The second Turkish occupation of Yemen, 1289/1872-1918. The opening of the Suez Canal in 1286/1869 allowed the Ottomans ready access to maritime Arabia via the Red Sea, and during the latter half of the 13th/19th century they had gained a foothold on the Red Sea coast at al-Ḥudayda [*q.v.*] Aḥmed Mukhtār Pasha settled the affairs of 'Asīr [*q.v.*] and returned to al-Ḥudayda, whence he was invited by the people of Ṣan'ā', weary of the chaos caused by disaffected tribes, to enter their city. The Ottoman general entered Ṣan'ā' in 1289/1872, when there appeared to be no recognised *imām* and thus began a second Turkish involvement in Yemen which was to last until the end of the First World War.

After an administrative overhaul that resulted in the appointment of Turks into the administration and the removal of Yemeni officials, the Ottomans opened up a military campaign in the north that had certain successes, notably the capture of the stronghold of Kawkabān, rarely taken in all the history of Yemen. In 1296/1879, a new Zaydī *imām*, al-Hādī Sharaf al-Dīn, proclaimed himself ruler, and for the decade of his reign he fought with some courage against the Turks.

After Imām Sharaf al-Dīn's death in 1307/1890, the Zaydīs turned for their *imām* to the Ḥamīd al-Dīn family, wherein the imāmate was to reside until its abolition in 1962. Al-Manṣūr bi'llāh Muḥammad b. Yaḥyā Ḥamīd al-Dīn was recognised as *imām*. Al-Manṣūr proved completely uncompromising in his struggle against the Turks, and in the words of one Yemeni historian, his wars against the Turks "would fill several books (*dafātir*)" (ʿAbd al-Wāsiʿ b. Yaḥyā al-Wāsiʿī, *Ta'rīkh al-Yaman*, Cairo 1346, 134). When the Turks sent an emissary to al-Manṣūr in 1309/1891, the latter gave a reply implying that the Yemenis were quite capable of providing a government themselves, one that, moreover, ruled in accordance with the laws of Islam. He accused the Turks of all manner of un-Islamic practices and forwarded complaints about their abuses to Istanbul, the Turkish officials being charged with serious corruption.

On al-Manṣūr's death in 1322/1904, his son Yaḥyā was elected *imām* with the title al-Mutawakkil ʿalā Allāh [see YAḤYĀ B. MUḤAMMAD, AL-MUTAWAKKIL]. Yaḥyā continued the policy of all-out opposition to the Turks, giving instructions that Turkish-held towns were to be attacked and besieged. The anti-Turkish cause was helped by failure of the rains and the ensuing famine. In addition, it is clear that the long arrears of pay of the Turkish occupying troops led to much discontent. There are reports, for example, of a serious mutiny in Ṣanʿāʾ in 1324/1906. The Porte's attempts to make peace with Yaḥyā failed. Although a Turkish force with Arab volunteers left Ṣanʿāʾ during the First World War to attack the British in Aden and actually defeated a small British force at Laḥdj [*q.v.*] a few miles to the north of the port, they were forced to surrender in Aden when the armistice was declared.

The years 1918-62: the Imāms Yaḥyā, Aḥmad and Muḥammad al-Badr. Imām Yaḥyā was above all renowned for his extreme stinginess. He also followed a strict policy of almost complete isolation from the outside world. He was assassinated in 1948 by order of the dissident contender for the imāmate, ʿAbd Allāh al-Wazīr, as he drove near the village of Ḥizyaz just south of Ṣanʿāʾ. The conspiracy was put down after a short while, and the ringleaders executed. Yaḥyā's son Aḥmad was elected *imām*, but lacking support in Ṣanʿāʾ after the city's sacking during the revolt, he moved to Taʿizz where he ruled until his death from natural causes in September 1962. He will always be remembered for his ruthless behaviour in the face of any trace of opposition, although he was undoubtedly both a brave and learned ruler. The economic problems of the country had grown and grown, and Arab nationalism and a succession of military coups in the Arab world, as well as interference from the then USSR, all helped destabilise Yemen under Imām Aḥmad.

His son, Muḥammad al-Badr, who had played a high profile role in affairs of state in the late 1950s, was proclaimed *imām*. Only a week later, his residence was attacked by army officers and he and his guards fled. ʿAbd Allāh al-Sallāl then became the first president of the Yemen Arab Republic.

(G.R. SMITH)

(b) From 1962 to the present day.

The Republic of Yemen (ROY) was created on 22 May 1990 out of the peaceful unification of North Yemen and South Yemen, officially the Yemen Arab Republic (YAR) and the People's Democratic Republic of Yemen (PDRY), respectively. About two-and-a-half years earlier, in 1987, the YAR had celebrated its twenty-fifth anniversary and the PDRY its twentieth. Throughout this political generation, the question of Yemeni unification had been confounded by contradictory political legacies: the millennia-old idea of one Yemen and one Yemeni people, on the one hand, and two distinct modern national political struggles and resultant territorial states, on the other.

i. *The YAR.*

The YAR was preceded immediately in North Yemen by the imāmate state led and revived over the first six decades of the 20th century by the two great *imāms* of the Ḥamīd al-Dīn family, Yaḥyā and his son Aḥmad [see YAḤYĀ B. MUḤAMMAD, AL-MUTAWAKKIL; and the last section of 3(a) above]. They both revitalised the traditional Yemeni cultural and socio-political system and further insulated and isolated North Yemen from the outside, modern world. In retrospect, the history of the YAR can best be divided into three periods: (a) the al-Sallāl era (1962-7), the wrenching first five years under President ʿAbd Allāh al-Sallāl, marked by the 26 September Revolution that overthrew the imāmate, the long civil war and Egyptian-Saudi intervention that quickly followed, and, above all, the rapid and irreversible opening of the country to the modern world; (b) a 10-year transition period (1967-77), distinguished by the end of both the Egyptian military presence and the civil war, the Republican-Royalist national reconciliation under President ʿAbd al-Raḥmān al-Iryānī, and the attempt by the young President Ibrāhīm al-Ḥamdī to strengthen the state and restructure politics; and (c) the Ṣāliḥ era (1978-90), a 12-year period identified with both the

long tenure of President ʿAlī ʿAbd Allāh Ṣāliḥ and the change from political weakness and economic uncertainty at the outset, to political stability, the discovery of oil, and the prospect of oil-based development and prosperity in more recent years. This last period of YAR history ended with the unification of the two Yemens and the creation of the ROY, with President Ṣāliḥ at its head.

Of the many important political and socio-economic changes that took place in the YAR since its birth in 1962, most of the positive ones were compressed into the years since the republic's fifteenth anniversary in 1977. Nevertheless, the decade from the late 1960s to the late 1970s was also important, a transitional period in which much needed time was bought by a few modest but pivotal acts of state-building and, most important, by economic good fortune. Above all, global and regional economic events over which the YAR had no control facilitated a huge flow of funds into the country in the form of both foreign aid and remittances from Yemenis working abroad. This period of transition was much needed, because the changes that had buffeted Yemen in the five years following the 1962 revolution had left it both unable to retreat into the past and ill-equipped to go forward. The ability to advance rapidly in the 1980s was very much the result of the possibility afforded for a breather in the 1970s.

ii. *The PDRY.*

The path taken by, or, more correctly, imposed upon, South Yemen after the British occupation of Aden in 1839 was quite different. Of critical importance was Britain's preoccupation with the port of Aden and its neglect of the dozen or so statelets in the hinterland with which it signed treaties of protection only in the last quarter of the 19th century. As a consequence, no single political system embraced even most of what was to become an independent South Yemen in late 1967. Instead, what existed was the 75-square-mile Aden Colony—a city-state, a partly modern urban enclave and major world port—and a vast, mostly distant, politically-fragmented hinterland that was, for the most part, based on subsistence agriculture and traditional socio-cultural institutions.

At independence in 1967, the infrastructure barely holding together the major settlement areas consisted of dirt tracks, unpaved roads, a number of airstrips, and the telegraph. The country consisted of many micro-economies, most of them agriculturally based and largely self-sufficient. The isolated Wādī Ḥaḍramawt was an odd case, dependent as it was upon emigration to and remittances from Southeast Asia, East Africa, Saudi Arabia and the rest of the Gulf. What little market economy existed centred on the port of Aden and its environs, and this in turn was plugged less into its hinterland than into the international economic system via its sea lanes. This fragile modern sector was dealt devastating blows near the time of independence, when the blocking of the Suez Canal during the Six-Day War nearly brought port activities to a halt and Britain's rapid withdrawal ended both subsidies from London and the significant economic activity tied to the large British presence.

The history of South Yemen since independence is distinguished by three major periods: (a) the period of political takeover and consolidation (1967-9), the initial phase during which the National Liberation Front established control in Aden and over the hinterland at the same time that the balance of power within the party passed from the nationalists led by Ḳaḥṭān al-S͟hābbī to the party's left wing; (b) the period of uneasy leftist co-leadership of Salīm Rubayy ʿAlī and ʿAbd al-Fattāḥ Ismāʿīl (1969-78), distinguished by the efforts of these two bitter rivals both to organise the country in terms of their competing versions of Marxist "scientific socialism" and to align the country with the socialist camp and the national liberation movements around the world; and (c) the era of ʿAlī Nāṣir Muḥammad (1980-5), the period in which the consolidation of power in a single leader was paralleled by increasing moderation in both domestic affairs and external relations, especially with the YAR.

The period of co-leadership, which ended in 1978 in armed conflict between the two rival factions within the ruling party and the execution of Salīm Rubayy ʿAlī, was followed by two years during which ʿAbd al-Fattāḥ Ismāʿīl ruled alone. The era of ʿAlī Nāṣir Muḥammad, which began with the exile of Ismāʿīl in 1980, ended in January 1986 with the intra-party bloodbath and ʿAlī Nāṣir's ejection and flight into exile, and was followed by the nearly four years of troubled domestic and external politics that led up to unification with the YAR. Despite this pattern of bitter and sometimes lethal intra-party conflict, the PDRY régime over more than two decades did maintain its rule and order throughout the country, made progress in bridging the gap between Aden and the rest of the country, pursued with some success certain admirable social goals, and made good use of extremely limited resources in efforts to develop a very poor country, e.g. in the fields of education, health, and equality of the sexes.

iii. *The unification process and the ROY.*

In 1989, the renewed drive for Yemeni unification came suddenly and at the initiative of a newly self-confident YAR. The PDRY régime, weakened by the intra-party bloodbath and the sharp decline in political and economic support from the Soviet Union and the Socialist bloc, was unable to resist the proposal. In its final form, the unification plan called for: (a) formal unification in May 1990; (b) a two-and-a-half year transition period during which power would be shared equally by the two ruling parties of the former YAR and the PDRY; and (c), in late 1992, national elections throughout unified Yemen.

Unification was embraced enthusiastically by most Yemenis and proceeded apace, enjoying a year's honeymoon. However, the increasing dominance of President Ṣāliḥ and his allies and the collapse of the economy—the latter caused largely by a drastic drop in external aid and workers' remittance, the result of the ROY failure to join the U.S. and Saudi-led coalition against ʿIrāḳ during the Gulf War, soon led to protracted political conflict between Ṣāliḥ's faction and most of the top southern leaders. Despite the holding of relatively free and fair elections in April 1993, and many efforts at mediation, the political crisis worsened, leading in early 1994 to fighting between the yet-unmerged armies of the two parts of Yemen and to a bloody two-months civil war in mid-1994. The forces loyal to President Ṣāliḥ won a decisive victory over the Saudi-supported secessionist forces, and Yemen remained united.

The fighting over, the ROY was faced with the virtually complete collapse of the economy and political isolation in the region. Regarding the latter problem, relations with the Arab Gulf states and other Arab states improved considerably during the period 1995-7. However, relations with Kuwait and Saudi Arabia remained problematical—most notably, the serious Yemeni-Saudi border dispute resisted solution. With the assistance of the International Monetary

Fund, the World Bank, and various European donors, the ROY in early 1995 addressed the former problem by adopting and then implementing a largely successful three-year package of economic reforms; this demanding and painful process was facilitated in part by the continued discovery and development of modest oil and gas reserves. President Ṣāliḥ and his allies strengthened the political system and—to a degree at least—Yemeni political life was reorganised during this period. Despite the economic hardships of recent years, the régime was able to hold relatively free and fair national elections in April 1997, elections that produced a clear-cut victory for President Ṣāliḥ and his party. Mid-1998 marked the end of Ṣāliḥ's twentieth year as president of the YAR and the ROY.

4. Ethnology and social structure of the Yemeni highlands.

The population of the high plateaux of Yemen is chiefly Zaydī by persuasion [see ZAYDIYYA]. However, a strong Shāfiʿī Sunnī presence [see SHĀFIʿIYYA] has been making its mark on the capital city of Ṣanʿāʾ [*q.v.*] since the 1970s (where at the last census in 1994 there were 954,448 inhabitants), as also in the massif of Ḥarāz [*q.v.*], which is shared between the Zaydīs and the Shāfiʿīs. The Ismāʿīlī [see ISMĀʿĪLIYYA] community of Yemen is concentrated in the latter region around Manākha [*q.v.*]. In addition there are several hundred Jews living in the regions around Ṣaʿda and Rayda [*q.vv.*].

With the exception of Ṣanʿāʾ, the territory of which belongs to no single tribe (*ḳabīla*) in its own right, towns such as Ṣaʿda (Khawlān b. ʿAmr), Khamir (Banū Ṣuraym), Ḥūth (ʿUsaymāt), Dhamār [*q.v.*] (ʿAns) or ʿAmrān are all contained within the territory of single tribes. Part or all of their non-tribal population is composed of "market people" (*ahl al-sūḳ*) and religious men (*sayyids* and *ḳāḍīs*). The *hidjra* sites such as Ḥūth are generally inhabited by the latter, and the market as well as the tribal assembly places, called *misrākh*, were subject to tribal protection. The inviolable nature of the *hidjras*, the "sanctuaries" of knowledge and religious law, was in fact only recognised by the tribes that were linked to them, often by a formal ageement, and who used them as neutral territory. The principal confederation of tribes of the highlands of Yemen are those of the Ḥāshid and the Bakīl [*q.vv.*]; the Madhḥidj (Dhamār, Radāʿ, Ḥarīb [*q.v.*] and Mārib [*q.v.*]) do not actually exist, as the number of its tribes was incorporated in the course of time among the Bakīl, whereas the tribes of the Murād (Ḥarīb) and the ʿAbīda (Mārib), who were supposed to belong there, have no confederal ties. On the other hand, the tribe of Khawlān b. ʿAmr (Ṣaʿda) has no links with any other. However, it would be an exaggeration to place any real importance on the idea of a confederation apart from that of the Ḥāshid, which is numerically less important than that of the Bakīl; it has greater cohesion though relatively so, stemming largely from the role in national politics played by the supreme *shaykh* (*shaykh al-mashāyikh*), ʿAbd Allāh b. Ḥusayn al-Aḥmar.

The morphology and tribal subdivisions vary just as their degree of mobility. Membership of a tribe is based on real or supposed family relationships, but tribal unity is above all based on territory, and the majority of tribesmen are sedentary farmers. The different sections of the tribe are thought to be descended from a common ancestor (*djidd*) and to be bound by fraternal ties, although this genealogical fiction does not imply a detailed acquaintance or the existence of actual family relationships between its members. The practice of customary law (*ʿurf* [*q.v.*]), with regard to the role of guarantor of the honour of the group and of intra- and inter-tribal arbitrator, makes the function of the *shaykh* an important factor of the social life of the highlands, and even at the national level for those who combine economic success and political stature. Recognition by the state of the representative function of the *shaykhs*, who from the early years of the Republic onwards have been paid by the Ministry of Tribal Affairs, has given their traditional role of mediator an official status.

However, the social structure of the highlands is not limited to the tribal system. It overlaps with a system of social ranks to which the tribal system is pivotal. The traditional social hierarchy is indeed composed of status groups graded in the hierarchical system according to certain criteria, the most important of which are those of ancestry (*aṣl*) and professional activity. Up to the founding of the Republic in 1962

the descendants of the Prophet (*sayyid*, pl. *sāda*) including the Zaydī Imāms, took their place at the top of the hierarchical order. Because of their prestigious genealogy and the primacy granted to them in religious matters and spiritual direction, they played the role of arbitrator among the tribes, though this position could also be filled by the "religious judges" of tribal origin (*ḳāḍī*, pl. *ḳuḍāt*).

The other status groups were the tribesmen (*ḳabīlī*, pl. *ḳabā'il*), city dwellers of tribal origin (*'arabī*), and at the bottom of the social order those who had menial occupations without tribal origin. They were designated by the generic noun *banu 'l-khums* or *ahl al-ṭaraf*, literally, "sons of the fifth", i.e. potential recipients of public charity or "people of the extremity". Menial jobs (market gardeners, butchers, workers at the public bath, cess-pit cleaners, barber-circumcisers, blood-letters, tanners, shoemakers, potters and the *dawshān*, a sort of tribal herald) were considered as such in relation to a system of tribal values in which the idea of honour played a dominant role, and which would forbid members of the tribe being put into the position of servant or middle-man. In this predominantly agrarian society, commercial activity was regarded as menial, whereas agriculture, the traditional occupation of tribesmen, was not considered in any way discreditable. In certain cities, and particularly in Ṣan'ā', the city dwellers felt that they belonged to a more distinctive sort of community, and their cultural model was distinguished from the tribal one by reason of the greater significance it attached to religious values. Besides, in contrast to the *sūḳs* in the tribal territories, the market of Ṣan'ā' was distinguished by its great social diversity and was frequented by representatives of all the status groups of the city. To belong to these status groups was a matter of heredity and very often was no longer connected with the original "occupation".

The rules for matrimonial alliance have constituted and still do constitute one of the essential ways of reproducing status groups. The main principles governing marriage in Yemeni society are those of *aṣl* (origin) and *kafā'a* [*q.v.*], a term denoting the idea of parity, sc. the equality of status of the two partners. These principles allow society to maintain the hierarchical system, since they relate to descent, the patrilinear nature of which authorises a man to marry a woman of equivalent or inferior status. The woman herself may not marry a man of inferior status as the children will inherit their father's status. This traditional social order was indicated by the distinctive dress of the wearer. The most important sign was the dagger, which was worn differently according to the status group. However, this traditional social order has been considerably weakened by a number of factors: the founding of a Republican régime; the appearance of intense social mobility (promoted by the years of emigration); the existence of new economic opportunities; and finally, strong urban growth, facilitating a degree of social anonymity and the influence of state institutions through school, public office and army.

Bibliography: There are so many sources for the ethnology of the highlands of Yemen that here only a selected number of titles is given, viz. J. Chelhod *et alii*, *L'Arabie du Sud. (F. MERMIER)

5. The Arabic dialects of al-Yaman.

The main dialect areas partly correspond to the physical nature of the country: One block is the western coast, Tihāma [*q.v.*]. A transitional zone are the Tihāma foothills. In the western mountain range from the outermost north down to the south-east (Yāfi' [*q.v.*]) extremely archaic dialects, the so-called *k*-dialects, are spoken. This originally coherent area is now interrupted in the south by the Ḥudjariyya dialects. In the border zone to Saudi Arabia, dialects are quite remote from other Modern Arabic dialects. From Ṣa'da down south to Djuban, in the highlands, but also in Aden, dialects less deviating from other modern Arabic dialects are spoken. The dialects of the Djawf and the Mārib area are little known. They are related to Bedouin dialects of the north and the south-east of the peninsula. In the former People's Democratic Republic of Yemen (PDRY), the regions of Aden, Ḥaḍramawt, Dathīna, Laḥdj and the Yāfi' area are more or less explored dialectologically, but little is known from the southern coast. The actual distribution of dialects still reflects the characterisation of Yamanī dialects given by al-Hamdānī, and regions of which he classifies the language as "bad Arabic", "unintelligible" or "Ḥimyaritic" still have the most deviating dialects. A mere sketch, however, cannot do justice to the dialectological diversity of Yemen.

i. *Phonology*.

Hamza, in most modern Arabic dialects a marginal phoneme, has maintained its status in many dialects; in the Ta'izz area we can even notice the opposite of what normally happens, i.e. a shift of verbs with final *y* to hamzated verbs: **ramā* > *rama'*, **ramat* > *rama'at*. In some fifty items, *b* corresponds to *m* in

CA, e.g. *ṣarab* "to harvest" vs. *ṣarama* "to cut", *banā* "to intend" vs. *tamannā* "to wish". In the Tihāma *d* may be realised as a flap, *d* and *t* in the Yāfiʿ region are "soft apicals" and not dentals, according to Vanhove. Interdentals are preserved, except in Aden and al-Ḥudayda. Both **ḍ* and **ẓ* have merged into *ʾdh*, except in Dat͟hīna: **ḍ* > *ḷ* vs. **ẓ* > *ʾdh*; in D͟jabal Yazīdī (former PDRY), **ḍ* is *ḍ*, but **ẓ* = *ʾdh*; also in the north (Bani ʿAbādil, Ṣaʿda area), *ḍād* and *ẓāʾ* are separate phonemes *ʾdh* and *ʾth*. In Minabbih (Ṣaʿda area) the merger is *ʾth*. In D͟jabal Rāziḥ, in some fifty words the reflex of **ḍ* is a slightly retroflex *č* (**ḍabaṭa* > *čabaṭ*). In the same area (Minabbih) the reflex of **ṣ* is *st*: *stadīgin* "a friend", reflecting a former **ts* or **tsʾ*. There are several lexemes indicating a merging of **ṣ* (**tsʾ*) and **ẓ* (**ʾth*) in historical dialects of Yaman as attested in Sabaic, e.g. *liṣī* "to kindle", CA *laẓiya* "to burn brightly". In Minabbih **s͟h* is a slightly retroflex medio-palatal fricative close to the German "ch" in "Buch" (neither [x]nor [ç]). As for **s*, there are lexical relics hinting at sound shifts like those in Modern South Arabian, e.g. **sāḳah* > *hāḳah* "tail-pole" in the southern Tihāma. In the central highlands *ṭ* is realised as [ḍ] in pre- and intervocalic position, hence *ḍallab* "to beg". The reflexes of **g* vary between *g* (southern Tihāma, Ḥud͟jariyya down to Aden, Yāfiʿ), a palatal stop *j* (e.g. central Tihāma), the affricate *d͟j* (especially in the central highlands) and *y* in Ḥaḍramawt. In the central Tihāma **ʿ*, and often in a parallel fashion **g͟h*, have merged into *ʾ*: *ʿaynun* > *ʾēnu* "eye", *g͟hanamun* > *ʾanamu* "sheep", only **g͟h* > *ʾ* is found in the southwestern mountains: *g͟hanam* > *ʾanam*. In Dat͟hīna, Upper ʿAwlaḳī and D͟jabal Yazīdī: *g͟h* > *ʿ*: *ʿanam*, and partly *ʾ*: *ʾanam*. North of Ṣanʿāʾ, in parts of the east, in the Ṣaʿda area, and also in the Wādī Bannā *g͟h* is an affricated [ḳx] or *ḳ*: *ḳanam*; in Yāfiʿ *ḳ* and *g͟h* are free variants: *ḳanam* ~ *g͟hanam*. The main reflexes of **ḳ* are *ḳ* and *g*, the former characteristic of most of Tihāma and the southern mountains from the Taʿizz area down to Aden. In Tihāma, **ḳ* has been shifted to *g* or *j* in roots containing *d*: *ḳaʿādah* > *jaʾādah* "bed". Still in Tihāma, a voiced uvular *ḳ* is to be heard. In central *ḳ*-dialects the allophones of *ḳāf* are in complementary distribution: *ḳ* (initial, geminated)—*g͟h* (intervocalic)—*k͟h* (final). In Minabbih, **k* is shifted to *č* and varies with *k* in lexical distribution. Emphatic *ḷ* is frequent in the dialects of the D͟jawf and Mārib: *gāḷ* "he said". Emphatic *ṛ* is rare.

Diphthongs are preserved in the majority of dialects. The short vowels *a, i, u* are preserved in all dialects. Apart from the D͟jawf and Mārib area (**ḥimārah* > *ḥmārah*) the syllable structure is extremely conservative, e.g. *libisat* "she has dressed", *yisāfirū* "they travel". Long vowels in final syllables are also preserved. In southern Tihāma and Hud͟jariyya, however, they are short and not lengthened in the case of suffixation: *ʾdharabu* + *ik* → *ʾdharabuyk* "they beat you", *ʾdharabna* + *ak* → *ʾdharabnak* "we beat you", *ʾdharabna* + *uh* → *ʾdharabnuh* "we beat him". Elisions often are due to the fluctuation of accent: *yiḥtárig* "it gets burnt" vs. *yiktsír* "it gets broken". The fluctuation of accent (*máwd͟jūd* vs. *mawd͟jūd*, *al-ḥímār* vs. *al-ḥimār*) is still one of the mysteries of Yamani dialects (for explanations, see Diem, 10-12, and Naïm-Sanbar).

Other remarkable phonotactic phenomena are pausal glottalisation in the highlands: *kat͟hīr* → *kat͟hīʾr* #, pausal nasalisation in Tihāma and parts of the northern and southern mountain ranges: *ani* → *aniŋ* # and devoicing of geminates in the central highlands: *ḥaggī* → *ḥakkī*.

ii. *Morphology*.

a. Verbs.

All verbal endings of CA (except the dual) can be found in Yamanī dialects. In Minabbih, **-a* of the 3rd m. perfect appears in the case of suffixation: *baytūh* # "his house", but *g͟hasal* + *u* → *g͟hasálaw* "he washed him", *ṣawwar* + *ča* → *ṣawwaráča* "he took a picture of you". In the northern Tihāma, the forms of the 1st and 2nd f. sg. still have the classical endings: *katabtu-katabt-katabti*. Elsewhere, mainly in Ḥud͟jariyya, only the 1st person has preserved *-u*: *katabtu*-2nd m. *katabt*. In the extreme north and the Yarīm area, the opposite is found: 1st *katabt*-2nd m. *katabta*. Feminine forms in the plural are preserved except in Tihāma, the Ṣaʿda region and Aden. The endings of 2nd pl. *-tum, -tinna* and 3rd pl. *-ū, -na* are typical of the highlands north and west of ʿAmrān and the extreme north (there even *-tum, -tunna*). South Semitic perfect endings (*-ka, -ki, -ku* vs. *-ta, -ti, -tu*) are preserved in the western mountain range from the outermost north down to Ḥud͟jariyya and in the Yāfiʿ area. Rare are *k*-perfects with the old vocalic endings (D͟jabal Yazīdī, former PDRY: *waṣalku*) but in some dialects the inner vowel is assimilated to them: *katabku* > *katubk, katabka* > *katabk, katabki* > *katibk* (Taʿizz area). Elsewhere, the *-k* of the 1st person is labialised. Central and northern *k*-dialects, but also Yāfiʿ, also have *kas͟hkas͟ha*-forms for the 2nd f. sg.: *katabč, katabs͟h(i)*. Major innovations are the generalisation of *-aw* (*-ō*) for the 3rd pl. m. *ramaw* → *katabaw* in the central Tihāma and in the east (Mārib, D͟jawf), and for the f. pl. the extension of *-ayn* (CA *ramayna*) to all verb classes and the 2nd pl.: *ramayn* → *katabayn* → *katabtayn* (central highlands down to the south-east). In some places in Tihāma, the ending of the 2nd sg. f. has been assimilated to that of the imperfect: *tiktubin* → *katabtin*. In Tihāma and the Ṣaʿda area, before the merging of f. and m. in the plural, the 3rd sg. f. perfect (**-at*) was adapted to the 3rd pl. f. (**-na*): **katabat* > *kataban*. In D͟jabal Rāziḥ, Ḥud͟jariyya and Yāfiʿ, the 3rd sg. f. perfect follows the noun: *katabah* corresponds to *baḳarah*, with suffixes: *katabtuh* corresponds to *baḳartuh*. In the imperfect, the *ya*-prefix is to be found in the extreme north and most parts of Tihāma. Landberg reported the Mag͟hribī forms for the 1st sg. and pl. *niktub-niktubu* for the Bedouins of Ḥud͟jariyya. Long forms have been preserved in central and northern Tihāma, sporadically in the east, and in a compact area in the former PDRY (Ḥaḍramawt, Yāfiʿ): *tiktubīn* "you (f.) write", *tiktubūn, yiktubūn*. When suffixed in Tihāma, the *-ī-* is shortened and the *-n* geminated: *tiktubinnuh*. This has led to re-analysis in some dialects in central Tihāma: *kataban-katabannuh, tiktubīn-tiktubinnuh* → *tiktubin-tiktubinnuh*. Internal passives are attested everywhere: *s͟huwik, yis͟hwak* "to be stung by a thorn"; they are frequent in the east: *d͟hbiḥ/yid͟hbaḥ* "to be killed", *s͟hill, yis͟hall* "to be taken away".

As in other modern Arabic dialects, there are preverbs for the present continuous or habitual, e.g. 1st. p. *bayn-*, the rest of the paradigm *bi-* in Ṣanʿāʾ, and for the future: e.g. *šā* (south, Tihāma) *šā-/ʿa-* (Ṣanʿāʾ), *bā-* (east and south). Reflexes of **ḳad* are used as an auxiliary: *giduh ṣug͟hayyiru* "he is young". In many dialects, *kān* is not conjugated: *ams kānnī bu Ṣaʿda* "yesterday I was in Ṣ".

Hamzated verbs are common in the southern mountains: *yaʾkul* "he eats", *siʾir* "it remained", *ḳaraʾ* "he read". Characteristic of the east are imperfect forms with *ō*: *yōkul* "he eats".

There are cases of class change for verbs with initial *w*: **wat͟haba* > *t͟hāb* "to sit" (Minabbih), **wakaba* > **wabaka* > *bāk* "to go" (Tihāma).

Geminate verbs have been assimilated to verbs with final *y* in northern Tihāma: *madda, yimidda*, in Ḥudjariyya: *maddī, yimidd* (Ḍāliʿ *madda, yimidd*), and in Djabal Rāziḥ: *maddē, yimidd.*

The two perfect types of hollow verbs are preserved in most regions, a third has been added mainly in the *k*-dialects: *ḳalku* "I said", in others the distribution of *a, i* and *u* is conditioned by the persons: 1st. *surk*-2nd m. *sark*-2nd f. *sirk* (Taʿizz area), *surk-sirk-sirki* (north of Taʿizz) or, in Djabal Rāziḥ, *suruk-sirik-siric*. In some places only one type is attested: *giltu*, respectively *ḳilk* or *ḳaltu*. In the participle, *hamza* is preserved, especially in the southern mountains: *ghāʾib* "being absent", elsewhere *ghāyib*, also with reduction of *-āyi-> ey, ē: ghēb* (northern Tihāma, the East).

Verbs with final *y*: in the highlands from Khamir down to Ḥudjariyya only one type is left: *ramā-nasā, ramī-nasī* or *rimī-nisī*. Elsewhere *a*- and *i*-type are preserved with partial levelling, e.g. *ramu-nisyu, ramaw-nisiyaw*. In the *k*-dialects, the suffix vowel has influenced the different forms: 1st sg. **ramayku* > **ramawku* > *ramawk/ramōk*-2nd sg. m. **ramayka* > *ramayk*. Especially in the southern *k*-dialects and in Ḥudjariyya, the vowel of the perfect of form II follows the imperfect: *ghaddī/yighaddī* "to give a lunch", accordingly V: *atghaddī-yitghaddī* "to have lunch".

The verb "to come" behaves like verbs with final *y* with the usual assimilations in the *k*-dialects: 1st sg. *guʾk*-2nd sg. m. *gaʾk*-2nd f. *giʾk* or *ʾatawk-ʾatayk-ʾatayk* and similar forms. In Ḥudjariyya, hybrid forms of **djāʾa*-**ʾatā* are attested: *ʾagā*. In parts of Tihāma, the imperfect is irregular: *yiʾēt*. For the imperative *taʿāla* is rare; the respective roots are used: *djiʾ*! *ʾati*! Other forms are *hālak*! (southern Tihāma) or *duwēnak*! (the east).

Verbal forms: IX has been replaced by II: *ḥammar* "to become red". IV is still used. VII is used mainly in the east, the passive-reflexive function being normally expressed by VIII or the internal passive: *summiyat* "she was called", *yiḥtarig* "it gets burnt".

b. Nouns.

Tanwīn is preserved in Minabbih: *stayfin* "a guest", in northern Tihāma: *shtarētu djamalun* "I bought a camel", and as *-u* in the rest of Tihāma: *banātu* "girls", *juhdu* "boy". The normal feminine endings are *-ah, -eh* (*-ih*), in many dialects conditioned by the preceding vowel: *bagara-tisʿe*. In Djabal Rāziḥ the ending is *-it* whenever the noun is definite: *bagarah* "a cow", but *ib-bagarit* "the cow". Gender distinction has been given up in several dialects with adjectives of the type *faʿil* and participles: *hiyya ksil* "she is lazy", *anī dārī* "I (f.) know", *is-sayyārit mujannab* "the car is parked". As for the syntax of the numerals, all Yamanī dialects follow the model of CA: *khams banātin* "five girls", *khamsah ridjālah* "five men". Characteristic nominal forms are those with an *-ī*-suffix: participles like *nāzilī* "going down", also of the true Ethiopian type *faʿālī*: *falāḥī* "fox" (Djabal Rāziḥ), nouns like *shugrī* "chicken", *buhmī* "donkey", *bukrī* "cow", *kitlī* "tea-pot", *mushgurī* "small bouquet". Other typical forms are plurals like *ṭirwag* "ways", sg. *ṭarīg, shirwaṭ* "tapes", sg. *sharīṭ, binwat* "girls" and the infinitives of II: *tafʿūl, fiʿʿāl*.

The genitive marker is *ḥagg*. The definite article is *(a)m* all over Tihāma. In the north-east, in the east from Mārib down to the Wādī Ḥaḍramawt, *im-* is frequent, *b-* is attested in northern Tihāma. The Ṣaʿda area is rich in forms with *al-, il-, im-, in-, an-, hā-*. The predominant form is *al-* whilst *il-* is characteristic of some eastern dialects. The *-l* of the article is assimilated to all letters mainly in the southern mountains: *ab-baḳarah*. The relative pronoun in the central mountains is a gender-indifferent *alladhī*, a compact area in the south-east has the Ḥimyaritic *dhī*, southern Tihāma *allī*, and there are other shorter forms like *lī, dī, alī*.

c. Pronouns.

The 1st sg. has been differentiated on the model of the 2nd sg. (*anta-anti*): *anā* m.-*anī* f. in Tihāma and parts of the central and southern highlands down to Aden. Consequently, the suffixes of the 1st persons: *-nī, -nā* were re-analysed: m. *anā*, suffix *-nā* (*bētnā* "my house"), f. *anī*, suffix *-nī* (*bētnī*); *-nā* not being available any more for the plural, the independent pronoun equally serves as a suffix: *baytiḥnā* "our house" (Tihāma), *shāfniḥna* "he saw us" (Aden). Among the 2nd forms, those of Djabal Rāziḥ are remarkable: m. *ak*, f. *ac*, identical with the suffixes. In southern Tihāma in one spot, *-ak* has been added to the pronoun: *antak*, whilst the feminine form has been assimilated to the verb: *antīn*. Such analogous formations are mainly attested for Tihāma (*ʾantīna, ʾantīn, ʾantin*). For the 3rd persons short and long forms are attested: *hū, hī, huwwa-hiyya*, in the south forms with a prefix copying the radical vowel: *uhu-ihi*. Most remarkable is the fusion of m. and f. in the dialect of Minabbih: *ahā* "he, she". Forms of the 1st pl. are less aberrant, the most frequent one being *iḥna* or *ḥna*, whilst *niḥna* is attested for the east and the south, for this last even *naḥnu*; in Djabal Rāziḥ: *anḥā*. For the 2nd persons, we have *antum-antunna, antum-antinna* in the extreme north and *antu-antinna* in the northern highlands. The western mountain range has *antum-antin* (*antun, antan*), the east mainly *antu-antan* (*intu-intan*); the central highland dialects, parts of the east and the southern mountains have feminine forms remodelled on the verb: *antum katabtum-antayn katabtayn*. Tihāma has forms with *-n* for both genders: *(a)ntun, ʾantūn*. Extremely deviating again is Djabal Rāziḥ: *akkum-akkun*. The most common forms of the 3rd pl. are *hum-hin*. Longer forms are attested only for the feminine: *hunnah, hinnah*. Tihāma mainly has *hun*, sporadically with a prefix: *uhun*. Comparable forms are to be found in Minabbih: *ihim-ihinna*.

d. Pronominal suffixes.

For 1st persons see above. The 2nd m. is predominantly *-ak*, only in the southeast is it *-uk*, sporadically *-ik*, Minabbih: *-ča*. For the feminine, *kashkasha* forms are dominant, namely *-iš* (north, centre, east, south-east), in northern and central *k*-dialects *-ič, -ic* and in the Djabal al-Ẓāmir area even *-it: baytit* "your house", elsewhere *-ik*, Minabbih: *-či*. With nouns ending in *-u*, in Tihāma no distinction is made between m. and f.: *abūk* "your father", while in some dialects north of Ṣanʿāʾ, an allomorph *-ki* is used for the f.; in southern dialects: *abu + ik → abuyk*, or with umlaut: *abīk* (m. *abūk*). The suffix of the 3rd sg. m. is *-ih* all over the north, centre and south-east, *-uh* is the form of Tihāma and the southern mountains and also Aden, *-ah* is attested mainly in central Tihāma and the south-east. Djabal Rāziḥ has *-ō*. The f. form is predominantly *-hā*, in the south-eastern mountains *-i* or *-ē* (*baḳarti, baḳartē*), in Djabal Rāziḥ *-ā*. For the 1st pl., see above. The suffixes of the 2nd and 3rd persons follow the respective pronouns (*-kum-kin, -kum-kinna, kum-kan, -kun*), in Djabal Rāziḥ: *-ām, -ōn* for the 3rd pl.

e. Demonstrative pronouns and adverbs.

A central strip from the highlands down to Aden has forms nearer to CA, whereas Tihāma and the extreme north, but also partly the east, have all kinds of short forms: *dhā-tā, dhī-tī, dhā-dhī, dhih-tih, dhāk-tāk, ʾdhāk-ṭāk*, and there are also forms with a deictic element *dhn* (as in Sabaic): *dhīnek* (remote deixis pl.)

dhinnek, dhinnāk, mainly in Ḥudjariyya. Most dialects have a series of diminutive or deprecative demonstratives like *dhayya-tayya,* but used deictically as well (medium range). The demonstrative adverb "now" is *dhalḥīn* all over the country with slight variations. Short forms for "here" are to be found mainly in the east, Tihāma and in the south, the central highlands down to Ḥudjariyya have long forms like *hāna* and *hawna.* For "there" the most common forms are *hunāk* and *hināk,* in southern Tihāma we have forms like *halah.*

f. Interrogatives.

As for "what" the main forms comprise *mā* all over the Tihāma, the central highlands and the north-east (*maw, mō, mū* in the southern mountains, *mī* in some central *k*-dialects, *mādhī* in Djabal Rāziḥ). From the north-east down to the south *aysh* and similar forms are normal. There is more variation in the case of "why": *laysh, limā, lilma, lilmeh, lamū, ninma, liyyeh, lēh,* even *way'.* "Where" has the more "classical" forms in the central highlands: *ayn;* Tihāma has forms like *fiyān;* and forms with *w-* are attested in the east. Also for "when", the centre again has a new formation: *ayyiḥīn,* and Tihāma has variations of it: *yaḥīn* etc. In the north and the east, we find reflexes of **matā* or **matay: matē* (Djabal Rāziḥ).

iii. *Lexicon.*

There is a good deal of the South Semitic lexicon: *da* and similar forms, *dimm(ī)* "cat", *dhahal* "rust", *girbah* "field". There are also words from the Semitic lexicon not attested in CA, like *thāb, yathūb* "to sit", *lammad* "to train the ox for ploughing". There is much of the Classical lexicon not to be found in, say, Mediterranean dialects, like *ʿafw* "young donkey", *(h)āyab* "to return". The lexicon of Tihāma is highly aberrant: *ḥād* "to see", *ʾamm* "to drink", *bāk* "to go", *juhdeh* "girl". An important part of its modern vocabulary has been furnished by English, mainly via the south, like *rayfal* "rifle", *kitlī* "tea pot," *recte* kettle, *kilish* "clutch".

(P. BEHNSTEDT)

YAMĪN (A.), pls. *aymān, aymun,* literally, "the right hand", but often used in Arabic with the transferred sense of "oath".

In human life and activity, the right hand often symbolises power and the ability to initiate actions. The Arabic word *yamīn* has such connotations as fortune and prosperity, whilst the wider term *yad* "hand in general" covers a vast semantic range: power, help, strength, sufficiency, ability to act, etc. The right hand can have a cultic significance, as with the bronze hand, probably from the vicinity of Ṣanʿāʾ and now in the British Museum, with a South Arabian *ex voto* inscription (illustrated and discussed by Ch. Robin, in idem (ed.), *L'Arabie antique de Karibʾîl à Mahomet = RMMM,* no. 61 [1991-3], 143-4).

Because oaths were often, in early societies such as the Arab one, taken by the two parties to a contract or agreement clasping their right hands together and pledging a solemn oath to fulfil the undertaking, *yamīn* came to be a general word for "oath". It has in fact tended, in Arabic usage, to become the most general term for "oath", in company with the verb *ḥalafa* "to swear", but other terms exist such as *ḳasam, ḥalaf* and *aliyya/alwa/ilwa.* See further, ḲASAM and also ḤILF, this last term denoting originally "a covenant, agreement" but often coming to mean "oath", and see the *Bibls.* there, to which should be added N. Calder, *Ḥinth, birr, tabarrur, taḥannuth: an enquiry into the Arabic vocabulary of vows,* in *BSOAS,* li (1988), 214-39. (ED.)

YAMŪT B. AL-**MUZARRAʿ** AL-ʿABDĪ, Abū Bakr, multifaceted scholar of the second half of the 3rd/9th century, d. *ca.* 303-4/915-16. He belonged to the tribe of ʿAbd al-Ḳays [*q.v.*], and was al-Djāḥiẓ's nephew on his mother's side; the latter was the source of several anecdotes transmitted by Yamūt.

Because of the ominous meaning of his name, "he dies", Yamūt tried to replace it with Muḥammad, which was, however, not generally accepted. Nonetheless, al-Khaṭīb al-Baghdādī decided to enter him into his *Taʾrīkh Baghdād* under both names. The bad omen of his name also caused Yamūt to have himself announced simply as Ibn al-Muzarraʿ when he visited the sick.

Yamūt came from Baṣra. After the death of his uncle al-Djāḥiẓ in 255/868-9, Yamūt went to Syria and settled in Tiberias, where his son Muhalhil was born. Only at an advanced age did he visit, in 301/913, Baghdād, where he appeared as a transmitter, from *inter alios* the philologists Abū Ḥātim al-Sidjistānī (d. 255/869 [*q.v.*]) and Abū ʿUthmān al-Māzinī (d. *ca.* 248/862 [*q.v.*]). Several times he travelled to Egypt, the last time in 303/915, dying according to some at Tiberias in 303/915, according to others at Damascus in 304/916.

Yamūt was a Ḳurʾān reader, grammarian, poet, and above all an historian (*akhbārī*). In this last capacity he restricted himself to the transmission of historical anecdotes (*mulaḥ wa-nawādir*). Thus he is cited amongst others by al-Marzubānī in his *Muwashshaḥ,* by Abu 'l-Faradj al-Iṣbahānī, and by al-Mubarrad in his *Kāmil.* Al-Masʿūdī counts Yamūt moreover among the *ahl al-ʿilm wa 'l-naẓar wa-'l-maʿrifa wa 'l-djadal.* Yamūt, according to al-Dhahabī, wrote several books the titles of which are not mentioned at all. Al-Dhahabī himself did not mention any title, too. A Damascene manuscript of Ibn Durayd's *Fawāʾid al-akhbār,* however, has a small supplement of four pages entitled *Akhbār Yamūt b. al-Muzarraʿ.* It contains eleven poems and anecdotes transmitted by Yamūt. It was published by Ibrāhīm Ṣāliḥ together with a much more comprehensive collection of Yamūt's traditions taken from the secondary literature. As a poet, Yamūt praised Dhakāʾ al-Aʿwar, who was governor of Egypt from 303/915 until 307/919. In addition, he addressed several poems to his son Muhalhil, who was his consolation in times of distress and to whom he sent *waṣiyya*-like admonitions.

Muhalhil became famous as a wine and love poet. His *Dīwān,* no longer extant, was put together by Ibrāhīm b. Aḥmad Tūzūn. Preserved is Muhalhil's *Risāla* on the plagiarisms of Abū Nuwās, which Ḥamza al-Iṣfahānī included as ch. 13 in his *Dīwān* of Abū Nuwās. A counter-treatise (*naḳīḍa*) on the strengths of Abū Nuwās's poetry (*maḥāsin shiʿr Abī Nuwās*), mentioned by Ḥamza and by Muhalhil himself in his preface to the *Risāla,* was finished too late for Ḥamza to include

it in the *Dīwān* of Abū Nuwās. It is not preserved. Muhalhil must have died after the year 334/946, since he composed an elegy (*marthiya*) on the Ikhshīdid Muḥammad b. Ṭughdj [*q.v.*], who died in that year.

(E. WAGNER)

YANBUʿ, conventionally Yanbo or Yambo, the name of a port on the Red Sea coast of the Ḥidjāz, now a flourishing town of Suʿūdī Arabia (lat. 24° 05' N., long. 38° 03' E.), also formerly called *Yanbuʿ al-baḥr* ("Y. of the sea") or *Sharm Y.* ("the inlet of Y."), and also of an inland town, known as *Yanbuʿ al-nakhl* ("Y. of the date-palms"). The name is said to derive from Ar. *yanbūʿ* "well", because of the many wells at the foot of the escarpments of the nearby Raḍwā [*q.v.*] (Yāḳūt, *Buldān*, i, 1038). Ibn Djubayr indeed writes *Yanbūʿ*. Yanbuʿ seems to be identical with Ptolemy's *Iambia Kōmē*.

In pre-Islamic times, Yanbuʿ al-Nakhl was a centre of worship of the god Suwāʿ [*q.v.*]. It is mentioned several times in the *ghazawāt* (see AL-MAGHĀZĪ and al-Ṭabarī, i, 1269, 1271; Yāḳūt, *Buldān*, i, 1038) and, according to al-Bakrī, ed. Wüstenfeld, *Muʿdjam*, i, 425 ff., it was conquered by the Prophet, who is said to have conducted the *ṣalāt* in its mosque. Town and region were then inhabited by the Banū Djuhayna [see ḲUḌĀʿA]. The Arab geographers describe the town as large, well populated and defended by a strong castle. Life was easy because of the many date groves (*The History of al-Ṭabarī*, xxx, tr. C.E. Bosworth, Albany 1989, 321-2). Al-Muḳaddasī, 101, adds that there were gold-mines between Yanbuʿ and al-Marwa (this last can hardly be the mountain near Mecca; possibly Dhu 'l-Marwa in the Wādī 'l-Ḳurā is meant); he also mentions enmities and fighting (*ʿadāwāt wa-ḥurūb*) in the town between Sunnīs and Shīʿīs. It gradually came to replace al-Djār [*q.v.*] as port of Medina.

Ḳatāda b. Idrīs [*q.v.*], the ancestor of the Sharīfs of Mecca, was born in Yanbuʿ in 540/1145-6. He rebuilt the fortress, which was in the hands of his family, and used the town as the basis for his conquest of Mecca in 596/1202. In 1503 there was an *amīr* in Yanbuʿ, and in 1583 the Ottomans restored the fortress again (Faroqhi, *Mekka*, 105, 134). In 1819, G. Forster Sadleir, *Diary*, 110, described the port as miserable, surrounded by a recently-made tottering wall, with the old walls and one gate still standing; several waste spots were appropriated for dunghills, burial grounds and receptacles for dead horses and camels; the supply of water was very precarious. The population lived mainly by the trade of Medina with Suways (Suez), Kuṣayr and Ḳunā [*q.vv.*] (cf. Wellsted, *Travels*, ii, 207 ff.). In 1816 Ibrāhīm Pasha [*q.v.*] landed at Yanbuʿ where he started his campaign against al-Dirʿiyya [*q.v.*], the capital of the Wahhābīs. In the early 20th century the port was described as standing on a bay, protected by a small sandy island, the entry to the inlet being between reefs. Outside, the water was deep, but in the entrance the depth decreases rapidly. The port was divided by an arm of the sea into two parts. On the landside, there was still a wall with towers and two gates. Formerly the port had 4,000 to 5,000 inhabitants, but their number had dwindled to about 1,500 since the opening of the Ḥidjāz railway [*q.v.*], swelling temporarily during the Pilgrimage (Hogarth, *Hejaz*, 25-6).

Until recently, Yanbuʿ's economy was based on the Pilgrimage and on the export of agricultural products, mainly dates. In 1975 King Khālid signed a decree charging a Royal Commission with overseeing the creation of Yanbuʿ Industrial City (*Madīnat Yanbuʿ al-ṣināʿiyya*) together with its twin on the Gulf coast, Djubayl. This creation *ex nihilo* has made Yanbuʿ one of the most important industrial areas in the Kingdom, especially for the petrochemical industry; two pipelines connect it with the oilfields in the Gulf, one for crude oil and one for natural gas. Port facilities and the airport have been expanded. In 1993 the population was estimated at 40,000.

(E. VAN DONZEL)

YANINA [see YANYA].

YĀNIS, al-Amīr ABU 'L-FATḤ NĀṢIR (or Amīr, Ibn Taghrībirdī, *Nudjūm*, v, Cairo 1913-17, 240) al-Djuyūsh Sayf al-Islām Sharaf al-Islām, al-Rūmī al-Armanī al-Ḥāfiẓī (d. 16 Dhu 'l-Ḥidjdja 526/1132), the fourth of six Muslim Armenian viziers of the Fāṭimids (over the period 1074-1163).

A former *mamlūk* of al-Afḍal, in 516/1122-3, Yānis was appointed chief of the *ṣibyān* and head of the treasury by al-Āmir's vizier Maʾmūn al-Baṭāʾiḥī (al-Maḳrīzī, *Khiṭaṭ*, ed. al-Malīgī, iv, 268). Rising to the posts of chamberlain and commander-in-chief, the political career of Yānis developed through his involvement in the events following the assassination of al-Āmir: the regency of the caliph's cousin Abu 'l-Maymūn ʿAbd al-Madjīd for the heir al-Ṭayyib, the overthrow of the Fāṭimid Imāmate by the Imāmī Kutayfāt and the liquidation of the latter by the *ṣibyān al-khāṣṣ al-Āmirī* (led by him). As a reward for his role in reinstating the Ismāʿīlī state, Yānis was proclaimed

vizier (see the *sidjill* for this of al-Ḥāfiẓ, in al-Ḳalḳashandī, *Ṣubḥ*, ix, 297). A tough disciplinarian and man of *hayba*, Yānis took the initiative in punishing anarchic elements within the *ṣibyān*, and eliminated about 300 of them; he also imprisoned prominent figures in the administration and promoted a private regiment of military slaves known as the *Yānisiyya* (*Khiṭaṭ*, iii, 26-7; *Itti'āẓ*, ed. M. Aḥmad, Cairo 1919, iii, 144; Ibn Muyassar, *Akhbār*, 75; F. Daftary, *The Ismā'īlīs*, Cambridge 1992, 268). Fearful of the vizier's growing power during the nine months in office, al-Ḥāfiẓ arranged his murder by poisoning his ablutions water (*Khiṭaṭ*, *loc. cit.*; *Akhbār*, ii, 75-6). Yānis built two mosques, the *Masdjid al-Fatḥ* and the *Masdjid Yānis*, completed posthumously by his two sons (*Khiṭaṭ*, ii, 268-9, 324), whom al-Ḥāfiẓ had taken under his protection.

YANYA, the Ottoman form for YANINA, a town of the Epirus region of northwestern Greece, situated on the west bank of lake Pamvotis at an altitude of 520 m/1,700 feet and dominated by the Pindus mountains.

The date of its foundation is unknown, and though certain historians maintain that it is mentioned in a document concerning the Council of Naupactus (673), it is only mentioned for certain in a decree of the Emperor Basil II in 1020. It must have already existed for some centuries and is said to have originated from a monastery of St. John the Baptist, around which grew a settlement called Agioanneia or Agioannina. Walls were built in the 10th century, and Anna Comnena records in her *Alexiad* that these were in very good condition at the time of the Norman conquest of the town in spring 1082. Important repairs to the enceinte were not made until the end of the 18th century by 'Alī Pasha Tepedelenli [*q.v.*], with the work going on till 1815 and being accompanied by the building of a second citadel on the acropolis; within this interior fortress (*ič ḳal'e*) was 'Alī Pasha's great palace and the magazine tower (*bārūd-khāne*).

The town's history has been full of incident. After the Latin conquest of Constantinople in 1204, Michael Angelus Comnenus founded the despotate of Epirus with the intention of using it as a base for the re-establishment of the Byzantine empire. After this last was restored by the Palaeologi of Nicaea in 1261, the despots of Epirus retained their independence till 1319, when Yanina and its district came briefly under Byzantine control, till in 1346 the Serbian king Stephen IX annexed it. The Florentine Esau de Buondelmonti held it from 1385-1411, then followed two decades under the Counts of Cephalonia Charles I and II Tokkos, till the Ottoman conquest by Murād II on 9 October 1430. The town remained in Turkish hands till February 1913.

Under the Turks, Yanina, as the centre of one of the three *pashaliks* in Epirus, enjoyed a period of relative stability, with various Islamic monuments constructed, some of which still exist. According to Ewliyā Čelebi, in the later 11th/17th century it had some 30 mosques and oratories, seven *medreses*, as many *tekkes*, an *'imāret-khāne*, several schools, three caravanserais, two *ḥammāms* and 1,900 shops. The region continued nevertheless to be disturbed, especially with the rising of 1611 organised by the metropolitan of Larissa, Dionysius, which was fiercely repressed, with withdrawal of the privileges granted at the time of the town's conquest, expulsion of the Christian population to outside the walls, and the confiscation of *tīmārs* [*q.v.*] from those who held them. This Ottoman repression led to many conversions to Islam. At the end of the 18th century, Yanina was transformed by 'Alī Pasha of Tepedelen (1744-1822), appointed governor of Epirus in 1787, who governed what was in effect a quasi-autonomous state that included, as well as the *pashalik* of Yanina, part of modern Albania, Thessaly, and northern Euboea and Peloponnesus. For some thirty years, Yanina enjoyed an unprecedented prosperity until the fall and death of 'Alī Pasha in 1822.

Despite the conversions of the 17th century, the population of Ottoman Yanina remained till the end in majority Christian. The first fiscal register known to survive, from 1564, mentions 50 Muslim hearths and 1,250 Christian ones, whilst a register from 1579 also mentions Jews. When Ewliyā was there *ca.* 1670, he counted 37 quarters, almost half of these (18) being Muslim and the rest comprising 14 Christian ones, 4 Jewish ones and one of gypsies, with an estimated 4,000 hearths for the whole town. At the beginning of the 19th century, F. Pouqueville counted 3,200 hearths (2,000 of Christians, 1,000 of Muslims and 200 of Jews). In the later 19th century, this disparity continued. According to the Ottoman census of 1881-93, the central *ḳaḍā* of the province of Yanina had 4,759 Muslims, 77,258 Greek Orthodox (covering also Christian Albanian speakers), 3,334 Jews and 207 "foreigners".

If the Muslims were less numerous than the Christians, they were nevertheless very prominent in the town. Yanina was of military importance since the conquest, with a garrison of troops from all over the empire, before 1837 lodged among the population, after then in barracks and other buildings prominent in the urban landscape. These soldiers were, together with the Ottoman civilian officials, substantially the only Turkish speakers there, since the autochthonous Muslims used Albanian and, above all, Greek. These Greek speakers, known as "Turcoyaniots", were probably descended from Christian *sipāhīs* converted towards the mid-11th/17th century.

Greek was not only a demotic language but might be used by the Ottoman authorities in public acts. Thus in the last decades of the 19th century, the meetings of the municipal council were held in Greek, and the newspaper *Wilāyet*, published from 1868 onwards, was bilingual in Greek and Turkish. This preponderance of Greek was further reflected in the sphere of education. If there were several turcophone schools in the last days of Ottoman domination, the local élites continued to prefer Greek institutions, in particular the renowned Zosimaia school.

In 1913, as part of the Treaty of Bucharest ending the Balkan Wars, Yanina and southern Epirus passed to the Kingdom of Greece, and ten years later, as part of the exchanges of populations between Greece and the Turkish Republic, the Turcoyaniots left. During the Second World War, it was the turn of the small Jewish community to disappear into the Nazi extermination camps. Despite these two happenings, Yanina and its region continues to have a certain ethnic mixture; as well as Greeks, there are Albanian speakers and small groups of Vlachs.

(MEROPI ANASTASSIADOU)

YAO, a Bantu people and language (Chi-Yao), whose earliest recorded habitat lay east of the Ruvuma River in present Mozambique. At latest from the end of the 16th century, they were engaged in petty trade with Kilwa [*q.v.*] and the east coast of Africa, peddling tobacco, iron hoes and animal skins in exchange for cloth (for the well-to-do only), brassware, swords, salt and beads. Slowly an export trade in ivory developed, together with captives who had been enslaved to carry it to the coast.

This trade greatly advanced in the 18th century and reached its apogee in the 19th. By mid-19th century a series of Yao towns followed the trail from the east side of Lake Nyasa (Marawi, Malawi), in close association with Arab traders from Zanzibar, financed by Indians with Indian Ocean connections. The Arabs were few in number, and the Yao were able to acquire firearms for protection as well as for slave-catching. By 1860 it was noted that better-to-do men affected Arab dress, a sign already of acculturisation towards Islam. Only *ca.* 1880 did any substantial conversion to Islam become noticed. By then there were Yao populations in what was to become Masasi District, and separately round Songea (in present Tanzania) east of the lake. The number of adhesions to Islam greatly enhanced in the First World War, when German Benedictine missionaries working in the area were interned, leaving Christian converts leaderless, so that these last found a ready response from Islamic fraternities in both areas.

Russell and N.C. Pollock, *News from Masasi*, Beiträge zur Afrikanistik, Band 45, no. 62, Inst. für Afrikanistik und Aegyptologie der Universität Wien, 1993; and personal knowledge of both areas.

(G.S.P. FREEMAN-GRENVILLE)

YARBŪʿ (A.), the jerboa, jumping mouse or jumping hare (*Jaculus*) of the class of rodents and family of dipodids (*Dipus*).

The name jerboa is itself derived from *yarbūʿ*, which may come from Aramaic, as also the name gerbil. *Dipus* is the "two-legged rat". It holds itself up on long backlegs like the kangaroo, whilst the front legs are very short and are used to grasp prey and scrape out its burrows. In Pliny, the jerboa is often confused with the "white rat" (*Mus albus*). The Dipodid family comprises a dozen species, typified by the "Arrow-bolt jerboa" (*Dipus sagitta*). The Arabic authorities on zoology mention three kinds of jerboa: (a) *al-shufārī* "big and elongated"; (b) *al-tadmurī* "that of Palmyra"; and (c) *dhu 'l-rumayḥ* "bearing a short lance", because of its long, upright tail terminated by a brush of hair. There is a certain terminology for the jerboa. Thus its young is called *dirṣ*, pl. *adrāṣ, durūṣ*; its burrow with its several exits is called *nāfiḳāʾ* (pl. *nawāfiḳ*), *ḳuṣʿa, ḳuṣāʿa, ḳāṣiʿāʾ, ḳuṣaʿāʾ, ḳuṣayʿa* (pl. *ḳawāṣiʿ*), whence the verbs *naffaḳa* and *ḳaṣṣaʿa*, further, *damm, dumma, dumamāʾ* is found. The spoils from an excavated burrow are piled into a heap called *dammāʾ, dummāʾ, dāmmāʾ, rāhiṭāʾ, ruhaṭāʾ, ruhaṭa*. All this vocabulary of rodents, rats, mice and jerboas, is given by al-Djāḥiẓ, who devoted several chapters to the jerboa (see *Bibl.*). He mentions there that certain of the Bedouin happily eat jerboas, whilst others avoid it, considering it one of the djinns' mounts. Islamic law has varying views about the lawfulness of eating jerboa flesh, since the Prophet is said to have forbidden the killing of this little rodent.

The jerboa's name is found in several proverbial sayings of comparison: *aḍall min walad al-yarbūʿ* "more astray than the jerboa's young", and *ka 'l-mushtarī al-ḳāṣiʿāʾ bi 'l-yarbūʿ* "like someone who buys the burrow in exchange for the jerboa", meaning someone who turns away from the substance and follows (its) effect and prefers the transient to the permanent" (al-Maydānī, *Madjmaʿ al-amthāl*, ed. M.M. ʿAbd al-Ḥamīd, Cairo 1379/1959, ii, 155b, no. 3099). The jerboa's blood is said to be good as an ointment for hairiness of the eyelids, making these hairs fall out and not grow again.

Finally, in oneiromancy, seeing a jerboa in a dream reveals a person who is a voluble liar, ready to quarrel; the reasoning behind this interpretation remains enigmatic.

(F. VIRÉ)

YARBŪʿ, an important group of the tribe of Tamīm [*q.v.*] with the genealogy Yarbūʿ b. Ḥanẓala b. Mālik b. Zayd Manāt b. Tamīm (see Caskel-Strenziok, in *Bibl.*). The same name is borne by other ethnic groups not only Tamīmī (e.g. Yarbūʿ b. Mālik b. Ḥanẓala, cf. *Mufaḍḍaliyyāt*, ed. Lyall, 122, l. 18 and parallel passages) and also Yarbūʿ b. Tamīm in Caskel-Strenziok), but also of other tribes, of the south (Kalb, Saʿd Hudhayn, Djuhayna) and of the north (Ghaṭafān, Thaḳīf, Ghanī, Sulaym, Ḥanīfa, ʿĀmir b. Ṣaʿṣaʿa; we also find among the Ḳuraysh a Yarbūʿ b. ʿAnkatha b. ʿĀmir b. Makhzūm).

Yarbūʿ being the name of a rodent widely found in Arabia, the jerboa (see previous article), its application to the tribe has been taken as an example of totemism (W. Robertson Smith, *Kinship and marriage in early Arabia*², 235), a theory that is, however, now abandoned. Mythological legend, which has survived to a greater extent in this connection than elsewhere among

the traditions of the Tamīm, dwells on the mother of Yarbūʿ, Djandala bt. Fihr, of the Kināna, who is said to have been violated one stormy night by Mālik b. ʿAmr b. Tamīm and later married to him (Ibn al-Kalbī, *Djamhara*, B.L. ms. fol. 62a; *Naḳāʾiḍ*, ed. Bevan, 225, n. 1; this is perhaps an etiological myth, formed to explain certain connections between neighbouring clans). Compared with the other groups descended from Ḥanẓala, reunited under the name of al-Barādjim, the Yarbūʿ appear isolated, probably because they were powerful enough to do without a federative alliance. Indeed we find that even some of the sub-groups of the Yarbūʿ enjoy a certain autonomy, like the Riyāḥ, the Kulayb, the Salīṭ, the Thaʿlaba and the Ghudāna. They are divided into two sections, the exact nature of which we do not know: al-Aḥmāl (Thaʿlaba, ʿAmr, Subayra and al-Ḥārith) and al-Uḳad (Kulayb, Ghudāna and al-ʿAnbar). Their territory was very extensive, for we find them practically throughout the whole extent of the territory of the Tamīm, from Yamāma to below the Euphrates; but their centre was the valley of al-Hazn, of remarkable fertility (cf. Yāḳūt, *Muʿdjam*, ii, 261, iii, 870; the name of one of their oases was Firdaws al-Iyād). Although tradition mentions "towns" belonging to them (Wüstenfeld, *Register*, 254) they led a nomadic life, like most of the Tamīm.

The history of the Yarbūʿ during the Djāhiliyya is closely connected with that of the rest of the Tamīm, and on several occasions they took command in the wars of the latter. Sometimes, however, we find them engaged by themselves in war with one or another of the neighbouring tribes; thus they fought several battles alone with the Banū Shaybān, the best known being those of Dhū Ṭulūk (*Naḳāʾid*, 45-59, 73) and of al-Iyād (*ibid.*, 580-7, also known by other names), in which they took prisoner the famous Shaybānī leader Bisṭām b. Ḳays (cf. E. Bräunlich, *Bistam ibn Qais, ein vorislamischer Beduinenfürst und Held*, Leipzig 1923, *passim*) in spite of the support given to the latter by the Persian governor of ʿAyn Tamr.

At the beginning of Islam, the attitude of the Yarbūʿ was that of hostile reserve. They did not dare declare openly against the powerful prophet of Medina, but on his death they were the first to rebel. The prophetess Sadjāḥ [*q.v.*] was one of them (the tradition that makes her belong to the Taghlib seems to have little authority). To the Yarbūʾ also belonged the two brothers Mālik and Mutammim b. Nuwayra [*q.v.*], whose relations with Khālid b. al-Walīd made such a stir. After the suppression of the *ridda*, however, the Yarbūʿ like the rest of the Tamīm proved faithful to Islam and took an active part in the conquests; but their turbulent and rebellious nature was revealed in the considerable support they gave to the Khāridjīs. In the *Aghānī*[1], vi, 4, it is noted that at the battle of Dawlab, in 65/684-5, where the forces of the Azraḳīs were crushed, the leaders of the two parties, ʿUbayd Allāh b. Bashīr al-Salīṭī and al-Rabīʿ b. ʿAmr al-Ghudānī, were both of Yarbūʿ.

The many details that we possess of the deeds of the Yarbūʿ during the wars of the Djāhiliyya, and even of those of the tribal wars of the Islamic period, have survived mainly because these wars are mentioned in the verses of Djarīr (who belonged to the clan of the Kulayb b. Yarbūʿ) and because his commentators discuss them fully.

The Yarbūʿ, moreover, gave to the poetry of the pre-Islamic period and of the 1st/7th century quite a number of remarkable poets; in addition to the well-known poets, one may mention Suḥaym b. Wathīl al-Riyāḥī [*q.v.*] (cf. especially, *Aṣmaʿiyyāt*, ed. Ahlwardt, 76), Ḥāritha b. Badr al-Ghudānī and al-Sharmardal b. Sharīḳ [*q.v.*], of the Banū Thaʿlaba b. Yarbūʿ.

(G. Levi Della Vida)

YARGHU (T.), trial, interrogation, the Mongolian tribunal or court of justice (Doerfer, iv, 58 ff. n. 1784), hence *yarghuči*, a judge.

Čingiz Khān's adopted brother (or according to Rashīd al-Dīn, adopted son, *Djāmiʿ al-tawārīkh*, i/1, ed. A. Romaskevič, L. Khetagurov and A.A. Alizade, Moscow 1965, 178; *ibid.*, ed. B. Karīmī, Tehran 1970, i, 414) Shigi-Ḳutuku was made *yarghuči* at the *ḳuriltay* held in 1206 (D.O. Morgan, *The Mongols*, Oxford 1986, 97). He was to judge certain criminal cases on an *ad hoc* basis and to supervise the distribution of subject peoples and to record what was done in a "blue book" (*kökö debter*) (idem, *The "Great Yāsā of Chingiz Khān" and Mongol law in the Īlkhānate*, in *BSOAS*, xlix [1986], 164; L. Ligeti (ed.), *Histoire secrète des Mongols*, Budapest 1971, 173-4; F.W. Cleaves, *The secret history of the Mongols*, Cambridge, Mass. 1982, 143-4). Rashīd al-Dīn states that Shigi-Ḳutuku "conducted courts of enquiry justly (*yarghuhā bi-rāstī pursīdī*), and he was solicitous and helpful to many criminals and caused his words to be repeated, lest (they) should confess out of terror and fear; and he said, 'Do not be afraid, but speak the truth'. And in the discussions of the *yarghučis* it became well known from that time to this, in the country (*wilāyat*) of Mughulistān and those regions, that the foundations of the *yarghus* are laid on the regulations (*ḳawāʿid*) that he established and followed" (*Djāmiʿ al-tawārīkh*, i/1, ed. Romaskevič *et alii*, 180, quoted by Morgan, *op. cit.*, 174-5). It would seem, therefore, that a kind of case law grew up on the foundations laid down by Shigi-Ḳutuku. This is borne out by the account of the *Dastūr al-kātib* (see below). The *yarghu*, held at the court of the Great Khān was called the Great Yarghu, according to Djuwaynī, ed. Ḳazwīnī, i, 50.

Courts of interrogation were also held by Mongol *amīrs* and provincial governors. Major cases were referred by them to the Great Yarghu. The rulers of the various Mongol khānates, including the Īlkhānate in Persia, had their own *yarghus*. From Ibn Baṭṭūṭa's description of the practice prevailing under Ḳutlugh Temür, the governor of Khʷārazm in or about 734/1334, it seems that the procedure of the *yarghu* had by this time become somewhat similar to that of the *maẓālim* [*q.v.*, and see also MAḤKAMA]. Ibn Baṭṭūṭa states, "It is one of the regular practices of this *amīr* that the *ḳāḍī* comes daily to his audience hall and sits in the place assigned to him, accompanied by the jurists and his clerks. Opposite him sits one of the great *amīrs*, accompanied by eight of the great *amīrs* and *shaykhs* of the Turks, who are called *arghudjis* [i.e. *yarghučis*]. The people bring their disputes to them for decision; those that come within the jurisdiction of the religious law are decided by the *ḳāḍī*, and all others are decided by these *amīrs*" (*Riḥla*, tr. Gibb, iii, 545).

In the early years of the Īlkhānate, the cases heard in the *yarghu*, such as are mentioned in the sources, were mainly to do with Mongol state affairs, cases between Mongols or between Mongols and Persians, and concerned with sedition and irregularities over taxation.

Sharʿī courts continued to exist and their autonomy and nature were not fundamentally altered. The relation of the *yarghu* to the *maẓālim* and *ʿurfī* courts is less clear. With the conversion of Ghazan Khān [*q.v.*] to Islam there may have been a revival in the impor-

tance of the *maẓālim* jurisdiction (Lambton, *Continuity and change in medieval Persia*, London 1988, 93 ff.). Naṣīr al-Dīn Ṭūsī includes the *yarghuči* among the "men of the pen" (*Madjmūʿa-i rasāʾil az taʾlīfāt-i Khʷādja Naṣīr al-Dīn Ṭūsī*, ed. M. Riḍawī, Tehran 1957, 29. See also V. Minorsky and Mojtaba Minovi, *Naṣīr al-Dīn Ṭūsī on finance*, in *BSOS*, x, [1940-2], 758 and revised version by Minorsky in *Iranica, bīst maḳāla*, Tehran 1964, 68). In doing so he was, perhaps, influenced by the tradition relating to Shigi-Ḳutuku. In practice, *yarghučis* were probably also concerned with the apprehension of those summoned to the *yarghu* and possibly with the execution of the sentences of the court also (cf. *Tārīkh-i shāhī-i Ḳara Khitāʾiyān*, ed. M.I. Bāstānī Pārīzī, Tehran 1976-7, 156).

No one was immune from interrogation in the *yarghu*, whether a member of the royal house, an *amīr* or a high official. Ābish Khātūn, who was married to Tash Möngke, one of Hülegü's sons, was summoned to the *ordu* to answer in the *yarghu* accusations of alleged misdemeanours in Fārs (see Lambton, *op. cit.*, 273-5. See also Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, ed. Karīmī, ii, 811). Shams al-Dīn Djuwaynī [*q.v.*] was interrogated in the *yarghu* and bastinadoed before he was put to death in 683/1284 (Abū Bakr al-Ḳutbī al-Āharī, *Tārīkh-i Shaykh Uways*, ed. J.B. van Loon, The Hague 1954, 138-9). Another notorious case was that of Rashīd al-Dīn [*q.v.*], who was tried in the *yarghu* for an alleged attempt to poison Öldjeytü and was killed together with his son Khʷādja Ibrāhīm on the orders of Öldjeytü in 718/1318 (Ḥāfiẓ Abrū, *Dhayl-i Djāmiʿ al-tawārīkh-i rashīdī*, ed. Khān Bābā Bayānī, [2]Tehran AHS 1350/1971, 128).

From the documents in the *Dastūr al-kātib* of Muḥammad b. Hindūshāh Nakhdjawānī, who lived into the Djalāʾirid period, it seems that Mongol *amīrs* and soldiers were still subject to the *yarghu* down to the end of the Īlkhānate and perhaps longer. He gives the text of a document for the office of *amīr yarghu* issued in favour of a certain Amīr Bayān, who "more than any of the *amīrs* of the day was endowed with experience and knowledge of the customs and regulations (*rusūm wa ḳawāʿid*) of the Mongol sultans and *amīrs* and their *yasakhā* and *turahā*". He was to oversee the affairs of the *yarghu*, to enquire diligently into the cases of the Mongols and to act in accordance with the *ḳutatghu bilik* of Čingiz Khān and the (precedents) laid down by the great *yarghučis*. He was not to transgress by one jot the rule of justice and equity and was to decide cases in accordance with the Čingiz-khānid *yāsāḳ*. When the rightness of one of the disputants was apparent, he was to be given a *yarghu-nāma* as a record to produce should his opponent(s) trouble him again. He and his followers (*nawkarān*) and the scribe who wrote the *yarghu-nāma* were to receive the usual fee on the termination of the case (ed. Alizade, ii, Moscow 1976, 29-35).

Few details concerning the rules of procedure of the *yarghu* are available. The infliction of torture and beating by bastinado to induce confession appear to have been common. Djuwaynī describes the referral of an alleged conspiracy by a number of Uyghur leaders to massacre the Muslim population in Besh Balīgh to the Great Yarghu at Möngke Ḳaʾan's court. Written declarations of their innocence and an attestation from the *amīr* who had revealed the alleged conspiracy were taken in Besh Balīgh but no settlement was reached and so they went to Möngke's court. After confessions were extracted from the conspirators by torture, Möngke Ḳaʾan gave the order for them to be sent back to Besh Balīgh and executed (i, 35 ff.).

One of the earliest cases recorded in the Persian sources of the application of the *yarghu* to Mongols in Persia is that of Körgüz, who had been sent to Khurāsān and Māzandarān, where he had carried out a new census and reassessed the taxes. His predecessor, Edgü-Temür, and others accused him of malpractices and he eventually went to Ögedey's court to answer the accusations made against him. A *yarghu* was held, but although it sat for several months, it failed to bring about a reconciliation between the two parties. Finally, Ögedey himself sat in judgement. Edgü-Temür and his supporters were found guilty; some were beaten and others handed over to Körgüz to be put in the cangue (Djuwaynī, ii, 230 ff.). Then in 637/1239 Körgüz returned to Khurāsān. Intrigues against him continued and he again set out, probably in 639/1241-2 for Ḳaraḳorum, presumably to defend himself. However, passing through the territories of Čaghatay (who had recently died) he had an altercation with an official during which he made a remark which offended Čaghatay's widow. Fearful of the consequences he hurried back to Khurāsān. The wives and sons of Čaghatay sent after him to arrest him and bring him to Čaghatay's *ordu* at Ulugh-Ef. There the *amīrs* held a *yarghu*. Its proceedings were inconclusive, hence it was decided to send Körgüz to Ḳaraḳorum to Töregene, Ögedey's widow, who had become the regent of the empire. There it was decided that, since his alleged crime had been committed in Čaghatay territory, he should be sent back to Ulugh-Ef. Körgüz, as apparently was his wont, spoke roughly to those in charge and was killed on the spot (*ibid.*, 240 ff.). The *amīr* Arghun, who succeeded Körgüz, was also subjected to calumny and intrigue by his subordinates. He was examined by the *yarghu* at the *ordu* in 647/1249 and again in 651/1253 and cleared on both occasions. On the second, those who had accused him were handed over to him. Some were executed at the *ordu* and others he took back with him to Ṭūs, where he killed them (*ibid.*, 259-60). Three points emerge from Djuwaynī's account: first, that the *yarghu* was concerned with reconciliation as well as judgement; second, that the various Mongol kingdoms exercised a degree of independence in the administration of justice; and third, that those found guilty by a *yarghu* might be handed over to the other party for punishment. These features are also to be observed in the operation of the *yarghu* in the Īl-khānate (see further, Lambton, *op. cit.*, 83 ff.).

An early case submitted to the *yarghu* in the Īl-khānate was that of Madjd al-Dīn Ibn al-Athīr, a *nāʾib* of ʿAṭāʾ Malik Djuwaynī. Yesü-Buḳa, governor of Baghdād, reported to Abaḳa that Madjd al-Dīn had been heard to speak of the power and greatness of the Mamlūk army. This, Yesü-Buḳa alleged, showed that Madjd al-Dīn and the Djuwaynī brothers were in league with the Mamlūks. Abaḳa ordered Madjd al-Dīn to be seized. Although he was interrogated in the *yarghu* and given one hundred strokes of the bastinado, his guilt was not established and he was handed over to Shams al-Dīn Djuwaynī, who sent him to Sīwās as governor (Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, iii, 156-7. See also for a slightly different account Djuwaynī, tr. Boyle, i, pp. xxii-xxiii). Another case of alleged sedition, also during the reign of Abaḳa, is that of Angyanu. He had been sent to Fārs as governor in 667/1268-9. The vigour of his administration and his success in collecting taxes aroused opposition and alienated the Mongol *amīrs* in the province. A number of them fled the province and went to Abaḳa's court, where they accused Angyanu of planning rebellion and committing

peculation. He was summoned to the *ordu*, tried by *yarghu* and found guilty. He succeeded in exonerating himself but lost his government (Waṣṣāf, *Tārīkh*, ed. M.M. Iṣfahānī, lith. Bombay 1269/1852-3, 193, 195. See further Lambton, *Mongol fiscal administration in Persia*, in *SI*, lxv, 104-5).

There are various cases of a *yarghu* being held to look into failure in military operations. Tekelle, the Atabeg of Greater Luristān, who had joined Hülegü on his march against Baghdād, decamped with his followers (who had no experience of siege operations) when Ket-Buḳa remonstrated with him for his lack of effort in prosecuting the siege of Baghdād. After the fall of Baghdād, Ket-Buḳa was sent in pursuit of him. Eventually he was brought to Tabrīz, subjected to interrogation in the *yarghu* and executed (Muʿīn al-Dīn Natanzī, *Muntakhab-i tawārīkh-i muʿīnī*, ed. J. Aubin, Tehran AHS 1336/1957, 43). *Yarghus* held by Ghazan and Öldjeytü to investigate military failures are also recorded. The former held a *yarghu* at Ūdjān on 12 Dhu 'l-Ḳaʿda 702/28 June 1303 after the battle of Mardj al-Ṣuffar [*q.v.*] to try the *amīrs* who had been responsible for the defeat of the Īl-Khānid army. Initially, it appears that the trial was carried out by persons other than Ghazan. Rashīd al-Dīn states, "Although they (sc. the *amīrs*) had been closely interrogated, when the *yarghu-nāma* was presented to Ghazan he made a few pertinent remarks. They were then interrogated again, the points made by Ghazan being taken into consideration. Finally, on the first day of Dhu 'l-Ḥidjdja (17 July) the interrogations (*yarghuhā*) were completed and Aghutay Tarkhān, the son of Haybak Tarkhān, and Toghan-Temür of the Mangit were executed and whatever was in accordance with the Great Yāsā was carried out in every respect" (*Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 149-50). According to al-Maḳrīzī's account, the Īl-Khān was with difficulty restrained from putting the commander of the force, Ḳutlugh-Shāh, to death, and the onlookers are said to have rushed at the prisoner and spat in his face. Al-Maḳrīzī adds that Ḳutlugh-Shāh was banished to Gīlān (*Hist. des sultans mamlouks de l'Egypte*, tr. Quatremère, Paris 1837-45, ii, 204-5, quoted by Boyle, in *Camb. hist. Iran*, v, 395). There was a similar case during the reign of Öldjeytü when the Mongol army was put to flight during a campaign in Gīlān in 706/1306-7. A *yarghu* was held, and some of those found guilty were executed and others bastinadoed (Ḥāfiẓ Abrū, *Dhayl-i djāmiʿ al-tawārīkh-i rashīdī*, 76).

One of the best-documented cases of a *yarghu* held to investigate alleged peculation is that of the Shaykh al-Islām Djamāl al-Dīn Ibrāhīm b. Muḥammad al-Ṭībī, the Malik al-Islām, a rich merchant, who held an extensive *muḳāṭaʿa* [*q.v.*] for Fars during the reign of Ghazan (see Lambton, *Continuity and change in Medieval Persia*, 88-9, 335 ff.).

It was not only cases directly concerning Mongol affairs that were heard in the *yarghu*. Ḳuṭb al-Dīn, the Ḳutlugh-khānid ruler of Kirmān (632-55/1235-57), appealed to Möngke for help against his cousin Rukn al-Dīn Khʷādja Djuḳ b. Baraḳ Ḥādjib, who had turned him out of Kirmān. The case was referred to the *yarghu*. After examination, Möngke handed Rukn al-Dīn over to Ḳuṭb al-Dīn, who killed him and re-established himself in Kirmān [see further KIRMĀN, at vol. V, 161-2]. After Ḳutlugh Terken succeeded her husband Ḳuṭb al-Dīn as ruler of Kirmān, some dissatisfied persons complained against her to Arghun, the governor of Khurāsān. He realised that their reports were lies, and on his instructions Ḳutlugh Terken referred the matter to the *basḳaḳs* and *yarghučis* of the province. Those who had complained were tied up naked outside Kirmān for several days and, "as was the custom of the Mongols", interrogated until they confessed and signed statements of their guilt. Some were executed and others sent to the *ordu* (*Tārīkh-i shāhī-i Ḳarā Khiṭā'iyān*, 156. See further Lambton, *op. cit.*, 86). Another case concerning local rulers is that of Ḥusām al-Dīn ʿUmar. He had overthrown and killed Ṣamṣām al-Dīn Maḥmūd and his son and seized Lesser Luristān. He was summoned to the *ordu* after the grandson of Shaykh Zayn al-Milla wa 'l-Dīn Kāmū'ī, the brother of Ṣamṣām al-Dīn's widow, had appealed to the *ordu* for blood-wit. He was interrogated in the *yarghu* by Ghazan and killed in retaliation for the murder of Ṣamṣām al-Dīn and his son (Muʿīn al-Dīn Natanzī, 62).

A rather unusual case is that of a *yarghu* which was held to decide the possession of Sīrdjān [*q.v.*], which was disputed between Ḳutlugh Terken, the ruler of Kirmān, and the *maliks* of Shabānkāra [*q.v.*]. The matter had been discussed at Hülegü's *ordu* but not settled. However, in 663/1264-5 Abaḳa, who had succeeded Hülegü, sent two officials to Sīrdjān to hold a land court (*yarghu-yi amlāk*) and to examine the documents and title deeds of the two parties (*Tārīkh-i shāhī-i Ḳara Khiṭā'iyān*, 192, 275-6. See further Lambton, *op. cit.*, 86-7).

After the fall of the Īl-khānate, the term *yarghu* seems gradually to have fallen out of use. There are a few references to it under the Tīmūrids in the sense of both a court of interrogation and the process of interrogation (e.g. Niẓām al-Dīn Shāmī, *Ẓafar-nāma*, ed. F. Tauer, ii, 31, 89, and Khʷāndamīr, *Rawḍat al-ṣafā*, Tehran AHS 1338-51/1957-72, vi 70, 86). Niẓām al-Dīn Shāmī mentions a *yarghu-yi djangī* held by Tīmūr in Samarḳand (ii, 66); and most of the cases recorded appear to have concerned the interrogation of *amirs*. It seems that the procedures of the *yarghu* were gradually modified and transferred to the *dīwān-i buzurg* (cf. B.F. Manz, *The rise and rule of Tamerlane*, Cambridge 1989, 169).

(ANN K.S. LAMBTON)

YĀRKAND, a town of the Tarim basin, Eastern Turkestan, now coming within the Sinkiang/Xinjiang Autonomous Region of the People's republic of China and having in Chinese the (revived) name of So-ch'e/Shache (lat. 38° 27' N., long. 77° 16' E., altitude 1,190 m/3,900 feet).

Yārkand lies on the river of the same name, which rises in the northern part of the Karakoram mountains near the imperfectly delineated border between Kashmīr and China and then flows eastwards to join the Tarim river; with its perennial flow, it is the main source stream of the Tarim. The town was also situated on the southern branch of the historic Silk Route which skirted the southern edge of the Tarim basin and the Takla Makan desert, being about 220 km/138 miles from Kāshghar [*q.v.*] and 320 km/182 miles from Khotan [*q.v.*], in the computation of mediaeval Islamic travellers, four days' and then ten days' march respectively (cf. Minorsky (ed. and tr.), *Sharaf al-Dīn Ṭāhir Marwazī on China, the Turks and India*, tr. London 1940, 18). Since caravan routes from the upper Oxus region and the Pamirs joined the southern Tarim basin route at Yārkand, it was always a significant trading centre (the Portuguese missionary Benedict de Goës, en route from India to China in 1603, noted that the caravan from Kābul terminated at what he calls *Hiarcàn* and a fresh caravan was put

together for the journey onwards to China: see Yule-Cordier, *Cathay and the way thither*, London 1914-15, iv, 215-22). Also, the fertile, well-irrigated oasis surrounding the town has always supported a considerable agricultural population; the present one is estimated at 60,000. See Sir Aurel Stein, *Ancient Khotan*, Oxford 1907, i, 87-9.

Little is known of the pre-Islamic history of Yārkand. Like Kāshghar, Khotan and other towns of the region, it was probably a foundation of the Indo-European Sakas, and a *Saka-rādja* is mentioned who may have been the ruler of Saka, the older name of Yārkand, cf. the Sha-ch'a of the Chinese annals of the 1st century B.C. (the Chinese forms for what appears to be the town of Yārkand are discussed in detail by P. Pelliot, *Notes on Marco Polo*, Paris 1959-73, ii, 880-2). The language of the people of Yārkand, as also those of Kāshghar, would thus have been, at this time, an Indo-European one similar to the Iranian tongues of Khotan, Tumshuk, etc. In this 1st century B.C., the king of Sha-ch'a paid tribute to the Hsiung-nu of the northern and western fringes of China, and in the 1st century A.D. the king Hsien (*r.* 33-61) for a brief period extended his power across the "Western Region" as far as Farghāna and Kuča, whilst the later Han were distracted by internal problems and the Hsiung-nu were in a weakened condition (see W. Samolin, *East Turkestan to the twelfth century, a brief political survey*, The Hague 1964, 28-30; R. Grousset, *The empire of the steppes. A history of Central Asia*, New Brunswick, N.J. 1970, 37, 39-41, 43; D. Sinor (ed.), *The Cambridge hist. of early Inner Asia*, Cambridge 1990, 128, 146, 173). From about this time, Mahayana Buddhism began to spread in the Yārkand oasis, as elsewhere in Eastern Turkestan, amongst other things bringing Sanskrit as an hieratic language; the early 7th century pilgrim Hüan-tsang/Xuan-zang, returning from India to China, found many Buddhist monasteries at *Che-ku-ka* = Yārkand, though several were in ruins (T. Watters, *On Yuan Chwang's travels in India*, London 1904-5, ii, 293-5). The later 7th century and the later 8th century saw periods of domination by the Tibetans over much of the southern Tarim basin (see C.I. Beckwith, *The Tibetan empire in Central Asia. A history of the struggle for great power among Tibetans, Turks, Arabs, and Chinese during the early Middle Ages*, Princeton 1987, 28 ff., 34 ff., 42, 102-3, 152-7), but the Iranian-speaking, Buddhist city-state of Yārkand continued under its own rulers, like those in neighbouring Khotan, at first subject to the T'ang emperors of China, but with an infiltration of Turkish ethnic elements. A Uyghur state was established in the northern part of the Tarim basin after 843, and in the 10th century the Karluk Karakhānids [see ILEK-KHĀNS] moved across the T'ien-shan into the western Tarim basin. Khotan became Muslim in 396/1006, so the establishment of the new faith at Yārkand must have taken place at some previous date with the advent of the Karakhānids. Certainly, the Buddhist religion, and the local Iranian and "Tokharian" languages, began to disappear as part of the eventual Islamisation and Turkicisation of the whole of the Tarim basin. See in general on this period, Samolin, *East Turkestan to the twelfth century*, esp. 61-3, 69-70, 80-2; *EIr*, art. *Chinese Turkestan. II. In pre-Islamic times* (V. Mair and P.O. Skjaervø).

The actual name Yārkand is first attested for certain in Maḥmūd al-Kāshgharī's *Dīwān lughāt al-turk* (later 5th/11th century) (tr. Atalay, i, 484, cf. Brockelmann, *Mitteltürkischer Wortschatz*, Budapest 1928, 244). Pelliot, *Notes on Marco Polo*, index, iii, 295, propounded a Turco-Iranian etymology for this toponym, Tk. *yār* "cliff" (but more precisely, it would seem, "eroded, vertical bank or gorge of a river", see Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 953-4) + Ir. *kand/kend* "town". We possess coins from the Karakhānid Eastern Khānate, which was based on Kāshghar, minted at Yārkand (thus spelt on the coins) in 404/1013-14 by Nāṣir al-Dawla Malik al-Mashrik Kadïr Khān Yūsuf b. Bughra Khān Hārūn or Ḥasan (d. 423/1032) and by his son Sulaymān Arslān Khān (d. 449/1057-8) (see Barthold, *Turkestan down to the Mongol invasion*, 281; E. von Zambaur, *Die Münzprägungen des Islams zeitlich und örtlich geordnet*, Wiesbaden 1968, i, 272; T. Mayer, *Sylloge numorum arabicorum Tübingen. Nord- und Ostzentralasien. XV b Mittelasien II*, Tübingen-Berlin 1998, 72-3). It is strange that the *Ḥudūd al-ʿālam* (372/982-3) mentions Kāshghar, Khotan and possibly some minor places along the southern Tarim basin route but not Yārkand (cf. map iv in Minorsky's tr. at 261). We possess some information reflecting social and cultural conditions in the Yārkand oasis under the Karakhānids in the later 5th/11th and early 6th/12th centuries from a collection of legal documents that were found in a garden there in 1911 and preserved by Sir George Macartney, the then British Consul-General at Kāshghar. They are in Arabic and in Turkish, the latter written in both the Uyghur and Arabic scripts, and cover the years 473-529/1080-1135. They give the name *Yār.k.n.d.h* (thus spelt) mostly to the district or *kūra*, but also to the town or *balda* itself, and through their use of standard Islamic legal formulae and phraseology show that Islamic faith and culture had well penetrated life in the Yārkand oasis by the end of the 11th century. One document, from Dhu 'l-Ḥidjdja 474 or 494/May 1082 or September-October 1101 mentions the then ruler in Kāshghar as Abū ʿAlī al-Ḥasan Tafghač Bughra Kara Khākān b. Sulaymān Arslan Kara Khākān, i.e. the ruler of the Eastern Khānate 467-96/1075-1103 and dedicatee of Yūsuf Khāṣṣ Ḥādjib's *Kutadghu bilig* [*q.v.*, and see ILEK-KHĀNS at Vol. III, 1114a]. See, on this collection of documents, much commented upon but with the originals now disappeared, Monika Gronke, *The Arabic Yārkand documents*, in *BSOAS*, xlix (1986), 454-507, with detailed bibl. of previous work on the collection at 506-7. Towards the middle of the 6th/12th century, the Karakhānids fell under the general suzerainty of the Western Liao or Kara Khitay [*q.v.*]. Chinese sources state that in 1123 the Gür Khān Ye-liu Ta-shi invaded the Tarim basin from the region northwest of Shensi in China and captured Kāshghar, Yārkand and Khotan; but the Arab historian Ibn al-Athīr records a victory in 522/1128 by the ruler of the Eastern Khānate, Arslan Khān Aḥmad or Hārūn b. Ḥasan over the Kara Khitay (ed. Beirut, xi, 83).

In the 7th/13th century, again according to Chinese histories such as the *Yüan-shi*, after his killing of the Nayman chief Küčlüg, Čingiz Khān sent an expedition into Eastern Turkestan, and Kāshghar, Yārkand and Khotan surrendered to the Mongols; subsequently, the Great Khān ordered 13 water-stations to be set up between Yārkand and Khotan (E. Bretschneider, *Mediaeval researches from East Asiatic sources*, London 1910, i, 234, ii, 47-8; river communication between the two towns seems to be implied). When Marco Polo passed through Yārkand (his *Yarcan*) in *ca.* 1274 en route for China, he noted the presence there of Nestorian and Jacobite Christians as well as the majority Muslims, and observed that the population there suffered much from goitre (a fact later confirmed by European travellers

such as Sven Hedin); the town belonged to a nephew of the Great Khān, i.e. of Ḳubilay [*q.v.*], whilst Kāshghar and the lands beyond belonged to "Great Turkey", the empire of Ḳubilay's rival Ḳaydu [*q.v.*] (Yule-Cordier, *The Book of Ser Marco Polo*, 3London 1902, i, 187-8; Barthold, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, Berlin 1935, 187).

Eastern Turkestan now came within the dominions of the Čaghatayids, with Yārkand as one of the *Altï Shahr* or "Six Cities" (with Aḳsu, Uč Turfan, Ḳuča, Kāshghar and Khotan). The Čaghatayids' rival Tīmūr sent an expedition into Kāshgharia led by his grandson Iskandar Mīrzā b. ʿUmar Shaykh in 802/1399-1400, which captured Kāshghar, Yārkand and Aḳsu. Nevertheless, for over two-and-a-half more centuries the region continued to form part of the Čaghatayid Khānate, but with members of the powerful Turco-Mongol Dughlāt family, influential in the region since the later 8th/14th century, as actual rulers. In 920/1514 Mīrzā Muḥammad Ḥaydar Dughlāt ejected a usurper from Kāshgharia and restored Čaghatayid suzerainty there, making Yārkand his capital, having irrigation canals dug in the oasis and building a citadel in the town with six gateways and an inner *arg* (Mīrzā Muḥammad, *Tārīkh-i Rashīdī*, ed. and tr. N. Elias and E. Denison Ross, *A history of the Moghuls of Central Asia*, London 1895, Introd. 11, 122, tr. 296-8; see also DŪGHLĀT). Towards the end of the 10th/16th century, the *ordo* or centre of power of the Čaghatayid ʿAbd al-Karīm Khān b. ʿAbd al-Rashīd was usually at Yārkand, where his brother Muḥammad had succeeded him when Benedict de Goës passed through in 1603. But from this same time onwards, the power of the Naḳshbandī religious line of the *sayyid* Khodjas [*q.v.* in Suppl.] grew in Kāshgharia, with the Āfāḳiyya or Aḳtaghlïḳ, "People of the White Mountains", lineage exercising real power at Yārkand. The Čaghatayids lingered on till the second half of the 11th/17th century, when they were extinguished (1089/1678) and Kāshgharia united under the theocratic rule of the Khodjas as protégés of the Mongol Oyrats or Kalmuks [*q.v.*] centred on the Ili basin and Dzungaria. Thus the charismatic Khodja, Ḥaḍrat Āfāḳ/Apak Hidāyat Allāh, was installed at Yārkand and Kāshghar in 1091/1680, Yārkand now becoming for the remainder of this century and for over half of the next one the capital of the Khodjas. In the 1750s, the Khodja Ḳïlïč Burhān al-Dīn led a Muslim crusade against the infidel domination of the Kalmuks, but this brought down in 1758 a Chinese army which, after annexing Dzungaria three years previously, turned on the Khodjas and captured Yārkand; Kāshgharia was now annexed to the Ch'ing/Qing empire. See Grousset, *The empire of the steppes*, 425-6, 459, 485, 500-1, 527-8; *EIr*, art. *Chinese Turkestan. v. Under the Khojas* (Isenbike Togan).

The Chinese maintained Yārkand rather than Kāshghar as their capital for the new province. But Ch'ing authority in Central Asia declined over the next decades, and from 1820 onwards, when the Khodja pretender Djahāngīr returned from Khokand and launched a rebellion in the Altï Shahr, there were a series of revolts by the Turkish Muslims of the province, culminating in the outbreak at Yārkand in August 1863 which signalled the great rebellion of the Khoḳandī Muḥammad Yaʿḳūb Beg [see YAʿḲŪB BEG], who proclaimed himself Khān of Eastern Turkestan at Kāshghar (1867-77). We owe knowledge of Yārkand at this time to the published accounts resulting from British missions at this time to Yaʿḳūb Beg, that of the merchant R.S. Shaw in 1868 and those of the Government of India envoy Sir Thomas D. Forsyth in 1870 and 1873. After the suppression of Yaʿḳūb Beg's movement, the three regions of "Uyghuristān", Altï Shahr and Dzungaria were formed into the new imperial province of Sinkiang "New Territory" (1884). The Chinese *Tao-t'ai* or Circuit Commissioner made his residence at Kāshghar rather than Yārkand, and it was at this former town that Russian and British consulates were now established.

In the 20th century, Yārkand was involved in several "Turco-Islamic" secessionist movements of the Uyghur Turks in the southern Tarim basin during the 1930s and 1940s, the era of the warlords in China, since southern Sinkiang was a stronghold of conservative Islamic religious sentiment. In March-May 1933 both Old Yārkand (= the traditional Muslim town) and New Yārkand (= the Chinese and other non-Turkish town) fell to troops of the secessionist "Khotan Islamic Government" under the *amīr* ʿAbd Allāh Khān, with a total collapse of Han authority in southern Sinkiang. This last was restored by the warlord Sheng Shih-ts'ai, with considerable Soviet Russian backing, but a further revolt, the so-called "Sabīl Allāh" one, involved the occupation of Yārkand from April to September 1937 by anti-Sheng, anti-Communist Turkish rebels, and it was likewise involved in the 1945-6 anti-Chinese and anti-Russian revolt against Kuomintang misrule in Sinkiang. Similar outbreaks are reported to have occurred in southern Sinkiang in the 1950s and possibly later, but massive Han Chinese immigration after the imposition of Communist rule in 1949 has meant that secessionist movements have had less and less chance of success. See A.D.W. Forbes, *Warlords and Muslims in Chinese Central Asia. A political history of Republican Sinkiang 1911-1949*, Cambridge 1990, 68, 77-9, 140 ff., 204-6.

(C.E. BOSWORTH)

YARLÏGH, YARLÏḲ, a term of Inner Asian Turkish origin, employed in the chanceries of the Mongol empire and in those of certain of its successor states both before and after their Islamisation, in its original (i.e. pre-Mongol and pre-Islamic) meaning of "[Imperial] decree, edict, command". In general, in Islamic chancery practice, *yarlïghs* are contextually equivalent to the more specific documentary forms of *firmān, ḥukm* or *barāt* [*q.vv.*; and see DIPLOMATIC. iii]; cf. Clauson, *Dictionary*, 966: "a command from a superior to an inferior, sometimes with some connotation of a grant of favour"; *Drevnetyurskii slovar'*, 242, s.v. *jarlïγ*: "prikaz, predpisanie, ukaz".

In Old Turkish, *yarlïgh* is a typical Uyghur word: it is not attested in the (Oghuzian) runic (Orkhon) inscriptions, and is expressly denoted by al-Kāshgharī

as a non-Og͟huz word, employed by the Čigil to denote an imperial writing or command (*yarlig͟h huwa kitābu 'l-sulṭān wa-amruhu bi 'l-lug͟hati čigil wa-lā ta'rifuhu 'l-g͟huzziya*). Conversely, the term appears in the Uyg͟hur runic mss. In Ottoman usage (where it is chiefly used to refer to the edicts of the Crimean *k͟hāns*) it is, the above usage apart, an exotic loan-word known in only a few texts (*TTS*, i, 789, ii, 1006) and documents (see below). In Arabic (Mamlūk) usage, one encounters the broken plural form *yarālig͟h/yarālīg͟h* (also *yārlīg͟hāt*, cf. al-Ḳalḳas͟handī, *Ṣubḥ*, vii, 229, 230; Björkman, *Beiträge*, 47, 128: *bārlig͟hāt* [sic] "Reisepass", with reference to Ilk͟hānid usage).

The Turkish word *yarlig͟h* is a second-period (sc. 8th-13th centuries) loan-word in Mongol (*jarlïγ*) as a technical administrative term for a government edict (Clauson, *loc. cit.*; N. Poppe, *The Turkic loan words in middle Mongolian*, in *CAJ*, i [1955], 38). (The once widespread view, put forward by e.g. Spuler, *Goldene Horde*[1], 306, n. 2, and previously by Russian scholars from the mid-19th century onwards, such as V.V. Grigor'ev, that "Džarlyḫ" [*sic*] is a Mongol word, cannot now be substantiated.) As a loan-word, it was specifically employed in imperial (i.e. K͟hāḳānic) decrees (*qaan jarlïγ manu*, "unser kaiserlicher Erlaß", A.P. Grigor'ev, *Mongol'skaya diplomatika XIII-XV vv.*, Leningrad 1978; cf. E. Haenisch, *Zu den Briefen der mongolischen Il-khane Argun und Öljeitu an den König Philipp den Schönen von Frankreich (1289 u. 1305)*, in *Oriens*, ii [1949], 222) and in, e.g., the *Secret History*, whereas documents emanating from subordinate members of the Čingizid dynasty utilised the phrase *üge manu* "our word (sc. decree)". For the use of the Turkish term *sözüm[iz]* "my/our word" (calqued from the Mongol *üge manu*) as a validating formula or associated with the *tug͟hrā* [*q.v.*] in later *yarlig͟hs* and other documents; see the discussion in Fekete, *Arbeiten der grusinischen Orientalistik*, 13 ff. (Fekete's misreadings of Crimean Tatar documents in this context are corrected by Mary Ivanics, *Formal and linguistic peculiarities*, 215 n. 15).

The route of transmission of the term from pre-Islamic Uyg͟hur to Islamic usage must have been via the use of Uyg͟hur scribes in Mongol service producing chancery documents in Mongolian and Turkish (see, for a detailed discussion and analysis, A.P. Grigor'ev, *op. cit.*). From the prestige and widespreadness of the term in Čingizid usage stems not only its reborrowing into e.g. south-western Turkish but also its presence from the Mongol period with the same meaning in Russian (*yarlïk*: first occurrence 1267; Vasmer, *Russisches etym. Wörterbuch*, Heidelberg 1958, iv, 493) and in many other languages of Eurasia, including 7th/13th century Og͟huz (A.M. S͟hčerbak, *Oguzname*, 11, 21). It was also still current at this time with its old (sc. Uyg͟hur/Buddhist) secondary meaning of "Divine command" amongst the Nestorian Christians of Central Asia (C. Džumagulov, *Yazîk siro-tyurskik͟h pamyatnikov Kirgizii*, 91 ff.); for further borrowings see Doerfer, *Elemente*, iv, 153-8, no. 1849. The word survives at the present day in Russian with the meaning "label, tag".

Čingizid *yarlîg͟hs* were written in Chinese (cf. E. Chavannes, *Inscriptions et pièces de chancellerie chinoises de l'époque mongole*, in *T'oung-pao*, sér. 2, v [1904], 357-447, vi [1905], 1-42, ix [1908], 297-428, *passim*); in Mongol, in both Uyg͟hur and quadratic scripts; and in Ḳîpčaḳ Turkish. The language used in the earliest *yarlîg͟hs* of the Golden Horde remains a matter of dispute. The earliest documents still extant as originals date from the later 8th/14th century and are written in Ḳîpčaḳ Turkish, in Uyg͟hur characters. It has been suggested by A.P. Grigor'ev, on the basis of his reconstruction of early texts surviving only in Russian translation, that the earliest Golden Horde edicts were also written in Mongolian (cf. also the exhaustive study by M.A. Usmanov, *Žalovannye aktî Džučieva ulusa, XIV-XVI vv.*, Kazan 1979). The most important surviving document written in Turkish is the *yarlîg͟h* of Toḳtamîs͟h K͟hān [*q.v.*] for Jogaila Algirdaitis (Jagiello), Grand Duke of Lithuania and king (as Władysław II) of Poland (1386-1434), which was issued "in camp on the river Don" "in the Year of the Fowl, 8 Radjab 795 [/20 May 1393]" (reproduction of the first 13 lines of the document in Reychman and Zajączkowski, *Zarys*, 103 = *Handbook*, 155; transcription-text in Kurat, *Yarlık ve bitikler*, 147). This document lacks almost all evidence of Islamic influence over the original Mongol form, possessing no *invocatio* and only the most basic form of *intitulatio* and *inscriptio* (*Toḳtamîs͟h sözim/Yagaylaga*); yet the year of issue is given in both its Twelve-animal cycle and *Hidjrī* forms; the month and day of issue follow the Muslim calendar. (The use of the Twelve-animal cycle in conjunction with *Hidjrī* dating lasted in Crimean and Ottoman usage until the mid-to-later 9th/15th century.) Under the Il-k͟hāns [*q.v.*], the texts of *yarlig͟hs* were also engraved in stone. Cf. W. Barthold, *Die persische Inschrift an der Mauer der Manūčehr-Moschee zu Ani*, in *ZDMG*, ci [1951], 241-69 (Russian original in his *Sočineniya* iv, Moscow 1966, 313-38); P. Wittek, *Ankara'da bir Ilhani kitabesi*, in *Türk Hukuk ve İktisat Tarihi Mecmuası*, i (1931), 161-4; cf. idem, *Zur Geschichte Angoras im Mittelalter*, in T. Menzel (ed.), *Festschrift Georg Jacob*, Leipzig 1932 (= idem, *La formation de l'empire ottoman*, ed. V.L. Ménage, London 1982, no. III), 347-8.

Mongol, pre-Islamic concepts thus lingered in the forms and usages employed in post-Čingizid *yarlîg͟hs* long after the formal Islamisation of the rulers who issued them. The designation *yarlîg͟h* (e.g., as in the combination *ḥukm-i yarlîg͟h*) remained current in Persia until the end of the 9th/15th century [see DIPLOMATIC. iii] and in the successor states of the Golden Horde for much longer. The well-known *yarlîg͟h* of the first k͟hān of the Crimea, Ḥādjdjī Girey I, dated 857/1453 (see below), combines, after the *basmala* (serving, as noted, as *invocatio*) the following assertions of divine authority, set out in three equally prominent lines: (1) [Arabic-Islamic] *bi 'l-ḳuwwati 'l-Aḥadiyya wa 'l-mu'djizāti 'l-Muḥammadiyya* ("through the strength of the One and the miracles of Muḥammad"); (2) [Turkish-Mongol/Islamic]: *Mängü-Täñri küčinde Muḥammad Resūlü'llāh wilāyetinde* ("in the strength of the Great God [and] in the protection of Muḥammad the Prophet of God"); and (3) [Turkish]: *Ḥādjdjī Girey sözim* ("Ḥādjdjī Girey—my decree"). (For a discussion of the adoption (in 932/1525) of this "Mongol-Crimean assertion of the source of authority" into Ottoman chancery practice, see V.L. Ménage, *On the constituent elements*, 300 ff.) *Yarlîg͟hs* of the later k͟hāns of the Crimea conform much more closely in both form and language to contemporary Ottoman usage (A. Bennigsen *et alii*, *Le Khanat de Crimée dans les archives du musée du palais de Topkapı*, Paris-The Hague 1978; but cf. the useful corrections and amplifications by V. Ostapchuk, in *Harvard Ukrainian Studies*, vi/4 [1982]), 500-28, and *Turcica*, xix [1987], 247-76; there is a valuable discussion and analysis of *yarlîg͟hs* in Crimean chancery practice in Ivanics, *Formal and linguistic peculiarities*, *passim*; cf. also Fekete, *Einführung in die osmanische Diplomatik*, Budapest 1926, pp. lxi-lxii; J. Matuz, *Krimtatarische Urkunden im Reichsarchiv zu Kopenhagen*, Freiburg 1976).

As mentioned above, *yarlîg͟hs* also served the same

function as the *barāt* [*q.v.*; and see SOYŪRGHĀL], i.e. as a diploma of investiture and a grant of immunities. The khāns of the Golden Horde and its successor dynasties not only issued diplomas of investiture to e.g. the subject princes of Rus', and the Metropolitans of All Rus', employing their issue and the ever-present threat of their summary withdrawal as a powerful means of political control over their tributary principalities, but also large numbers of so-called *tarkhanlīk yarlīghs*, or grants of privilege/immunity from taxes and services in kind, to their own subjects (specimen text in Kurat, *Yarlık ve bitikler*, no. 4, 62-80, a document of Ḥādjdjī Girey 857/1453. Cf. also the studies by Halasi-Kun, Grigor'ev, and Muhamedyarov and Vásáry as detailed in *Bibl.* below, all with useful discussion and analyses. Comparable documents were issued by the Il-khānid rulers of Persia and their political successors (cf. Minorsky, *A soyūrghāl of Qāsim b. Jahāngir Aq-Qoyunlu (903/1498)*); in Ottoman usage, exemption documents of a similar nature are known as *muʿāfiyet-nāme*).

Yarlīghs issued down to the early 9th/16th century were validated by the *khān*'s *al-tamgha*. This was a quadrilateral seal impressed, usually in vermilion, sometimes in black, blue or gold, either towards the head or at the foot of the document, and over the pasted joins of individual sheets making up the roll. Later *yarlīghs* of the Golden Horde largely followed Ottoman practice, making use of a *penče* [*q.v.*]-type *ṭughra* for documents issued by the *khān* or the immediately subordinate members of the dynasty (*kalgha, nūreddīn*) plus the formula *sözümiz* at the head of the document (see ṬUGHRA, and cf. Matuz, *Krimtatarische Urkunden*, 77-80 and facsimiles).

Jnal. of Slavic Linguistics and Poetics*, xi (1967), 33-47. (C.J. HEYWOOD)

YARMŪK, the main left bank affluent of the Jordan river [see AL-URDUNN. 1], famed in history as the site of a historic battle between the Arabs and Byzantines.

1. Geography.

The Yarmūk flows into the Jordan some 9 km/5 miles to the south of Lake Tiberias, with headwaters on the southwestern slopes of the Ḥawrān [*q.v.*] in southern Syria. It follows a deeply-incised valley which nevertheless provides the main access through the eastern wall of the Jordan rift valley, the Ghawr or Ghōr, to the north-south routes along the western fringes of the Syrian Desert. As such, it was followed, with difficulty, by the narrow-gauge railway from Ḥayfā via Samākh to Darāʿa/Deraa, where it connected with the Ḥidjāz railway [*q.v.*]. In Antiquity, it was called by Pliny the Elder, *Natural history*, v. 74, the Hieromix or Hieromices. Part of the river's lower course today forms the political boundary between Syria and Jordan. The waters of the Yarmūk could irrigate the Jordan valley if its lowermost course were to be diverted to Lake Tiberias as a reservoir for its waters; but this would entail the improbable co-operation of Syria, Jordan and Israel.

Brice, *A systematic regional geography. VIII. South-west Asia*, London 1966, 217, 223-5, 339, 369-72. (C.E. BOSWORTH)

2. The battle.

This was fought near the confluence of the Yarmūk River and the Wādī 'l-Ruḳḳād, which today marks part of the border between Jordan and Syria, and it determined the fate of Byzantine Syria. The Byzantine Emperor Heraclius, who was not personally present, in early 636 collected a very substantial Byzantine and Christian Arab force in order to reverse recent Muslim victories in Syria, Transjordania and Palestine, and to drive the Muslims out of Syria and Palestine. The site strategically included high ground, water supplies, pasture and domination of important routes between Damascus and Galilee (see 1. above). It was an important sedentary base and crucial pasture-grounds of the Ghassān [*q.v.*], and lay near the intersection of four Byzantine provincial boundaries. A major battle had previously taken place near it in 614, at which the Persian general Shahrbarāz had inflicted a resounding defeat on the Byzantines, opening the way into Palestine for the Persians. The terrain's strategic significance was apparent to both sides and in theory was familiar to them. On the eve of the battle, the Byzantines had not succeeded in developing any effective new tactics or strategy for checking the Muslims.

The battle of the Yarmūk or Djābiya lasted more than a month if one includes the preliminary manoeuvrings. It began in the vicinity of al-Djābiya [*q.v.*], the traditional base of the Ghassān, with these manoeuvrings, and terminated on 12 Radjab 15/20 August 636. Byzantine forces had come from Ḥimṣ (Emesa) under the general Vahān, who was probably the *Magister Militum per Orientem*, and Theodore Trithurios, the *Sakellarios* (Treasurer). Djabala b. al-Ayham [*q.v.*], king of the Ghassān, led Ghassānid forces. Other Christian Arabs, whom Heraclius had recruited in upper Mesopotamia and elsewhere, participated. There are contradictory reports concerning whether Theodore, the brother of Heraclius, was present. Although he participated in planning some of the campaign, Theodore had probably been recalled to Constantinople in disgrace before the final stages of the battle. Muslim forces under Abū ʿUbayda b. al-Djarrāḥ [*q.v.*] withdrew from Ḥimṣ and Damascus in the face of the approach from the north of stronger Byzantine armies. They retired to a line between Dayr Ayyūb and Adhriʿāt [*q.v.*], where they waited for more than a month, in a topographically strong position, to deter any Byzantine move further south. On 13 Djumādā II 15/23 July 636 the Muslims won an initial clash near al-Djābiya. The Byzantines attempted to use the waiting period to familiarise their forces with the Muslims and, unsuccessfully, to encourage desertion and dissension within Muslim ranks. Both sides received reinforcements, but the decisive clash took place when the Muslims were continuing to gain more reinforcements. The Byzantines, together with their Christian Arab allies, probably enjoyed numerical superiority, having troops that totaled up to 15,000 to 20,000 men, possibly even more.

By a feigned retreat, the Muslims lured the Byzantines into attacking Muslims and their camp near Dayr Ayyūb. The Muslims penetrated the exposed Byzantine left flank, and then exploited gaps that yawned between Byzantine foot and cavalry. Byzantine infantrymen apparently attempted to lock shields and to engage in intricate and complicated and risky exercises (the so-called "mixed formation") that involved opening the ranks of foot for horsemen to pass through and then relocking shields. Poor Byzantine coordination allowed the Muslims to exploit the gap and to slay many exposed Byzantine infantry. Byzantine forces withdrew into territory that lay between the Wādī 'l-Ruḳḳād and Wādī 'l-ʿAllān, both west of the Wādī 'l-Ḥarīr, to what they believed to be a secure encampment that received protection from the high bluffs of the wadis. But in a night raid, the Muslims under Khālid b. al-Walīd [*q.v.*] seized the critical bridge over the Wādī 'l-Ruḳḳād, which offered the only viable retreat route for the encircled men and animals of the Byzantine army. The Byzantines found themselves blocked and could not retreat in formation, or fight their way out, or negotiate a reasonable settlement. The Byzantines panicked, having learned that they were cut off. The Muslims stormed their camps between the wadis as well as at the village of Yāḳūsa, on the edge of the Djawlān [*q.v.*]. The Byzantines lost cohesion and most were slaughtered, although a few may have managed to flee down the steep walls of the wadis. The Muslims took few or no prisoners. Some Christian Arabs allegedly wavered in their loyalty to the Byzantine cause and managed to flee, which aided the Muslims. One Muslim tradition reports that some dejected and defeated Byzantine troops, having perceived the hopelessness of their situation, fatalistically awaited their slaughter.

The battle destroyed the only viable Byzantine army in Syria and its commanders, and it ceased to exist as a fighting force. A rout ensued. For the Muslims, the victory eliminated the possibility of any Byzantine penetration further south, reconfirmed Muslim control of Palestine and Transjordania, and opened the way for the Muslim conquest of the Biḳāʿ [*q.v.*] valley, Damascus and beyond it, all of Syria. The Muslims consolidated their victory by a rapid and far-stretching and ruthless pursuit of retreating Byzantines, giving them no respite. The battle had great psychological as well as material effects: it broke the will of the Byzantines to give more open battle. The Byzantines henceforth avoided open battle with the Muslims in Syria and upper Mesopotamia, and ended their efforts to recover or hold Syria. Together with Heraclius, who was staying first at Ḥimṣ and then at Antioch, they evacuated northern Syria and withdrew into Anatolia, where the emperor attempted to improvise new defences.

The Byzantines had suffered logistical problems on the eve of the battle. They lacked experience in handling and supplying large numbers of troops in the regions of these operations, and this inexperience may have contributed to their logistical problems and to tensions with local civilians. Byzantine leaders found it difficult to procure adequate supplies from local inhabitants on the eve of the engagements. Manṣūr son of Sergius, the local fiscal official at Damascus, refused to provide supplies to the unprecedentedly large Byzantine forces. These last included heterogeneous ethnic elements, many of whom had no experience in operating or fighting in the region. There was probably mistrust, misunderstandings and friction between Greeks, Armenians and Christian Arabs within the Byzantine forces. There is no indication that the local inhabitants participated in fighting on either side. The Byzantines were already suffering psychological shock from a series of recent defeats at the hands of the Muslims. Muslim losses were considerable, but far smaller than the human and material ones of the Byzantines. But all statistics for the battle, both numbers of combatants and numbers of casualties, should be regarded with suspicion.

The account that Ibn ʿAsākir preserved in his *Taʾrīkh Madīnat Dimashk* is probably the best. No documentary records or eyewitness accounts survive. Memory of the actual facts of the battle soon faded and quickly became embellished with legends. The magnitude of the Muslim victory received instant recognition and continued to resound later in the 7th century. The military manual entitled the *Strategikon* of Maurice, although written *ca.* A.D. 600, provides some reliable insight into actual contemporary Byzantine fighting techniques and logistics that were probably utilised in the battle. The reigning Byzantine Heraclian dynasty appears to have attempted to shift the responsibility for the disaster from itself to others: to an alleged abortive rebellion of the Armenian Byzantine general Vahān or to the failure to follow Emperor Heraclius' injunctions to watch out for Arab ambushes, or to the adverse climate. There is no evidence that Christian religious dissension affected the outcome. Muslim writers later celebrated the role of Islamic religious zeal, but superior Muslim leadership as well as superior morale, including confidence that derived from their recent pattern of successes, were important factors in their victory.

YAʿRUBIDS (a., pl. Yaʿāriba, sing. Yaʿrubī), a dynasty of ʿUmān [*q.v.*] who ruled the country, mostly from al-Rustāḳ but also from Djabrīn [*q.vv.*] and al-Ḥazm, *ca.* 1024-1164/1615-1749. There are a number of different versions of the date on which the first *imām* of the dynasty, Nāṣir b. Murshid, was given the oath of allegiance: al-Sālimī (ii, 4) suggests it was 1024/1615, whereas Nāṣir's biographer, ʿAbd Allāh b. Khalfān b. Ḳayṣar (13), and the author of *Kashf al-ghumma*, Sirḥān b. Saʿīd b. Sirḥān (Ross, *Annals*, 46), give 1034/1624. The origins of the dynasty are not entirely clear. Wilkinson (*Imamate*, 219) supposes them to be of the Nabāhina, but he quotes another tradition which has them of al-Azd.

The 11/17th century saw ʿUmān free of external forces and united, with the rulers free to pursue an active naval policy against the Portuguese and one of expansion overseas, particularly in East Africa. In fact, their struggles against the Portuguese were so successful that ʿUmān became the major maritime power in the Indian Ocean, taking over the Portuguese previous position. Maritime power meant that commercial prosperity and profits were put back into trading interests and also into the building of palace fortresses at home. Nāṣir's successor, Sulṭān b. Sayf I (1059-91/1649-80) began the process by building the massive round fort of Nizwā [*q.v.*]. His son and successor Balʿarab (1091-1104/1680-92) built the magnificently-decorated fort of Djabrīn and redeveloped the agricultural lands in the area. Balʿarab's brother and successor, Sayf b. Sulṭān I (1104-23/1692-1711) presided over the zenith of ʿUmānī sea power and Mombasa, Kilwa and Pemba were captured by the ʿUmānīs as they waged war on the Portuguese with their greatly expanded navy, and they compelled the Persians to grant them right of entry into the Gulf. Internally, Sayf repaired water channels (sing. *faladj*) seventeen major ones in all, developed land and planted extensive date and coconut palm groves.

Sayf's son, Sulṭān II (1123-33/1711-19), extended ʿUmānī overseas power yet further with the conquest of al-Baḥrayn [*q.v.*]. He also built the fine fortress of al-Ḥazm which became his residence. But the great wealth brought with it problems. The Yaʿrubī state had become a society of rich merchants and landlords exploiting a class of peasants and slaves. At his death in 1133/1719, Sulṭān left only a minor as his successor, Sayf II. The *ʿulamāʾ* stepped in, unable to support the Yaʿrubī policy of dynastic succession any longer, and put forward their own contender for the imāmate. A confused period of civil war followed, with Sayf returning to the imāmate in 1141/1728. His later intrigues with the Persians, allowing them to enter internal ʿUmānī politics and the struggle for the imāmate, further exacerbated the situation. Sayf died in 1156/1743. Power eventually passed to one Aḥmad b. Saʿīd, who had been appointed Sayf's *wālī* in Ṣuḥār, and who had finally expelled the Persians from ʿUmān. Aḥmad belonged to the Āl Bū Saʿīd [*q.v.*] who have ruled ʿUmān to this day.

Bibliography: The best ʿUmānī sources for this period are ʿAbd Allāh b. Khalfān b. Ḳayṣar, *Sīrat al-Imām Nāṣir b. Murshid*, ed. ʿAbd al-Madjīd Ḥasīb al-Ḳaysī, Muscat 1977, the biography of the first Yaʿrubī *imām*; Sirḥān b. Saʿīd b. Sirḥān, *Kashf al-ghumma*, tr. E.C. Ross in *Annals of Oman*, Calcutta 1874, repr. Cambridge 1984, 44-57 (up to the year 1728 only); and ʿAbd Allāh b. Ḥamīd al-Sālimī, *Tuḥfat al-aʿyān bi-sīrat ahl ʿUmān*, ii, 3-150. Of modern sources, J.C. Wilkinson, *The Imamate tradition of Oman*, Cambridge 1987, is excellent, with a comprehensive family tree of the Yaʿrubī *imāms* with dates at 13 and an historical summary of the period at 217-25. Wilkinson's *Water and tribal settlement in south-east Arabia*, Oxford 1977, also has some useful remarks on the dynasty, as does his *A short history of Oman from earliest times*, Muscat 1972, 5-8.

(G.R. Smith)

YĀS, Banū, a conglomeration of tribes which in the 18th century ranged in the interior of al-Ẓafra [*q.v.*; see also al-djiwāʾ; dubayy], the region in the United Arab Emirates [see al-imārāt al-ʿarabiyya al-muttaḥida, in Suppl.] extending southward from the Gulf. The island of Ṣīr Banī Yās [*q.v.*] is mentioned by the Venetian traveller Gasparo Balbi in 1580, who thus implies that the Banū Yās were already in the area at that time (Slot, *The Arabs*, 39-40, 143). They are also mentioned in the early 17th century (Slot, *op. et loc. cit.*) and by Niebuhr in the 18th century (*Beschreibung*, 342). The town of Abū Ẓabī [*q.v.*] is said to have been founded by them at about 1174/1760-1. In 1209/1794-5 Shakhbūṭ b. Dhiyāb of the Āl Bū Falāḥ, the ruling family of Abū Ẓabī settled in the town. The Banū Yās resisted the Wahhābī invasions of 1800-14 [see wahhābiyya], which earned them friendly relations with Saʿīd b. Sulṭān of the Āl Bū Saʿīd [*q.v.*]. In the early 1820s, the Banū Yās, led by a certain Suwaydān b. Zaʾal, who appears to have been head of the Mahāriba section of the Banū Yās, made maritime depredations from al-Dawḥa [*q.v.*, and see also Lorimer, *Gazetteer*, i, pt. III] (Doha) in Ḳaṭar, bringing Abū Ẓabī close to war with Baḥrayn. The raiding ceased when Suwaydān returned to Abū Ẓabī in 1828. The economic interests of the Banū Yās lay mainly in the date groves of al-Djiwāʾ (Līwā) and in the pearl fisheries around Dalmā Island. Unlike the al-Ḳawāsim [*q.v.*], they thus were far from the navigation channels of the Gulf and therefore had no conflict with the British at sea. In 1835, however, severely depressed by prolonged warfare with the al-Ḳawāsim and by the loss of the annual pearl fishery for several years running, they made a wholesale attempt upon the trade of the Gulf in order to redress their revenues. Outfought and scattered by the British [see ḳurṣān. iii], they had to pay fines for piracy and many emigrated to al-ʿUdayd, an inlet (*khawr*) in southern Ḳaṭar, causing much friction between Ḳaṭar and Abū Ẓabī. They left al-ʿUdayd in 1878 and returned to Abū Ẓabī in 1880.

In the modern Gulf States, the Mazrūʿī [*q.v.*] are

regarded as an Abū Ẓabī section of the Banū Yās.

(E. van Donzel)

YĀSĀ (thus the usual orthography in Arabic script, Mongolian *jasaq, jasaγ*, see Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iv, 71-82 no. 1789 s.v. *yāsāq*) may be translated variously, according to context, as "law" or, virtually synonymous with *yarlīgh* [*q.v.*], as "decree" or "order". Hence the sources for the Mongol period speak of what is generally called "the Great *Yāsā* of Čingiz Khān", in the sense of a comprehensive legal code laid down by the founder of the Mongol empire; but in many if not most instances of the use of the term, a specific decree is what is meant. In some cases it is far from certain which sense was in the mind of the writer.

1. Amongst the Mongols.

The traditional view of the Great *Yāsā* is that it was laid down by Čingiz as a written legal code, probably at the *ḳuriltay* [see ḳūrīltāy] of 1206 which affirmed and proclaimed his supremacy over the tribes of Mongolia and which preceded the Mongol campaigns of conquest in China and Central Asia. There are serious difficulties in accepting this view: these are discussed in mongols. 3. The evidence does not support the notion of a written legal code dating from 1206, and indeed it is very difficult to demonstrate with any degree of certainty that a written code ever existed. D. Ayalon showed that most of what we known about the contents of the Great *Yāsā* derives from al-Djuwaynī's account of it (*The Great* Yāsa *of Chingiz Khān: a reexamination. A*, in *SI*, xxxiii [1971], 97-140, repr. in his *Outsiders in the lands of Islam: Mamluks, Mongols and eunuchs*, London 1988). Al-Djuwaynī (i, 16-25; Djuwaynī-Boyle, 23-34) certainly tells us that certain of Čingiz's decrees had been written down in a Great Book of *Yāsā*s (*yāsā-nāma-i buzurg*), and that this book was taken out, consulted and its precepts followed by the Mongol élite whenever appropriate. But the matters with which these *yāsā*s were concerned were more administrative than technically legal (the organisation of the hunt, the army and the postal courier system).

Nevertheless, there is no doubt that a Great *Yāsā* was believed to exist, and that it was regarded as embodying the founder of the dynasty's unalterable decrees on all manner of state and legal matters. It has been suggested, on the basis of Chinese evidence, that a written version may have been first promulgated in 1229, two years after Čingiz's death, at the *ḳurilitay* that proclaimed the accession of his son Ögedey [*q.v.*] as Great Khān (I. de Rachewiltz, *Some reflections on Cinggis Qan's* Jasaγ, in *East Asian History*, vi [1993], 91-104). However, the view presented in mongols. 3., that there may never have been a written version, and that as an oral body of laws and precepts, remembered as having been laid down by Čingiz, it continued to be augmented by Mongol rulers after his time, appears still to be a likely interpretation of the scanty evidence. If there was more to it than that, the evidence would in all probability be much less scanty than it is. The Great *Yāsā* remained of great symbolical importance, not least in the Islamic world, as an entity conceived as being in opposition to the *Sharīʿa* (see 2. below).

Bibliography: In addition to the references in the article, see the studies cited in mongols. 3. (particularly, for the interpretation of the evidence advanced here, D.O. Morgan in *BSOAS*, xlix/1 (1986), 163-76). P. Ratchnevsky's biography of Čingiz Khān, listed there, has been skilfully translated into English by T.N. Haining as *Genghis Khan. His life and legacy*, Oxford 1991 (see especially, for the *Yāsā*, 187-96).

(D.O. Morgan)

2. Amongst the Mamlūks.

The constituting of the Mongol empire in Western Asia had a great impact on the Mamlūks. The two great powers were enemies for some three-quarters of a century, but relations were necessarily close, and the two groups of Mongols and Mamlūks felt themselves as ethnically close, sharing a common *djinsiyya* (cf. D. Ayalon, in *SI*, xxxvi [1972], 117 ff., xxxviii [1973], 148-52). The Mamlūks [*q.v.*] drew their military slave manpower from lands under Mongol control, in particular from South Russia and the Dasht-i Ḳïpčaḳ [*q.v.* in Suppl.], and soldiers coming to Egypt and Syria from the lands of the Golden Horde Khāns included, as well as Ḳïpčaḳ and other Turks, Turkicised Mongols and some pure Mongols. Other, free Mongols arrived in Egypt as an element of the *Wāfidiyya*, amongst whom the Oyrat were notable in the last four decades of the 7th/13th century and especially in the reigns of Baybars I [*q.v.*] and Kitbughā, the latter himself from the Oyrat [see wāfidiyya].

Whether the Mamlūks had access to a text of the Great *Yāsa* attributed to Čingiz Khān [see above, 1.] is problematical, even though a source like Ibn Taghrībirdī attributes its introduction to Baybars I, an admirer of the Mongols. There is no evidence that there existed a copy of this within the Mamlūk Sultanate. Few Mamlūk *amīr*s can have been expert in Mongolian, and even fewer in the Uyghur script which must have preceded the apparent adoption of the Arabic script for diplomatic documents between the Mongols and Mamlūks in the 8th/14th century (al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, 167, states that the correspondence of the Golden Horde Khāns with the Mamlūks was *bi ʾl-lugha al-mughuliyya bi ʾl-khaṭṭ al-ʿarabī*).

The veracity of a passage in al-Maḳrīzī's *Khiṭaṭ*, ed. Būlāḳ, ii, 220, stating that his source, one Abū Hāshim Aḥmad b. al-Burhān, had seen a copy of the Great *Yāsa* in the Mustanṣiriyya library in Baghdād, was questioned also by Ayalon. He believed that al-Maḳrīzī introduced this passage, with its description of the alleged contents of the *Yāsa* (in fact, derived from Ibn Faḍl Allāh al-ʿUmarī and, ultimately, from al-Djuwaynī), because the *ḥādjib*s or chamberlains, acting as judges, and especially of the Mamlūks, were applying administrative law, *siyāsa* and the practice of *al-naẓar fī ʾl-maẓālim*, as complements to the *Sharīʿa* and were, in the historian's view, encroaching upon the *ḳāḍī*'s sphere. To combat this tendency, al-Maḳrīzī asserted that the *siyāsa* of the *ḥādjib*s was nothing but the *Yāsa*, whch was the antithesis of the *Sharīʿa*. He even claimed (perhaps with his tongue in his cheek) that the word *siyāsa* derived etymologically from *Yāsa* (see *Khiṭaṭ*, ii, 220-1; and see siyāsa. 1, at Vol. IX, 694a, and 3., at 696a).

The earliest reference to the Mongol *Yāsa* amongst the Mamlūks found by the late D. Ayalon was in al-Ṣafadī, *Aʿyān al-ʿaṣr* (cited in *SI*, xxxviii [1973], 134-5), in which an *amīr* and confidant of Sultan al-Nāṣir

Muḥammad b. Ḳalāwūn [*q.v.*] in the first half of the 8th/14th century, Aytamis̲h̲ al-Muḥammadī, is said to have mastered the Mongolian language for diplomatic purposes, to have studied closely the *sīra* of Čingiz K̲h̲ān and to have judged the élite members of the *k̲h̲āṣṣakiyya* [*q.v.*], the royal bodyguard, according to the *Yāsa* of Čingiz. Another of the sultan's *amīrs*, Ariḳṭāy, is also said to have been knowledgeable about the *Yāsa*. Ayalon's conclusion (*pace* the assertions of A.N. Poliak, in *REI*, ix [1935], 213-48, and *BSOS*, x [1940-2], 862-76, that Mongol influence in the Mamlūk state was pervasive and lasted until the dynasty's end) was that, even if the *Yāsa* had played some rôle in early Mamlūk society, this cannot have been long sustained, given the fact that the *Yāsa* and other Mongol customs must have been losing ground within the territories directly ruled by the Mongols, a process accentuated by the conversion to Islam of most of the Western Asian Mongols during the first decades of the 8th/14th century.

Bibliography: In addition to references in the text, see the thoroughgoing study of D. Ayalon, *The Great* Yāsa *of Chingiz Khān, a re-examination*, in *SI*, xxxiii (1971), 97-140, xxxiv (1971), 151-80, xxxvi (1972), 113-58, xxxviii (1973), 107-56, repr. in his *Outsiders in the land of Islam: Mamluks, Mongols and eunuchs*, Variorum, London 1988, no. IV; R. Amitai-Preiss, *Ghazan, Islam and Mongol tradition. A view from the Mamluk Sultanate*, in *BSOAS*, lix (1996), 1-10.

(C.E. Bosworth)

YASAḲNĀME [see ḳanūnnāme].

YĀSAMĪN, Yāsimīn, Yāsamūn (a.), a masc. noun denoting the jasmine shrub, of the Oleaceae tribe, family of jasmines (Jasminaceae).

It was cultivated for its yellow or white or purple flowers and for the oil obtained from it by distillation. In the poets, the abbreviated forms *yāsam, yāsim*, are found. Several sub-species of jasmine are found in the Arabic-speaking lands, sc. (a) *Jasminum floribundum*, called *habb al-ẓalīm* "male ostrich seeds"; (b) *J. fructicans*, called *yāsamīn al-barr* "country jasmine"; (c) *J. grandiflorum*; (d) J. *grasissimum*, called *ḳayyān* "flourishing, blooming", and *suwayd* "blackish", proper to Yemen; (e) *J. officinale*, called *ḳīn, sid̲j̲illāṭ*; and (f) *J. sambac* or *Nyctanthes sambac* or *Mogorium sambac*, called *full*, the Arabian jasmine cited by al-Ḳazwīnī for certain of its properties and effects. According to Ibn Sīnā, jasmine used in a lotion, either dried or fresh, gets rid of freckles. Too much inhaling of its odour yellows the face and causes migraine, whilst its oil, *duhn al-yāsamīn*, taken in a potion cuts off catarrhal mucus.

Bonnier and G. de Layens, *Flore de France, Suisse et Belgique*, Paris 1974, 211; A. Issa, *Dictionnaire des noms des plantes/Muʿd̲j̲am asmāʾ al-nabāt*, Cairo 1981, 101.

(F. Viré)

YASAWĪ [see aḥmad yasawī].

YASAWIYYA, a Ṣūfī brotherhood present in Transoxania, in K̲h̲ʷārazm, in the Kazak̲h̲ steppe and in the Tatar world in Eastern Turkestān, in Turkey, in China and even in India.

Its eponymous founder was Aḥmad Yasawī (d. 562/1166-7 [*q.v.*]). It had as its centre the town of Yasi (or Ḥaḍrat), modern Turkistān [*q.v.*] in present-day Ḳazak̲h̲stān [*q.v.* in Suppl.], where the mausoleum of the founder described as "the Kaʿba of Turkistān" (cf. Bernardini) is situated. Concerning the spiritual filiation of the Yasawiyya, the Naḳs̲h̲bandī sources (e.g. Fak̲h̲r al-Dīn ʿAlī b. Ḥusayn Wāʿiẓ Kās̲h̲ifī, *Ras̲h̲aḥāt ʿayn al-ḥayāt*, ed. ʿAlī Aṣg̲h̲ar Muʿīniyān, Tehran 1977, 17) maintain that Aḥmad Yasawī was a disciple of Abū Yūsuf Hamadānī (d. 534/1140), the inspiring force behind the *ṭarīḳa-i k̲h̲ʷād̲j̲agān*, but this is erroneous. Recent work shows on the contrary that the Yasawiyya belong to the movement of the Mubayyiḍiyya ("those dressed in white"), a S̲h̲īʿī sect which brought together the supporters of Abū Muslim [*q.v.*] after his death, and which integrated certain Manichaean and Zoroastrian beliefs (cf A. Muminov, *Mübeyyidiyye-Yaseviyye alâkası hakkında*, in *Bir*, i [Istanbul 1994], 115-23). The Mubayyiḍiyya stemmed from the Kaysāniyya [*q.v.*], one of the most radical S̲h̲īʿī groups, who recognised the imāmate of Muḥammad b. al-Ḥanafiyya (d. 81/700 [*q.v.*]) and awaited his return. They were protected by the Turkish dynasty of the Ḳarak̲h̲ānids at the beginning of its period of power. In one of the oldest genealogies of Aḥmad Yasawī, translated from Arabic into Eastern Turkish in 590/1291 (Mawlāna Ṣafī al-Dīn Orunk Kūlāḳī, *Nasab-nāma*, ed. A. Muminov and Z. Žandarbekov, Turkistān, Ḳazak̲h̲stān 1992, Turkish tr. K. Eraslan, *Mevlānā Safiyyü'd-dīn, Neseb-nāme tercümesi*, Istanbul 1996), there is mention of a certain Isḥāḳ Bāb, who certainly seems to have been, according to Muminov, Isḥāḳ al-Turk (cited in al-Nadīm, *Fihrist*), a supporter of Abū Muslim, who had come from Damascus to Central Asia in 150/767-8 to propagate Islam in Farg̲h̲ānā and in Eastern Turkistān, and to convert the Zoroastrians (*mūg̲h̲*) and the Christians (*tarsā*). According to al-Nadīm, *loc. cit.*, Isḥāḳ Bāb professed to be the successor to Zoroaster and the rites of the Mubayyiḍiyya, according to al-Maḳdisī, resemble those of the "dualists" (*zindīḳ*) (Barthold, *Turkestan*, 199-200). According to the *Nasab-nāma* cited above, Aḥmad Yasawī was descended from ʿAlī Murtaḍā (ʿAlī b. Abī Ṭālib) and from Muḥammad b. al-Ḥanafiyya. His spiritual master, Arslan Bāb, was the leader of the Mubayyiḍiyya in Utrār [*q.v.*], and it was as a representative of this movement that Aḥmad Yasawī was sent to Yasi. The Ṣūfī schools of Bag̲h̲dād and of K̲h̲urāsān did not form an essential part of the development of the Yasawiyya, even though several of their mystical themes are subsequently to be found in the Yasawī texts. To establish what were the primitive practices of the order it is not possible to follow blindly the poetry (*hikmat*) attributed to Aḥmad Yasawī, for it is known that it was largely the work of later Yasawīs. It should be noted that in the *Nasab-nāma*, Aḥmad Yasawī and his disciples followed an orthodox Islam (construction of mosques, mausoleums and Ṣūfī hospices, *k̲h̲ānaḳāhs*) and that their Ṣūfism was essentially based on a privileged relationship with the Prophet K̲h̲iḍr and the practice of retreat (*k̲h̲alwa*).

The representatives (*k̲h̲alīfa*) of Aḥmad Yasawī, such as Ḥakīm Atā (d. 582/1183) or Saʿīd Atā (d. 615/1218), and the disciples of their disciples, such as Zangī Atā, Uzūn Ḥasan Atā, Sayyid Atā, Ismāʿīl Atā, Isḥāḳ Atā, Ṣadr Atā, etc., preached Islam in the region of the Volga, of K̲h̲ʷārazm, in eastern Turkey, and as far as India (*Ras̲h̲aḥāt ʿayn al-ḥayāt*, 17-30; ʿAlī S̲h̲īr Nawāʾī, *Nesāyim ül-mahabbe min s̲h̲emāyim il-fütüvve*, ed. Eraslan, Istanbul 1979, 385). Then, according to the *S̲h̲ad̲j̲arat al-Atrāk* (written in the 16th century), Sayyid Atā, at the beginning of the 16th century, is supposed to have converted Uzbek K̲h̲ān, the leader of the Golden Horde, to Islam. They also assisted the emergence in K̲h̲ʷārazm of an influential Yasawī line of descent, the Atāʾiyya (i.e. of Sayyid Atā, 14th century; cf. D. DeWeese).

From the 13th century onwards, fleeing from the

Mongols, the Yasawī shaykhs arrived in Anatolia and became involved with an order of kalandars called Ḥaydariyya, founded by Ḳuṭb al-Dīn Ḥaydar al-Zāwa'ī (d. 1221, cf. Ahmet Yaşar Ocak), who has been stated to be a disciple of Aḥmad Yasawī (*Nesāyim ül-maḥabbe*, 383-4; Ḥādjdjī Bektāsh Welī, *Wilāyet-nāme. Manakıb-ı Hünkār Hacı Bektāsh-ı Veli*, ed. A. Gölpınarlı, Istanbul 1958, 9-11). The Anatolian mystical movements issuing from the Ḥaydariyya, such as the Bektāshiyya, called upon the patronage of Aḥmad Yasawī who thus appeared to be a heterodox Ṣūfī, which he was not in Central Asia. The same phenomenon of the absorption of the Yasawiyya by the Ḳalandariyya or the association of the Yasawiyya with the heterodox Ṣūfī orders, was recorded in other regions of the Muslim world: in the north of India where an alleged descendant (?) of Aḥmad Yasawī, Sharaf al-Dīn Turk Pānīpānī (d. 1349-50), was found leading a branch of the Čishtī ṭarīḳa (cf. Th. Zarcone); in Eastern Turkestan (cf. the *Dīwān* of Muḥammad Ṣādiḳ Zalīlī, 18th century, ed. Imīn Tursun, Peking 1985); and in certain regions of Mā warā' al-nahr (e.g. Khʷādja Ḳalandar in the 18th century, who was thought to be a descendant of Aḥmad Yasawī, according to Riḍā Fakhr al-Dīn, in *Athar*, i/2 (Orenburg 1901), 44).

In the 14th to 15th centuries the Yasawiyya were in competition with the Naḳshbandiyya, who criticised various aspects of their doctrines and practices, such as the principle of the hereditary succession for the position of shaykh, the ʿAlid origins of the order, the practice of repetitive oral prayer (*dhikr djahrī*) called "*dhikr* of the saw (*arra*)" (in Arabic, *dhikr al-minshār*) (cf. H. Algar; J. Fletcher) which gave the Yasawiyya the name of *Djahriyya*. Over against this prayer, the Naḳshbandīs set the silent repetitive prayer (*dhikr khafī*) and, finally, the Naḳshbandīs criticised the dance (*samāʿ*) of the Yasawiyya. These two brotherhoods competed with each other, for the Yasawiyya did not proselytise exclusively among the nomads of the steppe, but equally among the sedentary inhabitants of Transoxania, where they played both a political and a social role. There was not, however, an equal sharing of influence between the Yasawiyya and the Khʷādjagān-Naḳshbandiyya according to ethnic linguistic, economic or regional criteria, as is made clear by DeWeese, *The Mashā'ikh-i Turk and the Khojagān: rethinking the links between the Yasavī and Naqshbandī Sufi traditions*, in *Jnal. of Islamic Studies*, vii/2 [1996], 180-207). At the beginning of the 16th century an influential branch of the Yasawiyya (the offshoot of a spiritual line of descent from Zangī Atā and Ṣadr Atā) known as ʿAzīziyya and remaining true to the customs and practices of the order (preserving the *dhikr* of the saw, the *khalwa* and the dance) was established in the region of Samarḳand by Kamāl al-Dīn ʿAzīzān (d. 912/1507), who was called "the second Aḥmad Yasawī". It spread out as far as Harāt in Afghānistān. The principal figures of this branch were ʿAzīzān Shaykh Khādim (d. 1573), then ʿAzīzān Shaykh Djamāl al-Dīn (d. 1505) and Khudāydād ʿAzīzān (d. 1532). In the same period, several practices of the Yasawiyya were adopted by important Naḳshbandī shaykhs: Muḥammad Ḳāḍī, who was the first to adopt the retreat (*khalwa*), and Mawlānā Khʷādjagī Kāsānī Dakhbidī (Makhdūm-i Aʿẓam), who demonstrated that dance (*samāʿ*) and the *dhikr* of the saw were not contrary to the *Sharīʿa* (for the shaykhs of the ʿAzīziyya and their practices, see Muḥammad ʿĀlim al-Ṣiddīḳī al-ʿAlawī, *Lamāḥāt min nafaḥāt al-Ḳuds*, Tashkent 1909, written in 1034/1625). The shaykhs who came from Central Asia and belonged to this movement could be found in other parts of the Muslim world, such as Turkey, India and Syria. They declared themselves to be members of the Naḳshbandiyya, sometimes from the Yasawiyya or even quite frequently they belonged to both orders at the same time (cf. Zarcone; Hazini, *Cevāhiru 'l-ebrār min emvāc-ı bihār*, ed. Cihan Okuyucu, Kayseri 1995, an ed. of ms. no. 3893 from the Istanbul University Library, dated 1002/1593-4).

In the 16th and 17th centuries the Yasawiyya finally disappeared in favour of the Naḳshbandiyya, but in the 18th and 19th centuries references were still made to Yasawī shaykhs, who were apparently isolated and who numbered among their ranks some who declared themselves to be descendants of Aḥmad Yasawī (cf. Riḍā Fakhr al-Dīn, in *Athar*, i/2 (Orenburg 1901), 44, and i/5 (1903), 228). However, the Yasawiyya acquired an important popular dimension, particularly among the nomads. Consequently, the successors of the Yasawī shaykhs centralised their activities around the mausoleums of the *bāb* of the Mubayyiḍiyya and those of the Yasawī saints. They abandoned the role of the shaykh of the brotherhood in favour of that of intercessor with the saints on behalf of pilgrims. It was in this form that the Yasawiyya have survived the Soviet period and lasted right up to the present day, despite the continued attacks of Marxist propaganda which denounced its "reactionary, feudal and clerical" aspects (cf. A. Bennigsen; Ch. Lemercier-Quelquejay; K. Çağatay; Zarcone).

It is possible today to determine the genealogical lines of the families that represented it, thanks to the genealogical documents (*shadjarat idjāza*) bequeathed to their families by their ancestors. These families are chiefly located in the south of Ḳazakhstān (Dasht-i Ḳipčak, Turkistān, Čimkent), where they are known as *khʷādja* (with the family names Aḳḳorghan, Khurāsān, Duāna, Ḳilīshti, Sabīlt, etc.), and in Turkmenistān among the *Awlād* tribes (the tribes of Atā, Khʷādja) (cf. S.M. Demidov, Muminov and K. Tayžanov). The Yasawiyya have disappeared from the other regions of the Muslim world except for Xinjiang (People's Republic of China), where they were still attested at the beginning of the 20th century, mingled with the Ḳalandariyya (cf. G. Jarring).

Three types of writings have been ascribed to Aḥmad Yasawī and to the Yasawiyya. The principal type is the *Dīwān-i ḥikmat*, of which a great number of manuscripts and several editions exist, which essentially can be classified as poetry (*Divân-hikmet'ten seçmeler*, ed. Eraslan, Istanbul 1983; and the *Divan-ı hikmet*, ed. Yusuf Azmun, Istanbul 1994). Secondly, there is the *Faḳr-nāma*, a short text in prose, which probably was used to introduce the first group (Eraslan, *Yesevī'nin Fakr-nâmesi*, in *Türk Dili ve Edebiyat Dergisi*, xviii, Istanbul 1977, 45-120). The third group, called the *Risāla*, largely ressembles the previous one. The *Dīwān-i ḥikmat*, a collection of poetry in Eastern Turkish, has been so enriched over the centuries that no one any longer knows whether certain poems were really written by the founder of the order (cf. Borovkov). This poetry, which was printed for the first time at Kazan in 1887, has as its themes divine love, unity with God, love of the Prophet, loyalty to the (Sunnī) tradition of the Prophet, encouragement of the practice of religion, privation and asceticism, and love of humanity. These poems were sung during ceremonies and are still sung today (Raziya Sultanova, *Poyushčee slovo uzbekskikh obryadov* (*Opït liričeskogo issledovaniya*), Tashkent 1994). Other poets and Ṣūfīs subscribe to this literary and mystical tradition inaugurated by Aḥmad Yasawī which has permeated all Central Asian literature: Turcoman;

Transoxanian, with Īshān Iḳānī (the *lakab* of Kamāl al-Dīn ʿAzīzān), Ḳul ʿUbaydī (perhaps the pseudonym of the *khān* Özbeg ʿUbayd Allāh himself) and ʿAẓīm Khʷādja Īshān (cf. ʿAẓīm Khʷādja Īshān, *Ḥikmat*, Tashkent 1894-5, repr. 1993; ʿAbd al-Raʾūf Fiṭrat, *Aḥmad Yasawī*, in *Maʿārif wa okituwčī*, Tashkent 1927, 6, 7, 8; and Begali Kasimov); also Tatar literature, especially where this has given rise to a school of literature where the chief important names, after Aḥmad Yasawī and his disciple Sulaymān Bāḳirghānī (Ḥakīm Atā), in the 18th and 19th centuries were Bashīr b. ʿAbd Allāh, ʿAbdī and ʿAbd al-Salām (cf. ʿÄziz ʿÄli Rähim, *Tatar ädäbiyati tarikhi*, Kazan 1923, 84-119; and E. Sibgatullina). After its publication had been forbidden in the Soviet period, the *Dīwān-i ḥikmat* has been reprinted in Uzbekistān and in Ḳazakhstān with other works concerning the Yasawiyya and their representatives.

YASH [see Suppl.].

YASHM (P.), the Persian term for the mineral generally termed jade. This is made up of one or the other hard, fine-grained translucent stones jadeite or nephrite, the first a silicate of sodium and aluminum and the second a silicate of calcium and magnesium. Both may be white or colourless, but are often found in a variety of other colours, such as green, brown, yellow, etc., because of the presence of traces of other elements such as iron, chromium and manganese.

1. In Islamic history.

Nephrite was known to Eastern Turkic peoples as

kash (see Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 669-70), to the Mongols as *khas* and to the Chinese, who much prized it for artistic purposes, as *yü*. The Persian word has passed into Arabic usage. The English, French and German words "jade" have no connection, as was earlier suggested, with the name of the ancient Turks' so-called "rain stone" (*yada tash* [*q.v.*]) (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian words and phrases*, ²London 1903, 444-5).

The prime source for the nephrite used in the Islamic world, as in China, was the region of Khotan [*q.v.*] in the southern part of the Tarim basin [*q.v.*] of eastern Turkestan, where recovery of jade from local rivers is mentioned in Chinese sources as far back as the early 7th century A.D. Already in Maḥmūd al-Kāshgharī's time (11th century), two rivers flowing by Khotan were known as the Ürüñ Kash and the Ḳara Kash "White Jade" and "Black Jade", from the varieties of jade recovered from them respectively (*Dīwān lughāt al-turk*, tr. Atalay, iii, 152, tr. Dankoff and Kelly, ii, 226). On his journey from Kāshghar of 1895, Sven Hedin found jade on sale in Khotan and visited the site to the north-east of the town where jade was obtained from the bed of the Ürüñ Kash (*Through Asia*, London 1898, ii, 748, 754). Islamic geographers had known of its origin there from the 10th century, at a time when Khotan was not yet Muslim; the author of the *Ḥudūd al-ʿālam* (372/982) states that "jade stone" (*sang-i yashm*) came from the rivers of Khotan (tr. Minorsky, 85-6, § 9.18, comm. 234).

2. In Islamic art.

Jade, or more properly nephrite, is mentioned in texts as early as the 2nd/8th century, but the first surviving objects of jade carved in the Islamic lands date only from the 9th/15th century, after 828/1424-5, when the Tīmūrid prince Ulugh Beg (796-853/1394-1449), grandson of Tīmūr and governor of Samarḳand, defeated the ruler of Mogholistān [*q.v.*] and gained access to the jade mines there. There is no evidence that earlier lapidaries worked the stone, but fine jade objects were produced for the next five centuries, mainly for princes and courts in the eastern Islamic lands, where jade vessels were commonly believed to counter the effects of poison.

The first and largest jade object produced in the Islamic lands is the cenotaph of dark green jade over Tīmūr's grave in the Gūr-i Mīr in Samarḳand. Measuring 1.92 × .36 × .30 m, the block is engraved on the upper face with a niche and an inscription about Tīmūr's ancestry, as well as the history of the particular stone, which was seized as booty along with another block and dragged back to Samarḳand. As the carving is that of a skilled mason rather than of a lapidary, the cenotaph must have been carved in the Tīmūrid capital where there was no indigenous jade-working tradition.

A group of drinking vessels, probably intended for wine, is also associated with Ulugh Beg and likewise attributed to Samarḳand. These include four cups with handles carved in the shape of a dragon's head. One made of olive-green jade in the British Museum, London (OA 1959.11-20.1(36)) is inscribed on the bottom with Ulugh Beg's name and the title *gūragān*, implying that it was made before he acceded to the sultanate in 850/1447. An oval cup of green jade in Varanasi (Banares Hindu University, Bharat Kala Bhavan, 3/8860) is also inscribed with Ulugh Beg's name. A similar but anepigraphic cup of almost black jade, showing green only in strong light, also in the British Museum (1961.2-13,1) and another cup that the Ṣafawid Shāh ʿAbbās I (*r.* 995-1038/1587-1629) gave to the dynastic shrine at Ardabīl and is now in the National Museum of Iran, Tehran, can be associated with the two inscribed cups. These cups owe their form to the type of Chinese water reservoir called a *cheng*. Such cups with dragon-handles were prized by the Mongol rulers of Persia and Central Asia, and silver and gold examples were excavated at New Saray, the Golden Horde capital on the Volga. The awkward carving of some pieces, such as the handle on the inscribed piece in London, leaves no doubt that these jade cups were carved in Islamic Central Asia.

Other drinking vessels made for the Tīmūrids take the form of a globular jug with a short cylindrical neck and an S-shaped dragon handle, secured by rivets. The most impressive is a white jade example in the Gulbenkian Foundation, Lisbon (328). Inscribed around the neck with Ulugh Beg's name and regnal titles, the jug can be attributed to 851-3/1447-9 and may have been made to commemorate his accession to the sultanate. Based on the shape, other jugs can also be assigned to this group and dated to the second half of the 9th/15th century. They include an undecorated drinking pot of green jade in the Sackler Gallery, Smithsonian Institution, Washington, D.C., and one in the Museum of Natural History in Paris once belonging to Louis XIV. A pear-shaped example in a private collection (see Pinder-Wilson, fig. 5), like the Paris jug, has a small projection at the back of the neck pierced with a tiny hole by which a lid was once attached. Another pot of very dark green jade in the British Museum (1945-10-17-257) has lost its handle.

A third shape of jade drinking vessel associated with the Tīmūrids is a bowl. A dark green example in the Louvre (MR199) is bell-shaped, like Chinese porcelains, and carved with chinoiserie decoration of lotus blossoms on a gracefully curving scroll. The poem inscribed in cartouches on the exterior links it to a hemispheric bowl of striped agate in the Art and History Trust Collection (on loan to the Sackler Gallery, Smithsonian Institution, Washington, D.C.), which was made in 876/1471-2 for the Tīmūrid ruler Sulṭān Ḥusayn Bayḳara and was similarly inscribed with a poem in cartouches.

Several other jade objects are inscribed with the names of members of the Tīmūrid family. A tiny cylindrical container of white jade in the Asian Art Museum, San Francisco, bears a dedicatory inscription in the name of Ulugh Beg's nephew, ʿAlāʾ al-Dawla (820-64/1417-60), and a jade seal in the Hermitage, St. Petersburg (SA-13650) is inscribed with the name of Ulugh Beg's mother Gawharshād. By their function, other jade objects may be associated with royal patronage. A small object with dragons' heads in the Metropolitan Museum of Art (02.18.765) may have been the quillon (blade-guard) for a dagger. A small circular pendant or belt-buckle of dark green jade in the Chester Beatty Library, Dublin (no. 29), decorated with chinoiserie blossoms and inscribed with apotropaic verses, undoubtedly served as a talisman.

The Tīmūrid tradition of jade working was continued in the early Ṣafawid period, for a black jade jug decorated with delicate spiral arabesques inlaid in gold in the Topkapı Palace Museum is inscribed on the neck with the name of the first Ṣafawid Shāh

Ismāʿīl I (*r.* 907-30/1501-24). It is unclear whether this object represents a new Ṣafawid creation or a plain Tīmūrid object decorated in the early Ṣafawid period, for undecorated Tīmūrid objects such as the handleless jug in the British Museum were decorated at the Mug͟hal court, to which many Tīmūrid jades passed. The Mug͟hal emperors Dj̲ahāngīr (*r.* 1014-37/1605-27) and S̲h̲āh Dj̲ahān (*r.* 1037-68/1628-57) were avid collectors of Tīmūrid jades, no doubt because they traced their ancestry to the Tīmūrid dynasty, and their names were inscribed or inlaid in gold or silver on several objects, including the Varanasi cup and the white jug.

Jade continued to be used at the Ottoman court in Istanbul, where objects were made of and decorated with jade, itself often inlaid with gold arabesques and encrusted with precious stones. Some jade objects may have been captured in 920/1514 when the Ottomans defeated the Ṣafawids at the battle of Čāldirān [*q.v.*]. A two-handled cup of dark green jade inlaid with gold arabesques and encrusted with rubies in collar mounts in the Topkapı Palace Museum (3815) has inlay similar to that on the jug of Ismāʿīl I, although the encrusted rubies set in collar mounts are typical Ottoman work. A comparable jade dish in the National Collection, Kraków, was given in 1699 by Sultan Muṣṭafā II (*r.* 1106-15/1695-1703) to Stanislas Malachowski, voivode of Poznań, on the occasion of the treaty of Carlowitz [see ḲARLOFČA], although the dish may have been in the Ottoman treasury for centuries. More typically Ottoman is a covered tankard of milky-green jade encrusted with cabuchon rubies and emeralds in collar mounts set in a tracery of inlaid gold scrolls (Topkapı Palace Museum 3832). It can be attributed to the late 10th/16th or 11th/17th century on the basis of its shape, first attested in ceramic from *ca.* 1560. A covered ewer (Topkapı Palace Museum 3800), with a shape known from 11th/17th-century Ottoman metalwork, has sides of jade plaques and a neck of jade held together and encrusted with gold and jewels. Also attributable to this period are two mirrors with solid jade handles and gold backs set with plaques of gold and jade encrusted with rubies and emeralds (Topkapı Palace Museum 1795 and Hermitage, NV2 720).

Jade was also used in Ottoman times for military and ceremonial objects, many preserved in the Topkapı Palace Museum. The most famous is a gold canteen with a dragon-headed spout and set with jade plaques, themselves encrusted with rubies and emeralds on gold tracery (3825). This type of flask, used to hold the sultan's drinking water, is depicted carried by the Master of the Wardrobe in illustrations to chronicles of the period 973-98/1566-90, and this object may have been made late in the reign of Süleymān II (*r.* 926-74/1520-66). An 11th/17th-century quiver is decorated with jade plaques, and an 11th/17th or 12th/18th-century mace has a jade head (126 and 724, respectively). Imported jade objects encrusted at Istanbul in the Ottoman taste include a Mug͟hal condiment dish of dark green jade in the form of a palmate leaf (3822), Indian cups, jugs, boxes, and Chinese cups.

Luxury objects produced for the Ḳādj̲ār court of Persia also combined jade with other precious materials. A jewelled jade dish in the Kunsthistorische Museum, Vienna (Plastikensammlung no. 3223) presented by the Persian ambassador Abu 'l-Ḥasan K͟hān to the Austrian Emperor Francis I (*r.* 1792-1835) has a central gold plaque enamelled by the painter ʿAlī, who also painted an oval mirror with a carved jade handle now in the Crown Jewels Collection, Tehran.

(SHEILA S. BLAIR AND J.M. BLOOM)

YASHRUṬIYYA, a Ṣūfī order of the S̲h̲ādh̲iliyya [*q.v.*], founded by ʿAlī Nūr al-Dīn b. Muḥammad b. Nūr al-Dīn Aḥmad al-Mag͟hribī al-Yas̲h̲ruṭī al-S̲h̲ādh̲ilī al-Tars̲h̲iḥī (*ca.* 1218-1309/*ca.* 1804-91) from Banzart [*q.v.*] in Tunisia.

After having been initiated into the *ṭarīḳa* [*q.v.*] of the S̲h̲ādh̲iliyya-Madaniyya [*q.v.*] in Miṣrāta [*q.v.*] by Muḥammad b. Ḥamza Ẓāfir al-Madanī (d. 1263/1847), ʿAlī Nūr al-Dīn travelled extensively. In 1266/1850 he settled in ʿAkkā on the Palestinian coast where he married the wealthy widow K͟hadīdj̲a Tūsīz. In 1297/1862-3 he opened his first *zāwiya* [*q.v.*] in Tars̲h̲iḥa. The order quickly spread among the notables, the *ʿulamāʾ* [*q.v.*] and the female members of their households to Ṣafad, Jerusalem, Beirut, the Biḳāʿ valley, Saida, Aleppo, Damascus, Jaffa and Istanbul. Each *zāwiya* had a local administrator, its *muḳaddam* [*q.v.*]. S̲h̲ayk͟h ʿAlī Nūr al-Dīn's daughter Fāṭima vividly describes the daily life and the dogmatic foundations in her *Riḥla ilā 'l-ḥaḳḳ*, Beirut 1373/1954, 4th rev. ed. by Aḥmad Yas̲h̲ruṭī, 1417-18/1997; *Nafaḥāt al-ḥaḳḳ*, Beirut 1382/1963, 3rd rev. ed. by idem, 1418-19/1998; *Mawāhib al-ḥaḳḳ*, Beirut 1385/1966, 3rd rev. ed. by idem, 1417-18/1997, and *Masīratī fī ṭarīḳ al-ḥaḳḳ*, Beirut, 3rd rev. ed. by idem, 1417-18/1997. After her father's death the *mas̲h̲yak͟ha* was handed down to his eldest son Ibrāhīm al-Yas̲h̲ruṭī and after his death in 1927 to Muḥammad al-Hādī al-Yas̲h̲ruṭī. Due to political instability, the order frequently shifted its main centre of activities, first from Palestine to Lebanon and then, under Aḥmad al-Yas̲h̲ruṭī, to ʿAmmān. Since the end of the Civil War in Lebanon, the Yas̲h̲ruṭiyya has opened a *zāwiya* in K͟halde, south of Beirut, and one in Kāmid al-Lawz in the Biḳāʿ valley. It has a predominantly Palestinian following in Lebanon, Jordan, Syria, Israel, Brazil and Canada. Male and female members recite a number of individual and congregational prayers and litanies, the *awrād* (sing. *wird* [*q.v.*]) and *waẓīfa* [*q.v.*]. Once a week a *ḥaḍra* [*q.v.*] is held in the local *zāwiya*, and an occasional *mudh̲ākara*, a lesson on the Ḳurʾān and the *ṭarīḳa*.

YATHRIB [see AL-MADĪNA].

YATĪM (A.) denotes a child, below the age of puberty, who has lost his father.

1. In the Ḳur'ān and classical Islamic law.

According to the lexicographers, this term, which occurs in the Ḳur'ān, denotes in the human realm a fatherless child, whilst in the animal world, it denotes a young one that has lost its mother (in both cases, it is a question of the loss of the one regarded as its nourisher). A child who has lost its mother is called *munḳaṭiʿ*, and a child who has lost both father and mother, i.e. an orphan, is called *laṭīm*. But at the age of puberty, the fatherless child is no longer called *yatīm*, unless in a derived sense (hence Muḥammad, though an adult, was still called *yatīm*). *Yutm* is the abstract noun denoting the state of being fatherless. In classical Islamic doctrine and law, the cases of the *yatīm* and *laṭīm* are regarded as radically different from that of the *laḳīṭ* [*q.v.*], the foundling, one "picked up", whose family background is unknown.

The theme of the *yatīm* whose property cannot be despoiled but whom one must, on the contrary, assist, is common all through Muḥammad's preaching. One of the characteristic traits of "him who accounts false the Last Judgement", i.e. who refuses to recognise the new revelation brought by Muḥammad, is that of "repelling orphans" (Ḳur'ān, CVII, 1-2). It is difficult not to view this theme except in relationship to the Prophet's situation, who, as noted in XCIII, 6 ("Did He not find you an orphan and give you a refuge?"), was himself a *yatīm* from birth. Thus the Ḳur'ānic descriptions of the unenviable lot of orphans probably convey the bitter memories that Muḥammad had of his early years in pre-Islamic Meccan society. The case of orphan girls whose guardians try to despoil their property by refusing to let them marry (or by marrying them themselves) is exposed in IV, 126/127.

As well as verses reproving in a general manner, sometimes very harshly (cf. IV, 11/10), those who oppress orphans, the Ḳur'ān stipulates more precise provisions for them. (1) A part of the fifth of booty (*ghanīma* [*q.v.*]) taken is to be reserved for orphans (VIII, 42/41). (2) A part, not precisely laid down, of the *fay'* [*q.v.*] (goods and property taken from the enemy without fighting) should likewise be allotted to them (LIX, 7/6). (3) When orphans are present at the dividing-up of an inheritance, they should be given something (IV, 9/8). Furthermore, as well as the prohibition against despoiling orphans' goods and property directed against evil-minded guardians, the Ḳur'ān lays down, in rather vague terms, that the moment when guardianship over orphans' property ceases is when the *yatīm*, by now having reached puberty and capable of marriage, is considered mature enough to look after his or her own fortune (IV, 5/6; VI, 153/152; XVII, 36/34). A saying of the Prophet transmitted by Abū Dāwūd (*K. al-waṣāyā, bāb matā yanḳaṭiʿ al-yutm*) confirms that "the status of orphan ends with puberty" (*lā yutm baʿd al-ḥulum*).

The lawyers define variously the precise moment when guardianship over the *yatīm*'s goods ceases (see al-Djaṣṣāṣ, *Aḥkām al-Ḳur'ān*, [Cairo] n.d., ii, 63). The quality of *rushd*, which the *yatīm* must have to be able freely to dispose of his goods, is likewise defined in various ways; against Abū Ḥanīfa, al-Shāfiʿī holds that religious uprightness should be taken into account. Moreover, the Ḥanafīs hold that a *yatīm* who has not yet reached puberty but who is clearly of rational judgement, may, if his guardian so authorises him, enter into commercial transactions, whilst the other legal schools do not authorise this till puberty is reached. If, after being judged capable of looking after his own goods, the *yatīm* turns out to be a spendthrift (*safīh*), the control of his goods can, according to al-Shāfiʿī, be taken back from him (see al-Rāzī, *al-Tafsīr al-kabīr*, *ad* IV, 5/6, and, concerning guardianship, see WILĀYA).

Following the Ḳur'ānic recommendations, classical Islamic legal doctrine discusses the case of the *yatīm* in relation to, on the one hand, bequests (*waṣiyya*), and on the other, to the division of plunder and of *fay'*. Bequeathing something to fatherless children is a meritorious act, but the jurists differ on the definition of a *yatīm* in this context; according to some, a *yatīm* who is rich has no part in this distribution, and the same question is posed in regard to the allocation of a share (*sahm*) in plunder and *fay'* (see al-Shīrāzī, *Muhadhdhab*, Beirut-Damascus 1996, iii, 728, v, 302).

In the conditions of poverty and of social and family disruption prevailing today in many Islamic lands, the status of the *yatīm* is often parlous, above all in the towns and cities. They are little regarded, and form a reservoir of cheap manual labour, vulnerable to merciless exploitation and oppression (in certain countries there are organised networks for exploiting this cheap labour); in order to escape this status, they frequently choose to live on the streets (see the chapters by A. al-Azhari Sonbol, *Adoption in Islamic society. A historical survey*, and A.B. Rugh, *Orphanages in Egypt. Contradiction or affirmation in a family-oriented society*, in E.A. Fernea (ed.), *Children in the Muslim Middle East*, Cairo 1996, 45-67 and 124-41, respectively).

(E. CHAUMONT)

2. In modern legislation.

i. *The status of the orphan as an heir.*

Islamic law defines an orphan (*yatīm*) as a minor whose father has died. Under the basic *sharʿī* rule that "the nearer in degree excludes the more remote", orphaned grandchildren are excluded from any share in their grandparent's estate if that grandparent is survived by a son. This denial of the orphan's inheritance right was mitigated within the extended agnatic family, as the deceased's responsibilities towards his lineal descendants were fulfilled by passing the inheritance *en bloc* to the first degree of his issue. With the growing breakdown of extended family ties in contemporary society, however, the *sharʿī* rule is no longer readily supportable.

Protection of orphaned grandchildren within the immediate family has traditionally been undertaken by grandparents by means of voluntary gifts *inter vivos*, bequests and *waḳfs* [*q.v.*]. The grandparent often allocates his orphaned grandchild a share equivalent to

the share that the orphan's father would have been entitled to had he survived his father (the orphan's grandfather), thereby introducing the principle of representation, not recognised under the *Sharīʿa*.

Several Islamic countries have resorted to legislative means. The 1913 Ottoman Inheritance Law (based on a German model), introducing the principle of representation, enabled the orphaned grandchild to take the part of his deceased father in his grandfather's legacy of *mīrī* property.

Egyptian reformers, adopting the system of "obligatory bequests", decreed (1946 Law of Wills: Articles 76-9) that a grandparent with orphaned grandchildren is presumed to bequeath in their favour what their deceased parent would have taken had he or she survived, provided that this does not exceed the "bequeathable third", and that the grandparent has not made a gift of the same value to the orphaned grandchildren *inter vivos*. If he has made them a lesser gift *inter vivos*, the obligatory bequest is reduced by this amount. If he has made other bequests instead, the obligatory bequests receive priority (1946 Law of Waḳf: Article 29 permits, but does not oblige, the grandparent, as a founder of a *waḳf*, to provide for his orphaned grandchildren in the same manner).

These provisions, justified by the reformers on the basis of Ḳurʾān, II, 180, were substantially adopted in Syria (1953), Tunisia (1956), Morocco (1958), Kuwait (1971), Jordan (1976), Iraq (1979), Algeria (1984) and Israel (1996). Contrary to the Egyptian version, the Syrian, Moroccan, Jordanian and Algerian reforms concern only grandchildren orphaned by a predeceased son, and make no provision for grandchildren orphaned by a predeceased daughter. Also contrary to the Egyptian version, the Tunisian, Kuwaiti, Iraqi and Israeli reforms do not provide for orphaned great-grandchildren.

The Pakistani 1961 Muslim Family Laws Ordinance prescribes (section four) that if any son or daughter of the propositus predeceases the propositus, the children of the predeceased son or daughter shall receive *per strips* the amount their parent would have received had he or she outlived the propositus. This reform represents the alternative system of "inheritance by right" and is based on the principle of representation.

Similarly to the Egyptian reform, the Pakistani one treats the predeceased daughter's children identically to the predeceased son's children. Contrary to the Egyptian reform, the Pakistani one does not provide for orphaned great-grandchildren. The main difference between the Pakistani reform and those of other Middle Eastern countries is that the Pakistani one places no maximum limit on the share that may be taken by orphaned grandchildren.

Both the Egyptian and the Pakistani reforms led to contradictory interpretations, some of which disrupted Ḳurʾānic-based rules of intestate succession. The Islamisation of laws currently taking place in Pakistan endangers the survival of this reform.

ii. *The management of an orphan's property.*

The *sharʿī* motivation is to prevent abuse of an orphan's property by relatives or by strangers. In the absence of a guardian, an orphan's property is deposited in the *Sharīʿa* court (it was called *tābūt*, or *mūdaʿ al-ḳuḍāt*, or *bayt māl al-ḳuḍāt*), its management supervised by a *ḳāḍī*.

Modern legislation obliges the guardian of a minor to obtain a *Sharīʿa* court's approval before concluding transactions affecting his ward's property (1858 Ottoman Land Code: Article 52). Moreover, the *Medjelle* (Articles 356, 441, 459) invalidates the guardian's sale or rent of his orphan ward's property if the price obtained was lower than the proper one.

iii. *Orphanages, foster care and adoption.*

The modern period has witnessed the establishment of orphanages (Egypt, in the last decade of the 19th century), mainly supported by public *waḳfs*. Modern governments provide pensions and aid in case of the parents' death or incapacity. They supervise and support institutions providing occupational training and general education for orphans, and continue to support them after they leave the institution upon reaching the legal age of majority. Modern governments have also established a system of orphan foster care.

Adoption is not recognised under the *Sharīʿa*. So far, statutory adoption has been introduced only in Turkey (1926), Tunisia (1958) and Somalia (1975). In India, the Adoption of Children Bill (1972) was opposed by Indian orthodox Muslims and consequently shelved. Modern states such as Egypt and India have created forms of *de facto* adoption, however.

YAWM (A., pl. *ayyām*), "day" (a Common Semitic word, e.g. Akkad. *ūmum*, Hebr. *yōm*, Aram. *yawmā*, ESA *ywm*), denoting the whole 24-hour cycle making up a day, whereas *nahār* means "the daylight period", i.e. from sunrise to sunset. See further on this, AL-LAYL WA ʾL-NAHĀR.

Yawm occurs as an isolated term in various specialised uses, in particular, in pre- and early Islamic times in the meaning of "day of battle"; for this, see AYYĀM AL-ʿARAB. The pl. *ayyām* can also occur, especially in early Arabic poetry, in a similar sense to its apparent antonym *layālī* "nights", referring to the passage of time = "destiny, fate"; see H. Ringgren, *Studies in Arabian fatalism*, Uppsala 1955, 38-9, and also DAHR.

In the compound *yawm al-dīn* we have a technical Islamic eschatological sense, the "day of judgement, retribution" [see DĪN and SĀʿA. 3]. For other compound expressions of a religious nature, see T.P. Hughes, *A dictionary of Islām*, 694-5.

For the divisions of the day, used by the ancient

Arabs in the absence of chronometers of any kind and subsequently applied in several cases to the times for the Muslim *ṣalāt* or worship, see ʿAṢR; ʿATAMA; ḌUḤĀ; ṢALĀT. III.

Bibliography: Given in the article. (ED.)

YAYA (T.), lit. "pedestrian", denoted, in Ottoman military usage of the 8th-10th/14th-16th centuries, infantryman.

Originally forming part of the *khāṣṣa* army serving directly under the ruler, in the 10th/16th century the *yaya* were considered part of the provincial forces. According to Meḥmed Neshrī [*q.v.*], under Sultan Orkhān peasant taxpayers were offered the opportunity of joining the army as *yaya*, and large numbers of people applied. Under Murād II, the *yaya* were supposedly given the nickname *enik* (puppy) as a form of derision (Neshrī, *Kitâb-ı Cihân-nümâ*, ed. Faik Resat Unat and Mehmed A. Köymen, Ankara 1949, i, 155-7); this may have been linked to their making a living from agriculture. Like the *müsellems*, who performed military service on horseback under analogous conditions, the *yaya* were gradually demilitarised in the 10th/16th century, serving on building projects such as the restoration of the Aya Ṣofya. However, while many former *müsellems* succeeded in becoming *tīmār* holders, the *yaya*, when their corps was abolished in the last quarter of the 10th/16th century, were declared ordinary peasants.

Organised in units known as *odjak*, the *yaya* took turns serving in the field, with those staying home (*yamak*) supplying those who went to war. An *odjak* before the rule of Selīm I generally consisted of 2-4 men; by the end of the 10th/16th century, this had increased to 4-15 persons. The *yaya* were granted lands consigned to special registers, which were inalienable and could not be divided among heirs, such holdings being especially numerous in the *sandjaks* of Sulṭānönü and Ḥamīd. In spite of their peasant lifestyle, the *yaya* were considered servitors of the sultan (*ʿaskerī*); as dues, they only paid the bride tax and monetary penalties in case of crimes or misdemeanours. Non-attendance at campaigns was deemed a serious crime, with mutilation a possihle punishment. This rule was only rescinded shortly before the abolition of the *odjak*, in part because the depredations of the Djelālī rebels had made it impossible for many *yayas* to support themselves.

(SURAIYA FAROQHI)

YAYĪĶ, the name in mediaeval Turkish usage for the Ural River, whence Russian Yaika. The river rises in the Ural Mountains separating modern European from Asiatic Russia and flows past the recent cities of Orenburg [see ÖRENĶALʿE, in Suppl.] and Kral'sk into the northern end of the Caspian Sea east of the Volga estuary, having a total course of 2,430 km/1,510 miles.

The Greek sources record it as *Daix* (Ptolemy, 2nd century A.D.), *Daikh* (Menander Protector, 6th century) and *Géekh* (Constantine Porphyrogenitus, 10th century). The name was perhaps originally a Sarmatian one, the Sarmatians being masters of the lower Ural region in Ptolemy's time. In the surmise of Sir Gerard Clauson, the change from the Greek name to Yayïķ in Turkish (i.e. a change in the initial consonant *dh* > *y*) probably took place later, when the region had become ethnically Turkish, the Turkish people in question being unable to pronounce the voiced dental fricative. See Gy. Moravcsik, *Byzantinoturcica*, Berlin 1958, ii, 116; Clauson, *Turkish and Mongolian studies*, London 1962, 124-5.

The river is almost certainly mentioned by the 4th/10th century geographer and historian al-Masʿūdī in his *Tanbīh* and in the anonymous *Ḥudūd al-ʿālam*, but under varying names. Thus the latter source, § 6.42, tr. Minorsky 75, wrongly calls it the Artush (a confusion with the Irtïsh [*q.v.*]?) and has it empty into the lower Volga. The traveller Ibn Faḍlān [*q.v.*] must have crossed the Emba and Ural rivers on his way from Khʷārazm to Bulghār; his *Riḥla* mentions many rivers but does not clearly name the Emba and Ural. Exactly when the Turkish name of the river came into general usage is uncertain, although Maḥmūd al-Kāshgharī (later 5th/11th century) does not mention it as such.

The steppes north of the Caspian and Aral Seas were in early Islamic times roamed over by such Turkish peoples as the Oghuz [see GHUZZ], Kimäk [*q.v.*] and, somewhat later, the Ķïpčaķ [*q.v.*], the whole region becoming known in Mongol times as the Dasht-i Ķïpčaķ [*q.v.* in Suppl.].

(C.E. BOSWORTH)

YAYLAĶ (T., originally *yaylagh*), "summer quarters", applied to the summer residences of the old Turkish *kaghans* or the summer pastures of nomadic or transhumant tribes of Inner Asia, its antonym being *ķïshlaķ* [*q.v.*] "winter quarters".

The origin of the word is from *yay* "summer" (but this originally meant "spring", cf. Kāshgharī, *Dīwān lughāt al-turk*, Tkish. tr. Atalay, iii, 160-1, though already in the Orkhon inscriptions it means "summer", and it comes to mean this in most Turkic languages, with *yaylamaķ* "to spend the summer", cf. Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 980, 981).

In Islamic times, the Turco-Mongol rulers and leaders who, from the 5th/11th century onwards came into the "northern tier" of the Middle East as far west as Anatolia with their pastoralist hordes, long kept up the pattern of alternate winter and summer residences, the latter usually in cooler and greener upland regions. The Il-Khānids favoured pasture grounds in eastern Anatolia, such as the Alatagh, and in Ādharbāydjān and Ķarabāgh (see B. Spuler, *Die Mongolen in Iran*, ¹Leipzig 1939, 334-5, 404). These, and then later, those of the Ṣafawids, are described by European travellers such as Kaempfer and, especially, Chardin; see the latter's *Voyages*, ed. Langlès, Paris 1811, ii, 285-6: the *yelac*. See, in general, Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iv, 252-4 no. 1941. A somewhat curious usage amongst the Mongols and Turco-Mongols of the 7th/13th century was Yaylaķ as a personal name for nobles, both male and female; see Rashīd al-Dīn, tr. J.A. Boyle, *The successors of Genghis Khan*, New York and London 1971, 105, 126-7, 129. A later Ottoman form, with a pseudo-Arabic ending, was *yaylaķiyya* "rent paid for summer pastures or lodgings", see W. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, iii/2, 11.

The Arabic equivalent *maṣīf* is found in the 4th/10th century geographers and is the word normally adduced to define *yaylak* in the Turkish-Arabic vocabularies of the Mamlūk period, though Kāshgharī, iii, 47, has

yaylagh = *muṣṭāf*. In Persian, an approximate synonym was *sardsīr* "cool region". See further on these Arabic and Persian usages, ḲIS̲H̲LAḲ.

Bibliography: Given in the article.

(C.E. BOSWORTH)

YAZAN, an influential clan in pre-Islamic Ḥaḍramawt, first attested about the middle of the 5th century A.D. by inscriptions (with the spelling *Yz'n*) in the Wādī ʿAmāḳīn, in the Ḥabbān area. A little later they emerge as closely allied with the important Sabaean clan *Gdn*, and by the early 6th century they were probably the most powerful family in the Ḥimyarite kingdom [see ḤIMYAR; TUBBAʿ], claiming "lordship" (signified by the prefix D̲h̲ū) over virtually the whole of what had been, up to around 300 A.D., the ancient kingdom of Ḥaḍramawt, together with the Dhofar coast around modern Ṣalāla, and the island of Suḳuṭra [*q.vv.*]. In the early 6th century, their members furnished the principal military commanders serving kings Maʿdikarib and Yūsuf As'ar (= D̲h̲ū Nuwās [*q.v.*]). Tradition (without epigraphic support) assigns to later in that century a legendary hero Sayf b. D̲h̲ī Yazan [*q.v.*], who is also the centre of a cycle of folk tales.

YAZD, a city of central Persia, and capital of the province of the same name. It is situated on the Persian plateau at lat. 31° 54' N. and long. 54° 24' E. (at an elevation of 1,230m/4,240 feet), in an elongated interior basin stretching from near Kās̲h̲ān to Bāfḳ and bordered by the Das̲h̲t-i Kawīr. It was known in early times as Kat̲h̲a (Le Strange, *Lands*, 285; *Ḥudūd al-ʿālam*, tr. Minorsky, London 1937, 128, 380), after a fortress and prison alleged to have been founded by Alexander (Aḥmad b. Ḥusayn b. al-Kātib, *Tārīk̲h̲-i d̲j̲adīd-i Yazd*, ed. Īrad̲j̲ Afs̲h̲ār, Tehran AHS 1345/1966, 16). According to legend, later foundations grew up on this site (Muḥammad Mufīd Bāfḳī, *D̲j̲āmiʿ-i mufīdī*, ed. Afs̲h̲ār, Tehran AHS 1340-2/1961-3, i, 14 ff.). Yazd became known as *dār-al-ʿibāda*, when Ṭog̲h̲rïl Beg assigned it to the Kākūyid Abū Manṣūr Farāmurz ʿAlā' al-Dawla, in 443/1051 (see below). The modern city has a population, according to the 1996 census, of 326,976.

1. Geography, topography and social structure.

Ibn Ḥawḳal describes Yazd in the 4th/10th century as a well-built fortified city with two iron gates (Le Strange, *Lands*, 285). Ḥamd Allāh Mustawfī Ḳazwīnī states that it was built of sun-dried bricks which lasted as long as burnt bricks elsewhere because there was hardly ever any rain, though water was plentiful, being brought in by channels from the hills and each house had its own storage tank (*ibid.*). Wind towers [see BĀDGĪR, in Suppl.) were (and are) a distinguishing feature of the architecture of the city, so constructed as to convey any breeze available in the upper air into the *sardābs* (semi-underground chambers) of the houses or other buildings (see Īrad̲j̲ Afs̲h̲ār, *Yazd-nāma*, Tehran AHS 1371/1992-3, i, 337-57). Aḥmad b. Ḥusayn al-Kātib mentions *bādgīrs* constructed in the Muẓaffarid and Tīmūrid periods (*Tārīk̲h̲-i d̲j̲adīd-i Yazd*, 86, 92, 94). The domed roofs of the *āb-anbārs* or *miṣnaʿas* (water storage cisterns) are another distinguishing feature of the city, and also its fine mosques (see Afs̲h̲ār for a comprehensive account of monuments, religious and secular, of Yazd, the inscriptions to be found in them and also on tombstones, *Yazd-nāma*, and *Yādigārhā-yi Yazd*, 3 vols., Tehran AHS 1348-54/1970-5).

According to Aḥmad b. Ḥusayn al-Kātib, Abū Manṣūr Farāmurz ordered the city wall (*ḥiṣār*) to be built with towers and four iron gates (*op. cit.*, 61. See also Afs̲h̲ār, *Yādigārhā-yi Yazd*, ii, 671-2). Part of the wall was destroyed by floods in 673/1275 (73). It was restored by the Atabeg Yūsuf S̲h̲āh b. Tug̲h̲ān (685-714/1286-7 to 1314-15) (74). Mubāriz al-Dīn Muḥammad Muẓaffar (713-59/1313-14 to 1358) built an outer wall with seven gates enclosing various districts within the city (83). S̲h̲āh Yaḥyā, who took possession of the city in 779/1367-8, made further additions, including a ditch, towers and gate (87; D̲j̲aʿfar b. Muḥammad b. Ḥasan D̲j̲aʿfarī, *Tārīk̲h̲-i Yazd*, ed. Afs̲h̲ār, Tehran AHS 1338/1960, 36, and see also Muḥammad Mufīd, iii, 738). The latter author states that Pīr Muḥammad b. ʿUmar S̲h̲ayk̲h̲, after putting down a rebellion against the Tīmūrids, built a fort for the residence of governors on the orders of Tīmūr and in 808/1405-6 a wall and a deep ditch in the south of the city (iii, 740; Aḥmad b. Ḥusayn al-Kātib, 91-2). The fort was partly destroyed by S̲h̲āh ʿAbbās (Afs̲h̲ār, *Yādigārhā-yi Yazd*, ii, 697). In 1821 Muḥammad Walī Mīrzā, when governor of Yazd, repaired the city wall and the ditch (Ḥusayn Nā'īnī, *D̲j̲āmiʿ-i D̲j̲aʿfarī*, ed. Afs̲h̲ār, Tehran AHS 1353/1974-5, 715-16. See also Afs̲h̲ār, *Yādigārhā-yi Yazd*, ii, 674-5 and *Survey of Persian art*, iii, 1242-4).

In the 19th century, the city of Yazd was still enclosed by a ditch and a double wall with numerous detached towers in it, all in tolerable repair. Its circumference was about 2½ miles. The inner city was surrounded by gardens and habitations. It had 24 *maḥallas*, 8 of which were within the walls, 31 mosques and 11 *madrasas*. The bazaar contained some 100 shops, and 34 caravanserais (A. Amanat, *Cities and trade. Consul Abbott on the economy and society of Iran 1847-1866*, London 1983, 131-2, referred to below as Abbott). Major Oliver St. John states that Yazd had 50 mosques, 65 baths and 8 *madrasas* in 1872 (*Narrative of a journey through Baluchistan and southern Persia, 1872*, in F.J. Goldsmid, *Eastern Persia, an account of the journeys of the Persian Boundary Commission, 1870-1-2*, London 1876, 175). Curzon, who visited Persia in 1889-90, states that the fort, which was partly ruined and partly built into or over, still retained a double wall with a broad deep ditch before the outer rampart, while the citadel inside the fort, where the governor resided, was separately walled to a height of 30 or 40 feet (*Persia and the Persian question*, London 1892, ii, 240, and see ḤIṢN. ii, at Vol. III, 502).

In the early centuries of the ʿAbbāsid caliphate, Yazd was included in the district of Iṣṭak̲h̲r of the province of Fārs under the name of Kat̲h̲a. After the Mongol invasions it became part of the D̲j̲ibāl and, later, part of Kirmān province [see KIRMĀN, at Vol. V, 147b]. In the Ṣafawid period it was one of the districts under the direct administration of the central government (*Tad̲h̲kirat al-mulūk*, tr. and comm. Minorsky, London 1943, 42). In the 19th century, when the Ẓill al-Sulṭān was at the height of his power, it formed part of the Iṣfahān province. On the Ẓill al-Sulṭān's disgrace in 1888 it became again an independent government but was returned to the Ẓill al-Sulṭān in 1890 (Curzon, *op. cit.*, ii, 243). For a time during the 19th century, Kūhbanān and S̲h̲ahr-i Bābak, belonging to Kirmān, were attached to Yazd as also were some of the villages of Fārs (Abbott, 144-5). At the present day the province covers an area of over 76,156 km² and consists of seven *s̲h̲ahristāns*, Yazd, Ardakān, Bāfḳ, Taft, Abarḳūh [*q.v.*], Mihrīz and Maybud (*Yazd nigīn-i kawīr*, a tourist guide and information brochure published by the Society of Yazd Public Libraries, 1375/1996-7, 29-30).

The province is bordered on the north and west by the province of Iṣfahān, on the north-east by Khurāsān, on the south-west by Fārs and in the south-east by the province of Kirmān. The Shīr Kūh massif, rising to 4,075 m/13,366 feet, lies in the south and west of the province. In the centre of the province to the north of the city of Yazd is the Kharānik massif, the highest point of which is 3,158 m/10,358 ft. In the east there are lesser mountains in the districts of Khūr, Biyābānak, Djandāk and Ribāṭ-i Pusht-i Bādām. There are small deposits of iron ore, lead, zinc and copper in the province, Ibn Ḥawkal mentions that a lead mine near Yazd was productively worked (Le Strange, *Lands*, 285); and old workings of lead ore survive near Bāfk (Abbott, 134, 135). Marble is found in the Tūrān-pusht mine in the Pīsh-Kūh district to the south and south-west of the city of Yazd.

Large areas of the province are occupied by sterile, or almost sterile, hammadas due either to their low rainfall or to an excess of salt in the soil or both (M. Zohary, *On the geo-botanical structure of Iran*, in *Bull. of the Research Council of Israel. Section D. Botany, Suppl.*, vol. xi D Suppl. [March 1963], 182). Violent dust storms are frequent and moving sands encroach upon the city of Yazd, upon Ashkidhar, Bāfk and elsewhere. Ḥusayn b. Muḥammad b. Abi 'l-Riḍā Āwī in his translation of Māfarrūkhī's *Maḥāsin Iṣfahān*, made in 729/1328-9, mentions the planting of tamarisk (*gaz*) to stabilise moving sands by the people of Yazd (*Tardjuma-yi maḥāsin Iṣfahān*, ed. ʿAbbās Iḳbāl, Tehran AHS 1328/1950-1, 43). The climate of the province is described as temperate (*muʿtadil*) (Ḥamd Allāh Mustawfī Ḳazwīnī, *Nuzha*, ed. Le Strange, London 1915, Persian text, 74). Ibn Balkhī adds that since it is situated on the edge of the desert the climate is inclined to be warm (*mayl bi-garmī; Fārs-nāma*, ed. Le Strange, London 1921, 122). The summers in the city of Yazd are, in fact, extremely hot.

The province lies in the rain shadow of the Alborz in the north and of the Zagros in the west. The average annual rainfall, which occurs in winter and spring, varies from 20 mm in Shīr Kūh to 60 mm in the lower parts of the province; in the city of Yazd it is only 55.4 mm. Ground water is provided by *ḳanāts* (*q.v.* and see Lambton, *The qanāts of Yazd*, in *JRAS*, 3rd series, vol. 2, pt. 1 [April 1992], 21-35). From the 1960s onwards a large number of deep and semi-deep wells have been sunk, which has led to a lowering of the water-table. Of the 3,331 *ḳanāts* alleged to exist in the province, only 2,615 were said to be in operation in 1997. Some are over 50 km/31 miles long and 100 m deep (Afshār, *Yazd-nāma*, 413-14). Ground cover in most of the province is sparse owing to lack of rainfall, fluctuations in temperature and the destruction of plants over the centuries for charcoal burning and other purposes. Failure of rain has frequently resulted in shortages and sometimes famine. In 850/1446-7 a period of drought was accompanied by famine and plague (*wabā*) (Aḥmad b. Ḥusayn al-Kātib, 10). In 858/1454 the rains failed again and famine and plague ensued with heavy loss of life (276). Sudden or unusually heavy rains have also occasioned damage. In 673/1275 five days of consecutive rain in Urdī Bihisht/April-May resulted in floods and much damage to the city of Yazd (73-4). In 860/1456 there was again severe flooding in the city of Yazd as a result of heavy rain in Farwardīn/March-April (276). Muḥammad Mufīd records that there were heavy snowfalls in 1057/1647-8 and that snow lay in the streets of Yazd for nearly three months (*Djāmiʿ-i mufīdī*, i, 133).

Despite unfavourable climatic conditions, the city of Yazd and the towns and villages of the province are surrounded by cultivated fields (*kishtkhʷān*), orchards and gardens. The mountain districts are carefully terraced. Water rights and land in many parts of the province are separately owned and highly sub-divided [see MĀʾ, at Vol. V, 871a-b]. Absentee landownership does not appear to have been common. Local landowners predominated, some of whom enjoyed considerable wealth. Peasant proprietorship also existed. *Awḳāf*, especially in the form of shares in *ḳanāts*, were widespread (Lambton, *Awḳāf in Persia: 6th-8th/12th-14th centuries*, in *ILS*, iv/3, 298-318; ʿAbd al-Wahhāb Ṭarāz, *Kitābča-yi mawḳūfāt-i Yazd*, ed. Afshār, in *FIZ* [1962-3], 3-123). Lands assigned as *iḳṭāʿs* or *tiyūls* [*q.vv.*] and crown lands (*khāliṣadjāt*) appear to have been rare, though Ṭoghrïl Beg assigned Yazd, as stated above, and Abarḳūh to Abū Manṣūr Farāmurz in 443/1051 and Abū Saʿīd, the Il-khān, gave Maybud as an *iḳṭāʿ* to Muḥammad b. Muẓaffar (Aḥmad b. Ḥusayn al-Kātib, 82), allotted wages (*marsūm*) to him and appointed 200 men to be in his service, and there were cases of land being assigned as *tiyūl* under the Ṣafawids (e.g. Muḥammad Mufīd, iii, 276). There are frequent references to crown lands in the Ṣafawid period but few details (*ibid.*, iii, 366 and *passim*). A *farmān* of Nādir Shāh, dated 1155/1742-3, appointing Mīrzā Ḥusayn (formerly *ḍābiṭ* of Naṭanz) governor of Yazd, ordered him, *inter alia*, to exert himself in increasing *khāliṣa* property (Afshār, *Si farmān wa yak ḥukm marbūṭ bi Yazd*, in *FIZ*, xxv [AHS 1361/1982], 396). In the Ḳādjār period there was also some *khāliṣa* property in Yazd. Several *ḳanāts* were wholly, or in part, *khāliṣa* (cf. Muḥammad Djaʿfar, 310, 460, 591, 593, 594).

Grain was grown in the province but not in sufficient quantity for its needs (cf. Mustawfī, *Nuzha*, 74). In the 19th century it sufficed for only two to three months, the deficit being met from Iṣfahān and elsewhere. Fruit was grown abundantly, including mulberries, pomegranates (those of Maybud being especially good: Ibn al-Balkhī, 122), apples, pears, cherries, apricots, plums and grapes; and a variety of vegetables; cotton was grown, and silk manufactured and used in Yazd's flourishing textile industry. Rashīd al-Dīn Faḍl Allāh Hamadānī [see RASHĪD AL-DĪN ṬABĪB] includes much information on the crops and agricultural methods of Yazd in his book *Āthār wa aḥyāʾ* (ed. Afshār and M. Sutūda, AHS Tehran 1368/1989-90. See also Lambton, The Āthār wa aḥyāʾ *of Rashīd al-Dīn Faḍl Allāh Hamadānī and Rashīd al-Dīn's contribution as an agronomist, arboriculturist and horticulturalist*, in R. Amitai-Preiss and D.O. Morgan (eds.), *The Mongol Empire and its legacy*, Leiden 1999). He draws attention to the skill and thrift shown by Yazdīs in agricultural development and states that the return they got from the land was seldom equalled in other places. He also mentions that the production of silk was higher than elsewhere. In the 19th century, much silk was still produced but of inferior quality. It was not enough to supply local workshops, and raw silk was imported from Gīlān and Khurāsān. In the second half of the century the production of silk declined and was largely displaced by opium and cotton (G.G. Gilbar, *Persian agriculture in the late Qājār period 1860-1906: some economic and social aspects*, in *Asian and African Studies*, xii/3 [1978], 350, and see Abbott, 105). Among other crops grown in the 19th century Abbott mentions Indian corn, millet, lentils, pulse, beans, madder, asafoetida, fruits, nuts and vegetables (134).

From early times Yazd had a thriving trade. Its

manufactures of silk and cotton were famous and exported to other parts of the Islamic world and India. Al-Iṣṭakhrī and Ibn Ḥawḳal mention cotton garments made in Yazd. Ibn al-Balkhī, writing at the beginning of the 6th/12th century, states that "in the districts round [Yazd], silk is produced, for the mulberry tree is here abundant. Further, they (sc. the Yazdīs) manufacture excellent cloths in brocade also, of the kind named *mushtī, farakh*, and the like, for in Yazd they rear goats only, no sheep, and the hair from these is very strong" (20, quoted by R.B. Serjeant, *Islamic textiles*, Beirut 1972, 55-6). Al-Ḳazwīnī found in Yazd makers of silk (*ḥarīr*) of *sundus* (a kind of green brocade), extremely beautiful and close-woven which is taken from there to all countries (*Kosmographie*, ed. Wüstenfeld, ii, 187, quoted in Serjeant, *op. cit.*, 56). Al-Maḳrīzī mentions the import of Yazdī textiles into Egypt in the 8th/14th century (*ibid.*, 115). Marco Polo noted that Yazd "is a good and noble city, and it has a great amount of trade. They weave there quantities of a certain silk tissue known as Yesdi, which merchants carry into many quarters to dispose of" (H. Yule, *The Book of Ser Marco Polo, the Venetian*, London 1871, i, 89, quoted in Serjeant, 56). Pedro Teixeira mentions that the richest and finest carpets came from Yazd "from which place I saw some, each of which, on account of its workmanship and perfection, was valued at more than a thousand ducats", while the fabric known as *al-ḳaṭīfa* was "the best, the finest and the most perfect" (quoted in Serjeant, *loc. cit.*). Friar Odoricus (in 1325) and Josafa Barbaro (in 1474) state that Yazd was a great silk mart and Raphael de Mans describes how gold thread was made there (*Estat de la Perse en 1660*, ed. C. Schefer, Paris 1890, 195, quoted in Serjeant, 85).

At the beginning of the 19th century Yazd was a large and populous city, celebrated among merchants for its security. Commerce in silk, carpets, felts, shawls and coarse cotton cloth flourished (Malcolm, *Melville papers*, quoted by C. Issawi, *The economic history of Iran 1800-1914*, Chicago and London, 1971, 262). Capt. Christie, who passed through Yazd in 1810, states that it was "a great mart between Hindoostan, Khorasan, Baghdad and Persia" and was said to be a place of greater trade than any other place in the latter empire (*Abstract from Captain Christie's Journal after his separation from Lieut. Pottinger, at Nooshky June (1810)*, in H. Pottinger, *Travels in Beloochistan and Sinde*, London 1816, 421). He mentions that there were over 50,000 camels in the city (421-2), which is an indication of the extent of the trade. J.B. Fraser, who was in Yazd in the early years of the 19th century, states that Yazd was one of the most prosperous towns of Persia and one of the great entrepôts between East and West. Caravans from Kābul, Kashmīr, Bukhārā, Harāt, Mashhad and Kirmān were met in Yazd by merchants from Iṣfahān, Shīrāz, Kāshān and Tehran and a great interchange of commodities took place. Its manufactures of silk and other stuffs, felts, sugar-candy and sweetmeats commanded a ready market everywhere in Persia (*An historical and descriptive account of Persia*, [2]Edinburgh 1834, 64). E. Scott Waring also mentions that Yazd was an emporium for all the trade of Persia. Coarse perpets were sent there and sold to the Uzbegs and the people of Khurāsān, the merchant taking on his return journey silks, carpets, felts and Kashmīrī shawls (*A tour of Sheeraz*, London 1807, 76). By the middle of the century there had been a decline in the manufacture of textiles (Abbott, 79). Despite an attempt by Muḥammad Khān, who was governor of Yazd 1863-70, to encourage the silk trade, the decline continued and by the end of the 19th century, or the beginning of the 20th, there were only some 800 workshops and 2,000 cotton looms (Issawi, 268), whereas in 1870 Major Euan Smith had reported that there were 18,000 silk workshops in Yazd, employing probably 9,000 hands and that the silk was considered by some to be the best in Persia (*The Perso-Baluchistan Frontier Mission 1870, 1871*, in Goldsmid, *Eastern Persia*, i, 175). Nevertheless E. Stack, who visited Yazd in 1881, wrote that prosperity was "a notable feature of Yazd. Hardly a beggar was to be seen and the busy bazaars and well-kept houses, as well as the dress of the people, and the number of merchants, were signs of a city supported by brisk trade" (*Six months in Persia*, London 1882, i, 267).

Meanwhile, although the silk trade had declined, the opium trade had increased in importance (see further, Gilbar, *op. cit.*, 314 and *passim*). Rabino noted that towards the end of the century the opium crop absorbed all the floating capital of the province and that the money went to the villages (*Banking in Persia*, in *Jnal. of the Institute of Bankers*, xiii [1892], 35, quoted by Issawi, *op. cit.*, 352). Other exports from Yazd included coarse loaf sugar, made from raw sugar imported from India, Java and Siam, which was sent to all parts of Persia (Abbott, 104), cotton, carpets, felts, madder roots, and nuts. The principal imports were cotton fabrics, copper, tin, lead, iron, drugs and spices and tea from India, and oil, candles, sugar, furs, crockery and piece goods from Russia (see further Curzon, ii, 241-2. See also Lambton, *Persian trade under the early Qajars*, in D.S. Richards (ed.), *Islam and the trade of Asia*, Oxford 1970, 118-19). Henna was also brought to Yazd for processing and in 1907-8 there were some 60 enterprises engaged in this (Issawi, 299). In spite of the changes in production and manufacture, Yazd nevertheless remained a major distribution centre in the early years of the 20th century (G. Jones, *Banking and Empire in Iran*, Cambridge 1986, i, 99).

The local histories are rich in details of the lives of officials, landowners, *ʿulamāʾ*, merchants and others, but these are beyond the scope of this article. Many of them held land and shares in *ḳanāts*; some were very rich. The extent to which they expended their wealth on buildings, religious and secular, in the city and throughout the province, and on *ḳanāts* and agricultural development, is notable. Some of the Muslim merchants, as well as the Zoroastrian ones, had links with India, at least from the Ṣafawid period if not before.

The *sayyids* were a numerous and influential group. Djaʿfar b. Muḥammad states that there were nearly 1,000 descendants of the Imām Djaʿfar al-Ṣādiḳ [*q.v.*] in Yazd when he was writing, i.e. in the 9th/15th century (108). Prominent among the Ḥusaynī *sayyids*, descended from Djaʿfar al-Ṣādiḳ, were Rukn al-Dīn Muḥammad b. Ḳawām al-Dīn b. Niẓām (d. 732/1331-2) and his son Shams al-Dīn Abū ʿAbd Allāh Muḥammad (d. 733/1332-3), both of whom disposed of a great deal of property in shares in *ḳanāts*, land and real estate, much if not all of which they constituted into *waḳf* (Lambton, *Continuity and change in medieval Persia*, New York, 1988, 156. See also J. Aubin, *Le patronage culturel en Iran sous les Ilkhans: une grande famille de Yazd*, in *Le monde iranien et l'Islam*, iii, [1975], 107-18). Among Sayyid Rukn al-Dīn's many benefactions was the complex consisting of a *madrasa*, mosque, observatory (*raṣad*) and pharmacy (*bayt al-adwiya*) in the *Waḳt wa sāʿat* quarter of the city, which took its name from the observatory (Djaʿfar b. Muḥammad, 81-3; Aḥmad b. Ḥusayn al-Kātib, 122-5; Afshār, *Yādigārhā-*

yi Yazd, ii, 711; and see Parwiz Mohebbi, *Technique et resources au Iran du 7e au 19e siècle*, Institut français de recherches en Iran, Tehran 1996, 199).

In the 7th-9th/13th-15th centuries there appears to have been an increase in the number of Ṣūfīs in the province (Afs̲h̲ār, *Yazd-nāma*, i, 30). One of the most famous was S̲h̲ayk̲h̲ Taḳī al-Dīn Muḥammad Dādā (d. 700/1300-1), who migrated from Iṣfahān to Yazd and built *k̲h̲ānaḳāhs* at Bundarābād, As̲h̲kid̲h̲ar, Maybud, and in various other locations (D̲j̲aʿfar b. Muḥammad, 112; Afs̲h̲ār, *Yādigārhā-yi Yazd*, i, 126-8).

Physicians were another influential group in the city. Ras̲h̲īd al-Dīn's early connection with Yazd appears to have been through two physicians, S̲h̲araf al-Dīn ʿAlī and S̲h̲ams al-Dīn Raḍī (Lambton, *Continuity and change in medieval Persia*, 308. See also Afs̲h̲ār, *Ras̲h̲īd al-Dīn wa Yazd*, in *Īrān-s̲h̲ināsī*, ii/1 [1970], 23-33).

The local histories also mention poets, painters and calligraphers who lived in Yazd. A marked feature of the population was the existence of skilled craftsmen, builders, weavers, potters, *muḳannīs* (also known as *čāhk̲h̲ūyān*, who were highly rated for their skill and often employed outside Yazd), and a thrifty peasantry, many of whom worked not only on the land but also as craftsmen and weavers. Among the peasants there was probably a higher proportion of peasant proprietors than in most other districts of Persia. Al-Kās̲h̲ānī states that Ras̲h̲īd al-Dīn took some 300 draft oxen with their *gāw-bands* (those who worked them) from Yazd to Tabrīz. The purpose of this, he alleges, was that the oxen should be used to transport night soil from the city to Fatḥābād and other properties that Ras̲h̲īd al-Dīn was developing (*Tārīk̲h̲-i Uld̲j̲āytū*, ed. Mahin Hambly, Tehran AHS 1348/1969, 116). This seems unlikely to be the only reason, or even the real reason. More likely Ras̲h̲īd al-Dīn brought the *gāw-bands* with their oxen to Tabrīz in order to make use of their agricultural skill.

Ibn al-Balk̲h̲ī states that the Yazdīs were Sunnīs, very pious and of right religion (*Fārs-nāma*, 122). Aḥmad b. Ḥusayn al-Kātib remarks that the people of the Yaʿḳūbī quarter of Yazd had a sense of solidarity (*ṣāḥib ittifāḳ*), were fanatical (*taʿaṣṣub-dār*) and somewhat parochial in their attitude (*wa ḥukm-i du dānga dārand*); they were continually occupied in earning their living (*kasb*) and worship (*ṭāʿat*), and most of them were well-to-do (*muraffah al-ḥāl*) (61). There is no information in the local histories of when or how the Yazdīs were converted to S̲h̲īʿism. It would seem that their piety and devotion were carried over from Sunnism to S̲h̲īʿism.

A further feature of the population was the existence of a Zoroastrian community [see MAD̲J̲ŪS], between which and India there was constant intercourse. According to Abbott, there were some 200 Zoroastrian families in the town and 640 in eight villages round about (137). As *d̲h̲immīs* [*q.v.*] they were forced to wear special clothing and subject to other restrictions (138; see also Napier Malcolm, *Five years in a Persian town (Yazd)*, London 1905). Euan Smith states that the number of Zoroastrians under the government of Yazd was estimated at 3,800 (175). Towards the end of the century their numbers rose. E.G. Browne, who was in Persia in 1887-8, states that there were 7,000-10,000 Zoroastrians in Yazd and its dependencies (*A year among the Persians*, Cambridge 1927, 404).

There was a small Jewish community, numbering about 1,000 in Yazd in 1867-8 (Issawi, 32), but Euan Smith put it at only 800 in 1870 (175). Bābīs [*q.v.*] were to be found in Yazd in the middle of the 19th century and took part in the Bābī rising of 1848 (Browne, 67). The Bahāʾīs in Yazd were given the right to trade in 1860 and to open schools in 1870, but as a result of anti-Bahāʾī riots in 1903, they were virtually exterminated in Yazd (F. Bémont, *Les villes de l'Iran*, Paris 1969, 205-6). In the 19th century there were also a few Hindu merchants from Sind resident in Yazd. They enjoyed British protection and were engaged in trade with India (Abbott, 132; Euan Smith, 173).

2. History.

Details of the pre-Islamic history of Yazd are sparse. Whether in fact Yazdagird III spent two months in Yazd after his defeat at Nihāwand in 21/642 before he set out for Marw, where he arrived in 31/651, seems doubtful. The story related in the *Tārīk̲h̲-i d̲j̲adīd-i Yazd* by Aḥmad b. Ḥusayn al-Kātib that he buried his treasure in three wells in the Yazd district, and that the first of these was later found by the Atabeg ʿIzz al-Dīn Langar (599-604/1194 to 1207-8), the second by Mubāriz al-Dīn Muḥammad b. Muẓaffar (713-59/1314-58) and the third by the people of Yazd in the time of Iskandar b. ʿUmar S̲h̲ayk̲h̲, who became governor of Yazd in 808/1405-6 (46-8), is almost certainly legendary.

There is mention of the appointment of ʿUmar b. Mug̲h̲īra as governor of Yazd during the caliphate of ʿUt̲h̲mān and some settlement of Arabs of the Banū Tamīm is alleged (Aḥmad b. Ḥusayn al-Kātib, 53; D̲j̲aʿfar b. Muḥammad, 16). Conversion to Islam is said by Aḥmad b. Ḥusayn al-Kātib to have taken place during this same caliphate (53). In fact, it is likely that conversion was more gradual. Those who retained their Zoroastrian faith were subject to the *d̲j̲izya* [*q.v.*]. It seems probable that Yazd formed part of Fārs during the Umayyad caliphate. With the rise of Abū Muslim, his supporters appear to have defeated Abu 'l-ʿAlāʾ al-Tawḳī, the Umayyad governor. Little, however, is known of the history of Yazd under the early ʿAbbāsids; it is not until the Sald̲j̲ūḳ period that more detail is available, and even then the information in the local histories of Yazd (which are of much later dates) is confused and chronologically unreliable.

When Ṭog̲h̲ril Beg took Iṣfahān from the Kākūyid Abū Manṣūr Farāmurz [see KĀKŪYIDS] in 443/1051 and made Iṣfahān his capital, he assigned to Abū Manṣūr as an *iḳṭāʿ* Abarḳūh and Yazd, both of which had been controlled by the Kākūyids. There is a *dirham* struck in Yazd in 421/1030 by the Kākūyid *amīr* ʿAlāʾ al-Dawla Muḥammad acknowledging the caliph al-Ḳādir as suzerain (C.E. Bosworth, *Dailamis in Central Iran: the Kakuyids of Jibal and Yazd*, in *Iran*, viii [1970], 77). Bosworth has meticulously examined the evidence for Kākūyid rule in Yazd and found it impossible to elucidate the exact chronology of the Kākūyid governors of Yazd (*op. cit.*, 84-5).

Both Abū Manṣūr Farāmurz and his son Muʾayyid al-Dawla ʿAḍud al-Dīn ʿAlī appear to have been treated with favour by the Sald̲j̲ūḳs. The former accompanied Ṭog̲h̲ril Beg when he went to Bag̲h̲dād in 455/1063 to meet his bride, the caliph's daughter. The latter married in 469/1076-7 Arslān K̲h̲ātūn bt. Čag̲h̲rī Beg, whose first husband, the caliph al-Ḳāʾim, had died in 467/1075. Yazd appears to have prospered under the Kākūyids. Abū Manṣūr Farāmurz built a palace, a Friday mosque, and (as stated above) a wall round the city of Yazd. His successors continued for some years as local rulers of Yazd. New villages and *ḳanāts* were made in the vicinity of the city. The last Kākūyid ruler, Gars̲h̲āsp b. ʿAlī b. Farāmurz, was with Sultan Sand̲j̲ar [*q.v.*] at the battle of the Ḳaṭwān steppe (536/1141) and was killed

in the battle. During the reign of Arslān b. Ṭoghril (556-71/1161-76) Garshāsp's two daughters ruled Yazd. Rukn al-Dīn Sām b. Langar was appointed atabeg to them and married to one of them. He was apparently incompetent and replaced by his brother 'Izz al-Dīn (Dja'far b. Muḥammad, 23), who was the real founder of the dynasty known as the Atabegs of Yazd. The benefactions of Garshāsp's daughters in Yazd are spoken of in the local histories and seem to have been considerable; and under the Atabegs prosperity and development continued.

'Izz al-Dīn Langar was succeeded by his son Wardānzūr, who had an uneventful rule of twelve years. He was succeeded by Ḳuṭb al-Dīn, during whose rule further building and development was carried out (Aḥmad b. Ḥusayn al-Kātib, 69-70). Ḳuṭb al-Dīn died in 626/1228-9. He was succeeded successively by his son Maḥmūd Shāh and the latter's son Salghur Shāh, who sent an offer of submission to Hülegü and received in return a diploma for Yazd. He was succeeded by his son Taḳī Shāh, who ruled for some twenty years and died in 670/1271-2 (72-3). During the reign of his son and successor 'Alā' al-Dawla ('Alā' al-Dīn), the great flood of 673/1274-5 occurred. Aḥmad b. Ḥusayn al-Kātib relates that 'Alā' al-Dawla was so shaken by the flood that he died within a month (74). His brother Yūsuf Shāh succeeded him.

Towards the end of the 7th/13th century Yazd became increasingly subject to interference from the Mongols. According to Mustawfī, the *tamgha* dues of Yazd and the province amounted to 251,000 dīnārs (*Nuzha*, 74). Rashīd al-Dīn states that in 694/1294-5 Baydu gave a draft for 1,000 dīnārs on the taxes of Yazd to Nawrūz and the government of Yazd to Nawrūz's son Sulṭān Shāh, whose mother was, he states, Sulṭān Nasab Khātūn, the daughter of 'Alā' al-Dīn, the son of the Atabeg Maḥmūd Shāh (*Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 75). If Aḥmad b. Ḥusayn al-Kātib's account of the genealogy of the Atabegs is correct, she must have been the great-great-granddaughter and not the granddaughter of Maḥmūd Shāh. There is, however, no record of Sulṭān Shāh taking up his government.

According to Rashīd al-Dīn, Yazd like many other places suffered from the depredations of the Mongol tax-collectors. He gives a lurid account of their extortion in the villages of Yazd (*op. cit.*, 249) and of a particular occasion when they descended on the village of Fīrūzābād (259). The owner of this village has been identified by Aubin as the Sayyid Niẓām al-Dīn 'Alī b. Maḥmūd b. Maḥfūẓ b. Ra'īs Yazdī, a friend and contemporary of Rashīd al-Dīn (*Une grande famille de Yazd*, 111). That extortion took place is very probable, but at the same time the foundations of Shams al-Dīn Djuwaynī and his agent in Yazd, Shams al-Dīn Muḥammad Tāzīkū (Tadjīk-i Kūčik) of Rashīd al-Dīn himself, and more particularly, of Sayyid Rukn al-Dīn and Sayyid Shams al-Dīn are witness to wealth and prosperity in Yazd at the close of the 7th/13th and the early years of the 8th/14th century (Lambton, *Awqāf in Persia*, 313-5; eadem, *Continuity and change in medieval Persia*, 65-6). After Ghāzān became established in Tabrīz, the Atabegs apparently sent an annual *pīshkash* [*q.v.*] to the *ordu*. Yūsuf Shāh withheld this. Ghāzān sent Yesüder (or Toghāy b. Yesüder) to Yazd with instructions to confirm Yūsuf Shāh in his government if he paid the tribute. When Yesüder drew near to Yazd, Yūsuf Shāh fortified himself in the city and sent his mother to Yesüder with presents to intercede for him. Yesüder treated her with gross disrespect and refused the presents that she had brought. She returned to Yazd and told Yūsuf Shāh what had happened. He was furious, made a night sortie from the city, killed Yesüder and took his women prisoner. When Ghāzān heard of this, he sent the governor of Iṣfahān Muḥammad Īdādjī with 3,000 cavalry to overthrow Yūsuf Shāh. The latter, realising that resistance was impossible, fled with his women, army and the prisoners whom he had taken from Yesüder to Sīstān. The people of Yazd submitted to Īdādjī, who, having appointed an *amīr* as *dārūgha* [*q.v.*], returned to Iṣfahān (Dja'far b. Muḥammad, 26-8; Aḥmad b. Ḥusayn al-Kātib, 74-6). Muḥammad b. 'Alī b. Muḥammad Shabānkāra'ī adds the information that Yūsuf Shāh was captured in Khurāsān, taken to the *ordu* and executed (*Madjma' al-ansāb*, ed. Mīr Hāshim Muḥaddith, Tehran AHS 1363/1984-5, 210-14). Rashīd al-Dīn does not refer in detail to these events; he merely mentions that Toghāy b. Yesüder was dismissed (i.e. turned out) from the office of *shiḥna* of Yazd (*op. cit.*, 357).

Yūsuf Shāh was the last of the Atabegs of Yazd to exercise effective rule: his son Ḥādjdjī Shāh was finally overthrown by a combination of Muẓaffarids and Īndjū'ids [*q.vv.*] in 718/1318-19. In 719/1319-20 Mubāriz al-Dīn Muḥammad b. Muẓaffar was recognised as governor of Yazd by Abū Sa'īd, the last Il-khān. In the disorders that occurred after the death in 736/1335 of Abū Sa'īd, Yazd was subject to the constant movement of troops (though the numbers were probably small). In 751/1350-1 the Īndjū'id Abū Isḥāḳ besieged Mubāriz al-Dīn in Yazd but failed to take the city, and as he retired, he laid waste the countryside and closed the roads. Snow and rain also impeded movement. No grain reached the city and severe famine ensued (Mu'īn al-Dīn b. Djalāl al-Dīn Muḥammad Mu'allim Yazdī, *Mawāhib-i ilāhī*, ed. Sa'īd Nafīsī, Tehran AHS 1326/1947, 217 ff.) However, by 754/1353 Mubāriz al-Dīn had established his supremacy over a wide area, including Yazd. Before long, internecine strife broke out among the Muẓaffarids which led to Mubāriz al-Dīn's deposition in 759/1358. Internecine strife continued under his successors.

In spite of the prevailing turbulence and the internal warfare of the Muẓaffarids, the city apparently prospered under them and was extended. New villages and *ḳanāts* were made (Mufīd, i, 121-2 and *passim*), *madrasas* and libraries built. Yaḥyā b. Shāh Muẓaffar, who took possession of Yazd after Tīmūr's withdrawal after his first invasion of Persia in 789/1381, and others of his family made a number of buildings in the city and its vicinity, including the Sulṭān Ibrāhīm bazaar built by Shāh Yaḥyā's sister's son, and the Khātūn bazaar beside the Friday mosque, consisting of 60 shops with *ḥudjras* above them, built by Shāh Yaḥyā's mother; Shāh Yaḥyā's *wazīr* Rukn al-Dīn also built the Dallālān bazaar (Dja'far b. Muḥammad, 36-7; Aḥmad b. Ḥusayn al-Kātib, 86-7; and see further R. Pinder-Wilson, *Timurid architecture*, in *Camb. hist. of Iran*, vi, 730 ff.).

In 795/1392 Shāh Manṣūr b. Muẓaffar was defeated and killed by Tīmūr [*q.v.*] who had left Transoxiana in 794/1392 to begin his second campaign against Persia. The remaining Muẓaffarid princes submitted to Tīmūr and were executed, apart from two of Shāh Shudjā''s sons (who had earlier been blinded, one by Shāh Shudjā' and the other by Shāh Manṣūr; Mufīd, i, 160). Tīmūr's eldest son, 'Umar Shaykh, became governor of Fārs, including Yazd. He died in 796/1394 and was succeeded by his son Pīr Muḥammad. Disorders meanwhile broke out in Yazd and the neighbourhood and Pīr Muḥammad set out for Yazd and

successfully besieged the city in 797/1394-5. Aḥmad b. Ḥusayn al-Kātib says that there was severe famine in the city and that nearly 30,000 died, but his account is somewhat confused (89-91). As a result of these events, new fortifications were constructed in the city by the Tīmūrids (as stated above) and completed in 799/1396-7. In 808/1405-6 Iskandar b. ʿUmar Shaykh came to Yazd and made further additions to the fort and the wall and added a moat (Aḥmad b. Ḥusayn al-Kātib, 92).

In due course Shāh Rukh [*q.v.*] became Tīmūr's successor. Governors were appointed over Yazd. The most notable of them was the *amīr* Djalāl al-Dīn Čaḳmāḳ, who held office from *ca.* 831/1427-8 until 850/1446-7 and gave Yazd a period of peace. He and his wife Bībī Fāṭima and son Amīr Shams al-Dīn Muḥammad Mīrak erected many buildings, religious and secular, in Yazd and the neighbourhood and constituted many *awḳāf* for them. Among them was the new Friday mosque in the Lower Dahūk quarter, which was richly endowed by Amīr Čaḳmāḳ. It was begun in 840/1436-7 and completed by Bībī Fāṭima in the following year. In the neighbourhood of the mosque a *khānaḳāh*, a caravanserai, a *ḥammām*, a cistern, a *ḳannād-khāna* (confectioner's shop) and a bazaar were built and a well dug (Dja'far b. Muḥammad, 79-80; Aḥmad b. Ḥusayn al-Kātib, 97, 99; Mufīd, i, 170 ff. The *waḳf-nāma* of the New Friday Mosque, dated 849/1445, is printed as an annex to the *Djāmiʿ-i mufīdī*, iii, 871-84). Bībī Fāṭima, among her other benefactions, made a mill outside Yazd in the Sar Āb-i Naw quarter near Dihābād. It was, so Aḥmad b. Ḥusayn al-Kātib states, continually in operation and the nearest mill to the city (98). Encouraged no doubt by the stability provided by the government of Amīr Čaḳmāḳ, a number of buildings were also made by the inhabitants of Yazd in the city and the neighbourhood.

By 857/1453 control over most of Persia, including Yazd, had passed to the Ḳara Ḳoyunlu [*q.v.*], who were succeeded by the Aḳ Ḳoyunlu [*q.v.*]. In 858/1454 there was, according to Muḥammad Mufīd, severe famine in Yazd, heavy loss of life and an outbreak of plague owing to the movement of troops and the dispersal of the population (i, 204-6). The severe floods of 860/1456 caused further damage. Troop movements and struggles between the contending parties for supremacy continued in Yazd and the neighbourhood as elsewhere in Persia throughout the second half of the 9th/15th century. This does not appear to have caused major disruption in the economic life of Yazd, for the Venetians in the late 9th/15th century recognised Yazd as an important manufacturing centre (Josafa Barbaro and Ambrogio Contarini, *Travels to Tana and Persia*, Hakluyt Soc., first series, no. 49, London 1873, 60, 72-4, 127). Trade with India, which was to become important in the Ṣafawid period, was also probably increasing at this time.

In 907/1501 Ismāʿīl Ṣafawī [see ISMĀʿĪL] was crowned in Tabrīz, but Yazd was not taken until 909/1504. Thereafter, Yazd became a province of the empire, with governors and officials appointed over it and taxation levied by the central government. For most of the Ṣafawid period, Yazd was under the *khāṣṣa* administration, i.e. directly administered by the central government under a *wazīr* sent by the central government to the province (K.M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 122-6). Few of these were local men, though there were exceptions, for example Mīrzā Khalīl Allāh, whose family came from Bihābād, one of the villages of Bāfḳ, and who became *wazīr* of Yazd in 1034/1624-5 (Mufīd, iii, 190 ff.). Officials who came from outside did not, on the whole, spend their wealth in Yazd on local development nor did they arouse the confidence or loyalty of the local population. Trade flourished and local patriotism continued, but in the absence of strong local government it did not express itself in local development to the extent that had been the case under the Kākūyids, the Atabegs of Yazd, the Muẓaffarids and Amīr Čaḳmāḳ.

During the reign of Shāh Sulṭān Ḥusayn there was a weakening of royal authority and a decline in security. In 1110/1698-9 Baluch tribesmen ravaged Kirmān and almost reached Yazd (L. Lockhart, *The fall of the Safavī dynasty*, Cambridge 1958, 46). Revolts broke out in various parts of the empire. Finally, Maḥmūd b. Mīr Ways set out from Ḳandahār to attack the Ṣafawids. After an abortive siege of Kirmān, he advanced on Yazd, the outskirts of which he reached in February 1722. The population shut the gates of the city and prepared for a siege. The Afghāns were driven back with some loss of life and so Maḥmūd abandoned the siege and marched on Iṣfahān (*ibid.*, 131-2) and in 1134/1722 the Persian forces were defeated at Gulnābād. During the brief period of Afghān domination Yazd was besieged several times.

With the defeat of Ashraf by Nādir Ḳulī Khān (later Nādir Shāh Afshār [*q.v.*]) in 1142/1729, ʿĪsā Khān, the Afghān governor of Yazd, fled. Nādir was now in control of a wide area including Yazd (Mīrzā Mihdī Astarābādī, *Djahāngushā-yi nādirī*, ed. Sayyid ʿAbd Allāh Anwar, Tehran AHS 1341/1962, 118). In due course, Afshārid governors were appointed over Yazd (Muḥammad Dja'far, 282 ff.). It may be that Yazd benefited from Nādir Shāh's exemption of taxation, which he granted to Persia after his successful Indian campaign in 1151-2/1738-9 (as Muḥammad Dja'far alleges), but the remission was soon to be rescinded and exactions were renewed; 4,000 *tūmāns* were demanded from Yazd (284). This provoked an uprising. Meanwhile, news of the assassination of Nādir in 1160/1747 arrived. The Afshārid governor of Yazd fled (285-6). ʿĀdil Shāh, Nādir's nephew, then sent ʿAlam Khān to Yazd as governor. His extortionate conduct provoked a rebellion (289), and in 1161/1748 Muḥammad Taḳī Khān Bāfḳī set out from Bāfḳ for Yazd with 70 riflemen (302). After a siege of three or four days, ʿAlam Khān escaped from the fortress and fled to Khurāsān (304-5). Muḥammad Taḳī Khān, having made himself master of Yazd, received a *raḳam* from Shāh Ḳulī Mīrzā, Nādir's grandson, who had succeeded Nādir's nephews, ʿĀdil Shāh and Ibrāhīm (307). He held office for 52 years, first under the Afshārs, then under the Zands and finally under the Ḳādjārs. He was succeeded by his sons ʿAlī Naḳī, who held office for seven years, and ʿAbd al-Raḥīm Khān, who was dismissed and succeeded by a series of Ḳādjār governors. During Muḥammad Taḳī Khān's government Yazd experienced a new period of development and prosperity, an increase of population, and the bringing into operation of new *ḳanāts*, the creation of gardens and charitable buildings and the institution of *awḳāf* for their upkeep (308 ff., 326, 340-83, 463). His son ʿAlī Naḳī also made many benefactions in Yazd and the neighbourhood (493 ff.). However, during these years Yazd was not entirely immune from military expeditions by the contending parties and their demands for revenue. The precise course of events is, however, somewhat confused and the sources vary in their accounts. After Karīm Khān had made himself master of most of Persia by 1179/1765, his officials came to Yazd to collect taxes (415). His

successors attacked Yazd several times and demanded revenue.

The Ḳādjārs, like the Ṣafawids, sent governors to Yazd. Many of them were Ḳādjār princes. The appointment of a local man to the government was the exception. The most notable of the prince governors was Muḥammad Walī Mīrzā, who held office from 1821 to 1828. He constructed a number of *ḳanāts* and repaired others (Muḥammad Dja'far, 705 ff.), and founded charitable buildings (606, 620 ff.). During his governorate, trade prospered (680). Of Nāṣir al-Dīn Shāh's twenty-four governors, Muḥammad Khān Walī, who held office twice (1863-70 and 1876-80), was the most outstanding.

During the Russo-Persian war of 1826-8 disorder spread throughout the country. In Yazd 'Abd al-Riḍā Khān b. Muḥammad Taḳī Khān Bāfḳī headed a revolt during the absence of the governor Muḥammad Walī Mīrzā in Tehran, and turned out the latter's family and entourage from Yazd. Ḥusayn 'Alī Mīrzā Shudjā' al-Salṭana was appointed governor of Kirmān, which had also revolted, and of Yazd, and was sent to restore order. He laid siege to Yazd but failed to reduce it and set out for Kirmān. In 1830 he renewed operations against Yazd without permission from Tehran. 'Abbās Mīrzā [*q.v.*] was accordingly sent from Tehran to restore order. He succeeded and proceeded to Kirmān. After he was summoned back to Tehran, 'Abd al-Riḍā Khān and Shafī' Khān of Rāwar (who had been in rebellion in Kirmān) joined forces and renewed their rebellion but were defeated and captured by government forces. 'Abd al-Riḍā Khān was taken to Tehran, and was handed over to Muḥammad Walī Mīrzā and killed in revenge for his action in turning out Muḥammad Walī Mīrzā's family and entourage from Yazd ('Abd al-Ghafūr Ṭāhirī, *Tārīkh-i Yazd*, included in his *Tadhkira-yi Djalālī*, in Afshār, *Yazd-nāma*, i, 177-237, at 206 ff.).

On the death of Muḥammad Shāh in 1834, there was renewed rioting in Yazd, but it subsided after Nāṣir al-Dīn established himself on the throne in Tehran. In 1840 Āḳā Khān Maḥallātī [see ĀGHĀ KHĀN] mounted a rebellion in Kirmān and Yazd. In 1848, there was a Bābī uprising. Riots took place against the Tobacco Régie in 1890, against the Belgian customs administration set up in 1899, and against new tariff charges in 1903. In the latter part of the 19th century, modernisation began. There was an increase in the number of schools and of the local press. In the 20th century there was strong support for the Constitutional Movement and the formation of *andjumans* in its support [see DUSTŪR. iv; DJAM'IYYA. iii]. Under the Electoral Law, Yazd had the right to send two deputies to the National Assembly. Some of those elected played an outstanding part in the deliberations of the Assembly.

Yazd, throughout the Islamic period, maintained its distinctive character. Strong local patriotism was a marked feature. It is to be ascribed, in part at least, to the remoteness of Yazd and its situation on the edge of the Central Desert of Persia, and the fact that it did not lie in the path of invaders. More than any other city in Persia, it owed its development and growth to *ḳanāts*. Without them it could not have existed, still less have sustained a civilisation that, from time to time, attained a high degree of excellence. It shared the religion, language and literary heritage of its neighbours, but "because of its utter dependence upon *ḳanāts* it developed a strong personality of its own, different from that of other cities; and its people acquired a stability and firmness of character, self-confidence and assurance which distinguished them from the inhabitants of other cities. They had a special sense of identity with the soil. They tended it with love and care and made it flourish with the water of its *qanāts*, which they brought out with skill and toil from the depths of the earth" (Lambton, *The qanats of Yazd*, 35). Until the development of modern communications, the spasmodic nature of the control exercised by the successive governments that ruled in Persia enabled local culture to flourish, and the fact that Yazd was situated on one of the trade routes from the Persian Gulf to the interior of Persia and Central Asia undergirded its economic development.

(ANN K.S. LAMBTON)

YAZDADJIRD III, in Persian, Yazdagird, son of Shahriyār, son of Khusraw Aparwīz, the last Sāsānid emperor (reigned from the end of 632 or beginning of 633 till his murder at Marw in 31/651). It was in the early years of his reign that the Arabs started raiding into ʿIrāḳ, defeating the Sāsānid army at al-Ḳādisiyya [*q.v.*] and in other battles, capturing the capital Ctesiphon-al-Madāʾin in March 637, and gradually extending across the Iranian plateau to occupy the whole of Persia. For further details, see SĀSĀNIDS, at Vol. IX, 80.

YAZDĪ, MĪRZĀ MUḤAMMAD (Farrukhī) (1889-1939), Persian poet, journalist, and one-time *Madjlis* deputy in the post-Constitutional and early Pahlawī periods. Born of modest origins in Yazd, he spent a few years in the traditional *maktab*s and briefly attended a school founded in Yazd by English missionaries. The Constitutional movement (1905-9) attracted him to politics, and his "patriotic *musammaṭ*" poem of 1909 so enraged Ḍirgham al-Dawla Ḳashḳāʾī, the governor of Yazd, that he ordered the sewing together of his lips, an event which provoked protests in Yazd and Tehran. In late 1910 Farrukhī left Yazd for the capital, where he published his poems in the radical press such as *Āzādī* ("Liberty"). When Ḍirgham al-Dawla fell from office, the new governor of Yazd, Ḥādjdj Fakhr al-Mulk, made some compensation to Farrukhī.

During the First World War, Farrukhī was among those journalists who, in November 1915, left Tehran for Ḳum and the *Kumīta-yi Difāʿ-i Millī* ("Committee of National Defence"), which later moved to Kirmānshāh where it founded the *Dawlat-i Muwaḳḳat-i Millī* ("Provisional National Government") under the premiership of Niẓām al-Ṣalṭana Māfī. When the Russians took over western Persia and suppressed the Provisional Government, Farrukhī went to ʿIrāḳ where he was detained by the British army. He escaped from Baghdād and eventually returned to Persia, where he was briefly taken into Russian custody on suspicion of being a British agent.

In 1919 Farrukhī opposed the premier Wuthūḳ al-Dawla's [*q.v.*] ill-fated agreement with the British, and again in 1921 he opposed the coup d'état of Riḍā Khān (the future Riḍā Shāh Pahlawī). Subsequently he founded his newspaper *Ṭūfān* ("Storm"), of which the first issue appeared on 26 August 1921. Publication of *Ṭūfān* was often interrupted, and during the eight years of its life, the paper was suppressed more than fifteen times; yet each time it was banned, Farrukhī would publish in other periodicals such as *Sitāra-yi Sharḳ* ("Star of the East), *Paykār* ("Battle"), *Ḳiyām* ("Uprising"), and *Ṭalīʿa-yi Āʾīna-yi Afkār* ("The Primal Mirror of Ideas").

In 8 March 1922 Farrukhī and a group of opposition journalists took refuge in the Soviet embassy in Tehran, but were persuaded to leave by Riḍā Khān, then the Minister of War. When, on 28 October 1923, Riḍā Khān became Prime Minister, Farrukhī expressed his opposition, but in the same period favoured Riḍā Khān's short-lived inclination towards forming a republic in Persia. In 1927, as the editor of *Ṭūfān*, and in view of his political sympathies, Farrukhī was invited to Moscow to attend the tenth anniversary of the Russian Revolution. In 1928 he was elected as a deputy from Yazd to the seventh *Madjlis*, where he joined the *frāksīyun-i aḳalliyyat* ("minority faction"), traditionally a coalition of socialists. In the seventh session, however, that lobby consisted only of Farrukhī and Maḥmūd-Riḍā Ṭulūʿ, a deputy and fellow-journalist from Lāhīdjān. From March 1928 Farrukhī also published a weekly edition of *Ṭūfān* with a historical and literary orientation.

At the end of the seventh *Madjlis* (October 1930), and with no more parliamentary privilege to rely on, Farrukhī left Tehran for Moscow and then for Berlin. There he wrote against the political situation in Persia in the periodical *Paykār* ("Battle") founded in 1930 by Persian activists in Berlin, and then in his own *Nihḍat* ("Movement"), until both were suppressed and Farrukhī was ordered to leave Germany. Meanwhile, ʿAbd al-Ḥusayn Taymurtāsh, minister of the royal court, met with Farrukhī in Berlin and assured him of his safety if he returned to Persia. Farrukhī agreed, and in 1932 returned, but after a year of indigence in Tehran, he was arrested on a civil charge for debts owed to the paper supplier of *Ṭūfān*.

Although the initial charges were of a civil nature, his political agitation inside the prison, expressed at times in passionate poems, soon turned him into a political prisoner and led to his constant transfer from one gaol to another: his term was extended first to 27 months, then to 30 months, and finally to three years. In the end he was transferred from Ḳaṣr prison to the infamous "clinic" at the police headquarters in Tehran, where on 18 October 1939 he was murdered by the prison's notorious medical practitioner, *Pizishk* ("physician") Aḥmad Aḥmadī, by air injection.

Although in poetical style Farrukhī observed the traditional patterns of prosody (*ʿarūḍ*), the content of his poems focussed on contemporary social and political topics. Major themes of the Constitutional period, such as patriotism and the quest for civil liberties and social justice, were expressed in his verse, hence his contribution to the composition of political *ghazal* is noteworthy. In Persian poetry, he can be placed in the long tradition of the poetry of protest against arbitrary rule.

(ALI GHEISSARI)

YAZĪD (I) B. MUʿĀWIYA, the second Umayyad caliph (*r.* 60-4/680-3). He was named as his successor by his father [see MUʿĀWIYA I]. His mother was Maysūn, a sister of the Kalbī leader Ibn Baḥdal [see ḤASSĀN B. MĀLIK]. The Banū Kalb [see KALB B. WABARA] were strong in the southern regions of Syria, and Muʿāwiya appointed Yazīd as his successor in preference to an older half-brother, ʿAbd Allāh, born of a Ḳurashī mother. Yazīd's *kunya*, Abū Khālid, refers to one of his own younger sons [see KHĀLID B. YAZĪD]. During his father's caliphate, Yazīd commanded expeditions (*ṣawāʾif*, see ṢĀʾIFA. 1.) against the Byzantines and participated in an attack upon Constantinople (in 49/669 or 50/670) that is mentioned in both Muslim and non-Muslim sources. He is also named as having led the *ḥādjdj* in various years. Reports make him less than 40 at the time of his death at Ḥuwwārīn [*q.v.*] in Rabīʿ I 64/November

683, variant dates and other details being given about his birth. He had apparently nominated his eldest son Muʿāwiya [see MUʿĀWIYA B. YAZĪD] as his succcessor, but the latter received only limited acceptance as caliph and died within months.

Yazīd's caliphate marked the beginning of the crisis, commonly referred to as *fitna* [*q.v.*], during which the Umayyads came close to losing the caliphate. Eventually they re-established their hold on the institution but in the person of Marwān I b. al-Ḥakam [*q.v.*] and his descendants rather than a representative of the Sufyānid branch of the family, to which Yazīd belonged. Following his father's death in Radjab 60/April 680, Yazīd was faced with the continuing refusal of ʿAbd Allāh b. al-Zubayr and al-Ḥusayn b. ʿAlī b. Abī Ṭālib [*q.vv.*], both then in Medina, to give him allegiance. Most of the reports about his caliphate concern his attempts to overcome their opposition and that of others. Al-Ḥusayn's attempt to make good his own claim to the caliphate ended in his death at the hands of a force sent by Yazīd's governor of ʿIrāḳ, ʿUbayd Allāh b. Ziyād [*q.v.*] at Karbalāʾ in Muḥarram 61/October 680. Ibn al-Zubayr's opposition led, in 64/683-4, to the siege of Mecca, where he had taken refuge, and to the bombardment of the town with catapults (*madjānīḳ*) by an army sent by Yazīd. During the siege, the Kaʿba was damaged by fire, but there are variant accounts of how exactly that happened and who was responsible for it. Yazīd's army, initially commanded by Muslim b. ʿUḳba al-Murrī [*q.v.*], had been raised in 63/683 primarily in response to the actions of the people of Medina, who had thrown off their allegiance to Yazīd, expelled those Umayyads living there and, according to some accounts, established contacts with Ibn al-Zubayr. After defeating the Medinans at the battle on the Ḥarra [*q.v.*], Muslim entered (and, it is said, sacked) the town, and compelled a number of its prominent men to return to their allegiance to Yazīd. He then set off for Mecca, intending to force Ibn al-Zubayr, who had received the support of others of Yazīd's opponents, including several Khāridjites [*q.v.*], to submit. On the way, Muslim died and his position as leader of the Syrian army was assumed by al-Ḥuṣayn b. Numayr al-Sakūnī [*q.v.*]. He it was who commanded the siege of Mecca. News of Yazīd's death in Syria reached him while the siege was in progress, and after fruitless negotiations with Ibn al-Zubayr he withdrew the army back to Syria.

In broad terms, Yazīd seems to have continued the form of rule developed by his father which depended on the relationship between the caliph, his governors and the tribal notables (*ashrāf*) in the provinces. His governor of ʿIrāḳ, ʿUbayd Allāh, was the son of Muʿāwiya's governor there, Ziyād. A Christian, Sardjūn, who had been prominent in the administration of Muʿāwiya, continued to be influential under Yazīd. (Robert Hoyland has questioned whether this Sardjūn, sometimes called "the *mawlā* of Muʿāwiya", sometimes "of Yazīd", and variously described as Yazīd's drinking companion or as *ṣāḥib amrihi*, was the father of John of Damascus, as Lammens and others have assumed.) The custom of receiving delegations (*wufūd* [*q.v.*]) from the provinces at the court to win them over with gifts and flattery, institutionalised by his father, was less successful when Yazīd attempted to use it to head off the opposition of the Medinans. The image of Muʿāwiya as operating more like a tribal *shaykh* than a traditional Middle Eastern despot, perhaps embodied in the well-known description of him by Theophanes as a "chief governor" (*protosymboulos*), also seems applicable to Yazīd and may be behind the eulogy of him in the *Byzantine-Arab chronicle of 741*: "he never... sought glory for himself by virtue of his royal rank but lived as a citizen along with all the common people" (*nullam unquam... sibi regalis fastigii causa gloriam appetivit, sed communis cum omnibus civiliter vixit*; tr. Hoyland). The breakdown, beginning under Yazīd, of the system of government used more successfully by Muʿāwiya, may be ascribed partly to difficulties associated with the succession to the caliphate but more fundamentally to the changes taking place in the structure of the conquest society, analysed by Patricia Crone in her *Slaves on horses*.

Yazīd is often credited with the creation of the new *djund* of Ḳinnasrīn [*q.v.*]. For an extensive discussion of that and other incidental information about him and his caliphate (his reduction of the tribute to be paid by the Christians from Nadjrān [*q.v.*], his suppression of privileges enjoyed by the Samaritans, his involvement in irrigation work, etc.), see Henri Lammens, *Le Califat de Yazîd Ier*. For a Sāsānid type coin dated "year 1 of Yazīd", see the article by Mochiri cited in the *Bibl.*

As the caliph under whom the Prophet's grandson al-Ḥusayn was killed, the two holy cities of Arabia attacked, and the Kaʿba set on fire, and as the one who benefited from an appointment presented in Muslim tradition as a crucial stage in the corruption of the caliphate into a kingship, it is not surprising that the tradition generally is hostile to Yazīd. There are frequent mentions of his penchant for drinking, singing girls, sexual licentiousness, hunting, playing with his tame monkey, and other such things which show him as a frivolous libertine. As James Lindsay has illustrated, however, some of the traditional material emphasises Yazīd's closeness to the generation of the Prophet and his role in the transmission of Muslim tradition, and there are different versions of an apocalyptic tradition ascribed to ʿAbd Allāh b. ʿAmr b. al-ʿĀṣ [*q.v.*] which includes "the King of the Holy Land (*malik al-arḍ al-muḳaddasa*)", Muʿāwiya, and his son in a line of righteous *khalīfas*. Even Ibn ʿAbbās is said to have given Yazīd the *bayʿa* and to have spoken favourably of him and his father.

The glowing account of Yazīd in the *Byzantine-Arab chronicle* was cited by both Wellhausen and Lammens, who presented him, at least after his accession to the caliphate, as an able and worthy ruler traduced by opponents who hypocritically appealed to religion. More recently, Lindsay has argued that Ibn ʿAsākir's biography of Yazīd, although unable to ignore entirely the unfavourable traditional material, seeks to present as sympathetic an image as possible in order to convey a moral and religious message of its own. If that interpretation is valid, it is nevertheless true that the Damascene scholar was able to draw on some favourable material already existing in the tradition. It is probably impossible on the basis of the evidence available to make a judgement about Yazīd's ability or his character. Any attempt to do so, however, must seek to understand both the historical situation in which he ruled (insofar as that can be recreated) and the nature of the Muslim historical tradition which crystallised after the Umayyads had been overthrown.

YAZĪD (II) B. ʿABD AL-MALIK, the ninth Umayyad caliph, *r.* 101-5/720-4. He was born in Damascus *ca.* 71/690-1. His mother was ʿĀtika bt. Yazīd b. Muʿāwiya, and he was named after his Sufyānī grandfather, the caliph Yazīd I. Thus Yazīd II joined in his person the Marwānid and the Sufyānid branches of the Umayyad family, making him a natural candidate for the succession. Like most other Umayyad princes, he appears to have travelled outside of Syria only to the Ḥidjāz. Also, he seems to have received neither administrative nor military preparation for ruling, although Sulaymān b. ʿAbd al-Malik designated him his second successor in 99/717. Thus he was crown prince under ʿUmar II and then became caliph on ʿUmar's death on 21 Radjab 101/9 February 720. He probably spent most of his reign at Damascus or on his estates in the *djund* of al-Urdunn [*q.v.*], where he died at Irbid on 24 Shaʿbān 105/26 January 724.

At the beginning of his reign, Yazīd II faced a serious if short-lived revolt in ʿIrāḳ led by Yazīd b. al-Muhallab al-Azdī (101-2/720). This rebellion expressed the continuing dissatisfaction of the Yamanī elements in ʿIrāḳ with Umayyad rule and elicited from the Umayyads a harsh reaction against the Yamanīs there. In order to strengthen the Umayyad position in ʿIrāḳ, Yazīd II reintroduced Syrian troops and tended to rely on the Muḍar tribal elements against the Yamanīs, as shown by his appointment of his Djazīran-domiciled brother Maslama b. ʿAbd al-Malik (102-3/720-1 [*q.v.*]) and the latter's protégé, the Muḍarī Djazīran ʿUmar b. Hubayra al-Fazārī (103-6/721-5 [see IBN HUBAYRA]), to be governors of the East.

His apparent tilt toward the Muḍar has caused Yazīd II often to be portrayed as a pro-Muḍar and anti-Yaman extremist, but such a judgement is unfair, as he actually tried to balance the conflicting groups, just as other Umayyad rulers did. Certainly, Yazīd retained the confidence of the Syrian Yamanīs, for he gave them the governorships of the other two great provinces, the West and also al-Djazīra, including Ādharbāydjān and Armenia. Before joining it to the province of the East, he even appointed a Syrian Yamanī general as governor of Khurāsān.

On the other hand, relations between the Syrians and others, especially the Kūfans, remained poor. Also, Yazīd II alienated the non-Arab Muslims or *mawālī* by seeking to annul the reforms of ʿUmar II that favoured them. Thus in Sind, Khurāsān, North Africa and Spain, attempts were made to reimpose the *djizya* that had recently been removed from the *mawālī*. These attempts seem not to have been very successful. In Khurāsān, the new policy, applied under Saʿīd b. ʿAmr al-Ḥarashī (103-4/721-2), contributed to revolts and wars that continued for twenty years and played a considerable rôle in the Umayyads' later downfall. In North Africa, Yazīd II's governor Yazīd b. Abī Muslim was assassinated almost immediately for trying to implement such a policy (102/720), leading to a loss of caliphal authority and prestige and presaging the great North African revolt under Hishām (from 122/740).

On the frontiers, Yazīd II resumed the traditional Umayyad policy of military expansion after its brief suspension by ʿUmar II. During Yazīd's short reign, campaigns were carried out against the Franks in France and Sardinia, the Byzantines in Sicily and Anatolia, the Khazars in the Caucasus and the Turks in Transoxania. Furthermore, ideological struggle against other religions intensified, especially against Christian icon worship, with Yazīd II's issuance of an iconoclastic decree commanding the destruction of all images of humans and animals throughout the caliphate (103-4/721-3), a step that preceded and anticipated the Byzantine emperor Leo III's iconoclasm.

Despite the momentous events of his reign, both mediaeval sources and modern scholars often portray Yazīd II as a frivolous slave to passion, especially to his singing girls Ḥabāba and Sallāma. While there is no doubt that he cultivated poetry, like the other Umayyads, and had a refined artistic taste, the picture of his lack of seriousness and of Ḥabāba's influence has been much exaggerated.

YAZĪD (III) B. AL-WALĪD (I) b. ʿAbd al-Malik b. Marwān I, Umayyad caliph for approximately six months in 126/744. He is known in tradition as al-Nāḳiṣ (the Depriver, or the Deficient; various explanations are given). He is said to have boasted that through his mother, one of Yazdagird III's granddaughters captured in Transoxania, he had inherited both Sāsānid and Byzantine blood. He has a reputation for asceticism and piety, and was accepted as a righteous Imām not only by his immediate supporters but by some later theorists too (al-Ḳāḍī ʿAbd al-Djabbār, *Mughnī*, Cairo n.d., xx/2, 150).

Yazīd obtained the caliphate by overthrowing his cousin and predecessor, al-Walīd II b. Yazīd II [*q.v.*], an act which initiated the third "civil war" in Islam [see FITNA]. The main support for Yazīd came from the Kalbīs of the region around Damascus, and his short rule promoted Kalbī and Yamanī interests at

the expense of Ḳays and Muḍar. He sent the Kalbī Manṣūr b. Djumhūr to ʿIrāḳ to depose the pro-Ḳaysī governor Yūsuf b. ʿUmar al-Thaḳafī [see AL-THAḲAFĪ], but subsequently he made ʿAbd Allāh b. ʿUmar II his governor there.

He is frequently described as a Ḳadarī [see ḲADARIYYA] and as supported by the Ghaylāniyya [see GHAYLĀN AL-DIMASHḲĪ]. The conception of the caliphal office put forward in his accession *khuṭba* and in a letter he sent to the ʿIrāḳīs, both of which have been accepted as largely authentic in spite of the variant versions transmitted, was certainly unusual among the Umayyads. As well as promising to right certain abuses with which his Umayyad predecessors had been charged, he appealed to the Book of God and the Sunna of His Prophet, put forward the view that the caliph should be chosen as a result of consultation (*al-amr shūrā*), and offered to stand down if found to fall short himself, so long as he was given the chance to repent. If another could be found who was considered preferable, he would be the first to give him the oath of allegiance.

Yazīd seems to have died of natural causes—according to one report he was a victim of the plague (*al-ṭāʿūn*)—in Dhu 'l-Ḥidjdja 126/September 744, and was succeeded by the equally ephemeral Ibrāhīm b. al-Walīd (I) [*q.v.*].

(G.R. HAWTING)

YAZĪD B. **ABĪ MUSLIM** (Dīnār), Abu 'l-ʿAlāʾ, secretary and governor under the Umayyads. He was a *mawlā*, not by manumission (presumably by conversion), of Thaḳīf [*q.v.*], and foster-brother and secretary, but not *mawlā*, of al-Ḥadjdjādj [*q.v.*] (thus al-Djahshiyārī and al-Djāḥiẓ). He ran the *dīwān al-rasāʾil* for al-Ḥadjdjādj and took charge of the taxes of ʿIrāḳ when the latter died in 95/714, but was dismissed and jailed on Sulaymān's accession in 96/715. His cruelty was so notorious that ʿUmar II reputedly left him in jail, or alternatively sent him home when he joined a summer campaign as a member of the *dīwān*. His pay as secretary was 300 dirhams a month. As a member of the *dīwān* [*al-muḳātila*] he received 2,000 (a year, i.e. *sharaf al-ʿaṭāʾ*), which ʿUmar allegedly reduced to 30 (*sic*, Ibn al-Djawzī, *Sīrat ʿUmar b. ʿAbd al-ʿAzīz*, 88-9, 90; al-Fasawī, *al-Maʿrifa wa 'l-taʾrīkh*, i, 606-7). Yazīd II appointed him to North Africa where he was killed in 102, either for branding his Berber bodyguards with the word *ḥarasī* in alleged imitation of Byzantine practice or for continuing the policy adopted in ʿIrāḳ of repatriating and reimposing the taxes on *dhimmīs* who left their land as converts to Islam. He was rumoured to be a Khāridjite.

(PATRICIA CRONE)

YAZĪD B. **ABĪ SUFYĀN** b. Ḥarb b. Umayya, Arab commander of the conquests period, son of the Meccan leader Abū Sufyān [*q.v.*] by his wife Zaynab bt. Nawfal and half-brother of the subsequent caliph Muʿāwiya I [*q.v.*], d. 18/639 without progeny (Ibn Ḳutayba, *Maʿārif*, ed. ʿUkāsha, 344-5).

With his father and brother, he became a Muslim at the conquest of Mecca in 8/630, took part in the ensuing battle of Ḥunayn [*q.v.*] and was one of "those whose hearts are won over", receiving from the Prophet a gift of 100 camels and 40 ounces of silver (Ibn Saʿd, ii/1, 110, vii/2, 127; al-Wāḳidī, iii, 944-5; and see AL-MUʾALLAFA ḲULŪBUHUM). In Abū Bakr's caliphate, he operated in Palestine with Shuraḥbīl b. Ḥasana and ʿAmr b. al-ʿĀṣ [*q.vv.*], and after the Byzantines were defeated at al-Adjnādayn [*q.v.*] and Damascus fell, he campaigned in the Balḳāʾ [*q.v.*] and captured the citadel at ʿAmmān (14/635). When ʿAmr left Palestine for Egypt, he appointed Yazīd in charge of Syria, but Yazīd died there, in company with many other Arab commanders such as Abū ʿUbayda and Muʿādh b. Djabal, in the notorious "Plague of Emmaus" [see ʿAMWĀS] in 18/639.

Yazīd is called in later sources "Yazīd al-Khayr", with a good image because of his part in the conquests and the manner of his death, accounted by some authorities as that of a *shahīd* [*q.v.*]

(C.E. BOSWORTH)

YAZĪD B. **DĪNĀR** [see YAZĪD B. ABĪ MUSLIM].

YAZĪD B. **ḤĀTIM** AL-**MUHALLAB** [see MUHALLABIDS. (iv)].

YAZĪD B. MIḲSAM **IBN ḌABBA** AL-THAḲAFĪ (*fl.* first half of the 2nd/8th century). Arab poet, member of the circle around the caliph al-Walīd b. Yazīd [*q.v.*].

He was a *mawlā* of the tribe of Thaḳīf in al-Ṭāʾif; according to the philologist al-Aṣmaʿī [*q.v.*], who knew him, his Arabic was nonetheless pure (*Aghānī*, vii, 103). Since his father died when he was still young, he became known as Ibn Ḍabba after his mother, who as the dry nurse of the children of al-Mughīra b. Shuʿba [*q.v.*] and of his son ʿUrwa was a woman of some standing. He seems to have befriended al-Walīd early on, since on account of this friendship he was snubbed by the caliph Hishām (who disliked his nephew) at the latter's enthronisation in 105/724, whereupon he retired to al-Ṭāʾif, there to live on funds provided by al-Walīd. He returned to Damascus at al-Walīd's accession in 125/743 and apparently stayed in his entourage. He may have returned to al-Ṭāʾif after al-Walīd's death, since al-Aṣmaʿī (b. possibly in 123/741) met him there.

Of his allegedly voluminous poetic output ("one thousand *ḳaṣīdas*", according to the local patriotism of the Ṭā'ifites, *Aghānī*[3], vii, 103), besides a few fragments only three longish poems have been preserved: a complaint about Hishām's behaviour, a congratulatory panegyric to al-Walīd on becoming caliph and an impromptu description of al-Walīd's horse, at the latter's behest, on the occasion of a successful hunt (all of them included in the *Aghānī* article on him). The narrative connected with the descriptive poem (mentioned in Hamilton, *Walid*, 128, but without Yazīd's name) gives us a fascinating glimpse into the "handling" of poetry: after applauding Yazīd's feat, al-Walīd asks him to add an amatory prelude (*tashbīb*) to his poem—which would turn it into a complete *ḳaṣīda*—and give it (the prelude, not the entire poem) to two well-known singers to set to music. Which he does.

The complaint poem against Hishām is composed in the more traditional metre *wāfir musaddas*, whereas the ode to al-Walīd is in the short and more "modern" metre *hazadj murabba'*, probably more to the taste of the addressee. The Hishām poem displays a strange rhyme: *-Cnā*, where *-nā* is the pronominal ending "we" of the perfect, and *-C-* is represented 20 times by the consonant /d/ and three times by another consonant. So we have to consider it a *nūniyya* with a strong tendency for *luzūm mā lā yalzam* [*q.v.*]. Al-Aṣma'ī remarks (*loc. cit.*) that he sought out difficult rhymes (*ḳawāfī mu'tāṣa*).

Most of the material gathered on the *Aghānī* is traced back by *isnād* to Yazīd's grandson, 'Abd al-'Aẓīm b. 'Abd Allāh.

(W.P. Heinrichs)

YAZĪD b. al-**MUHALLAB** [see muhallabids. (i)].

YAZĪD b. **ZURAY'**, Abū Mu'āwiya al-Baṣrī, traditionist of Baṣra, b. 101/720 and d. in Baṣra Shawwāl 182/Nov.-Dec. 798. His father had been governor of al-Ubulla [*q.v.*], presumably under the later Umayyads. He is described as the outstanding *muḥaddith* of Baṣra in his time, a *thiḳa* and *ḥudjdja*, and was the teacher of the historian and biographer Khalīfa b. Khayyāṭ [see ibn khayyāṭ]. Ibn Sa'd says that Yazīd was a supporter of the 'Uthmāniyya [*q.v.*].

Bibliography: Ibn Sa'd, vii/2, 44; Ibn Ḥadjar, *Tahdhīb*, xi, 325-8; Ziriklī, *A'lām*[2], ix, 235.

(Ed.)

YAZĪDĪ, Yazīdiyya, the name of a mainly Kurdish-speaking group whose communal identity is defined by their distinctive religious tradition.

Appellations and definitions. The Kurdish appellation generally used by the community itself is *Ēzdī*, with a variant *Ēzīdī*. Most Western scholars now hold that the word derives from the name of Yazīd b. Mu'āwiya [*q.v.*]; a derivation from Old Iranian *yazata*, Middle Persian *yazad* "divine being", was once widely accepted and is still preferred by many Yazīdīs. Popular etymologies include a derivation of the term from *ez dā*, which is understood to mean "I (i.e. God) created". In the Yazīdī hymns (*ḳawl*, see below), some of whose terminology goes back to the early stages of the history of Yazīdism, the community is occasionally referred to as "the Sunna" (*Sinnat*). Other appellations are *Ṣuḥbatiyya* "those who claim discipleship", "those who belong to the circle of disciples [of Shaykh 'Adī]" and *Dāsinī* or *Dāsin*, originally perhaps the name of an influential Yazīdī tribe. The Yazīdīs are sometimes referred to by outsiders as "devil-worshippers". Their worship of the Peacock Angel (*Ṭā'ūs-ē Malak* or *Malak Ṭā'ūs*), whom some non-Yazīdīs associate with the devil, and their extreme veneration for 'Adī b. Musāfir [*q.v.*], were contributory factors in a process that caused the Yazīdīs to become alienated from the Islamic community. Most modern Yazīdīs emphatically reject any connection between their religion and Islam.

Numbers and territories. No reliable data are available as to the size of the various Yazīdī communities. Estimates of the total number of Yazīdīs vary from 200,000 or less, to over a million; a conservative estimate would seem to be around 240,000. The largest group of Yazīdīs (perhaps 120,000) now live in 'Irāḳ. There is one community in the Shaykhān region northeast of Mawṣil; this area comprises the valley of Lālish, the religious centre of Yazīdism, Bā'adhrā, the seat of its leader (Mīr, see below), and the traditional centre of Yazīdī learning, the twin villages of Ba'shīḳa and Baḥzānē. The second Yazīdī community in 'Irāḳ is found in the area of Djabal Sindjār [*q.v.*] to the west of Mawṣil. The number of Yazīdīs in Transcaucasia is estimated at 60,000; most of these live in the Republic of Armenia, with a smaller group in Georgia. In Syria there are some 15,000 Yazīdīs, with communities in the Kurd Dāgh region and in the Syrian Djazīra. In Turkey, small remnants of the once large Yazīdī community still live in the south-east [see ṭūr 'abdīn. 4. Languages]. In the 1980s most Yazīdīs from Turkey found refuge from religious persecution in Western Europe, notably Germany, where the number of Yazīdīs is estimated at 20,000 to 40,000. Persistent reports about the existence of a Yazīdī community in western Iran have not so far been corroborated.

Language and origins. All known Yazīdī communities speak a form of Northern Kurdish [see kurds, kurdistān. v.]; the first language of the inhabitants of Ba'shīḳa and Baḥzānē is Arabic, but they use Kurdish as the language of their religious tradition. Many Yazīdīs regard themselves as Kurds but others, especially in Armenia and in the European diaspora, insist on being considered as a separate ethnic group.

Aspects of Yazīdī culture. Pre-modern Yazīdī society was largely organised along tribal lines. This is still the case in some communities, but elsewhere the importance of tribal institutions is much reduced. Traditionally, it was forbidden for most Yazīdīs to learn to read and write, and until recently most of Yazīdī culture was transmitted orally. Another characteristic of Yazīdī society is its division into hereditary endogamous classes or "castes".

Early history. A movement known as the Yazīdiyya, which sympathised retrospectively with the Umayyad caliphs and in particular with Yazīd b. Mu'āwiya, was active in the Kurdish mountains before Shaykh 'Adī b. Musāfir, who was of Umayyad descent, settled there some time before 505/1111. At the same time, some Kurdish tribes in these areas still adhered to a faith which is described as "Magian" and was presumably of Iranian origin. Shaykh 'Adī founded a Ṣūfī order, the 'Adawiyya, whose centre in the Kurdish areas was the valley of Lālish, where his tomb later continued to be venerated by his followers. The 'Adawiyya had a following outside Kurdistān, but by the time of Shaykh 'Adī's successor Ḥasan b. 'Adī [see 'adī b. musāfir], the Kurdish group appears to have acquired some characteristics which distinguished them from other 'Adawīs. The group's peculiar beliefs and observances increasingly alienated it from the

surrounding Muslim population; the first major conflict, which widened the rift, took place in 817/1414. The appellation "Yazīdī", which was already known locally, presumably came to be associated with the group on account of Shaykh ʿAdī's Umayyad origins.

Powerful Kurdish tribes joined the followers of Shaykh ʿAdī, and during the first centuries after his death these played a prominent role in local politics. This power later decreased and from the 16th century onwards a long succession of persecutions characterised the community's history. In the 19th century some Yazīdī tribes sought refuge in Christian Armenia and Georgia. The latter half of the 20th century saw large group of Yazīdīs from Turkey seeking sanctuary in Western Europe, followed by Yazīdī immigrants from ʿIrāḳ.

The community's own account of its early history comprises legends explaining its origin and exceptional ontological status (the Yazīdīs are said to have been engendered by Adam alone, without Eve), and tales about Shaykh ʿAdī's arrival among the Kurds, his miraculous deeds and his associations with some of his contemporaries; the latter accounts are held to explain the origin of the various lineages of Shaykhs and Pīrs (see below).

Religion. Although most modern Yazīdīs deny any links with Islam, their religious textual tradition reflects the syncretistic origins of their faith. Theology and mythology, particularly the cosmogony, show traces of a non-Islamic tradition which may be of ancient Iranian origin. Religious vocabulary and imagery, on the other hand, largely derive from Ṣūfism. While Yazīdīs have some characteristic beliefs, mythology, religious observance and acceptance of the obligations arising from a complex social system play at least as important a role in their religious life.

(a) *Beliefs*. Yazīdīs believe in one God, who created the world but is held to have entrusted it to seven archangels, the "Seven Mysteries" (*Haft surr*), whose leader is the Peacock Angel. Yazīdīs themselves do not admit the objective existence of good and evil, but whatever befalls the world—including what others might call evil—is attributed in Yazīdism to *Ṭāʾūs-ē Malak*. While Yazīdīs reject claims that their greatest Archangel is identical with the devil (*Shayṭān*), the strict taboo on the use of words associated with the latter suggests an awareness of some connection between the two. Some Yazīdīs say that Iblīs [*q.v.*] has been forgiven and is once more close to God.

Besides God and the Seven, Yazīdīs venerate a large number of "holy figures" (*khāṣṣ* or *mēr*), some of whose names correspond to those of early Ṣūfī saints, whereas others may originally have been local heroes or early community leaders. Most *khāṣṣ* have special links with a lineage of Shaykhs or Pīrs; they can be worshipped by means of visits to shrines dedicated to them and by gifts to members of the lineage representing them. Some *khāṣṣ* are thought to have special curative powers; otherwise their individual character and functions are in most cases not clearly defined.

Both reincarnation (*donādon*, also *kirās gihorrīn* "changing one's shirt") and the existence of heaven and hell are referred to in Yazīdī texts, and to some extent in community discourse; some traditions exist which seek to reconcile these beliefs.

(b) *Myths and legends*. The Yazīdīs have a rich mythology, in which ancient Iranian, Christian and Judaeo-Islamic elements can be distinguished, and which also comprises tales that have their origin in community history or serve to explain Yazīdī observance. Only a relatively small part of the corpus of Yazīdī myths and legends has so far been described in Western sources.

The myth of creation describes how God fashioned an embryonic form of the universe in the shape of a pearl, upon which he evoked the Seven Mysteries and made a Covenant with them, entrusting them with the control of the world. The Yazīdī cosmogony has a direct parallel in the tradition of the Ahl-i Ḥaḳḳ [*q.v.*], with which Yazīdism has several features in common, and shows some similarities to the Zoroastrian cosmogony. It has been suggested that the myth goes back to an ancient western Iranian tradition which was not deeply Zoroastrianised. The theme of a Flood also figures prominently in Yazīdī accounts of the origin of the world.

The textual tradition. As literacy was traditionally forbidden to all but a few Yazīdīs, most of their textual tradition has long been transmitted by word of mouth. This has influenced its character: the style is rarely abstract, and anecdotes, myths and legends predominate. These can be told in the form of "stories" (*čīrok*), and they are frequently alluded to in the sacred hymns (*ḳawl*).

(a) *The* Ḳawls. The Hymns, a large corpus of texts which is still imperfectly known in the West, represent the Yazīdī counterpart to both the sacred and the learned traditions of other cultures. Until the beginning of the 20th century this knowledge is said to have been taught in a "school" (*maktab*) for Ḳawwāls in the twin villages of Baʿshīḳa and Baḥzānē.

(b) *The "Sacred Books"*. The texts known in the West as the Yazīdī "Sacred Books", the *Maṣḥaf-ā Rash* and the *Kitēb-ī Djilwa*, were probably written down by non-Yazīdīs on the basis of information deriving from the teachings of the *Ḳawwāl* school. A series of manuscripts containing these texts, first in Arabic and later also in Kurdish, came to light in the late 19th and early 20th centuries, and were sold to Western researchers and institutions. A long academic debate concerning the status of these texts has resulted in a virtual consensus that the written texts do not represent an ancient tradition. The evidence of the *Ḳawls* suggests, however, that the contents of the texts (though not the manuscripts) represent a genuine Yazīdī tradition.

Observance. Prayer in Yazīdism is felt to be a private, individual matter; communal prayer is unknown. Individual praying habits vary, as do prayer texts. Tying the "sacred girdle", and on some occasions kissing the neckline of the "sacred shirt" (on both garments, see below), form part of traditional praying routine. Paying homage to the rising sun by bowing to it, or kissing the spot where its first rays fall, are traditional non-verbal acts of worship. Pilgrimages to the shrines of holy figures and regular visits to one's Shaykh and Pīr are also important parts of Yazīdī observance.

Some Yazīdī "taboos" (*mamnūʿāt*) should be observed by the community as a whole (e.g. the ban on using words connected with Satan or cursing, wearing blue clothes, eating certain foods, and polluting earth, air, water or fire by certain acts), while others concern only Shaykhs of a certain lineage and their followers. Observance of taboos is now generally less strict than in the past.

(a) *Holy places and objects*. Yazīdī villages normally have a local shrine, which is dedicated to a holy figure and functions as a religious centre. Further shrines, usually also associated with a *khāṣṣ*, are found all over the territories where Yazīdīs live. The most impor-

tant and holy centre of Yazīdī religious life is the area referred to as "Shaykh 'Adī" or "Lālish". This sacred part of the Lālish valley, entry to which is marked on one side by a small bridge known as the "Ṣirāṭ Bridge" (*pirra Silāt*), contains shrines dedicated to most of the important holy figures of Yazīdism. Chief among these is the central sanctuary dedicated to Shaykh 'Adī. Holy places in the area further include a subterranean cave under Shaykh 'Adī's sanctuary where the water of the "Zamzam" spring bursts from the rock, and a second sacred spring, the *Kāni-yā Sipī* ("White Spring"). One of the mountains surrounding the valley is known as "Mt. 'Arafāt", another as Mishēt (cf. Djabal Mushayt, near Medina).

Barāt, little balls of dust from Lālish made with water from the Zamzam spring or the *Kāni-yā Sipī*, have great religious significance, and most Yazīdīs carry some of these with them at all times. The *Sandjak*, sacred effigies of the Peacock Angel, traditionally play an important role in Yazīdī observance (see below). There were originally seven of these images, two of which are still known to exist. Garments with religious significance include the *khirkas* [*q.v.*] of contemporary Fakīrs (see below) and of ancient holy figures, the "sacred girdle" (*shutik*), and "sacred shirt" (*kirās*, whose neckline is called *girīvān*), both of which were worn until recently by many religious Yazīdīs. A "sacred cord" (*ristik*) is worn by a few religious dignitaries. A sacred shirt (*sadra*, which has a pocket called *girebān*) and a sacred girdle or cord (*kustī*, which is untied and retied before prayer, cf. above) are also known in Zoroastrianism.

(b) *Rites of passage.* Baptism (*mor kirin*) with holy water from Lālish and male circumcision are practised by most Yazīdīs. Weddings and funerary ceremonies require the services of a Shaykh, a Pīr, and a "Brother (or Sister) of the Hereafter" (see below).

(c) *Festivals.* Yazīdī festivals can be divided into local and general observances. Some of the latter have a counterpart in Islam and follow the lunar calendar, while others follow the "Eastern" calendar (which, in the 20th century, is 13 days behind the Gregorian one).

In the Shaykhān area, the principal local religious feasts are the *ṭawāf* and the arrival of the *Sandjak*. Most villages hold an annual festival (*ṭawāf*) in the name of the *khāṣṣ* to whom their shrine is dedicated. Formerly, groups of Ḳawwāls (see below) and other religious dignitaries toured all the Yazīdī lands at least once a year to display the *Sandjak*, chant *Ḳawls* to the accompaniment of the "sacred" tambourine (*daf*) and flute (*shabāb*), preach a sermon (*mushābat*), distribute holy water, and collect taxes. Such tours, known as *Ṭā'ūs gērran* ("taking the Peacock around"), still take place in Shaykhān and Sindjār.

The Čēlkān tribe, whose ancestral territories are in the Ṭūr 'Abdīn area [*q.v.*] in Turkey and in the border regions between Turkey and Syria, celebrate a seven-day festival in mid-winter known as *Bātizmiya*, which seems to be associated with the Christian New Year.

Among the movable feasts, some Yazīdīs observe counterparts to two ceremonies of the Muslim Ḥadjdj [*q.v.*], sc. on the sojourn at 'Arafa (which is celebrated on Mt. 'Arafāt at Lālish) and the *'Īd al-Aḍḥā* [*q.v.*], and to the *'Īd al-Fiṭr* [*q.v.*]. An equivalent to the Islamic *Laylat al-Barā'a* [see BARĀ'A] is observed at the Sanctuary of Shaykh 'Adī.

The immovable feasts of Yazīdism include a spring New Year (*Sar-ē Sāl*), and forty-day fasts (*čilla*) around mid-summer and mid-winter, which are kept by some religious leaders. More widely observed is a three-day winter fast, ending with a feast which is associated with the birth of Ēzīd (one of the great holy figures). The most important occasion in the Yazīdī religious year is the seven-day autumn festival known as "Feast of the Assembly" (*Djažn-ā Djamā'iyya*), for which all those who are able must gather at Lālish. Important elements of the *Djamā'iyya* celebrations are the *samā'* (sessions which include a solemn procession by the chief dignitaries of the faith, and the chanting of *Ḳawls* to the accompaniment of music), the ritual sacrifice of a bull at the shrine of Shaykh Shams (one of the Seven), and a ceremony in which an object known as the "bier of Shaykh 'Adī" is brought out from the Shrine, solemnly washed, and returned.

Social organisation. The most fundamental division of Yazīdī society is that into three hereditary, endogamous classes or castes: Shaykhs, Pīrs and *murīds* (laymen). The Shaykhs are subdivided into three endogamous branches (Shamsānī, Ādānī and Qātānī), each with several sub-branches. There are forty lineages of Pīrs, most of which may intermarry. The lineages of Shaykhs and Pīrs essentially represent the Seven Mysteries and other holy figures of the Yazīdī tradition.

Every Yazīdī, including Shaykhs and Pīrs, must have a Shaykh and a Pīr. A *murīd*'s relationship with his Shaykh and Pīr is hereditary, and members of each tribe can be affiliated to Shaykhs and Pīrs from certain lineages only. This creates a complex web of social relations and obligations that is made even more intricate by the obligation on each individual to have a "Brother (or Sister) of the Hereafter" (*birā-yē ākhiratē*, *khushk-ā ākhiratē*, usually from a lineage of Shaykhs), a *murabbī* or preceptor (this is now observed only in Northern 'Irāḳ) and, in the case of males, a *karīf*, an unrelated male on whose knees one has been circumcised and with whom a life-long bond exists.

Membership of three other social groups, the Ḳawwāls, Fakīrs and Kočaks, is also largely hereditary. The Ḳawwāls are the repositories of Yazīdī learning, who have been trained to recite the *Ḳawls* or to play the sacred instruments. They live at Ba'shīḳa and Baḥzānē, and belong to either of two tribes (Hakkārī or Dumilī). The Fakīrs, who wear a black *khirḳa* and must lead pious and abstemious lives, now form a more or less closed group; the organisation of the group shows similarities to that of some Ṣūfī *ṭarīḳas*, however, and membership may originally have been more open. The Kočaks ("little ones"), wear white clothes and are known for their piety. Kočak families come from all three castes; male members of these families often act as "servants" at Lālish, but the term *kočak* is properly used for visionaries, diviners and miracle-workers who are thought to communicate with the "World of the Unseen" (*'ālam al-ghayb*) [see AL-GHAYB] by means of dreams and trances.

The temporal and spiritual leader of the community is known as the *Mīr* (Prince) of Shaykhān. The *Mīr* and other dignitaries representing the groups described above have a seat on the Yazīdī Religious Council (*Madjlis-a Rūḥānī*), which has considerable powers.

AL-**YAZĪDĪ**, ABŪ MUḤAMMAD YAḤYĀ B. AL-MUBĀRAK b. al-Mughīra al-ʿAdawī al-Baṣrī al-Baghdādī, with the *laḳab* or *shuhra* of al-Yazīdī (so named after Yazīd b. Manṣūr al-Ḥimyarī, d. 165/781, maternal uncle of the caliph al-Mahdī), Ḳurʾān teacher, grammarian, lexicographer, poet and man of letters, d. 202/817-18.

1. Al-Yazīdī, the father.

Born around 128/745-6 in Baṣra (?) as a client of the Banū ʿAdī b. ʿAbd Manāt, he frequented the local philologists, particularly Abū ʿAmr b. al-ʿAlāʾ, Yūnus b. Ḥabīb and al-Khalīl b. Aḥmad [*q.vv.*]. He became the main transmitter of the seven canonical readings or *ḳirāʾāt* [see KIRĀʾA and also AL-DIMYĀṬĪ AL-BANNĀʾ] of his teacher Abū ʿAmr and the main antagonist of his "Kūfan" colleague al-Kisāʾī [*q.v.*]. Appointed educator of the sons of his sponsor, Yazīd, whose historical role was as governor of Baṣra, Yemen and Kūfa, al-Yazīdī came into close contact with the court. Hārūn al-Rashīd appointed him teacher of his son al-Maʾmūn, who in turn entrusted his own sons to him. For them, he is said to have composed a *K. al-Mukhtaṣar fi 'l-naḥw*; previously, he had apparently dedicated a *K. fi 'l-lugha* to the Barmakī Djaʿfar b. Yaḥyā [*q.v.*]. Of the works attributed to him starting with the list contained in the *Fihrist*, 50-1, which is probably based on al-Marzubānī [*q.v.*], only "quotations" have been preserved, as commonly happens with this early generation of scholars. Also "lecture notes" [see MUḤAMMAD B. AL-ḤASAN B. DĪNĀR], written down after the session (*ḥalḳa, madjlis*; cf. below I.3), existed and were transmitted further [see MATHAL. iii]. At the age of seventy-four, al-Yazīdī died in 202/817-18 in Khurāsān, probably in Marw, the then residence of al-Maʾmūn. He is said to have been, like some of his descendants, a follower of the Muʿtazila. He is the forefather of the first extended family of scholars in Islam.

2. The descendants.

From among al-Yazīdī's sons (I) there are six, among his grandsons (II), fifteen, and among his great-grandsons (III), seven, who excelled as philologists, Ḳurʾān readers, traditionists or poets. Their extant verse has been collected, albeit incompletely, and edited by Muḥsin Ghayyāḍ, *Shiʿr al-Yazīdiyyīn*, Nadjaf 1973. Among those who acquired a scholarly reputation, the following four sons should be mentioned: Abū ʿAbd Allāh (I.1) Muḥammad (d. shortly after 214/829 in Egypt; Ghayyāḍ, 93-4); Abū Isḥāḳ (I.2) Ibrāhīm (d. 225/840 in Baghdād; Kaḥḥāla, i, 126-7); Abū ʿAlī (I.3) Ismāʿīl (d. after 275/888-9; Kaḥḥāla, ii, 300); and Abū ʿAbd al-Raḥmān (I.4) ʿAbd Allāh, known as Ibn al-Yazīdī (alive before 207/822; Kaḥḥāla, vi, 139-40).

Like their father, they all stood in a relationship of trust with al-Maʾmūn, some of them even with the

rank of privileged companion (*nadīm* [*q.v.*]). Ibrāhīm, together with his nephew Aḥmad (see below II.1), accompanied the caliph on his travels and military campaigns against the Byzantines. None of their numerous works has come down to us as such, except for a fragment of Ibrāhīm's dictionary of homonyms, *Mā 'ttafaḳa lafẓuhu wa 'khtalafa maʿnāhu*; this work once consisted of 700 folios and kept the author busy, according to his own testimony, from the seventeenth year of his life to the sixtieth (Yāḳūt, *Udabā'*, i, 360; al-Ziriklī, *Aʿlām*, Beirut 1979, i, 79; Sezgin, ix, 74). Of Ismāʿīl, we have a *riwāya* of a small *amthāl* book by his teacher Abū Fayd Mu'arridj al-Sadūsī, which was obviously transmitted to him orally. In 263/876 he transmitted it by dictation in the house of the vizier Sulaymān b. Wahb [see WAHB, BANŪ, and MATHAL. iii (1b)]. His elegy on the death, in 275/888-9, of ʿAlī b. Yaḥyā al-Munadjdjim [*q.v.*] yields a *terminus a quo* for his death.

From among al-Yazīdī's grandsons, two sons of (I.1) Muḥammad should be listed: his second son, just mentioned, i.e. Abū Djaʿfar (II.1) Aḥmad (d. shortly before 260/873-4; Yāḳūt, *Udabā'*, ii, 34-5), and his seventh son Abu 'l-ʿAbbās (II.2) Faḍl (d. 278/891; see AL-MUBARRAD). Both are frequently-quoted authorities in the transmission of texts ranging from *ḳirā'a* to *adab*.

This is especially true of the great-grandson Abū ʿAbd Allāh (III.1) Muḥammad b. al-ʿAbbās, the oldest son of (I.1) Muḥammad. He was born in 228/843 or 230/845 and died on 17 Djumādā II 310/12 Oct. 922 (al-Ziriklī, *Aʿlām*, vi, 182). Among his teachers, al-Riyāshī and Thaʿlab have pride of place, the former as a member of the so-called Baṣran, the latter as the head of the so-called Kūfan school. The lost (?) *Ṭabaḳāt al-shuʿarā'* of his great-uncle (I.2) Ismāʿīl (Sezgin, ii, 96; viii, 165-6) and the *Naḳā'iḍ* [*q.v.*] *Djarīr wa 'l-Farazdaḳ*, with the text according to Abū ʿUbayda > Ibn Ḥabīb > al-Sukkarī, are owed to his recension (*riwāya*). His collection of poems (*dīwān*) of al-Ḥādira [*q.v.*] was published in 1858 in Leiden (with a Latin tr.), then again in Rampur 1939 and Cairo 1969 (Sezgin, ii, 213-14). His collection of elegies (*marāthī*) from pre-Islamic and Islamic times, based on the texts of Ibn Ḥabīb and his uncle (II.2) Faḍl, was published at Ḥaydarābād in 1367/1948 under the title *K. al-Amālī* (H. Ritter, in *Oriens*, v [1952], 196, vi [1953], 189n; Sezgin, ii, 84, x, 261). This *K. al-Marāthī*, under this title, was newly published in Damascus and at the same time in Rabat 1991 (diploma thesis of 1985, cf. *Akhbār al-turāth al-ʿarabī*, xxviii [1407/1986], 20). A *riwāya* of the *K. al-Madjālis* of his teacher Thaʿlab can also be traced back to him (*Fihrist*, 74). The *K. Gharīb al-Ḳur'ān wa-tafsīruhu* (Sezgin, viii, 173) of his great-uncle (I.4) ʿAbd Allāh b. Yaḥyā in his *riwāya* was published in Beirut in 1407/1987. His *K. Manāḳib Bani 'l-ʿAbbās* seems not to be extant; neither, unfortunately, is his *K. Akhbār al-Yazīdiyyīn*, the history of his family, which was accessible to the author of the *Aghānī*, Abu 'l-Faradj al-Iṣbahānī (d. after 362/973), al-Marzubānī (d. 384/994) and Ibn al-Nadīm (d. 380/990). Towards the end of his life, the caliph al-Muḳtadir entrusted him with the education of his sons.

Bibliography: Given in the article, and see the *Bibl.* to I. above. (R. SELLHEIM)

YAZIDJI (T.), lit. "writer, secretary" < Tkish. *yaz-* "write", hence the Turkish equivalent of *kātib, dabīr* and *munshī*.

The term was used in Ottoman times for the clerks in the various government departments, such as the treasury, with a *bash yazidji* at their head. It could also be used for the secretaries of high court and military officials, e.g. of the Ḳîzlar Aghasî "Chief Eunuch of the Women", who was also, in the 10th/16th century, in charge of the *ewḳāf* for the Ḥaramayn, Mecca and Medina, and other great mosques of the empire [see ḤARAMAYN, at Vol. III, 175b].

Bibliography: Gibb and Bowen, *Islamic society and the West*, i/1, London 1950, 334; Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iv, 67-71 no. 1788. (ED.)

AL-YĀZIDJĪ, the name of a famous Lebanese Maronite family from Kafr Shīmā eminent in the Arab literary renaissance (*Nahḍa* [*q.v.*]) of the 19th and early 20th centuries.

1. al-Shaykh Nāṣīf b. ʿAbd Allāh (1800-71), the son of a physician and founder of the family's fame, who although he received no formal education, became a teacher, revered philologist and poet. During the first half of his life he held secretarial positions such as that to the Greek Catholic Patriarch (1816-18). He worked closely with American missionaries whom he assisted in a translation of the Bible, as well as becoming a key member of a society established by them entitled *al-Djamʿiyya al-sūriyya* [see DJAMʿIYYA. i.], a literary and scientific circle set up in 1847 in Beirut to raise cultural awareness. He wrote books, mainly popular school texts, on *bayān* [*q.v.*], syntax and morphology (of which one of the best known is *Djawf al-farā*, a work on syntax written in a verse of approximately 1,000 lines that was probably modeled on Ibn Mālik's [*q.v.*] famous *Alfiyya*). Nāṣīf also wrote on logic and medicine. However, he is probably best known for his poetry and his famous collection of prose *Maḳāmāt* [*q.v.*]. Nāṣīf was essentially a follower of the classical tradition. In his poetry he was influenced by al-Mutanabbī, on whom he prepared his well-known commentary entitled *al-ʿArf al-ṭayyib fī dīwān Abi-'l-Ṭayyib*, edited and published by his son Ibrāhīm in 1882. His predilection for classical works and language might have contributed to the animated dispute between Ibrāhīm and the progressive al-Shidyāḳ [*q.v.*], which appears to have begun when al-Shidyāḳ took offence at one of Nāṣīf's poems. Nāṣīf's apparent reluctance to learn foreign languages is another illustration of his traditional outlook. He wrote three *dīwāns* of poetry and a collection of letters in poetic forms containing correspondence with Arab literary figures, the *Kitāb Fākihat al-nudarā' fī murāsalat al-udabā'* (Beirut 1889). Some of his poetry was religious, as evidenced in the collection of *dīniyyāt* in F. al-Bustānī's *al-Shaykh Nāṣīf al-Yāzidjī: muntakhabāt shiʿriyya* (Beirut 1950), in which he sets out to prove the divinity of Christ. Despite this, his interest in the Arabic language, particularly as a symbol of Arab identity, is an important indication that language rather than religion was the main unifying factor in the Arab world at that time. Nāṣīf's prose writing is best exemplified in his famous collection of *Maḳāmāt*, the *Madjmaʿ al-baḥrayn* (Beirut 1856). By his own admission, he strove in this work to produce something comparable to that of the mediaeval al-Ḥarīrī [*q.v.*] in both form and content. These *maḳāmas* were initially well received in the Arab world and Europe, and were translated into several languages. Although lacking in real originality, this collection re-established the roots of Classical Arabic prose after centuries of stagnation and helped the Arabic language in Lebanon (and elsewhere) to become "a medium of culture and self-expression on an artistic level" (S. Jayyusi, *Trends and movements*, i, 20). Although he was not a moderniser,

he nonetheless played an invaluable role in awakening the national consciousness of the Arabs, as well as being a key figure in the 19th century Arab literary revival.

2. Ibrāhīm (1847-1906) was the second eldest son of Nāṣīf, from whom he received his early education. He became one of the most eminent scholars of his day, spending the first part of his life in Lebanon but then moving to Egypt where he lived until his death. Ibrāhīm was principally a philologist, stylist and lexicographer, but also wrote essays and articles on a wide range of subjects such as astronomy, chemistry, physics and medicine. As a journalist he established and edited three major journals and literary periodicals that, aside from their intellectual value, formed part of his major contribution to the development of printing in the Arab world. As a poet he produced a *dīwān* to express his patriotic fervour, using poetry as a vehicle to arouse nationalistic sentiments in the Arabs and to call them to seek independence from Ottoman rule. He also wrote a number of letters in poetic form to learned friends and literary figures dealing with mainly linguistic themes collected together in his *Rasā'il al-Yāziḏjī* (Cairo 1920). He was a reformer who played a major role in the revival of the Arab linguistic heritage that had laboured under centuries of foreign rule. It was initially through his own journals such as *al-Bayān* (1897-8) and *al-Ḍiyā'* (1898-1906) that he was able to convey his strong reformist views on language. It was also in these journals and in those owned by his friend Buṭrus al-Bustānī [see AL-BUSTĀNĪ, in Suppl.] (*al-Ḏjinān*) and his main rival al-S̲h̲idyāḳ (*al-Ḏjawā'ib*) that many acrimonious intellectual and personal battles were fought. His serialised articles attacking the standards of Arabic employed by his fellow journalists were published in one of his most famous books, *Lug̲h̲at al-ḏjarā'id* (Cairo 1901). In this work, he tried to show the decline in Classical Arabic in the wake of the Ottoman empire. Although he never argued against the need for the Arabic language to adapt to the requirements of the modern age, his reformist ideas were always based on classical, normative principles, often with an intent to "purify". His lexical innovations for foreign concepts were based on Arabic forms, such as the introduction of *minṭād* for "balloon". Moreover, such was his passion for Classical Arabic that he wrote critiques on the *Lisān al-ʿarab*, and al-Bustānī's *al-Muḥīṭ*, two of the most famous Arabic dictionaries. His own dictionary, *al-Farā'id al-ḥisān min ḳalā'id al-lisān*, was left unfinished. Ibrāhīm had his critics, of whom the most vociferous were al-S̲h̲idyāḳ, Anastās al-Karmalī and Ras̲h̲īd al-S̲h̲artūnī. However, he also had many supporters, especially amongst the al-Bustānī family, who helped to bring him the prestige he acquired. It is also said that he greatly influenced the Lebanese poet K̲h̲alīl Muṭrān [*q.v.*] in his mastery of the language. Notable amongst his other scholarly achievements are that he completed, edited and wrote commentaries on some of his father's works, and that he was instrumental in a revised Roman Catholic translation of the Old Testament, which included the Vulgate, into Arabic.

3. K̲h̲alīl (1858-89), youngest son of Nāṣīf, produced a varied but limited literary output owing mainly to his early death. His play in verse entitled *al-Murū'a wa 'l-wafā'* (Cairo 1884, 1902), was one of the first original tragedies in Arabic. His anthology of poetry called *Nasamāt al-awrāḳ* (Cairo 1888, 1908) was described by Ḏjurḏjī Zaydān as one of the finest *dīwāns* ever written. He also wrote on stylistics, as evidenced in an unpublished work on epistolary style, and contributed to the debate on the status of Classical Arabic *vis-à-vis* colloquial Arabic through his unpublished dictionary on the spoken language, *al-Ṣāliḥ bayn al-ʿāmmī wa 'l-faṣīḥ*. He also subscribed in journals to the common view that the success of the Arab world was dependent on a clear and uniform linguistic strategy. He spent some time in Egypt, where he established a short-lived journal called *Mir'āt al-s̲h̲arḳ* before returning to his native Lebanon to teach.

4. Warda (1838-1924), daughter of Nāṣīf, produced mainly poetry which was published in a *dīwān* of about 100 pages (Beirut 1867, 1881; Cairo 1913) entitled *Ḥadīḳat al-ward*. Her poetry consisted principally of elegies (*marāt̲h̲ī*) which reflected the classical tradition more than the contemporary scene (as did the works of her father and brothers). Of more significance, perhaps, is that she was one of the early women writers in Arabic of the 19th century. The esteem in which she was held as a key representative of women in society at that time can be seen in the tribute paid to her by Mayy Ziyāda [*q.v.*] in a lecture published in the journal *al-Muḳtaṭaf* in 1924, in which she acknowledged her as one of a group of geniuses that manifests "the cognitions and emotions of its society", and as a "blessed daughter" of the Arabs (*Opening the gates. A century of Arab feminist writing*, ed. M. Badran and M. Cooke, London 1990, 241; tr. by M. Cooke). A portrait of Warda was donated by the women of Beirut and hung next to those of the great men in the city's public library. She died in Egypt, where she in fact spent most of her life.

5. Ḥabīb (1833-70), eldest son of Nāṣīf, was intellectually active in Beirut literary circles and learned several languages. However, his only recorded work of substance was an unpublished commentary on one of his father's books on prosody and rhyme. He also translated literary works into Arabic.

YAZÎDJÎ-OGHLU, AḤMED [see BĪDJĀN].

YAZÎDJÎ-OGHLU, or YAZÎDJÎ-ZĀDE, Meḥmed, a venerated religious figure and poet of the first half of the 9th/15th century. He was the son of Yazîdjî (i.e. scribe) Ṣāliḥ b. Süleymān [*q.v.* in Suppl.], who wrote a Turkish *methnewī* on astrology called the *Shemsiyye*. The date of his birth is unknown and its place is uncertain, but may have been Ḳāḍī Köy in the Thracian district of Malḳara [*q.v.*]. After he had gone to Persia and Transoxania to complete his studies, he settled in Gallipoli (Gelibolu). He met Ḥādjdjī Bayrām [*q.v.*], probably whilst the latter was passing through Gelibolu, and became his novice (*murīd*). He spent the period of religious retirement and privation (*čile*) in two small cells hewn into a large rock on the Ḥamza Köyü shore in the Namāzgāh district of Gelibolu. He died in 855/1451 and his grave is outside Gelibolu on the road to Istanbul, with the grave of his brother Aḥmed Bīdjān [*q.v.*] close by it. He enjoyed great veneration through the centuries and his grave became an object of pilgrimage. The former presence of a Yazîdjî-oghlu *tekiyye* [see TEKKE] in Gelibolu leads to the supposition that he was a (presumably Bayrāmiyye) *sheykh* and had dervish followers, but there is no documentation for this.

He first wrote a prose work in Arabic called *Maghārib al-zamān*. This he later translated into Turkish in verse form, whilst his brother Aḥmed Bīdjān translated it into Turkish prose (his *Enwār el-ʿāshiḳīn*). Yazîdjî-oghlu Meḥmed gave his work the name *el-Risāle el-Muḥammediyye* ("The Muhammedan treatise"), but it is generally known simply as the *Muḥammediyye*. He completed it in late Djumādā II 853/August 1449.

The *Muḥammediyye* is a voluminous didactic religious poem of 9,008 verses. Throughout the work, the monorhyme scheme (in the form of *ḳaṣīdes*, *ghazels*, *terdjīʿ-i bends*, *terkīb-i bends*, *ḳiṭʿas* and *müstezāds*) alternates with the *methnewī* "double rhyme" scheme. About half-a-dozen *ʿarūḍ* [*q.v.*] metres are used, the most frequent being *hazadj* and *ramal*. Although Ṣūfī elements are to be found in this work, its overall approach is quite orthodox. It treats, in accordance with the Ḳur'ān and the *ḥadīth*, of the Creation, the Prophets, the lives of the Prophet Muḥammad and of the caliphs Abū Bakr, ʿUmar, ʿUthmān and ʿAlī, of the Judgement Day and the Resurrection, of Heaven and Hell, but its primary theme is the life and prophethood of Muḥammad. The style is mixed; plain Turkish dominates in the passages composed in shorter metres, whilst more ponderous language is to be found in the passages written in longer metres. The *Muḥammediyye* enjoyed immense popularity through the centuries, as the remarkable number of manuscripts attest (an autograph is to be found under no. 431/a in the Vakıflar Genel Müdürlüğü, Arşiv ve Neşriyat Müdürlüğü Kütüphanesi), and it was printed repeatedly (cf. F. Babinger, in *EI*[1], art. *Yazîdjî-oghlu*).

Of the several commentaries on the *Muḥammediyye*, that by Ismāʿīl Ḥaḳḳī [*q.v.*], *Faraḥ al-rūḥ*, is greatly renowned (first printed Būlāḳ 1252), an earlier *sharḥ* being that by Esīrī (Meḥmed Yūsuf Efendi, d. 1000/1591), which is a prose version in simple language. Several imitative works (*naẓīres*) were also written, for example by Yūsuf-î Bīčāre under the same title (11,690 verses, completed in 913/1507-8; ms. in İstanbul Üniversitesi Kütüphanesi, no. TY 4051). As in the case of the *Wesīlet el-nedjāt* (better known as *Mewlid*) of Süleymān Čelebi [*q.v.*], parts of it were publicly recited, besides being read in private circles in Turkish homes.

The fame of the *Muḥammediyye* extended farther than that of Süleymān Čelebi's *Mewlid*, beyond the boundaries of Anatolia to the Crimea, Kazan, the Bashkirs and to Persia. However, it is not as popular as the *Mewlid* in Turkey today.

Yazîdjî-oghlu Meḥmed also wrote a succinct Arabic *sharḥ* on Muḥyī al-Dīn Ibn al-ʿArabī's [*q.v.*] *Fuṣūṣ al-ḥikam*. Other works attributed to him, such as the *Saltuḳ-nāme* reported by Ewliyā Čelebi [*q.v.*], *Seyāḥat-name*, iii, 366, are no longer extant.

AL-YĀZURĪ, ABŪ MUḤAMMAD AL-ḤASAN (or al-Ḥusayn) b. ʿAlī b. ʿAbd al-Raḥmān, vizier to the Fāṭimids in Egypt 440-50/1050-8 (al-Maḳrīzī, *Ittiʿāẓ*, ii, 203-40; list of his *laḳabs* in L.S. al-Imad, *The Fatimid vizierate, 969-1172*, Berlin 1990, 166; A.F. al-Sayyid, *al-Dawla al-fāṭimiyya, tafsīr djadīd*, Cairo 1996, index at 461).

He was born at Yāzur in Palestine, where his father was *ḳāḍī*, in a Ḥanafī Sunnī family who were the owners of a landed estate. After a Pilgrimage, a piece of the Prophet's Mosque at Medina fell on his shoulder, the presage of a splendid future (Ibn Ẓāfir, *Akhbār al-duwal al-munḳaṭiʿa*, ed. Ferré, Cairo 1972, 79-80, with a very detailed biography). He became *ḳāḍī* of Yāzur, then of al-Ramla, from where, after falling out with

the governor, he had to flee to Cairo. He entered the service of the great eunuch Rizḳ and became *nāẓir* of the personal *dīwān* of the princess-mother of the caliph al-Mustanṣir [*q.v.*] and then grand *ḳāḍī* of Egypt before succeeding, thanks to Rizḳ's support, Ṣadaḳa b. Yūsuf al-Falāḥī, who had been put to death. (On al-Yāzurī's relations with the rival parties of al-Tustarī and al-Falāḥī, both of Jewish origin, see M. Gil, *A history of Palestine, 634-1099*, Cambridge 1992, 403-4 and index.) Although of Sunnī origin, al-Yāzurī was the first person in Egypt to exercise simultaneously the three supreme offices of the régime, *wazīr, ḳāḍī al-ḳuḍāt* and *dāʿī al-duʿāt*.

Under his vizierate in 448/1056-7, the body of the great Fāṭimid general Anūshtakīn al-Dizbarī [see *EI*[2] Index of Proper Names, s.v. Anūshtigin al-Duzbarī] was brought from Aleppo, where he had been buried unceremoniously in 433/1042 after his dismissal by Ibn al-Djardjarāʾī [*q.v.*], to Jerusalem, his corpse to lie in glory at the side of former Ṭūlūnid and Ikhshīdid [*q.vv.*] masters of Egypt. It is likely that al-Yāzurī was responsible for this exceptional posthumous act of homage to a great figure in the Fāṭimid state, devoted completely to Syria and unjustly persecuted by a vizier of ʿIrāḳī origin (Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, Damascus 1989, ii, 521-3).

The vizier's irascible character and his pretensions led him to pursue an aggressive foreign policy. In 443/1052, al-Yāzurī reproached the Zīrid of Ifrīḳiya al-Muʿizz b. Bādis [*q.v.*] for having placed before his own name, at the end of an official letter to Cairo, the expression *ṣanīʿatuhu* "his creature" and not the time-honoured formula *ʿabduhu* "his slave", thus showing a lack of consideration on the part of this prince towards the vizier. Ibn al-Athīr, ix, 556, who tells this anecdote, sees nothing wrong in al-Yāzurī's reaction here but considers it that of a parvenu peasant. It was in order to punish the Zīrid that al-Yāzurī is said to have unleashed the Banū Riyāḥ and the Zughba, two components of the Hilāl [*q.v.*], against North Africa, who pillaged Egypt and Tripolitania and who were to became notorious, together with the Banū Sulaym [*q.v.*], in Ifrīḳiya. In fact, the Byzantines had warned Cairo that the Zīrid state had thrown off Shīʿism and Fāṭimid obedience in favour of a return to Mālikī Sunnism and the *khuṭba* for the ʿAbbāsid caliph in Baghdād. The impolite letter was merely the pretext for a rupture announced by the Zīrid coinage issued from 441/1050 onwards.

The end in 449/1057 of the truce between Egypt and Constantinople is partly explicable by the difficulties that all the countries of the eastern Mediterranean littoral were at that time experiencing in securing grain supplies. An agreement provided for an exchange of grain, in time of famine, between Byzantium and Egypt, in favour of the country that was most affected. This arrangement had normally functioned in Egypt's favour at the time of the 447/1055-6 famine, but in 449/1057, the export of cereals was forbidden by the new Byzantine emperor, provoking in reprisal a renewal of Fāṭimid operations in northern Syria (see Bianquis, *op. cit.*, ii, 506 ff.), against Lādhaḳiyya and then Aleppo. This action was to end in 452/1060, after al-Yāzurī's death, in the definitive loss by the Fāṭimids of northern Syria and in a rapprochement between Byzantium and the new power of the Saldjūḳs [*q.v.*], protectors of the ʿAbbāsids.

Finally, breaking Cairo's tradition since the death of the Būyid ʿAḍud al-Dawla [*q.v.*] in 383/972 of Fāṭimid non-intervention to the south and east of al-Raḥba on the middle Euphrates, in order to avoid conflict with the ʿAbbāsids, al-Yāzurī organised, in concert with the *dāʿī* al-Muʾayyad fi 'l-Dīn, the ill-fated expedition of al-Basāsīrī [*q.v.*] against Baghdād, a venture which, after initial success, ended miserably in 451/1060 after al-Yāzurī's death. For Ibn Muyassar (*Akhbār Miṣr*, ed. A.F. Sayyid, Cairo 1981, 16, 20-1), the invasion of Fāṭimid Syria by the Turkish Ghuzz [*q.v.*], which followed shortly after the vizier's death, was the direct result of the anti-Saldjūḳ provocation by al-Basāsīrī and the permanent depletion of the Fāṭimid treasury after this very costly expedition.

Even in Egypt itself, where he treated the Christians badly, Upper Egypt [see AL-ṢAʿĪD] seems to have slipped partly from his control (J.Cl. Garcin, *Un centre musulman de Haute Égypte médiévale, Qūṣ*, Cairo 1976, 91, n. 3).

The arrest of al-Yāzurī, with eight of his accomplices, and then his execution in the *dār al-wizāra* of Tinnīs, is said to have been motivated by several accusations against him. He was allegedly guilty of high treason: whilst supporting al-Basāsīrī, he was at the same time reportedly corresponding with Ṭoghrïl Beg [*q.v.*] and with Ibrāhīm Inal, the latter's brother and enemy, inciting the Saldjūḳs to occupy first Syria and then Egypt in order to put an end to the Fāṭimid régime. He was said to have been equally guilty of misappropriation. The riches of his table during the famine of 447/1055-6 are said to have drawn al-Mustanṣir's attention. At a later date, he is said to have sent gold, hidden in coffins, to Palestine, notably for his son Khaṭīr al-Mulk or for Wafī al-Mulk, his associate in the vizierate and the supreme judicature, at that moment in post at Jerusalem. At the time of al-Yāzurī's arrest, three million dīnārs are said to have been confiscated from him, and his mounts sold for one thousand dīnārs. Al-Nuwayrī, *Nihāyat al-arab*, ms. Dār al-kutub al-miṣriyya, *ʿāmma* 546, vol. xxvi, fol. 19, records that his son Khaṭīr al-Mulk, having later fallen into penury, earned his bread mending clothes in the mosque of Fuwwa in Upper Egypt.

It is from al-Yāzurī's vizierate that one can date the end of the Fāṭimid empire outside Egypt and the fall of the civil administration which, after the crisis of 457-64/1065-72, became a military régime in which the caliph was placed under the thumb of the commander-in-chief, the *amīr al-djuyūsh* [see WAZĪR. 1(b)].

Bibliography: Given in the article.

(TH. BIANQUIS)

YEĞANA, ʿALĪ MÜNĪF (1874-1950), Ottoman administrator, deputy, and minister during the constitutional period (1908-18), deputy during the republic, was born in Adana. He graduated from the *Mekteb-i Mülkiyye*, the civil service school in Istanbul where he learned Arabic and Persian, in 1896. There he joined the secret opposition to ʿAbd ül-Hamīd II [*q.v.*] and promised to support the constitutional movement wherever he was posted. ʿAlī Münīf was sent to Gallipoli (1896) and to towns in the Balkans. While he was *ḳāʾim-maḳām* of Köprülü, he permitted the secret Committee of Union and Progress (CUP) (*Ittiḥād ve Teraḳḳī Djemʿiyyeti* [*q.v.*] to operate in relative freedom. He met and became friendly with Meḥmed Ṭalʿat [*q.v.*], one of the most important leaders in the CUP.

ʿAlī Münīf supported the constitutional movement when it broke out in Macedonia in June 1908. When elections were held in November, he was elected deputy for Adana and put in charge of the CUP's parliamentary party. But after the failure of the counter-revolution of April 1909, the Committee decided to strengthen its position in the provinces,

and such able administrators as ʿAlī Münīf were sent there. He was appointed governor (*wālī*) of Ankara in November 1910, and then of Manāstir in July 1911 where the CUP had its roots. However, in July 1912 the liberal opposition seized power through a military coup d'état. ʿAlī Münīf was dismissed along with other Unionist officials and was forced to work within the CUP. He was elected to the Central Committee, the *Merkez-i ʿUmūmī*, which played a critical role while in opposition. It organised popular meetings during the Balkan War favouring belligerency, and ʿAlī Münīf says that he addressed one such meeting on 21 September 1912.

The CUP recaptured power with the coup d'état of 23 January 1913. ʿAlī Münīf was sent as *wālī* of Aleppo and instructed to appease the nationalists in Syria with concessions recognising the use of Arabic in local education and administration.

When Ṭalʿat became Interior Minister, he appointed ʿAlī Münīf his under secretary. But in September 1915 he was sent to Syria, partly to curb Djemāl Pasha's [*q.v.*] authority and partly to assert Ottoman sovereignty as governor of Mount Lebanon. He replaced Ohannes Kuyumjiyan, a Catholic Armenian, and remained in office until May 1916. On his recall, local notables, both Christian and Muslim, protested to Istanbul, describing ʿAlī Münīf as "just and neutral", and his administration as "honourable and beneficial". But Ṭalʿat wanted ʿAlī Münīf by his side, appointing him Minister of Public Works when he became Grand Vizier in February 1917. He was elected deputy for Aleppo in the by-election of December 1917, and in the same year the CUP arranged his marriage to Sabīḥa Hānim, the granddaughter of Aḥmed Rātib Pasha, a creature of the old régime.

ʿAlī Münīf resigned in October 1918, with the rest of the Ṭalʿat Pasha cabinet, under British pressure, and he was arrested in January 1919 by the sultan's government as a former Unionist. He was imprisoned, tried, and exiled to Malta, returning to Istanbul in April 1921. He joined the nationalist movement, but was suspect as someone with close ties to Ṭalʿat Pasha. Muṣṭafā Kemāl wanted to send him as the Nationalists' representative to Afghānistān, a form of exile. ʿAlī Münīf chose to return to Adana, where he had political roots. He organised resistance to the French occupation of the Čukorova and after the French left, he was elected mayor of Adana. He played an important role in the town's rehabilitation from the ravages of war and in the development of agriculture and irrigation in the Čukorova.

The Republic was founded in October 1923, and ʿAlī Münīf was elected deputy for Mersin and later Seyḥān on the Republican People's Party (RPP) ticket. He kept a low political profile during these years, and this saved him from arrest and trial for involvement in the Izmir conspiracy of former Unionists in 1926. His friend from the *Mülkiyye*, Meḥmed Djāwīd, was hanged. Though he supported the formation of the Free Party led by his friend ʿAlī Fetḥī [Okyar] [*q.v.*], he took care not to join it. In the election that followed he was omitted from the RPP list but was elected as an Independent; he refused to accept election unless he was rehabilitated. He was taken back into the RPP and continued to be elected on its ticket until the first multi-party election of 1946, when he became the oldest member of the new assembly. ʿAlī Münif, who had adopted the surname Yeğana in 1934, died on 3 March 1950, two months before the May election when the RPP lost to the Democrat Party.

YEGEN MEḤMED PASHA [see MEḤMED PASHA, YEGEN].

YEGEN ʿOTHMĀN PASHA [see ʿOTHMĀN PASHA, YEGEN].

YEGEN, WALĪ AL-DĪN [see YAKAN, MUḤAMMAD WALĪ AL-DĪN].

YEMISHDJI ḤASAN PASHA (d. 1012/1603), one of twelve Grand Viziers under Meḥemmed III (1003-12/1595-1603 [*q.v.*]) during the Long War (1593-1606) with the Holy Roman Empire. Albanian in origin, he was raised in the palace system, began service in the Janissaries in 1580, was appointed as Yeñi Čeri Aghasi on the Hungarian battlefields in Shawwāl 1002/June 1594, and became Grand Vizier on 21 Muḥarram 1010/12 July 1601 on the death of his predecessor Dāmād Ibrāhīm Pasha [*q.v.*]. His period as Grand Vizier was punctuated with battlefield service, especially at the restoration of Istolnī Belgrad in 1602, and intrigue, when a rumoured palace coup made him dash to Istanbul in that same year, where his life was spared by the intercession of his protectress Wālide Ṣultān Ṣafiyye [*q.v.*]. In a period of chaos and disorder, he is especially noteworthy for greedy ambition, maliciousness and abuse of friend and foe alike, and was one of three of Meḥemmed III's Grand Viziers to be executed, shortly after his dismissal on 27 Rabīʿ II 1012/24 September 1603. He was married to Ibrāhīm Pasha's widow, ʿĀʾishe Sulṭān.

(Virginia H. Aksan)

YEÑI BĀZĀR, in Turkish "new market", in Serbo-Croat Novi Pazar, denotes both a region, the former "Sandjaḳ of Yeñi Bāzār/Sandžak of Novi Pazar", and a town, now in Yugoslavia, on the Raška river (lat. 43° 09', long. 20° 29' E.).

1. The region. This and Zeta constitute the original heartland of mediaeval Serbia, corresponding largely to the ancient Rascia, and was in mediaeval times very important, as the remains of imposing churches, monasteries and baths there show. The Sandjaḳ (in the Ottoman *wilāyet* of Kosovo till 1912) was an upland region situated between Serbia, Bosnia and Montenegro, of great strategic and military importance, since it assured communications between Bosnia and Rumelia, and prevented a direct link of Serbia with Montenegro and the Adriatic coast. It was part of the Ottoman empire for four centuries (mid-15th century to 1878), then with its western part, the "region of Lim", garrisoned, according to the provisions of the Congress of Berlin, by Austro-Hungarian

troops till it was restored to the Ottomans in 1908. Entered by Serbian and Montenegrin troops in 1912, it was divided amongst these two powers, occupied again by Austria-Hungary in 1915-18, and then became part of Yugoslavia (except during 1941-4 when it was attached to "Greater Albania" under a Fascist Italian protectorate).

2. The town. This was founded *ca.* 1460 by the governor of Sarajevo Ghāzī ʿĪsā Beg [see BOSNA, at Vol. I, 1263a] after the Ottoman conquest of the region *ca.* 1456, and called "New" to distinguish it from the settlement of Pazarište or Trgovište, called in Turkish Eski Bāzār. Thanks to its favourable situation on a plain at the crossroads of important routes between Bosnia and Macedonia, connecting towns like Sarajevo, Ragusa/Dubrovnik, Niš and Istanbul, the town developed rapidly, with a colony of Ragusan merchants apparently attested in 1461 and iron mines in the vicinity; it also served as a concentration-point for military conquests further west and northwest. It was visited and described by many Western travellers [see *EI*[1] art. *Novibazar*, with references to their works], with its apogee in the later 17th century, when Ewliyā Čelebi visited it (1660); he mentions, with some exaggeration, 40-50 *maḥalles*, 23 mosques, 11 *mesdjids*, 5 *medreses*, 2 *tekkes*, etc. But this prosperity was ended by the Turco-Austrian wars, with the town devastated by Austrian troops and Serb insurgents in 1689 and again in 1737. A period of anarchy under semi-independent beys, such as the Ferhadagić or Ferhād-oghullarî followed, aggravated by plague outbreaks. Commerce and agriculture declined, and Novi Pazar became in the 18th century, and even more so in the 19th century, a place of little importance. In such a climate, relations between Muslims and non-Muslims in both the town and the region remained difficult, with the landowning *beys* residing in the towns, to which also came influxes of Muslim *muhādjirs* [*q.v.*] from Montenegro and Serbia; after 1912, more or less massive emigrations of Muslims back to Turkey took place. The town is said to have had 7,000 inhabitants in 1836, 13,433 in 1913 and 23,000 in 1968. The situation of the remaining Muslims in the town and region has been complicated. Part of these Muslims have settled in adjacent regions, such as Macedonia and Bosnia-Hercegovina, and notably in Sarajevo, where they have recently played an active role in the *Savez Demokratske Akcije* ("Union of Democratic Action") of M. Alija Izetbegović. This has made the identity problems of the Muslims in the Sandžak even more complex, with groups at various times and in various circumstances calling themselves "Muslim Serb", "Musulman", "Sandžaklije" or "Bošnjak".

(A. POPOVIC)

YEÑI ČERI (T.), lit. "new troop", a body of professional infantrymen of the Ottoman empire in its heyday.

1. Origins.

The "new troop", so-called not so much because of the novelty of the idea as because at the time of its introduction by the vizier Khayr al-Dīn Pasha [see DJANDARLÎ] in the 760s/1360s it opposed then-prevailing military traditions cherished by the frontier warriors. The predecessors of Murād I [*q.v.*], rather than maintaining a standing army funded by the central fisc, had relied almost exclusively on the military services provided, on a voluntary basis, by Turkmen horsemen and border raiders (*akîndjî*), who served under semi-independent commanders of the frontier districts (*udj beyleri*). Although the recruitment of cash-paid soldiers had plenty of precedents, from the Rūm Saldjūk *djīra-khwārs* (Bombaci, 345) to the *yaya* [*q.v.*] troops introduced by Sultan Orkhān [*q.v.*] after the fall of Iznik in 734/1331 (Kemāl Pasha-zāde, *II. Defter*, 47-55), those with a vested interest in the preservation of the old military order saw the "new troop" as a threat. Ottoman sources closest to the events, such as the anonymous chronicles, reflect the considerable unease which the creation of the *yaya* and later the *yeñi-čeri* caused among the frontier forces. Apart from its importance as a means of confronting the military might of neighbouring states, Ottoman sultans increasingly came to regard the possession of a personal army of permanent salaried troops (*khāṣṣa ordusu*) as an essential tool in combating centrifugal tendencies among the Turkmen beys. For ceremonial purposes, too, a court-based imperial bodyguard, called by the Ottomans *kapu kullarî* but closely modelled on the Saldjūkid *ghulām-i dargāh* (Bombaci, 349), gained an increased importance from the time of Orkhān onwards as the Ottomans sought to set themselves apart from neighbouring Muslim states in Anatolia, whom they regarded as belonging to the petty dynasts or *mulūk al-ṭawāʾif*. It was, however, only after the Ottomans' acquisition of Edirne and the opening up of a new sphere for imperial expansion in Europe after the mid-760s/1360s that the need for a dependable, centralised military organisation began to assert itself more convincingly.

The initial source of recruitment for the corps was the *pendjik resmi* or one-fifth treasury tax on war captives whose introduction by the Ottomans is dated in sources of a later period to 764/1363-4 (*Osmanlı kanunnameleri*, in *MTM*, i/2, 325). This practice, despite the outcries by traditionalists and supporters of the early Ottoman status quo, who regarded it as a hateful innovation [see BIDʿA], actually rested on long-standing Islamic precedent [see FAYʾ]. The "newness" of the *yeñi čeri* can also be questioned on the grounds of the duties and functions performed by it in the period immediately after its establishment. Apart from the parallel institution of the *yaya*, another group, the *ʿazab* [*q.v.*], played a very similar battle role to the Janissaries and outnumbered them in the first period by a very considerable margin (Inalcik, *Military expenditure*, 93). The collective presence of the Janissaries in the army of Murād I was limited to no more than 2,000 (Ferīdūn, *Münsheʾāt*, i, 114) and it seems that his great-grandson Murād II, who died in 855/1451, was still only capable of mustering a Janissary force of

about 3,000 men (Inalcik, *Fatih devri*, 118). Ottoman military practice was not revolutionised by the introduction of the Janissaries, whose only distinction in comparison to the *ʿazabs* was their permanent salaried status. In this early period, as later, the Janissaries' coveted position as *khünkār ḳulu* was a source of jealousy not just among the *aḳindji* border raiders (see above), but also a source of grievance to the irregular infantry forces whose conditions of service, armaments and fitness for battle were indistinguishable from the Janissaries. The Janissaries' continued use of the cross-bow and related technologies in the late 8th/14th century is attested in a variety of Ottoman sources (see, for example, the *Ḳawānīn-i Yeñičeriyān*, fol. 110b). Because of their limited numbers, sufficient in practical terms for little more than vanguard and imperial escort services, Janissaries did not assume a crucial offensive role in the Ottoman army until they came into their own after the mid-9th/15th century in a more specialised role as troops trained for the assault of fortified places.

The still undeveloped state of Ottoman siege techniques in the early period is apparent from contemporary accounts describing the failed sieges of Kruje in 854/1450 [see AḲ-ḤIṢĀR. 4] and Belgrade in 860/1456. Contemporary sources on the Belgrade campaign concur in their view that, while Ottoman artillery achieved its purpose in penetrating enemy defences, the assault troops failed to capitalise on the opportunity which their success had offered (Mihailović, 107-10, and Tursun Bey, 38-40). By contrast a detailed account of Ottoman success in the Belgrade siege of 927/1521 attributed a leading role to the Janissaries who, by advancing ahead of the artillery, cleared a path for the best placing of the siege guns thereby ensuring the success of the final assault (see events of 1 Ramaḍān/4 August; Tauer, *Histoire de la campagne*, Persian text, fol. 95b [pp. 78-9], French tr., 53). Despite the early textual evidence referring to Janissaries and other Ottoman troops armed with arquebuses (see Petrović, in Parry and Yapp (eds.), *War and society*, 193-4), the most authoritative sources on the state of Ottoman warfare in the mid-9th/15th century, such as the anonymous account of the battle of Varna, give an equal prominence to the continuing use in battle of more "primitive" weapons such as axes, picks and maces (see the index of Inalcik and Oguz (eds.), *Gazavatname, s.v. balta, külünk, topuz*) in addition to the still ubiquitous bow and arrow. Firearms did not assume a dominant place at the centre of Ottoman military provision until the early years of the 10th/16th century (see Inalcik's remarks on the "modernisation" of the Ottoman military order under Sultan Süleymān I (1520-66), in Parry and Yapp, *op. cit.*, 198).

While we do not have enough detailed knowledge of the actual state of Janissary tactics and training during the first century of the corps' existence to reach any conclusive assessments, from the standpoint of its institutional continuity there can be little doubt that the period of the interregnum which followed the Ottomans' defeat by Tīmūr at the battle of Ankara in 804/1402 brought serious disruption to evolving Janissary service traditions. It is thus only from the reign of Meḥemmed II onwards (see below) that we can confidently trace the evolutionary phases through which the corps passed.

2. The evolution of the Janissary corps (1450-1700).

Institutional growth and development

The size of the corps inherited by Meḥemmed II at the time of his second accession in 855/1451 was still modest. Two years later, as a natural consequence of the transfer of his capital to Istanbul and the creation of an extended administrative apparatus, the membership of his standing military corps increased.

From Meḥemmed's time, it became necessary to distinguish Janissary regiments according to the time and circumstances of their creation in three principal subdivisions: the *djemāʿat* or *piyādegān* (later expanded to 101 regiments) for those created before Meḥemmed's reign; the *segbān* [*q.v.* in Suppl.] (*sekbān*), a small corps of keepers of the palace hounds absorbed into the ranks of the Janissaries by Meḥemmed in 855/1451 (later expanded to 34 regiments); and the *bölük* or *agha bölükleri* (numbering 61 regiments), created in a further expansion undertaken early in the reign of Bāyezīd II [*q.v.*]. Hence by the 1480s, when the Janissary institution had already assumed its final structural profile, the "imperial bodyguard" of the early 15th century had grown to 196 infantry regiments each referred to by the generic term *orta* (i.e. "common", "shared" [*q.v.*]), which meant that each had its separate mess arrangements and a chief officer called (in the case of the *agha bölükleri*) the *čorbadji* (i.e. dispenser of the soup [*q.v.*]). These smaller units within the three divisions formed the actual focus of loyalty and identification for the majority of Janissaries, who in a further allusion to the communal nature of their joint enterprise were also referred to as hearthmates (*odjaḳ-eri*; see ODJAḲ). Some Janissary regiments had specialised functions which served to accentuate their sense of distinctiveness and separation. Consequently, when speaking of general institutional developments, it is important to be wary of the obvious but dangerous assumption that the Janissaries always functioned as a monolithic and cohesive whole and remain conscious of the degree to which regimental pride and loyalty motivated Janissary behaviour (see section 4, below).

The expansion of the Janissaries during the reign of Meḥemmed II from about 5,000 to perhaps 10,000 by the end of his reign (Inalcik, *Fatih devri*, 118) reflects the needs of an expanding empire, and if we accept that each of the 61 new regiments introduced by his successor Bāyezīd had, at first, 50 members (*Ḳawānīn-i Yeñičeriyān*, fol. 84a), its increase to roughly 13,000 over less than half a century was formidable. Meḥemmed's decision to try to meet the empire's growing military needs by converting *waḳf* and *mülk* lands to *mīrī* ownership and redistributing them as *tīmār* to the growing ranks of the provincial cavalry had met with fierce resistance from established Muslim families in Anatolia. Bāyezīd's alternative plan of expanding the Janissaries had the double advantage of appeasing public opinion while at the same time providing the empire with a professional soldiery on a scale unmatched in either Europe or Asia at the time. Neither the fiscal nor the political implications of Bāyezīd's military policies seems to have attracted much critical notice or caused any of the furore associated with a later phase of the Janissaries' expansion in the closing decades of the 10th/16th century (see below).

During the reign of Sultan Süleymān I [*q.v.*], the corps experienced a period of relative stability, maintaining its size and proportional share of treasury allocations with consistency. While it retained its nominal strength of between 12-13,000 members, in battle deployments the usual figure was more like half that number, as the record of a salary distribution in the field while on campaign in Hungary demonstrates (Topkapı Sarayı Müzesi Arşivi, D. 9619 dated 948/1541, showing the presence in Süleymān's army of

6,362 Janissaries). Ottoman military provision, including levels of Janissary enrolment, was closely linked to realistic assessment of the empire's actual strategic requirements. In the aftermath of the drastic devaluation of the silver *akče* [*q.v.*] in 994/1586, the spiralling cost of maintaining the Janissaries caused widespread concern, but the realities of the Ottomans' new initiatives in the Caucasus and their intermittent two-front war with the Habsburgs and Ṣafawids between 1000/1591 and 1015/1606 made a further expansion inevitable. The steepest increase seems to be associated not with remobilisation for war in Hungary after 1000/1591 but earlier, in connection with the twelve-year struggle between 986/1578 and 998/1590 focused on control of Ādharbāydjān and prompted, at least in part, by the Ṣafawids' development of a musket-bearing infantry corps of their own [see ʿABBĀS I; GHULĀM. ii]. By the death of Murād III in 1003/1595, the Janissaries already numbered 25,000 (Muṣṭafā ʿĀlī, *Künh ül-akhbār*, fol. 92b). Throughout the 11th/17th century the Ottomans were intermittently engaged on both the eastern and western fronts, and exceptional mobilisations for major new undertakings such as the Cretan offensive in particular years periodically pushed Janissary enrolments near to the 40,000 mark (Murphey, *Ottoman warfare*, 45, table 3.5). The gist of Ottoman advice literature of the early 11th/17th century in which the *leitmotif* of Janissary "corruption" caused by recruitment irregularities is repeatedly emphasised (see below), does not adequately reflect the Ottomans' real manpower needs and strategic requirements in an epoch dominated by siege warfare. The new military realities had rendered both the ideals and the social structure which had supported the landed timariot class of the past increasingly obsolete.

By the early 11th/17th century, the Janissaries had evolved beyond their former role as an élite troop with principal responsibility for escorting and guarding the imperial presence to a position (together with the also proliferating *djebedji* and *topdju* artillerymen) as the indispensable operational core of the Ottoman army. An indication of the important part played by Janissaries in general military provision is given by the fact that, despite the conclusion of their war with the Habsburgs by treaty in 1015/1606, and despite their having entered into a phase of retrenchment in the east, which was shortly to lead to the abandonment of many of the forward positions occupied during the first phase of their conflict with the Ṣafawids, when ʿAyn-i ʿAlī surveyed the Ottomans' military position in 1018/1609 he found 9,046 *ʿadjemi oghlanlarî* still in the pipeline, most of them destined for induction into one of the 196 standing regiments of the Janissaries (ʿAyn-i ʿAlī, *Ḳawānīn*, 89).

3. The role of the Janissaries in Ottoman politics.

According to Ottoman protocol, the *agha* of the Janissaries' position as the top-ranking officer of the select palace guard called the "officers of the stirrup" [see RIKĀB] required that he remain close to the sultan. Although he maintained a residence of his own called the *agha ḳapusu*, a sprawling complex built on a site overlooking the Golden Horn adjacent to the Süleymāniyye mosque (see Plate IV), by making use of his unrestricted right of private audience with the sultan (*Tewḳīʿī ʿAbd al-Raḥmān Pasha ḳānūnnāmesi*, 524-5), he maintained an exceptionally close personal relationship with the sovereign and served as one of his inner group of advisers both in peacetime and war. The *agha* of the Janissaries also bore a heavy responsibility (along with the Grand Vizier [see ṢADR-I AʿẒAM]) for the maintenance of law and order in the capital. Given the nature of his position as a close aide and confidant of the sultan, the commander of the Janissaries exerted a powerful influence on the government. There is a tendency, apparent in the Ottoman court chronicles, to ascribe a negative role to the Janissaries and to highlight their participation in mutinies and their commission of other acts of intransigence associated especially with the regencies necessitated by the accession of minor sultans in the 11th/17th century [see KÖSEM WĀLIDE] and the obvious breakdown of Janissary discipline in the 18th century (see below). However, it bears remembering that even the most powerful, determined and militarily active sultans such as Meḥemmed II, Selīm II and Süleymān I experienced considerable difficulties in dictating terms to their *ḳullar*.

The role of the Janissaries as caretakers and guardians of the sovereign authority during regencies and interregna is attested in all periods of Ottoman history. One striking example is the role played by the Janissaries in securing the pseudo-succession of Ḳorḳud which lasted for seventeen days until the safe arrival of his father Bāyezīd from Amasya in 886/1481 [see ḲORḲUD B. BĀYEZĪD; and Tursun Bey, 64]. The sponsorship of the Janissaries was essential to sultans in securing their succession to the throne. This was particularly true of the period of Ottoman history up to the accession of Meḥemmed III in 1003/1595 since, until that time, all candidates for the succession resided not in the capital but in their princely governorates in Anatolia. The Janissaries' intervention in politics was, however, by no means limited to succession struggles and dethronements. An illustration of the delicate relationship of mutual dependence between sovereign (*khünkār*) and servitor (*kul*) is provided in a much-quoted passage in a letter of the Habsburg envoy Busbecq written in 1560, where he reflects on the causes of Sultan Süleymān's anxiety and notes the Janissaries' ability to "transfer their loyalty to whomever they will" (Busbecq, *Letters*, 159). Busbecq's remarks serve as the strongest possible reminder that, long after the distribution of the obligatory accession gratuity [see BAKHSHĪSH] as one of their first acts in office, sultans were still engaged in ongoing negotiations with the Janissaries to gain their cooperation.

Under normal conditions, the loyalty and obedience of the Janissaries to their protector and benefactor (*welī niʿmet*) was unquestioning, but maintaining the relationship of mutual trust required constant effort and vigilance on both sides. The one-sided ascription of blame for periodic breakdowns in the relationship to the natural disposition of the Janissaries to rebelliousness and sedition (*fitna*) misses the essential point that nurturing the bonds of filial duty placed an equal burden of responsibility on the sultan to provide for the basic needs of his troops, which included not just prompt and full payment of their basic wages (*ʿulūfe*) but also, when merited, bonuses for exceptional service distributed as *teraḳḳī* (salary increases) and other forms of sultanic largesse [see INʿĀM]. The classic case of the gradual unravelling of this relationship based on mutual trust is collapsed into a short but dramatic period of Ottoman history during the rule of ʿOthmān II (1027-31/1618-22). Janissary fears over the sultan's intention to replace them in an ill-conceived plan concocted by the chief of the Harem, the Dār ul-Saʿāde Aghasî Süleymān Agha, compounded by the general spirit of mutual recrimination following the failed Polish campaign of the previous year [see KHOTIN] led to a serious crisis of confidence culminating in the

Janissaries' rejection and refusal of the sultan's patronage by the overturning of their soup cauldrons. Aside from such moments of exceptional and irresolvable bitterness, however, the Janissaries took their responsibility for protecting the honour, reputation and personal safety of the sultan as a sacred trust. The historian ʿĀs̲h̲ïḳ Pas̲h̲a-zāde [*q.v.*], while holding some reservations about the legal basis as well as usefulness of the corps in the early days of its existence (see above), still gave recognition to this protective aspect of the Janissaries' responsibilities in his account when he noted: "the sovereign needs the household troops at his [right]/that they might watch over him [day and night]" (*gereklüdür Yeñičeri ḳapuda/ki K̲h̲ānï gözleyeler her ṭapuda*) (*Tārīk̲h̲*, 50; on the multiple senses of *ṭapu* as used in this verse, see the *Bibl.* under this author).

4. Janissary self-governance: the traditions of jurisdictional autonomy and judicial immunity as sources of regimental cohesion.

Although they performed key fixed roles in court ceremonial and battle field deployment, the Janissaries were keenly aware and jealously protective of their independence and sense of regimental pride. While heedful of the superior position of the sultan as the ultimate source of patronage, they staunchly defended their jurisdictional autonomy. One sign of each regiment's status as a closed corporation was that each maintained a separate communal welfare chest (*orta ṣandïg̲h̲ï*), from which Janissaries could draw in retirement and which also provided for widows and orphans of deceased Janissaries. Each regiment also had an officer called the *wekīl-i k̲h̲ardj̲* (paymaster-general), who oversaw the distribution of funds held in trust for use by those in special need as well as the collection of contributions for each regiment's independent campaign provisions fund (*kumanya*). All these special funds were administered at the regimental level (*Ḳawānīn-i Yeñičeriyān*, fol. 39a). From the standpoint of fiscal autonomy and responsibility for the discipline of and imposing of punishments on its own members, each regiment within the 196 was run as a separate entity with a principled objection to outside interference in its members' welfare. This organisational structure fostered a strong sense of regimental pride and loyalty, a source of Janissary strength that neither the sultan nor the *ag̲h̲a* of the Janissaries himself was disposed to tamper with. Rules for the punishment of lapses in Janissary discipline were precise and allowed maximum scope for the carrying out of the required punishments (usually flogging) in the relative privacy of the offending soldier's regimental barracks (*Ḳawānīn-i Yeñičeriyān*, fols. 41b-42a). In the final analysis, the Janissaries' élite status derived not so much from their material condition, since (barring income from another source) their maximum entitlement when they reached the top of the pay scale after more than a decade of active service was no more, in the early 10th/17th century, than 12 *aḳčes* per day [see ʿULŪFE], but rather from their visible separation from the common rank of society conveyed by the privilege of wearing a regimental uniform and the immunity from public prosecution which it symbolised. The very strong impression is left in one of the few genuinely contemporary accounts surviving of the deposition and murder of ʿOt̲h̲mān II in 1031/1622 that it was the sultan's persistent disregard for the time-honoured tradition of the Janissaries' judicial immunity that so provoked their anger (Tug̲h̲ī, *ʿIbretnümā*, 493, 504). The communal ethos binding Janissaries together was felt most forcefully at the regimental level among smaller cohorts of men who were both recruited and trained under very similar conditions and who, after completion of their training, served together in a succession of campaigns as comrades at arms (*yol-das̲h̲*). The protection of each unit's administrative autonomy thus had considerable importance for the maintaining of general morale within the corps.

The General Commander of the Janissaries reserved promotion to some of the regimental commands for those who had served at his side as one of the personal aides and as attendants who made up his obligatory suite on special ceremonial occasions (see the section on the *ag̲h̲a gedikli̇leri* in the *Ḳawānīn-i Yeñičeriyān*, fols. 75a-76b). By this means, he had knowledge of and was able to exert some control over the mood of his troops at the regimental level. However, in combat situations especially, the higher level of authority represented by the *ag̲h̲a* of the Janissaries had little direct influence over the soldiers' performance.

Recommendations for promotion and commendation for deeds of valour on the battlefield were admittedly processed by means of the commander's *ʿarḍ* (petition) to the sultan, but this list of candidates for reward was itself generated within the regiments. With very few exceptions, moreover, (see the list in *SʿO*, iv, 771-8) the average term of office for *ag̲h̲as* of the Janissaries was relatively brief. Because of their overriding concern with institutional aspects of the corps' history, even the seemingly most comprehensive works on the Janissaries have left a perhaps exaggerated impression that Janissaries belonged to a monolithic entity governed by clear lines of authority and possessing a distinct chain of command which emanated from the centre.

5. Recruitment, training, promotion and battle performance of Janissaries.

The effectiveness of the Janissaries as a key element of Ottoman military provision in the era of the *Pax Ottomanica* in the 10th/16th and 11th/17th centuries is generally recognised. Opinion is, however, divided on the question of whether their recognised superiority derived from selectivity in recruitment, thoroughness in training or the exceptional quality of the *esprit de corps* generated in individual Janissary units whose fighting strength represented, in round figures, about 100 men. While the subject is too large to treat in any detail here, a review of some of the basic elements of the system may help to clarify some controversial aspects. From what we know of Ottoman recruitment practices it seems that they gave preference in selection to boys who had already entered early manhood. This is reflected in the rates of the *pendj̲ik*, which in several examples dating from the pre-Süleymānid era (texts transcribed in Uzunçarşılı, *Kapukulu ocakları*, 87-90) indicate that the ages between 12 and 19 were considered optimal for the purpose of military training. Such theoretical guidelines were apparently also followed in the actual practice of the *devs̲h̲irme* [*q.v.*], since we know from a published example relating to Bosnia that the actual age span found in one group of recruits ranged from 13 to 19 (see the study by Meriç cited in DEVS̲H̲IRME). Other texts of the early 10th/17th century (see the example in Refik, *Devşirme usulu*, 4-5, dated 1031/1621) suggest the consistent adherence to an age at first recruitment between 15 and 20, which may indicate a bias towards a slightly shorter period in training but otherwise conforms closely to earlier practice. If we accept that most Janissaries began their training at the age of 14 or 15 and completed a course of basic training lasting a minimum of four to five years, they were ready to

enter active service at the age of 19 or 20 at the peak of their physical development and endurance potential. References in the advice literature to an optimum period of 15-20 years in basic training before admission to active Janissary units seem not just highly unlikely but wholly impractical (see, for example, Ḳoči Bey's *risāle* of 1041/1631-2, Aksüt, 71: *on-besh̲ yigirmi čuhalu olmayïndja . . .*, and the anonymous *Kitāb-i Müsteṭāb* of *ca.* 1029/1620, Yücel, 7, which recommends that cadets should serve terms of 6-7 years as *ʿadjemī og̲h̲lān*, then 5-10 years as *bostandjï* [*q.v.*] before being inscribed in the Janissary rolls). At all events, Janissary vacancies (*maḥlūl*) created by the retirement or death of veterans had be filled on a semi-continuous basis by those most fit for service between the ages of 18 and 23 without regard to the regular intervals prescribed for the general exodus in which candidates destined for the scribal services also took part.

Irrespective of its duration, the emphasis during the initial training period was placed on fitness, physical endurance, self-discipline and deference, as well as obedience to those with greater seniority and rank. The probationary period actually continued even after a cadet's induction into a permanent Janissary regiment, termed "going up to the gate" (*ḳapuya čïḳmak, be-dergāh olmaḳ*), as recent inductees were initially assigned menial chores such as floor sweeping and mess duties in the Istanbul barracks. Although target practice and other drill was routinely carried out during the off-season between campaigns, it would not be too far from the truth if we were to suppose that formal training in the arts of war began with exposure to actual conditions of battle at the front. The emphasis on recruitment and peace-time training of Janissaries which follows in its main lines the views expressed in the Ottoman advice literature [see NAṢĪḤAT AL-MULŪK] misses the essential point that battle experience was the most crucial element in a soldier's training. One of the chief deficiencies of the Janissary corps in the 12th/18th century was not inadequate training, but the lack of recent combat experience as the inevitable consequence of the prolonged period of peace between the signing of the Treaty of Belgrade in 1152/1739 and the empire's remobilisation for war with Russia in 1182/1768.

Idealised perceptions of the quality of the corps before the introduction of new recruitment categories beginning from *ca.* 990/1582 (see below) have given a distorted weight to selection criteria which, despite their undoubted importance, must be considered as only one of the relevant variables affecting Janissary performance. Allowances for campaign equipment and provisions (*yay aḳčesi, sefer filorisi*), and bonuses and rewards for exceptional deeds of bravery, distributed both on the battlefield to encourage the troops and as part of generalised celebrations held to mark significant Ottoman victories [see DONANMA. 2], also played a very significant role in motivating the Janissaries to achieve the maximum performance levels which their training, fitness and expertise permitted.

6. Attitudes towards the Janissaries in Ottoman political writing of the late 10th/16th and early 11th/17th centuries.

Although the expense of maintaining an expanded Janissary corps had already begun to attract notice in Ottoman political writing as early as Luṭfī Pas̲h̲a's [*q.v.*] treatise dating from the mid-950s/1560s (*Āṣafnāme*, ed. Kütükoğlu, 35), the topic acquired increased urgency from about 1580 onwards. A series of authors beginning with the prolific ʿĀlī saw the problems besetting the Janissary corps in their time as chiefly due to irregularities in the method of their recruitment and the resultant insinuation of non-*devs̲h̲irme* recruits, referred to in the texts as *edjnebī* (outsiders) or *saplama* (intruders) spoiling the purity of the corps. ʿĀlī's remarks in a work written towards the end of his life in 1007/latter part of 1598-early 1599 fixed on the circumstances connected with Murād III's precedent-setting grant of fast-track promotion to the Janissary corps to a group of what he called "city boys" as part of the celebrations to mark the circumcision feast held for prince Meḥemmed (later Meḥemmed III [*q.v.*]) in 990/1582 (see the *Fuṣūl-i ḥall*, Nuruosmaniye ms. 3399, fol. 132a: *sūr-i hümāyūnda "Istanbul dews̲h̲irmesine" ruk̲h̲ṣat verildi, ol ṭarīḳ muk̲h̲tall oldu*). In the aftermath of ʿĀlī's retrospection regarding the significance of the events of 1582, which he regarded as the defining moment in the Janissaries' general slide towards mediocrity, a group of later writers took up the theme of the corruption of the Janissaries reproducing and immortalising ʿĀlī's brief remarks in close paraphrase. Among them Ḳoči Bey, writing in 1041/1631-2, more than thirty years after the penning of ʿĀlī's treatise, repeated the reference to the *sūr-i hümāyūn* of 990/1582 as the source of all later corruption (*First risāle*, ed. Aksüt, 44). Tracts written in the intermediate years also insisted on the seriousness of admitting city boys (*s̲h̲ehir og̲h̲lanlarï*, a code term for recruits among whom Turks and other Muslims had insinuated themselves) to Janissary membership without explaining the unsuitability of Turks for military service except by the repetition (or unexpressed assumption) of standard ethnic stereotypes which held them to be "unruly". It is clear that the views of such "traditionalists" were seriously out of touch with the military realities facing the empire, as their texts contain no reference to the empire's pressing need for recruits to man the dozens of new garrisons which were being erected, renovated and expanded to guard the Ottomans' advancing frontier in the east during the 990s/1580s and beyond [see ʿOT̲H̲MĀN PAS̲H̲A (ÖZDEMIR-OG̲H̲LÏ)].

Whatever its basis in fact, the theme of the corruption of the Janissaries gained general acceptance in the popular consciousness and achieved a particular popularity in the aftermath of ʿOt̲h̲mān II's dethronement and murder in which the Janissaries were implicated. Anti-Janissary sentiments reached a kind of climax during the term in office of the reformist Grand Vizier Kemānkes̲h̲ Ḳara Muṣṭafā Pas̲h̲a between S̲h̲aʿbān 1048/December 1638 and D̲h̲u ʾl-Ḳaʿda 1053/January 1644, but the kind of dramatic spending cuts he was advocating, while desirable in the abstract, were hardly practicable, since the empire was on the eve of gearing up for a renewed phase of its centuries-long confrontation with Venice which would involve a significant military build-up in both Dalmatia and Crete [see IḲRĪṬIS̲H̲]. Kātib Čelebi [*q.v.*] was one of the few Ottoman thinkers of the mid-11th/17th century to see the desirability of maintaining steady Janissary enrolments, both because of their obvious military value and also as a means of avoiding the political turmoil associated with sudden or dramatic changes to their status. In his view, a slight oversupply of military capacity in peacetime was preferable to last-minute attempts to supplement the regular soldiery by recruiting inexperienced *lewends* [*q.v.*] and other irregulars on the eve of battle. As the son of a soldier himself, with considerable first-hand exposure to conditions at the front, where he had served in a variety of scribal capacities, Kātib Čelebi was better equipped than most to draw sound conclusions. Unswayed by the anti-Janissary sentiments afflicting

many of his contemporaries, he fully realised that Ottoman reliance on forced conscription of peasants to man fortresses in remote areas of the frontier represented the worse of two evils (see ch. 2 of the *Düstūr al-ʿamel*, 129-32).

It is noteworthy that later theorists such as Ṣarî Meḥmed Pas̲h̲a [*q.v.*], writing *ca.* 1120/1708 at a time when the Janissary numbers had mounted to 53,200, including pensioners (*oturaḳ*), thus representing a huge burden on the treasury, tended to follow in Kātib Čelebi's footsteps in advocating a gradual diminishing of the Janissary ranks as the best policy (Wright, *Ottoman statecraft*, 114: "slowly and deliberately accomplished").

7. Peacetime and non-combatant duties of the Janissaries.

Apart from their duties associated with the waging of war, the Janissaries played a very considerable role in state ceremonial and ritual [see MARĀSIM. 4]. The regular pay distributions to the sultan's household troops were themselves organised as ceremonial occasions called *ʿulūfe dīwānî* or *g̲h̲alebe dīwānî* [see DĪWĀN-Î HÜMĀYŪN], often timed to coincide with the presence in the capital of foreign diplomatic missions. On these occasions, the presence of the Janissary regiments in full strength made a powerful impression on Western envoys, who were in any case already in awe of the Ottomans because of the scale of their permanent standing armed forces, which dwarfed those of contemporary European states. The four *ṣolaḳ* regiments (the 60th to 63rd *d̲j̲emāʿats*) created in the time of Bāyezīd I with a nominal membership of 20 each (*Ḳawānīn-i Yeñičeriyān*, fol. 102b) but later expanded to 100 each [see ṢOLAḲ] were reduced to an exclusively ceremonial function under sultans who, as became increasingly common after the reign of Meḥemmed III [*q.v.*], declined to accompany the army on campaign. The laws of protocol also dictated that the *ag̲h̲a* of the Janissaries should personally escort the sultan to and from the palace on the occasion of his obligatory Friday visits to one of the capital's principal mosques [see SELĀMLÎḲ]. In addition to these fixed duties, Janissary units assumed general responsibility for essential functions of municipal governance from fire fighting (*Ḳawānīn-i Yeñičeriyān*, fol. 48a-b) to night sentry duties and the preservation of law and order, both in the capital (*kol dolas̲h̲maḳ*, see *ibid.*, fols. 49a-50b) and the provinces (*yasaḳd̲j̲îlîḳ*, see *ibid.*, fols. 50b-52b). The latter assignments were typically for periods of either three or nine months, depending on the town's proximity to the capital. The nine-month term for provincial inspectorate and guard duty was reserved for assignments to the remoter parts of the empire (*tas̲h̲ra*). Janissaries accustomed to a privileged life at the centre of the empire's political, cultural and economic life regarded these stints in the provinces as hardship postings, and anxiously awaited their rotation back to the capital.

Janissaries assigned to provincial garrison duty were intended only to supplement locally recruited forces (*yerlü ḳul*) but, if war-time circumstances required, their times could be extended. References found in normative sources of the 11th/17th century (see the *Second risāle* of Ḳoči Bey, ed. Aksüt, 92, and *Ḳara Kemānkes̲h̲ Pas̲h̲a lāyiḥasî*, ed. Unat, 450) suggest that Janissaries posted as *ḳalʿe nöbetd̲j̲ileri* served a term lasting three years, but there was quite a wide variation in actual practice. The essential point is that, at any given time, a very substantial proportion of the corps was employed in this manner as part of the empire's frontier defences. This proportion might rise in the context of a prolonged conflict in a particular sector of the frontier to as much as one-third of the total membership. For example, figures provided by Ḥüseyn Hezārfenn [*q.v.*] for the year 1080/1669-70 show 14,379 out of a total of 53,849 Janissaries, or 26.7%, were employed in provincial garrison duty, but ten years earlier in 1070/1660 the proportion had been 39.5% or 21,428 out of a total membership of 54,222 (see Murphey, *Ottoman warfare*, 45). The fact that Janissaries were counted as absent (*nā-mewd̲j̲ūd*), when roll calls were carried out in the trenches during wartime, is a reflection not of Janissary truancy but rather of the actual pattern of use to which Janissaries were put. To a very considerable degree, these legitimately included responsibilities for defence and other non-combatant duties. It was the permanent responsibility of the 34 *sekbān* regiments to function as the home guard, and it was the *ag̲h̲a* of the *sekbāns* who, as the corps' second-ranking officer, deputised for the *ag̲h̲a* of the Janissaries and fulfilled his superior's ceremonial and administrative duties when his chief was absent on campaign. While their numbers in all but the key strategic fortresses like Buda and Bag̲h̲dād were counted not in thousands but hundreds, Janissaries formed an integral part of the social fabric in the provinces as much as the capital. By restricting ourselves to an assessment of the narrow range of their activities when Janissaries were being used as commandos and assault troops, we gain a distorted picture of their role, which was in its essence and by design multi-functional.

8. The economic position of the Janissaries.

The most impressive presence of the Janissaries was in Istanbul, since in addition to two barracks of their own, the *eski* and the *yeñi odalarî*, and the residence of the Janissary *ag̲h̲a* himself called the *ag̲h̲a ḳapusu* (see above), there were also thousands of Janissary cadets domiciled in the palace gardens scattered all round the imperial capital. The presence of tens of thousands of Janissaries and Janissary trainees in the city meant that the interpenetration of military and civilian life was an inescapable part of the urban experience in Ottoman Istanbul. The involvement of Janissaries during peacetime as artisans and tradesmen is noted in Ottoman sources as early as the reign of Meḥemmed II soon after the city's capture [see ISTANBUL, at Vol. IV, 242b], and this dimension of the Janissaries' activities cannot be regarded as an aberrant behaviour associated with the decline of the Janissary corps as a fighting force in the 18th century (see 9., below). As for the impact of the smaller Janissary presence on life in the provinces, and the social position and administrative role of the lesser Janissary commanders, who were called, at the *ḳaḍā* level, *yeñičeri serdārî*, we have little direct evidence apart from what is provided in subjective accounts by Christian travellers to the Balkans or equally unsympathetic diatribes by indigenous clerics, both of which groups were only able to tell half, and perhaps not the most interesting half, of the story (see Georgieva, in *Bibl.*) The periodic excesses of Janissaries tempted to take advantage of their extra-judicial status during secondments to the provinces, when they were removed from the supervisory control of their superior officers, cannot be ruled out as a destabilising influence on provincial society in certain periods and places; but to suppose that the net effect of Janissary presence in a locality was always the terrorisation of the local populace seriously overstates the case.

The Janissaries were wage earners, a relative rarity, especially in provincial society. Whatever cash surpluses

they could accumulate represented a welcome source of stimulus for the local economy, which was heavily based on production of goods for immediate household consumption. As official institutions, too, the Janissary garrisons were purchasers on a grandiose scale of basic supplies from local markets. Moreover, when the Janissaries' basic policing function was properly carried out, the protection they offered provincial populations from the depredations of brigands and other sowers of provincial anarchy provided the necessary environment of safety and security favouring trade and sustained economic growth.

An indication of the general economic position of Janissaries, although biased towards the higher-ranking and most prosperous group among them, is provided in data compiled from the probate records of 11th/17th-century Istanbul. Table I is a summary of this information which, although it is silent on the crucial subject of the sources from which Janissary wealth was accumulated, nonetheless gives a valuable impression of the high social standing and economic position of the Janissaries at the peak of their power and influence in the 11th/17th century.

9. The retirement of the Janissaries from active service after 1700, their elimination in 1826 and its after-effects.

The common association of the Janissaries with growing political instability of the Ottoman empire in the 12th/18th century needs careful reassessment. Recent research has cast some considerable doubt on the once prevalent notion of the endemic predisposition of the Janissaries to revolt and rebellion. This research (see refs. in *Bibl.* under Janissary-*eṣnāf* relations) goes a long way towards refuting or at least muting the constant harping on the theme of Janissary waywardness as found in the Ottoman court chronicle tradition and repeated by modern proponents of the "conspiracy theory" of 18th-century Ottoman politics. From the strictly military point of view, however, there can be no doubt that the 18th century brought major changes both in public perceptions concerning the Janissaries and the new position assigned to them in the altered deployment patterns of the period. In the new environment, partly determined by the Ottomans' consistently non-interventionist stance in Europe after 1739, the size and expense of the corps became increasingly difficult to justify. In military terms, the Janissaries had already begun to outlive their usefulness when, driven by fiscal pressures, Maḥmūd I [*q.v.*] decided in 1153/1740 to legalise the selling of Janissary pay-certificates (*esāme*) (Aḥmed Djewād, *Tārīkh-i ʿaskerī*, iii, 52-3, and Aksan, *Whatever happened*, 26-7). The timing of this decision from the standpoint of the Janissaries' regimental cohesion could not have been more unfortunate, as the inauguration of a prolonged period of peace, lasting until 1182/1768, meant that no new Janissaries were being recruited or trained. At the same time, the corps' existing members either retired or lapsed into varying degrees of inactivity. Thirty years after the introduction of Maḥmūd's fiscal measures the empire was not noticeably better off, while the effect on its military preparedness was catastrophic. When it went to war with Russia in the late 1760s it did so with inexperienced, demoralised and sadly ineffective troops, which included large numbers of superannuated Janissaries brought back from retirement to face Russia's recently-modernised army. The Ottomans' desperate attempts during the 1767-74 war to pick up where they had left off three decades earlier placed intolerable strains on Ottoman resources, and policy makers' attention was necessarily divided between demands from competing services. In the aftermath of the disastrous defeat at Česhme [*q.v.*] in 1184/1770, it was natural that naval concerns should gain a certain predominance in their thinking. Significantly, in the post-war period, too, when the Ottomans undertook a broad-based renovation of all the empire's defence capabilities, the naval sphere was again assigned priority. The Ottomans' first imperially-sponsored technical school founded in 1187/1773 and called the *mühendis-khāne-yi baḥr-i hümāyūn* was, as the name suggests, intended to give priority to the naval sphere. The founding of its counterpart institution, the *mühendis-khāne-yi berr-i hümāyūn*, devoted to the scientific and technical aspects of land wars, was deferred until 1208/1793. Worries about Ottoman naval preparedness continued during the reign of the military moderniser *par excellence* Selīm III [*q.v.*] and while some of his advisers such as Tatārdjïḳ ʿAbdullāh Efendi advocated undertaking a serious (and well-funded) effort to improve the condition of the Janissaries (see his *Lāyiḥa*, pt. ii, 259-70), the demands for a modern navy were given equal priority (*Lāyiḥa*, pt. i, 330-9) and in the end other options for upgrading the Ottomans' land forces were pursued [see NIẒĀM-I DJEDĪD].

Between 1770-2, when the Ottomans were still at war with Russia, experimentation with alternatives to the Janissaries had in any case already begun. The very existence of the *süratdjis* (rapid-fire artillerymen) being trained by the Baron de Tott in the capital, although ostensibly a replacement for the *ṭopdjus* rather than the Janissaries proper, was enough in itself to engender real fears among the Janissaries at the front about their collective future. The fact that the experiment was essentially a failure and that the prototype unit ordered to the front never actually reached its destination (Aksan, "*Wretched Fanaticks*") did little to allay these fears, and the truth is that already in the 1770s, their days were numbered. Finding a viable replacement for the Janissaries was, however, a complicated problem, and the last half-century of the corps' existence saw a series of phased reforms and policy reversals. There were valid reasons for this gradualism, and it is wrong to attribute the slowness of reform principally to Janissary obstinacy, resistance and conservatism, as is sometimes implied.

Even the "abolition" of the corps by Maḥmūd II's imperial fiat in 1242/1826, dubbed in the sources the "auspicious event" (*waḳʿa-yi khayriyye*), was not so absolute or final as the name would suggest. The transition to local recruitment models was, in some areas, painfully slow and, especially in border areas such as Bosnia, it met with fierce resistance from the local Muslim notables. In Bosnia, for example, it took seven years for the sultan's "abolition" of the corps to take full effect and be replaced with a reliable local militia (O. Moreau, *Recruitment*, 264). It was in the provinces closest to Istanbul and least vulnerable to attack that the transition to a regionally recruited land army was quickest and most successful [see RADĪF. 3]. In the short to medium term, it cannot be said that the removal of the Janissaries brought any real solution to the empire's military difficulties. The empire was militarily unprepared in both the 1828-9 Russo-Ottoman war and the first phase of its conflict with Muḥammad ʿAlī [*q.v.*] in 1832-3 and the diplomatic interventions needed to bring these disastrous episodes to a close, established a new pattern of Ottoman dependency on foreign aid which lasted to the era of the Crimean War and beyond. The 1830s heralded not so much a new era of promise for accelerated military modernisation by the Ottomans as the inau-

Table I

Value of estates left by retired and active members of the Janissary* corps between 1005/1594 and 1078/1668 (based on Öztürk, *Istanbul tereke defterleri*, 438-93)

name of deceased	P. no. in Öztürk	inventory no. in Öztürk	date of death (*hid̲j̲rī*)	place of death	value of estate (in *aḳčes*)
Meḥmed Čāwūs̲h̲	438	15	1005	sefer-i sulṭānī	127,676
Muṣṭafā Ag̲h̲a	444	68	1027		529,378
Ṣāliḥ Čāwūs̲h̲	448	137	1037	s̲h̲arḳ seferi	380,819
Mataradjî Meḥmed Ag̲h̲a	450	24	1046	sefer-i hümāyūn	260,000

* Some titles (e.g. *čāwūs̲h̲*) are ambiguous and could refer to military or non-military officials other than Janissaries. In a few cases, however, additional, functionally specific, information is given (e.g. *ṣolaḳ, turnadjî-bas̲h̲î, oda-bas̲h̲î, mataradjî*, etc.) confirming the individual's status as a member of the Janissary corps. When the place of death is given as "on campaign" (e.g. *sefer-i s̲h̲arḳ, sefer-i sulṭānī*), this increases the likelihood that individuals bearing ambiguous titles were in fact Janissaries.

** This estate was also composed mostly (145,300 *aḳčes*' worth) of cash. Many Janissaries lived in barracks as bachelors and thus had no private homes to dispose of at the time of death.

*** This estate was composed almost entirely of cash in the amount of 9,054,530 *aḳčes*, with a further 32,368.5 *aḳčes* owed to the estate by creditors.

guration of the "Eastern Question" in western politics.

Bibliography: 1. Primary Ottoman historical sources. Anon., *Gazavat-i Sultan Murad b. Mehemmed Han*, ed. H. Inalcık and M. Oğuz, Ankara 1978; Kemāl Pa<u>sh</u>a-zāde, *Tevārī<u>kh</u>-i āl-i ʿO<u>th</u>mān, VII. Defter*, ed. Ş. Turan, Ankara 1954, *II. Defter*, ed. idem, Ankara 1983; Tewḳīʿī ʿAbd ul-Raḥmān Pa<u>sh</u>a, *Ḳānūnnāme [1087/1676]*, ed. A. (R. Murphey)

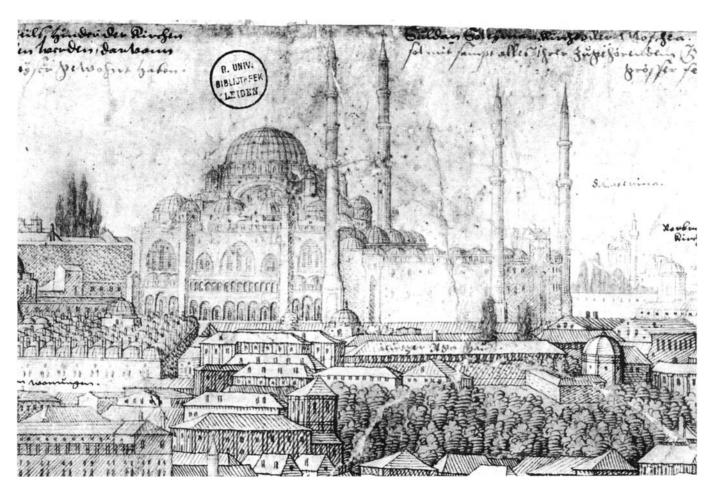
YEÑI ḲALʿE, in Turkish, "the New Fortress", a fortress in the southeastern Crimea.

It was founded by the Ottoman sultan Muṣṭafā II [*q.v.*] in 1114/1702 to protect the nearby port of Kerč [*q.v.*] and provide a counterweight to Azov, which had been conquered by Peter the Great in 1696 (and held by Russia for 17 years) [see AZAḲ]. When Catherine the Great's armies marched into the Crimea in 1771, Yeñi Ḳalʿe and Kerč fell into Russian hands without resistance and in the Treaty of Küčük Ḳaynard͟ja [*q.v.*] of 1774, the Porte ceded its rights to them, thus giving Russia control of the northern Black Sea shores.

Bibliography: See that to ḲIRĪM. (Ed.)

YEÑI ʿOT͟HMĀNLĪLAR, the Young Ottomans, a political grouping which strove for the establishment of a constitutional régime in the Ottoman empire.

The group was formed in 1865 by a group of six young civil servants who had been trained in the new government offices created under the *Tanẓīmāt*,

Janissary vanguard observes the crossing of the Drava en route to Sigetwār in 1566. Miniature from the supplement (*tatimma*) to the *Süleymān-nāme* of Luḳmān b. Sayyid Ḥusayn [*q.v.*] covering the years 968-74/1561-66. Chester Beatty Library, MS T 413, folio 60b; reproduced by kind permission of the Trustees of the Chester Beatty Library, Dublin.


Detail from the 1559 Istanbul panorama of Melchior Lorichs showing the *agha kapusu* or headquarters and chief residence of the Janissary commander located behind the Süleymāniyye mosque. Courtesy of Leiden University Library (BPL 1758, Tafel X).

and specifically in the Translation Bureau of the Porte. Some of the leading members of the group, such as Namìḳ Kemāl [*q.v.*], also pioneered modern journalism in the empire. The Young Ottomans opposed the leading statesmen of their day, Meḥmed Amīn 'Alī Pas̲h̲a and Fu'ād Pas̲h̲a [*q.vv.*], accusing them of establishing a tyrannical régime, of giving in to foreign pressure and betraying the Ottoman interests in the Balkans and on Crete, and of neglecting the Islamic heritage of the empire.

The group formed in 1865 originally called itself the *Ittifāḳ-i Ḥamiyyet* (Patriotic Alliance). It was loosely modelled after similar movements in Europe, notably the Carbonari in Italy. From 1867 onwards, the group received powerful support from Muṣṭafā Fāḍil Pas̲h̲a [see FĀḌIL PAS̲H̲A], a brother of the Egyptian Khedive Ismā'īl, who had been a high Ottoman bureaucrat, but had fallen out of favour with Fu'ād Pas̲h̲a. Muṣṭafā Fāḍil Pas̲h̲a bore Fu'ād an even stronger grudge when the succession to the khedivate was changed in 1866 and he lost his position of heir-apparent to Ismā'īl. In February 1867, Muṣṭafā Fāḍil, who had been living in Paris since 1866, declared himself the head of the "Party of Young Turkey" to the French press. This apparently denoted a vaguer group of Ottoman reformists than the Patriotic Alliance, which did not recognise him as its head.

At the same time, the Young Ottomans in the empire came under increasing pressure because of their criticism of the régime and their support for Muṣṭafā Fāḍil. Leading members of the group were banned from the capital. Fāḍil Pas̲h̲a reacted by inviting them to Paris, whither they escaped with the help of the French embassy. For the next three years, the Young Ottomans waged a war of words on the government of Fu'ād and 'Alī Pas̲h̲a in Istanbul by way of numerous newspapers that they published in London, Paris and Geneva. Muṣṭafā Fāḍil Pas̲h̲a made his peace with Sultan 'Abd al-'Azīz during the latter's visit to Paris in August 1867 and returned to Istanbul, but he continued to subsidise some of the Young Ottoman publications. Other powerful politicians, among them Khedive Ismā'īl, also tried to use the Young Ottomans to put pressure on the government in Istanbul.

The Young Ottomans were a loose grouping of individuals with very different ideological standpoints. Under their general and vague constitutionalism, some came close to European liberalism (Namìḳ Kemāl), while others were more conservative and monarchist (Ḍiyā Bey, later Pas̲h̲a) or Islamist ('Alī Su'āwī [see SU'ĀWĪ]). The most accomplished political thinker in the group, Namìḳ Kemāl, tried to show that "European" ideas like liberalism, constitutionalism and parliamentarianism were not alien to Ottoman tradition, but could be found in early Islam as well. The effort to explain European liberalism to an Ottoman audience necessitated the development of a new vocabulary as well. Modern political terms such as *millet* ("nation"), *waṭan* ("patrie") or *ḥürriyyet* ("liberté") were coined by the Young Ottomans.

After the deaths of Fu'ād Pas̲h̲a (1869) and 'Alī Pas̲h̲a (1871), almost all Young Ottomans returned to Istanbul. Their hopes of gaining political influence were soon dashed, however. Their newspaper publications again brought them into conflict with the authorities. In 1873 Namìḳ Kemāl used another novel medium—European-style theatre—to convey his message in a patriotic play called *Waṭan yāk̲h̲ūd Silistre* ("The Fatherland, or Silistria"). This brought about an outburst of public support but also led to most of the Young Ottomans being sent into internal exile. When an Ottoman constitution was finally proclaimed in December 1876, this was the work of a number of very senior statesmen and soldiers who were not directly influenced by the Young Ottomans. Although the movement soon lost whatever strength it had had, it remained extremely important as an example to later generations of reformists. The Young Turks, who brought about the constitutional revolution of 1908, took much of their ideals from the Young Ottomans. As important as the strictly political role of the Young Ottomans was their role in the development of journalism (and therefore of "public opinion") in the Ottoman empire [see D̲J̲ARĪDA. iii].

For the course of events involving the Young Ottomans and Young Turks from 1875 onwards, see DUSTŪR. ii. and 'OT̲H̲MĀNLİ. I. 5; and for the reformist and intellectual currents of the time, see IṢLĀḤ. iii. and PAN-TURKISM.

Bibliography: The definitive work on the Young Ottomans is Şerif Mardin, *The genesis of Young Ottoman thought. A study in the modernization of Turkish political ideas*, Princeton 1962. Niyazi Berkes, *The development of secularism in Turkey*, Montreal 1964, and B. Lewis, *The emergence of modern Turkey*, Oxford 1961 also have valuable sections on the Young Ottomans. Among the older sources, Ebüzziya Tevfik's *Yeñi 'Ot̲h̲mānlìlar ta'rīk̲h̲i* (originally published in instalments in 1909, mod. Tkish. ed. Istanbul 1973, 3 vols.), is still very interesting since Tevfik was a member of the group himself.

(E.J. ZÜRCHER)

YEÑI S̲H̲EHIR, modern Turkish Yenişehir, a town of northwestern Anatolia, in what was the classical Bithynia. It lies in lat. 40° 17' N. and long. 29° 38' E. at an altitude of 245 m/800 feet in a long depression running from Inegöl in a northeasterly direction, where this narrows; this plain is drained by the Gök Su, whose waters are used here for irrigation purposes and which flows past Yeñi S̲h̲ehir into the Sakarya river [*q.v.*].

Yeñi S̲h̲ehir played an important role in early Ottoman history. It was the first town of significance to be taken at some point in the early 8th/14th century by 'Ot̲h̲mān I [*q.v.*], who made this town and Sögüd [*q.v.*] his headquarters, using Yeñi S̲h̲ehir as a base for expansion westwards to the Sea of Marmara, thus cutting the communications of Bursa [*q.v.*], the last independent Byzantine city in the region, with Constantinople, so that 'Ot̲h̲mān's son Ork̲h̲an [*q.v.*] was able to capture Bursa in D̲j̲umādā I 716/April 1326. This northwestern region eventually became the *eyālet* or province of K̲h̲udāwendigār [*q.v.*]. After Tīmūr had defeated Bāyezīd I at Ankara in D̲h̲u 'l-Ḥid̲j̲d̲j̲a/July 1402, the Tīmūrid army ravaged first Bursa and then Yeñi S̲h̲ehir and Iznik. Two decisive battles subsequently took place at Yeñi S̲h̲ehir. On 22 Rabī' II 886/20 June 1481 the Ottoman prince D̲j̲em [*q.v.*], who had made Bursa his capital in his bid for his father Meḥemmed II Fātiḥ's succession, was defeated by his elder brother Bāyezīd (II) and the commander Gedik Aḥmed Pas̲h̲a, and fled with his family and the last Ḳaramānid prince Ḳāsim b. Ibrāhīm to the Mamlūk court in Cairo. On 27 Muḥarram 919/15 April 1513 a further battle took place at Yeñi S̲h̲ehir when Selīm I [*q.v.*], exactly one year after his accession, defeated his elder brother and rival for power, Aḥmed, and executed him.

Thereafter, Yeñi S̲h̲ehir played only a reduced role in Ottoman history, although it was the home town of Yeñis̲h̲ehirli 'Abd Allāh Efendi, *S̲h̲eyk̲h̲ al-Islām* 1130-42/1718-30 under Aḥmed III. The European guide

books of the late 19th century describe it as a modest place, the centre of a *ḳaḍā* in the *sandjaḳ* of Ertoghrul in Khudāwendigār province (actually erected in 1885 out of the former *sandjaḳ* of Biledjik), with around 2,500 inhabitants, all Muslims, several mosques, including the mosque and *ʿimāret* of Sinān Pasha, a *khān*, baths and the *türbe* of a certain Baba Sulṭān (see *Murray's Handbook for Constantinople, Brûsa, and the Troad*, London 1898, 129; a population figure of less than 5,000 is given in *Baedekers Konstantinopel, Balkanstaaten, Kleinasien, Archipel, Cypern*, Leipzig 1914, 265). Yenişehir is now, in the Turkish Republic, the chef-lieu of an *ilce* in the *il* or province of Bursa.

YEÑI SHEHIR, the Ottoman name (Yeñi-Shehir i-Fenārī, since 1423) of Larissa (i.e. "citadel"), the chief central Greek city of Thessaly [see TESALYA], lying near the river Peneios and on the highway connecting Athens with Thessalonica [see SELĀNIK]. It is now the seat of Larissa prefecture (*nomos*) (1981 pop. 102,426). Founded in Antiquity, it was fortified by Justinian (6th century), became one of the administrative and military seats of the Byzantine theme of Hellas (9th-10th centuries) and was attacked and temporarily captured by the Bulgarians (985-6), the Latin Crusaders (1204) and the Serbs (1348), withstanding a Norman siege in 1082-3 (see refs. in J. Koder-F. Hild, *Hellas und Thessalia*, Vienna 1976, 198-9; further bibl. in A. Savvides, *Splintered medieval Hellenism: the semi-autonomous state of Thessaly, A.D. 1213/22-1454/70*, in *Byzantion*, lxviii [1998]).

There were in fact three Ottoman conquests of Larissa: in 1386-7 by Evrenos Beg [*q.v.*] and Khayr ul-Dīn Pasha; between 1392-3 and 1396-7 by sultan Bāyezīd I [*q.v.*]; and definitively in 1423 (not A.H. 848, i.e. 1444, according to Ewliyā Čelebi) by the renegade Turakhān Beg [*q.v.*] (refs. in Savvides, *Problems of the Ottoman conquest and the spread of the conquerors in the Thessalian area* [in Greek], in *Thessaliko Hemerologio*, xxviii [1995], 33-64, esp. 36-9, 49-50). From 1423 Larissa-Yeñi Shehir developed into a characteristic Turkish city with a large Muslim population throughout the long period of Ottoman domination (see Helen Angelomate-Tsougarake, *A contribution to the history of economic, social and educational life of Larissa during the Tourkokratia* [in Greek], in *Mesaionika kai Nea Hellenika*, iii [1990], 255-332, esp. 255, 259, citing the *taḥrīr defters* of 1454-5 for Thessaly), remaining steadily an Ottoman base (since 1770 as the seat of Thessaly's central administration, numbering about 40,000 inhabitants; see N. Kladas, art. *Larissa*, in *Megale Hellenike Enkyklopaideia*, xv, [2]1964, 802C), despite isolated cases of rebellion, like that of 1600-1 headed by the city's bishop Dionysius. Turakhān Beg himself became Thessaly's first governor and was succeeded by his son ʿÖmer Beg (1456), who also established his headquarters in Yeñi Shehir, where his mosque survived during the time of Ewliyā Čelebi's visit in 1668 (see Th. Paliougas, *The mosque of Omer bey in Larissa. A topographical note* [in Greek], in *Thess. Hemerol.*, xii [1987], 185-92 and idem, *Larissa in the travel accounts of Ewliya Čelebi* [Greek tr.], in *Thess. Hemerol.*, xxvi [1994], 81-104). The town's local fair developed in the 17th-18th centuries, and the sultan Meḥemmed IV [*q.v.*] himself visited it, also in 1668, to find there his future sultana (see C. Spanos, in *Makedoniko Hemerologio* [1972], 349-52; İ.H. Uzunçarşılı, *Osmanlı tarihi*, iii/1, [3]Ankara 1983, 415-16).

Although the city's crucial location did not enable it to participate in the Greek War of Liberation (1821-30), still it suffered devastations by the Ottoman generals Meḥmed Reshīd Pasha and Maḥmūd Pasha [see TESALYA]. The Turks held it until 1881, when Thessaly was annexed to the Kingdom of Greece, though Larissa was briefly recaptured by the Ottomans in the course of the Graeco-Turkish war of 1897 (see Kladas, *op. cit.*, 802C-803A; B. Kodaman (ed.), *1897 Türk-Yunan savaşı. Tesalya tarihi*, Ankara 1993, 92 ff.; I. Aktsoglou, in *Thess. Hemerol.*, xxxi [1997], 17-26, with Greek tr. of a Turkish telegram and two poems mentioning the event). In any case, the exodus of the city's Muslim residents was completed by the 1920s.

(A. Savvides)

YERLIYYA, colloquial Turkish-Arabic term derived from the Turkish *yerlü* "local". It was used by the Damascene sources for the local Janissary corps (Turkish *Yerlü Čeri*) to distinguish it from the Ḳapï Ḳullarï Janissary corps (slaves of the Gate or Imperial Janissaries) referred to by the same sources as *Ḳābiḳūl*.

A *fermān* dated 4 Djumādā I 985/20 July 1577 commanded the governor of Damascus to give the places that fell vacant in the Janissary corps to men from Rūm (Anatolia and Rumelia) and not to rich and wealthy natives (*yerlü*) and non-Turkish subjects (*tāt*) (U. Heyd, *Ottoman documents on Palestine, 1522-1615*, Oxford 1960, 61). The *fermān* was not heeded, and natives and foreigners continued to join the corps, which numbered 1,000 in the 1570s. One of the duties of the Janissary corps was to assist the *Defterdārs* of Damascus and Aleppo in collecting taxes (Heyd, 73 n. 3; al-Muḥibbī, *Khulāṣat*, ii, 129, iii, 156, 299, 417-18, 427-8, iv, 449-50; al-Murādī, *Silk*, i, 166, ii, 63; al-Ghazzī, *Nahr al-dhahab*, iii, 266, 279; al-Ṭabbākh, *Iʿlām*, iii, 129). Suffering from the devaluation of the Ottoman silver currency (*akče*) with which they were paid, the Janissaries of Damascus imposed extra taxes on the peasants. When the government took disciplinary action against them, they rose in revolt. Between roughly the last quarter of the 16th century, when these events first occurred, and 1069/1658-9, when the Ḳapï Ḳullarï were established in Damascus, the government—and especially under Sultan Murād IV (1032-49/1623-40)—killed at intervals several of the mutinous Janissary chiefs of Damascus, among whom figured Rūmī and non-Turkish individuals. This opened the way to influential Damascenes, mostly grain merchants from the Mīdān quarter, to enroll in the corps. In 1069/1658-9, the Janissary corps in Damascus supported the revolt of the governor of Aleppo, Ḥasan Pasha. But Ḳapï Ḳullarï Janissary troops loyal to the Sultan put down the revolt, punished

the rebellious Janissary chiefs and established themselves in Damascus to counter its Janissary corps that was becoming dominated by Damascenes and known accordingly as Yerliyya or "locals". Thus two Janissary corps came to exist in Damascus. The Ḳapî Ḳullarî Janissaries took control of the citadel, the walls and the gates of the city. The Yerliyya Janissaries were entrusted with garrisoning the fortresses along the Pilgrimage route to the Ḥidjāz, but most of them stayed in Damascus to serve their own personal interests. The Yerliyya Janissaries were known in Damascus as *Dawlat Dimashḳ* ("masters of Damascus") and the Ḳapî Ḳullarî Janissaries as *Dawlat al-Ḳalʿa* ("masters of the citadel"). The strongholds of the Yerliyya were in the Mīdān and in Sūḳ Sārūdja that was close to the citadel. The Ḳapî Ḳullarî were rotated at intervals and reinforced by fresh troops periodically to keep them immune to infiltration by local people. Many of them, however, lived in the city quarters and joined the guilds, which further caused economic rivalry between them and the Yerliyya (Abdul-Karim Rafeq, *al-ʿArab wa 'l-ʿUthmāniyyūn, 1516-1916*, ²Damascus 1993, 142-7, 193-7; idem, *The province of Damascus, 1723-1783*, ²Beirut 1970, 26-35; idem, *The local forces in Syria in the seventeenth and eighteenth centuries*, in V.J. Parry and M.E. Yapp (eds.), *War, technology and society in the Middle East*, London 1975, 277-81.

In 1740, the Yerliyya, in concert with other Damascene power groups and with the approval of the sultan, expelled the Ḳapî Ḳullarî from Damascus. The prestige of the Yerliyya soared as they controlled the citadel, the walls and the gates of the city. A group of them, known locally by the Turkish term *zorab* or *zorbāwāt* (sing. *zorba*, meaning "insolent one" or "rebel"), went out of control (Redhouse, *Turkish dictionary*, 589; Dozy, *Supplément*, i, 584; Aḥmad al-Budayrī al-Ḥallāḳ, *Ḥawādith Dimashḳ al-yawmiyya, 1154-1175/1762-1741*, ed. Aḥmad ʿIzzat ʿAbd al-Karīm, Cairo 1959, 62 ff.). Challenged by the *zorab*, the governor Asʿad Pasha al-ʿAẓm (1743-57) used his private troops, the Dalātiyya, in 1746 to discipline them. Many of them were killed and their houses destroyed (al-Budayrī, 66-70; Rafeq, *al-ʿArab*, 258-61). To guard against the resurgence of Yerliyya power, Asʿad Pasha reinstated the Ḳapî Ḳullarî Janissaries in Damascus. Further clashes between the two corps weakened the Yerliyya, who sought help from the local Ashrāf (al-Budayrī, 214-16; Rafeq, *Province*, 171-5, 223-6). The animosity between the two Janissary corps, each representing special interests, continued until 1826 when the Janissary corps was altogether abolished in the Ottoman empire and replaced by the new European-style army known as Niẓām-î Djedīd [*q.v.*].

YESHIL İRMAK, modern Tkish. Yeşil Irmak ("the Green River"), a river of northern Anatolia, the classical Iris in the province of Pontus (see *PW*, ix/2, col. 2045).

The upper course of the river, called the Tozanlı Su, rises in the Köse Dağ to the northeast of Sivas and flows westwards by Tokat [*q.v.*] and Turhal. Here there is a fertile plain, the Kazova or "Goose Plain", which is now irrigated by waters from the Almus dam on the river's course above it, completed in 1966, and a canal running off and parallel to the river, enabling cereals, sugar-beet and vines to grow there (for a description of the Kazova as it was over a century ago, see H. Van Lennep, *Travels in little-known parts of Asia Minor*, London 1870, ii, 86-7). The river turns northwards by Amasya [*q.v.*] and another fertile region and then eastwards, taking in the Kelkit as an important right-bank affluent, then northwards through a narrow valley with defiles to emerge at the Black Sea coast in a delta built up by silt carried down from the mountains of the interior. The delta is partly wooded and partly used for agriculture, but with marshes, in the past malarial, towards the sea. The small town of Çarşamba, 32 km/20 miles to the east of Samsun [*q.v.*], is situated here on the Yeşil Irmak's left bank. A road runs along the east-west trough of the upper and middle sections of Yeşil Irmak's course, with a short stretch of the valley between Turhal and Amasya carrying the railway from Kalın near Sivas to Samsun, but the river has never been navigable.

Bibliography: Naval Intelligence Division, Admiralty Handbooks. *Turkey*, London 1943, i, 167-8, ii, 152-3, 254, 312-13 and indices; *İA*, art. *Yeşilırmak* (Metin Tuncel). (C.E. Bosworth)

YESHILKÖY, a town of what is now the urban agglomeration of Istanbul, on the shores of the Sea of Marmara 15 km/9 miles from the city centre; before 1924 it was known as Agios Stephanios in Greek and Ayastefanos in Turkish.

The place is not mentioned in Byzantine sources, but appears in Villehardouin when he describes the arrival of the Crusader fleet in 1203 and mentions "an abbey at St. Stephen three leagues from Constantinople" (ed. Paris 1961, 127). After the Ottoman conquest, Meḥemmed II deported large numbers of persons during his Serbian campaign of 1454 and installed them there (Ducas, xlii, 11; *Anonymus Giese*, 111; Kritovoulos, B22 (2)). It was probably from these that the Ottoman village of Ayastefanos arose; in 1498 the inhabitants comprised 20 hearths of share-cropping slaves (*ortakdjî ḳullar*) with Slav forenames and 24 hearths of free *reʿāyā*, with Slav and Greek forenames, and a few Muslims, a total of *ca.* 170 persons (BBA, Tapu tahrir 1086, ff. 64b-66a).

By an act of *waḳf* in October 1505, Bāyezīd II attached the village to the mosque that he built in the capital, and *ca.* 1525 the *Defterdār* Ibrāhīm Čelebi rented out to the *waḳf* a stretch of ground at the modern village of Bakırköy as a pleasure garden, which was taken into the *waḳf* after his execution in 1534. Ewliyā Čelebi probably exaggerated when he counted 500 hearths at Ayastefanos in the mid-17th century, but mentions a *tekke*, a small bazaar and two churches. Parallel to agricultural acivities there (the requirement of milk delivery to the capital for a yoghurt factory there, *yoghurtdju kārkhānesi*, is mentioned for March 1762: *Istanbul külliyâtı*, vii, 119-20), the village early acquired a residential character. The Wallachian prince Constantine Brancovan retired to a house there after his deposition in 1713. The place prospered above all thanks to the Armenian Dadian family, who in 1796 founded a gunpowder factory in the adjacent village of Āzādlî. Ohannes Dadyan (d. 1869) built in 1826 an Armenian church of St. Stephen, and the Greek church, of the same dedication, was renovated in 1845 by his nephew Boghos Dadyan. A Greek primary school was opened in 1862, a Roman Catholic church was added in 1865 and the first mosque built in 1905 (cf. Pars Tuğlacı, *The role of the Dadian family in Ottoman social, economic and political life*, Istanbul 1993).

At the time of the Russo-Turkish War of 1877-8, the Russian army reached Ayastefanos, and it was there that the Treaty of San Stefano was signed setting up an (in fact, ephemeral) Greater Bulgaria (3 March 1878). The village was connected to the capital by steamer in 1852 and by a suburban railway line, utilising the

Orient railway line, in the 1880s. In 1887, lands of the Dadian family between the railway line and the sea were granted out for development, permitting a considerable expansion of the village, which had 160 families in 1905. During the counter-revolution of 1909, the deputies of the new Ottoman parliament retired to Ayastefanos, to which there also arrived the first battalion of the relieving Army of Salonica (ʿAbd ül-Raḥmān Sheref Efendi, *Tārīkh*, Ankara 1998, 20-1, 34-5). The Greek population of the village was not included in the population exchanges of the post-war period. It now in 1924 took on the name of Yeshilköy. The original military airport of 1911 gradually became the main airport for Istanbul. In 1990 Yeşilköy had 22,674 inhabitants.

(S. Yerasimos)

YETI SU, in mediaeval Turkish "[the land of] the seven rivers", rendered in recent times by Russian scholars as Semirečʾe, a region of Central Asia.

It comprised essentially the lands north of Transoxania [see MĀ WARĀʾ AL-NAHR] which stretched from the basin of the Issïk-Kol [*q.v.*] lake northwards to Lake Balkhash [*q.v.*], and it derived its name from the numerous rivers draining it, such as the Ču [*q.v.*], which peters out in the desert to the northeast of the middle Sïr Daryā [*q.v.*], and several rivers flowing into Lake Balkhash such as the Ili [*q.v.*], which rises in Dzungaria and flows through Ḳuldja [*q.v.*] into Semirečʾe, and the Ḳaratal, Aḳsu and various others rising in the northern slopes of the Tien Shan and in the Alatau mountains further north. What was the mediaeval Semirečʾe is now comprised in the northern part of the new republic of Kirghizia and the southeastern part of that of Kazakhstan.

Although the lower reaches of the Ču and the rivers entering Lake Balkhash run through arid, desert lands, in their upper courses, along the foothills of the mountain massifs, and in the lands around the Issïk-Kol, the terrain has always been attractive for human settlement, with at times towns and agriculture and with pastures suitable for nomads and their herds. This has given Semirečʾe a geographical and cultural identity of its own, and at several periods it has played a significant role in Inner Asian history. In particular, the generally east-west-running rivers provide routes through the Tien Shan into eastern Turkistan (the Chinese Sinkiang [*q.v.*]), with the Ili, further north, forming a particularly important strategic corridor via Ḳuldja into Dzungaria, with the possibility of passing by Urumči and Ḳomul [*q.v.* in Suppl.] through the Kansu [*q.v.*] corridor into the western part of China proper. Hence these routes have always been important, *inter alia*, for commercial exchanges between Western Asia and China.

In pre-Islamic times, Chinese annals of the 2nd century A.D. mention Semirečʾe as being in the hands of a nomadic people, the Wu-sun, with the Hsiung-nu or Huns controlling the upper Irtish river [*q.v.*] lands to the north of it and Dzungaria. In the 4th century, the Zhuan-zhuan confederacy, which had arisen out of the disintegration of the Huns, incorporated Semirečʾe in their territories. In the early 7th century, the Buddhist pilgrim Huien-Tsang (Xuan-zang) found many towns there, with flourishing agriculture and a commerce dominated by Sogdian colonists, and with the Manichaean faith widespread amongst the people. There must also have been already Nestorian Christians, whose graves have been found in Semirečʾe with dates indicating their presence there well into Mongol times (see in general, Barthold, *Zur Geschichte des Christentums in Mittel-Asien bis zur mongolischen Eroberung*, Tübingen and Leipzig 1901, and, more specifically, below). By this time, the Western Turks were dominant in the region, but their empire collapsed in the mid-8th century and the resultant confusion facilitated the Arabs' penetration of Transoxania at this time, although Talas [see ṬARĀZ] for long marked the limit of the Muslim advance northwards into the steppes. Turkish tribes meanwhile consolidated their hold on Semirečʾe, with the Ḳarluḳ [*q.v.*] in 766 occupying the former Türgesh capital of Suyab to the north of the Ču (probably to be situated to the northeast of Pishpek) (see O. Pritsak, *Von den Karluk zu den Karachaniden*, in *ZDMG*, ci [1951], 277-8). Islamic geographers of the 4th/10th century mention not only the Ḳarluḳ, amongst whom Islam had begun gradually to spread, but other Turkish tribes like the Toghuzghuz [*q.v.*], Čigil and Tukhsï (see *Ḥudūd al-ʿālam*, tr. Minorsky, maps v and vi) who resisted Islam for much longer. Towns, clearly of some importance, now begin to be noted, such as Barskhān on the shores of the Issïk-Kol and Balāsāghūn [*q.v.*] situated somewhere in the Ču valley, whose seizure, being by then a Muslim town, by pagan Turks in *ca.* 940 is recorded in Islamic sources (see Barthold, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, Berlin 1935, 77-8). These infidel Turks must have been the early Ḳarakhānids [see ILEK-KHĀNS] before their conversion to Islam. Within a generation or so, these last had become Muslim, and they used Semirečʾe as a base for their take-over of Transoxania from the Sāmānids. In the early 5th/11th century, Aḥmad Ṭoghan Khān, brother of the Ilig Naṣr, ruled Semirečʾe and Kāshgharia, but lost the latter to his second cousin and rival Yūsuf Ḳadïr Khān. From the middle of this century onwards, Semirečʾe, being with Eastern Turkistan the original Ḳarakhānid dominions, constituted the Eastern Khānate of the dynasty.

Over the next century and a half, Semirečʾe was fought over by various rival Ḳarakhānid princes. It was in this time that much of the region became Islamised, but a new power came on the scene in the 1130s, the people of the Kitan or Khiṭay, Buddhist in faith and possibly of proto-Mongol or (less likely) Tungusic ethnic origin, the Western Liao of Chinese historians [see ḲARA KHIṬAY, and now D.C. Twichett, in *Camb. hist. of China*, vi, *Alien regimes and border states 907-1368*, Cambridge 1994, 45-6]. According to one source, the Khiṭay had infiltrated into northern Semirečʾe a century earlier in 433/1041-2. After *ca.* 1140, the army camp of the Gurkhān or ruler of the Ḳara Khiṭay, called *khosun ordo* "strong encampment", was situated on the banks of the Ču, and the Gurkhāns' basically hostile attitude to Islam imposed on Muslims there. After *ca.* 1209, their position was disputed by the Nayman Mongol adventurer Küčlüg, who speedily ended the power of the Ḳara Khiṭay and took over both Semirečʾe and Eastern Turkistan, using Semirečʾe and the eastern Sïr Daryā region as his base against the Khʷārazm Shāh ʿAlāʾ al-Dīn Muḥammad [see KHʷĀRAZM-SHĀHS]. But a Čingizid Mongol force under Ḳubilay Noyon had already reached northern Semirečʾe in 1211, disputing with Küčlüg for control there, and in 1218 Čingiz's commander Djebe Noyon defeated Küčlüg and entered Balāsāghūn without a fight, the Muslim inhabitants there being thankful to shake off Küčlüg's tyranny. Semirečʾe thus escaped devastation by the Mongols, and travellers through the region in the 13th and early 14th centuries, both Chinese and Western ones, describe there a flourishing agricultural and commercial economy, with populous towns such as Almalïgh [*q.v.*] in the upper Ili valley.

The rule of the Mongol Čaghatayids [see ČAGHATAY KHĀN; ČAGHATAY KHĀNATE] was favourable to the adherents of non-Muslim faiths, for the Čaghatayid Khāns themselves resisted conversion to Islam until the mid-14th century. The Nestorian Christian cemeteries at Ṭokmaḳ and Pishpek, discovered by Russian amateur archaeologists at the end of the 19th century, have yielded nearly 600 gravestones inscribed in Syriac script, most of them in Syriac language but some in eastern Turkish; their dates range from 1186 to 1345. In the reign of the Khān Čangshi (1334-8) Roman Catholic missionaries built a fine church near Almalîgh, and in this same century there existed an Armenian monastery on the shores of the Îssîk-Kol (Barthold, *Zwölf Vorlesungen*, 206; T.W. Thacker, *A Nestorian gravestone from Central Asia in the Gulbenkian Museum, Durham University*, in *Durham University Jnal.*, N.S., xxviii [1966-7], 94-17). But the definitive conversion to Islam of the Čaghatayids in the mid-14th century led to persecution of the Christians of Semireč'e, and thereafter, mention of their faith fades away. Semireč'e was in any case much disturbed from this time onwards by internecine warfare amongst Mongol claimants to power, and in 776/1335 Tīmūr [*q.v.*] invaded Mogholistān [*q.v.*], as the whole region north of Transoxania was now generally known, the first of several expeditions against the local Turco-Mongol ruler of Semireč'e, Ḳamar al-Dīn, who was eventually driven out and fled to the Altai mountains region. Soon afterwards began incursions into Semireč'e by the Buddhist Mongol Oyrats, called by the Muslims Ḳalmuḳs [see KALMUKS], who now became an enduring factor in the history of the region and who raided as far as the Sîr Daryā province. As a result of all this unrest, Chinese sources of the 15th century no longer speak of flourishing towns and villages in Semireč'e but of a land exclusively inhabited by nomads who dwelt in tents.

At the beginning of the 16th century, pagan tribesmen of the Turkish tribe of the Ḳirghiz [*q.v.*], who had traditionally lived in the upper Yenisei region, moved southwards into Semireč'e, this being the first attestation of this people in the neighbourhood of what has become their modern home, the new republic of Kirghizia. Threats by both the Ḳalmuḳs and the Ḳirghiz against Transoxania led to attacks on them by the Turco-Mongol *amīrs* of Transoxania, including Mīrzā Muḥammad Ḥaydar Dughlāt [*q.v.*], in whose *Tārīkh-i Rashīdī* these invading peoples from the northern steppes, what subsequently became known as the Kazakh Steppe, and their territory of Mogholistān, are designated the Djätä, with a pejorative implication that this means "marauders, robbers" (cf. Ottoman *čete* "band, group", with a neutral meaning, however: Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, iii, 1983, and see also Mīrzā Muḥammad Ḥaydar, tr. N. Elias and E.D. Ross, *A history of the Moghuls of Central Asia*, London 1895, introd., 75-6; Barthold, in *Four studies on the history of Central Asia*, i, 54, 139). Nevertheless, Ḳalmuḳ domination of Semireč'e lasted until the mid-18th century, when in 1755-8 Chinese armies came westwards and overthrew the Ḳalmuḳs. The Ḳirghiz and Kazakhs were now left virtually independent in Semireč'e until the armies of Imperial Russia advanced through the Kazakh Steppe. The Russian occupation of Semireč'e brought them up to the frontier with China, and in 1864 a treaty between the two empires defined this frontier, thus enabling Russian forces to secure their flank for an assault on the Khānate of Khoḳand [*q.v.*], and in 1865 Russia put an end to Khoḳand's independence. Semireč'e was henceforth part of the Russian governorate-general of Turkestan, and in 1899 formally became one of its five component districts (*oblast*). Alma Ata or Almaty (now the capital of the Kazakhstan Republic) was developed as the administrative centre of Semireč'e under the name of Vernyi ("the loyal [city]"). After the Russian Revolution and the civil wars in Russia, the region was divided between the Kazakh and the Kirghiz SSRs, and the name Semireč'e became obsolete.

Bibliography: The only monograph specifically devoted to the region is Barthold's early work *Očerk' istorii Semireč'ya*, Vernyi [Alma Ata] 1898, repr. in *Sočineniya*, ii/1, Moscow 1963, 21-106, Eng. tr. V. and T. Minorsky, *History of the Semirechyé*, in *Four studies on the history of Central Asia*, i, Leiden 1956, 73-171. In addition to references given in the article, there are further ones in Barthold, *Turkestan down to the Mongol invasion*[3], index, and other general works on the history of Central Asia such as Grousset, *L'empire des steppes*; Sinor (ed.), *The Cambridge history of early Inner Asia*; etc. (C.E. BOSWORTH)

YÎLDÎZ [see TĀDJ AL-DĪN YILDIZ].

YÎLDÎZ KÖSHKÜ [see YÎLDÎZ SARĀYÎ].

YÎLDÎZ SARĀYÎ, the most recent of the Imperial Ottoman palaces, situated on the heights above the European Bosphorus shore and above the quarter of Beşiktaş. The whole complex of buildings, set in a large park, covers almost 50 ha.

Like other Imperial residences along the Bosphorus, it had its origin in a garden and a hunting ground. Mentions of pre-19th century buildings are confused. The first trace is of a fountain with an inscription from 1219 [/1804] which apparently went with a pavilion built by Selīm III for his mother Mihrishāh Sulṭān. It was probably this building which for the first time bore the name Yîldîz "star" since it is not mentioned by the meticulous chronicler of Selīm's movements, Aḥmed Efendi, in his *Rūznāme*, but first appears in the *Ta'rīkh-i Enderūn* of Khiḍr Ilyās Agha (Istanbul 1987, 63) in connection with a visit of Maḥmūd II (1808-39 [*q.v.*]) on 3 August 1812; it is also mentioned at the same period by Andreossy. In 1834-5 Maḥmūd built a small pavilion surrounded by a garden. It was demolished in 1842 and replaced by ʿAbd ül-Medjīd (1839-61 [*q.v.*]) with a building for his mother, called the Ḳaṣr-i Dilküshā, and he also undertook the laying out of amenities to the west of a vast park surrounding this structure. Following a first plan done by the German Stefel, other German landscape architects, Schlerf in 1860 and Vienhild in 1862, also worked there.

The Čiraghān palace completed in 1871 on the Bosphorus shores by ʿAbd ül-ʿAzīz (1861-76 [*q.v.*]) was linked by a bridge over the road with the Yîldîz park, making the latter a pleasure ground for the new palace. The Malta and Tent Kiosks were then built there by the Balian brothers, Sarkis and Hagop. At the same time, the sultan embarked on a series of buildings on the higher part of the park destined to function for public audiences and the reception of ambassadors and dignitaries, the Büyük Mābeyn Köshkü and the Indian Lady Pavilion. Round this nucleus, ʿAbd ül-Ḥamīd II (1876-1909 [*q.v.*]), fearing that being too near the coast would make him vulnerable, built his own residence and made Yîldîz a symbol of his absolute power. A new team of landscape specialists, German, Italian and French, laid out gardens in the English style, whilst the architectural construction was undertaken by Sarkis Balian and then Raimondo d'Aronco.

Access to the palace was by a rise, to the right of which was built in 1885-6 the Ḥamīdiyye mosque,

convenient for the sultan to attend the Friday worship, with the nearby Terrace Pavilion built for the congregation. The rise ended in the Harem Gate, the main one of the palace, giving on to a court blocked by a long building, that of the sultan's aides-de-camp and servants (*yāwerān we bendegān dā'iresi*). To the left of the court was situated on the west the Great Chancery, and on the north the Indian Lady Pavilion. To the right of the Harem Gate was a long range comprising the kitchens, cellars, armoury and coachmen's quarters with those of the Albanian guards on the floor above. Facing this, the prolongation of the aides-de-camp's building housed the library and a cabinet of curiosities.

A door in the angle between the Indian Lady Pavilion and the aides-de-camp's building gave access to the private apartments. Within was the Small Chancery, Küčük Mābeyn, with the sultan's office and a building containing the private apartments, of great simplicity, of 'Abd ül-Ḥamīd, a theatre (these structures being the work of the Italian architect Raimondo d'Aronco, 1857-1932) and a building with the quarters of the chief eunuchs, governesses and the less favoured odalisques. Behind this last was the interior garden, arranged round an artificial water scheme with an island in it on which was a miniature farm. At the south end of the garden was the Belvedere Kiosk, Djihānnümā Köshkü, and at the north end the apartments of the wives and the odalisques; the whole ensemble of the private apartments and garden was surrounded by a high wall. To the west of the ensemble were the service buildings and further out, and isolated, the apartments of the royal princes. At the extreme north was a grand pavilion for the reception of guests, the Chalet, Shale Köshkü, which connected with both the private apartments and the great park situated to the east. The building was built in three phases, corresponding to the rhythm of royal visits, including the German Kaiser Wilhelm II's two visits of 1889 and 1898, the first two phases being the work of Balian and the third that of d'Aronco. In the park there were also workshops for carpentry and ceramics, the latter making the porcelain known as Yīldīz, functioning from 1895-1909, 1911-20 and now from 1962 onwards.

'Abd ül-Ḥamīd's deposition in 1909 meant that the palace fell into disfavour and was even partially pillaged. Nevertheless, Meḥemmed VI (1918-22 [*q.v.*]) spent the greater part of his reign at Yīldīz. In the 1930s the Yīldīz estate was divided into three, with the greater part used by the Military Academy, Harp Akademisi; the Chalet and other service buildings designated for the use of the President of the National Assembly; and the other palace buildings, along with the Malta and Tent Kiosks, given to the municipality of Istanbul and opened to the public in 1940. With the move of the Military Academy to Ankara in 1968, new arrangements were made: the main buildings were transferred to the Ministry of Culture for use as museums and the service buildings to the west were taken over by the Yıldız Technical University. In 1999 the Ministry of Culture's section houses the Yıldız Museum and the Museum of the City of Istanbul, a research institute for Islamic history, art and culture, etc.

YIRMISEKIZ MEḤMED [see meḥmed yirmisekiz].

YOGHURT (t.), from older Turkish *yughur-*, Ottoman *yoghurmak/yoğurmak* "to knead [dough, etc.], yoghourt, a preparation of soured milk made in the pastoralist, more temperate northern tier of the Middle East, Central Asia and the Balkans, appearing as *yoghurt/yoghrut* in Maḥmūd al-Kāshgharī (*Dīwān lughāt al-turk*, tr. Atalay, i, 182, ii, 189, iii, 164, 190; Brockelmann, *Mitteltürkischer Wortschatz*, 92. Cf. also Radloff, *Versuch eines Worterbuch der Türk-Dialecte*, iii/1, 412-13; Doerfer, *Türkische und mongolische Elemente im Neupersichen*, iv, 173-5 no. 1866; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 906-7). It seems to have been used for therapeutic purposes by the pre-Islamic Uyghur Turks (G.R. Rachmat [Arat], *Zur Heilkunde der Uiguren. I*, in *SPWAW Berlin*, phil.-hist. Kl., xxiv [1930], 6, 12, *Pt. II*, in *ibid.*, xxv [1932], 8).

Partially skimmed milk is reduced over a slow heat, and after cooling, a quantity of a previous fermentation is introduced and then the whole left slowly to cool and become more solid. The product is called *māst* in Persia; *laban* in Syrian and Palestinian Arabic; *zabādī* in Egyptian Arabic; *liban* in 'Irāḳī Arabic; *rā'ib, laban, labne*, etc. in the Arabian peninsula. A cool, refreshing drink is also made from yoghourt and water (*ayran* in Turkish; *dūgh* in Persian; *lassi* in India). Yoghourt figures extensively in Middle Eastern eating practices, both in cooked dishes (see e.g. D. Waines, *In a caliph's kitchen. Mediaeval Arabic cooking for the modern gourmet*, London 1989, 64-5, 78-9) and mixed with vegetables such as cucumber (the *māst-khiyār* of Persian cuisine, cf. E.G. Browne, *A year amongst the Persians*, [2]Cambridge 1926, 190-3).

Bibliography: See also *İA*, art. *Yoğurt* (Kâzim Yetiş); *Larousse gastronomique*, s.v. *yoghourt, yagourt.*

YORGAN LADIK [see lādhiḳ. 2].

YORUBA, a people of West Africa. The present article deals with the role of Islam among the Yoruba.

The earliest attested presence of Islam among this people of what is now Nigeria would seem to date back to the Old Ọyọ empire in the 16th century. The role of Songhay-speaking Muslim traders in the early spread of Islam is reflected in a number of Songhay loanwords in Yoruba. The earliest term for

the Muslims, *imalé* "People from Mali", probably refers to this group. Islam apparently first took root among traders, craftsmen (especially weavers) and warriors (especially horsemen) in Ọyọ towns. Muslim slaves from the north were also absorbed into the royal and aristocratic households. All these groups became involved in the overthrow of the empire (*ca.* 1797-1837) and in the establishment of new warrior city states. The heterogenous Muslim groups of Ilọrin overthrew their Ọyọ warlord in 1824 and founded an Islamic amīrate under Sokoto [*q.v.*] authority. The *amīrs*, descendants of a Fulani preacher who had forged the Islamic community, were elected and controlled by a council of the leading warlords. The cosmopolitan but increasingly Yorubanised town became famous for its Islamic schools and its scholars and saints.

Ibadan, the second warrior state and Ilọrin's most formidable antagonist, also developed a Muslim majority. Ilọrin, Ibadan and their dependent Yoruba towns became crucial for the spread of Islam as an element of urban culture and associational life, especially among the Yoruba marketwomen. The same happened in Lagos, a British colony since 1861 with sizeable groups of Muslim slave returnees from Sierra Leone and Brazil. Yoruba Muslim slaves and freedmen had already played a leading role in the *Malé* revolt of 1835 in Bahia.

Islamic communities expanded markedly during the colonial period (1895-1960). Widely propagated by preachers and local associations and increasingly entrenched in the communal structures, Islam grew along with Christianity in Yorubaland. As Christian missionary education came to dominate the educational institutions in Western Nigeria the Muslims tried to meet the challenge. The spread of the Aḥmadiyya [*q.v.*] since 1916 was followed by the foundation of the *Young Ansar-Ud-Deen Society* (Lagos 1923) and other societies which established "Western" Schools for Muslims and became models of reform for Yoruba Islamic communities. Local Islamic learning was adapted to Arab educational models, mainly by young Islamic scholars and preachers from Ilọrin, like Kamāl al-Dīn (b. 1906) and Ādam al-Ilūrī (1916-92) who also became one of the most prolific Arabic writers in West Africa. Contacts with Arab countries and with al-Azhar and other Islamic universities strongly increased after independence. Since the 1970s, Arabic schools expanded tremendously. The *Muslim Students' Society (MSS)*, founded in Lagos in 1954, was instrumental in bringing together Muslim students of different educational and regional backgrounds; it became the first national Islamic organisation, mobilising and transforming the younger Muslim élite of the south. The highly educated, well-organised and sometimes very wealthy Yoruba Muslims, both men and women, became politically important. They were often able to mediate between North and South and between Muslims and Christians within Nigeria. Chief Moshood Abiọla, the presidential candidate who died in detention in 1998, owed much of his nationwide electoral success in 1993 to his skills in this field. The Yoruba remain one of the rare peoples with an almost equal share of Islam and Christianity.

(S. Reichmuth)

YÖRÜK, Yürük, a term applied to pastoral nomadic groups in the Ottoman empire.

Three main meanings are attested in the literature: (1) in the Ottoman empire, primarily a special term with legal, administrative and fiscal implications denoting a particular class of nomads obliged to serve in the Ottoman army; (2) in modern ethnological and anthropological literature, a term for, and also a self-designation of, nomadic pastoralists, including elements in various stages of sedentarisation, used in an ethnic sense as opposed to Türkmen [*q.v.*], Kurdish [see kurds, kurdistan] or other pastoralist tribal groups of Anatolia; and (3) in Ottoman and modern times, a general, and therefore less appropriate, term for nomadic pastoralist Turkish tribal groups.

Etymology and significations.

The term Yörük/Yürük is usually derived from the old Turkic verb "to walk, to march" *yorï-* (references in Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 957). Middle Turkic forms range from *yori* "to walk, to travel" (see e.g. Maḥmūd al-Kāshgharī, *Dīwān lughāt al-turk*, ed. and tr. R. Dankoff and J. Kelly, *Compendium of the Turkic dialects*, iii, Cambridge, Mass. 1985, index 231) to *yüri-* and *yürü-* in texts from the 13th to 15th centuries (Clauson, *ibid.*). In most modern Turkic languages the stem is found with high rounded front vowels, e.g. Ttü. *yürü-* "to move, to march, to go". In Anatolia, also, the forms *yüri-* and *yürü-* "to march" are attested in vocalised texts from the 14th century, e.g. in the *Kitāb-ï Ghunya* in Old Anatolian Turkish (ed. Muzaffer Akkuş, Ankara 1995, index); for further examples for the 15th to 17th centuries, see *Tarama sözlüğü*, vi, Ankara 1972, 4775-7. The noun *yörük/yürük* (with deverbal nominal-forming suffix *-k*) "walking, going briskly, running, fast (horse)" appears only in Čaghatay, Crimean Tatar and Ottoman Turkish (W. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, iii, St. Petersburg 1905, col. 604). In Ottoman historical texts, mainly of the 15th and 16th centuries, the term *yörük/yürük* has a specific administrative or fiscal meaning (see below). European lexicographers tend to render only the general meaning, probably because by their time, the word had to a certain extent lost its particular meaning; see e.g. F. Meninski (1623-98), who has for *yürük* "vagabond, person of no fixed abode" (*Lexicon Arabico-Persico-Turcicum*, Vienna 1780, iv, col. 5617); J.Th. Zenker lists *yörük/yürük* as meaning "someone who walks, runs, a vagabond", while *Yürükler* is for him the name of a nomadic tribe and a village in Asia Minor (*Türkisch-arabisch-persisches Handwörterbuch*, Leipzig 1866, ii, 971), reflecting the ethnic connotation of the term prevalent from the 19th century onwards. J.W. Redhouse goes a step further and lists for *yürük*, 1. "active, that goes fast, fleet", 2. "nomadic, especially (with pl. *yürügān*) a nomadic, pastoral Turkman settled in Asia Minor" (*A Turkish and English lexicon*, Constan-

tinople 1890, 2214); K. Steuerwald, however, has *yürük*, 1. "going briskly, marching", 2. "fast (horse)", 3. hist. "infantry connected to the Janissaries" and the ethnonym *Yörük* "Türkmen (*sic*) nomads in Anatolia" (*Türkisch-Deutsches Wörterbuch*, Wiesbaden 1972, 1040, 1034). In regional forms of modern Turkish, the verbal stem *yörü-* "to march" and similar meanings, is attested as well as *yörük* "göcebe" (nomad), *yörük* "dağlı, kaba kişi" (mountain-dweller, rough person), while *yürük* is connected with *yüğrük* "güçlü, çevik, çalışkan, eline ayağına çabuk" (strong, quick, diligent, nimble) (*Türkiye'de halk ağzından derleme sözlüğü*, xi, Ankara 1979, 4310, 4333, 4325).

History.

The phenomenon of the Yörük should be set within the context of the immigration of Türkmen tribal groups into Anatolia beginning with the 11th century. In pre-Mongol times and in connection with the Mongol conquests (13th century) and Mongol claims over large areas of Asia Minor up to the mid-14th century, unknown numbers of Türkmen took hold of grazing grounds for seasonal migration. To date, no source antedating the mid-15th century has been found that spells out the name Yörük (Cl. Cahen, *La Turquie pré-ottomane*, Istanbul 1988, 107, as opposed to Çabuk, in *İA* (1986), 430-1). When from the second part of the 14th century onwards, Türkmen nomadic groups, along with the colonising dervishes, began to take possession of the Balkan peninsula in an organised way, they contributed eventually to its Turkicisation and Islamisation. Some of the tribesmen might have been the ancestors of those people who were to become known under the name of Yörük two generations later.

In a brief separate section, the code of laws (*ḳānūn-nāme* [*q.v.*]) for the taxpaying subjects (*re'āyā*, sing. *ra'iyya* [*q.v.*]) of Meḥemmed II the Conqueror (*r.* 1451-81) specifies the organisation, military equipment and obligations of the Yörük who, as auxiliary troops, were considered as belonging to the *'askerī* class and therefore were exempt (*müsellem*) from all but military service (ed. and tr. F. Kraelitz-Greifenhorst, *Ḳānūnnāme Sultan Meḥmeds des Eroberers*, in *MOG*, i [1921-2], 28, 43; Akgündüz 1990, i, 354-5). It specifies that a unit (*odjaḳ*) should consist of 24 men serving in rotation, one of them as soldier (*eshkindji*), three as his aides (*čatal*) and the remaining 20 (*yamaḳ*) paying for the four fighters' expenses and shouldering their duties back home. Under Süleymān Ḳānūnī, the number of men in a unit was raised to 30 (Akgündüz 1992, iv, 548). General, provincial and district *ḳānūnnāmes* as well as those specially issued for the Yörük dating from the reigns of Bāyezīd II, Selīm I and Süleymān regulate with increasing detail the functions of the Yörük and the legal and fiscal framework they had to comply with (Akgündüz, ii-v, index). A *ḳānūnnāme* of the mid-15th century specifies that the Yörük may migrate along their traditional routes, but should they cause damage to the fields or harvest, the fine they would have to pay would be assessed in regular court proceedings (Fr. tr. N. Beldiceanu, *Les actes des premiers sultans conservés dans les manuscrits turcs de la Bibliothèque Nationale à Paris. I. Actes de Mehmed II et de Bayezid II du ms. fonds turc ancien 39*, Paris-The Hague 1960, 123; Ott. text in Akgündüz 1990, i, 463). The damage caused by the pastoralists might have been one of the reasons for the Ottoman state's perennial policy of forced settlement and deportation. Extreme examples are that of Yörük deportations to Cyprus after the conquest of this island (1571) or, in the early 18th century, from western Anatolia to northern Syria. The main reason, however, was their independent way of life, which was considered incompatible with the basic system of the centralised Ottoman administration.

Tax registers from the time of Süleymān Ḳānūnī (1520-66) permit us to assess globally the nomadic population in western Anatolia alone at 80,000 households (*khāne*) for 1520-35 (İnalcık 1994, 34-5), with the greatest nomadic concentrations in the districts (*sandjaḳ* [*q.v.*]), of Anḳara, Kütāhiya, Menteshe, Aydīn, Ṣarukhān, Teke and Ḥamīd [*q.vv.*], or, in other words, areas where the Türkmen principalities of the 14th and 15th centuries had flourished. By 1570-80, their number had increased to around 120,000. Unfortunately, the registers do not permit a systematic distinction between Türkmen and Yörük tribes. However, the term Türkmen tended to be more closely associated with those Anatolian tribes that showed a preference for Shī'ism (İnalcık 1986, 40-2). On the European side, Yörük tribes pursued their life of seasonal transhumance, with a growing tendency toward sedentarisation, in Thrace, eastern Bulgaria, the Dobrudja, in the Rhodope and Balkan mountains adjoining the Maritsa and Vardar river valleys, and north of Thessaloniki (İnalcık 1994, 36). The most comprehensive study, based on archival materials, of the names, locations, numbers and functions of the Rumelian Yörüks from the 15th to 19th centuries is Gökbiligin 1957, summarised in Çabuk 1986. Based on tax registers, Ö.L. Barkan suggests for the early 16th century a total number of almost 38,000 Yörük households, or one-fifth of the total population of the European provinces (*Essai sur les données statistiques des registres de recensement dans l'empire ottoman aux XVe et XVIe siècles*, in *JESHO*, i [1957], 32-3). From the early 17th century onward, the number of households registered as Yörük was in steep decline (Gökbilgin 1957, 56-92). On the economic plane, Yörüks engaged primarily in animal husbandry, producing wool and hides as well as carpets for an international market, while their small-scale agricultural activities were concentrated on cash-crops such as wheat, cotton and rice (İnalcık 1994, 37-9; for taxes on the Yörük in the 17th century, see *Regional structure in the Ottoman economy. A Sultanic memorandum of 1636 A.D.*, ed. R. Murphy, Wiesbaden 1987, index). In war and peace, they also played an important role in long-distance transportation.

Different from the Eastern Anatolian Türkmen and Kurdish tribal federations, the Yörük were organised in military conscriptions within the Ottoman administration, serving mostly as provincial auxiliary forces, as guards of roads and mountain passes, as falconers, and horse raisers, in military transport, road construction and maintenance, ship building and mining. Their leaders were indifferently called *beg*/*bey* (A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976, 60, based on Ewliyā Čelebi), a title that was abolished under Sultan 'Abd ül-Ḥamīd II (1876-1909) (Tsakyroglous 1891, 344) or *Yörük pashasi*/*Ewlād-ı fātiḥān ḍābiṭi* (Defterdār Ṣarı Meḥmed Pasha, *Zübde-i vekayiât, 1066-1116/1656-1704*, ed. Abdülkadir Özcan, Ankara 1995, *passim*).

During the 17th century, owing to large-scale sedentarisation, the number of Yörüks registered in Rumelia decreased considerably. In 1102/1690-1, during the protracted war with Austria, the tribal Yörük were reorganised as more tightly disciplined auxiliary forces under the name *Sons of the Conquerors* (*Ewlād-ı fātiḥān*). This system was modified only in 1243/1827-8, when Maḥmūd II (1808-39), in another attempt to reform the army, incorporated Yörük forces in the new *'Asākir-i manṣūre*. From 1261/1845-6, the Yörük were subject

to taxes and military service like the rest of the population (Gökbilgin 1957, 255-342, with texts of twelve relevant tax (*taḥrīr*) registers and list of 26 additional documents up to 1846).

During the *Tanẓīmāt* [*q.v.*] period, from *ca.* 1860 onwards, in order to strengthen central state control, the Ottoman government again made every effort to settle the volatile nomadic tribes (Tsakyroglous 1891, 342; Wenzel 1937, 83-7). In his *Te̲d̲h̲ākir*, Aḥmed D̲j̲ewdet Pas̲h̲a [*q.v.*] gives a general idea of how the pacification and reform in the Kozan and Çukurova regions of southeastern Anatolia were put into effect (ed. Cavid Baysun, Ankara 1986, *tezkires* 26-9).

Ethnography.

The earliest European ethnographic information dates from the end of the 19th century. Tsakyroglous (1891), who *ca.* 1880 became acquainted with Yörük groups with winter quarters in Borlu and summer camps near Gördes, and Bent (1891), who seems to have visited Yörüks of southwestern and southern Anatolia, contradict each other in the description of the physical appearance of the Yörük. Otherwise, they describe in some detail their economy, transhumance, tribal structure and beliefs. Both sources mention strictly pastoralist Yörüks migrating from winter (*ḳis̲h̲la/ ḳis̲h̲lak* [*q.v.*]) to summer (*yayla/yaylaḳ* [*q.v.*]) encampments, and half-settled Yörüks cultivating modest fields.

The Ottoman policy of controlling the nomadic pastoralists by encouraging and enforcing settlement was continued under the Turkish Republic, because nomadism was now considered retrograde. Since the 1950s, the policy of large-scale agricultural development through irrigation in the coastal plains of western and southern Anatolia, as well as in the Çukurova plain, has left a majority of tribes without grazing land and has brought about their impoverishment and social break-up. With his novel *Binboğalar efsanesi* (1971), the Turkish author Yaşar Kemal set up a literary monument to the decline of Yörük tribal life. In contrast, some groups who happened to become landowners in the newly-irrigated areas became wealthy by growing fruit-trees and cotton, some of them eventually giving up most of their cattle-raising activities or even becoming fully sedentarised (Roux 1961 for the case of the Antalya region).

In modern and contemporary research, the Yörük are mainly studied as keepers of the traditional ways of life of nomadic and semi-nomadic pastoralists in the Anatolian part of the Republic of Turkey. The patterns and conditions of their migrations, their economy and adaptation to new forms of economic demands, their social organisation and handicrafts have attracted field-researchers from Turkey and abroad. The question whether the popular designation of all Turkish-speaking nomads as Yörük/Yürük is an improper generalisation, and in which way the term reflects an historical, ethnic and social reality, seems to have been settled by ethnologists to the extent that there is indeed a distinction to be made between Türkmen, Yörük, Tahtacı and Çepni. The Tahtacı [see TAK̲H̲TAD̲J̲Ī] are set apart by their religious affiliation—they are Alevîs—and by their exclusive occupation as wood-cutters; the Çepni, also Alevî, claim descent from the Og̲h̲uz [see G̲H̲UZZ]. An historical relationship between Türkmen and Yörük is assumed by most scholars, although exact details remain somewhat elusive. The Türkmen and the Yörük themselves acknowledge this relationship insofar as a Türkmen might not consider himself a Yörük, whereas a Yörük might think of himself also as Türkmen (A. Gökalp, *Têtes rouges et bouches noires*, Paris 1980, 32-3). According to research conducted since the 1950s, a majority of the Yörük tend to call themselves Yörük, whilst a minority prefer their tribal name, which is often a personal or a place name, no common ancestor, mythical or historical, being claimed. Among Sunnī Yörüks, group identity is maintained through patrilineal descent. They are organised in tribes (*aşiret*), lineages (*kabile, sülâle*) and families (*aile*), with marked endogamy, but without paramount chiefs (Andrews 1989, 59-60).

The present number of Yörük is not known, since they speak Turkish and are therefore not separately listed in the official census. A recent study estimates their number at *ca.* one million, *ca.* 10,000 of these being fully nomadic, while the rest are part-time nomads or are settled (Kunze 1994, 71, 77). Today they are distributed primarily along the Taurus mountain range from western Anatolia (İzmir, Söke) all the way along the southern coast via the gulf of Antalya to Adana and its hinterland up the Ceyhun river. The winter quarters are in the coastal river plains, while the summer ones are beyond the Taurus in the high plateaus of inner Anatolia (Denizli, Afyon Karahısar, Konya, Kayseri, Bolu, Sivas, Maraş). Settled Yörük are recorded for the same region and also in the areas of Manisa, Balıkesir, Kütahya and Eskişehir (cf. Andrews 1989, 59; Kunze 1994, *passim* and map at p. 73; *Tübinger Atlas des Vorderen Orients* (*TAVO*), map A VII 14, Wiesbaden 1987). Probably very few Yörük remain in the Balkan peninsula. In the 1980s, Svanberg came across *ca.* 200 Yörük who led a traditional life in some isolated hamlets in the mountains of Macedonia. According to him, they belonged to the Bektās̲h̲ī religious community (I. Svanberg, *Gagavouzika and Juručki. Urgent tasks for Turkologists*, in *CAJ*, xxxii [1988], esp. 114-16). Most Yörüks are said to belong to the Ḥanafī school of Sunnī Islam, but there are also Alevî Yörük, about whom not much is known (Andrews 1989, 59, 62). Folklore studies and recent research on Yörük textiles refer to the preservation of pre-Islamic or shamanistic beliefs (Brüggemann 1993).

The Yörük dialects still await study in more detail. A recent study on the Anatolian dialects states that they show minor variations in vocabulary, phonetics and morphology in comparison with the dialects of settled Turks (Demir 1996).

The characteristic traits of the Yürük "black tent" (*kara çadır*), made from goat hair, as well as the textile arts of the Yörük, embroidered clothing, saddlebags (*heybe*), sacks (*çuval*) and, in particular, kelims and brocaded flatweaves, have now been quite well studied. The most comprehensive study of their flatweaves is by Brüggemann (1993), who, however, deals also with Türkmen ones, since he postulates that Turkish nomadic tribes shared over the course of time a common language of patterns, motives and techniques. Yörük folklore, customs, music and dances have been studied more systematically since the 1950s, but increased sedentarisation and interior and exterior migration have caused these traditional arts to fade away.

Bibliography: A bibl. with 190 items is I. Svanberg, *A bibliography of the Turkish-speaking tribal Yörüks*, in *Materialia Turcica*, v (1979) [1981], 25-40; the subsequent publications are listed s.v. *Yürüken* in *Turkologischer Anzeiger/Turkology Annual*, i ff., Vienna 1975 ff. Almost every volume of the journal *Türk Folklor Araştırmaları* (i ff., 1949-50 ff.) contains an article on Yörük customs and material culture. YOUNG TURKS [see YEÑI ʿOTHMĀNLÎLAR].

YOZGAT, a town of north central Anatolia, lying some 160 km/100 miles east of Ankara on both sides of a tributary of the Delice Irmak (lat. 39° 50' N., long. 34° 48' E., altitude 1,320 m/4,330 feet).

It was founded by members of the Djebbārzāde/Čapanoghlu family (supposedly *yoz* means "pasture, herd", while *gat* is a dialectal word for "town"). On record since 1116/1704, this dynasty, possibly of Mamalu-Türkmen background, constituted one of the major *aʿyān* lines of central Anatolia, controlling a territory far beyond its original power-base in the *sandjak* of Bozoḳ (*wilāyet* of Rūm, see Özcan Mert, *XVIII. ve XIX. yüzyıllarda Çapanoğulları*, Ankara 1980). Very few towns existed in this region when the Djebbārzāde came to live in Yozgat sometime in the mid-12th/18th century. The settlement grew as the Čapanoghullarî encouraged immigration, part of it non-Muslim (V. Cuinet, *La Turquie d'Asie*, Paris 1892, i, 297; this author stresses the modern, well-built aspect of the town, which at that time possessed 15,000 inhabitants). Such urban development conformed to a pattern not rarely encountered in the 12th/18th century, when the Ottoman state encouraged its appointees to revive trade and communications; slightly earlier, Newshehir [*q.v.*] had been established, located only about 150 km/95 miles to the south. Muṣṭafā Pasha built the new town's principal mosque, along with a mausoleum for the founder's family (1192/1778). It was enlarged by his son Süleymān Beg in 1210/1795, who created a unique ensemble by transforming the *son djemāʿat yeri* of the older mosque into a link between the two structures (G. Goodwin, *A history of Ottoman architecture*, London 1971, 400-2).

The next major event in the history of Yozgat pertains to the Turkish War of Independence, when in 1920 members of the Čapanoghlu family, still powerful in the area, in the name of Sultan Meḥemmed VI Waḥīd al-Dīn rebelled against the Nationalist forces led by Muṣṭafā Kemāl (Atatürk). The uprising was quelled by the Yeshil Ordu troops of Čerkes Edhem [*q.v.*]; however, the latter's demand that a governor deemed responsible for the incident be handed over to him for punishment was refused by Muṣṭafā Kemāl. These events are often regarded as the beginning of the rift between Atatürk and Cerkes Edhem (see art. *Yozgat*, in *Yurt ansiklopedisi, Türkiye il il, dünü, bugünü, yarını*, x, Istanbul 1982-4, 7646-7; contains extensive bibl.). They may also have caused the Turkish language to acquire the expression *bu işin altından bir çapanoğlu çıktı* to denote a troublesome situation. Present-day Yozgat is an *il* or provincial capital (over 36,000 inhabitants in the 1980s) and the centre of a largely rural area. A lack of industrial employment opportunities, and the fragmentation of village holdings, have led to large-scale emigration from this area.

YÜCEL, ḤASAN ʿALĪ (1897-1961), Turkish statesman, educator and author.

He was born, the son of a post and telegraph inspector ʿAlī Riḍā and Neyyire, the daughter of an army colonel, in Istanbul on 17 December 1897. Ḥasan ʿAlī attended the *Wefāʾ Iʿdādîsi* between 1911-5, and then, after military service during the First World War, graduated from Istanbul University in 1921. Until 1927, he worked as a teacher in several lycées in Izmir (Erkek Muallim Mektebi) and Istanbul (Kuleli, Istanbul Erkek, Galatasaray) where he lectured on philosophy, literature and Turkish language. He continued his career at various posts in the Ministry of Education, and was sent to Paris to study the French educational system. In 1935 he was elected to Parliament as the representative for Izmir of the Halk Partisi, and in 1938 was appointed the Minister of Education, playing a leading role in the Turkish modernisation process by initiating various reforms within the educational and cultural spheres. The translation of various world classics and encyclopaedias, the establishment of the Ankara State School of Music, studies on the Turkification of language and the realisation of the Village Institutes project [see KHALKEVI] were among his major initiatives. After resigning from office in 1946 and from the party in 1950, he served as the consultant to İş Bankası Cultural Publications between 1956-60. During 1960, he worked on the Commission for the Preparation of the National Education Plan. He died in Istanbul, on 26 February 1961.

Throughout his life, Ḥasan ʿAlī wrote many books and articles for various newspapers and magazines, including *Akşam, Ulus, Cumhuriyet, Öncü* and *Dünya*. The most often recurring themes of his works were culture, education and philosophy; in them, he expressed his faith in modernisation harmonised with traditional values. He also wrote poetry and collected his works in several volumes.

YUʿFIRIDS, the first local dynasty to emerge in the Yemen in the Islamic period (232-387/847-997). The name is often erroneously vocalised "Yaʿfurids", but the 4th/10th century Yemeni scholar al-Hamdānī, who was a contemporary of the Yuʿfirids, makes it clear that Yuʿfirids is the correct spelling (*al-Iklīl, Südarabisches Muštabih*, ed. O. Löfgren, Uppsala etc. 1953, 36, and *al-Iklīl*, ii, ed. Löfgren, Uppsala 1965, 71).

The family was of Dhū Ḥiwāl, a tribe from Shibām-Kawkabān some 40 km/25 miles north-west of Ṣanʿāʾ [*q.v.*]. The founder of the dynasty, Yuʿfir b. ʿAbd al-Raḥmān al-Ḥiwālī, had been waiting in the wings watching the increasing impotence of the ʿAbbāsid governors in Ṣanʿāʾ. In 232/837, after some skirmishes with, and a failed attack upon, the ʿAbbāsid forces in the Yemen, the Yuʿfirid army defeated the ʿAbbāsid governor, Ḥimyar b. al-Ḥārith.

We hear little of the rule of Yuʿfir b. ʿAbd al-Raḥmān, other than that the dynasty held vast areas of the Yemen from Ṣaʿda [*q.v.*] in the north to al-Djanad near Taʿizz [*q.v.*] in the south, and for some time the Yuʿfirids maintained their outward allegiance to the ʿAbbāsids in Baghdād. In 258/872, the old and infirm Yuʿfir handed over the reins of power to his son, Muḥammad.

In 262/876 Muḥammad left the Yemen to perform the pilgrimage, leaving his son Ibrāhīm in authority. In 269/882, Yuʿfir, presumably to deny them a role in the government of the house, conspired with Ibrāhīm to have both Muḥammad and his brother, Aḥmad, murdered in the minaret of the mosque in Shibām. Such an appalling crime brought widespread chaos to the Yemen with many tribes in revolt against the perpetrator Ibrāhīm, who withdrew to Shibām. The ʿAbbāsid caliph al-Muʿtamid despatched as governor to the Yemen ʿAlī b. al-Ḥusayn in a move to attempt to strengthen the hand of the Yuʿfirids, but he was unable to reach the country until 282/895. The new governor did manage to pacify the area around Ṣanʿāʾ.

At this particular juncture, our historical sources turn their attention elsewhere. With much of the north of the Yemen in complete chaos, Yaḥyā b. al-Ḥusayn, the future first Zaydī *imām*, al-Hādī ilā ʾl-Ḥaḳḳ, entered Ṣaʿda in 284/897 and over the next few years a Zaydī imāmate was established there [see zaydiyya]. The only historical information which we have on the Yuʿfirids at this time is that of their struggles against the Zaydī forces. In the south of the country, too, another dangerous enemy lurked. Two Fāṭimid-Ismāʿīlī propagandists, Manṣūr al-Yaman [*q.v.*] and ʿAlī b. al-Faḍl, were building up a strong force and threatening to move northwards on Ṣanʿāʾ. The history of the period is now a confused account of tripartite power struggles in the whole of the country, involving Yuʿfirids, Zaydīs and Ismāʿīlīs.

Al-Hādī died in 298/911 and the two Fāṭimids in 302/915. This at last left the Yuʿfirids without serious threat. Asʿad b. Ibrāhīm, the leader of the dynasty, was able to establish peace in Ṣanʿāʾ and throughout much of the country, although we cannot be sure how far north his authority extended. When Asʿad died in 344/955, leaving no clear instructions for his succession, serious family squabbles broke out. Ṣanʿāʾ was lost and the last Yuʿfirid ruler, ʿAbd Allāh b. Ḳaḥṭān b. ʿAbd Allāh died in Ibb in 387/997, after a tour of Tihāma [*q.v.*] and the south, and this date marks the end of the Yuʿfirid house.

The Yuʿfirid mosque in Shibām stands to this day, although the minaret in which the 269/882 murders took place was replaced at a later date (see R. Lewcock and G.R. Smith, *Two early mosques in the Yemen: a preliminary report*, in *AARP*, iv [1973]). The tomb, set at right angles to the western outer wall of the mosque, mentioned a Yuʿfir, perhaps Yuʿfir b. ʿAbd al-Raḥmān himself, and local tradition has it that it is his tomb. A visit to the mosque in 1997, however, revealed that the tomb is now in ruins and no inscription immediately visible.

Bibliography: Detailed treatment of the Yuʿfirids is given in G.R. Smith, *The early and medieval history of Ṣanʿāʾ*, in R.B. Serjeant and R. Lewcock (eds.), *Ṣanʿāʾ, an Arabian Islamic city*, London 1983, 55-7, and in Smith, *The political history of the Islamic Yemen down to the first Turkish invasion (1-945/622-1538)* in W. Daum, *Yemen, 3000 years of art and civilisation in Arabia Felix*, Innsbruck and Frankfurt [1988], 130-1, both relying on primary and early sources including ʿImād al-Dīn Idrīs, *Kanz al-akhyār fī maʿrifat al-akhbār*, B.L. ms. Or. 4581, now ed. ʿAbd al-Muḥsin al-Madʿadj, Kuwait 1992, and ʿAlī b. Muḥammad al-ʿAbbāsī al-ʿAlawī, *Sīrat al-Hādī ilā ʾl-Ḥaḳḳ*, ed. Suhayl Zakkār, Damascus 1972. Mention should also be made of the excellent, though still unpublished, Ph.D. thesis of C. Geddes, *The Yuʿfirid dynasty of Ṣanʿāʾ*, University of London 1959. (G.R. Smith)

YUGOSLAVIA "land of the South Slavs", a Balkan state which came into being through the peace treaties consequent on the end of the First World War, 1919-20 (St-Germain, Neuilly, Trianon), as the Kingdom of the Serbs, Croats and Slovenes under the ruling house of its largest component, Serbia. According to the constitution which came into effect on 1 January 1921, this was to be a unitary state, but this was never fully achieved, and arrangements in August 1939 envisaged a federal structure. Such developments were cut short by the German invasion of April 1941, after which the territories of Yugoslavia fell under Axis (German, Italian, Bulgarian) occupation till 1944-5. After the Second World War, Yugoslavia came under Communist control, with the January 1946 constitution abolishing the monarchy and setting up a Socialist Federal Republic of Yugoslavia that lasted until the break-up of the federation in the early 1990s.

Such regions of what became Yugoslavia as Macedonia, South Serbia ("Old Serbia") and above all Bosnia and Hercegovina had substantial Muslim populations, comprising ethnic Turkish incomers and converted indigenous Slav peoples. Many of the former element returned to Turkey after 1919 [see muhādjir. 2], but substantial numbers of Muslims have remained in Bosnia, and in recent decades, the numbers of Muslims in the Kosovo region of South Serbia [see ḳoṣowa, kosovo] have grown through the immigration thither of Albanians [see arnawutluḳ]. In the census of 1953, the last one which noted religious affiliation, 12% of the population of Yugoslavia was returned as Muslim.

See for the history in Islamic times of the various regions of Yugoslavia, bosna; ḳaradagh; ḳoṣowa; māḳadūnyā; ṣirb; dalmatia, in Suppl.; also muslimūn. 1, and the *Bibls.* there, especially A. Popovic, *L'Islam balkanique*, Berlin-Wiesbaden 1986. (Ed.)

YŪḤANNĀ B. SARĀBIYŪN, a Christian (Nestorian) physician of the 3rd/9th century. He wrote in Syriac a medical compendium (*kunnāsh*) in two different forms, one with seven, the other with twelve *maḳālāt*.

The second, called the large compendium (*al-kunnāsh al-kabīr*), was corrected by the Ṣābian Abu 'l-Ḥasan Thābit b. Ibrāhīm b. Zahrūn (d. 369/980). An extract was made by Yaḥyā b. Djamāl al-Dīn al-Ḥīrī al-Mutaṭabbib al-Ḥalabī (who was still alive in 1198/1783). The complete work has been preserved in the Istanbul ms. Ayasofya 3716.

According to Ibn Abī Uṣaybiʿa, the first compendium, called the small one (*al-kunnāsh al-ṣaghīr*), was translated into Arabic by the secretary Mūsā b. Ibrāhīm al-Ḥadīthī on behalf of the physician Abu 'l-Ḥasan b. Nafīs. This translation is said to have been superior, stylistically speaking, to that of Abū Bishr Mattā b. Yūnus al-Ḳunnāʾī (d. 328/940) and to that of the well-known annotator Ḥasan b. Bahlūl al-Awānī. This *kunnāsh* was translated by Gerhard of Cremona under the title *Practica Joannis Serapionis aliter breviarium nuncupata*; in later times this translation was often reprinted. The Latin translation led to a Hebrew one by Mōshē b. Mazliaḥ (Steinschneider, *Hebräische Übersetzungen*, no. 474). In this way, the structure and the contents of the work became known rather early. The seven treatises deal with: 1) diseases of body and nerves; 2) diseases of eye, mouth, lungs, breast and heart; 3) diseases of stomach, intestines, and those caused by worms; 4) diseases of liver, spleen, kidneys, bladder, gout; 5) skin-diseases, wounds caused by a bite, gynaecological diseases; 6) fever; 7) composite medicines (*aḳrābādhīn*).

Most of the quotations from Yūḥannā are found in al-Rāzī, the others in the *Dhakhīra* of (Ps.) Thābit, in the *Djāmiʿ* of Ibn al-Bayṭār, in the *Minhādj* of Kūhīn, in the *Aḳrābādhīn* of Ḳalānisī and others (enumerated in M. Ullmann, *Die Medizin im Islam*, 102-3). According to the critical al-Madjūsī who, in the preface to his main work, the *Kāmil al-ṣināʿa al-ṭibbiyya*, reviews the achievements of his predecessors, not many positive elements are to be found in Yūḥannā's work: e.g., he finds fault with the latter for limiting therapy to medicaments and diets, while disregarding "manual treatment" (surgery); furthermore, there are allegedly many complaints about omissions, deficiencies and inaccuracies (see Ullmann, *Medizin*, 142-3).

From a quotation in Abū Sahl Bishr b. Yaʿḳūb al-Sidjzī's *al-Rasāʾil al-ṭibbiyya*, it might perhaps be concluded that Yūḥannā also wrote a *Kitāb fī ʿAshr maḳālāt li-Djālīnūs*, see Dietrich, *Medicinalia Arabica*, Göttingen 1966, 67 l. 18.

Journal*, vii (1972), 122 n. 49.

(A. Dietrich)

YULBĀRS KHĀN, the Uyghur Turkish leader of a Muslim rebellion at Ḳomul [*q.v.* in Suppl.] in Eastern Turkistan or Sinkiang [*q.v.*] during the 1930s, b. 1888, d. ? in the mid-1970s.

In 1928 the second Republican Chinese governor of Sinkiang, Chin Shu-jen, overthrew the last autonomous khānate of Central Asia, that of Ḳomul in the extreme eastern end of the province, adjacent to the frontiers with Mongolia and Kansu. His anti-Muslim policies provoked a rebellion there in April 1931 of the Uyghurs, and possibly some of the Tungans [*q.v.*], under the joint leadership of Yulbārs Khān, who had been an adviser and official of the last two Khāns of Ḳomul, and the less effective Khodja Niyāz Ḥādjdjī. Yulbārs appealed to the Han Muslim warlord of northwestern Kansu, Ma Chung-yin [*q.v.*], and the latter's intervention enabled local Turkish elements to take over most of southern Sinkiang and set up in September 1932 an "Eastern Turkestan Republic" based on Kāshghar [*q.v.*], which in November 1933 became the "Turkish-Islamic Republic of East Turkestan". Yulbārs and Khodja Niyāz, however, represented conservative Ḳomulī sentiment, seeking limited autonomy for Ḳomul rather than secession from China, and they were suspicious of local Muslim leaders who were prepared to call in Soviet Communist support. Yulbārs was a fluent Chinese speaker, and he was later to choose exile in Taiwan rather than Turkey.

It soon became clear that Ma Chung-yin was following his own interests rather than those of the Turkish peoples of Sinkiang, and in early 1934 his forces destroyed the Kāshghar republic, although further rebel activity was to continue there. Yulbārs fled to Nanking in 1937, but returned to Ḳomul in 1946 as an adherent of the Kuo Min-tang. He fought against the increasing power of the Chinese Communist in Sinkiang, but in the winter of 1950-1 had to flee to Tibet and thence to Taiwan, where he retained the post of governor of Sinkiang in exile, eventually dying there.

(C.E. Bosworth)

YŪNĀN refers to the ancient Greeks, reflecting the name "Ionians". *Yūnānī* means Greek (noun and adjective) and *al-yūnāniyya* or, less commonly, *al-yūnānī* (with or without *lugha* or *lisān*), the ancient Greek language. The vocalisation *yūnānī*, instead of *yawnānī* favoured by some (cf. al-Tawḥīdī, *Baṣāʾir*, ed. W. al-Ḳāḍī, Beirut 1408/1988, viii, 11), is stated to be the generally accepted form by al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 536, and may have been favoured by the Arabic word formation *fuʿlān*. The ancient Near Eastern designation of the "Greeks" as Ionians had continued being used through the ages in the Near East and eventually became common, apparently through some Aramaic form, in Muslim civilisation as a kind of cultural artifact. Authors such as al-Yaʿḳūbī, i, 161, 164 (referring to Ptolemy, *Ḳānūn*); al-Masʿūdī, *Tanbīh*, 115; al-Samʿānī, *loc. cit.*, quoting Hishām Ibn al-Kalbī; *Kitāb al-Djaʿrāfiyya*, ed. Mahammad Hadj-Sadok, Damascus 1968, § 161, had no doubt that *yūnānī* was derived from the name of the biblical Yūnān b. Yāfith (Javan, the son of Japheth: Gen. x. 2, 4), although in the genealogy offered in al-Ṭabarī, i, 218, the form of the name is the traditional *Yawān*. In fact, the form *Yūnān* for Javan is not attested elsewhere in older times, at least as is known so far (Syriac *Yawnān* < Greek accus. *Iōnan*, for Jonah/Yūnus, is not applicable here). Although biblical names underwent as yet unexplained changes on their way into Arabic, in this case it seems likely that the noun/adjective *yūnānī*, derived on the model of Aram. *yawnāy* (Ar. *āʾī* > *-ānī*), was primary and led to a reconstructed form *Yūnān* for *Yawān*. In translations from the Greek, *yūnāniyyūn* is the ordinary rendering of *Hellēnes*, but occasionally also occurs for synonyms

like *Achaioi*, cf. *WKAS*, Letter L, 1629a, citing Artemidorus, whose Arabic translator also used an additional *yūnāniyyūn* to clarify Greek *palaioi* "ancients" (cf. E. Schmitt, *Lexikalische Untersuchungen zur arabischen Übersetzung von Artemidors Traumbuch*, Wiesbaden 1970, 386a). Plenty of information on everything Greek seeped, of course, from the Graeco-Arabic translation literature [see TARDJAMA. 2.] into wider learned circles, but only a few general points can be made here.

The internal Muslim geographic/cartographic tradition had no precise notion on where to locate the Yūnān, except for some vague generalities such as Athens being the capital of the ancient Greek philosophers or Macedonia being the country of Alexander the Great. Their status as the predecessor nation and dynasty to the contemporary Rūm [*q.v.*] was known but not widely understood among mediaeval Muslims, except some favourably placed scholars. Historical tradition and speculation preferably assumed an original habitat for the Yūnān in Asia Minor or Syria. There were other, highly speculative theories, as, for instance, one credited by Ḥamza al-Iṣfahānī, *Ta'rīkh*, book IV beg., to a 3rd/9th-century Christian source about an era dating from the departure of a legendary Yūnān from Babel and lasting until the merger of the Yūnān into the Rūm and their eventual disappearance. Following earlier interpretations of Gen. x. 2 and 4, Rome occasionally appears as a foundation of Javan and his descendants (*Djaʿrāfiyya*, § 187). Even al-Andalus could be said to have had them as its first rulers (Ibn Khallikān, ed. ʿAbbās, v, 323, 326, in the article on the conqueror of Spain Mūsā b. Nuṣayr [*q.v.*]).

The relationship of the ancient Greek language to the language of the (eastern) Rūm, which moreover involved the distinction between pagans and Christians, was widely acknowledged but again not known in detail, cf. the discussion by N. Serikoff, *Rūmī and Yūnānī*, in *Orientalia Lovaniensia Analecta*, clxxv [1996], 169-94). The excellent knowledge of ancient Greek possessed by certain scholars in the Muslim world in early ʿAbbāsid times faded rapidly in the 4th/10th century. A few technical terms, book titles, names and the like continued to be widely recognised as ancient Greek and in some cases acquired the status of cultural icons, especially names such as Sukrāṭ, Aflāṭūn, Arisṭūṭālīs (Arisṭū), Bukrāṭ and Djālīnūs. In general, however, even concerned Muslims like al-Kindī, al-Fārābī or al-Bīrūnī knew little, if anything at all, of the language. In some regions, learned Christian scholars retained some knowledge of Greek sufficient for translating minor texts into Arabic. In Western Islam, *ighrīkī*, *ighrīkiyya*, is occasionally mentioned as the correct designation of the ancient Greek language (Ṣāʿid al-Andalusī, tr. R. Blachère, 58, 77; *IAU*, ii, 47, cf. F. Rosenthal, *The Classical heritage in Islam*, London 1975, 39, 195).

Notwithstanding all this natural lack of information about long past and forgotten historical reality, the fundamental importance of the ancient Greeks and their intellectual achievements for the formation of Islamic civilisation was fully realised among Muslims. It became, and has remained to this day, the subject of a never-ending and often passionate discussion between supporters and opponents, Muslims and non-Muslims alike. Graeco-Arabic relations indeed occupy a central position in Islamic studies today; however, the meaning of the ancient Greek heritage for every and all individuals in Muslim intellectual life still needs comprehensive investigation. During the early centuries, a statement like that of the historian al-Yaʿkūbī, i, 106-7, characterised the ancient Greeks as "philosophising sages" who cultivated medicine, the "essential verities" (i. e. metaphysics), arithmetic, geometry, astronomy/astrology, agriculture, alchemy and elixirs as well as talismans and (magical) apparatus. This view would have found general concurrence at the time. In a way, it has remained the popular view throughout. At the same time, sophisticated learned schemes of organising all human knowledge began to evolve. They classified all the sciences, (scientific) medicine, logic and philosophy as the realm of the "non-Arabs", that is, predominantly, the ancient Greeks, as against the "Arab" disciplines concerned with matters of religion and language, literature and philology. In various forms, these classifications became standard throughout mediaeval Islam.

A vehement opposition to all learning connected to the ancient Greeks began at a very early date and intensified in the course of the centuries. The reasons were manifold, such as its evidently foreign and non-Muslim origin and its introduction into Arabic by mostly non-Muslim translators. Above all, it threatened a most severe conflict on the religious level in that it introduced ideas and methods contradicting traditional Muslim beliefs and raised the eternal problem of faith versus reason much more explicitly than had been the case before in the Near Eastern environment. This provoked an attitude of distance and hostility to the very term *yūnānī* and often the rejection of everything considered "Greek", as, for instance, the rejection of "philosophy" as heresy, pointedly expressed in the proverbial *man tafalsafa tazandaka* "he who philosophises commits heresy" [see ZINDĪḲ].

The struggle between defenders and opponents is exemplified, for instance, by the witty parody of a narrow-minded official who is represented as being shocked by the sacrilegious implications of Euclidean geometry (cf. Abū Ḥayyān al-Tawḥīdī, *Akhlāḳ al-wazīrayn*, Damascus 1385/1965, 235-47, see also AL-SARAKHSĪ), or is seriously pictured in the debate about (Arabic) grammar and (Greek) logic led by al-Sīrāfī [*q.v.*], reported by the same al-Tawḥīdī in another work and most recently discussed by G. Endress, *Grammatik und Logik*, Amsterdam 1986, 163-299 (*Bochumer Studien zur Philosophie* 3 = B. Mojsisch (ed.), *Sprachphilosophie in Antike und Mittelalter*). By far the most detailed and instructive discussion of the subject remains I. Goldziher, *Stellung der alten islamischen Orthodoxie zu den antiken Wissenschaften*, in *Abh. Pr. Ak. Wiss.* (1916), no. 8. In the end, a kind of compromise came about. While Greek logic and metaphysics as such were mostly, but not always, vilified and rejected, they played an often unacknowledged vital role in Muslim theological and juridical discussion. On the other hand, the Greek heritage in the sciences was accepted as indispensable, often with apologies and accompanied by efforts to prove the usefulness of those sciences for religious purposes, as in the case of mathematics and astronomy. And medicine continued to rely almost exclusively and without apology on the ancient Greek authorities and their writings [see ṬIBB].

Bibliography: For the history of Graeco-Arabic relations, cf. the fundamental study by D. Gutas, *Greek thought, Arabic culture*, London and New York 1998. The subject touches practically all spheres and levels of Muslim intellectual activity and thus much of the modern scholarly literature. The small selection of references given in this article may most conveniently be supplemented by the numerous articles in the *EI* devoted to Greek authors and sciences, see, for instance, FALSAFA and FALĀSIFA or the entries on pharmacology, medicine, agriculture, astronomy,

astrology, or alchemy as listed in P.J. Bearman, *Index of subjects*, [4]Leiden 1998. (F. Rosenthal)

AL-YŪNĪNĪ, Ḳuṭb al-Dīn Abu 'l-Fatḥ Mūsā b. Muḥammad b. Aḥmad b. ʿAbd Allāh, Syrian historian and Ḥanbalī *shaykh*, b. Damascus in 640/1242, d. Baʿlabakk in 726/1326, best known as the author of the *Dhayl Mirʾāt al-zamān*, a continuation of the *Mirʾāt al-zamān* of Sibṭ Ibn al-Djawzī (d. 654/1256 [*q.v.*]). Al-Yūnīnī belonged to a scholarly family originally from Yūnīn, a small town in the region of Baʿlabakk; his family claimed descent from Djaʿfar al-Ṣādik [*q.v.*] and in some sources, bore the *nisba* al-Ḥusaynī. Following the death of his father, then that of his elder brother, he inherited the role of leader of the Ḥanbalīs of Baʿlabakk, an important centre of Syrian Ḥanbalism at the time. He conformed to the family tradition in his capacity of scholar and *shaykh*, in maintaining stable relations with the dynasty in power, and in his sympathetic attitude towards the Ṣūfīs.

His father Muḥammad Taḳī al-Dīn Abū ʿAbd Allāh (572-658/1176-1260) was linked to the Ḥanbalī Ṣūfī *shaykh* ʿAbd Allāh al-Yūnīnī (534-617/1139-1220), whose daughter he married and whom he succeeded. His biographers present him as a Ḳādirī mystic who, like his father-in-law ʿAbd Allāh, claimed kinship with the *shaykh* ʿAbd al-Ḳādir al-Djīlānī [*q.v.*]. His mother, Zayn al-ʿArab bt. Naṣr Allāh b. Ṣanīʿ al-Dawla al-Ḥasan b. Yaḥyā, who died in 693/1294, came from a scholarly Syrian family. His half-brother Sharaf al-Dīn Abu 'l-Ḥusayn ʿAlī (621-701/1223-1302), a scholar known primarily as the transmitter of the *Ṣaḥīḥ* of al-Bukhārī, provided a list of al-Yūnīnī's masters, which has survived; cf. G. Vajda, *La mašyaḫa de ʿAbd al-Qādir al-Yūnīnī*, in *JA*, cclix [1971], 223-46. Finally, the marriage of his daughter to Aybak al-Iskandarī al-Ṣāliḥī, a Mamlūk thirty years her senior who died in 674/1276, consolidated the family's links with the Baḥrī Mamlūks.

Al-Yūnīnī first attended classes in Baʿlabakk and Damascus, where he was taught by the eminent masters of the various *madhhab*s. In 659/1260, the year following the death of his father, his elder brother ʿAlī, who had taken responsibility for his education, sent him to Egypt. He subsequently visited Egypt twice, in 675-6/1276-7 and then in 688/1289, taking the opportunity to pursue his research into *ḥadīth* and visit sages and Ṣūfīs; he also received *idjāza*s from scholars such as the Mālikī Yaḥyā b. ʿAlī al-ʿAṭṭār and the Shāfiʿī ʿIzz al-Dīn ʿAbd al-ʿAzīz Ibn ʿAbd al-Salām [see AL-SULAMĪ]. His principal activity was the collection of testimonies and data concerning his contemporaries, original material that he later incorporated into his work. In 673/1275, he made the Pilgrimage to Mecca. When in 680/1281, al-Malik al-Manṣūr Ḳalāwūn was fighting the Mongols, he made his way to Ḥimṣ and participated in the campaign; he was subsequently to devote a biographical notice to a scholarly friend who accompanied him and who died in battle. After his third visit to Egypt, he spent most of his time in Baʿlabakk and in Damascus where he continued his compilation of information. It was on the death of his brother ʿAlī, assassinated in 701/1302 in his library, that he became *shaykh* of the Ḥanbalīs of Baʿlabakk and dedicated himself to this function, to the dissemination of knowledge and to the editing of his own works.

Al-Yūnīnī first chose to summarise a universal history which he admired, the *Mirʾāt al-zamān* by Sibṭ Ibn al-Djawzī, in a *Mukhtaṣar* of four vols. Then, around 680/1281, he decided to compose a supplement, with a chronicle of events starting from the year 654, the date of the death of the Sibṭ (and continuing until the year 711, judging from the manuscripts which have survived) which he entitled *Dhayl Mirʾāt al-zamān*. Al-Yūnīnī thus placed his *Dhayl* within a family of works: *al-Muntaẓam* by Ibn al-Djawzī [*q.v.*], the *Mirʾāt al-zamān* by Sibṭ Ibn al-Djawzī and the *Ḥawādith al-zamān* of al-Djazarī [*q.v.*], with the pattern of chronological presentation comprising, for each year, a list of sovereigns and princes followed by an account of events (*ḥawādith*) and then obituaries (*wafayāt*). In spite of its title, *dhayl*, which identifies it as a "continuation" or "supplement", the originality of al-Yūnīnī's work was recognised by Western scholars as soon as the first volumes were published, on the initiative of Fritz Krenkow. Subsequently, Cl. Cahen described several manuscripts of the *Dhayl*, of which there exist two versions of unequal length. He made efforts to uncover the sources of the work and to identify reciprocal borrowings between the author and his contemporaries, while stressing the originality of the work. Ulrich Haarmann, and then Li Guo, have pursued this project, comparing al-Yūnīnī's work in particular with that of al-Djazarī. They have also analysed the role of al-Birzālī [*q.v.*] in the transmission of the works of the two authors. In his study devoted to al-Yūnīnī, *Early Mamluk Syrian historiography*, Li Guo has laid emphasis, largely in accordance with a formal analysis of the classification of obituaries, on the differences between the two versions of the text: one, more developed and with obituaries arranged in alphabetical order, contains personal testimonies, accounts and anecdotes that are not found elsewhere and that give information concerning the history of Baʿlabakk, of Damascus and of al-Shām in general; while in the second text, which is shorter, obituaries are arranged in chronological order and the other type of material is lacking.

The sources used by al-Yūnīnī are of various natures: chronicles and biographical dictionaries found in the library of learned Syrians of the time, such as Ibn Khallikān, Abū Shāma, Ibn Ḥammawayh al-Djuwaynī, Ibn Shaddād, Ibn ʿAbd al-Ẓāhir and Ibn Wāṣil in particular, certain of these owing a great deal to Sibṭ Ibn al-Djawzī, not to mention works relating more specifically to each region: the *Taʾrīkh Irbil* by Ibn al-Mustawfī, the *Dhayl Taʾrīkh Baghdād* by Ibn al-Nadjdjār or even the *Taʾrīkh Ḥalab* by Ibn al-ʿAdīm. To these may be added the official documents, judicial registers and correspondence to which al-Yūnīnī had access by virtue of his good relations with the Mamlūk officials, or indeed Ṣūfī works of the *manāḳib* [*q.v.*] genre which were familiar to him.

Currently, the state of edition of the *Dhayl* is as follows: years 654-86 were edited by Krenkow and Muḥammad Munīr al-Shādhilī; years 687-90 by Antranig Melkonian (unpublished diss.); and years 697-701 by Li Guo (thus the years 687 to 696 and 702 to 711 are not yet published). Continuing Cahen's work, Li Guo has also reconstructed families of manuscripts, of the *Mukhtaṣar Mirʾāt al-zamān* of the *Dhayl*, for which he has listed 23 manuscripts. What may be added here in this context concerns the identification of the "mysterious Istanbul manuscript" which has served as a basis for the edition of part of the text published in Ḥaydarābād (four volumes covering the years 654/1256 to 686/1287). In fact, while the years 654 to 672 (vols. i and ii and the first part of vol. iii) were edited on the basis of known manuscripts (those of Istanbul, Aya Sofya 3146, 3199 and of Oxford, Bodleian, Pococke 132), the section concerning

the years 673 to 686 (beginning at p. 111 of vol. iii and including the whole of vol. iv) is based on a manuscript which is imprecisely identified on the title pages. It is in fact a manuscript preserved in the B.L. London under the classification India Office Isl. 3452, but not featuring in the printed catalogue. The manuscript was copied by Krenkow in 1945-6 and served as the basis for the edition made by a group of Indian scholars under the direction of Muḥammad Munīr al-S̲h̲ād̲h̲ilī (cf. J. Sublet, *Un manuscrit égaré*).

Furthermore, a work of *manāḳib* has been attributed to al-Yūnīnī, but its authenticity is problematical. Li Guo relies on Ḥād̲j̲d̲j̲ī K̲h̲alīfa, vi, 155 no. 13042 (Kātib Čelebi 1834-44) and on Bağdatlı İsmail Paşa, *Hadiyyat al-ʿārifīn*, ii, 479, in saying that al-Yūnīnī, finding that Sibṭ Ibn al-D̲j̲awzī had devoted to al-D̲j̲īlānī only a very short notice, is said to have written a work intitled *Manāḳib ʿAbd al-Ḳādir al-D̲j̲īlānī*. Some additional information may be supplied in this context. The Arabic manuscript of the Bibliothèque Nationale de France contains a copy dating from 961/1554 of which the first (corrupt) folio bears the title *Bahd̲j̲at al-asrār*. G. Vajda (in his unpublished notes on the manuscripts of the BnF) identified the text as *Manāḳib ʿAbd al-Ḳādir al-D̲j̲īlānī wa-ʿAbd Allāh b. ʿUt̲h̲mān al-Yūnīnī*. This is thus a case of apologetic biographies of both al-D̲j̲īlānī and of ʿAbd Allāh al-Yūnīnī, our author's father-in-law. Vajda considered the text identical to that of Berlin (Wetzstein 1855) which is, according to Ahlwardt's catalogue (no. 10097), the work of ʿAlī b. Muḥammad al-Yūnīnī, who died in 701/1301, our author's brother. It may be deduced from this that numerous members of the Yūnīnī family composed *Manāḳib ʿAbd al-Ḳādir al-D̲j̲īlānī*, thus rendering homage to the Ṣūfī *s̲h̲ayk̲h̲* whose memory they all revered, and as a result confusion was created between members of this family. Li Guo also poses the question of the identification of a *Taʾrīk̲h̲ Bag̲h̲dād* that was allegedly composed by al-Yūnīnī but of which the text has not been found.

The cordial relations that al-Yūnīnī maintained with scholars and historians ensured that numerous biographical notices would be dedicated to him, although in his own time he enjoyed only a modest reputation. Thus al-D̲h̲ahabī [*q.v.*], who attended his transmission sessions in Damascus and in Baʿlabakk, paid him restrained homage.

Works such as the *D̲h̲ayl* contain an impressive store of materials for the history of Syria in the second half of the 7th/13th century and in the early 8th/14th century. The Syrian authors of the time may be considered as constituting a school, and analysis of their works entails a redefinition of the historiography of the region in the period of the first Mamlūks.

(Jacqueline Sublet)

YUNNAN (Yün-Nan), a province in the southwest of China, bounded in the east by the provinces of Kuei-chou, Kuang-hsi and in the north by the province of Ssū-ch'uan, and in the south to west by Vietnam, Laos and Burma.

1. History.

The province, first established under the Mongol Great K̲h̲ān Ḳubilay in A.D. 1253, received its name from that of ancient Yunnan county, which is identified with Hsian-yun Prefecture, Yunnan province. Yunnan Province is a highland country; the climate is generally mild, but agricultural products are not always plentiful. According to the statistics of the government of the People's Republic of China, the Hui (Muslim) population of Yunnan is given as 522,046 (1.36% of the total population of Yunnan province in 1990). They are mostly distributed in the eastern part of the province, mainly near rivers and roads. They live alongside Han Chinese and native non-Chinese minorities.

Under the T'ang dynasty, in the middle of the 8th century, a native tribe of Yunnan called *U-man* ("Black Barbarian"), which is identified with the Qaradjan belonging to the Thai race, rose to power in 937 and founded the Nanchao kingdom (with its capital at Tali). In the Sung period, the Nanchao kingdom was succeeded by the Tali one, which survived for about 150 years in the same territory up to the mid-13th century. Then came the Mongol domination over Yunnan province. In the historical sources for the T'ang dynasty, it is reported that Taji (i.e. Tād̲j̲īk, that is, Arab) soldiers who had come to help the dynasty as reinforcements, migrated to Yunnan province in the early 9th century, settling there and becoming the first Muslims in Yunnan; but this tale is uncorroborated elsewhere.

The origin of the Yunnan Muslims should probably be traced back to the early Yüan dynasty, when the Mongol Royal Prince (later Great K̲h̲ān) Ḳubilay [*q.v.*], who marched into China proper, conquered the above-mentionned Tali kingdom. Many soldiers and merchants from West Asia, and Central Asian Uyg̲h̲urs who were members of Ḳubilay's army, settled in the province, many of them being Muslims. A Muslim general, Sayyid-i Ad̲j̲all S̲h̲ams al-Dīn ʿUmar (1211?-79), who was reported to be of Buk̲h̲āran origin, is said to have surrendered to Čingiz K̲h̲ān in Transoxiana in 1219, to have become Čingiz's vassal, and then to have participated in the expedition to China, subsequently being appointed civil governor of Yunnan in 1273. He is further said to have pacified local tribes and to have spread the Islamic religion there. The town of K'un-ming, situated in eastern Yunnan, now became the administrative capital, and was later also called Yunnan-fu (see further

on this implantation of Islam in Yunnan, AL-ṢĪN. 4.). Under the administration of Sayyid-i Adjall Shams al-Dīn and his descendants, Muslims in Yunnan, Ssŭ-ch'uan and Shen-hsi prospered in the later 13th century and were gradually absorbed into local society as time went on. After the collapse of the Yüan, the first Ming Emperor Ch'u Yüang-ch'uang in 1381 ordered that Han and Muslim generals should proceed to Yunnan to get rid of any Mongol remnants, and they established Ming rule there. In general, the Yunnan Muslims, like those of other provinces, were gradually Sinicised under the Ming; also, many Muslims immigrated from surrounding provinces into Yunnan.

Under the Ch'ing dynasty that took over from the Ming in the early 17th century, a policy began of colonising native peoples of Yunnan with the power of both Han Chinese and Hui armies. Chinese and Muslims gradually spread further into the province: the Muslim population of the province is reported to have reached at this time *ca.* 800,000, making it the second densely-populated province of Muslims in China next to Kansu [*q.v.*]. As the Ch'ing policy of colonisation and absorption of the native Yunnan population continued in the early 19th century, Chinese pressure increased, with friction between Muslims and Han Chinese, especially in the western region with its centre at Yung-ch'êng fu (Pao-an). Revolts of the Yunnan Muslims against the Ch'ing authorities now began to occur. Quarrels between Muslims and Han Chinese at Ch'u-hsiung fu in 1854 marked the opening of the Great Rebellion which continued and raged for eighteen years all over the province; for details, see PANTHAY and TU WEN-HSIU. After a period of subsequent repression, there was comparative calm, or at least an uneasy peace, for the Yunnan Muslim community. But with the triumph of the Communist régime in 1950 and its pursuit of a militantly anti-religious policy, the position of the Yunnan Hui, and their perceived "differentness" in a state which was pathologically suspicious of all non-Han religious and ethnic identities, worsened. In such a closed state, details of discrimination and persecution are largely lacking, but the lowest point of Hui fortunes under Communism was clearly reached during the Cultural Revolution, epitomised in the "Shadian Incident". Shadian is a village in southwestern Yunnan adjacent to the Vietnam border and has been famed since Ming times as a centre of Muslim piety and learning. After requests by the Hui of Shadian for the re-opening of their mosques had been refused by the local Communist Party authorities, in July-August 1975 units of the People's Liberation Army moved in, razed Shadian to the ground and massacred over 1,600 Hui of the district, with 866 killed from Shadian village alone. Not until 1979, after the Fall of the Gang of Four, were apologies given and reparations made; but Yunnan Muslims understandably remain suspicious of PRC government attitudes and policies. For details of the Incident, see Gladney, *Muslim Chinese*, 137-40.

2. The community.

Yunnan Muslims have been and are still engaged in farming, handicraft, retail trade (especially with Burma), salt manufacturing (salt mining), eating-houses, inns, transportation, pottery-making, etc. They were also engaged in the mining of silver, copper and tin in the employment of local Ch'ing authorities. The Yunnan Muslims are not dissimilar from those Muslims of other provinces of China. They are Chinese-speaking Muslims calling themselves either *Hui* (Muslim), *Hui-min* (Muslim people) or *ch'ing-ch'êng (pure-true) Hui-hui*, and now, under the People's Republic of China, they are called *Hui-tsŭ* (Muslim people). Each Muslim community is located around their own *ch'ing-ch'êng ssŭ* (mosque). There are now reportedly about 600 mosques in the region. As religious leaders, they usually have an *akhon* (leader of the worship), a *khalīfa* (student, apprentice), and sometimes an *imām* (hereditary leader of the worship), just as in other provinces. They observe the Two Great *ʿĪds*, the *mawlūd al-nabī* (Muḥammad's birthday), *ʿāshūrāʾ*, the *miʿrādj*, *barāʾat*, *shab-i ḳadar*, etc.

Most Yunnan Muslims follow the *ḳadīmī* or "old", "traditional" or "orthodox" form of Chinese Islam, basically that of Ḥanafism, as observed by 90% of all the Chinese Muslims. There are also the *Djahriyya* order and the *Ikhwān* movement among Yunnan Muslims. The *Djahriyya* originally appeared in Kansu province in the early 18th century. It had its own centres at Sining, Ning-hsia and also at Peking, and must have been propagated in Yunnan. For Djahrī practices, see KANSU and TAṢAWWUF. 8. In Chinese Islam. The *Djahriyya* was specifically called *Hsin-chao* or New Religion, i.e. new as opposed to the *Ḳadīmīs*. The Ikhwān maintain strict observance of the *Sharīʿa* and spurn membership of the *mêng-huan* or the *ṭarīḳa* institutions [see TAṢAWWUF. 8.]. In Yunnan the Ikhwān make up *ca.* 10% of all Muslims.

(T. SAGUCHI)

YŪNUS B. MATTĀ, the prophet Jonah, son of Amittai (II Kings xiv. 25). The name entered Arabic ultimately from the Greek Septuagint rendering of the Hebrew, most likely transmitted through Christian Palestinian.

The Ḳur'ān mentions Jonah four times as Yūnus, without giving his father's name, once as Dhu 'l-Nūn (XXI, 87) and once (LXVIII, 48) as *ṣāḥib al-ḥūt* "the Man of the Whale". Yūnus is the only one of the major and minor biblical prophets who is mentioned by name in the Ḳur'ān; a prophet who is swallowed by a whale naturally figured significantly in the popular imagination. Yūnus is numbered among the apostles of God (IV, 163; VI, 86). Sūra X is named after Yūnus, and tells of a town which came to believe in the one

God and therefore its fate of "chastisement and degradation in the present life" was averted (X, 98). A paraphrastic rendering of the story of Jonah appears in XXXVII, 139-48 (cf. also XXI, 87-8): Yūnus, an apostle of God, fled on a ship which was overloaded. He was condemned by lot and a fish swallowed him. He was worthy of blame. If he had not praised God, he would have remained in the fish's belly until the resurrection. However, he was thrown sick upon a barren shore, and a gourd was caused to grow up over him. He was then sent to rule over a hundred thousand people who became believers and God gave them respite for a further period.

Al-Bukhārī and al-Nawawī quote a *ḥadīth ḳudsī* which says "No one can say he is better than Yūnus b. Mattā, even if his genealogy goes back to his father" (see Nöldeke, *Gesch. des Qor.*, i, 257; W. Graham, *Divine word and prophetic word in early Islam*, The Hague 1977, saying 44); al-Thaʿlabī, *Ḳiṣaṣ*, 366, quotes this simply as a statement of Muḥammad and provides the understanding that Mattā was Yūnus's mother's name and that the characteristic of being a prophet and carrying the name of one's mother was distinctive with ʿĪsā and Yūnus alone.

Muslim legend further develops the material. Yūnus served God in Nineveh at the time that he became enraged. The puzzle of why he became angry is answered in at least two ways:

(1) He became angry because his mission to warn the people of Nineveh of their need to repent in order to avoid their forthcoming destruction was so urgent that the angel Gabriel did not allow him time to mount a steed or put on a shoe before leaving.

(2) He was angry because the calamity that he had prophesied would befall Nineveh was delayed at the last minute, thus making him appear to be a liar worthy of death. Yūnus prophesied that the punishment would come after 40 days; on the 37th day the colour of the sinners changed. They repented, restored all that they had unjustly acquired, even the objects immured in their houses (cf. the principle enunciated in BT, *Gittin*, 55a); men, women, children and animals clothed themselves in sackcloth; suckling offspring, of both women and animals, were separated from their nurses. But on the day of ʿĀshūrāʾ, God granted forgiveness.

Urged by Satan, Yūnus embarked on the ship. The overloaded ship could not go backward or forward, a sign that a runaway slave was on board. Jonah confessed his guilt, but the sailors would not throw him into the sea; three times they cast lots and then threw down an arrow oracle (al-Thaʿlabī). Finally, Yūnus threw himself into the jaws of the whale (Ibn al-Athīr), which, it is said, had come from India on account of Yūnus (al-Kisāʾī). God commanded the whale, saying, "Whale, O whale! We shall not make Jonah into your sustenance! Rather We make you a retreat for him, a sanctuary" (al-Ṭabarī, i, 783). The threefold darkness (see Ḳurʾān, XXI, 87) of the inside of the fish, depth of the sea and the darkness of the night enveloped Yūnus. The fish was swallowed by another fish and then that one by still another (al-Ṭabarī, *Tafsīr*, *ad* Ḳurʾān, XXI, 87, as a second opinion on the meaning of the "darkness"). God made the fish transparent so that Yūnus could see the wonders of the deep. He heard the songs of praise of the sea monsters just as the angels heard his prayers from the inside of the fish. It is disputed whether Yūnus remained 3, 7, 20 or 40 days in the fish. Hurled out upon the shore, he was given shade by a gourd tree, and was suckled by a goat (Ibn al-Athīr) or an antelope (al-Thaʿlabī) or a gazelle (al-Kisāʾī). Yūnus found shade under a gourd tree which then withered, causing him to lament. God then reproached him for not having lamented the 100,000 people whose death he sought. This admonition was impressed upon him by other means also: by fruit trees torn up, by the example of a potter who is anxious about his pots, and a sower who is anxious about his seeds. Then Yūnus had a shepherd announce his approach: the earth, a tree, and an animal of his herd, all miraculously bore witness to the truth of the message. These motifs reflect the apparent connection between Jonah and nature and especially the animal kingdom. The king ceded his throne to the shepherd, and himself went to live with Yūnus as an ascetic. Notably absent here are any of the messianic aspects of the story developed in the New Testament (Matt. xxii. 39, Luke xi. 29) and in the Midrash (L. Ginzberg, *The legends of the Jews*, Philadelphia 1909-38, iv, 253, vi, 351 n. 38).

The feature that God forgives the sinful town on the day of ʿĀshūrāʾ suggests a Jewish basis for these developments in the legend; the Book of Jonah is recited in Jewish worship in the afternoon of the Day of Atonement, which was connected in early Islam to the fast of ʿĀshūrāʾ [*q.v.*]. According to al-Kisāʾī, Yūnus was conceived on ʿĀshūrāʾ (see W.M. Thackston, *The Tales of the Prophets of al-Kisaʾi*, Boston 1978, 350 n. 90, for a list of other events in the lives of the prophets which happened on this day).

A legend, mentioned by al-Yāfiʿī [*q.v.*] in his *Rawḍ al-rayāḥīn*, probably originated at a later date and indicates the extent of the active development of legendary material throughout the centuries, even down to contemporary times (see e.g. P. Bachmann, *Das Skandalon des Propheten Yūnus und eine neue arabische Jona-Geschichte*: Yūnus fī baṭn al-ḥūt, *von ʿAbd al-Ghaffār Mikkāwī*, in J.M. Barral (ed.), *Orientalia Hispanica, sive studia F.M. Pareja octogenario dicata*, Leiden 1974, i, 55-76). Yūnus asked the angel Gabriel to show him the most pious person in the world. The angel showed him a man who lost his feet, hands and eyes one after another and, notwithstanding, put his confidence in God and gave himself up to Him (cited in R. Basset, *Mille et un contes, récits et légendes arabes*, Paris 1927, ii, 122, no. 77).

Al-Kisāʾī extended the miraculous elements to the earlier history of the prophet. His father was 70 when Yūnus was born. His mother, who became a widow soon after, had nothing left but a wooden spoon, which proved to be a cornucopia. As a result of a miraculous dream, he married the daughter of Zakariyyāʾ b. Yaḥyā (see ZAKARIYYĀʾ; here reflecting the chronological confusion surrounding this person). He loses his wife, both his sons and his property. He therefore will not pray with the others on the ship. In the end, everything is miraculously restored to him.

(B. HELLER-[A. RIPPIN])

YŪNUS B. ḤABĪB, prominent Baṣran grammarian and philologist (*ca.* 90-182/708-98).

In the early sources, his important position as a grammarian is indicated by the 230 occurrences of his name in both syntactic and morphological parts of Sībawayhi's *Kitāb*. He is mentioned as a direct source of information in Abū ʿUbayda's *Madjāz al-Ḳurʾān* (transmitting Abū ʿAmr b. al-ʿAlāʾ's teaching), and the books of al-Farrāʾ and al-Akhfash. In al-Djumaḥī's *Ṭabaḳāt*, Yūnus describes personally the development of grammatical studies from the early days of ʿAbd Allāh b. Abī Isḥāḳ (d. 117/728 [*q.v.*]). His fabulous readiness to share knowledge is mentioned by the early short biographical treatise of Abū Ḥāmid. The many details added by the later sources include a grandfather's name and *kunya* (both of these being ʿAbd al-Raḥmān), dates of life and origin. He is presented as a *mawlā* of several Arab tribes. A Persian origin was mentioned by a Shuʿūbī author (Talmon, *Arabic grammar*, 7 n. 35). A recurring anecdote seems to suggest attribution by some biographers of pro-ʿAlid sentiments to this scholar. The list of Yūnus's teachers and students seems to draw mainly on the meagre information extracted from the early sources referred to above. Ibn al-Nadīm mentions five books written by this scholar, of lexical and philological, not grammatical, character. These include *Maʿānī al-Ḳurʾān*, *K. al-Lughāt*, *K. al-Nawādir* (*al-kabīr* and *al-ṣaghīr*) and *K. al-Amthāl*, cf. Sezgin, viii, 57-8, for possible traces of these books in later works. Yūnus's grammatical views presented in the *Kitāb* indicate a sophisticated systematic analogical reasoning, not much inferior to Sībawayhi's and al-Khalīl's.

(R. TALMON)

YŪNUS EMRE, an immensely popular Anatolian Turkish mystic poet of the second half of the 13th and the first quarter of the 14th century. The information on Yūnus Emre's life is fragmentary and inconclusive in many respects, being partly of a legendary character (see the hagiological writings especially of the Bektāshiyye) or dependent on the interpretation of some passages in his *Dīwān*.

Yūnus Emre's birthplace is uncertain; the likeliest site seems to be a village in the environs of either Sivrihisar (Eskişehir) or Bolu. There are indications that Yūnus Emre married and had one or more children and that he travelled quite extensively, not only in Anatolia but farther east to Damascus, Tabrīz, etc. There is no proof that Yūnus Emre studied at a *medrese*. On the other hand, he was certainly not illiterate (the allusions to illiteracy in his *Dīwān* should be seen in the light of the concept of being *ummī* [*q.v.*], which does not necessarily imply factual illiteracy). His considerable learning probably derives primarily from his *tekke* [*q.v.*] education and ambience.

It is not certain to which Islamic mystical order (*ṭarīḳa* [*q.v.*]) Yūnus Emre belonged. The main assertions are that he was affiliated to the Bektāshiyye or the Mewlewiyye, but it has also been alleged that he was a member of the Khalwetiyye, the Ḳādiriyye, etc. On the evidence of passages in his *Dīwān*, Yūnus Emre's spiritual director and initiator (*murshid* [*q.v.*]) was Ṭapduḳ Emre, who, according to Bektāshī hagiology, was admitted to the order by Ḥādjdjī Bektāsh [see BEKTĀSHIYYA]. On the other hand, Yūnus Emre's mention of Djalāl al-Dīn Rūmī [*q.v.*] in a few verses reflects a spiritual bond between him and the Mewlewiyye. His poetry documents him as deeply religious in conformance with the teachings of the Ḳurʾān and the *sīra* [*q.v.*], with an understanding of Islamic mysticism (*taṣawwuf* [*q.v.*]) in the tradition of Ibn al-ʿArabī [*q.v.*]. Yūnus Emre's religious philosophy aims at "the unity of existence" (*waḥdat al-wudjūd*). This pantheistic view is complemented by the doctrine of "the perfect human being" (*al-insān al-kāmil* [*q.v.*]).

It is generally accepted that Yūnus Emre died in 720/1320-1, as documented by the entry on fol. 38b of the ms. *Mecmua* no. 7912 at the Beyazıd Umumî Kütüphanesi, Istanbul. The site of Yūnus Emre's grave is not certain. The fact that about a dozen graves (or *maḳāms*) situated all over Anatolia are attributed to him attests to his immense popularity. Of these, the grave in Bursa is almost certainly that of ʿĀshiḳ Yūnus (d. 843/1439-40), a mystic who wrote poetry in the manner of Yūnus Emre. For the rest, the grave that has found most credibility is that in the village of Sarıköy in the vicinity of Sivrihisar (Eskişehir), and in 1970 the mortal remains in this grave were transferred to the memorial grave built for the poet in Sarıköy.

Yūnus Emre is known to be the author of two works: a *Dīwān* and the *methnewī* called *Risālet el-nuṣḥiyye*.

1. The *Dīwān*. There are a great number of mss. of this work. *Medjmūʿas* (collections of literary works) also contain many poems by Yūnus Emre. The mss. show great discrepancies with regard to the number of poems, number and sequence of verses, etc. Yūnus Emre used the pen-name (*makhlaṣ* [see TAKHALLUṢ]) *Yūnus*, occasionally in the form *Yūnus Emre(m)* or with attributes such as *Miskīn*, *Bī-čāre*, *ʿĀshiḳ*, and once each as *Ṭapduḳ Yūnus*, *Ṭapduḳlu Yūnus*. A considerable number of poems by poets using the pen-name *Yūnus*, or even an altogether different pen-name, have erroneously been attributed to him and included in mss. of his *Dīwān*. In fact, one of the most popular *ilāhīs* [*q.v.*] today, namely that starting *Shol djennetüñ ırmaḳlarî * Aḳar Allāh deyü deyü*, "Those streams of Paradise * Flow, calling Allah Allah", is generally attributed to Yūnus Emre, although it is actually by the poet ʿĀshiḳ Yūnus mentioned above.

The latest critical edition of the *Dīwān* (by M. Tatcı) contains 417 poems. Yūnus Emre composed a considerable number of poems according to the rules of the Arabo-Persian metrical system (*ʿarūḍ* [*q.v.*]), albeit with frequent faults. Nevertheless, the greater part of his *Dīwān* is composed according to the original Turkic method of versification, wherein the verses are not based on quantity as in *ʿarūḍ* but on the number of the syllables and the stress positions (*parmaḳ ḥisābî* or *hedje wezni*). A third group of poems shows only traces of composition in conformance with *ʿarūḍ*, so that these poems must be regarded (at least until further mss. supply metrically more correct versions) as composed according to *parmaḳ ḥisābî*. Yūnus Emre's application of *parmaḳ ḥisābî* is very successful. On the other hand, the frequent *ʿarūḍ* mistakes are understandable as Yūnus Emre lived at a time when the application of the Arabo-Persian metres to the Turkish language was in

its initial phase. Furthermore, oral transmission of the poems through the centuries is certain to be responsible for a considerable number of the *'arūḍ* faults found in the mss.

The *'arūḍ* metre Yūnus Emre used by far most frequently is *aṣlī redjez* (*mustaf'ilun-mustaf'ilun-mustaf'ilun-mustaf'ilun*). Of the syllabic lengths of *parmaḳ ḥisābī*, he used almost all, including such rare lengths as 10 and 12 syllables. He used aural rhyme, without regard for total accord (Turkish *geč* rhyming with Arabic *muḥtādj*, for example). Apart from one short *methnewī* of 28 verses, all the poems in the *Dīwān* have the rhyme scheme of the *ghazel* [see TURKS. 4.]. The lengths of these poems also corresponds to the usual lengths of the *ghazel* (only a few poems have more than 15 verses and one has 45). A considerable number of these are totally or partially *musammaṭ*, that is, have "inner rhyme" (the rhyme scheme *aa, xa, xa,* etc. thereby becoming *xaxa* [the first verse is usually without "inner rhyme"], *bbba, ccca,* etc.). The *musammaṭ* poems are mostly in the above *aṣlī redjez* metre consisting of 16 syllables and are often metrically faulty; such a faulty verse is practically indistinguishable from a quatrain with lines of 8 syllables composed according to *parmaḳ ḥisābī*. The genres of poetry found in the *Dīwān* are predominantly the *ilāhī* (respectively the *nefes* [*q.v.*]) and the *nuṭuḳ* (didactic mystical poem). However, there are a few examples of other genres such as the *münādjāt* (supplication addressed to God), the *na't* (eulogy, especially of Muḥammad), the *mi'rādj-nāme* [see MI'RĀDJ], the *shaṭḥiyye* [see SHAṬḤ], etc.

Yūnus Emre's poems are in Old Anatolian Turkish. He expresses himself simply and directly, in the idiom of the common people, using similes, metaphors, expressions, sayings, etc. that are familiar to them. His use of Arabic and Persian words is restricted enough not to have hindered the (at least superficial) comprehension of the bulk of his *Dīwān*. Frequently, an Arabic or Persian word is used in close proximity to its Turkish synonym. Yūnus Emre contributed to the forming of a Turkish mystical vocabulary based on the classic Ṣūfī terms. The *Dīwān* contains quotations from the Ḳur'ān, the *ḥadīth* [*q.v.*], the sayings of Ṣūfīs and allusions to Indo-Persian and Greek mythology and to folk tales.

The most recurrent theme in Yūnus Emre's *Dīwān* is mystic love. Yet he is no recluse and the conditions of everyday life are reflected in his poems. His mostly easily understandable religious and moral advice is couched in lyrical language of heartfelt sincerity and often great intensity of feeling. His poetry was of central importance in the dissemination of Ṣūfī teachings in Anatolia, influenced the *tekke* poetry of the following centuries, and played an initiative role in the application of the *'arūḍ* metric system to Turkish. The intense religious and humane feeling in his poetry has not lost its appeal today. It is not therefore surprising that his *ilāhīs* continue to be sung at events of a religious nature or that in 1946 Adnan Saygun composed his *Yunus Emre oratoryosu* using some of Yūnus Emre's poems as its libretto.

2. The *Risālet el-nuṣḥiyye*, a Turkish *methnewī* of 600 verses with a moralising didactic message, was composed in 707/1307-8. After an introductory section of thirteen verses in the metre *ramal* (*fā'ilātun-fā'ilātun-fā'ilun*), there is a short section in prose followed by the main text composed in the metre *hazadj* (*mafā'īlun-mafā'īlun-fa'ūlun*). This *methnewī* shows a mastery of the rhetoric device of *teshkhīṣ* (anthropomorphism), but it does not possess the lyrical quality of the poems in the *Dīwān*.

(EDITH G. AMBROS)

YŪNUS AL-KĀTIB AL-MUGHANNĪ, Abū Sulaymān Yūnus b. Sulaymān b. Kurd b. Shahriyār, well-known musician and writer on music in the first half of the 2nd/8th century.

He was the son of a jurist (*faḳīh*) of Persian origin and a *mawlā* of the family of al-Zubayr b. al-'Awwām (Ḳuraysh). Yūnus was born and grew up in Medina. He entered the local *dīwān* as a scribe, hence his surname al-Kātib. Early in life, however, he was attracted by music, and he is said to have taken lessons mainly from Ma'bad [*q.v.*], but also from Ibn Suraydj, Ibn Muḥriz, al-Gharīḍ [*q.vv.*], and Muḥammad b. 'Abbād al-Kātib. He was also a gifted poet. Whilst on a visit to Syria during the reign of Hishām (105-25/724-43) his fame in music brought him the patronage of the *amīr* al-Walīd b. Yazīd. This event forms the basis of a highly-coloured story in the 684th and 685th nights of the *Alf layla wa-layla*. Returning to Medina, Yūnus provoked a scandal by composing his *Zayānib*, a cycle of seven songs extolling Zaynab, a niece of the Successor (*Tābi'ī*) 'Abd al-Raḥmān b. al-Ḥārith al-Makhzūmī. On the accession of al-Walīd b. Yazīd in 125/743, Yūnus was summoned to the Damascus court where he was treated with "high honour and munificence". He was still alive under the early 'Abbāsids. Having lost his voice he gave singing lessons by using chironomic signs. His best-known pupil was Siyāṭ (d. 169/785), a teacher of Ibrāhīm al-Mawṣilī [*q.v.*]. Hence a musical tradition and, at the same time, a literary *isnād* connects the masters Ma'bad, Yūnus al-Kātib, Siyāṭ, Ibrāhīm al-Mawṣilī, and Isḥāḳ al-Mawṣilī [*q.v.*]. Yūnus died, around 147/765, at over eighty and possibly in Baghdād.

As a composer, Yūnus has a place among the great musicians of the classical era, as we know from the high esteem accorded his songs. They were even imitated by later musicians, in a so-called "Zayānib style"

(*ghinā' zayānibī*). As a singer, he seems to have been one of the *murtadjil* singers who used to accompany themselves by beating the musical metre (*īḳā'*) with a wand (*ḳaḍīb*). Yūnus left several books on music and musicians. Among them was a record of the tonal system of the Medinan music school, called *K. al-Nagham*. From this book, a quotation on the division of the octave seems to have survived. He also composed a book on the renowned female singers (*K. al-Ḳiyān*), a collection of his own song texts (*K. Mudjarrad Yūnus*), and an extensive systematic collection (*tadwīn*) of song texts (*K. fi 'l-Aghānī*), also called *Dīwān Yūnus*. The latter contained, in the redaction known to Ibn Khurradādhbih [*q.v.*], 825 song texts by 35 male and female singers of the first two "classes" (*ṭabaḳāt*) in Islam. In a redaction described by Ibn al-Ṭaḥḥān (d. after 449/1057 in Cairo), the number of song texts is said to have increased to 6,300. They were in alphabetical order, followed by complete musical indications, and by the names of the poet and the composer. Abu 'l-Faradj al-Iṣfahānī [*q.v.*] quoted the book frequently in his *K. al-Aghānī al-kabīr*. He made use of this "fundamental source" (*aṣl*) in a redaction by al-Hishāmī (3rd/9th century) who had supplied the musical indications (*adjnās, ṭarā'iḳ*) omitted by Yūnus. The advanced and extensive literary production of Yūnus al-Kātib proves in itself that he cannot have been "the first" to write on music in Islam, as was often stated.

YURT [see KHAYMA. iv].

YÜRÜK [see YÖRÜK].

YŪSHA' B. NŪN, the Joshua of the Bible. The Ḳur'ān does not mention him by name but alludes to him. When Moses wished to lead his people into the holy land and Israel was afraid to fight with the giants, they were encouraged by two God-fearing men (V, 20-6) who may be recognised as Joshua and Caleb. Neither can it be doubted that the young man (*fatā = na'ar*, Exod. xxxiii. 11) who accompanies Moses on a journey to al-Khaḍir [*q.v.*] (not named) in XVIII, 60-64, is any other than Joshua (see al-Ṭabarī, i, 428).

Al-Ṭabarī was certainly well informed of the features of the biblical tradition concerning Joshua: the crossing of the Jordan with the ark, the spies, the fall of Jericho, the dishonesty of Achan, the artifice of the Gibeonites, the solstice, Bezek. However, Muslim legend has also supplied the figure of Yūsha' with features not found in the Bible, most of which parallel the material in the Haggada. Yūsha' was given the task of summoning the Children of Israel to the true faith (al-Ṭabarī, i 503-4). To enable Moses to depart this life without anxiety, Yūsha' was installed as a prophet in his lifetime (see L. Ginzberg, *The legends of the Jews*, Philadelphia 1909-38, iii, 436-9). He was present at Moses's death and Moses's garments remained in Yūsha''s hands when Moses died. Yūsha' was suspected of having killed Moses but all the Israelites had a dream in which Moses refuted the suspicion to calm the affair. Yūsha' conquered the giants in Jericho, but the traditions vary as to whether the victory was won in the time of Moses or not until after his death. Balaam [see BAL'AM] supported the battle against the Israelites. In Ibn al-Athīr, the story is embellished; Balaam's wife was bribed to incite him to evil (see H. Schützinger, *Die arabische Baleam-Erzählung*, in *Isl.*, lix [1982], 195-221). Ḳur'ān, VII, 175-7 is also connected to Balaam. Yūsha' could not cross the Jordan for 40 days. He then prayed and the two hills on the banks became a bridge across which people could pass (al-Kisā'ī). Jericho was besieged for six months, and in the seventh the walls fell down at the blowing of the trumpets. The miracle in which Yūsha' makes the sun stand still is mentioned sometimes in connection with the conquest of Jericho and sometimes in the war against the united kings. In both cases, the story is told that Friday evening was close to arriving. If the sabbath began, the fighting could not be continued and the victory would be incomplete. Yūsha' wished to stop the sun; at first it refused, saying it was fulfilling divine orders just as Yūsha' was; finally, the sun agreed. After the victory, Yūsha' collected the booty and desired to offer it as a sacrifice but no flame came down from heaven to consume it (cf. Lev. ix. 24; I Kings xviii. 23-4; I Chr. xxi. 26; II Chr. vii. 1). There must have been some dishonesty. The lot pointed to Achan as the sinner. According to another tradition, Yūsha' summoned the heads of the tribes. The hand of the sinner stuck to the hand of Yūsha'. Al-Kisā'ī records another divine judgment; each tribe had a mark on Aaron's robe and the mark of the guilty tribe became distorted. A bull's head studded with pearls and jewels was found in the sinner's possession and was added to the booty. Flames then consumed the booty, including the bull's head, along with the sinner.

Yūsha' rooted out the inhabitants of Canaan, but a fraction of them migrated under the leadership of Ifrīḳīs to Africa; their king Djirdjir (i.e. Gregory) was killed; from the others, the North African Berbers are descended.

In al-Ṭabarī, i, 558, the isolated tradition is found that the dead man conjured up by Ṭālūt (Saul) was Yūsha' rather than Samuel (cf. I Sam. xxviii. 11-19). The tomb of Yūsha' is a pilgrimage site, probably dating from pre-Islamic times, in Ma'arrat al-Nu'mān [*q.v.*, at Vol. V, 926b].

(B. HELLER-[A. RIPPIN])

AL-YŪSĪ, ABŪ 'ALĪ AL-ḤASAN b. Mas'ūd, Moroccan man of letters (1040-1102/1631-91).

Of the Berber tribe of Aït Yūsī, he was born in

Fāzāz [*q.v.*] in the upper Malwiya region of Morocco. His travels first led him southwards to Marrakesh and then to Tāmgrūt, where he studied under the *shaykh* Muḥammad b. Nāṣir. He then went to the *zāwiya* of al-Dilā' [*q.v.* in Suppl.], where he enjoyed a long period of stability in his life until the destruction of this marabout principality by the ʿAlawī sultan Mawlāy al-Rashīd in 1079/1688. Al-Yūsī was compelled to follow the sultan back to Fās, where he gave courses that enjoyed much popularity at the Ḳarawiyyīn [*q.v.*]. But rivalries and frictions with colleagues, as well as a nomadic temperament, prevented him from adapting to life in a large city. He gave up teaching and finally left Fās in 1084/1673 for further travels. He visited various shrines before spending a good while in Marrakesh, where he taught in the mosque of the Shorfa. Towards the end of his life he made the Pilgrimage, and died in Fās soon after his return. He is buried near the town of Sefrou, his mausoleum being the centre of a cult [see ṢUFRŪ].

Al-Yūsī's oeuvre covers several areas of scholarship. His *Ḳānūn fī ibtidā' al-ʿulūm* is an attempt to define and classify the different sciences. The breadth of his interests can also be seen in his epistles (*Rasā'il Abī ʿAlī al-Ḥasan b. Masʿūd al-Yūsī*, ed. Fāṭima Khalīl al-Kablī, 2 vols. Casablanca 1981), which touch on points of theology, law and mysticism. The most famous are those reproaching the ruler, as in the case of the epistle called *barā'at al-Yūsī* in which, not without boldness, he reproaches Mawlāy Ismāʿīl for having disarmed the whole group of Moroccan tribes. In another one, known as the *djawāb al-kitāb* and composed in reply to a letter (now lost) from the same sultan, al-Yūsī dilates at length on the topic of scholars' relations with the sovereign power.

His *Dīwān* includes a *dāliyya* in honour of his master Ibn Nāṣir and a *rā'iyya* in which he evokes memories of the *zāwiya* of al-Dilā'. His verses have a mystical tone, and the most remarkable ones have a nostalgic feeling for his native land. He also compiled a collection of proverbs, *Zahr al-akam fi 'l-amthāl wa 'l-ḥikam* (ed. M. Ḥadjdjī and M. al-Akhḍar, 3 vols. Casablanca 1981). His *Muḥāḍarāt*, written in 1095/1684 (ed. Ḥadjdjī and Aḥmad Sharḳāwī, 2 vols. Beirut 1982) are conversations, of the *adab* genre: anecdotes, poetic quotations (including some in *malḥūn* [*q.v.*]), autobiographical confidences, travel narratives, and reflections upon such varied topics as sainthood, Mahdism, food customs in the *zāwiyas*, couscous and the story-tellers of the Djāmaʿ al-Fnā. Despite the discrete nature of its subjects, this work remains an irreplaceable document on the ruling classes, scholars, saints and the common people of the time.

Berque, *Al-Yousi, problèmes de la culture marocaine au XVII^e^ siècle*, Paris and The Hague 1958; C. Geertz, *Islam observed*, New Haven 1968; Abdelfattah Killito, *Speaking to princes: al-Yusi and Mawlay Ismaʿil*, in Rahma Bouqia and Susan G. Miller (eds.), *In the shadow of the sultan*, Cambridge, Mass. 1999, 30-46. There is a full bibl. of al-Yūsī in ʿAbbās al-Djirārī, *ʿAbḳariyyat al-Yūsī*, Casablanca 1981.

(ABDELFATTAH KILLITO)

YŪSUF B. YAʿḲŪB, in the Ḳur'ān and later Islamic literature parallels, the Joseph of the Hebrew Bible and Jewish and Christian tradition. The character of Yūsuf is popular in Islamic pietistic and devotional literature, in prose and in poetry from the earliest commentaries until the present day.

1. In the Ḳur'ān.

Outside of sūra XII, Yūsuf is mentioned only twice. In VI, 84, he is merely listed among other biblical prophets, and in the following order: Ibrāhīm (VI, 83), Isḥāḳ and Yaʿḳūb, Nūḥ "[whom] We guided previously, and from his progeny, Dāwūd, Sulaymān, Ayyūb, Yūsuf, Mūsā and Hārūn". XL, 34 is included in a longer section treating the story of Moses, where it is stated that Yūsuf came before Moses with clear divine messages that were nevertheless doubted by his people, and that these same people thought that God would not send another prophet after him.

All other Ḳur'ānic references to Yūsuf occur in sūra XII, a complete telling of the Joseph story, the longest Ḳur'ānic narrative and the only lengthy chapter of the Ḳur'ān representing a single and complete literary unit. The Ḳur'ānic Joseph story not only exhibits a close intertextual relationship with the versions represented in the Hebrew Bible and post-biblical Jewish and Christian narrative exegesis, but also finds important parallels with the tale of Bellerophon of the *Iliad* and the pre-biblical Egyptian "Tale of two brothers". One of the central themes of sūra XII, that of al-ʿAzīz's wife making vain overtures of Yūsuf and then accusing him of attempting to force her, represents a common motif of folk literatures throughout the world (motif K 2111 in S. Thompson's *Motif index of folk literature*, v). Questions of "influence" and "borrowing" become extremely complex in light of such a complicated intertextuality. However, it is clear from a diachronic perspective that "biblicist" material—that is, deriving from the Bible and its exegesis—impacted the emergence of sūra XII, while Ḳur'ānic and post-Ḳur'ānic Islamic material in turn impacted later renderings of the tale in Jewish and Christian circles.

The Ḳur'ānic Yūsuf embodies the chief qualities of a prophet: knowledge, trust and uprightness. In contrast to the biblical rendering and biblical narrative in general, the Ḳur'ān depicts Yūsuf as protected from error through its portrayal of the positive moral attributes of patience, trust, veracity, judgment and discernment and absolute faith epitomised not only by the prophet Yūsuf but also by his father, the prophet Yaʿḳūb. This, among many other differences between the biblical and Ḳur'ānic renderings of the tale, reflects the different eras, cultures and contextual world views that the two versions reflect. Whereas the biblical version typifies the "heroic tale" portraying a sacred history of progenitors and patriarchs, the Ḳur'ānic version serves far more as a didactic tale in which positive and negative behaviours are clearly depicted and assessed through the conduct of the tale's actors. The Ḳur'ānic rendering thus reflects the realm of pietism which, in turn, parallels post-biblical Jewish and Christian exegetical reflections of the tale that serve largely as teaching parables about chastity, temptation, faith and uprightness in the face of adversity.

Recently, synchronic approaches to the narrative have been taken by Johns, Stern and Mir. Johns stresses the unique oral nature of the Ḳur'ānic telling and the use of repetition and "replays", while Stern has shown how the story may be seen as an allegorical rendering of the traditional biography of Muḥammad. Both Yūsuf and Muḥammad were accused by their detractors (brothers or tribal kin) of seeking superiority over others for their own personal ends, but their very critics could not understand until the end that the two prophets were asserting themselves only because God had thrust a special role on them for the purpose of bringing about their people's own salvation. Mir has demonstrated the chiastic structure of the narrative

by showing not only how the tensions built up in the first half of the story (1-44) are resolved in reverse order in the second half (45-100) but also how certain motifs recur antithetically and heighten the story's drama.

The didactic and moralistic nature of the Ḳur'ānic rendering leaves the main protagonists' characters largely flat and undeveloped, and fails even to provide names for those actors in the drama that do not personify right behaviour. This, along with the exceptional length and narrativity of the sūra, encouraged a great deal of thinking and discussion which resulted in voluminous exegesis on *Sūrat Yūsuf*.

2. In post-Ḳur'ānic literature.

Yūsuf is largely absent from the *Ḥadīth*. Direct and indirect exegesis of *Sūrat Yūsuf* may be found in the *Tafsīr* literature, the universal histories of al-Ṭabarī, Ibn Kathīr, etc., hagiographic literature (*ḳiṣaṣ al-anbiyā'* [*q.v.*]), and in the poetry and pietistic literatures of virtually all religious, ethnic and linguistic sub-groups in the vast Islamic world from Spain to China and from Russia to South Africa. These literatures fill in the obvious lacunae of the Ḳur'ānic telling, resolve and respond to conflicts and parallels with biblicist literatures, and capitalise on the nature and authority of the scriptural tale in order to promote various independent or creative ideas or perspectives on the religious, moral, spiritual or creative life. At the most basic level, names and narrative depth are provided for secondary characters in the Ḳur'ānic telling, including certain of Yūsuf's brothers, the trader(s) who purchase Yūsuf from his brothers, the Egyptian to whom he is sold, his wife, the king of Egypt, his servants who know Yūsuf in jail, etc. The Egyptian is known variously as Ḳiṭfīr, Iṭfīr, Ḳūṭifar, Ḳiṭṭin, etc., all deriving from the biblical name Potiphar. His wife is named Rā'īl, a development from the common Arabising pattern of Hebrew names (Ḳābīl and Hābīl, Sāmwīl, Rāḥīl, etc.), and, later, Zulaykhā (Zālīka, Zulayka). Some biblicist material not found in the Ḳur'ānic rendering sometimes appears in the exegetical literature. In a Malay telling, for example, al-ʿAzīz is referred to as Potiphar, and his wife is called Asnath rather than Rā'īl or Zulaykhā. So also do local *realia* appear in re-tellings of the tale, such as the brothers telling Yaʿḳūb in the Malay version that Yūsuf has been killed by a tiger rather than a wolf.

Reasons are provided in the secondary literature for difficult aspects of the Ḳur'ānic story. Yaʿḳūb's intense suffering over the purported loss of his son is a result of his slaughtering a calf before the eyes of its mother, because he did not share his meal with the hungry, or because he separated a young slave-girl from her parents. Yūsuf suffers initially because of his vanity or because he relies on human help before trusting totally in God.

Because Yūsuf's story of suffering has resonated with the Shīʿī tradition of redemptive suffering and endurance, his and his father's tribulations find a place in the Shīʿī *taʿziya* [*q.v.*] plays commemorating the suffering and martyrdom of al-Ḥusayn. These expand and heighten the torment and suffering depicted in the Ḳur'ānic rendering and associate them with the future suffering of al-Ḥusayn and his family. Yūsuf and Yaʿḳūb represent the best of human suffering until the rise of Islam and the extraordinary suffering of al-Ḥusayn, which exceeds that of the early prophets and therefore receives greater redemptive merit for his Shīʿī followers.

Yūsuf serves as a model of virtue and wisdom in pietistic literature. He is extolled in Ṣūfī manuals such as that of Abū Naṣr al-Sarrādj's *K. al-Lumaʿ* as a paragon of forgiveness, based on XII, 92. He also epitomises the chastity that is based on complete trust in God, for it was his absolute piety that prompted God to personally intervene to prevent him from the transgression of succumbing to sexual temptation (XII, 24). So, too, does he exemplify deep wisdom by, for example, knowing to instruct his brothers to throw his shirt over Jacob's face rather than simply giving it to him, because Yaʿḳub's joy in learning of his son's survival would make him forget to rub the shirt over his eyes and restore his eyesight (see XII, 93, 96).

The most frequent reference to Yūsuf's attributes in post-Ḳur'ānic literature is to his extraordinary beauty. His beauty was so exceptional that the behaviour of the wife of al-ʿAzīz is forgiven, or at least mitigated, because of the unavoidably uncontrollable love and passion that his countenance would rouse in her. Such portrayals are found in many genres of Islamic literatures, but are most famous in Nūr al-Dīn ʿAbd al-Raḥmān Djāmī's [*q.v.*] *Yūsuf wa Zulaykhā*, which incorporates many of the motifs and attributes associated with his beauty in earlier works.

Certainly by the 7th/13th century, and up to the 10th/16th in Persian areas at the very least, Yūsuf was looked to by artists and rulers alike as a patron of the arts. The Ṣūfī Nadjm al-Dīn Rāzī Dāya (d. 1256) dedicates his *Mirṣād al-ʿibād* to the Saldjūḳ sultan of Rūm Kayḳubād, likening him to Yūsuf in hopes of receiving his patronage, and a famous Ṣafawid illustrated manuscript of Djāmī's *Yūsuf wa Zulaykhā* has the name of the Tīmūrid sultan and patron, Ibrāhīm Mīrzā (d. 1476) inscribed over a portrait of Yūsuf on the eve of his wedding to Zulaykhā. On the other hand, Yūsuf's role as temporal ruler rendered him suspect among some pietists, for the pollution of wordly kingship rendered even Yūsuf a delay in being accepted into the Garden.

Like the other earlier prophets, Yūsuf possesses special insights, often mystical and certainly exceptional, that may be emulated by spiritual adepts and other religious seekers. But the exceptional motifs and symbols found in *Sūrat Yūsuf* give his persona an even higher status than most in Islamic religious literature and civilisation. Renard has aptly noted the broad impact of Yūsuf and his story on this culture. "The well and prison into which Joseph is thrown refer to all forms of adversity through which one must live in patience and trust. Allusions to Joseph's shirt have come to mean any experience that restores the blinded seeker's sight. The expression 'to cut one's hand', an allusion to the guests at Zulayka's dinner party, has become a coded reference to the seeker's experience of stark bewilderment in the presence of the Beloved. And Joseph's necessary separation from, and eventual reunion with, his father offers a perfect pattern to console the lover of God who seems to experience God's absence. Most of all, Joseph's beauty keeps the poets enthralled as the most apt image for the deepest of all experiences, the ever-present yearning for the source of all life and being. As Rumi writes of his own experience of longing for the Beloved, 'Like Jacob I am crying alas, alas; the fair visage of Joseph of Canaan is my desire'."

The very fact that the tale of Yūsuf represents the one complete literary narrative structured as such in the Ḳur'ān rendered it special significance in Islamic literary and cultural tradition. Wahb b. Munabbih [*q.v.*] is quoted in al-Kisā'ī's *Ḳiṣaṣ al-Anbiyā'* as saying, "God would never send any prophet without telling him the story of Yūsuf, just as He told it to our prophet Muḥammad".

YŪSUF B. ʿABD AL-HĀDĪ, in fuller form Djamāl al-Dīn Abu 'l-Maḥāsin Yūsuf b. Ḥasan b. Aḥmad... b. ʿAbd al-Hādī, also known as Ibn al-Mibrad, Ḥanbalī scholar and author, advocate of a revival of the *ḥadīth* studies which had once flourished at Damascus, b. end of 840/June 1437 or in the next year, d. 16 Muḥarram 909/14 September 1503.

He stemmed from a branch of the Ibn Ḳudāma [*q.v.*] line of the Ḥanbalī Maḳdisī families who had come in the 6th/12th century and founded the Damascus suburb of al-Ṣāliḥiyya [*q.v.*], but is not to be confused with another famous Ibn ʿAbd al-Hādī from the same family, Shams al-Dīn Muḥammad b. Aḥmad (d. 744/1344), see Marwān ʿAṭiyya, in *Madjallat Madjmaʿ al-Lugha al-ʿArabiyya al-Urdunnī*, xlix [1995], 91-166). Little is known of Yūsuf's professional life except that he lectured at the ʿUmariyya *madrasa* in al-Ṣāliḥiyya, and led a life of teaching and scholarship. A large number of Damascus manuscripts contain notes from his own hand certifying the audition of himself or of his pupils and family. Most of his own work consists of small booklets (*adjzāʾ*), unstructured and *isnād*-based, like the reading copies of *ḥadīth* which he used for study and teaching. His works, and the certificates related to them as well, are almost exclusively preserved in his own handwriting; it is thus obvious that his energetic activity did not meet with much response in his time. His personal library, of which he listed 600 titles, he gave to the ʿUmariyya, although his pupil Ibn Ṭūlūn [*q.v.*] bought some works from Yūsuf's children, and much of the ʿUmariyya *waḳf* library was subsequently dispersed, with its remaining remnants incorporated into the Ẓāhiriyya library.

Yūsuf b. ʿAbd al-Hādī is praised as both a *muḥaddith* and a *faḳīh* by his biographers, although his Ḥanbalī learning was more in the field of historical studies than legal ones. However, his works, only partly printed, go far beyond these fields to include theology, biography, *sīra*, *adab*, medicine, etc. He was especially interested in the topography of Damascus and its buildings, cf. his *Rasāʾil dimashḳiyya*, Damascus 1988, and *Thimār al-maḳāṣid fī dhikr al-masādjid*, Damascus 1975; he wrote a history of al-Ṣāliḥiyya, partly preserved in quotations by Ibn Ṭūlūn in his *Ḳalāʾid* and in the abridgement of Ibn Kanān, *al-Murūdj al-sundusiyya al-fatḥiyya fī talkhīṣ Taʾrīkh al-Ṣāliḥiyya*, Damascus 1947. He also wrote brief treatises on aspects of everyday life, e.g. a *K. al-Ṭibākha* and a *K. al-Ḥisba*, ed. Ḥabīb Zayyāt, in *Machriq*, xxxv [1937], 370-6, 384-400). With the increased interest in him during recent decades, several of his specifically religious and legal works have been edited and published, e.g. in *fiḳh* and biography, his *K. Ḳawāʿid al-kulliyya fi 'l-ḍawābiṭ al-fiḳhiyya*, Beirut 1994; *al-Durr al-naḳī*, Djudda 1991; *Muʿdjam al-kutub* (mostly Ḥanbalī titles), Riyāḍ 1989; *al-Djawhar al-munaḍḍad fī ṭabaḳāt mutaʾakhkhirī aṣḥāb Aḥmad*, Cairo 1987; *Akhbār al-nisāʾ*, Ḥims 1993. On dogmatics and piety: *al-Tamhīd fi 'l-kalām ʿalā 'l-tawḥīd*, Riyāḍ 1997; *Baḥr al-damm fī man takallam fī 'l-Imām Aḥmad*, Beirut 1992; *Faḍl lā ḥawl wa-lā ḳuwwa illā bi 'llāh*, Damascus 1995; *al-Istiʿāna bi 'l-Fātiḥa*, Damascus n.d. On *Sīra*: *al-Shadjara al-nabawiyya*, Damascus 1994; *Iḳtibās al-iḳtibās bi-ḥall mushkil Sīrat Ibn Sayyid al-Nās*, Cairo 1937. In *adab*: *Itḥāf al-nubalāʾ bi-akhbār al-kuramāʾ wa 'l-bukhalāʾ*, Cairo 1989; and ed. Yusrā ʿA. ʿAbd Allāh, Beirut 1410/1990. See also for his life and lists of his works, Brockelmann, II², 130-1, S II, 130; Kaḥḥāla, xiii, 289; Fedwa Malti-Douglas, *Yūsuf ibn ʿAbd al-Hādī and his autograph of the* Wuqūʿ al-Balāʾ bil-Bukhl wa-l-Bukhalāʾ, in *BEO*, xxxi (1979), 17-50. A survey of his work is given by Ṣalāḥ Muḥammad al-Khiyamī, in *MMMA*, xxvi/2 (1982), 775-809.

YŪSUF B. ʿABD AL-RAḤMĀN b. Abī ʿUbayda **AL-FIHRĪ** (*ca.* 72-142/691-759), last governor of al-Andalus before the accession to power of the Umayyad ʿAbd al-Raḥmān I.

Great grandson of the conqueror of the Maghrib,

ʿUḳba b. Nāfiʿ [*q.v.*], he also belonged to one of the most prestigious Arab families to have settled in the Muslim West, renowned on account of its aristocratic Ḳurashī lineage and the participation of several of its members in the conquest of both shores of the Strait. Two brothers, Ḥabīb and ʿAbd al-Raḥmān, sons of Abū ʿUbayda ʿUḳba b. Nāfiʿ, accompanied the troops of Mūsā b. Nuṣayr [*q.v.*] at the time of the first crossing in the direction of al-Andalus. The former of the two remained in the Iberian Peninsula as lieutenant of ʿAbd al-ʿAzīz, son and successor of Mūsā, who was later assassinated. Subsequently, both brothers returned to Ifrīḳiya.

Yūsuf, born in Ḳayrawān, remained in Ifrīḳiya; after the return of his father, quarrels between the two of them induced him to leave for al-Andalus, governed at the time by Bishr b. Ṣafwān (103-9/721-7). He became governor of al-Andalus in 129/746 and was able to rely, initially at least, on the general support of the various factions dividing the Arabs of the Iberian Peninsula. But this unanimity was short-lived and the governor of al-Andalus, portrayed by the sources as a man totally manipulated by his lieutenant al-Ṣumayl b. Ḥātim [*q.v.*], was obliged throughout the term of his mandate to confront rebellions and revolts. With more or less ease he succeeded in suppressing the unrest; he even dared to rid himself of the tutelage of al-Ṣumayl, sending him away to govern the Upper March [see al-thughūr. 2.], a most difficult assignment. The latter came close to losing all prestige here, Yūsuf being unable—or unwilling—to come to his aid. Finally, rescued by members of his *djund*, al-Ṣumayl returned to his post in the service of Yūsuf without, apparently, bearing any grudge against the latter regarding the perils to which he had exposed him. Furthermore, when in 138/755 the Umayyad pretender ʿAbd al-Raḥmān b. Muʿāwiya, the future ʿAbd al-Raḥmān [*q.v.*], arrived in al-Andalus, al-Ṣumayl remained loyal to his superior even though the Umayyad agents approached him in the first instance, recognising his power and his influence.

All attempts to reach a peaceful accord having failed, the confrontation between the Umayyad and al-Fihrī took place: the latter was defeated at the battle of al-Muṣāra near Cordova, in Dhu'l-Ḥidjdja 138/May 756. Yūsuf fled to Toledo, where he mustered a large army with the intention of resisting ʿAbd al-Raḥmān b. Muʿāwiya, but subsequently, in negotiations near Granada, Yūsuf agreed to surrender to the sovereignty of the Umayyad, retaining in exchange his life and his possessions (Ṣafar 139/July 756). Having established himself in Cordova, he was unable to resist for long the advice of those who incited him to attempt the recovery of his power; he escaped from the city and made his way to Merida, recruiting a significant contingent of troops before advancing on Cordova. But before reaching this city, he took the field against the governor of Seville, ʿAbd al-Malik b. ʿUmar b. Marwān, suffering a bloody defeat at his hands. Once more, and for the last time, Yūsuf was forced to take flight. He was assassinated near Toledo in 142/759. According to some sources, his murderers were two of his slaves; according to others the perpetrators were the inhabitants of a hamlet which he was passing through, people who wanted to put an end to the war and knew that this would only be achieved through the death of one of the two adversaries, the loser.

Bibliography. 1. Sources. In addition to all the chronicles concerning this period, prominent among which are the *Akhbār madjmūʿa*, ed. and tr. Lafuente y Alcantara, 56-100, reference may be made to the biography of Yūsuf al-Fihrī in Ibn al-Abbār, *al-Ḥulla al-siyarāʾ*, ed. H. Muʾnis, ii, 347-50; Ibn al-Khaṭīb, *Iḥāṭa*, iv, 339-40; Maḳḳarī, *Nafḥ al-ṭīb*, ed. I. ʿAbbās, iii, 25-6.

2. Studies. See those listed in the *Bibl.* to al-ṣumayl b. ḥatim. (L. Molina)

YŪSUF b. **ABI** 'l-**SĀDJ DĪWDĀD**, Abu 'l-Ḳāsim, commander of Transoxanian Iranian origin who acted as governor of Ādharbāydjān, Arrān and Armenia for the ʿAbbāsid caliphs 288-315/901-28 as part of the short-lived line of Sādjid governors there established by his brother Muḥammad in 276/189-90. He was killed in battle near Kūfa by the Ḳarāmiṭa or Carmathians [see karmaṭī] in Dhu 'l-Ḥidjdja 315/ February 928, the last effective governor of his line in northwestern Persia. For details of his career, see sādjids.

Bibliography: See that for sādjids, and add C.E. Bosworth, *The New Islamic dynasties*, Edinburgh 1996, 147 no. 70. (Ed.)

YŪSUF b. **ʿĀBID** al-**IDRĪSĪ**, Moroccan mystic (*ṣūfī*) claiming Idrīsid descent, born *ca.* 966/1559, died 992/1584. After studying for six years at the *madrasas* of Fās and in the meantime visiting leading Moroccan Ṣūfīs, he proceeded in 990/1582 to Egypt to meet the leader of the Bakriyya order, Shaykh Muḥammad b. al-Ḥasan al-Bakrī. Eventually Yūsuf arrived in Ḥaḍramawt and, in 1036/1627, at the age of seventy, he dictated there his *Multaḳaṭ al-riḥla*, an account of his journey from Morocco to Ḥaḍramawt, in which he gave the reasons for his departure to the East and his decision to settle in Ḥaḍramawt.

Nearly three-quarters of the ms. (120 folios, found in the Great Mosque of Tarīm in Ḥaḍramawt) deal with social and cultural life in Morocco during the reign of the Saʿdid sultan Aḥmad al-Manṣūr. Yūsuf describes, at some length, the curricula at the various *madrasas* in Fās as well as the numerous Ṣūfī orders (*ṭarīḳas*) in Morocco. He also briefly describes the defence measures taken on Morocco's Atlantic coast to ward off Portuguese attacks.

In Cairo, Yūsuf b. ʿĀbid attended lectures on *tawḥīd* (dogmatic theology) at al-Azhar delivered by Shaykh Makhlūf al-Maghribī who informed him that Abū Bakr b. Sālim, Ḥaḍramawt's leading Ṣūfī, was expecting a young *sharīf* from Fās. "If you are a *sharīf*," Shaykh Makhlūf said to Yūsuf, "go to him, for he is your man." Yūsuf thereupon visited Shaykh Abū Bakr b. Sālim in ʿAynāt near Tarīm in Ḥaḍramawt, where the *shaykh* gave him a warm welcome and named him a teaching *shaykh*.

When Abū Bakr died eight months later (992/1584), Yūsuf thought of returning to Morocco, but he changed his mind as Shaykh Abū Bakr had urged his disciples to learn *ʿilm al-tawḥīd* at his hands, since Ḥaḍramawt was devoid of this *ʿilm*. At Sayʾūn mosque, Yūsuf lectured on al-Sanūsī's *al-ʿAḳīda al-ṣughrā* and became famous throughout Ḥaḍramawt for his lectures on *ʿilm al-tawḥīd*.

The picture depicted of Yūsuf b. ʿĀbid in the ms. is that of a Ṣūfī with a great thirst for knowledge and a fervent desire to meet prominent Ṣūfī leaders in Morocco and the East. The impression that comes across in the ms., however, is that of a second-rate writer who lacks style and originality.

Bibliography: Yūsuf b. ʿAbīd al-Idrīsī, *Multaḳaṭ al-riḥla*, ed. and annotated, with full introduction and bibliography, by Amīn T. Ṭībī, Casablanca 1988. (Amin Tibi)

YŪSUF b. **TĀSHUFĪN** or Tāshfīn, Abū Yaʿḳūb, the real founder of the Almoravid dynasty

[see AL-MURĀBIṬŪN] in North Africa (r. 453-500/1061-1106). According to tradition, he was born in 400/1009-10, but nothing at all is known of him until 453/1061 when his cousin Abū Bakr b. ʿUmar made him his lieutenant before himself returning to the Sahara to suppress a revolt. Yūsuf was a Berber from the Banū Turgut (Turguit) of the Ṣanhādja [*q.v.*]. He married the beautiful and redoubtable Zaynab al-Nafzawiyya, and on her advice, cleverly got rid of his cousin and completed the conquest of Morocco before passing across the Straits of Gibraltar into Spain to achieve his victory at Zallāḳa [*q.v.*].

Yūsuf's history is bound up with that of the Almoravids, and, enjoying the favour of the chroniclers, he is often placed in parallel with the Reyes de Taifas [see MULŪK AL-ṬAWĀʾIF] whom he sent into exile, and the story of his relations with the poet-prince al-Muʿtamid Ibn ʿAbbād [*q.v.*], exiled under surveillance to Aghmāt [*q.v.*], continue to inspire authors. Yūsuf laid down the foundations for a kingdom spanning North Africa and Spain, and introduced an innovation by adopting the title *Amīr al-Muslimīn* preceded by that of the fictitious caliph ʿAbd Allāh (see E. Lévi-Provençal, *Le titre souverain des Almoravides*, in *Arabica*, ii [1955], 266-8). He appeared as a model Islamic prince, virtuous, even-tempered and sober. The historians' near-unanimity in his favour is explicable both by his personal qualities and also by a documentary aspect: virtually all information on him stems from the lost work by the official historiographer of the Almoravid dynasty, Abū Bakr Yaḥyā b. Muḥammad, Ibn al-Ṣayrafī, his *al-Anwār al-djaliyya fī akhbār al-dawla al-murābiṭiyya.*

Yūsuf is said to have had a dark brown complexion (*asmar* can also mean a distinctly black colouring), and he may have been incapable of expressing himself in Arabic. With his ascetic and frugal habits, he remained faithful to his way of life and his desert costume; living off barley meal, milk products and camel meat, he seems to be the antithesis of the indolent and ostentatious princes of al-Andalus. He was pious, level-headed and generous towards the *fuḳahāʾ*, whom he never failed to consult, and avoided acts of cruelty. A great strategist, he put together a formidable army comprising Sudanese contingents, Christian mercenaries (*ʿUlūdj*) and the Saharan tribes of the Gudāla, Lamtūna [*q.vv.*] and Masūfa. This remarkable fighting instrument enabled him to secure the conquest of Morocco and much of the Iberian peninsula. He never hesitated in negotiations and entrusted great powers to his commanders. Enriched by the Saharan trade, he minted coins which became, for several centuries to come, the basis of the gold standard for the Mediterranean lands. His personal skills were shown in his bloodless removal of his cousin Abū Bakr and his attachment to his own side of his cousin's Saharan vassals. He is said to have used ruses to rid himself of uncertain allies like the ruler of the mountain Gzoula. The foundation of Marrakesh is attributed to him, although the city's bases were laid by Abū Bakr (cf. Lévi-Provençal, *La fondation de Marrakech (462/1070)*, in *Mélanges d'histoire et d'archéologie de l'Occident musulman*, ii, Algiers 1957, 117-20), but Yūsuf enlarged and embellished the capital, just as he did other major urban works in places like Sabta, Fās/Fez and Tilimsān/Tlemcen.

He died in Muḥarram 500/September 1106 and was buried in Marrakesh; he was succeeded by his equally long-reigning son ʿAlī.

(HALIMA FERHAT)

YŪSUF b. ʿUMAR AL-THAḲAFĪ [see AL-THAḲAFĪ].

YŪSUF AKČURA (Akčurin, Akçuraoğlu) (1876-1935), Tatar nationalist and Pan-Turkist intellectual.

Born at Simbirsk, on the Volga, he began his education at military schools in Istanbul, continuing it in Paris (1900-3), at the Ecole des Sciences Politiques. Active within Young Turk circles in the Ottoman Empire and Western Europe, his intellectual make-up shows influences from the reform-minded Tatar revival in Kazan and the increasing interest in past Turkish culture in Istanbul. Thus equipped, he returned to Russia in 1904, teaching, writing in the Tatar press and entering politics, trying in this way to recruit Muslims for concerted action in the 1905 First Duma. He subsequently promoted the political and cultural organisation of such Muslims in a Pan-Turk perspective. Following the Young Turk Revolution of 1908, he emigrated to Istanbul. In order to preach his own cultural-nationalist and Pan-Turkist views [see PAN-TURKISM], in 1911 he founded *Türk Yurdu*, editing and contributing to what soon became a first-class intellectual journal. In the Republic of Turkey, he participated in the Kemalist resistance, joined the People's Party, and was elected to the Grand National Assembly. In addition, he taught, lectured and published historical studies, which led to his election as first president of the *Türk Tarih Kurumu* [see MADJMAʿ ʿILMĪ. iii].

In *Üč ṭarz-ı siyāset* ("Three systems of politics"), he analysed the main lines of government policies in recent Turkish history: (a) Ottomanism, intended to unite all nationalities into one Ottoman nation; (b) Pan-Islamism [*q.v.*], aiming at basing Ottoman power on Islamic solidarity; and (c) Pan-Turkism [*q.v.*], whose goal was to establish "a political Turkish nationality based on race". A realist in his approach, Akčura examined each of the three for usefulness and feasibility, favouring Pan-Turkism, the main obstacle to whose achievement being internal, hence manageable. A stu-

dent of politics, he held that Pan-Turkism was the best panacea for the empire, by providing it with the cohesion of ethnic solidarity, internal and external, needed to save it from dismemberment or to rebuild it after a possible loss of territory. In the Kemalist Republic, whose founder had clearly rejected Pan-Turkism, Aḳčura still managed to defend the concept when writing its history in 1928 in *Türk yılı*. However, then and later he advocated Turkism (i.e. Turkish national solidarity), rather than Pan-Turkism, on the cultural level, with due respect to social and economic factors.

Bibliography: Yūsuf Aḳčura's two main works are *Üč ṭarz-i siyāset*, in *Türk* (Cairo), nos. 24, 25, 27 (April-May 1904), repr. in book-form, Cairo 1907 and repeatedly afterwards; and *Türk yılı*, Istanbul 1928, which he edited and in which he wrote his *Türkčülügün ta'rīkhi we gelishimi*, 287-455, later repr. in bookform. Among his numerous pamphlets and articles are *Midhat-Pacha, la constitution ottomane et l'Europe*, Paris 1903; *ʿUlūm we ta'rīkh*, Kazan 1906; *Mewḳūfiyyet khāṭiraları*, Kazan 1906, 2nd ed., Istanbul 1330/1912; *Eski shūrā-yi ümmet'de čiḳan maḳālelerimden*, Istanbul 1329/1911; *Türk, Djermān we Islāwların münāsebāt-i ta'rīkhiyyeleri*, Istanbul 1330/1912; *L'Etat actuel des aspirations des Turco-Tatares musulmans de Russie*, Lausanne 1916; *Rūsyā üserā muraḳhkhaṣi Yūsuf Aḳčūrā Bey'in rāpōrū*, Istanbul 1919; *Ta'rīkh-i siyāsī nōtları: sharḳ mes'elesine dā'ir*, Istanbul 1920; *Müʿāṣir Avrūpā'da siyāsī we idjtimāʿī fikirler we fikrī djereyānlar*, Istanbul 1339; *Siyāset we iḳtiṣād ḥaḳḳinda khiṭābe we maḳāle*, Istanbul 1924; *Osmanlı devletinin dağılma devri (XIII. ve XIX. asırlarda)*, Istanbul 1940. (J.M. Landau)

YŪSUF, ʿALĪ (1863-1913), successful Egyptian journalist and editor of the influential newspaper daily *al-Mu'ayyad*, which dominated the Muslim press from 1889-1913.

Shaykh ʿAlī Yūsuf was born in the remote village of Balṣafūra in Upper Egypt, to poor parents. His father died a year after his birth, forcing his mother to move with him back to her own village of Banī ʿAdī, where he was given a traditional religious education, memorising the Ḳur'ān by the age of 12. In 1881, at the age of 18, he left for Cairo, where he enrolled in al-Azhar. It seems that he quit his studies prematurely; the Khedive ʿAbbās Ḥilmī II [*q.v.*] suggests in his *Mudhakkirāt* (published in *al-Miṣrī*, April-July 1951) that Yūsuf frequented the Teachers' School (*madrasat al-muʿallimīn*), but there is nothing to show that he received a diploma or even completed his studies there (Ṣāliḥ, 19).

Yūsuf's early ambitions were in the realm of poetry, and in 1885 he published a *dīwān* entitled *Nasamāt al-saḥar* ("Whiffs of dawn", Ṣāliḥ, 20-1; Kaḥḥāla, vii, 10 gives *Nasīm* or *Nasama*, cf. Brockelmann, S III, 84); it encountered little success, whereupon he quickly turned to writing prose of a more journalistic nature. From submission of articles, he moved to actual employment, learning the trade of newspaper editing first at Aḥmad Fāris al-Shidyāḳ's [see FĀRIS AL-SHIDYĀḲ] daily *al-Ḳāhira*, and from there at *Mir'āt al-Sharḳ* sometime after 1884. After suspension of this latter daily in March 1886, he founded in 1887 his own weekly literary newspaper *al-Ādāb*, with the financial support of an al-Azhar crony, Shaykh Aḥmad Māḍī, who two years later would again come to his aid financially with the establishment of the Egyptian nationalist daily *al-Mu'ayyad* that would set ʿAlī Yūsuf on the political map.

The first newspaper to be published by an Egyptian, *al-Mu'ayyad* appeared on the streets a few months after publication of the pro-British *al-Muḳaṭṭam*, and quickly began serving as a forum for nationalist and reformist circles, backed by the Egyptian Prime Minister Muṣṭafā Riyāḍ Pasha, who had seriously fallen out with Lord Cromer, the British Consul-General. The paper soon gained a large following, publishing columns by such leading nationalists as Muṣṭafā Kāmil, Muḥammad Farīd and Saʿd Zaghlūl [*q.vv.*], and reformists such as Rashīd Riḍā, Muḥammad ʿAbduh, Ḳāsim Amīn (whose treatise on the emancipation of women, *Taḥrīr al-mar'a*, was serialised), and al-Kawākibī [*q.vv.*]. Throughout its existence, *al-Mu'ayyad* enjoyed the support of the Khedive ʿAbbās Ḥilmī, who had formed close personal ties with ʿAlī Yūsuf. When in 1898 the Khedive moderated his anti-British stance, after the Fāshōda [*q.v.*] incident between the British and the French, ʿAlī Yūsuf and *al-Mu'ayyad* followed suit. This move would constitute a break with the more vehement anti-British nationalists and result *inter alia* in Muṣṭafā Kāmil and Aḥmad Luṭfī al-Sayyid [*q.v.*] founding rival newspapers, weakening the position of *al-Mu'ayyad* as organ for the nationalist movement. The interdependency of khedival patronage, on the one hand, and unequivocal khedival policy support, on the other, effectively meant the dissolution of both the newspaper and its mirror political organisation, the Constititutional Reform Party (*Ḥizb al-Iṣlāḥ al-Dustūrī* [see ḤIZB, at Vol. III, 515b])—formed by ʿAlī Yūsuf in 1907 in support of the Khedive and with his continued backing—upon ʿAlī Yūsuf's death in 1913.

Although history might judge his role as ephemeral, ʿAlī Yūsuf and his newspaper were a catalyst for some major reforms in the Egyptian state, in particular in the field of educational reform. One of two scandals that rocked Egyptian society, with ʿAlī Yūsuf in the middle, revolved around his refusing in 1896 to divulge the source of information he had published in defiance of British censorship; the case, which became known as "the telegraph incident", stands as a fine case of two press principles unrecognised at the time: freedom of expression and the confidentiality of sources. ʿAlī Yūsuf was acquitted, and he became a hero to the populace who applauded his standing up to their oppressors. The second scandal, in 1904 when he eloped with a daughter of one of the country's most venerated families against her father's wishes, introduced him to the seamier side of celebrity. His humble beginnings and unworthy trade—the press was not considered a particularly noble institution, despite his earlier successes—were not deemed suitable to a woman of his bride's background, and the marriage was annulled by court ruling, with a large part of the same populace now decrying his audacity. The Khedive and other powerful friends of ʿAlī Yūsuf intervened, however, and the father Shaykh ʿAbd al-Khāliḳ al-Sādāt later did allow his daughter's marriage.

In 1912 ʿAlī Yūsuf resigned from *al-Muʾayyad* to succeed his brother-in-law ʿAbd al-Ḥamīd al-Bakrī as head of the Ṣūfī order al-Wafāʾiyya (de Jong, 187 n.), only to die a year later, on 25 October 1913, of heart failure.

Bibliography: A comprehensive biography of ʿAlī Yūsuf and his influential newspaper is Sulaymān Ṣāliḥ, *al-Shaykh ʿAlī Yūsuf wa-djarīdat al-Muʾayyad. Taʾrīkh al-ḥaraka al-waṭaniyya fī rubʿ ḳarn*, 2 vols., Cairo 1990. An English study is the unpubl. Ph.D. thesis of Abbas Kelidar, *Shaykh Ali Yusuf, political journalist and Islamic nationalist. A study of Egyptian politics, 1889-1913*, Univ. of London 1967 (unseen); and idem, *Shaykh ʿAli Yusuf, Egyptian journalist and Islamic nationalist*, in Marwan R. Buheiry (ed.), *Intellectual life in the Arab East, 1890-1939*, Beirut 1981, 10-20. For a contemporary view, in particular of the marriage scandal, see A. Goldschmidt, Jr. (tr.), *The memoirs and diaries of Muhammad Farid, an Egyptian nationalist leader (1868-1919)*, San Francisco 1992, 112-14; see also Aḥmad Bahāʾ al-Dīn, *Ayyām lahā taʾrīkh*, ³Cairo 1967, 63-85; Salāma Mūsā, *al-Ṣiḥāfa, ḥirfa wa-risāla*, Cairo 1963, 22. (PERI BEARMAN)

YŪSUF AL-BARM, sc. Yūsuf b. Ibrāhīm, a *mawlā* of Thaḳīf, rebel against ʿAbbāsid rule in eastern Khurāsān during the caliphate of al-Mahdī, d. 160/777 or shortly afterwards.

Yūsuf's rising was only one of a series of revolts by both Arabs and local Iranians in Transoxania and eastern Khurāsān during the early ʿAbbāsid period. Whilst the sources impute certain religious motives to Yūsuf, including use of the traditional slogan summoning to *al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*, it seems that the revolt was basically political and directed against the arbitrary power of the caliph and his governors. From Gardīzī's account, it appears that its epicentre was northern Afghānistān, the regions of Bādhghīs, Marw al-Rūdh, Gūzgān and Ṭālakān [*q.vv.*]. It was suppressed, largely by al-Mahdī's general Yazīd b. Mazyad, with Yūsuf being captured and then crucified at Baghdād. A further revolt in Khurāsān, by a grandson of Yūsuf's, is mentioned during al-Maʾmūn's caliphate.

Daniel, *The political and social history of Khurasan under Abbasid rule 747-820*, Minneapolis and Chicago 1979, 166-7.

(C.E. BOSWORTH)

YŪSUF KĀNDHALAWĪ DIHLAWĪ, MAWLĀNĀ MUḤAMMAD, the son of Muḥammad Ilyās (1885-1944), the founder of the Tablīghī Djamāʿat [*q.v.*], whom he succeeded in the leadership of this movement (d. 1965).

He was born in his ancestral village of Kāndhala in 1917. He studied exoteric religion with his father at Nizamuddin (Dihlī), and then later at the seminary of Sahāranpūr, which is associated with Deoband [*q.v.*], where his maternal uncle, Muḥammad Zakariyyā Kāndhalawī (d. 1982), also taught. The latter was his teacher of *ḥadīth*, whose two daughters he married. He devoted himself firstly to studying *ḥadīth* and wrote the *Īmānī al-Akhbār*, an unfinished commentary on the *Sharḥ maʿānī al-athār* commentary on the *ḥadīth* of Imām al-Ṭaḥāwī.

He was initiated into the Ṣābiriyya Čishtiyya brotherhood by his father, who from 1938 onwards forced him, despite his reticence, to take part in the missionary journeys of the Tablīghī Djamāʿat, where he showed his talents as an orator. On the death of his father in 1944 he was elected *amīr* of the movement and lived in its headquarters at Nizamuddin. He made five pilgrimages to Mecca (1938, 1955, 1959, 1961 and 1964), firstly with his father and then with hundreds of Tablīghīs. He died at Lahore (Pakistan) on 12 April 1965, and his body was interred at Nizamuddin.

The name of Muḥammad Yūsuf remains connected with the worldwide expansion of the Tablīghī Djamāʿat [*q.v.*, where further details are given]. He systematically, applied ideas which his father had tried to put into practice at the time of the pilgrimage in 1938. He firstly consolidated the enterprise of the movement in the subcontinent by creating secondary centres in Western Pakistan and then Eastern Pakistan (now Bangladesh). He then established it worldwide by sending missions to the Arab countries from 1946 onwards, to Western countries from 1950 onwards, and to Afro-Asian countries from 1956 onwards. The essential structure of his worldwide network was in place at the time of his death in 1965, however little this was recognised in that period.

(M. GABORIEAU)

YŪSUF KARAM (1823-89), Maronite *shaykh* and notable from the village of Ihdin (northern Lebanon), who during the socio-religious hostilities in 1860 emerged as one of the most prominent leaders of the Christians—the other, very different one being Ṭanyūs Shāhīn [*q.v.*]—without, however, providing effective military support to his coreligionists fighting against the Druzes in central and southern Mount Lebanon.

Impelled by far-reaching political aims, Karam initially managed to be (alternately) on good terms with French, British, and Ottoman representatives in Lebanon. These relations rapidly deteriorated, when in 1861, and after the establishment of a new administrative order which was to be permanently headed by a governor (*mutaṣarrif*) of non-Lebanese origin, Karam's own hopes of appointment as governor over all Mount Lebanon came to nothing. Though the first *mutaṣarrif*, Dāwūd Pasha [*q.v.*], tried hard to win Karam's cooperation, the latter finally refused and started a rebellion from his northern home, thereby expressing a wide-spread discontent among the Maronite Christians who had hoped for greater political influence in the new system. After three years in exile, Karam returned, only to start a new revolt against the Ottomans who, on their part, avoided open fighting as much as possible. When, therefore, Karam's actions gradually petered out, the Ottomans declared

an amnesty and in 1867 sent Karam into a second exile, this time permanently, in Algiers and Europe. He died in Italy after many vain requests for permission to return to Lebanon. For ten years he was paid by Istanbul a considerable monthly stipend, which only stopped because of his ongoing polemical publications against the régime in Mount Lebanon and his contacts with various political groups and states.

In spite of Karam's total failure to change the *status quo* in Lebanon, dissatisfaction among the Maronites continued. Karam was held up by them, as well as by certain circles in France, as the supreme example of the Lebanese national hero. Biographers and local historians clearly testify to such a view of "Lebanese Christian nationalism". On the other hand, one must consider Karam's contacts with the Algerian *amīr* ʿAbd al-Ḳādir regarding an Arab confederation (i.e. a certain autonomy for Arabs within the Ottoman Empire), first still under Muslim leadership, but in the long run, on a non-confessional, secular and national basis. In this vein, the role and the success of freemasonry [see FARMĀSŪNIYYA], in general rather influential among intellectuals and politicians in these times, was obviously very crucial: an issue which, however, still needs further research.

(A. HAVEMANN)

YŪSUF KHĀN RIḌWĪ, Mīrzā, Mughal commander and governor, d. 1010/1601-2.

The son of Mīrzā Aḥmad Riḍwī, he was appointed by the Emperor Akbar *ṣūbadār* or governor of Kashmīr in 995/1586-7. He imposed Mughal authority in the Kashmīr valley and secured the submission of the Čak [*q.v.* in Suppl.] chiefs. Yūsuf Khān himself rebelled against the Mughals in 1001/1592-3, but came back into favour and in 1003/1594-5 was *dārūgha* or superintendent of the Ṭop-khāna or arsenal.

Bibliography: Mohibbul Hasan, *Kashmir under the sultans*, Calcutta 1959, index; A.R. Khan, *Chieftains of the Mughal empire during the reign of Akbar*, Simla 1977, 18-19, 52; M. Athar Ali, *The apparatus of empire. Award of ranks, offices and titles to the Mughal nobility 1574-1658*, Delhi 1985, index for Akbar's reign. See also KASHMĪR. I. (ED.)

YŪSUF KHĀṢṢ ḤĀDJIB, Turkish poet of the 5th/11th century whose work, the *Ḳutadhghu bilig* [*q.v.*] ("Wisdom of Royal Glory"), completed in 462/1069-70, is the oldest monument of Islamic Turkish literature. He is not mentioned in any other source, so we must deduce what we know about him from the three surviving mss. of his work. (For the interrelation of the mss., see R. Dankoff, *Textual problems in* Kutadgu Bilig, in *Jnal. of Turkish Studies*, iii [1979], 89-99.) Two of these contain a verse prologue, written perhaps a century after the work was completed, and all three contain a shorter prose prologue which appears to be a summary of the verse prologue. These prologues provide the information that the author was originally from Balāsāghūn [*q.v.*]; that he completed the work in Kāshghar, where he presented it to the king, Tavghač Bughra Khān; and that he was awarded the office of *khāṣṣ ḥādjib* or privy chamberlain. His patron has been identified as the Khān Ḥasan b. Sulaymān, ruler of the eastern branch of the Ḳarakhānids or Ilek-Khānids [*q.v.*]. Yūsuf himself names him near the beginning of the work, in a section entitled "Ode to spring and praise of Ulugh Bughra Khān".

The prologues also, trying to assimilate the work to known genres, somewhat contradictorily label it both as a "Mirror for Princes" (*Adab al-mulūk*, etc.) and a "Book of Kings" (*Shāh-nāma*). The only similarity it has to the *Shāh-nāma* of Firdawsī [*q.v.*] is the use of the *mutaḳārib* metre. To be sure, Yūsuf does, in an introductory passage (ll. 276-80), identify the legendary hero of the Turks, Tonga Alp Er, with Afrāsiyāb, the ruler of Tūrān in the Persian epic, thus following a tradition also found in the work of his contemporary, Maḥmūd al-Kāshgharī [*q.v.*]. But in the body of the work, Tonga Alp Er appears only once (l. 5861) as the authority for one of the sententious sayings of political wisdom (*bilig*) attributed elsewhere to various anonymous Khāns and Begs. Still, one can say that Yūsuf, in attempting to assimilate the Inner Asian traditions of royalty and wisdom to the Irano-Islamic ideals of statecraft in a Turkish dress, was following the model of Firdawsī, who had consolidated the Iranian traditions of kingship within the framework of Islamic culture in a Persian dress (see Dankoff, *Qarakhanid literature and the beginnings of Turco-Islamic culture*, in *Central Asian monuments*, ed. Hasan B. Paksoy, Istanbul, 1992, 73-80; H. Inalcik, *Turkish and Iranian political theories and traditions in Kutadgu Bilig*, in *The Middle East and the Balkans under the Ottoman Empire*, Bloomington 1993, 1-18).

"Mirror for Princes" is a more accurate generic label. The *ḳut* ("glory, fortune") referred to in the title is the Turkish equivalent of Persian *farr*, designating the ruler's charisma, and *Ḳutadhghu bilig* literally means "The wisdom that conduces to royal glory or fortune". The first half of the work is largely concerned with traditional matters of statecraft: the virtues of the king and his obligations to his subjects; the qualities and duties of the various courtiers; and the establishment of justice. The second half, however, introduces a new theme: the conflict between the political goals of the state and the religious conscience of the individual. Here Yūsuf incorporates Ṣūfī asceticism as an opposing, and ultimately complementary, ideal to the prevailing community and statecraft ethics; in this regard he may be considered a precursor of al-Ghazālī [*q.v.*].

Another original contribution of Yūsuf to the Mirror for Princes genre is to dramatise the issues in the form of dialogues, within a frame story, among characters with significant allegorical names. The king, Kün Toghdi ("the sun has risen"), who represents justice, longs for a good vizier, and his trusty chamberlain presents to him Ay Toldi ("the moon is full"), who represents fortune. Ay Toldi suffers a fatal illness, but before he dies he commends his son Ögdülmish ("praised"), who represents intellect, to the king's care. The king discovers the young man's virtues and appoints him as chief counselor. Ögdülmish advises the king well on worldly matters, and then informs him of a kinsman named Odhghurmish ("awakened"), who represents otherworldly concerns. The king summons Odhghurmish to court, and the latter, after refusing several times to abandon his life of ascetic withdrawal and religious contemplation, eventually visits the king

and gives him counsel of a moral and spiritual nature, before he too dies. The allegory, then, can be interpreted as follows: Justice, to be exercised properly, requires Fortune, Intellect, and Religion; but Fortune cannot be depended on, and worldly and otherworldly concerns are not easily reconcilable; thus Justice and Intellect are left to administer the realm.

Appended to the text in one of the mss. are two odes in which the author complains of old age and expresses disillusion with the world and the times. As a high court official, with leanings toward the solitary life (ll. 6570-1), Yūsuf apparently suffered within himself the conflicts which he portrayed in his work. In the course of writing a Mirror for Princes, he broke the traditional boundaries of that genre. Especially in the second part of the work, in the confrontation and reconciliation of the wise courtier and the Ṣūfī ascetic, Yūsuf achieved a dramatic portrayal quite unique in Islamic literature.

Bibliography: In addition to the references given above and the older literature in the *Bibl.* of KUTADGHU BILIG, see the Introd. to Yūsuf Khāṣṣ Ḥādjib, *Wisdom of royal glory (Kutadgu bilig). A Turko-Islamic Mirror for Princes*, tr. with an introd. and notes, by R. Dankoff, Chicago 1983, where older interpretations are weighed and criticised. The standard edition of the text is by R.R. Arat, *Kutadgu bilig. I. Metin*, Istanbul 1947. Arat also published the three mss. in facsimile, *Kutadgu bilig tıpkıbasım*, 3 vols. Istanbul 1942-3, and a modern Turkish tr. *Kutadgu bilig. II. Tercüme*, Ankara 1959, repr. 1974. For the English tr. by Dankoff, see above. There is also a Russian tr., Yūsuf Balasaguni, *Blagodatnoe znanie*, redaktsionnaya kollegiya Yu.A. YŪSUF AND ZULAYKHĀ, a popular story in mediaeval Islamic literature.

1. In Persian literature.

The Biblical story of Joseph and Potiphar's wife, who later received the name of Zulaykhā, entered into Persian literature mainly through Arabic sources, consisting first of Sūrat Yūsuf (XII) of the Ḳur'ān, and then of commentaries on this "most beautiful of stories" and traditions on the lives of ancient Prophets (*kiṣaṣ al-anbiyā'* [*q.v.*]). The many additions to the story as it was told in the holy scriptures were derived from the Hebrew Midrash and Christian works in Syriac (cf. the studies by M. Grünbaum), which were further elaborated in the post-Ḳur'ānic Muslim sources. An immediate influence of the former on Persian versions is unlikely, except in the case of Judaeo-Persian literature.

The Persian versions include full narratives, but also episodic anecdotes and incidental references which occur in prose works, didactic and lyrical poetry and even in drama. The motif was particularly suited to be used by Ṣūfī writers and poets as one of the most important models of the relationship between the manifestation of Divine beauty in the world and the loving soul of the mystic.

Persian commentaries on sūra XII often provide a mystical reading of the story, for instance in the 6th/12th-century *tafsīr* of Maybudī [*q.v.*]. An earlier commentary focussing on this Ḳur'ānic story is *Anīs al-murīdīn wa-rawḍat al-muḥibbīn* by Abu 'l-Ḳāsim Maḥmūd b. Ḥasan Djayhānī, which was wrongly attributed to the Ṣūfī *shaykh* al-Anṣārī al-Harawī [*q.v.*] (see R. Levy, in *JRAS* [1929], 103-6). In 475/1082-3, the text was incorporated into Abū Naṣr Bukhārī's *Tādj al-kiṣaṣ*, a collection of prophetic legends (cf. Storey, i, 159, 1208, 1251; Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 96). Many similar works are extant, the most notable among them being *Djāmi' laṭā'if al-basātīn*, or *al-Sittīn al-djāmi'*, by Tādj al-Dīn al-Ṭūsī (Storey, i, 29, 1195; Storey-Bregel', i, 185; ed. M. Rawshan, Tehran 1345 *sh.*/1966, repr. Tehran 2526 *Shāhanshāhī*/1977); *Ḥadā'iḳ al-ḥaḳā'iḳ* (known also by other titles) by Mullā Mu'īn al-Dīn Farāhī Miskīn (d. 907/1501-2; see Storey-Bregel', i, 125-6, iii, 1337; ed. Sayyid Dj. Sadjdjādī, Tehran 1346/1967-8); and *Kashf al-arwāḥ* or *Yūsuf-nāma*, by Pīr Djamāl Ardistānī (d. 879/1474-5; Munzawī, i, 55). As far as their contents are concerned, they do not differ much from the collections of edifying tales which also include both general and specialised writings (listed in Storey, i, 168-72; supplemented in Storey-Bregel', i, 529-36, iii, 1409-13).

To the Ṣūfīs, the Yūsuf story became a rich source of motifs to be used as examples for key concepts of their discourse. 'Ayn al-Ḳuḍāt al-Hamadhānī [*q.v.*] saw the Sūra from the beginning to end as a parable of "God's way" (*rāh-i Khudā*), which the mystic should travel (*Nāmahā*, ed. 'Alī-Naḳī Munzawī and 'Afīf 'Usayrān, Tehran 1348-50 *sh.*/1969-71, i, 366-8), more specifically of "the way of love": to understand the meaning of this story one should have the nature of a Zulaykhā and the nickname of a Madjnūn [*q.v.*] (*ibid.*, ii, 130). According to Rūzbihān Baḳlī [*q.v.*], it contains emblems of two different kinds of love: the passion of a lover as well as the devotion of a father to his lost son (*'Abhar al-'āshiḳīn*, ed. H. Corbin and M. Mu'īn, Tehran-Paris 1958, 9; see also al-Hudjwīrī [*q.v.*], *Kashf al-maḥdjūb*, tr. R.A. Nicholson, London 1911, 310). In his allegory of mystical love, Shihāb al-Dīn Yaḥyā al-Suhrawardī [*q.v.*] introduced Yūsuf as the personification of eternal beauty as it is manifested in the created world (*Mu'nis al-aḥrār*, in al-Suhrawardī, *Oeuvres philosophiques et mystiques*, ii, ed. S.H. Naṣr and H. Corbin, Tehran-Paris 1970, 267-91).

As far as we at present know, the story was first treated in narrative poetry by Abu 'l-Mu'ayyad Balkhī (*fl.* 4th/10th century) and Bakhtiyārī, a poet who cannot now be identified. Their works have perished, but they are both mentioned as predecessors by the still unidentified writer of a *mathnawī* entitled *Yūsuf u Zulaykhā*, probably dating from the 5th/11th century. It is extant now in at least two different redactions, the number of its distichs varying between 6,500 and 9,000 (cf. Rieu, ii, 545-6). The manuscripts show considerable discrepancies in the introductory parts of the poem, and these seriously aggravate the problem of the true authorship of this poem. It was composed in the *mutaḳārib* metre, also used in the *Shāh-nāma*. For long it has indeed been regarded as a work by Firdawsī [*q.v.*], an attribution which can be found already in the prose introduction to the redaction of the *Shāh-nāma* made in 829/1425-6 for the Tīmūrid prince Bāysunghur [*q.v.*]. According to some copies, the poet is said to have turned away from the writing of poems about ancient Iranian heroes to devote himself to a more pious subject. There are also passages indicating an origin in western Persia, but they do not match other facts known about Firdawsī's life. His authorship was accepted, among others, by the translator O. Schlechta-Wssehrd and the editors H. Ethé and Ḥ.M. Ṣiddīḳ, but has been challenged in recent scholarship. As an alternative, Sa'īd Nafīsī proposed the name of Amānī, an otherwise unknown poet who seemed to mention himself in a line of the poem which can, however, also be read differently. The most reli-

able clue for the dating is a dedication, found in one manuscript, to Shams al-Dawla Ṭughānshāh, the son of Alp Arslān, who in the second half of the 5th/11th century acquired a reputation as a patron of the poets at his court in Harāt [see SALDJŪKIDS. VII. 1. Literature]. The poem still awaits a critical edition and a systematic investigation of its textual history (for a recent *status quaestionis*, see F. de Blois, in Storey-de Blois, v/2, 576-84).

In the "Firdawsī" version, the story is framed by the life of Yūsuf's father, the prophet Yaʿḳūb, and is told on the lines of traditional prophetic legend. Wahb b. Munabbih and his "son" Kaʿb al-Aḥbār, famous transmitters of the *Isrāʾīliyyāt* [*q.v.*], are mentioned as spokesmen. The religious significance of the subject is emphasised, but no mystical meanings are implied. There are several miraculous traits and emotional episodes are elaborated in particular. The poem is an interesting specimen of the romantic *mathnawī* before the time of Niẓāmī [*q.v.*].

In spite of its relative obscurity in the history of Persian literature, the impact of this poem is noticeable in later works, the oldest among which is the Judaeo-Persian version by Shāhīn-i Shīrāzī [*q.v.*]. It is as a part of his *mathnawī* on the Book of Genesis, now known as the *Bereshit-nāma*, written *ca.* 1358 in the metre *hazadj-i musaddas-i maḥdhūf*. Although Shāhīn was familiar with Hebrew sources, he based his work mainly on the Persian Muslim tradition, in particular the "Firdawsī" version (cf. Bacher, 117-24).

The most celebrated version in Persian was undoubtedly written by Mullā ʿAbd al-Raḥmān Djāmī [*q.v.*] in 888/1483 as one of the parts of his *Khamsa* [*q.v.*]. The subject takes the place of Niẓāmī's *Khusraw wa Shīrīn*, with which this poem shares some features, including the metre, which happens to be the same as that used by Shāhīn. Djāmī turned the story into a mystical allegory explaining in numerous asides the spiritual teachings implied. The love story is placed in the foreground so that Zulaykhā's role becomes equal to that of Yūsuf. As a pair they personify the epiphany of eternal beauty and the responses to it on the part of the loving human soul.

Djāmī had many imitators, most of whom met with little success (see Munzawī, iv, 3331-46). The only exception is the *Yūsuf wa Zulaykhā* by Mullā Farrukh Ḥusayn Nāẓim [*q.v.*], a poet of the 11th/17th century at the court of the Beglerbeg ʿAbbās Ḳulī Khān at Harāt. Although he mainly followed Djāmī's poem, he also refers to Firdawsī as a predecessor. Nāẓim's poem gained some popularity, especially in Central Asia. It was printed at Lucknow 1286/1869-70, and Tashkent 1322/1904-5; fragments were quoted by Hermann Ethé in the notes to his edition of the "Firdawsī" version.

The story of Yūsuf offered a very rich store of motifs to poets of lyrical *ghazals* which were not exclusively used in a religious context. In love poetry, Yūsuf appears as the supreme example of male beauty. To call a beloved person "another Yūsuf" or "the Yūsuf of the age" constituted a strong hyperbole. In nature scenes, the rose is a said to be a Yūsuf, reigning over the Egypt of the meadow. The story of his career provided the contrast between suffering and glory. This is often succinctly expressed by a pun on the words *čāh* ("the pit") and *djāh* ("honour"). The dimple in the beloved's chin is compared to the pit. Other elements of the story frequently used by *ghazal* poets are Yaʿḳūb's weeping over the separation from his son, his retirement to the "house of sorrows" (*bayt al-aḥzān*), his blindness and the recognition of Yūsuf's shirt by the smell, Zulaykhā being drawn from behind her chaste veil by her passion, and the Egyptian ladies who cut their hands instead of the oranges (for examples in *ghazals*, see Daniel Meneghini Correale and Riccardo Zipoli, *The collected Lirica persica*, i, Venice 1998). In the didactical *mathnawīs* of Sanāʾī, ʿAṭṭār, Djalāl al-Dīn Rūmī, Saʿdī [*q.vv.*] and others, the story is represented both through anecdotes and incidental references.

The aspect of suffering inherent in Yūsuf as a narrative character provided an obvious parallel to the martyrdom of al-Ḥusayn b. ʿAlī [*q.v.*]. In the *mathnawī* ascribed to Firdawsī, God's wish to comfort Muḥammad for the future suffering of his grandson is said to have been the reason for the revelation of Sūra XII. In *Yūsufiyya*, an outspokenly Shīʿī work written by Muḥammad Hādī Nāyīnī between 1243-50/1827-34, the stories of Yūsuf and al-Ḥusayn are brought together (Storey, i, 172; Storey-Bregel', i, 527). The cruel handling of Yūsuf by his brothers was also adopted in the repertoire of passion plays [see TAʿZIYA]. Popular prints of Yūsuf's story are still being sold in Iran (cf. U. Marzolph, *Dāstān-e Šīrīn*, Stuttgart 1994, 69-70).

(J.T.P. DE BRUIJN)

2. In Turkish literature.

The revealed story of the prophet Yūsuf, amplified by authenticated commentaries, occupies a central place in al-Rabghūzī's [*q.v.*] prose stories of the Prophets in Khwārazmian Turkish, with interspersed poetry, completed in 710/1310. The author gives the arguments for its being the best of stories. Yūsuf, the dreamer of dreams, favourite of his father, cast into a well by his brothers, rescued and sold to the master of a caravan, led into Egypt, encounters the female protagonist, Zulaykhā, the wife of the mighty one of Egypt, ʿAzīz Miṣr [*q.v.*] named Ḳiṭfīr [*q.v.*]. Her beauty is second only to that of Yūsuf. She wishes to commit adultery with him; Yūsuf is acquitted but goes to prison, where he interprets dreams. Zulaykhā's love is eventually rewarded when as an aged, blind and poor widow, she is brought before Yūsuf. She recovers her youth, her beauty, and her sight, and Djibrīl performs their marriage (cf. that of Fāṭima [*q.v.*]). Zulaykhā is a virgin, Ḳiṭfīr having been an eunuch. They live together for eighteen years and have seven children.

The story provided enough realistic detail and drama to make it part of the "romantic" *mathnawī* [*q.v.*] tradition. The divinely-attested inclination of Yūsuf toward Zulaykhā (Ḳur'ān, XII, 24) could be invoked subliminally in every rendering of Zulaykhā's hopeless illicit love; a love that eventually mutated into contemplation of the divine beauty personified in Yūsuf.

Ḥamdī [*q.v.*] completed his Ottoman Turkish version soon after Djāmī [*q.v.*] in 897/1492. His *mathnawī*, written in the *khafīf* metre interspersed with *ghazals*, is considered the best Turkish poem on the theme. Putting some emphasis on Yūsuf and his envious brothers, Ḥamdī devotes much space to Zulaykhā, the daughter of King Taymūs, who marries Ḳiṭfīr by mistake, having fallen in love with Yūsuf in a dream; her attempts to obtain her desire by entreaty and by craft, and Yūsuf's almost faltering resolution, flight, and imprisonment; his appointment as *ʿazīz* of Egypt, followed by the death of Zulaykhā's husband, are described.

She ages through grief and is reduced to poverty and blindness, but turns in penitence to God and finds favour in His eyes. Yūsuf marries Zulaykhā, whose beauty and sight are restored to her; her love, however, has passed from love for Yūsuf to the love of the divine beauty, so that she flees from him and they are equal in their love. Reunited with his father and brothers, Yūsuf dies. Zulaykhā dies on his grave (*HOP*, ii, 151-72).

More research is needed into the old Turkish versions mentioned in ḲIṢṢA. 3 (a), including that by Shayyād Ḥamza [*q.v.*]; a Mamlūk version in Anatolian Turkish was composed by Ḍarīr [*q.v.*]; and a Čaghatay rendering was completed in 874/1469 by Ḥāmidī. For Kemālpashazāde's and Yaḥyā Beg's [*q.vv.*] versions, see MATHNAWĪ. Fuḍūlī's [*q.v.*] often-illustrated *Ḥadīḳat al-suʿadā'*, recounting stories and legends of prophets and saints, contains scenes from the life of the prophet Yūsuf and of Zulaykhā's love for him.

(BARBARA FLEMMING)

YŪSUFĪ, the *takhalluṣ* or pen-name of Yūsuf b. Muḥammad b. Yūsuf Khurāsānī, native of Khwāf and émigré to India, where he became physician to the Mughal emperors Bābur and Humāyūn [*q.vv.*] and a prolific writer on medical topics. It is also very probably the same Yūsufī who is the author of an *inshā'* collection (see below).

Several of his Persian medical works are extant, including a *Dalā'il al-bawl* on diagnosis through examination of the urine; a *Dalā'il al-nabḍ* on interpretation of the pulse; various *ḳaṣīdas* and *ḳiṭʿas* on medical topics; *rubāʿiyyāt*, on which he himself wrote a commentary, the *Djāmiʿ al-fawā'id*, with notes on the various diseases of the body; and a metrical treatise on food, *Mak'ūl u mashrūb* (most of these have been printed in India).

The *munshī* Mawlānā Yūsufī also worked for the Mughals, and in 940/1533-4 composed for his son Rafīʿ al-Dīn Ḥusayn and other students a collection of model letters, the *Badā'iʿ al-inshā'*, which was very popular in Muslim India. The book begins with a *muḳaddima* on the different kinds of modes of address which must be regulated by the relation of the correspondents to one another in rank; Yūsufī then divides the different kinds of correspondence (*muḥāwarāt*) into three parts: letters to persons of higher rank (*murāḳaʿāt*), of the same rank (*murāsalāt*) and to those of lower rank (*riḳāʿ*). Then comes a series of forms of letters which are divided into sections, such as sultans to sultans of higher, equal or lower rank, princes to sultans and princes, princesses to princesses, *amīrs*, grand-viziers, viziers, officials of the *Dīwān*, secretaries (*munshī*), sayyids (*sādāt*), *shaykhs*, judges, poets and astronomers. Then come what one might call private letters: to relations and friends on various occasions, e.g. if a reply has not been received, when on a journey, on grief at separation, longing for home, on returning soon, faithlessness, reconciliation, excuses, congratulations, condolences etc. A *khātima* gives examples of addresses (*ʿunwān*).

(E. BERTHELS-[C.E. BOSWORTH])

YŪSUFZAY, the name of a Pakhtū-speaking tribal confederation inhabiting the North West Frontier Province of Pākistān and divided into two broad groups: the Mandans (Mandaṅrs) who (together with the Baīzay Yūsufzays) inhabit the so-called Yūsufzay plain (mainly falling into Mardān district and divided into the *taḥṣīls* of Sawābī and Mardān); and (confusingly) the Yūsufzays of the valleys of Swāt, Pandjkōra, Dīr and Bunēr and of the region to the east of the river Indus lying on the western slopes of the Black Mountain. These two main groups are in turn subdivided into many smaller divisions. In terms of political organisation, the Yūsufzays may be described as an acephalous segmentary society in which considerable power was exercised by *khāns* and *maliks* and at various times by the numerous class of people with claims to religious sanctity (*sayyids*, *pīrs*, *faḳīrs*, *mullās*, etc.). In Swāt [*q.v.*], the descendants of one religious leader, the Ākhūnd of Swāt, created a state which endured from 1917 to 1969. In Dīr [*q.v.*], uniquely, *khāns* ruled continuously for over two hundred years.

The Yūsufzays moved into the region which they now occupy in the late 15th and early 16th centuries, expelled the Dardic-speaking Dilazāk population and took up agricultural life, apportioning the conquered land between the various lineage groups. A peculiar feature of the land settlement was the institution of *wēsh*, or periodic redistribution of the holdings, a practice which continued well into the 20th century. Under Mughal rule, the Yūsufzays alternately resisted and submitted, but from the end of the 17th century were more or less wholly independent, a status which they strove to maintain under Sikh rule. However, after 1849 the Mandans of the Yūsufzay plain were gradually brought under British administrative control (although there were frequent expeditions, chiefly against the Baīzays) and their country developed through irrigation, becoming a centre for the production of sugar cane and tobacco. The Mandans enlisted in the British Indian army in considerable numbers.

The Yūsufzays beyond the mountains, however, long retained their independence. During the 19th century, there was constant fighting among the *khāns* of Swāt, Pandjkōra, Dīr and Bunēr, and Yūsufzays from these regions clashed with British forces at Ambēla in 1863 and during the 1897 tribal uprising. Despite frequent raids from Swāt into British-administered territory, no British troops entered the Swāt valley until the Čitrāl Relief Expedition of 1895 [see ČITRĀL]. British authority also came into conflict with the Yūsufzays of the Black Mountain and several expeditions were launched against them, notably in 1888, 1891 and 1892. Dīr and Swāt were included in the Mālākand Political Agency in 1895; Bunēr and the Black Mountain Yūsufzays were dealt with separately. Under Pākistān, this system was at first continued but eventually Dīr, Swāt and Bunēr were incorporated as districts in the Mālākand division and designated as Provincially Administered Tribal Areas. It is difficult to estimate the number of Yūsufzays, but on the basis of the 1981 census for Mardān district and estimates for the mountainous valleys, the total was likely then to have been somewhere between 3 and 4 million.

YÜZELLİLİKLER, T., literally, "the 150 [undesirables]".

During the peace negotiations between the Allies and Turkey at Lausanne in 1923, Great Britain demanded that a general amnesty in Turkey should form part of the final settlement. The British were concerned that, otherwise, those inhabitants of Turkey who had been opposed to Muṣṭafā Kemāl and his nationalist movement in Anatolia would be persecuted. The Turkish delegation would not agree to an amnesty without exceptions, but it did not have at its disposal a list of persons whom it wanted excepted. Hence in the end, the Turkish representatives on the subcommission on minorities, led by Dr. Riḍā Nūr [*q.v.*], accepted a general amnesty but reserved the Turkish government's right to ban up to 150 (unnamed) Muslims from the country.

Drawing up the list of these 150 undesirables proved difficult. The Lausanne treaty was ratified without it and when the law on the general amnesty was passed on 16 April 1924, it was still not ready. Finally, on 23 April, a list was produced with only 149 names on it. After some discussion, one more person was added and on 1 June 1924 the list was accepted by Parliament. Those banned were all people who had opposed the nationalists in 1919-22. They fell into the following categories: persons from Sultan Meḥemmed VI's personal and political entourage; from his counter-insurgency forces (the *Ḳuwā-yi Inḍibāṭiyye*); members of the bureaucracy, the armed forces and the police; the renegade nationalist commander Čerkes Edhem's [*q.v.*] family and supporters; and journalists.

(E.J. ZÜRCHER)

Z

ZĀʾ [see ZĀY].

ẒĀʾ, the seventeenth letter of the Arabic alphabet, numerical value: 900. The transliteration /ẓ/ reflects an urban/sedentary pronunciation as "emphatic" (pharyngealised) /z/. Sībawayh (d. 177/793 [*q.v.*]), however, describes the sound as an "emphatic" voiced interdental, thus /ḏ̣/ (iv, 436), and this is the way it is pronounced in those dialects, mainly Bedouin, that have preserved the interdentals. There is, however, an additional complication: with very few exceptions (in Northern Yemen, see Behnstedt, 5), all modern dialects of Arabic have coalesced the sounds represented by <ẓ> and <ḍ> into one sound, which is *grosso modo* pronounced /ḏ̣/ in the Bedouin dialects and /ḍ/ in the sedentary ones. In loans from the *fuṣḥā*, sedentary dialects, which do not have interdentals, imitate these sounds by using the corresponding sibilants, thus /ḏ̣/ > /ẓ/. Compare *muḏ̣āhara* > *muẓāhara* "demonstration" vs. the correct dialect correspondence in *ḏ̣uhr* > *ḍuhr* "noon". The two resulting

pronunciations were secondarily used to distinguish between *ẓāʾ* and *ḍād*, and this became the pronunciation in urban Standard Arabic which was also received into Western transliteration. In what follows the original /ḏ̣/ will be used instead of /ẓ/.

The phoneme /ḏ̣/ forms the "emphatic" unit of the interdental triad. For the articulation of the interdentals, see THĀʾ. Minimal pairs would be: *ḏ̣alla* "he remained" vs. *t̲h̲alla* "he tore down", *d̲h̲alla* "he became humble", and also *ḍalla* "he went astray" (the /ḍ/ being, according to Sībawayh's description, a voiced "emphatic" lateral [see ḌĀD]).

The Arabic /ḏ̣/ appears in cognates as /ṭ/ in Aramaic, /ṣ/ in Akkadian, Hebrew and Ethiopic. The fact that this phoneme is represented mainly by voiceless realisations has prompted its Proto-Semitic reconstruction as */ṯ̣/. The voiced representative in Arabic may have something to do with the shift of "emphasis" from glottalisation to pharyngealisation. But apart from that, it is phonemically immaterial whether the "emphatic" unit in a triad is voiced or voiceless; it is simply marked by "emphaticness". As a matter of fact, a voiceless /ṯ̣/ is attested in some Northern Yemeni dialects of Arabic (see Behnstedt, 5-6, 183-4), and a voiceless /ṭ/ occurs in North African sedentary dialects (see Cantineau, 45).

For assimilations, especially in sandhi, see Cantineau, 42-3, and Fleisch, 86-7. In the conjugation of verbs, the following assimilations are noteworthy: *ḥafiḏ̣tu* > *ḥafiḏ̣ṭu* "I preserved", some grammarians even note *ḥafiṭṭu* (see Fleisch, 92). For the VIIIth form the most common assimilation of the infixed /t/ in **iḏ̣talama* is *iḏ̣ḏ̣alama* "he was wronged", but *iḏ̣ṭalama* and *iṭṭalama* are also mentioned (Fleisch, 95-6).

As already mentioned, most Bedouin dialects preserve the interdentals and thus /ḏ̣/. The same is true for a fair number of rural sedentary dialects. Otherwise, the sedentary dialects (urban as well as some rural dialects) shift the interdentals to dentals, thus /ḏ̣/ > /ḍ/. Unusual shifts of interdentals to sibilants (Kozluk-Sason group and some other dialects of Anatolian Arabic, Uzbekistan-Arabic) with /ḏ̣/ > /ẓ/, and to labiodentals (Siirt group and some other dialects of Anatolian Arabic) with /ḏ̣/ > /v/ have also been noted (Jastrow, 34-9).

The grapheme <ẓ> is identical with that of <ṭ>, and distinguished from it by a superscript dot. The reason for this is the "cognate" principle in Nabataean spelling: the Nabataeans realised that Nabataean /ṭ/ corresponded to both /ṭ/ and /ḏ̣/ in Arabic. They, therefore, used the grapheme <ṭ> to render both Arabic sounds, thus e.g. the name *Ḥanḏ̣al*^{un} appears as *ḥnṭlw* in Nabataean inscriptions. The diacritical mark was added later; it is first attested in a papyrus by Ḳurra b. S̲h̲arīk [*q.v.*], dated Rabīʿ I, 91 = February 710 (Gruendler, 74b). Gruendler, 72-5, gives a description and tables for the development of the shape of *ṭāʾ*/*ẓāʾ* from Nabataean to Arabic.

In Persian and Persian-influenced languages, the sound /ḏ̣/ in Arabic words is pronounced /z/.

ZĀB, with its pl. ZĪBĀN, the name of a region of the Algerian Sahara around Biskra [*q.v.*], extending over an area of *ca.* 150 km/100 miles from west to east and 40 km/25 miles from north to south.

1. Geography.

The Zībān form part of the great Saharan piedmont which stretches from Agadir to Gabès. Within this, they have a special dual role, the first role derived from their position at the narrowest part of the Mag̲h̲ribī mountain rim and at the opening of the great southern axis of communication of eastern Algeria (Skikda-Constantine-Batna-Biskra); and second, from the agricultural potential of the region, found hardly anywhere else in this piedmont, arising from suitable soils and important water resources. It is therefore not surprising that oases and important towns (e.g. Biskra) are to be found there and that the region has been attractive to the ruling powers of the Mag̲h̲rib from Roman times onwards.

The Zībān comprise a depressed and short sloping surface, which starts off at 100 m/328 feet altitude on the southern slopes of the Atlas and ends in the salt flats of the S̲h̲aṭṭ Melhrir at 40 m/130 feet below sea level. From its piedmont nature, it has scattered soils of a muddy and fertile nature. From its contact with the Saharan Atlas, it has rich water supplies, including what were previously 80 rich springs, now tapped through bore holes. From its low-lying position and very dry atmosphere come the quality of its dates, the most famed being the Deglet Nour (Daglat al-nūr) variety. The Zāb G̲h̲arbī, in the west, has plentiful water and rich palm groves; the Zāb S̲h̲arḳī, in the east, has fewer deep water supplies but benefits from its position up against the Aurès (Awrās) Mountains and from flood waters, so that it is now a region of market-gardening irrigated by diesel pumps.

Thus the Zībān at present form a prosperous agricultural region, with 1.8 million palm trees spread over 20,000 ha and 16,000 ha of market gardens. With 22,000 workers engaged in agriculture, the Zībān are the leading agricultural region of the Algerian Sahara, ahead of the Wād G̲h̲īr. This prosperity has been encouraged by legislation (1983) on land ownership, by a good network of local roads and by the founding of a certain number of agrarian centres. The total population is *ca.* 500,000, with its urban centre, Biskra, having over 150,000. This last has a central position within the region, is a great commercial centre for dates (with 100,000 palm trees there), as well as being the administrative centre of a *wilāya* and a gateway to the Sahara, commanding the Skikda-Tuggurt communications axis (a *route nationale* and railway). It now has a university, an airport and an industrial zone. It has no medina, but a centre laid out by the Europeans; thanks to its rapid expansion, the town has spread across the Wād Biskra (*ca.* 500 m/1,630 feet wide) to the left bank, so that three main bridges now link the two halves. See further, BISKRA.

2. History.

Little is known of the early history of the Zībān, but date cultivation goes back over two millennia. The name Zāb may be connected with Zabi, a Roman town in the vicinity of Hodna [see ḤUḌNA]. The Romans established some control over the region by constructing fortified places (Gemellae, Tolga, Vescera, Thouda and Badia), and the research of J. Baradez (in his *Fossatum Africae, recherches aériennes sur l'organisation des confins sahariens à l'époque romaine*, Paris 1949) has thrown light on the *limes* in this part of the Mag̲h̲rib. The Sāḳiyat Bint al-Rās, a long trough running for 60 km/37 miles to the south of the Wād D̲j̲adī, marked along its length by mounds some 12 m/

40 feet in diameter, constituted an advance barrier of this *limes* against the nomads. From the 5th to the 7th centuries, Biskra was an episcopal see, and one bishop, Opta, was canonised as a saint.

It was in this region that in 63/683 the Arab commander ʿUḳba b. Nāfiʿ [*q.v.*] was killed, near an oasis with a village that subsequently bore his name, Sīdī ʿUḳba. Under the Aghlabids, the Zībān enjoyed a period of prosperity. Biskra was surrounded by a rampart and ditch, suburbs grew up *extra muros*, and forts built for the Arab *djund*. In the 17th century, the Turks placed a garrison in Biskra. After an outbreak of plague there in 1740, the town, then on an elevation in the heart of the palm groves, spread into seven village centres scattered through the groves, which remain to the present day. During the entire Turkish period, and then the early French one, the Zībān were dominated by two great families, the Bū ʿAzzāz and the Ben Gana, who each struggled for sole control (for details, see BISKRA).

The *amīr* ʿAbd al-Ḳādir [*q.v.*] intervened there, contributing to the local anarchy, until in 1844 the Duc d'Aumale occupied Biskra; but after the massacre of the French garrison later that year, a new fort and a new town were constructed outside the palm groves, 2 km north of the old town. In 1849, the region of Zaʿatča in the western Zībān broke out in revolt under Bū Ziyān, involving also the Aurès and members of the Raḥmāniyya Ṣūfī brotherhood, but Bū Ziyān was unable to rally the rest of the country. Besieged in Zaʿatča by the French army for 52 days, Bū Ziyān's followers preferred to kill themselves rather than surrender; 10,000 palms were cut down, and the region substantially pacified.

AL-ZĀB, the name of two left-bank tributaries of the Tigris [see DIDJLA] in northern ʿIrāḳ, both of them rising in the Zagros mountain chain in Kurdistān.

1. The Great or Upper Zāb (*al-Zāb al-akbar* or *al-aʿlā*) was already known to the Assyrians, as *Zabu ēlū* "the upper Zāb", and appears in classical Greek as Λύκος (cf. *PW*, xiii, cols. 2391-2), Byzantine Greek as ὁ μέγας Ζάβας, in Syriac as *Zāḇā* and in later Armenian as *Zav*. In Kurdish it is known today as the *Zē'-i Bādinān* and in Turkish as *Zap*. J. Markwart discussed possible etymologies and suggested a link with older Aramaic *dēḇā*, also in Syriac, "wolf", older Armenian *gail* "wolf", a basic meaning which would account for the Classical Greek calque Λύκος (see his *Südarmenien und die Tigrisquellen nach griechischen und armenischen Geographen*, Vienna 1930, 429-30).

It rises in the modern Turkish *il* of Van near the frontier with Persian Ādharbāydjān, flows southwards through Hakkâri into the Kurdish region of north-eastern ʿIrāḳ, where its waters are utilised by the Bakhma dam, and then flows southwestwards to its confluence with the Tigris 47 km/30 miles south of Mawṣil, having received as a right-bank affluent the Khāzir [*q.v.*].

2. The Lesser or Lower Zāb (*al-Zāb al-aṣghar* or *al-asfal*) was called *Zabū šupalū* "the lower Zāb" by the Assyrians, in Classical Greek Κάπρος (see *PW*, x, col. 1921) and in Byzantine Greek ὁ μικρὸς Ζάβας or ὁ ἕτερος Ζάβας. In Kurdish it is known today as *Zē'i Koya*. It is formed from the confluence of several streams, but the main stream rises just over the border from ʿIrāḳ in Mukrī Kurdistān. Within ʿIrāḳ, it flows southwards after the Dukān dam past the town of Altun Köprü [see ALTÎN KÖPRÜ] and meets the Tigris 80 km/50 miles above Takrīt [*q.v.*].

In the period before Islam, the region between the two Zābs formed the Eastern Christian Church's ancient diocese of Adiabene, with its centre at Erbil, the later Irbil (see J.M. Fiey, *Assyrie chrétienne. Contribution à l'étude de l'histoire et de la géographie ecclésiastiques et monastiques du nord de l'Iraq*, Beirut 1965-8, i, 37 ff.), whilst the region to the north of the Upper Zāb formed the diocese of Marga (see *ibid.*, i, 225 ff.). In early Islamic times, these regions continued to be strongly Christian, with many monasteries spread through them.

The mediaeval Islamic geographers describe the two rivers (in *Ḥudūd al-ʿālam*, tr. Minorsky, 76, **al-Zābayn*) and the very fertile plains (the granary of ancient Assyria) along their lower reaches, and called them both *al-Madjnūn* "the demoniacally-possessed" from their impetuous courses as torrents coming down from the mountains. The Arab geographers state that the Great Zāb flowed from a district known as *Mushangar and Bābghish (Syriac, Bēṯ Barghash) and joined the Tigris at the monastery of ʿUmr Bārḳānā near the "new town" of al-Ḥadītha [*q.v.*]/Ḥadīthat al-Mawṣil. The Lesser Zāb joined the Tigris near the town of al-Sinn "the Tooth", known more specifically as al-Sinn of Bārimmā (see Le Strange, *The lands of the Eastern Caliphate*, 90-1; Schwarz, *Iran im Mittelalter*, 695).

The Great Zāb has played a considerable role in history, being several times mentioned in the campaigns of the Emperors Maurice and Heraclius against the Persians, e.g. in Heraclius's Assyrian campaign of later 617 when he led his army down the eastern bank of the Tigris, across the two Zābs, against the Sāsānid palace at Dastgird to the north of Ctesiphon (see J.B. Bury, *A history of the later Roman Empire from Arcadius to Irene (395 A.D. to 900 A.D.)*, London 1889, ii, 242). According to Theophylactus Simocatta, the lower course of the Great Zāb was navigable (ναυσίπορος), and it may be that inflated rafts or *keleks* [*q.v.*] were used for travelling downstream as they have been used up to modern times. A fierce battle was fought on its tributary the Khāzir between the Umayyad governor of ʿIrāḳ ʿUbayd Allāh b. Ziyād and the rebel Ibrāhīm al-Ashtar (67/686) [see AL-KHĀZIR]; above all, it was on the banks of the Great Zāb that the last Umayyad caliph Marwān II b. Muḥammad [*q.v.*] was decisively defeated by the advancing revolutionary forces of the ʿAbbāsids led by ʿAbd Allāh b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās in 132/750 (cf. M. Sharon, *Black banners from the East. The establishment of the ʿAbbāsid state—incubation of a revolt*, Jerusalem 1983, 13-14).

In modern ʿIrāḳ, attempts have been made to control the great volume of water and silt brought down each spring by snows melting in the Zagros Mountains, and to store water for irrigation purposes during the hot and dry summer, by the construction of dams at Dukān on the Little Zāb and Bakhma on the Great Zāb.

Bibliography: In addition to references given in the article, see Naval Intelligence Division, Admiralty Handbooks, *Iraq and the Persian Gulf*, London 1944, 102 ff. (C.E. BOSWORTH)

ZABADĀNĪ, the name currently given to a town of Syria, and also to an administrative region (*minṭaḳa idāriyya*), to a smaller administrative unit (*nāḥiya*) composed of eight villages and six farms (*mazraʿa*), and to a river which flows from the north through the town. Various fanciful etymologies have been suggested from *zabad*, some of them alluding to its fertility. Whatever the case, Zabadānī was and still is known for the abundance of its apple trees.

Under the Byzantines, the town of Zabadānī was attached to the bishopric of the town of Abilla in Sūḳ Wādī Baradā, but after the Arab-Islamic conquest of Syria, the bishopric was moved to Zabadānī. A pottery oil-holder (*maṭra*), used by Christian pilgrims to hold sacred oil and dating back to the 6th century A.D., has been found in Zabadānī; it bears pictures of the Virgin Mary, the Angel and the Star, and has a Greek inscription saluting Mary.

Located on the northern edge of the Zabadānī plain in the Anti-Lebanon, at an elevation of about 1,200 m/3,940 feet above sea level, the town of Zabadānī counted in the early 1990s about 17,000 inhabitants. In the mid-1950s, one-fourth of its population were Christians. It then had six mosques, a Greek Orthodox church and a Greek Catholic church. The town is about 47 km/30 miles to the north-west of Damascus and is attached administratively to the Rural Area of the Governorate of Damascus (*Muḥāfaẓat Rīf Dimashḳ*). It is bounded on the north by Sirghāyā; on the east by Blūdān and Baḳḳīn; and on the south by Maḍāyā and the valley of the Baradā river. All these locations are major summer resorts for Damascenes and other Syrians.

(ABDUL-KARIM RAFEQ)

ZĀBADJ, ZĀBIDJ, ZĀBAG, the name of an island placed in the northeastern part of the Indian Ocean by the Arabic geographical writers. It appears as early as the *Akhbār al-Ṣīn wa 'l-Hind* of Sulaymān al-Tādjir and in the *K. al-Masālik wa 'l-mamālik* of Ibn Khurradādhbih (3rd/9th century) and then in almost all subsequent texts, and the title of its ruler, the Mahārādj[ā], is also regularly used from an early date.

The location of Zābadj in Southeast Asia is certain. The Arabic authors describe it as a trading empire, and place it in relation to known places, such as India, Ḳimār [*q.v.*] (Khmer = Cambodia) and Kalāh. From this there emerges that we have a country on the route between India and China, but further south than these; al-Bīrūnī, *K. al-Tafhīm*, ed. R.R. Wright, London 1934, 16, actually places it on the equator. The authors state that the ruler of the country of Zābadj ruled from a capital of the same name over the islands of the "Eastern Sea", and amongst a considerable number of these islands are listed Djāwa, Kalāh and Wākwāk [*q.vv.*]. The Mahārādjā appears as main king in the land, but with subordinate governors (*maliks*) owing allegiance to him, and with a powerful army and navy. Abū Zayd, in G. Ferrand, *Relations de voyages et textes relatifs à l'Extrême Orient*, Paris 1913-14, ii, 95-7, has a long account of his attack on Cambodia, the only historical fact mentioned. One source describes people from dependent islands, and also from Cambodia, turning their faces towards Zābadj and prostrating themselves as a sign of their allegiance.

The capital Zābadj was a flourishing commercial centre and a rendezvous for foreign ships, those of the Arabs, the Indians and Chinese. The Zābadjīs are said to have traded as far as Africa and to have brought iron from there to sell on the Asian mainland (al-Idrīsī, tr. A. Jaubert, Paris 1836-40, 58). Foreign traders provided the state with much revenue. Local customs mentioned are ordeal by fire and the ceremony of *bersila* (i.e. sitting cross-legged out of politeness: the actual Malay word is used in the Arabic texts) before the Mahārādjā (*ʿAdjāʾib al-Hind*, ed. Van der Lith, 154, tr. Freeman-Grenville, 90).

The exact identification of Zābadj from the Arabic sources is virtually impossible, although it is almost certainly somewhere in the Western Indonesian archipelago. Early European scholars preferred Java, because of a similarity in names (Skr. *yava*, Gk. *iabadiou*) and the fact that extensive ruins there showed the previous existence of a large empire, but a strong case can also be made from these sources for Sumatra (since its products gold and camphor are described as coming from Zābadj) and a defensible case for Borneo. Ferrand produced the Indian term Djāwaka as the equivalent of Zābadj and of Chinese She-p'o-t'i = Sumatra. See further on this, W. Mahdī, *Wie hiessen die Malaien, bevor sie "Malaien" hiessen?*, in *Südostasien und Wir: Grundsatzdiskussionen und Fachbeiträge. Tagung des Arbeitskreises Südostasien und Ozeanien Hamburg 1993, Austronesiana*, ed. A. Bormann *et al.*, Munster 1993, 162-76.

Modern scholars have linked the Mahārādjā with the Buddhist Sailendra rulers of Southeast Asia, who seem to have been the only rulers to call themselves by this title before the 10th century; it is therefore probable that, when Arabic writers speak of the Mahārādjā, they are referring to that dynasty. Around this we must build all our hypotheses. The present theory with regard to the history of the Sailendras is that they first appeared in Java, and became the dominant dynasty there, soon after the reign of the Hindu Sanjaya about A.D. 760. By about 860, a younger branch of the family established itself on the throne of Śrīvijaya centred at Palembang and perhaps in later times at Malayu (Jambi), a throne which they held for over three centuries, or at least, the title of Mahārādjā remained with this kingdom until its dissolution. The Sailendra dynasty in Java had lost its control of Java by the beginning of the 10th century, hence all references originating after this time would apparently refer to the Sumatran kingdom. Similarly, all references before 860 would refer to Java. Any Arabic writer therefore who uses sources before 860 referring to the kingdom of the Mahārādjā would be dealing with the Sailendras in Java, and any Arabic writer using sources originating from the 10th century onwards would be talking about Sumatra. Thus the references of Ibn Khurradādhbih and possibly those of the other early geographers would refer to Java and not to Sumatra.

A major problem is identifying the place which Ibn Khurradādhbih, 46 (quoted by al-Idrīsī and in other texts), calls Djāba, near Salāhit, Harang (*H.z.l.dj* in al-Idrīsī, *Opus geographicum*, i, 81) and Māʾit, fifteen days' journey from the Spice Islands, with a king apparently a Buddhist, and producing coconuts, bananas and sugar-cane. From this text alone, it would appear that Djāba and the three neighbouring places were near

the southern tip of the Malay peninsula, since they fall on the route to China between the ports of Kalāh and Ḳimār. But there is a complication in that in both places where the *Akhbār al-Ṣīn wa 'l-Hind* mentions Zābadj, Ibn Khurradādhbih, 17, mentions Djāba; thus the former states that Kalāh is a kingdom of Zābadj and the latter that it belongs to the kingdom of Djāba al-Hindī. Also, Ibn Khurradādhbih mentions Buddhism as the religion of Djāba, but the expression Djāba al-Hindī could be expected to refer to a Hindu king there; possibly there were two Djābas, one Buddhist and one Hindu in faith. In fact, the name Djāba occurs in no other original text except in Ibn Khurradādhbih/al-Idrīsī, and if Djāba was in Sumatra, as the evidence suggests, it cannot be the same as Zābadj if this last, at this early stage, was located solely in Java. In any case, no more is subsequently heard of the name Djāba, unless its name is echoed in the later name of Djāwa. This is complicated by the fact that Java and Sumatra were frequently confused with one another and sometimes thought of as one island.

The next two relevant Arabic texts, those of Abū Zayd and al-Mas'ūdī, stem from the mid-10th century, i.e. the time when the Sailendras ruled from Šrīvijaya (in Arabic, Sirbuza) only, but seem to show a mixture of earlier and later material. Thus mention of Sirbuza as an island in the empire of the Mahārādjā could stem from the period when the seat of the Mahārādjā was still in Java but the kingdom of Šrīvijaya was under his sway. Abū Zayd's account of the attack on Cambodia obviously comes from the Java period. Cambodia was subject to attacks like this from Java in the later 8th century (767-87), but after 802, the accession date of Jayavarman, threw off all relics of allegiance to Java. Also, Abū Zayd's account does not stress the importance of maritime trade, as one would expect with Šrīvijaya, but rather, of agricultural prosperity, which one would connect with Java. Al-Mas'ūdī's information sounds more up-to-date and deals with a Zābadj which could quite easily be Sumatra. He stresses the importance of sea trade and that sailors from the Persian Gulf continually voyaged to Kalāh and Zābadj, all this connecting easily with Šrīvijaya, the later seat of the Sailendra Mahārādjā.

Thus the texts seem to suggest that Zābadj was formerly a toponym attached to the island of Java, and then the Arabic sources attached it to the Sailendra Mahārādjās as a kind of title, i.e. the king of Zābadj, and then to the empire which he controlled. After the fall of the Sailendras in Java *ca.* 907, the main court of the dynasty was transferred to Šrīvijaya but Zābadj still remained as a loose term for the Sailendra empire in general. Almost contemporary with this transfer of the name to the Sumatran empire, the Arabic sources begin to mention Šrīvijaya in the geographical and travel accounts as Sirbuza (with various readings). The position of this last is fairly obvious from the texts. The *'Adjā'ib al-Hind*, ed. Van der Lith, 176, tr. Freeman-Grenville, 104, places it at the extremity of the island of Lamūrī and on a bay which penetrates 50 farsakhs into the island. Apart from the exaggerated distance, the description could well apply to Palembang in southeast Sumatra. The local crocodiles are frequently mentioned. Arab sailors would apply the name of the town to the whole island.

Thus it appears that, from the time of al-Mas'ūdī in particular, the Arabic authors had two names for the same thing, sc. Sirbuza and Zābadj. Insensible to or unaware of political conditions, they are interested primarily in Sirbuza for its trade, and regarded it as merely a province of the Mahārādjā's empire with its own governor or petty king, who levied dues on ships bound for China (*'Adjā'ib*, 111). The description of the place and its products is just what one would expect of the port of Palembang at this time. The term Zābadj, on the other hand, remained connected with the Mahārādjā and became more the name of an empire and less that of a place, so that even Sirbuza became "an island of Zābadj". The capital of the empire is unnamed, but is obviously a Sumatran town on an estuary. It is in fact only through studying non-Arabic sources that the Arabic Sirbuza can be shown as the capital of the Mahārādjā's empire. On Arabic evidence alone, one might think that the capital was further north and nearer the Malacca Straits, although it is possible that there were periods in the history of the empire when the capital was in fact further north, so that these sources may have in them an element of truth.

A further development in the history of Zābadj can be seen in Yāḳūt's mention (early 6th/12th century) of Djāwa (thus spelt with *wāw*, not the earlier *bā'*), which, he says, is the first part of China and is on the sea coast; merchants do not go to China, but only to Djāwa. This is likely to be Sumatra, since direct trade with China had been cut off and Arabic ships only went as far as Kalāh and Sirbuza at this time. The new Djāwa was an important trading centre, and this new reference tallies with the information of Marco Polo and other European authors that the island we know as Sumatra was called Java [the Less] (see Yule-Cordier, *The Book of Ser Marco Polo*, London 1903, ii, 284, 286 n. 1). Authors like the historian Rashīd al-Dīn and the traveller Ibn Baṭṭūṭa (cf. *Riḥla*, iv, 224, 228 ff., tr. Beckingham, iv, 873, 876 ff.) show that Djāwa meant for them Sumatra. Also, contemporary information in Ibn Sa'īd (d. 672/1274) provides a full description of the island, although placed to the south of the islands of the Mahārādjā; he gives a town of Djāwa in the centre of the island, but has no mention here of Sirbuza. The Chinese annals mention no embassies to China from San-fo-ch'i between 1178 and 1370, although the Ming annals say that this place continued to send embassies until the end of the Sung dynasty, and it is possible that, during the 13th century, Šrīvijaya lost its importance in Southeast Asian trade, the state of Malayu on the Jambi river possibly taking its place, especially as other sources than the Arab ones do not mention Šrīvijaya at this time. The popular Filipino belief that Zābadj and "Sanfotsi" (San-fo-ch'i) are in fact to be located in the Philippines is based on uncritical readings of the terms in the sources (e.g. the 13th-century *Chu fan-chi*, 75 ff.) and would appear rather to be the product of nationalist zeal.

(G.R. TIBBETTS and SHAWKAT M. TOORAWA)

AL-**ZABĀNIYYA** (A.), a word found in Ḳur'ān, XCVI, 18, usually interpreted by the commentators as the guardians of Hell or else the angels who carry off the souls at death [see MALĀ'IKA. 1]. A. Jeffery, The *foreign vocabulary of the Qur'ān*, Baroda 1938, 148, thought that an origin from Syriac *zabūrā*, the *ductores* who, says Ephraim Syrus, lead the departed souls for judgment was likely; but W. Eilers, *Iranisches Lehngut im arabischen*, in *Indo-Iranian Jnal.*, v (1962), 220, favoured an Iranian etymology, from MP *zen(dān)bān* "warder, keeper of a prison", NP *zindānbān*.

Bibliography: Given in the article. (ED.)

AL-**ZABBĀ'**, the more common of the two Arabic names given in the Islamic sources to the famous Queen of Tadmur/Palmyra, the other being Nā'ila, undoubtedly identifiable with the Greek and Aramaic forms of her name, Zenobia and Bath-Zabbay, both attested epigraphically. Al-Zabbā' "the hairy (?)" was possibly her surname while Nā'ila was her given name.

In spite of embroideries and accretions that have accumulated around her in the Islamic sources, these are valuable as they document the Arab profile of the history of al-Zabbā', on which the Classical sources are silent, just as the Arabo-Islamic sources are silent on the Roman profile. The two sets of sources thus complement each other and the task of scholarship is to disentangle fact from fiction in the Islamic sources, and so reach the kernel of historical truth which they undoubtedly have.

Al-Zabbā' appears in these sources as the daughter of one 'Amr b. al-Ẓarib, the ruler of Djazīra (Mesopotamia) and part of al-Shām. A military encounter between him and the Tanūkhid king of al-Ḥīra, Djadhīma [*q.v.*], left him dead, and al-Zabbā''s subsequent history became a story of revenge. She offered Djadhīma her hand in marriage, pretending that this would unite and strengthen their respective realms, and invited him to come to her in Palmyra. His counsellor, Ḳaṣīr, warned him of the ruse, but Djadhīma did not listen and proceeded from his castle on the Euphrates, Baḳḳa, to Palmyra, where he was trapped and where he died a dolorous death after al-Zabbā' asked her maid to open the veins in his arm. As a result, she became herself the object of revenge. Ḳaṣīr returned to al-Ḥīra, where he asked 'Amr b. 'Adī, Djadhīma's nephew and adopted son (who became the first Lakhmid king), to avenge the death of his uncle. This 'Amr finally did by a ruse reminiscent of that of the Trojan Horse, which enabled him to enter Palmyra and overpower its garrison. Al-Zabbā', however, fled and died by her own hand after she sucked her poisoned seal-ring, thus avoiding being killed by 'Amr.

The sources also speak of her construction of two castles on both banks of the Euphrates, one for herself and another for her sister Zabība, and of her campaign in north Arabia against Dūma and Taymā' and their two fortresses Mārid and al-Ablaḳ. This campaign and the episode involving Djadhīma and 'Amr gave rise to many attractive Arabic proverbs.

The kernels of truth in these Islamic accounts may be presented as follows: (i) On chronological and other grounds, the encounter with Djadhīma is perfectly credible and it is just possible that Djadhīma did indeed meet his death at al-Zabbā''s hands. As for her own death, its Arabic account has to be wholeheartedly rejected since the incontestable Greek and Latin sources testify to her defeat by the Roman emperor Aurelian in A.D. 272, whose triumph in Rome she later graced. But Lakhmid participation in Aurelian's campaign against her is probably historical.

(ii) Her campaign against Dūma and Taymā' is also possible to accept, as is her construction of a castle on the Euphrates. Palmyra was a great caravan city, and it was natural that al-Zabbā' should have wanted to annex these important trade stations controlling the routes to Arabia and Mesopotamia. Her foundation on the Euphrates is attested in the Greek sources and is known as Zenobia, present-day Ḥalabiyya.

The extraordinary career of al-Zabbā' impressed the pre-Islamic poets of 6th-century Arabia, fragments of whose poetry on her have survived. The most complete of these is the one by the Ḥīran poet 'Adī b. Zayd [*q.v.*].

(IRFAN SHAHÎD)

ZABĪB (A.), dried grapes, raisins, or currants. In the mediaeval Islamic culinary tradition, raisins were deemed indispensable for meat dishes of chicken or mutton with a sweet-sour character, such as those of Persian origin called *zirbādj* or *sikbādj* [*q.v.*], in which the sweetness of the dried grapes (sometimes combined with another dried fruit like apricot or additional sugar) is balanced by the acidity of vinegar. In another kind of preparation, the meat is initially cooked in a vinegar and raisin stock. A dish called *zabībiyya*, probably of Egyptian provenance, was prepared from fresh fish with a sweet and sour spiced sauce poured over it. In the recipes for substantial main dishes, two kinds of raisin, *zabīb aḥmar* and *zabīb aswad* are mentioned. The best kind of raisin was large with a lot of flesh and small seeds.

Raisins occurred also in a variety of other domestic preparations. For example, a kind of "mustard sauce" to accompany fowl was made from raisin extract (*mā' zabīb*) and pomegranate seeds (presumably the acidic variety) in which dried spices, crushed almonds and salt were "dissolved". Raisins were also used in the preparation of a beverage called *fuḳḳā'*, a sparkling, fermented beer-like liquor. Certain home-made remedies, like the electuary (*ma'djūn*), called for a large quantity of raisins, the seeds of which had to be removed before cooking; the preparation was used to avoid stomach disorders after eating greasy, fatty foods.

In the mediaeval medical literature devoted to dietetics, raisins are described as moderately hot and moist in character and as having a fattening quality. Abū

Marwān ʿAbd al-Malik b. Zuhr (d. 557/1162) was of the opinion that wine made from raisins was weaker than that produced from grape juice.

In the Prophetic medicine (*al-ṭibb al-nabawī*) tradition, raisins are also very positively judged for their many benefits. Ibn Ḳayyim al-Djawziyya (d. 751/1350 [*q.v.*]) provides two traditions, albeit unsound ones, in which raisins are described by the Prophet as excellent food which sweeten the breath and remove phlegm and fatigue; they were also said to strengthen the nerves, calm anger and contribute to a clear complexion. In a similar work attributed to al-Suyūṭī (d. 911/1505), Tamīm al-Dārī [*q.v.*] is reported to have given the Prophet some raisins, which he then shared among his Companions; the Prophet also had *zabīb* soaked in water which he would drink the following day. To the Prophet's attitude to raisins there is added Ibn ʿAbbās's caution that, while the flesh contained a healing property, the seeds were harmful and should be spat out. Nonetheless, according to the traditionist al-Zuhrī, their value in the religious life was that anyone who wished to memorise *ḥadīth* should eat raisins.

ZABĪD, a town in the Tihāma [*q.v.*] coastal plain of Yemen, at about 25 km/15 miles from the Red Sea, in a region of fertile agricultural lands irrigated by two major *wādīs*, Zabīd to the south and Rimaʿ to the north. It is the centre of an administrative district, a *mudīriyya*, with the same name, which falls under the jurisdiction of the governorate of al-Ḥudayda [*q.v.*].

1. History.

Originally known as al-Ḥuṣayb, a village of the Ashāʿir tribe, Zabīd took on the name of the *wādī*, to which it owed its prosperity, when it was founded in Shaʿbān 204/January 820 by Muḥammad b. ʿAbd Allāh b. Ziyād [see ziyādids], who was sent by the ʿAbbāsid caliph al-Maʾmūn to quell the rebellion of the Ashāʿir and ʿAkk tribes. During his rule and that of his descendants (until 407/1016), Zabīd became the seat of government. Its location on the important commercial and pilgrimage route Aden-Mecca brought it substantial material and cultural wealth, and many important scholars from different parts of the Islamic world stopped in Zabīd and contributed to its growing reputation as the main centre for Sunnī religious learning in Yemen. Both the Ashāʿir and the Great Mosques, built by the prolific Ziyādid patron al-Ḥusayn b. Salāma (*r.* 373-402/983-1012), became focal points for scholars. Zabīd continued to be the political capital for successive dynasties: the Nadjāḥids (412-553/1022-1158 [*q.v.*]), and the Mahdids (553-69/1158-74 [*q.v.*]). This period is characterised by a number of Ḳarmaṭī and Ṣulayḥid [*q.vv.*] incursions into the Tihāma, during which Zabīd suffered intermittent assaults as well as capture by the Ṣulayḥids during the latter part of the 5th/11th century.

The Ayyūbid conquest of Yemen in 569/1174 confirmed Zabīd as the administrative and economic capital of the region, even though several of their rulers preferred to settle elsewhere. However, Zabīd enjoyed its heyday under the Rasūlids (626-858/1229-1454 [*q.v.*]). Although they made Taʿizz their capital, the sultans continued to favour Zabīd by spending their winters there. They also established numerous religious foundations which attracted many prestigious scholars, such as al-Fīrūzābādī [*q.v.*], whose tomb in Zabīd is still known as that of *Ṣāḥib al-Ḳāmūs*. The number of quarters, palaces, gardens, markets, and religious monuments was higher in Zabīd during the Rasūlid period than in any other town of Yemen, including their official capital Taʿizz. Al-Khazradjī reported that a survey of the mosques and *madrasas* of Zabīd, ordered by Sultan al-Ashraf Ismāʿīl in 795/1392, put their number at between 230 and 240 buildings. The Rasūlids also constructed several palaces and pavilions in the lush Wādī Zabīd, amongst the date plantations, which they used as retreats during the hunting season, and for the date-gathering festival, known as *subūt al-nakhīl*. Ibn al-Daybaʿ describes how blessed Zabīd was with water, where each house had its own well, while underground channels fed the orchards in the town and its environs: His list of fruits, as well as references to date palms, sugar cane and rice attest to the richness of local agriculture. The cultivation of cotton and indigo also helped to develop an indigenous textile industry. As late as 1936, Zabīd had 150 textile workshops.

Although the Ṭāhirids (858-923/1454-1517 [*q.v.*]) followed the Rasūlids' habit of using Zabīd as a winter residence, and continued the upkeep of religious buildings, the town began a steady decline in the late 9th/15th century. Reports of floods, fires, earthquakes and other natural disasters, point to its shrinking size. The demise of the Ṭāhirids at the hands of the Mamlūks, and the subsequent control of the Tihāma and Zabīd by their mercenaries, the Lewend [*q.v.*], between 927/1521 and 943/1536, accelerated this decline. During their first occupation of Yemen (945-1045/1538-1635), the Ottomans' use of Zabīd as one of their main bases led to repeated devastating Zaydī [see zaydiyya] attacks. The latter's victory and the consolidation of their power over the whole of Yemen meant the loss of Zabīd's role as a focus for Sunnī autonomy in the Tihāma. Furthermore, Yemen's period of economic boom in the 17th and 18th centuries resulting from the coffee trade, completely bypassed Zabīd, which was supplanted by al-Mukhā and Bayt al-Faḳīh [*q.vv.*] as the principal centres of mercantile activities. When Carsten Niebuhr visited Zabīd in the 1760s, he found that its buildings occupied only about one-half of the ancient area of the town. The emergence of al-Ḥudayda as the administrative centre of the Tihāma during the 19th and 20th centuries, and notably during the second Ottoman occupation (1872-1918) further overshadowed Zabīd, which also suffered from internal social unrest between 1902 and 1917.

2. Structure of the town.

According to al-Muḳaddasī, Zabīd was known as the Baghdād of Yemen owing to its circular shape, a characteristic that sets it apart from other Yemeni towns, and this seems to have remained unchanged throughout its history. A fortified mud wall with four gates was already in place in the 3rd/9th century, even though the first wall was attributed to al-Ḥusayn b. Salāma by several later historians. A second wall was built by the Nadjāḥid Abū Manṣūr Mann Allāh al-Fātikī sometime between 520/1126 and 524/1130, a third wall was erected by al-Mahdī b. ʿAlī or his brother ʿAbd al-Nabī between 554-69/1159-73, and a fourth one by Ṭughtakīn b. Ayyūb in 589/1193. Ibn al-Mudjāwir's drawing of the plan of Zabīd shows the walls as concentric rings. Ibn al-Daybaʿ noted the Ayyūbid wall as still standing in his day, although it had been restored many times, and its mud bricks

had been replaced by baked bricks during the Rasūlid period. Most reports mention the existence of four main gates: Bāb al-Shabāriḳ in the east, Bāb Ghulayfiḳa in the west, Bāb Sihām in the north and Bāb Ḳurṭub in the south, although al-Khazradjī refers to the restoration of eight gates during the reign of sultan al-Mudjāhid ʿAlī (r. 721-64/1322-63), which suggests the existence of a double wall. The four gates which still stand in Zabīd have kept the same names, with the exception of Bāb Ghulayfiḳa, which became known, as early as the 8th/14th century, as Bāb al-Nakhīl. Zabīd's wall was torn down in 1045/1635-6 on the orders of the Imām al-Muʾayyad bi 'llāh b. al-Manṣūr following his victory against the Ottomans. It seems that Zabīd remained without a wall until it came under the control of Sharīf Ḥammūd of Abū ʿArīsh (r. 1798-1810). The wall was finally dismantled in the 1960s in order to sell its bricks. What remains of the walls is a trench which encircles the town.

Zabīd has 21,000 inhabitants according to the 1994 census, and is divided into four quarters: al-ʿAliyy, al-Djāmiʿ, al-Mudjanbadh and al-Djizʿ. It has a central covered market, which is rivalled by a new food market built in the mid-1980s on the northern side of town. The once important crafts of weaving and indigo dyeing have completely disappeared from Zabīd as a result of the influx of imported textiles and changes in fashion. Zabīd has lost its importance as a centre of Islamic learning, although its eighty-five surviving mosques and *madrasas* attest to its former glory.

The historical and aesthetic importance of Zabīd's distinctive religious and domestic brick architecture led to its being placed on UNESCO's list of historic towns in December 1993.

AL-**ZABĪDĪ, MUḤAMMAD MURTAḌĀ** [see MUḤAMMAD MURTAḌĀ].

ZĀBUL, ZĀBULISTĀN, the name found in early Islamic times for a region of what is now eastern Afghānistān, roughly covering the modern Afghān provinces of Ghaznī and Zābul.

The early geographers describe what was a remote region on the far eastern frontiers of the *Dār al-Islām* in understandably vague terms as an extensive province with Ghazna [*q.v.*] as its centre. It thus emerges that it lay between Kābul and the Kābul river valley on the north and the territories around the confluence of the Helmand river and Arghandāb known as Zamīndāwar and al-Rukhkhadj [*q.vv.*], but the boundaries here were clearly very imprecise. The name appears in the 7th century Armenian geography as *Zaplastan* < MP *Zāpulistān* (Marquart, *Ērānšahr*, 39-40). Only one or two of the Arabic geographers mention it, e.g. al-Muḳaddasī, 299, who has *Djāwulistān*, but historians like al-Balādhurī and al-Ṭabarī were familiar with the name because of raids into it by the Muslims during the first three centuries or so of Islam. For long, Arab expansion here was checked by a line of powerful rulers with the title of Zunbīl (the resemblance between Zābul and Zunbīl must, however, be fortuitous), who were probably epigoni of the Southern Hephthalites [see HAYĀṬILA]; the upland regions of Zābulistān seem to have been their summer quarters. Arab commanders had only occasional successes against these Zunbīls, such as when al-Manṣūr's commander Maʿn b. Zāʾida [*q.v.*] pursued this local ruler into Zābulistān (third quarter of the 8th century), and it was only the Ṣaffārid Yaʿḳūb b. al-Layth [*q.v.*] who in 256/870 penetrated through Zābulistān to Ghazna and Gardīz as far as Kābul (see C.E. Bosworth, *Sīstān under the Arabs from the Islamic conquest to the rise of the Ṣaffārids (30-250/651-864)*, Rome 1968, 82-3, 120; idem, *The history of the Saffārids of Sistan and the Maliks of Nimruz (247-861 to 949/1542-3)*, Costa Mesa and New York 1994, 99-103).

Marquart devoted a detailed and complex study to the region, its rulers and its religious cult, approximating its name to the Buddhist pilgrim Hüan Tsang's *Tsau-kiu-č'a* (see *Bibl.*). The region was probably Islamised in the course of the 4th/10th century. Whether there was any connection between the older Zunbīls and the local family, the *Lawīks, who controlled Ghazna in the mid-century just before Alptigin [*q.v.*] and others of the Sāmānids' Turkish slave commanders took over there (cf. Bosworth, *Notes on the pre-Ghaznavid history of eastern Afghanistan*, in *IQ*, ix [1965], 16 ff.), is unknown. Sebüktigin's son Maḥmūd of Ghazna [see MAḤMŪD B. SEBÜKTIGIN] married a wife from a family of chiefs in Zābulistān, and is accordingly sometimes referred to as Maḥmūd-i Zāwulī. From the 5th/11th century onwards, the name fades from usage, but Zābul has been revived since the 1964 administrative reform in Afghānistān for the name of a modern province (see above).

Jahrhundert*, in G. Weil (ed.), *Festschrift Eduard Sachau*, Berlin 1915, 248-92. (C.E. BOSWORTH)

ZABŪR (A.), a term found in pre-Islamic poetry referring to a written text, and in the Ḳur'ān referring to divine scripture, in some contexts specifically to a scripture of David [see DĀWŪD], probably the Psalms.

The Arabic root *z-b-r* is associated with "stone" (*ḥidjāra*), and verbal forms from it convey such meanings as stoning, lining a well with stones or setting stones in walls according to an overlapping pattern (an unrelated word is *zubra*, said to designate a piece of iron). A further range of meanings associated with the root conveys the sense of reciting or writing a text. Here perhaps a dialect variation renders either *zabartu 'l-kitāb* or *dhabartu 'l-kitāb* as *ḳara'tuhu* "I recited/read it". Western scholarship has tended to view the first range of meaning as the root's original sense and the second range a result of Biblical traditions. However, with the recent discovery of South Arabian cursive writing on palm ribs and wooden sticks it has become evident that *zabara* and *zabūr* refer to this particular way of writing; see W.W. Müller, *L'écriture* zabūr *du Yémen pré-islamique dans la tradition arabe*, in J. Ryckmans, Müller and Yusuf M. Abdallah, *Textes du Yémen antique inscrits sur bois*, Louvain-la-Neuve 1994, 35-9. This is reflected in Imru' al-Ḳays referring to the remains of an abandoned camp *ka-khaṭṭi zabūrin fī 'asībiyyin yamānī* "like the lines of a text written on Yemeni palm branches" and, in another context, *ka-khaṭṭi zabūrin fī maṣāḥifi ruhbāni* "like the lines of a text in the books of monks".

Western scholars have tended to understand *zabūr* as related to Hebrew *mizmōr*, with support from Arab grammarians who say that *fa'ūl* may have a passive meaning, the equivalent of *maf'ūl*. The root meaning of Hebrew *z-m-r* is "to make music", with the noun form *mizmōr* found in the Hebrew Bible for a poetic hymn or psalm in praise of God, and with cognates in Syriac *mazmōrā* and Ethiopic *mazmūr*. One may also note the similarity between *zabūr* and Biblical Hebrew *zāmīr* "song". The exchange of *b* with *m* may, however, be considered problematical. It is also possible that the Hebrew/Aramaic/Syriac *dibbūr, dibbūrā/d'vīrā*, meaning "speech" or "utterance" and often referring to revelation, represents a Semitic parallel. It may have influenced the meaning of the Arabic *zabara/dhabara* as referring to a written text in pre-Islamic Arabia, thereby conveying the meaning of sacred or revealed text, although this becomes less likely now that we know that *z-b-r* refers to South Arabia (see above). Pre-Ḳur'ānic rabbinic Hebrew *dibbūr* does refer to revelation (Gen. Rab. 44:6, Lev. Rabb. 1:4, Song Rabb. 1:2:2, Yeb. 5b, San. 99b), and even revelation to gentile prophets (Gen. Rab. 74:7). The poetic and linguistic evidence therefore suggest that *zabūr* referred to text and perhaps even sacred text among some pre-Islamic Arabian communities, whether Jewish, Christian, or practitioners of indigenous Arabian religious traditions. By the time of the Ḳur'ānic revelations, the term was already known to refer to, among other things, a written text of scripture.

The root *z-b-r* occurs in the Ḳur'ān thirteen times. In some contexts it occurs as a plural, *zubur*, in parallel with *bayyināt* ("proofs" III, 184, XVI, 43, XXXV, 25), *al-kitāb al-munīr* ("enlightening scripture" III, 184, XXXV, 25), *dhikr* ("the reminder" XVI, 43), and *tanzīl* ("revelation" or "bringing down" XXVI, 192-6), thereby referring in general to revealed books. The reference to *zubur* in XXIII, 53 seems to denote different scriptures over which certain groups are divided and which contrasts with the undivided community of Islam (*umma wāḥida*) religiously obedient to God. In sūra LIV, al-Ḳamar, the plural *zubur* refers to heavenly books in which are recorded human deeds (vv. 43, 52-3), probably referring to a divine ledger in which human behaviour is recorded (*mustaṭar*) as a basis for final judgment (cf. vv. 48, 54). In contrast, XVIII, 96, refers to pieces of iron (*zubar al-ḥadīd*) by which Dhu 'l-Ḳarnayn separates a people from the terror of Gog and Magog.

The singular *zabūr* occurs three times in the Ḳur'ān. Twice it refers specifically to a certain revelation given to David that is mentioned either within the context of prophethood in general (XVII, 54) or in a context referring to revelations given to Muḥammad and other prophets (IV, 163). In both places David is singled out as the recipient of a divinely given *zabūr* (*wa-ātaynā Dāwūda zabūran*). In XXI, 105, God is referred to as citing from what the context suggests is a recognised work: "We have written in the *zabūr* after the reminder (*min ba'd al-dhikr*) that My righteous servants shall inherit the earth (*anna 'l-arḍ yarithuhā 'ibādī al-ṣāliḥūn*)". This verse represents a close and rare linguistic parallel with the Hebrew Bible and, more pointedly, with Ps. xxxvii ascribed specifically to David (see vv. 9, 11, 29 which refer to the meek, the righteous or "those who wait upon the Lord" as they who shall inherit the earth (*yirshū 'āreṣ*); cf. K. Ahrens, *Christliches im Qoran*, in *ZDMG*, lxxxiv (1930), 29). It should be noted also in relation to Ḳur'ān, IV, 163, and XVII, 54, that the entire Biblical collection of Psalms is ascribed to David according to Jewish and Christian tradition.

Al-Ṭabarī collects the comments of early Ḳur'ānic exegetes in his *Tafsīr*, including definitions of terms such as *zabūr*, which vary depending on the verse. On XXI, 105, he records the meaning of *zubur* as "all the books of the prophets that God brought down to them" (Sa'īd b. Djubayr, Ibn Zayd), "the books revealed to the prophets after Moses" (Ibn 'Abbās, al-Ḍaḥḥāk), and "a specific book revealed to David" ('Āmir, al-Sha'bī). Al-Ṭabarī also defines the term in relation to its context. In his commentary on III, 184, it is a generic term for a book based on pre-Islamic poetic evidence. On IV, 163, he writes, "It is the name of the book that was revealed to David, just as He named the book that was revealed to Moses as the Torah and that which was revealed to Jesus as the Gospel and that which was revealed to Muḥammad as the Furḳān, because that is the name by which what was revealed to David was known. The Arabs say *zabūr Dāwūd*, and because of that the rest of the peoples know his book."

Apart from the question of the term *zabūr*, many passages in the Ḳur'ān that remind us of the Bible are reminiscent of the Psalms. It is likely that some form or forms of a Psalter circulated in pre-Islamic Arabia immediately prior to the rise of Islam. A fragment of a translation of the Psalms, dated on palaeographical grounds to the 2nd/8th century, the oldest known specimen of Christian-Arabic literature, was identified in Damascus by B. Violet. It contains an Arabic translation of Ps. lxxviii. 20-31, 51-61, in Greek majuscule writing. Al-Kindī, in his *Risāla* (composed *ca.* 204/819), and Ibn Ḳutayba, as cited in Ibn al-Djawzī's *Wafā'*, quote verses from the Psalms in literal translation. 'Alī b. Rabban al-Ṭabarī [*q.v.*] devotes a chapter of his "Book of Religion and Empire" (*ca.* 240/854) to the Psalms, and al-Mas'ūdī (*Tanbīh*, 112) mentions Arabic translations of the Bible which include the Psalms. Recensions of the Arabic translation-commentary by Sa'd b. Yūsuf al-Fayyūmī, i.e. Sa'adyā Gā'ōn (d. 330/942 [see SA'ADYĀ BEN YŌSĒF) of the Hebrew Bible, including the Psalms, exists to this day.

(J. Horovitz-[R. Firestone])

ZADJAL (a.), the name of a genre of vernacular strophic poetry that acquired literary status around 500/1100 in al-Andalus. It was cultivated by numerous Andalusian poets (the most famous being Ibn Ḳuzmān [*q.v.*]), later also spreading to the Maghrib and the Arabic-speaking East. Since the 7th/13th century its strophic structure is also encountered in the poetry of several Romance languages. In present-day Arabic the term *zadjal* may denote various types of dialect poems, even those with monorhyme. The non-technical meaning of *zadjal* is "a voice, sound or cry, or the uttering of the voice, etc.; a trilling, or quavering of the voice; or a prolonging of the voice, and modulating it sweetly, also a play, sport" (cf. Lane, *s.v.*). This etymology makes it probable that *zadjal* originally referred to sung poetry, songs (cf. also below, *The performance of the* zadjal).

1. In mediaeval Islam.

The language

The language of the Andalusian *zadjal* is only rarely the pure and regular Andalusian dialect. Since the poems were hardly ever really popular products, but mostly works of educated poets who, to be sure, endeavoured to speak like the people but also tried hard to bestow literary quality on their poems, and since the poets were accustomed to write in the Classical language, and were subject to the strictures of metre, rhyme, and length of line, one finds time and again influences and intrusions from the "higher register" of the Classical language and bastardisations in both directions (cf. F. Corriente, *Poesía dialectal*, 39). Some scholars go even further and speak of a "hybrid language drawn from both the spoken language and the literary" (T.J. Gorton, in *JAL*, ix [1978], 34; similarly A. Jones in *JSS*, xxvii [1982], 129, and Abu Haidar, *A study*). In the poems of al-Shushtarī (d. 668/1269 [*q.v.*]), consisting of *zadjals* as well as *muwashshahs* (sometimes difficult to distinguish), one encounters great linguistic multiformity. The gamut runs from poems entirely composed in Classical Arabic (mostly *muwashshahs*) via various intermediate stages (dialect poems with Classical "intrusions", e.g. nouns with *iʿrāb*, and, on the other side, high-register poems with dialectal insertions) down to *zadjals* composed entirely in Andalusian Arabic (cf. F. Corriente, *Poesía ... aš-Šuštarī*, 19). In addition, one finds in al-Shushtarī also poems in Maghribī or Maghribī-influenced language; even poems in Eastern dialects, or approximations of such, and in mixtures of dialects seem to occur. The language of the older Eastern—Egyptian, Syrian, and ʿIrāḳī—*zadjdjālūn*, such as ʿAlī b. Muḳātil, al-Amshāṭī, Ṣafī al-Dīn al-Ḥillī *et al.* has not been much studied. Apparently these poets, whose models were Ibn Ḳuzmān and the other Andalusian *zadjdjālūn*, tried to imitate the Andalusian dialect in their *zadjals*, but did not have complete command of it (cf. the examples in al-Ḥillī, *ʿĀṭil*, 99 ff.; Ibn Ḥidjdja, 104 ff.; cf. Corriente, in *JAL*, xxviii [1997], 134-5).

Strophic structure

The basic form of the Andalusian *zadjal* ("*zadjal* proper") has the following rhyme scheme: *aa bbb a, ccc a, ddd a*, etc. If we call rhymes that change from stanza to stanza separate rhymes, and rhymes that keep re-occurring throughout the poem common rhymes, we may describe the present strophic structure as follows. The poem starts with two common rhyme lines (*maṭlaʿ*). The following first stanza consists of three lines with separate rhyme and one line with common rhyme (acting as "stanza closure"). The remaining stanzas all have the same rhyme scheme as the first. The rhyme of the last line in each stanza is thus the same throughout the poem and echos the rhyme of the initial *maṭlaʿ*. It is important to note that the rhyme scheme of the stanza closures (common rhyme lines) in the "*zadjal* proper" constitutes one-half of the rhyme scheme of the introductory lines (*maṭlaʿ*). This is true also for the less common variant with the rhyme scheme *abab ccc ab, ddd ab*, etc. *Zadjals* proper without *maṭlaʿ*, i.e. with the rhyme scheme *bbb a, ccc a*, etc., are rare in the early period; a few examples can, however, be found in the *Dīwān* of al-Shushtarī (e.g. nos. 40, 42). Ibn Ḳuzmān uses in the large majority of cases the structure of the *zadjal* proper (about two-thirds of the extant poems). The remaining poems have a different structure: The stanza closures here consist of at least two lines and always reflect exactly the introductory lines (if any), thus e.g. *aa bbb aa, ccc aa*, etc.; or *ab ccc ab, ddd ab*, etc.; or (without *maṭlaʿ*) *dedede abcb, fgfgfg abcb, hihihi abcb*, etc. Since this structure corresponds exactly to that of the *muwashshaḥ* [*q.v.*]—some of the poems are known to be contrafacts (*muʿāraḍāt*) of famous *muwashshahs* (cf. Stern, 171 ff.)—and since these poems mostly also display the other peculiarity of the *muwashshaḥ*, i.e. the *khardja*, they are called "*muwashshaḥ*-like *zadjals*".

In length the *zadjals* vary greatly. While the *muwashshaḥ*-like type, like the *muwashshaḥ* itself, mostly consists of five or six (and occasionally up to eleven) stanzas, the *zadjal* proper may be much longer. The longest poem of Ibn Ḳuzmān is no. 9; it consists of 42 stanzas.

Terminology

Ṣafī al-Dīn al-Ḥillī, the most important theorist of the genre, calls *muzannam* those *zadjals* in which, contrary to rule, the Classical language (*iʿrāb*) is preponderant. To denote jocular or obscene *zadjals* he uses the term *bullayḳ*, those that contain lampoons he terms *ḳarkī*, and for those containing admonitions and wisdom he uses *mukaffir* (*ʿĀṭil*, 10). The terminology for the stanza and its parts is not uniform with the theorists. In al-Ḥillī, the entire stanza is called *bayt*, the introductory lines *maṭlaʿ*, and all the lines with common rhyme—not only those in the last stanza (!)—*khardja*. He applies the terms *ḳufl* and, more rarely, *ghuṣn* indifferently to single lines, irrespective of whether they have common or separate rhyme (cf. Hoenerbach, *ʿĀṭil*, German part, 20). The terminology of Ibn Saʿīd/Ibn Khaldūn is the clearest and most frequently used today; according to it, *bayt* = "stanza", *ḳufl* = "line with separate rhyme", and *simṭ* = "line with common rhyme" (cf. muwashshaḥ).

The performance of the zadjal—zadjal *as poetry set to music*

We may assume as certain that the *zadjal* originally was sung; this assumption is suggested already by the etymology (cf. above). This, however, in no way means that a tune was composed right away to each *zadjal*. The poems of Ibn Ḳuzmān were in all

likelihood recited as a rule, and not sung. This is not true of the *zadjals* of al-Shushtarī; they were conceived as songs or at least imitate the structure of songs. In al-Shushtarī's *Dīwān*, one encounters numerous *zadjals* and *muwashshahs* in which the refrain line(s) are written out. This allows us to address the question of *zadjal* "performance". That the refrain line(s) were meant for a chorus can not only be deduced from internal evidence but is also attested in parallels in Hebrew poetry (cf. Stern, 16-17). In al-Shushtarī, there are *inter alia* poems with genuine refrain (e.g. nos. 14, 68, 84), and poems with so-called internal refrain (e.g. nos. 44-8, 50, 82, 83). The former are characterised in their basic form by the following scheme: *(aa) AA bbb a AA, ccc a AA, ddd a AA*, etc.; the latter, in contrast, have the following scheme: *a A bbb a A, ccc a A, ddd a A*, etc. (where A represents the refrain line in which the rhyme of the *maṭlaʿ*, i.e. the common rhyme, is taken up again). Thus, while in the first, the entire *maṭlaʿ* is repeated by the chorus as a refrain after each stanza (according to the Hebrew testimonies, the *maṭlaʿ*, too, sung first by the soloist will be repeated immediately by the chorus), in the second only the second line of the *maṭlaʿ* will be repeated by the chorus. Exact parallels to this performance technique exist not only in Hebrew-Andalusian poetry but also in the more or less contemporaneous Romance *zadjal* (thus in numerous *Cantigas de Santa María*).

Metrics and rhyme

The metrics of the Andalusian *zadjal*, like that of the *muwashshah*, were controversial for a long time. However, in recent years a consensus has to a large extent been reached among Arabists. Most agree that practically all *zadjal* (and *muwashshah*) metres can be scanned quantitatively, which means that the poets must have intended quantitative metres; they agree also that, apart from regular Khalīlian metres (*ramal, khafīf* and *basīṭ*), they also used numerous non-Khalīlian quantitative metres and feet ("extended, or expanded, Khalīlian system", according to Gorton, Jones and Latham). The question how occasional irregularities are to be explained is still controversial. While Corriente brings in his hypothesis of an "Andalusian accentual adaptation of *ʿarūḍ*" (cf. MUWASHSHAḤ), according to which e.g. unstressed long syllables may be counted as short, other scholars point to similar metrical licences that occasionally already occur in Classical Arabic poetry, especially in *radjaz* (cf. Ullmann, *Rağazpoesie*, 69 ff.), thus shortening (*idjtizāʾ*) and lengthening (*ishbāʿ*) of vowels (Gorton, in *JAL*, vi [1975], 24 ff.; Schoeler, in *BO*, xl [1983], 311-22; idem, in M. Forstner (ed.), *Festgabe für H.-R. Singer*, ii, 887-909). All sides also agree today that, in rare cases, one has to reckon with foot substitution (a procedure first noted by Corriente).

The rules for the rhyme in *zadjal* are stricter than they are in *kaṣīd*. The most important difference is that words with /ū/ or /ī/ before the rhyme consonant (*īK/ūK*) do not rhyme.

Themes

On the themes treated in Ibn Ḳuzmān's *zadjals*, see IBN ḲUZMĀN. However, a particular theme deserves to be pointed out here, one that is sometimes subsumed under the category of *madīḥ*, although the relevant poems differ greatly from the other praise poems. They are request or begging poems in which the poet, due to his impecuniousness and in a melancholy mood, requests a lamb from a sponsor for the *ʿĪd al-Aḍḥā* (nos. 8, 48, 82, 85, 118). Since the same theme is also treated in one of the extant *zadjals* of Ibn Ḳuzmān's predecessor Ibn Rāshid (cf. below), but never occurs in a *muwashshah* or a *kaṣīda*, one has to assume that this style belongs to the genre of *zadjal* in general. The original *zadjal* was possibly a popular or minstrel request song, introduced into élite literature by Ibn Rāshid and Ibn Ḳuzmān. In support of this one might adduce that also in the Romance *zadjal*, which is also originally a minstrel genre, request poems are typical (Juan Ruiz, *Libro de buen amor*, stanzas 1650 ff., 1656 ff.; Alfonso Alvarez de Villasandino, *El Cancionero de Baena*, nos. 196, 219). The *zadjals* (and *muwashshahs*) of al-Shushtarī, the other great *zadjdjāl* of whom a *Dīwān* is extant, are all of mystical content. It is again worth noting that the Romance *zadjal* was also adopted into the service of religion (*Cantigas de Santa María* of Alfonso el Sabio, Juan Ruiz, Villasandino; *Laude* of Jacopone da Todi).

The earliest poets

Some information on this point is provided by Ibn Ḳuzmān; further indications can be gleaned from the admittedly late and non-Andalusian poetics of the genre written by al-Ḥillī (*ʿĀṭil*, 66) as well as in Ibn Saʿīd/Ibn Khaldūn (*Muḳaddima*, iii, 404). Ibn Ḳuzmān names two predecessors: in the introduction to his extant *Dīwān*, 18-19, he refers to a certain (al-)Akhṭal b. Numāra, from whom he quotes a few fragments. In the poems themselves he mentions Yakhlaf b. Rāshid (no. 134/10/2; no. 186/1/1). Ibn Rāshid appears to have been a slightly older contemporary of Ibn Ḳuzmān; two fragments of his have been preserved (*Muḳaddima*, iii, 407; Stern, 185, 193 ff.). Al-Ḥillī, *ʿĀṭil*, 16-17, answers the question as to the first *zadjdjāl* by giving a list of names in two groups. Among these only the already-mentioned Yakhlaf b. Rāshid can be considered a precursor of Ibn Ḳuzmān.

The genesis of the zadjal

About the genesis of the *zadjal* genre the indigenous tradition is much more reticent than about that of the *muwashshah*. The term *zadjal* for a popular poem or song is indeed attested early (in Aḥmad b. ʿAbd Allāh b. ʿAbd al-Raʾūf's treatise on *ḥisba*, possibly from the first half of the 4th/10th century, and in the *K. ʿAbd al-Malik al-uskuf* from the middle of the 5th/11th century; cf. most recently J.T. Monroe, in *Oral Tradition*, iv [1989], 45 ff.). It is, however, very unlikely that the songs mentioned are *zadjals* in the later technical sense. A vernacular distich from the 4th/10th century has been identified as a kind of "proto-*zadjal*"; the lines rhyme according to the Arabic, not the Romance, system: *laban ummuh fī fummuh—rās ban Ḥafṣūn fī ḥukmuh* (Ibn Ḥayyān, *Muktabas*, v, 64). This distich might probably be considered a parallel to the vernacular *khardjas* attested much later (cf. MUWASHSHAḤ) (thus Corriente, *Poesía dialectal*, 79-80).

The often-raised question concerning the derivation of the strophic structure and the rhyme scheme of the genuine *zadjal* (*aa bbb a, ccc a*, etc.) can be answered today with certainty: this structure has been taken from the *musammaṭ* [*q.v.*]. A special form of the *musammaṭ*, attested in the East at the latest since the 4th/10th century, displays this very structure. So far, three specimens of this type have become known: (Ps.?-) Ḥammād al-Rāwiya, in *Aghānī*, v, 27-8; Abū Nuwās, *Dīwān*, ed. Wagner, iii, 332-3 (no. 287 in the recension of Ḥamza al-Iṣfahānī); and (Ps.-)Imruʾ al-Ḳays, in Ibn Rashīḳ, *ʿUmda*, i, 179; to these should be added a Persian imitation by Amīr Muʿizzī (d. *ca.* 520/1126) (*Dīwān*, 597 ff.; for these *musammaṭs*, see Schoeler, in *AS*, li [1997], 618 ff.). Three of these poems can be read either as a *musammaṭ* or as a *kaṣīda* with regularly applied internal rhyme. This is impossible with the *musammaṭ* of (Ps.-)Imruʾ al-Ḳays, since here all

lines have the same length; this poem thus exactly follows the structure of the *zadjal* in every respect.

Since Judaeo-Spanish poets (e.g. Ibn Gabirol) use this rhyme scheme already in the 5th/11th century in Hebrew liturgical poems (cf. Monroe, *op. cit.*, 44), this might be considered evidence that Arabic *zadjals* (in the technical sense) already existed at the time, to be imitated by the Hebrew poets. (The hypothetical Arabic models may have been popular or minstrel songs that had not yet ascended to élite literature.) However, this assumption is far from certain: the Hebrew poets may also have used as their models Arabic *musammats* of the above-mentioned structure. The derivation of the structure of the *muwashshah*-like *zadjal* poses no difficulties: it is simply an imitation of the *muwashshah* in the vernacular.

The trend to compose poetry in the colloquial soon also affected the *kaṣīd*: Mudghalīs (or Madghalīs), a younger contemporary of Ibn Ḳuzmān, composed so-called *kaṣā'id zadjaliyya*, of which numerous examples have been preserved (ed. W. Hoenerbach and H. Ritter, in *Oriens*, v [1952], 269-30). Summing up, the following can be said about the genesis of the *zadjal*: (1) Lines of poetry in the vernacular are attested in al-Andalus already in the 4th/10th century. (2) At a certain point in time (most likely in the 5th/11th century) this poetry, under the influence of a specific type of *musammat*, acquired the rhyme structure *aa bbb a, ccc a*, etc. (3) Finally, probably shortly before the time of Ibn Ḳuzmān (around 500/*ca.* 1100), poems of this type attained to literary status. Deriving the *zadjal* from hypothetical Romance models, as most recently tried again by Monroe (*op. cit.*), is speculative and seems to overlook the existing Arabic models.

Spread of the zadjal

Born in al-Andalus, the *zadjal* soon spread to the East. Outside Spain *zadjals* are first encountered in the Maghrib (cf. Stern, 200 ff.). There the genre was cultivated down to the middle of the 10th/16th century in the Andalusian vernacular, which had become the "classical" language of the *zadjal*. (The *malḥūn* [*q.v.*], written in the Maghribī dialect since the 10th/16th century, although also called *zadjal* and *kaṣīda zadjaliyya*, is entirely different from the "classical" *zadjal*.) In the first half of the 8th/14th century, imitations of literary *zadjals* in the manner of Ibn Ḳuzmān became very popular with court poets in the Mamlūk and Mongol spheres of influence, i.e. Egypt, Syria, and ʿIrāḳ (cf. W. Hoenerbach, in *Homenaje a Millás Vallicrosa*, i, Barcelona 1954, 725). In the 11th/17th century at the latest, minstrel *zadjals* in Egyptian, or would-be Egyptian, vernacular are attested in the written record (on these cf. Schoeler, in *Festgabe für H.R. Singer*, ii 902 ff., and M. Voegeli, *Manṣūbāt Ṣafā l-ʿAiš*, Lizentiatsarbeit, Basel 1994 unpubl.). Starting in the 19th century, scholars, initially all European, have collected and published folksongs from the Near East; these are called *zadjal*, especially in Lebanon (the terminology is, however, confused), and they often, but not always, display an identical or similar structure to that of its Andalusian counterpart (cf. Jargy, *La poésie*, with bibl., 321 ff.).

From the 13th century onwards, several Romance literatures have produced poems that have the exact same structure of the *zadjal* (in Galician: the majority of the *Cantigas de Santa María* of Alfonso X [1221-84]; in Castilian: *estribotes* and *villancicos*, some poems in the *Libro de Buen Amor* of Juan Ruiz [1283-1351]; in Provençal: *dansas* and *baladas*; in French: *virelais* and *ballades*; and in Italian: *ballate, frottole, laude* of Jacopone da Todi [1236-1306]). Since one has here complete identity of the forms (predominantly poems of the rhyme structure *aa bbb a, ccc a*, etc., thus "*zadjals* proper"), and since in the performance there is evidence also for identical ways of presentation (use of the introductory lines as refrains—thus in many *Cantigas* of Alfonso X—as well as internal refrain), an assumption of a direct dependence of the Romance "*zadjal*" on the Arabic would seem difficult to counter (cf. Schoeler, *Muwaššaḥ und Zağal*, 456-8).

Collections of Andalusian zadjals *and works on poetics*

The only two extant *dīwāns* are the *Iṣābat al-aghrāḍ fī dhikr al-aʿrāḍ* of Ibn Ḳuzmān (presumably only a selection from his poems, and even that not complete in the only extant manuscript) and the *Dīwān* of al-Shushtarī. The first and most important poetics of the *zadjal* (and other vernacular genres) is the *K. al-ʿĀṭil* of Ṣafī al-Dīn al-Ḥillī (d. *ca.* 749/1348 [*q.v.*]). The work contains numerous poems, from the Andalusian "classics" (among them poems by Ibn Ḳuzmān not contained in the *Iṣāba*) as well as from the author himself and other Eastern poets. Strongly dependent on this work is the *Bulūgh al-amal fī fann al-zadjal* by Ibn Ḥidjdja al-Ḥamawī (d. 837/1434). In contrast, the anonymous author of *Dafʿ al-shakk wa 'l-mayn fī taḥrīr al-fannayn* (9th/15th century) develops his own ideas. The *Safīna* of ʿAlī b. Mubārakshāh is also an important source for otherwise lost *zadjals*, even for some by Ibn Ḳuzmān (cf. Hoenerbach, in al-Ḥillī, *ʿĀṭil*, German part, 8 ff.).

2. In modern times.

Zad̲j̲al is used nowadays as a term for a poem in vernacular Arabic, often one meant to be sung, or sung directly when improvised. The term is also used for vernacular poetry in general. The *zad̲j̲al* poet is called *zad̲j̲d̲j̲āl* as well as—in the context of improvisation—*ḳawwāl* [see s̲h̲āʿir. 1. E].

In a restricted sense, *zad̲j̲al* may refer specifically to a non-classical strophic poem of the *murabbaʿ* type [see musammaṭ], with four-line stanzas and an optional prelude (*maṭlaʿ* or *lāzima*), rhyming *aa bbba ccca*... (thus corresponding with the prevalent form of its Andalusian namesake, see above under 1.), or some other related pattern. In informal parlance, the term may include altogether different types of poems.

In its broadest sense, *zad̲j̲al* covers a wide range of subjects and a great variety of forms with a correspondingly large arsenal of technical terms not always clearly defined in the literature. Sometimes it comes close to being the equivalent of the general expressions *s̲h̲iʿr ʿāmmī* ("colloquial poetry"), *s̲h̲iʿr s̲h̲aʿbī* (literally "popular", but often synonymous with "non-classical poetry") and *s̲h̲iʿr g̲h̲ayr muʿrab* ("poetry without *iʿrāb*", i.e. with non-classical grammar), and of such regional expressions as *malḥūn* [*q.v.*] (used in Morocco, Algeria, Yemen), *s̲h̲iʿr ḳawmī* (Sudan, Lebanon), *ḥumaynī* (Yemen), and *s̲h̲iʿr nabaṭī* [*q.v.*] (Arabia). But *zad̲j̲al* does not seem to embrace all vernacular poetry: it does not refer, as *s̲h̲iʿr s̲h̲aʿbī* may, to the truly popular poetry of folk literature. *Zad̲j̲al* may be couched in the "popular" language, but it is often practised by the educated and enjoyed by them as much as by the illiterate. For their part, the members of the modern Egyptian school of colloquial poetry, for whom the term *zad̲j̲al* has become associated with a traditionalism that is out of touch with modern ideas, stress the fact that they write poems rather than unsophisticated *zad̲j̲als*.

Elsewhere, no such negative associations are involved, as when al-D̲j̲irārī (50-61) argues for the adoption of the term *zad̲j̲al*—rather than *malḥūn* or ten other names—as the appropriate designation for any poem in Moroccan Arabic, or in Lebanon where *zad̲j̲al* features at festivals with poetic duelling between *zad̲j̲al* poets and their accompanying troupes (*d̲j̲awḳāt*, sg. *d̲j̲awḳa*) and enjoys a huge popularity with wide sections of the public (Haydar, 202-10) as well as with the government (cf. the conference that it sponsored where a resolution was passed calling for the teaching of colloquial poetry in schools and universities: *al-Muʾtamar al-awwal li ʾl-s̲h̲iʿr al-ʿāmmī al-lubnānī 1995*, [Beirut] 1995-6, 202). The media, for their part, focus regularly on the *zad̲j̲al* (e.g. six pages on "500 years of colloquial poetry" in *al-Nahār* newspaper of 6 March 1999).

Lecerf (234-5), writing in 1932, divides the Lebanese forms of *zad̲j̲al* into the sung genres of *mawwāl* [see mawāliyā], *ʿatāba* [*q.v.*], *mīd̲j̲ānā*, *dalʿōna* and *s̲h̲urūḳī* (*ab ab ab ab*); and the recited genres of *ḳaṣīd* (*ab ab ab ab*), *maṭlaʿ* or *muʿannā* (predominant type *aaba bbba ccca*), *ḳarrādī* (heptasyllabic) and *d̲j̲annāz*. He notes a preference for *s̲h̲urūḳī* and *ḳaṣīd* in D̲j̲abal ʿĀmil as against *muʿannā* and *ḳarrādī* in the Lebanese mountains (221). The subject matter of Lebanese *zad̲j̲al* is varied: the topics of K̲h̲alīl's thematic anthology are nature, beauty, love, songs, customs, wisdom, the fatherland, society, and politics.

The related Palestinian improvised poetry (*s̲h̲iʿr murtad̲j̲al* [see irtid̲j̲āl]) is divided by Sbait (214) into the genres of *ʿatāba*, *ḥidā*, *farʿāwī*, *mḥōraba*, *mʿannā*, *ḳarrādī* and *ḳaṣīda*.

In common with the vernacular poetry of other regions, ʿIrāḳī poetry has forms that show many characteristics of Lebanese, Syrian and Palestinian *zad̲j̲al*, but which are not normally designated as such. *Zad̲j̲al* is said to be extinct in ʿIrāḳ (Mād̲j̲id S̲h̲ubbar, *al-Adab al-s̲h̲aʿbī al-ʿirāḳī*, London 1995, 164-5), but it may be noted that the ʿIrāḳī poet ʿAbbūd al-Kark̲h̲ī (1861-1946) is referred to as a *zad̲j̲al* poet (*s̲h̲āʿir zad̲j̲alī*) in the introduction to the second edition of vol. i of his *Dīwān al-Kark̲h̲ī* (Bag̲h̲dād 1956).

As a literary form between the "high" *fuṣḥā* literature in standard Arabic and the literature in the colloquial, *zad̲j̲al* employs an intermediate language with characteristics originating from both. The metre appears to be quantitative and akin to those of the classical Arabic system [see ʿarūḍ], but extended with non-classical patterns and rules. According to D. Semah (*Modern Arabic zajal*, 82-3), "No evidence has ever been given to support the often-repeated claim that Arabic *zajal* is not composed according to the quantitative Khalilian metres, but is cast in syllabic metres, in which rhythmic regularity depends only on an equal number of syllables, irrespective of their length", but he qualifies this statement by adding that, with its seven syllables of random quantity, the Lebanese *ḳarrādī* is an exception. Nor does he include the prosody of Mag̲h̲ribī vernacular poetry where the issue appears to be not so clear-cut [see malḥūn].

In 19th-century Egypt, *zad̲j̲al* widened its scope; it had entertained the élite as a literary pastime, and, in the case of the religious *zad̲j̲al*, expressed the devotion of pious Ṣūfīs, but it subsequently found a new function in the broader socio-political context of populist patriotism, especially in the wake of the ʿUrābī [*q.v.*] revolt. This development was furthered by the growing importance of the press and the rise of many specialised satirical magazines such as those under the editorship of Yaʿḳūb Ṣannūʿ (1839-1912 [see abū naḍḍāra]) and ʿAbd Allāh al-Nadīm (1845-96 [*q.v.*]). For his part, Muḥammad ʿUt̲h̲mān D̲j̲alāl (1828-98 [*q.v.*]) not only wrote *zad̲j̲als* but translated Western drama and other literary forms into vernacular poetry, thereby heralding the heightened literary status that the spoken idiom was to gain in a later era.

In the 20th century, *zad̲j̲al* continued to be a voice for political and social criticism. Satirical periodicals were launched by *zad̲j̲d̲j̲āls* such as Bayram al-Tūnisī (1893-1961 [*q.v.*]), Ḥusayn S̲h̲afīḳ al-Miṣrī (1882-1948), Maḥmūd Ramzī Naẓīm (1887-1959) and Badīʿ K̲h̲ayrī in Egypt, and ʿAbbūd al-Kark̲h̲ī in ʿIrāḳ. In the same

period, the Lebanese poet Rashīd Nakhla (1873-1939), who in 1932 received the title of *amīr al-zadjal*, is said to have combined a political career with the writing of 18,000 lines in vernacular Arabic, mostly in the sphere of traditional love poetry but with a new vitality that contributed, as did the poetry of al-Tūnisī and al-Karkhī in their countries, to the rise of the new trends in vernacular poetry. The transition to this new stage is particularly visible in the work of Mīshāl Ṭrād (1912-98) in Lebanon, Fu'ād Ḥaddād (1927-85) and Ṣalāḥ Djāhīn (1930-86) in Egypt, and Muẓaffar al-Nawwāb (b. 1934 in 'Irāḳ). Their poetry moves from local to universal issues, from the concerns of the collectivity to those of the individual, from traditional forms towards a colloquial "free verse" or *shi'r ḥurr* [see SHI'R], and is couched in a new language with sophisticated imagery. There is a notable shift, for instance, from Djāhīn's early nationalistic *zadjals* to his volumes *Rubā'iyyāt* ("Quatrains") and *Ḳaṣāḳīṣ waraḳ* ("Confetti"). This trend is continued by Sayyid Ḥidjāb in his *Ṣayyād wi-djinniyya* and is present in the work of a poet like 'Abd al-Raḥmān al-Abnūdī (b. 1938). There is now a growing awareness with a wider public that the vernacular is as suitable a vehicle for the highest literary creation as any other language, as long as it is used poetically. It has even been suggested that the new colloquial poetry stands some chance of becoming the true successor of an obsolete and exhausted traditional *fuṣḥā* poetry (Semah, *op. cit.*, 91).

The appreciation of modern *fuṣḥā* and modern colloquial verse as equal partners had already surfaced with Luwīs 'Awaḍ (1914-90) in his *Plutoland* (*Pulūtūländ wa-ḳaṣā'id ukhrā*, Cairo 1947), and in the work of Sa'īd 'Aḳl (b. 1912) who, by using his adapted Latin script for the vernacular poems in his collection *Yāra* (1961), has distanced himself from tradition more than anyone before him.

The new perception of the role of the vernacular has not, however, put an end to the more traditional Egyptian *zadjal*, for the cultivation of which organisations such as the *Rābiṭat al-zadjdjālīn*, founded in Cairo in 1932 by Muḥammad 'Abd al-Mun'im Abū Buthayna (1905-80), and the *Djam'iyyat udabā' al-sha'b* of Alexandria have continued to provide a framework with conferences and collective publications, notably of a nationalistic strain. The Egyptian crossing of the Suez canal into occupied Sinai in 1973, for example, produced a collection of seventy poems and *zadjals* under the title *Malḥamat al-'ubūr* "the epic crossing" (ed. 'Abd al-Fattāḥ Shalabī, Cairo 1975).

Political and social events all over the Arab world have sparked off the writing of *zadjals* throughout the modern period, written to a limited degree by workers (their short-lived poetic-social movement is discussed by Beinin), but more often by leftist intellectuals. The most popular and explicitly political representative in the second half of 20th-century Egypt is Aḥmad Fu'ād Nadjm (conventionally: Nigm) (b. 1929), who became famous for his partnership with the blind singer al-Shaykh Imām (1918-95). His poems are an indictment of the policies of the Nasser and Sādāt régimes.

Zadjal has a long-standing relationship with the popular song and the operetta (*masraḥ ghinā'ī*), with famous poets writing for famous singers: Badī' Khayrī for Sayyid Darwīsh (1892-1923), Aḥmad Rāmī (1892-1981) and Bayram al-Tūnisī for Umm Kulthūm [*q.v.*], and the Raḥbānī brothers and Sa'īd 'Aḳl for Fayrūz (b. 1936).

Zadjal has also provided all sorts of humoristic entertainment (early examples in F. Kern, *Neuere ägyptische Humoristen und Satiriker*, in *MSOS As.*, ix [1906], 47-9); special forms are the *fazzūra* or riddle (a favourite item during Ramaḍān) and *al-shi'r al-ḥalamantīshī*, burlesque poems in a mixture of standard and vernacular Arabic parodying famous classical examples (W. Stoetzer, *Classical poetry parodied: the case of Ḥusayn Šafīq al-Miṣrī (1882-1948)*, in *The Arabist* (Budapest Studies in Arabic), xv-xvi [1995], 229-38).

AL-**ZADJDJĀDJ**, ABŪ ISḤĀḲ IBRĀHĪM B. AL-SARĪ, Arabic grammarian who worked most of his life in Baghdād; he was born *ca.* 230/844 and died in 311/923. He was the main teacher of al-Zadjdjādjī [*q.v.*], who took his *nisba* from him. Among his other pupils are al-Fārisī, Ibn Wallād and al-Rummānī [*q.vv.*]. Al-Zadjdjādj himself had learnt grammar from both Tha'lab and al-Mubarrad [*q.vv.*], combining in his own teachings what he had learnt from these representatives of both the Baṣran and the Kūfan schools. He may be regarded as the link between the old generations

of Kūfan and Baṣran grammarians and the new grammar that was developed in Baghdād in the 4th/10th century under the influence of Greek logic.

Among his writings are a number of lexicographical treatises (e.g. his treatises on the *khalk al-insān* and his book on the differences between *fa'altu* and *af'altu*), and an important treatise on diptote and triptote nouns (*K. mā yanṣarif wa-mā lā yanṣarif*, ed. by H.M. Karā'a, Cairo 1971), which was the first to present a comprehensive theory of the phenomenon of incomplete declinability. His main work dealt with Ḳur'ānic philology, the *Ma'ānī 'l-Ḳur'ān* (preserved in several manuscripts; the edition by I. al-Abyārī, 3 vols., Beirut 1986 of a work *I'rab al-Ḳur'ān* attributed to al-Zadjdjādj probably contains another, later book; cf. Sezgin, *GAS*, viii, 100, and al-Abyārī's conclusions in his edition, iii, 1095-1100).

Al-Zadjdjādj remained an authority in the history of the Arabic grammatical tradition. His opinions are quoted for instance frequently by al-Rāzī in his Ḳur'ān commentary (more than 500 times, cf. Lagarde's index *s.v.*, Leiden 1996, 82-3); rather surprisingly, his favourite pupil al-Zadjdjādjī does mention him as his teacher, but when he quotes his opinion on complete and incomplete declinability from the *K. mā yanṣarif wa-mā lā yanṣarif* he does so without mentioning his name (cf. Versteegh, 1995, 164, 172, 174).

AL-**ZADJDJĀDJĪ**, ABU 'L-ḲĀSIM 'ABD AL-RAḤMĀN b. Isḥāḳ, famed Arabic grammarian. He was born in Nihāwand in western Persia in the second half of the 3rd century A.H. (i.e. around 860-70), received his training as a grammarian in Baghdād, and was active in Damascus and Aleppo. He probably died in Ṭabariyya (Tiberias), either in 337/948 or 339-40/949-50. Almost nothing is known about his life except for a few anecdotes. It is clear from his grammatical writings that he was a Mu'tazilī (he mentions with approval such typically Mu'tazilī tenets as *al-kalām fī 'l al-mutakallim* and the non-identity of *ism* and *musammā*; cf. Versteegh, 1995, 36 n. 20, 37 n. 21) and there is one report that mentions his Shī'ī leanings (al-Dhahabī, *Siyar*, xv, 476 ll. 7-8).

Al-Zadjdjādjī's teachers are well known, since he himself gives a list of them in his *Īḍāḥ* (78-9); among them are not only grammarians belonging to the Baṣran school such as al-Zadjdjādj, al-Akhfash al-Ṣaghīr, and Ibn al-Sarrādj, but also those belonging to the Kūfan school, such as Ibn Kaysān, Ibn Shuḳayr and Abū Bakr Ibn al-Anbārī [*q.vv.*]. As a matter of fact, al-Zadjdjādjī is proud to present himself as an intermediator between the two schools of grammar, stating that he reformulated the arguments of the Kūfan grammarians in Baṣran terms. His main teacher was al-Zadjdjādj [*q.v.*], from whom he received his *nisba* because of his long association with him. Among his own students are a few grammarians known as such from other sources (e.g. Aḥmad b. Muḥammad b. Salama Ibn Sarrām, cf. al-Suyūṭī, *Bughya*, i, 357, and al-Ḥasan b. 'Alī al-Ṣiḳillī, cf. *ibid.*, i, 515).

Al-Zadjdjādjī's chief fame rests on his *K. al-Djumal* "Book of summaries" (rather than "sentences", the usual meaning of this term in grammar), a didactic introduction to Arabic grammar (ed. M. Ben Cheneb, Paris 1957) of the kind that became popular in the 3rd-4th centuries; similar books were written by Ibn al-Sarrādj, al-Fārisī and Ibn Djinnī. In the *K. al-Djumal*, he simply lists the rules of Arabic grammar without going into explanations or controversies. This book became one of the most popular textbooks in the Arab world, especially in North Africa, where at one time more than 120 commentaries were current (Ibn al-'Imād, *Shadharāt*, ii, 357); 49 commentaries are preserved in manuscripts, some of which have been published, among them those of al-Baṭalyawsī (d. 521/1127), ed. H.'A. al-Nashratī, al-Riyāḍ 1979, and Ibn 'Uṣfūr (d. 669/1270), ed. S.Dj. Abū Djanāḥ, 2 vols., Baghdād 1980-2 (cf. Sezgin, *GAS*, ix, 89-94).

More interesting from a theoretical point of view is his *K. al-Īḍāḥ fī 'ilal al-naḥw* "Book of the explanation of grammatical causes" (ed. M. al-Mubārak, Cairo 1959), which deals with the *'ilal* "causes" [see 'ILLA] of the discipline of linguistics. The term *'illa* in the title is essential for the understanding of al-Zadjdjādjī's theoretical principles, and at the same time difficult to understand. In the fifth chapter (*Īḍāḥ*, 64-6) he states that there are three kinds of linguistic causes: the *'ilal ta'līmiyya*, the *'ilal ḳiyāsiyya* and the *'ilal naẓariyya wa-djadaliyya*. These represent the levels of explanation grammarians provide for linguistic phenomena: the first category are the simple rules (such as those presented in the *K. al-Djumal*), and the second category the explanations of these rules in terms of resemblance and relative force of linguistic elements, but the third category contains extra-linguistic or logical explanations that justify the explanations of the second level. Al-Zadjdjādjī claimed that he was the first to write such a book; this assertion may be exaggerated, but nevertheless, his distinction of epistemological levels in linguistic explanations must be regarded as a unique contribution to the Arabic tradition, even though there are connections with other texts, e.g. al-Sīrāfī's commentary on the *Kitāb Sībawayhi*. Unlike the *K. al-Djumal* and perhaps because of its uniqueness, the *Īḍāḥ* does not seem to have had much impact on Arabic grammatical literature. There is only one manuscript and the book is rarely cited by later grammarians, although there are lengthy quotations in later compilations such as al-Suyūṭī's *Muzhir*.

Among the other books that have been preserved from his writings are a treatise on particles containing an *l* (*K. al-Lāmāt*, ed. M. al-Mubārak, Damascus 1969), a book on the functions of particles (*K. Ma'ānī 'l-ḥurūf*, ed. Farhūd, 1982), a treatise on the etymology of the names of God (*K. Ishtiḳāḳ asmā' Allāh*, ed. al-Daḳḳāḳ, Damascus 1975), as well as several collections of notes and comments, the most important of which is the *K. al-Madjālis*, one of the most important sources on debates between grammarians (ed. 'A.M. Hārūn, Kuwait 1962). Other books are mentioned by title in the sources, but have not been preserved in manuscript form, e.g. his *Risāla*, a commentary on the introductory chapters of the *Kitāb Sībawayhi*, which he himself mentions in the *Īḍāḥ* (41; cf. Versteegh, 1995, 32 n. 8). For a complete list see Sezgin (*GAS*, ix, 88-95) and Versteegh (1995, 3-6).

It is not easy to assess al-Zadjdjādjī's value and impact: as *ṣāḥib al-Djumal*, he was celebrated, but the original ideas in his *Īḍāḥ* are largely forgotten. This means that his special blend of grammar on a logically epistemological basis never caught on. In fact, later grammarians were more concerned with the

semantics and pragmatics of the Arabic language—apart from the traditional preoccupation with morphological and syntactic analysis—so that they had no time for the methodological points which al-Zadjdjādjī attempted to make. This applies in particular to such typical topics treated by him as the relative priority of noun, verb, and particle, or the explanation of the fact that the verb does not have a genitive, and that the noun does not have a jussive. Even with regard to the definition of the parts of speech, later grammarians tended to mention just a few definitions, whereas he analyses them in detail (*Īḍāḥ*, 48-55).

In general, what is characteristic of his work as a grammarian is his relentless quest for the "cause" or explanation of linguistic phenomena. Mention should also be made of his special style, a personal approach to polemics that is absent from most other grammarians. A comparison between al-Sīrāfī's and his own treatment of the same problem (that of the status of the weak consonants in the declension of the dual and the plural, cf. *Īḍāḥ*, 121-9, with al-Sīrāfī, *Sharḥ*, i, 214-23; cf. Versteegh, 1995, 224-5) makes clear that there is a large difference in style: al-Sīrāfī's presentation is dry and concise, whereas al-Zadjdjādjī makes an attempt to present the discussion as an actual debate.

ZADJR [see ʿIYĀFA].

ẒAFĀR, i.e. Ẓafārᵢ, the name of the ancient capital of the South Arabian kingdom of Ḥimyar. The present small village of the same name on the ruins of the ancient town is located approximately 8 km/5 miles to the south of the town of Yarīm; the geographical co-ordinates of Ẓafār are lat. 14° 13' N. and long. 44° 24' E.

The identity of the site has been known in Yemen since Antiquity and is confirmed by Late Sabaic inscriptions found at this place. The site of Ẓafār is located at the foot of a hilltop with the ruins of an ancient castle, and remains of foundations and walls can be found at some points. Many fragmentary architectural elements, inscriptions and sculptures as well as items decorated with geometric designs, plant motifs, animal motifs, and various other motifs, like griffons, sphinxes, mythical creatures and signs of the zodiac, bear testimony to a strong influence of orientalised Hellenism in the 4th and 5th centuries. Ẓafār was already in existence in the middle of the 1st century A.D. Pliny (*Natural History*, vi, 104) mentions in the inland of Arabia Felix a town called Sapphar, which is the residence of the king, and the unknown author of the *Periplus of the Erythraean Sea* (§ 22) writes that nine days' further inland from the Red Sea is Saphar, the capital, residence of Charibael, the legitimate king of the two nations, namely, of the Homerite and of the Sabaean; also Ptolemy (*Geography*, vi, 7, 41) calls Sapphar a metropolis. The earliest inscriptional evidence of Ẓafār occurs in the title "king of Sabaʾ and Dhū-Raydān", since the name Raydān in this title is that of the castle on the hill above the town of Ẓafār which is still known locally by the name of Raydān and which was the seat of the Himyarite kings. The town of Ẓafār is explicitly mentioned in a dozen Sabaic inscriptions, mainly in votive texts from the temple Awām in the oasis of Mārib [*q.v.*]. According to an inscription (Jamme 631) from the time of king Shaʿirum Awtar in the first quarter of the 3rd century A.D., the town had to be defended from an Abyssinian army which had marched to Ẓafār. The text Iryānī 14 from *ca.* 270 reports that the two kings Yāsirum Yuhanʿim and his son Shammar Yuharʿish went from the castle of Raydān in the town of Ẓafār to the palace of Salḥīn [*q.v.*] in the town of Mārib, and from the inscription Iryānī 32 we learn that *ca.* 315, after a successful campaign against Ḥaḍramawt, the Himyarite army returned with rich booty into the town of Ẓafār.

Ca. 342 the Byzantine emperor Constantius II sent ambassadors under the leadership of a certain Theophilus to the ruler of the Himyarites, and as a result of the mission three churches were built, one of them in the capital Tapharon (Philostorgius, *Ecclesiastical history*, iii, 4). The first testimonies to Himyarite monotheism are to be found in two inscriptions from Ẓafār (Glaser 389 and Bayt al-Ashwal 2) dated to 378, in which king Malikkarib Yuhaʾmin and two of his sons record the building of the palaces Shawḥaṭān and Kallānum in their capital "through the power of their Lord, the Lord of Heaven". Ẓafār's further embellishment is documented by an inscription (Ẓafār Museum 1), which says that king Shuraḥbiʾil Yaʿfur erected a magnificent palace named Hargab in the capital in 457. The Abyssinian presence and influence are to be seen in an inscription (Ẓafār Museum 579) dated to 504, according to which the dedicators, whose names are clearly Ethiopian, refer to themselves as envoys and claim to have built a house in Ẓafār. When King Yūsuf Asʾar Yathʾar, who professed the Jewish faith, came to power, he launched military operations against the Abyssinians in Southern Arabia along with their allies the Christians. According to the testimony of the Sabaic rock-inscriptions Ryckmans 508, Jamme 1028 and Ryckmans 507, in 518 the Himyarite king killed the Abyssinians in Ẓafār, three hundred in number, and burnt the church there. An account of the persecution of the Abyssinians and Christians and of the burning of the church in the town of Ẓafār (*ṭpr, ṭypr*) and the massacre of all who

were in it, is also found in two Syriac hagiographic works (*The Book of the Himyarites*, ed. A. Moberg, Lund 1924, 7; the letter contained in *The Martyrs of Najrân, new documents*, ed. I. Shahîd, Brussels 1971, II A). The martyrdom of the Himyarite Christians prompted a military intervention and an invasion of an Abyssinian army under the Christian king Caleb Ella Aṣbeḥā, who conquered Yemen in 525. A vivid report on the capture of the royal city of Taphar by the Abyssinians is given in the *Acts* of Saint Arethas and his companions (chs. 35-7). The *Vita* of Gregentius (ch. 63), who later was installed as bishop in Ẓafār, lists three churches built by Caleb in Tephar. With the fall of the Himyarite kingdom, however, Ẓafār lost its imperial status, power and influence, and went into an irrevocable decline; it was already in mediaeval times a ruined site and became the small village it is still today.

The most detailed description of the ancient site of Ẓafār is given by the 4th/10th-century scholar al-Hamdānī [*q.v.*] in the eighth volume of his *Iklīl*, which deals with the antiquities of Yemen (*Iklīl*, viii, ed. M. al-Akwaʿ al-Ḥiwālī, Damascus 1979, 65-74). He says that, in addition to Raydān, which was the royal palace, there were two other castles in Ẓafār, named S̲h̲awḥaṭān and Kawkabān. The town had nine gates which are all enumerated by name. At these gates stood attendants (*awhāz*) who served as guards and without whose permission no-one was allowed to enter the town. Attached to the gate were bells (*maʿāhira*) which could be heard from a distance whenever the gate was opened or closed. Many verses of various poets are quoted by al-Hamdānī, in which Ẓafār is praised as a wealthy city of castles and in which the brightness and uniqueness of the royal palace Raydān is celebrated.

(W.W. MÜLLER)

ẒAFĀR, a former settlement on the Indian Ocean coast and modern name of the Southern Region of the Sultanate of Oman. In early, mediaeval and late mediaeval times it was never actually a port, and is now a ruined site called al-Balīd, a few miles to the east of the chief town of the southern region, Ṣalāla [*q.v.*].

In modern times, the name came to be used for the whole of the Southern Region of the Sultanate of Oman [see ʿUMĀN] and was officially Anglicised as Dhofar. There can be no longer any doubt about the correct vocalisation of the Arabic name, for both lexicographers (e.g. Ibn Manẓūr, *LA*, Beirut 1955, v, 519-20) and geographers (e.g. Yāḳūt, *Muʿd̲j̲am al-buldān*, Beirut 1979, iv, 60) are agreed that the name is of the pattern *faʿāli*, i.e. undeclinable and ending in *kasra*.

Despite local tradition that Ẓafār was a pre-Islamic settlement in origin, there is nothing to substantiate this. The idea may stem from the fact that the whole area was an incense growing one, though we know that the pre-Islamic incense port was SMHRM/SMRM, present-day K̲h̲awr Rawrī, east of al-Balīd (Jacqueline Pirenne, *The incense port of Moscha (Khor Rori) in Dhofar*, in *Jnal. Oman Studies*, i [1975], 81-96). Furthermore, its pre-Rasūlid [*q.v.*] history cannot be recounted in any great detail and it would be wise to commence with the Mand̲j̲ū/Mand̲j̲awiyyūn who arrived in the area after the decline of Sīrāf [*q.v.*] in the 5th/11th century, according to Ibn al-Mud̲j̲āwir (*fl.* early 7th/13th century) (*T. al-Mustabṣir*, ed. O. Löfgren, Leiden 1951-4, 270). According to Abū Mak̲h̲rama (d. 947/1540), Sultan Muḥammad b. Aḥmad al-Mand̲j̲awī, nicknamed al-Ak̲h̲al, was from a people known as Buluk̲h̲ and he died in 600/1203-4, upon which the dynasty came to an end (*T. T̲h̲ag̲h̲r ʿAdan*, in Löfgren (ed.), *Arabische Texte zur Kenntnis der Stadt Aden im Mittelatter*, Leiden 1936, 194-5). The historian of Ḥaḍramawt, Muḥammad al-Kindī (d. 1310/1892-3) (*T. Ḥaḍramawt*, ed. ʿAbd Allāh Muḥammad al-Ḥibs̲h̲ī, i, Ṣanʿāʾ 1991, 97), generally following Abū Mak̲h̲rama closely, tells us, however, that Buluk̲h̲ (the text has Bulḥ) belong to the Yemeni tribe of Mad̲h̲ḥid̲j̲ [*q.v.*], but he gives no evidence for his statement. It was these settlers who built the nearby port of Mirbāṭ [*q.v.*], continues Ibn al-Mud̲j̲āwir, thus called because it was initially where they tethered their horses.

Early in the 7th/13th century (our sources differ on the question of dates and even names), Ẓafār was taken over by a Ḥaḍramī family from Ḥabūḍa (Ḥabūẓa?) near S̲h̲ibām, the Ḥabūḍids. The account of the destruction and rebuilding of the settlement in the early 7th/13th century is found in some detail in Ibn al-Mud̲j̲āwir's *Taʾrīk̲h̲* and, since he was a contemporary of these events, he can be paraphrased here. About 618/1221, the leader of the Ḥabūḍī family, Aḥmad, destroyed Ẓafār, fearing its capture by the Ayyūbids [*q.v.*] from Yemen. He then built a new town on the site, called al-Manṣūra, also al-Ḳāhira, although the name Ẓafār continued to be used. The town was well fortified with four gates; the air was good, the water sweet, and sugar cane and bananas grew well in the area. All the inhabitants were Ḥaḍramīs, perhaps, though Ibn al-Mud̲j̲āwir does not mention this, brought by Aḥmad to populate his new town (265-6; G.R. Smith and Venetia Porter, *The Rasulids in Dhofar in the VIIth-VIIIth/XIIIth-XIVth centuries*, in *JRAS*, 1988/1, 28).

Space does not permit a detailed account of the remarkable Rasūlid conquest of Ẓafār in 677/1278. The reasons for the conquest and the three-pronged attack from Aden by a naval force, a second detachment travelling along the coastal route and a third which marched from the Yemen to Ẓafār via Wādī Ḥaḍramawt, no doubt to wave the flag there, are dealt with in Smith and Porter, *op. cit.*, 29-31, with full references. All this military effort proved unnecessary, for, after the rendezvous of the Rasūlid troops at Raysūt, the port of Ẓafār, the Ḥabūḍids capitulated when their leader, Sālim, was killed early on in the fray. The local inhabitants of the town were granted an amnesty by the Rasūlids, whose accompanying merchants soon began to open up trade in the area.

Thereafter, until the late 8th/14th century, there would seem to have been a Rasūlid presence in Ẓafār, on occasions an independent ruler of the house, on others a ruler dependent on the Rasūlid government centred in Taʿizz [*q.v.*] in Yemen (al-K̲h̲azrad̲j̲ī, *al-ʿUḳūd al-luʾluʾiyya fī taʾrīk̲h̲ al-dawla al-Rasūliyya*, GMS III, v, Leiden and London 1918, 134, 276, 277-8, 285). Apart from these few references, there is nothing of the history of Ẓafār to report until mention of

the rise of the Kat̲h̲īrīs [*q.v.*], a tribal group from the area, in the late 9th/15th century. In 867/1462-3, they took al-S̲h̲iḥr [*q.v.*], then the port of Ḥaḍramawt, and their subsequent history played out in the area of greater Ḥaḍramawt, in which we can, for convenience, include Ẓafār.

As for the site of Ẓafār, now called al-Balīd, and situated about 5 km/3 miles from Ṣalāla, the chief town of the Southern Region, it has been examined and studied in some depth by P.M. Costa (*The study of the city of Ẓafar (al-Balīd)*, in *Jnal. of Oman Studies*, v [1979], 111-50). Drawings, maps and photographs of the site are many, and what excavations have been carried out there are described in some detail. Perhaps the most remarkable feature of the site is the Great Mosque (Costa's plan, fig. 25, fold-out opposite p. 133). The site which stretches along the sea shore is over one km/1,000 yards in length and it is perhaps worthy of mention that it is larger than the area of the Rasūlid capital, Taʿizz [*q.v.*].

The modern area of Ẓafār, the Southern Region of the Sultanate of Oman and one of its governorates (sing. *wilāya*), covers an area of about 120,000 km²/ 75,000 sq. miles, a third of the total area of the country. The population was estimated at about 160,000 (Oman Ministry of Information, *Sultanate of Oman, the promise and the fulfilment*, Muscat n.d., 30) in the 1980s, and the large majority are Sunnī S̲h̲āfiʿīs, unlike those of the Bāṭina coast and al-D̲j̲abal al-Ak̲h̲ḍar region of the north of Oman who follow Ibāḍī Islam [see ʿUMĀN]. The main towns and villages of the Ẓafār region are: Ṣalāla, Mirbāṭ [*q.vv.*], Ṭāḳa and Raysūt. Geographically, the region of Ẓafār can be divided into three: the coast with its fishing and agricultural settlements; the mountains which enjoy plentiful monsoon rainfall and are the home of cattle rearers; and the Nad̲j̲d, a desert area extending north from the foothills to al-Rubʿ al-K̲h̲ālī [*q.v.*]. For the languages spoken in Ẓafār, see ʿUMĀN, heading (the modern South Arabian languages), and 4. The modern Arabic dialects.

Bibliography: Apart from the sources mentioned above, the following may also be mentioned as the best source by far of the Rasūlid conquest of Ẓafār: Muḥammad Ibn Ḥātim, *K. al-Simṭ al-g̲h̲ālī al-t̲h̲aman fī taʾrīk̲h̲ al-mulūk min al-G̲h̲uzz bi ʾl-Yaman*, in G.R. Smith (ed.), *The Ayyūbids and early Rasūlids in the Yemen*, GMS, N.S. XXVI, i, London 1974, 505-29.

(G.R. SMITH)

ZAʿFARĀN (A.) saffron, *Crocus sativus* L. or *Crocus officinalis* Pers., one of some eighty species of low-growing perennial plants of the family Iridaceae, found throughout the Mediterranean area, mid-Europe and Central Asia. A product, used in antiquity as an important source of yellow orange dye, was obtained from the stigma (*s̲h̲aʿr, s̲h̲uʿayra*) of the sterile cultigen *C. sativus*.

1. Domestic uses.

Saffron was, and remains, also widely used in Middle Eastern culinary traditions. In the extant Arabic culinary manuals of the mediaeval period (4th/10th to 8th/14th centuries), ranging in provenance from ʿIrāḳ to the Iberian peninsula, saffron appears frequently in a wide variety of domestic preparations. A representative selection of recipes may be found in the anonymous *Kanz al-fawāʾid*, probably of Mamlūk Egyptian origin.

In substantial dishes containing meat, often together with one or more vegetables, saffron was used to lend colour, a purpose sometimes explicitly stated in the recipe. For example, in a sweet-sour dish of Persian origin, *zirbād̲j̲*, chicken is tinted with saffron before vinegar is added to the cooking pot. However, in other cases, saffron is used to add flavour. One of the stages of preparation for *ṭabāhid̲j̲a* calls for a combination of saffron with honey, nuts, corn starch, pepper and various spices mixed together and added to the pot. The complement of the distinctive aroma of saffron was likely intended when, in a meatless recipe, it was sprinkled with sugar and rosewater on top of the finished dish; indeed, saffron is often found in combination with aromatic rose water [see MĀʾ AL-WARD, in Suppl.]. A mustard sauce, *k̲h̲ardal*, containing saffron and other dried spices, was mixed with brown vinegar, the preparation being used to prevent the "transformation" of fish.

Other, less known, domestic uses for saffron were its frequent appearance, among many other ingredients, in preparations for "home remedies" such as stomachics (*d̲j̲awāris̲h̲*), one such being said to sweeten the breath and prevent snoring. Finally, *māʾ zaʿfarān*, a clear liquid distilled from saffron, was used to scent clothing without leaving a trace of its colour.

2. As a medicament.

As well as being used in food preparation, saffron is one of the simple medicaments, abundantly cited in Arabic medical treatises. At the present time, it is used in traditional medicine of the Arab-Muslim domain (*ṭibb ʿarabī, ṭibb yūnānī*). It has been used since Antiquity (cited in the *Iliad*, xiv. 348) as an aromatic, colourant and simple medicinal herb. In mediaeval Islamic literature it appears under various names: *zaʿ-farān* (the most common), *rayhaḳān, d̲j̲ādī, d̲j̲ād̲h̲ī* and *d̲j̲isān*. Dāwūd al-Anṭākī [*q.v.*] thought that the Syriac name of this herb was *kurkum*, but this term in fact denotes the curcuma, often mixed up with saffron on account of the similarity in colour. Saffron was cultivated in many parts of the Islamic world, but was also imported. Ibn al-ʿAwwām [see FILĀḤA. ii] gives a precise description of the plant's cultivation in al-Andalus, near to Seville (*K. al-Filāḥa*, i, 116-18). There were various varieties known in the classical period: the Mag̲h̲ribī and the Edessan (*ruhāwī*), but also the Frankish or Genoese (*ifrand̲j̲ī, d̲j̲anawī*). Al-Bīrūnī mentions Persian varieties (*iṣbahānī, rāzī* and *k̲h̲urāsānī*) and Syrian (*s̲h̲āmī*) ones. The products of the Sūs [*q.v.*], in southern Morocco, were especially appreciated, as stated by al-Anṭākī and the anonymous *Tuḥfat al-albāb*; contemporary Moroccan herbalists further mention the *zaʿfarān zebbūdī* (cultivated by the Zebbūd of the Sūs).

Saffron was considered to be a stimulant for the nervous system, but also an aphrodisiac, a tonic for the heart and a cordial (*mufarrid̲j̲*). It was used in the composition of collyria, as indicated by Ibn Sīnā [*q.v.*] (*Ḳānūn*, i, 306-7) and al-Anṭākī (*Tad̲h̲kira*, 178-9), since the powers of dissolving white specks in the eye and strengthening the eyesight were attributed to it. Finally, it was used as an emmenagogic, a diuretic and a lithotriptic, but also, on the fringes of magic, in amulets for helping with labour in parturition. At the present time, folk medicine uses the "ink" of saffron in the making of amulets bearing cabbalistic inscriptions aimed at combatting the evil eye. Another usage, fairly current in the medical treatises, is as a calming remedy for pains and inflammations of the ear. Since saffron was a precious and expensive product, fraudulent substitutes of all kinds were current, to the degree that Kōhēn al-ʿAṭṭār [*q.v.*] devotes a section of his

treatise to describing the techniques for verifying the authenticity of this simple (*imtiḥān al-zaʿfarān*) (*Minhādj*, 159). Most of the falsifications were done by using the curcuma rhizome (sc. that of *Curcuma longa* L., *kurkum*) or the bastard saffron (*Carthamus tinctorius* L., *ʿuṣfur*), because of their close resemblance to genuine or medicinal saffron.

AL-**ZAFAYĀN**, ʿAṬĀʾ B. USAYD (or Asīd) Abu ʾl-Mirḳāl al-ʿUwāfī al-Saʿdī, Umayyad *radjaz* poet, *fl. ca.* 80/700. His *Dīwān*, collected by Muḥammad b. Ḥabīb, has been only incompletely preserved (ten fragmentary poems, 230 verses) and published by W. Ahlwardt (*Sammlungen alter arabischer Dichter*, ii, 1903, lx-lxv, 91-100; with four additional fragments, 30 verses). The *Dīwān* was in better condition when used by al-Ṣaghānī in the 7th/13th century.

Further fragments (41 verses), with corrections to the edition of Ahlwardt, have been collected in J. Hämeen-Anttila, *az-Zafayān and his place in literary history*, forthcoming in *Asiatische Studien*, where the history of al-Zafayān's *Dīwān* is discussed in detail.

Al-Zafayān is rarely quoted in philological literature and almost nothing is known of his life. One of his poems (no. 8) refers to the defeat of Abū Fudayk in 73/693 and another (no. 6) is dedicated to a Marwānid caliph with typical Marwānid propagandistic themes such as are also found in poems by Djarīr [*q.v.*]. The poems of al-Zafayān resemble those of his contemporary, al-ʿAdjdjādj [*q.v.*], and show the development towards polythematic *urdjūzas* [see RADJAZ]. Some of his poems exhibit the lexicographical orientation of the Baṣran *radjaz* poets, whereas in others al-Zafayān uses a simple and straightforward language.

There seems to have been another *radjaz* poet of the same name, al-Zafayān b. Mālik b. ʿAwāna, living in Baṣra a century later (Yāḳūt, *Udabāʾ*; ii, 130-1), but almost nothing is known of his works.

Bibliography: In addition to references given in the article, see Sezgin, *GAS*, ii, 370.

(J. HÄMEEN-ANTTILA)

AL-**ẒĀFIR BI-AʿDĀʾ ALLĀH**, ABŪ MANṢŪR ISMĀʿĪL, twelfth Fāṭimid caliph and the ninth to reign in Egypt (born mid-Rabīʿ II 527/February 1133, *r.* 544-9/1149-54).

His four older brothers having predeceased their father, ʿAbd al-Madjīd al-Ḥāfiẓ, the latter appointed him, in writing, as heir to the caliphate. Al-Ẓāfir, at sixteen years of age, received the *bayʿa* on Sunday, 4 Djumādā II 544/10 October 1149, the day following the night of his father's death, at a time when Cairo was the scene of confrontation between Turkish cavalry and black military slaves. To pacify the troops, he distributed cash payments to them and promised to ensure their welfare. As soon as his vizier, Nadjm al-Dīn Abu ʾl-Fatḥ Salīm b. Muḥammad Ibn Maṣāl al-Lukkī al-Afḍal or al-Mufaḍḍal [see IBN MAṢĀL], a native of Barḳa, had eliminated the instigators of unrest in Shaʿbān/November, al-Ẓāfir, a young man of exceptional beauty, was free to devote his time to recreation in the company of his concubines. There then erupted the rebellion of the governor of Alexandria, Sayf al-Dīn ʿAlī b. al-Sallār (or Salār), who overthrew Ibn Maṣāl and had himself recognised by the Palace as vizier with the *laḳab* of al-ʿĀdil [see AL-ʿĀDIL B. AL-SALĀR]. He then sent his stepson, ʿAbbās b. Abi ʾl-Futūḥ [*q.v.*] Yaḥyā b. Tamīm b. al-Muʿizz b. Bādis al-Zīrī, accompanied by Ṭalāʾiʿ b. Ruzzīk [*q.v.*] to execute (on 19 Shawwāl 544/11 February 1150, at Ibn Maṣāl's refuge at Dillas) the deposed vizier and his ally, Badr b. Rafīʿ, who had been unable to protect the Arab tribes of the Delta.

A month earlier, in Ramaḍān 544/January 1150, Ibn Sallār had gathered together all the "cadets" of Cairo, *ṣibyān al-khāṣṣ*, sons of dignitaries and officers receiving military training. Hearing of a conspiracy amongst them against him, he executed the majority of them and sent the others to garrison the frontiers.

In Radjab 545/October-November 1150, a Frankish contingent attacked al-Faramā, which was sacked and burned. Less than a year later, Rabīʿ I 546/July-August 1151, al-ʿĀdil retaliated by sending a fleet to raid the Frankish coast, causing severe damage to Yāfā, ʿAkkā, Ṣaydā, Beirut and Tripoli and slaughtering a large number of Christian pilgrims. The expedition cost the Fāṭimid treasury 300,000 dīnārs, and in Cairo it was necessary to suspend the free distribution by the *dīwāns* of clothing and various other items. Nūr al-Dīn b. Zangī [*q.v.*], then the prince of Aleppo, was tempted to support the efforts of the Egyptian fleet with a land attack on the Frankish positions, but concern about his relations with Abak, prince of Damascus led him to decide against it (M. Yared-Riachi, *La politique extérieure de la principauté de Damas 468-549 h./1076-1154*, Damascus 1997, 229-30).

In Muḥarram 548/April 1153, concerned at the pressure being exerted by the Franks, Ibn Sallār appointed ʿAbbās to conduct on his behalf the relief of the Egyptian garrison of ʿAsḳalān [*q.v.*] in Palestine, a relief which took place every six months. While ʿAbbās and his companions, including the renowned Usāma Ibn Munḳidh [see MUNḲIDH, BANŪ], were on the way, they became disenchanted with the idea of going and isolating themselves so far from Cairo in a fortress to which the Franks were laying siege. Arriving in Bilbays, they appealed to Naṣr, the son of ʿAbbās and a very close friend of al-Ẓāfir, to go and persuade the latter to appoint his father vizier in place of Ibn Sallār. The young man obtained the agreement of al-Ẓāfir, who refused him nothing, then went to the house where his grandmother was cohabiting with Ibn Sallār, beheaded him with a single sword blow and alerted his father by carrier-pigeon (Ibn Ẓāfir, *Akhbār al-duwal al-munḳaṭiʿa*, ed. A. Ferré, Cairo 1972, 102-3). The next day, 12 Muḥarram 548/9 April 1152, ʿAbbās arrived in Cairo. He negotiated with al-Ẓāfir's courtiers and the latter appeared in the *manẓara* above the Bāb al-Dhahab (see A.F. Sayyid, *La capitale de l'Égypte jusqu'à l'époque fāṭimide. Al-Qāhira et Fusṭāṭ, essai de reconstitution topographique*, Beirut

1998, index at 727-32) brandishing the head of Ibn Sallār for all the people assembled at the gate to see, then had it exhibited in the *khizānat al-ruʾūs* of the Palace. ʿAbbās was generally congratu-lated for his action, all the more so since Ibn Sallār, a man of no discernible qualities whatsoever, was detested for his greed and his cruelty. Both Ibn Ẓāfir and Ibn Muyassar give detailed accounts of the brutal and vindictive crimes perpetrated by him in the wake of his seizure of power. On the other hand, when the *faḳīh* Aḥmad b. Muḥammad al-Salafī al-Iṣfahānī arrived in Egypt, Ibn Sallār had a *madrasa* built for him in Alexandria, known as al-ʿĀdiliyya (completed in 546/1151-2), where Sunnī *fiḳh* was taught. He may also have been responsible for the appointment of a Shāfiʿī Sunnī, Abu 'l-Maʿālī b. Djumayʿ al-Arsūfī, to the post of grand *ḳāḍī* of Egypt. After his assassination, the vizier's Sunnī supporters appealed to the caliph al-Ẓāfir to punish the one responsible, in their view, for instigating the murder, Muʾayyad al-Dawla Ibn Munḳidh, whom they presented, rather curiously for non-Ismāʿīlīs, as a stranger to the Egyptian tradition, agent of a Syrian power hostile to the Fāṭimids and a person capable of actions detrimental to the reigning caliph. Ibn Munḳidh, informed of their threats and fearing for his life, shared with his friend ʿAbbās the unsavoury rumour that was circulating in the palace concerning the dubious relationship between al-Ẓāfir and Naṣr b. ʿAbbās. Ibn Munḳidh urged the furious ʿAbbās to have al-Ẓāfir killed and replaced by another caliph. ʿAbbās then put pressure on Naṣr to kill the caliph. Al-Ẓāfir was invited by the latter to come, with a small escort, to spend a night at Dār al-Maʾmūn (or al-Maʾmūniyya, see Sayyid, *op. cit.*, 507-8, extensive bibl. on the episode in question), the vizier's residence, close to the palace. In the entrance hall, the members of the escort were slaughtered and the caliph himself, then twenty-one years old, was executed. The bodies were thrown into a nearby pit and then hidden under fragments of blue marble (early Muḥarram 549/later March 1154).

The following morning, alerted to the murder by his son, the vizier ʿAbbās presented himself openly at the Palace, on horseback, demanding to see the caliph on urgent business. He was sought everywhere, in vain. However, a minor slave in al-Ẓāfir's escort had witnessed the murder of the caliph, having hidden in an embrasure, and in the morning he informed the Palace. The women took to mourning while a guard was sent to tell ʿAbbās that the caliph had left the Palace the previous evening to visit his son and had not returned. ʿAbbās dismounted from his horse and with his escort forced his way into the Palace. Having installed himself in the great hall of the fountains, *ḳāʿat al-baḥr* (Sayyid, *op. cit.*, 466, perhaps known under a different term), where the caliph was accustomed to holding solemn receptions, he ordered that the two younger brothers of al-Ẓāfir, Djibrīl and Yūsuf, be brought to him. They told the vizier that his son should be asked what had become of their brother. ʿAbbās ordered his men to kill the two princes, then went out to announce publicly that they had confessed to the murder of al-Ẓāfir. The vizier had al-Ẓāfir's son ʿĪsā, a child of five years old, brought to the same room, perched him on his shoulder, and before the assembled dignitaries of the Palace, introduced him as al-Fāʾiz bi-Naṣr Allāh, successor to his father whom his two uncles had assassinated. The officers of the court declared with one loud voice that they had heard and would obey. The newly appointed child-caliph, shocked by the sight of the blood-stained bodies of his uncles and intimidated by the vehemence of the cry of unanimous support, was permanently traumatised, and was never to regain his health or his sanity.

From this tragic reign of a declining dynasty, one salient feature to be noted is the Sunnī upsurge which marginalised the official Ismāʿīlism of the Fāṭimids at the same time as there developed a strong sense of Egyptian identity in confrontation with the Muslim powers of Syria, a sense which was the power-base of successive viziers, often accorded the title of *sulṭān* by the chroniclers. Also to be noted is the effectiveness of the Egyptian battle fleet, at a time when the army was incapable of defending ʿAsḳalān, which fell to the Franks in Radjab 549/August 1153.

Bibliography: The most complete account is in Ibn Muyassar, *al-Muntaḳī min akhbār Miṣr*, ed. A.F. Sayyid, Cairo 1981, 141-4 and bibl. at 185-90; the list of sources, abundant for this period and all already exploited, may be found in Ibn Ẓāfir, *Akhbār al-duwal*, notes and 21-7; Y. Lev, *State and society in Fatimid Egypt*, Leiden 1991, 61-3, 199-210; Sayyid, *al-Dawla al-fāṭimiyya, tafsīr djadid*, Cairo 1413/1992, 207-11, 433-55; J.Cl. Garcin (ed.), *États, sociétés et cultures du monde musulman médiéval, Xᵉ-XVᵉ siècle*, i, Paris 1995, pp. xlii-l, 113; C. Petry (ed.), *The Cambridge history of Egypt*, i, Cambridge 1998, 154, 168, 560-71; J. Prawer, *Histoire du Royaume latin de Jérusalem*, Paris 1969, i, 394-415 (analyses in detail the contribution of Christian sources for the period).

(TH. BIANQUIS)

ẒĀFIR AL-ḤADDĀD, ABŪ MANṢŪR (Abū Naṣr in al-Dānī, Abu 'l-Ḳāsim in al-Maḳrīzī, see *Bibl.*) b. al-Ḳāsim al-Barḳī, Fāṭimid poet from Alexandria. His father was from Djudhām and his mother from Lakhm, tribes which had migrated to Egypt in early Islamic times. His date of birth is unknown. He died in Dhu 'l-Ḥidjdja 528/Sept.-Oct. 1134 or Muḥarram 529/Oct.-Nov. 1134.

At first he worked as a blacksmith like his father, but was drawn to literature and frequented meetings of poets until they acknowledged him as one of their own. He wrote panegyrics on governors and judges in Alexandria and al-Fusṭāṭ, having settled down in al-Fusṭāṭ after 508/1114-15. There he praised the Fāṭimid caliphs al-Āmir and al-Ḥāfiẓ and the viziers al-Afḍal al-Maʾmūn, al-Baṭāʾiḥī, al-Akmal and others. In addition to panegyrics, the main themes of his poetry were love-poetry and descriptive poetry, excelling in descriptions of nature, both in Alexandria and in al-Fusṭāṭ; his descriptions of Alexandria evince nostalgic memories of his youth there.

Critics admired his poetry, lauding his tender and musical language and his knack for apt similes, and the critic M. Kāmil Ḥusayn (see *Bibl.*) has ranked him among the greatest poets of his age. ʿImād al-Dīn al-Iṣfahānī accused him of committing many linguistic mistakes, and other critics accused him of plagiarism. He was perhaps the first to compose *muwashshaḥāt* [see MUWASHSHAḤ] in Egypt and also wrote a *maḳāma* addressed to al-Dānī in the ornate style of his day.

ZAGHANOS PASHA (Greek forms Záganos, etc., cf. Moravcsik, *Byzantinoturcica*[2], ii, Berlin 1958, 128-9), Ottoman official and general of the 9th/15th century, Grand Vizier 1444-52 and commander-in-chief of the army 1452-64, in which last year he probably died. He was an ex-Christian of the *dewshirme* [*q.v.*], possibly of Greek or Albanian origin, and was both the son-in-law of sultan Murād II and father-in-law of Meḥemmed II [*q.vv.*].

He was tutor and chief counsellor of the latter, together with the second vizier, Shihāb al-Dīn Pasha. The two of them exercised considerable influence over Meḥemmed in persuading him in 1453 to pursue the siege of Constantinople when the Grand Vizier Khalīl Pasha Djandarlî [*q.v.*] had temporarily considered lifting the siege for fear of possible Western intervention. After the conquest of the city and the execution of Khalīl, Zaghanos replaced him in his office, with a new tradition "whereby the most important positions in the central government were filled by the slaves of the sultans" (S.J. and Ezel K. Shaw, *History of the Ottoman Empire and modern Turkey*, Cambridge 1976-7, i, 58; cf. Uzunçarşılı, *Osmanlı tarihi*, [5]Ankara 1988, i, 430-1, 439-40, 479, 499, ii, 9-10; C.H. Imber, *The Ottoman Empire 1300-1481*, Istanbul 1990, 153, 156). In the preparations for the final assault on Constantinople, Zaghanos had played an important role in preparing pontoons and siege engines, and he also shared in the construction of Rūmeli Ḥiṣārî on the European shore of the Bosphorus (see S. Runciman, *The fall of Constantinople*, Cambridge 1965, 110-11, 118-19, 162-3; A. Savvides, *Constantinople in a vice. Some notes on Anadolu Hisarı (1395/6) and Rumeli Hisarı (1452)*, in *Acta Patristica et Byzantina*, viii [Pretoria 1997], 144-9; Imber, *op. cit.*, 146, 155 ff.). Both he and Shihāb al-Dīn were summarily dismissed in 1456, and Zaghanos was exiled to Anatolia. But this exile was only brief, for he soon appears as governor of Gallipoli [see GELIBOLU], of Thessaly [see TESALYA] and of the Morea [see MORA] between 1457 and 1463 (see Savvides, *Problems of the Ottoman conquest and the spread of the conqueror in the Thessalian area* [in Greek], in *From Byzantium to the Turkish domination . . .*, Athens 1997, 296).

In October 1459 he succeeded Ismāʿīl Pasha as *ḳapudan-i deryā* and with his fleet attacked the Latin garrisons in Samothrace [see SEMEDIREK] and Thasos [see TASHÖZ], and from spring 1460 he was involved in the conquest of most of the Byzantine despotate of the Morea as well as of eastern Attica and Boeotia. His atrocities in the Morean campaign led to his eventual replacement in the governorship there, according to Chalcocondyles (see K.M. Setton, *The Papacy and the Levant*, Philadelphia 1976-8, ii, 220-2; Uzunçarşılı, ii, 25; Savvides, *Morea and Islam, 8th-15th centuries: a survey*, in *From Byzantium to the Turkish domination*, 319 n. 173). He then completed the annexation of the Florentine duchy of Athens (1460), executing at Thebes its last ruler (see Savvides, *The Ottoman conquest of Thebes and Levadeia* [in Greek], Athens 1993, 36, 58-9). In 1463 he became commander-in-chief of the army and possibly governor of Macedonia, and it was at this time that he took into his harem Anna, daughter of the last Byzantine emperor of Trebizond [see ṬARABZUN], eventually forcing her to adopt Islam. He died soon afterwards, probably in 1464.

(A. SAVVIDES)

ZAGHARDJÎ BASHÎ (T.), the title of one of the three commanders who formed the *dīwān* or administrative focus of the Janissary corps of the Ottoman army (the other two being the Shamsundjî Bashî and the Turnadjî Bashî). Since *zaghar* means "hound" and *zaghardjî* "keeper of the hounds", the *orta* or company of the *zaghardjî*s (no. 64 in the Janissary corps) was probably in origin part of the hunting force of the early Ottoman sultans (cf. also the Segbāns [*q.v.* in Suppl.]).

ZAGHĀWA, the name given to a part Saharan, part-Sahelian tribe or people, who inhabit parts of the Republics of the Sūdān and Chad. They appear in the mediaeval Arabic sources and in more recent travel and anthropological literature in three distinct contexts:

(a) A pagan, albeit superficially Islamised, divine monarchy, which held sway within the existing territories of Wadai (Wādāy) and Kanem. E.W. Bovill, in his *Caravans of the Old Sahara*, Oxford and London 1933, remarked (264) that "Probably no event in the history of the Western Sudan had more far-reaching consequences than the Zaghawa invasion. Unfortunately we know nothing of its circumstances—how it came about, or the manner of its achievement", but H.A. MacMichael in his *The tribes of Central and North Kordofan*, 105-10, found it hard to quote solid historical evidence to justify this claim. Islamic sources are silent about such an "invasion". The Zaghāwa are described, in some detail, by several Arab geographers, notably al-Yaʿḳūbī (d. 259/872-3); al-Muhallabī (d. 380/990), quoted by Yāḳūt in his *Muʿdjam al-buldān*; and al-Idrīsī (d. 548/1154) in his *Kitāb Rudjdjār*. The Zaghāwa were, in part, Berber-speaking (the Ṣadrāta) and were semi-sedentary. They possessed a capital that was located in the region of Borkou (Burkū).

According to Lewicki, the Zaghāwa included four peoples that were later to form a part of the Tubu of Tibesti [*q.vv.*], sc. the Teda, Daza, Bideyat and a group which have retained the name of the Zaghāwa. According to Isḥāḳ b. Ḥusayn al-Munadjdjim (d. *ca.* 340/950-1), they had a town in the area of the Baḥr al-Ghazāl and others which are now hard to locate, Mānān and Tarāzkī, Saghwa (which also denoted camel-breeding nomads) and Shāma. The Zaghāwa also controlled Bilma, Kawar and parts of Aïr (Ayar). These towns developed trading links with Egypt via Nubia, and with the Maghrib via the oasis of Ouargla (Wardjalān) in Algeria. The chief items of exchange were wheat, sorghum, cowpeas and slaves. The Zaghāwa facilitated the diffusion of Nubian culture into the Central Sudan, especially in crafts associated with leather and metals.

One of the last of the Zaghāwa kings was the reputedly nominally Muslim Arkū b. Būlū (*r. ca.* 414-59/1023-67), who established slave colonies in Kawar and at Zaylā in the Fezzan [see FAZZĀN].

(b) The Zaghāwa were represented amongst the slave population in lower ʿIrāḳ during the ʿAbbāsid age. Seven Zaghāwa slave girls are mentioned by Abu 'l-ʿAlāʾ al-Maʿarrī in his verse. A *ghulām*, whose name is mentioned by al-Ṭabarī and by Yāḳūt as Sālim al-Zaghāwī, played an active role in the great Zandj revolt (see J. Wansbrough, *Africa and the Arab geographers*, in *Language and history in Africa*, ed. D. Dalby, London 1970, 98-9, and M.A. Shaban, *Islamic history, a new interpretation*, ii, *A.D. 750-1055 (A.H. 132-448)*, Cambridge 1976, 110-13; and ZANDJ. 2.).

(c) Today, the term Zaghāwa denotes a partially Islamised, linguistically distinct, mixed Negro and Hamitic tribal group, who are akin to the Tubu and who are to be found in the Eastern Sahara between Lake Chad and Dārfūr province in the Sudan Republic. They are associated with the Dādjū Sultanate of Sila. According to Henri Berre, citing A.J. Arkell, (8-12) the Dādjū (or Kabdja) claim to be related to the Zaghāwa and to have emigrated from the east. Some lay claim to an Arab genealogy which attaches them either to the Banū Khuzām (var. Khazzām, according to Arkell, but possibly to be read as Djudhām), or to the Banū Djuhayna (see MacMichael, *op. cit.*, 111).

(H.T. NORRIS)

ZAGROS, a mountain chain of western and southwestern Persia; the geographers of Classical times identified the Zagros Mountains as the range that separated the empires of Assyria (Mesopotamia) and Media (Central Persia).

This is one of the great Tertiary fold ranges of the Middle East, which begins in the high knot of volcanic mountains, Ararat, Nemrut and others, around Lake Van, and sweeps south-south-east to the eastern edge of the Persian Gulf. At the Straits of Oman the ranges turn eastwards through Fārs and Makrān, beyond where they bend sharply to the north to form the border ramparts between Baluchistan and Sind. The mountains of Muscat and Oman are the exposed section of a flooded pendent offshoot of these same ranges.

The name Zagros is nowadays applied to that part of this mountain system lying between Kurdistān to the north and Fārs to the south, approximately between the latitudes of 29° and 35° N. or the cities of Hamadān and Shīrāz.

The entire range imposes a very effective physical barrier to movement, because of its great width of some 250 km/155 miles, its structure of many parallel folds which rise to 4,000 m/13,100 feet, and the narrow and precipitous nature of the few valleys that cut through them. The Zagros therefore constituted the western defensive wall of Parthian and Sāsānid Persia against assaults from Imperial Rome and Byzantium. Subsequently, the same ranges for long formed the border zone between Ottoman and Ṣafawid territory, and along their western foothills runs the present political frontier between ʿIrāḳ and Iran.

At their northern extremity, the only way over the Zagros is an old caravan route along the Great Zāb river from Irbīl, through Ruwandiz, to Miyāndu'āb, and thence to Tabrīz. By widening, between 1928 and 1932, critical parts of the gorges at Ruwandiz and Berserini, this way was made fit for motor traffic. The high pastures in this region are occupied in summer by Kurdish tribes. Lower down, the oak forests have suffered severely from uncontrolled cutting. The foothills, with an annual rainfall of some 60 mm and with the aid of terracing and irrigation, can support vines, maize and rice. The population includes both Assyrian Christians and a substantial Turkish element that was moved here in Ottoman times. There was formerly a Jewish population of some significance, speaking either Arabic or Neo-Aramaic dialects; this group has now emigrated to Israel. Further south, between the rivers Diyālā and Dez, the Zagros ranges are at their widest and highest, and are made up of regular folds, of mainly limestone rocks, of a height of some 4,000 m/13,100 feet, with few outstanding peaks. These mountains receive an appreciable precipitation, of 100 mm/40 inches or more, from the winter cyclones. This falls mainly in the form of snow, which melts through the summer to supply the extensive pastures of the high valleys and plateaux between the ranges. Summer storms here provide a further water-supply.

These wide grasslands are in effect the preserve of the main mobile tribesfolk of Iran, the Lurs (including the great Bakhtiyārī confederacy) and the Ḳashḳāʾī

[*q.vv.*, and see also ĪLĀT]. Their population was estimated in Pahlawī times at between four and five millions, about a quarter of that of all Persia, and they could sometimes mount a threat to the central government, as in 1906. In winter these high plateaux are snow-bound, and the tribes have then to descend to the foothills and Mesopotamian plains.

This pattern of movement, with two migrations during the year, one up, one down, along established wide paths, is strictly speaking transhumant rather than nomadic. The tribes are at their most vulnerable during these movements, and it was then that, especially in the reign of Riḍā S͟hāh Pahlawī [*q.v.*], the army would waylay them and attempt to restrain them throughout the year in their winter camps. This enforced sedentarisation was a virtual death-sentence for both herds and herders.

The rivers of the high Zagros are active and powerful, and have in many cases captured the headwaters of their streams as far back as the main plateau. The watercourses pass through successions of isolated valleys separated by steep and narrow gorges or *tangs* which are practically impassable. In consequence, streams above and below these constrictions are often called by different names. Thus the river which begins as the Gamasiyāb is thereafter known as the Saidmarreh, and reaches the lowlands of K͟hūzistān as the Karkheh [see KARK͟HA].

It follows that these river plains are very isolated, and only accessible by *ṭāḳs* or *kotals*, passes over the ranges. These very rarely link to make a continuous route across the whole mountain system. Much the most important through route is the Ṭāḳ-i Girra, the ancient *Portae Zagriacae* or *Medicae*, the Zagros or Median Gates. This road climbs from Bag͟hdād up the Diyālā river [*q.v.*], which occupies a natural rift opening a way through the outer ranges. The railway to K͟hāniḳīn takes advantage of this gap. From there the well-used road passes by Ḳaṣr-i S͟hīrīn and Karand, crosses the Paylak Pass to Bāk͟htarān (Kirmāns͟hāh) in the valley of the Ḳara Sū, and then goes by way of the Ṭāḳ-i Bustān past the rock of Behistun (*Mons Bagistanus*) with its sculptures and trilingual inscriptions celebrating the conquests of Darius. Thence there is an easy approach over the plain of Čamčamāl to Hamadān, which under the name of Ecbatana was the capital of ancient Media.

Further to the east, there is another possible crossing of the heart of the Zagros, from the town of Dizfūl, along the lower Saidmarreh river and its tributary the Kashgan to K͟hurramābād, and thence to the fringe of the central plateau at Burūdjird. This, however, was never an important trade route, and is essentially a highway of seasonal movement for the Bak͟htiyārī tribesfolk between their winter and summer quarters. At a slight distance to the east, the Trans-Persian Railway pioneered in 1935 the very difficult route up the Diz river valley from Dizfūl to Arāk.

The foothill ranges of the Pus͟ht-i Kūh, about 2,000 m/6,560 feet high, separate the main Zagros from the plains of K͟hūzistān. Their gypsum rocks make poor saline soils, and support only a thin cover of scrub oak. The main oil fields of Iran are trapped in these hills, between Masdjid-i Sulaymān and Gačsarān. The tribes had to pass across this area on their seasonal migrations, and it was here that they were often ambushed.

Eastwards again, the high Zagros grades into the somewhat lower ranges of the province of Fārs, about 3,000 m/9,840 feet above sea-level at their highest. Rainfall here is appreciably less, the rivers less continuous and powerful, and the high plains often contain not streams of fresh water but salty lakes at the centre of systems of inland drainage, as in the Nirīz basin and the Daryā-i Mahārlū in the high plain of S͟hīrāz. Seasonal transhumance is much less common here than in the central Zagros, and most of the population relies on the scattered oases irrigated by cisterns and *ḳanāts*.

The mountains are here crossed by two well-established caravan routes, from the port of Bushire (Būs͟hīr) up the Shāhpūr valley to Kāzarūn and S͟hīrāz (improved by British troops in 1918-19); and from Bandar ʿAbbās by the Tang-i Zindān to Sīrdjān and Kirmān.

(W.C. BRICE)

AL-ZAHĀWĪ, DJAMĪL ṢIDḲĪ (b. 18 June 1863 in Bag͟hdād, d. 23 February 1936), neo-classical poet and eminent representative of the *Nahḍa* [*q.v.*] in ʿIrāḳ.

A son of the Kurdish élite family of al-Bābān from Sulaymāniyya [*q.v.*]—his father Muḥammad Fayḍī was *Muftī* of Bag͟hdād and his mother of Kurdish upper-class origin also—he spent his childhood with his mother, who lived separately from his father. At about 7 years old he became his father's pupil in traditional Arabic learning at a time when modern-type Arabic schools did not exist in ʿIrāḳ. The father encouraged his son's poetic attempts in Arabic and Persian, but Djamīl later confessed that his real interests were the "modern sciences", in which he acquired some knowledge self-taught from translations into the languages he knew: Arabic, Persian and Turkish (Kurdish was not yet a literary language). After teaching at the Sulaymāniyya School in Bag͟hdād, he was appointed a member in the *Madjlis al-maʿārif* in Bag͟hdād, later becoming director of the government printing house and responsible for the Arabic part of the official newspaper *al-Zawrāʾ* and also a member of the appellate court. In *ca.* 1903, having been summoned to the Porte in Istanbul, he visited Cairo and met with progressive Egyptian intellectuals. The Sultan ʿAbd al-Ḥamīd II, aware of al-Zahāwī's enmity towards the government, sent him as *wāʿiẓ ʿāmm* with a deputation to Yemen. After his return 11 months later, he was given a military rank and a medal, but his Young Turkish sympathies and a critical poem which he wrote on Ḥamīdian policies earned him two weeks' imprisonment and a return to Bag͟hdād under guard but with a monthly salary. When the Constitution was restored, he became professor of Islamic philosophy at the *Djemʿiyye-i mülkiyye* and of Arabic literature at the *Dār ul-Fünūn* in Istanbul. Health problems caused him to return to Bag͟hdād, where he taught the *Medjelle* [*q.v.*], later translated by him into Arabic, at the *Madrasat al-ḥuḳūḳ*.

His first books deal with varied topics: philosophy (1894, lectures in Turkish, 1906); horses and horse racing (1896); physical and philosophical questions of the universe (1897); chess (n.d.); a disputation concerning the condemnation of folk belief in miracles and saints, evidently meant to support ʿAbd al-Ḥamīd II's policy towards the Wahhābiyya [*q.v.*] (1905 or 1907); and gravity (1910). In October 1896 he proposed in the Egyptian journal *al-Muḳtaṭaf* a reform of

Arabic script (ed. al-Rashūdī, pp. 186-7). Only at the age of 40 did he return to poetry. He criticised the Arabic poetic tradition, characterising mono-rhyme and mono-metre as a straight-jacket. In 1905 he composed the first Arabic poem in *shiʿr mursal* (*Dīwān*, 149). All his later poetry is in mono-rhyme and, mostly, mono-metre. Already his first *dīwān*, *al-Kalim al-manẓūm* (Beirut 1907), voices his religious scepticism and his role as a social and cultural critic and an advocate of progress in ʿIrāḳ, foreshadowing his later anthologies *Dīwān al-Ẓahāwī* (Beirut 1924), *al-Lubāb* (Baghdād 1928), *al-Awshāl* (Baghdād 1934), *al-Thumāla* and *al-Ẓiyādāt* (publ. posthumously Baghdād 1939). The translation of ʿUmar al-Khayyām's *Rubāʿiyyāt* (Beirut 1924) inspired him to his own *Rubāʿiyyāt* (Baghdād 1928), which criticise in short and pugnacious verses social injustice (especially as regards the position of Muslim women), and the contrast between ʿIrāḳ's former glory and its present educational situation. He praises technical progress and supports the then highly-contested Darwinism. His audacious article *al-Marʾa wa ʾl-difāʿ ʿanhā* in the Egyptian newspaper *al-Muʾayyad* (1910, publ. Nādjī, 255-8) scandalised orthodox circles. After a short (reading) drama *Layla wa-Sumayr* (in *Lughat al-ʿArab*, v [1927], 578-608) he published his brilliant *Thawra fi ʾl-djaḥīm*, an epic poem of 433 verses in the *khafīf* metre. Inspired by al-Maʿarrī's [*q.v.*] *Risālat al-Ghufrān*, and, probably, by Asín Palacios' *La escatologia musulmana en la "Divina comedia"* (1924), its main idea is that heaven's inhabitants were faint conformists, always submissive to the ruling élite and traditions, while hell's inhabitants, of whom he names eminent historical authorities from East and West, were intellectually independent, courageous, creative, and therefore dangerous. Finally, in an overwhelming fight they conquer heaven, the place that they deserve (ed. in *al-Awshāl*, German tr. Widmer, in *WI*, xvii [1935], 1-79). Al-Zahāwī himself considered his *Dīwān al-Nazaghāt* as the most provocative. After a several months' stay in Cairo in 1924, where his expectations for more tolerance were soon deeply disappointed, he delivered it to Salāma Mūsā [*q.v.*]. Published only by Hilal Nādjī, Cairo 1963, it openly and ironically, but with ambiguities, voices the poet's scepticism in nearly every religious principle of Islam. The complete work of al-Zahāwī still awaits publication.

(WIEBKE WALTHER)

ZĀHID [see ZUHD].

ZĀHIDĀN, a city of southeastern modern Iran (lat. 29° 32' N., long. 60° 54' E.), this being the new name, adopted in the time of Riḍā Shāh Pahlawī [*q.v.*], for the older settlement of Duzdāb.

Duzdāb/Zāhidān lies on the north-south highway connecting Čābahār on the Persian coast of the Gulf of Oman through Birdjand to Khurāsān (now of special importance as a supply link to the newly-independent central Asian republics), at some 40 km/25 miles south of the point where the borders of Iran, Afghānistān and Pakistani Balūčistān meet. Though situated in a harsh desert environment (average rainfall p.a., 75 mm/3 inches), the place has had a considerable commercial and strategic significance over the last century or so, and during the First World War it became the western terminus of the railway extended from Quetta [see KWAṬṬA] through the northern part of what was then British Balūčistān. There were plans in the 1930s to connect the railhead of Zāhidān with the Trans-Iranian railway constructed by Riḍā Shāh (see Naval Intelligence Division, Admiralty Handbooks, *Persia*, London 1945, 550, 563); but it was not till the second half of the century that the railway was extended from Ḳum to Yazd and Kirmān city and beyond the latter for mineral traffic, although the passenger traffic line has not yet reached Zāhidān (see *The Middle East and North Africa*, 47th ed. London 2001, 560).

The present city of Zāhidān is almost wholly a modern one. In *ca.* 1950 it had a population of some 10,000, a mixture of Persians and Balūč (Razmārā (ed.), *Farhang-i djughrāfiyā-yi Īrān-zamīn*, viii, 218-19), which by the census of 1996 had grown to 419,518. It is the administrative centre for the province of Balūčistān and Sīstān, and has such amenities as an airport and a university.

Bibliography: Given in the article.

(C.E. BOSWORTH)

ẒAHĪR (A.), conventional form *dahir*, an administrative term of the Muslim West.

Here *ẓahīr*, meaning "help, support", came to mean a royal decree issued by the sovereign and conferring an administrative prerogative, such as nomination to a political or religious post, or granting a privilege, either moral or material, upon the beneficiary. In the case of conferred privileges, the beneficiary could share them with his relatives or even pass them on to his descendants if the sovereign was generous enough to include such a favour in the document.

The early dynasties

The term first appeared under the Almohad dynasty (524-668/1130-1269), replacing another term, *ṣakk*, used earlier by the Almoravids (454-541/1062-1147) and the Andalusian *ṭāʾifa* kingdoms to refer to the same type of royal or princely decree. As such, the use of the term *ẓahīr* was especially associated with the royal administrative tradition in the Maghrib and Islamic Spain. The *ẓahīr* was, in the first place, a document the ruler delivered to a state official upon his appointment. In the case of a governor, it would define the administrative prerogatives and the territorial limits within which he would exercise his powers. Along with the royal decree, the governor would also receive a seal and a garment. A copy of the document was usually addressed to the subjects of the appointee in order to introduce the new official and reiterate the duty of obeying those representing the princely authority. The content of the *ẓahīr* was made known in a public reading, usually at the main mosque following the Friday prayer. An ambassador on mission to a foreign court was also supposed to carry a *ẓahīr* introducing him to the authorities of that country. In this case, the document was no different from an official letter of accreditation. In fact, in common usage, *ẓahīr* became synonymous with "royal letter", but *ẓahīr* in its strict sense refers to a document endowed with a legal binding power, which a letter does not necessarily have.

Another use of the document consisted in bestowing privileges upon merchants, dignitaries, religious figures or former state servants as a reward for their past services or in recognition of their loyalty to the sovereign. These privileges could be symbolic, in the form of "distinction and respect" (*at-tawḳīr wa 'l-iḥtirām*), or they could be material in the form of a regular allowance, land grant (*tanfīdha*), the right to farm taxes within a defined territory, or a trade monopoly. *Ẓahīrs* were also delivered to the *shaykhs* of the Ṣūfī lodges and to members of Sharīfian families to confirm their distinguished status or to corroborate their claim to a holy lineage, on the basis of which they would be entitled to a number of privileges, such as exemption from non-religious taxation, arbitrary impositions, *corvée* obligations and military service. They also involved respect (*tawḳīr*) and special treatment by the local authorities, thereby demonstrating the state's consideration for those whose descent or social distinction placed them above the common people.

The bestowal of such privileges by a Muslim sovereign by means of *ẓahīr* was not limited to his Muslim subjects. Christian or Jewish subjects were also among the beneficiaries. The Almohad ruler Abū Yaʿḳūb Yūsuf II (1213-23) even wrote a *ẓahīr* in favour of a Christian monastery located beyond the northern Andalusian border, giving the monks the right to drive their cattle south to the more favourable grazing lands of the Almohad domains. The most famous Almohad ruler, Yaʿḳūb al-Manṣūr (1184-99 [see ABŪ YŪSUF YAʿḲŪB AL-MANṢŪR]), also wrote *ẓahīrs* in favour of his Jewish subjects. The practice of extending *ẓahīr* privileges to Jews became even more common during the modern period with the growing role of Jewish merchants in domestic and international trade.

Under the Saʿdids and ʿAlawīs

Under the Sharīfian rule of the Saʿdī and ʿAlawī dynasties (916/1510-present day), the issuing of *ẓahīrs* became more frequent as a result of the special privileges acquired by the *sharīfs* and because of the proliferation of saintly lineages. The growing weakness of the central government and its inability to extend its effective rule to the whole country also meant that sultans were more disposed to grant privileges for those local religious and political figures who would return the favour and support the state's policies at the regional level. Under these two Sharīfian dynasties, the most common form of *ẓahīr* became the *ẓahīr al-tawḳīr wa 'l-iḥtirām* delivered to Sharīfian families, maraboutic figures, *shaykhs* of the Ṣūfī orders and faithful servants.

This form of *ẓahīr* usually conferred upon the holder and his relatives the two kinds of privileges mentioned above, moral and material. Every *ẓahīr* of this category was by definition a title of distinction conferred by the highest political and religious authority of the land. The mere fact of possessing such a document was enough to guarantee its holder special treatment by the local authorities and to free him from the exactions and abuses usually suffered by the common people. The royal decree could also involve material benefits, such as exemption from non-religious taxes, or even more, the authorisation to pay the legal religious taxes, normally due to the state treasury (*bayt al-māl*), to the poor among the grantee's relatives. In the case of *zāwiyas*, such a favour amounted to a practical exemption from religious taxation, since it was up to the *shaykh* of the *zāwiya* to decide how he would spend the proceeds of the *zakāt* and *ʿushr* [*q.vv.*]. In the case of an influential *zāwiya*, the sultan could also make concessions in the form of land grants, the right to collect taxes from tribes or villages for the benefit of the *zāwiya*, and even the right to nominate judges or other officials within the territory that fell within the *zāwiya*'s sphere of influence. The *ẓahīr* of respect could also turn the residence or the domain of the beneficiary into a sanctuary (*ḥaram, ḥurm* in Moroccan usage) where people and property would be immune from state prosecution or intervention.

By the end of the 19th century, the number of subjects holding *ẓahīrs* of distinction freeing them from state obligations had reached unbearable proportions. This inflation of *ẓahīrs*, in addition to the harmful effects of European consular protection, led to the deterioration of state finances. However, reforms by which *ẓahīr* privileges would be abolished, or at least limited, were doomed to failure since traditional groups benefitting from state-bestowed privileges vigorously opposed any attempt at reform which would harm their interests. Under the French protectorate régime, which ruled the country after 1912, and after Moroccan independence in 1956, the *ẓahīr* as a title of exemption from state obligations was *de facto* abolished, even if Moroccan sultans (after 1956, kings) continued to deliver *ẓahīrs* to reconfirm the Sharīfian status of those who held similar documents issued by their predecessors. The significance of such documents became purely honorific. Nowadays, usage of the term *ẓahīr* is strictly limited to legislation bearing the royal seal or to appointments to a high state position.

(MOHAMED EL MANSOUR)

ẒĀHIR (A., pl. *ẓawāhir*), lit. the outward meaning of a word, language or event, a term of *uṣūl al-fiḳh* [*q.v.*]. It is the meaning first comprehended by the mind upon hearing a particular term or expression that potentially has two or more meanings. Deriving from a root suggesting a notion of strength, *ẓāhir* is applied to that meaning which in effect takes over the term, thus imparting it before it does the other meanings carried therein. That particular meaning is made prominent by virtue of conventional (*ʿurfī*) or technical (*ṣināʿī*) usage. Cast in opposition to *naṣṣ*, which designates a univocal term, *ẓāhir* is epistemologically probabilistic (*muḥtamal*). Yet *ẓāhir* is also contrasted with *khafī*, this being a term carrying an unclear meaning that is established or deduced only after a hermeneutical effort has been made. This interpretive activity is said to result in the *bāṭin* meaning of the term. Accordingly, the term *ẓāhir* stands somewhere in the middle of a spectrum whose two extreme ends are the *naṣṣ* and the *khafī*.

The term is also applicable to events, states or situations in so far as they are analysable in terms of discourse. If a Muslim is caught carrying wine, claiming that it is either not his or that he intends to ferment it into vinegar, then he would not be held liable if it can be shown that he is pious and of good character. In such an instance, it is said that the *ẓāhir* of his overall situation and character is an argument in his own vindication. It is in this sense that the jurists held the view that legal construction must, as a rule, be based on the *ẓāhir* (*al-bināʾ ʿalā al-ẓāhir wādjib*).

In the Ḥanafī school of law, the *ẓāhir al-riwāya* or alternatively *ẓāhir al-madhhab* is the most authoritative doctrine, that which is transmitted from Abū Ḥanīfa, Abū Yūsuf and al-Shaybānī through a large number of channels by trustworthy and highly qualified jurists.

(WAEL HALLAQ)

AL-ẒĀHIR WA 'L-**BĀṬIN** (A.), two terms of Arabic theological and philosophical discourse, the first, *ẓāhir*, meaning "outward, external, exoteric sense", hence "apparent, manifest sense", and the second, *bāṭin*, its antonym, meaning "hidden, inner, esoteric sense". This pair of words occurs together four times in the Ḳurʾān: in VI, 120, to describe the outwardness and the inwardness of a sin; in XXXI, 20, as adjectives to describe God's blessings, both manifest and hidden; in LVII, 3, as names of God to mean that He is the Outward and the Inward [reality], and in LVII, 13, as opposites portraying both the inside as well as the outside of a thing (*Muʿdjam alfāẓ al-Ḳurʾān al-karīm*, Cairo 1409/1988, i, 141, ii, 732, 733; Lane, i, 219-22, ii, 1926-30).

The Shīʿa, both the Imāmīs and the Ismāʿīlīs, maintain that the Ḳurʾān has both an outer (*ẓahr*) as well as an inner dimension (*baṭn*). To support their contention they report a tradition wherein the Prophet is stated to have said, "Not a verse of the Ḳurʾān has come down [to me] but it has a *ẓahr* (a literal expression or an apparent meaning) and a *baṭn* (an interpretation or an inner meaning)" (al-Ḳāḍī al-Nuʿmān, *Asās al-taʾwīl*, ed. A. Tāmir, Beirut 1960, 30; Abū Djaʿfar al-Ṭūsī, *al-Tibyān fī tafsīr al-Ḳurʾān*, ed. Aḥmad al-ʿĀmilī, Beirut, n.d., i, 9; see also Muḥyī al-Dīn Ibn al-ʿArabī [attrib.], *al-Tafsīr*, ed. M. al-Ghamrāwī, Cairo n.d., i, 2; al-Suyūṭī, *al-Itḳān fī ʿulūm al-Ḳurʾān*, ed. Abu 'l-Faḍl, Beirut 1988, iv, 196-8; *LA* and *TA*, s.v. *ẓ-h-r*). The aforementioned Shīʿī tradition further states that the inner dimension has yet another dimension; in fact, it states, there are up to seven or seventy inner dimensions (al-Sayyid Muḥammad Ḥusayn al-Ṭabāṭabāʾī, *al-Mīzān fī tafsīr al-Ḳurʾān*, Ḳumm n.d., i, 7). Referring to the inner meaning or the interpretation (*bāṭin*) of the Ḳurʾān, the Imām Djaʿfar al-Ṣādiḳ is reported to have said, "We can speak about a word in seven ways." One of the followers in the audience, expressing his surprise, asked, "Seven, O son of the Messenger of God?" The Imām replied, "Yes, [not only seven], but seventy" (*Asās al-taʾwīl*, 27).

ʿAlī b. Abī Ṭālib is reported to have said, "The apparent meaning (*ẓāhir*) of the Ḳurʾān is elegant, and its inner meaning (*bāṭin*) is profound; the marvels [of the Ḳurʾān] cannot be fathomed and its wonders cannot be exhausted" (al-Faḍl b. al-Ḥasan al-Ṭabrisī, *Madjmaʿ al-bayān fī tafsīr al-Ḳurʾān*, ed. Hāshim al-Rasūlī and F. al-Ṭabāṭabāʾī, [Tehran] 1379/1959-60, ii, 9; see also *al-Mīzān, op. cit.*, i, 12). In his *al-Uṣūl min al-kāfī*, ed. ʿAlī Akbar al-Ghaffārī, Tehran 1388/1968, i, 228, Abū Djaʿfar Muḥammad b. Yaʿḳūb al-Kulīnī states, "No-one except the *awṣiyāʾ* [i.e. the Imāms] can claim that they possess the whole of the Ḳurʾān, both its *ẓāhir* and its *bāṭin*."

The Prophet Muḥammad was the recipient of God's revelation, its transmitter and its interpreter. The Shīʿa, both the Imāmīs and the Ismāʿīlīs, maintain that God revealed both the Ḳurʾān (often called *tanzīl*, because it was sent down or revealed) and its exegesis (*taʾwīl* [*q.v.*]) to the Prophet. The Prophet, in turn, transmitted the revelation but reserved the transmission of its *taʾwīl* for the Imāms. The latter therefore have a unique relationship to the Ḳurʾān. In a well-known tradition, related by both Shīʿī and Sunnī traditionists (with some variations in the wording), the Ḳurʾān is presented as "the greater weight" (*al-thaḳal al-akbar*) and the Imāms as the "lesser weight" (*al-thaḳal al-aṣghar*). The Prophet, according to this tradition, is said to have told the Muslims, "I am leaving among you two things of great weight (*al-thaḳalayn*), the Book of God and my kindred (*ʿitratī*), the people of my House (*ahl baytī*, i.e. the Imāms), and these two shall never be separated until they return to me at the Pool (*ḥawḍ*) just like these two." Then the Prophet put together the index fingers of his two hands, coupling them and equalising them in all respects. He added "And not like this," and extended the middle and index fingers of his right hand, "because one reaches out beyond the other. Indeed, the likeness of these [two things of great weight], is Noah's ark. He who boarded it was saved, and he who left it was drowned" (al-Ḳāḍī al-Nuʿmān, *Daʿāʾim al-islām*, ed. Fyzee, Cairo 1963, i, 28, Eng. tr. Fyzee, revised and annotated by I. Poonawala, forthcoming; *al-Kāfī*, i, 294; *Madjmaʿ al-bayān fī tafsīr al-Ḳurʾān*, i, 9; Walī al-Dīn Muḥammad al-Tabrīzī, *Mishkāt al-maṣābīḥ*, ed. Muḥammad al-Albānī, Damascus 1961, iii, 255, 258, Eng. tr. J. Robson, Lahore 1975, ii, 1350, 1353; Wensinck, *Concordance*, s.v. *th-ḳ-l*; transmitted by Ibn Ḥanbal, Muslim, al-Tirmidhī and al-Dārimī).

Thus it is apparent from the foregoing discussion that the *ẓāhir* (or *ẓahr*) and *bāṭin* (or *baṭn*) of the Ḳurʾān have been identified by the Shīʿa with the principles of *tanzīl* and *taʾwīl*. The former refers to the revealed text of the Ḳurʾān and the latter to its inner, esoteric meaning. Al-Kulīnī's *kitāb al-ḥudjdja*, in his *al-Uṣūl min al-kāfī*, and al-Ḳāḍī al-Nuʿmān's *kitāb al-walāya*, in his *Daʿāʾim al-islām*, are eloquent testimonies and detailed accounts of their respective views on the subject. It should be noted, however, that in comparison with the Ismāʿīlīs' use of it, the principle of the *ẓāhir* and *bāṭin* is used by the Imāmīs somewhat moderately. The Ismāʿīlīs, in contrast, assert that every exoteric meaning has an esoteric counterpart; therefore, all aspects of religion are divided into *ẓāhir* and *bāṭin*. The former consists of exterior aspects, such as knowing the apparent meaning of the Ḳurʾān and performing the obligatory acts as laid down in the *Sharīʿa* [*q.v.*]. The latter, on the other hand, is comprised of knowing the hidden, inner, true meaning of the Ḳurʾān and the *Sharīʿa*. The *ẓāhir*, which represents the body, can be perceived by the senses, while the *bāṭin*, which represents the spirit, is derived by special knowledge called *taʾwīl*. The apparent meaning of the Ḳurʾān, the Ismāʿīlīs state, perishes in the opacity and servitude of legalist religion. It is necessary to bring out the transparency of its depth, the esoteric meaning. Attaining comprehension of *bāṭin*/*taʾwīl* is like a spiritual birth that enables the person to enter a new world, to accede to a higher plane of being. They further contend that the *ẓāhir* was the miracle of the Prophet while the *bāṭin* is the miracle of the Imāms (*Asās al-taʾwīl*, 31; Abū Yaʿḳūb al-Sidjistānī, *K. al-Iftikhār*, ed. Poonawala, forthcoming, ch. xii). Al-Ḳāḍī al-Nuʿmān's *Taʾwīl al-daʿāʾim*, ed. M. Aʿẓamī, Cairo n.d. and al-Sidjistānī's *K. al-Iftikhār* are good examples of Ismāʿīlī *bāṭin*/*taʾwīl* doctrine. The conviction that to everything apparent, literal, exoteric there corresponds something hidden, spiritual, esoteric, is the fundamental principle at the very foundation of Ismāʿīlī doctrine. *Bāṭin* is the central postulate of esoterism and of esoteric *taʾwīl* (hermeneutics). Because of their insistence on this principle, the Ismāʿīlīs are very often called *al-Bāṭiniyya* by their opponents, and they are

classified as extremist Shīʿa by the Muslim heresiographers (see ʿAbd al-Ḳāhir al-Baghdādī, *al-Farḳ bayn al-firaḳ*, ed. M. Muḥyī al-Dīn, Cairo n.d., 281 ff.; al-Shahrastānī, *al-Milal wa 'l-niḥal*, ed. ʿAbd al-ʿAzīz al-Wakīl, Cairo 1968, i, 192; al-Ghazālī, *Faḍā'iḥ al-bāṭiniyya*, ed. ʿAbd al-Raḥmān Badawī, Cairo 1964; I. Goldziher, *Streitschrift des Ġazālī gegen die Bāṭinijja-Sekte*, Leiden 1916; Abū Muḥammad al-Yamanī, *ʿAḳā'id al-thalāth wa-sabʿīna firḳa*, ed. Muḥammad al-Ghāmidī, Medina 1414/1993, ii, 477). The Zaydīs are opposed to *Bāṭinī ta'wīl* as practiced by Ismāʿīlīs and Imāmīs. Druzes [see DURŪZ], on the other hand, affirm that the Bible, the Ḳur'ān and their own scriptures have esoteric as well as exoteric meanings. They further maintain that in addition to these two levels of meaning there is yet another level, called "the esoteric of the esoteric" (Samy Swayd, *The Druzes. An annotated bibliography*, Kirkland, Wash. 1998, 36).

The Ṣūfīs also maintain this principle of *ẓāhir* and *bāṭin* with regard to the Ḳur'ān. The *tafsīr* of Sahl al-Tustarī (d. 283/896 [*q.v.*]), one of the oldest extant works representing mystical interpretation of the Ḳur'ān, is a good case in point. At the basic level of interpretation al-Tustarī's division is twofold: *ẓāhir* (exoteric) and *bāṭin* (esoteric). The former aspect comprises mostly traditions (*aḥādīth*) explaining religious law, occasions of revelations, and other obvious matters, while the latter aspect comprises mystical explanations. Referring to the Ḳur'ān, at the beginning of the *tafsīr*, al-Tustarī states, "Its apparent meaning (*ẓāhir*) is beautiful and its inner meaning (*bāṭin*) is profound, and no mind is capable of comprehending it" (*Tafsīr al-Ḳur'ān al-ʿaẓīm*, Cairo 1326/1908, 2; G. Böwering, *The mystical vision of existence in classical Islam. The Qur'ānic hermeneutics of the Ṣūfī Sahl al-Tustarī*, New York 1980, 139). Further explaining the meaning of the Ḳur'ānic verses, he states, "Each verse has four levels of signification: a *ẓāhir*, a *bāṭin*, a *ḥadd* and a *maṭlaʿ* (or *muṭṭalaʿ*). The *ẓāhir* is the recitation of that verse, the *bāṭin* is its [proper] understanding, the *ḥadd* defines what is lawful and what is unlawful, and the *maṭlaʿ* (the point of transcendency) or the *muṭṭalaʿ* (anagogical meaning) is the spectacle of the heart and its meaning intended by God" (see also al-Sulamī, *Ḥaḳā'iḳ al-tafsīr*, in Böwering, *The mystical vision*, 140; this fourfold division is attributed by al-Sulamī to ʿAlī b. Abī Ṭālib in *Itḳān*).

Abū ʿAbd al-Raḥmān al-Sulamī's (d. 412/1021) *Ḥaḳā'iḳ al-tafsīr*, which holds a unique place in the history of Ṣūfī *tafsīr*, also uses the distinction of *ẓāhir* and *bāṭin* (Böwering, *The Qur'ān commentary of Sulamī*, in *Islamic studies presented to Charles Adams*, ed. W. Hallaq and D.P. Little, Leiden 1991, 41-56; al-Sulamī, *Ziyādāt ḥaḳā'iḳ al-tafsīr*, ed. Böwering, Beirut 1995, 1, 24, 38, 42, 43, 101, 106.) This trend of Ṣūfī esoteric interpretation of the Ḳur'ān was continued by Rūzbihān al-Baḳlī (d. 606/1209), Ibn al-ʿArabī (d. 638/1240), and others.

AL-ẒĀHIR [see BARḲŪḲ; BAYBARS I].

AL-ẒĀHIR BI-AMR ALLĀH, ABŪ NAṢR MUḤAMMAD b. al-Nāṣir, 35th ʿAbbāsid caliph, *r.* 622-3/1225-6. In 585/1189 he was designated by al-Nāṣir [*q.v.*], as his father's elder son, to succeed him, but in 601/1205, probably under the influence of the Shīʿī vizier Ibn Mahdī, the caliph changed his mind and made his heir his younger son ʿAlī, more favourable towards Shīʿism than the elder one, who was very attached to Sunnī orthodoxy. To explain and justify this decision, a letter was produced, signed by two witnesses, in which the prince Abū Naṣr Muḥammad asked his father to relieve him of the function of *walī al-ʿahd*, which he felt incapable of assuming. However, ʿAlī died in 612/1215-16, and since the caliph had no other heir, Abū Naṣr was restored to his former status but kept under close surveillance until 615/1218-19 or 618/1221-2.

On his father's death, he was hailed as caliph at the end of Ramaḍān 622/beginning of October 1225 when he was more than 50 years old, and chose the regnal *laḳab* of al-Ẓāhir. His reign was only 9 months and 14 days, since he himself died on 14 Radjab 623/11 July 1226; but he is unanimously praised by the historians as a just, generous and pious ruler who gave extensive alms, freed unjustly-confined prisoners and restored to their owners lands confiscated by his father.

In the political and religious fields, he had hardly any time to accomplish any major work. The influence of the Ḥanbalīs increased in Baghdād, whilst as his external policy, the caliph tried to end the fratricidal strife of the Ayyūbid princes in Syria and Egypt, hoping to make them his own vassals. To this end he despatched Muḥyī al-Dīn Yūsuf Ibn al-Djawzī, son of the famous Ḥanbalī theologian [see IBN AL-DJAWZĪ] with robes of honour and investiture diplomas. In the economic and fiscal spheres, he undertook a series of important measures, at the risk of diminishing the state revenues, by forbidding uncanonical taxes (*mukūs*), abolishing the increases in land tax made by his father and attacking the frauds that were rife within the public treasury. He further combatted the excessive price rises of staple foods, especially at the time of the great famine which affected all of Upper Mesopotamia during the year of his reign. Within Baghdād, he had constructed a second bridge of boats across the Tigris and abolished the espionage and intelligence service set up in every quarter of the city by his father, to the great relief of the population.

(ANNE-MARIE EDDÉ)

AL-ẒĀHIR LI-IʿZĀZ DĪN ALLĀH, Abu ʾl-Ḥasan (or Abū Hās̲h̲im) ʿAlī b. al-Ḥākim bi-amr Allāh, seventh Fāṭimid caliph and the fourth to reign at Cairo in Egypt.

After the death of al-Ḥākim on 27 S̲h̲awwāl 411/ 14 February 1021, Sitt al-Mulk [*q.v.*], the latter's half-sister, refused to recognise the rights of the heir presumptive, Abu ʾl-Ḳāsim ʿAbd al-Raḥīm (or ʿAbd al-Raḥmān) b. Ilyās, al-Ḥākim's cousin, designated *walī al-ʿahd* by the latter in 404/1014-5 and at the time governor of Damascus (A.F. Sayyid, *al-Dawla al-fāṭimiyya, tafsīr d̲j̲adīd*, Cairo 1413/1992, 108-9, 117-18). Recalled to Cairo, he allegedly committed suicide some months later. Sitt al-Mulk, the favourite daughter of the caliph al-ʿAzīz, who had been constantly humiliated by the Palace since her father's death, secured the succession for her nephew, born in Ramaḍān 395/1005, who received the public *bayʿa* at sixteen years of age on 10 D̲h̲u ʾl-Ḥid̲j̲d̲j̲a 411/28 March 1021. The princess, who retained her Christian faith, was a true stateswoman, negotiating a treaty with Byzantium. She exercised the reality of power in the state until her death, which took place in D̲h̲u ʾl-Ḳaʿda 413/February 1023. After the death of the princess, al-Ẓāhir was notorious until the end of his life for his political incompetence. Unlike his father, tormented to the point of insanity by his political, moral and religious responsibilities, al-Ẓāhir seems to have been a hedonist, enjoying the wine and the black slaves supplied to him by a Jewish merchant, the future *wazīr* Abū Saʿd Ibrāhīm b. Sahl al-Tustarī (Ibn Muyassar, *Ak̲h̲bār Miṣr*, ed. Sayyid, Cairo 1981, 2-5). Al-Ẓāhir never showed any interest in the wielding of real power, and was the first Fāṭimid caliph to shift the responsibility for any important decision on to his entourage, inaugurating a tradition of personal impotence on the part of the Imām which was to persist until the end of the dynasty. His contemporary, al-Musabbiḥī [*q.v.*] wrote a chronicle of which a few months have been preserved, from 414-5/1024-5 (*La chronique d'Égypte*, ed. Sayyid and Th. Bianquis, Cairo 1978), recounting in detail on the one hand, the public life of the caliph, the reception of the military, administrative and religious hierarchy in the great hall, and solemn processions around Cairo and its neighbourhood (P. Sanders, *Rituals, politics and the city in Fatimid Cairo*, New York 1994, index at 231), and on the other, the secret and ruthless struggles erupting between the various nexuses of power at the heart of the palace, dominated by a faction of three civilians and a military eunuch who joined forces to deprive the caliph of all executive power (Bianquis, *Damas et la Syrie sous la domination fāṭimide*, ii, Damascus 1989, 391-8; idem, *Le fonctionnement financier des dīwāns centraux fāṭimides au début du Vᵉ/XIᵉ siècle*, in *AI*, xxvi [1992], 46-61).

The powerlessness of the state was evident when in 415/1024-5 Egypt experienced a serious famine, followed by an epidemic and rural and urban disorder, and the Fāṭimid presence in Syria was threatened by attacks on the part of three major tribes: Ṭayyiʾ D̲j̲arrāhids from Transjordan against Ramla, Kalb ʿAdawīs from Palmyra or Tadmur against Damascus and Kilāb Mirdāsids [*q.vv.*] from northern Syria against Aleppo (see Bianquis, *Une crise frumentaire dans l'Égypte fāṭimide*, in *JESHO*, xxiii [1978], 67-101; idem, *Damas et la Syrie*, ii, 399-511; Sayyid, *al-Dawla al-fāṭimiyya*, 119-23 and index). However, the public teaching of the Ismāʿīlī doctrine with the aid of works written by the *ḳāḍīs* al-Nuʿmān and Ibn Killis continued in Egypt (see H. Halm, *The Fatimids and their traditions of learning*, London 1997). Propagandists sent secretly to the East enjoyed some success in southern ʿIrāḳ but failed in the G̲h̲aznawid state, resolutely Sunnī and loyal to the ʿAbbāsids.

However, thanks to the efforts of two exceptional individuals, the most serious problems were resolved. In Cairo, in Rabīʿ I 418/ April-May 1027, the ʿIrāḳī *kātib* Abu ʾl-Ḳāsim ʿAlī b. Aḥmad al-D̲j̲ard̲j̲arāʾī, former steward of Sitt al-Mulk and a force in the palace since 415/1025, was appointed *wazīr*, an office that had been suppressed by al-Ḥākim and replaced by the *wisāṭa* and the *sifara*. In southern and central Syria, Fāṭimid domination was restored by the able Turkish general Anus̲h̲takīn al-Dizbarī [*q.v.*] who, despite the hostility of the *dīwāns* of Cairo, won a decisive victory over the Bedouin coalition at al-Uk̲h̲uwāna, to the east of Lake Tiberias (Rabīʿ II or D̲j̲umādā I 420/May 1029).

In 413/1023, a treaty between Byzantines and Fāṭimids, putting an end to the unfavourable relations existing between al-Ḥākim and the Emperor Basil II, was to have been concluded, but the death of Sitt al-Mulk led to its cancellation. In 418/1027, a provisional agreement guaranteed that, in the mosque at Constantinople, the invocation would be made in the name of the Fāṭimid Imām, and that the Basileus had the right to rebuild the Church of the Holy Sepulchre in Jerusalem, burned on the orders of al-Ḥākim, as well as all the churches in Egypt which had been destroyed and not transformed into mosques. In 423/1032, in an exceptional episode in the history of relations between Constantinople and the Muslim powers, a combined Fāṭimid-Byzantine expedition attacked the Druzes in the D̲j̲abal Summaḳ, driving them into caves and slaughtering them (see *Histoire de Yahya ibn Said d'Antioche*, ed. I. Kratchkovsky, Fr. tr. Françoise Micheau and G. Troupeau, in *PO*, vol. xlvii, fasc. 4, no. 212, Tournai 1997, 152-3). It was not until 425/1034, after protracted negotiations brought together representatives of all the principalities of the Middle East, of which Yaḥyā al-Anṭāḳī gives a detailed account, that the definitive version of the treaty came into existence. It included a clause stipulating that in the event of famine, corn would be transferred from the better-off state to the needy one.

Al-Ẓāhir died on the eve of his thirty-second birthday, in mid-S̲h̲aʿbān 427/1036, and was succeeded by his son, Abū Tamīm Maʿadd al-Mustanṣir [*q.v.*].

(TH. BIANQUIS)

AL-MALIK AL-**ẒĀHIR GHĀZĪ**, GHIYĀTH AL-DĪN, Ayyūbid [*q.v.*] ruler of Aleppo, third son of Ṣalāḥ al-Dīn, b. mid-Ramaḍān 568/end of April 1173, d. 20 Djumādā II 613/4 October 1216.

In Rabīʿ II 579/July-August 1183, after the conquest of Aleppo, Ṣalāḥ al-Dīn made al-Ẓāhir nominal regent of the city under the tutelage of an *amīr*. Soon afterwards, in Shaʿbān-Ramaḍān 579/November-December 1183, he restructured his realm and gave Aleppo to his brother al-ʿĀdil [*q.v.*]. Al-Ẓāhir returned to the court of his father. The next restructuring occurred three years later after submission of the Djazīra [see ZANGIDS], when Ṣalāḥ al-Dīn bestowed Aleppo on al-Ẓāhir, in Djumādā II 582/August-September 1186. During his father's campaigns against the Crusaders in 584/1188, al-Ẓāhir distinguished himself as a vigorous and able warrior.

At the death of Ṣalāḥ al-Dīn in 589/1193, al-Ẓāhir held sway over the principality of Aleppo, from the Euphrates in the east, the borders of Armenian Cilicia in the north, the Crusader principality of Antioch in the west and the Ayyūbid principality of Ḥamāt [*q.v.*] in the south. In 589/1193 he reinforced al-ʿĀdil, who had to suppress the rebellion of the dependent principalities in the Djazīra. In the ensuing struggles for supremacy within the Ayyūbid house, al-Ẓāhir first sided with the coalition of the designated heir al-Afḍal [*q.v.*] and al-ʿĀdil against his ambitious brother al-ʿAzīz ʿUthmān of Egypt. In Radjab 591/June 1195, when al-Afḍal's incapacity became apparent, al-Ẓāhir supported al-ʿAzīz, but the coalition of al-Afḍal and al-ʿĀdil proved stronger. A reconciliation mainly on the basis of the status quo was reached. During the final stages of the power struggle, al-Ẓāhir sided with al-Afḍal again, now against a coalition of al-ʿAzīz and al-ʿĀdil, who had become al-ʿAzīz's main supporter. As a result, al-ʿAzīz was acknowledged as supreme sultan in Egypt and al-ʿĀdil got Damascus. Al-Ẓāhir was confirmed in his possessions in 592/1196.

More struggles followed the death of al-ʿAzīz in Muḥarram 595/November 1198, extending over the next three years. Al-Ẓāhir favoured al-Afḍal again, now as regent for al-ʿAzīz's son, al-Manṣūr Muḥammad, in Egypt. Al-ʿĀdil, at that time besieging Mārdīn, was forced to withdraw in order to secure Damascus, besieged by al-Afḍal. In Shaʿbān 595/June 1199, al-Ẓāhir set out to join al-Afḍal. Finally, the coalition broke up, and they lifted the siege of Damascus soon afterwards. The first phase ended in 596/1200 when al-ʿĀdil took Cairo and deposed al-Manṣūr in order to become supreme sultan himself. However, al-Afḍal now became recognised as supreme sultan by his main supporter al-Ẓāhir and his northern Mesopotamian allies. Meanwhile, al-Ẓāhir consolidated his position in northern Syria by conquering various towns and an attack on Ḥamāt. In Dhu 'l-Ḳaʿda 597/August 1201, al-Ẓāhir and al-Afḍal besieged Damascus again for over a month, but without success. Finally, in Djumādā II 598/March 1202 al-Ẓāhir agreed to acknowledge al-ʿĀdil's suzerainty. He remained outwardly loyal but lived with the persistent threat that his uncle might seize his principality. When in 606/1209 al-ʿĀdil tried to conquer the Zangid principalities, al-Ẓāhir tried to maintain the balance of power in northern Mesopotamia and supported diplomatically the besieged lord of Sindjār [see ZANGIDS]. The marriage with al-ʿĀdil's daughter Ḍayfa Khātūn in 609/1212 and the designation of her son al-ʿAzīz Muḥammad, born in 610/1213, as heir, lowered the tension here.

After al-Ẓāhir came to terms with his uncle, he turned his attention mainly to the development of the principality of Aleppo. He launched major building projects on fortifications, on religious institutions and on the water supplies (*ḳanawāt*). He promoted commerce and trade, notably with the Venetians, who in 604/1207-8 were given privileged access to the mint of Aleppo for imported European silver (Pozza, Bates). From Egypt, important scholars and able officials fled to his court, namely, Ibn al-Ḳifṭī and Ibn Mammātī [*q.vv.*]. The historian Ibn al-ʿAdīm [*q.v.*] dedicated a treatise to al-Ẓāhir on the occasion of the birth of al-ʿAzīz Muḥammad (Brockelmann, I², 405).

At the end of al-Ẓāhir's reign, the ambitious Armenian king Leon II threatened his realm in the north. Al-Ẓāhir found a natural ally in Bohemund IV, Count of Tripoli and lord of Antioch. The conquest of the latter city by Leon II in 612/1216 finally brought al-Ẓāhir in closer contact with the Rūm Saldjūḳs.

Al-Ẓāhir died in 613/1216 after a severe illness. His three-year-old son al-ʿAzīz Muḥammad succeeded him under the tutelage of the *mamlūk* Shihāb al-Dīn Ṭoghrïl, whilst Ḍayfa Khātūn became in 634/1236 an influential regent of Aleppo for her grandson al-Nāṣir Yūsuf II [*q.v.*].

AL-**ẒĀHIR ČAḲMAḲ** [see ČAḲMAḲ].

ẒAHĪR-I FĀRYĀBĪ, or ẒAHĪR AL-DĪN ABU 'L-FAḌL ṬĀHIR b. Muḥammad AL-FĀRYĀBĪ, Persian poet of the 6th/12th century, born at Fāryāb (modern Dawlatābād) near Balkh about 550/1156, d. 598/1201. As a court poet he served patrons in various parts of Persia; the earliest known to us was ʿAḍud al-Dīn Ṭughānshāh, a local ruler of Nīshāpūr. In 582/1186-7 he went to Iṣfahān and three years later from there to Māzandarān, where he was attached to the *ispahbād* Ḥusām al-Dīn Ardashīr b. Ḥasan of

the Bāwandids [*q.v.*]. Still later he settled down at the court of the Eldigüzids or Ildeñizids [*q.v.*], writing panegyrics to the Atābegs Muẓaffar al-Dīn Ḳizil Arslān ʿUthmān (581-7/1186-91) and Nuṣrat al-Dīn Abū Bakr b. Pahlawān (591-607/1195-1210). One of the *ḳaṣīdas* preserved in Ẓahīr's *Dīwān* is adressed to the Saldjūḳ Sultan Ṭoghril III (d. 590/1194). Towards the end of his life, he retired from the world and led a life of devotion in Tabrīz. In Rabīʿ I 598/December 1201 he died in that city and was buried at Surkhāb in the cemetery of the poets (Mustawfī, *Guzīda*, 737-8).

The *Dīwān* of Ẓahīr was collected shortly after his death by Shams-i Sudjāsī (d. 602/1205-6), who is probably also the author of a prose introduction handed down in some manuscripts (Storey-de Blois, v/2, 536). The best preserved part of his work are the *ḳaṣīdas* and the *muḳaṭṭaʿāt*. These poems were composed in the same learned style which marks the panegyrics of Anwarī and Khāḳānī [*q.vv.*]. In the 7th/13th century, the critical comparison between Anwarī and Ẓahīr became a topic of literary discussion in which the poets Madjd-i Hamgar and Imāmī participated (cf. the introduction to *Dīwān-i Anwarī*, i, 108-10). Saʿdī [*q.v.*] objected to Ẓahīr's extravagant use of hyperbole (*Būstān*, 40). His style as a court poet has been characterised as polished and graceful, but somewhat insipid (Browne, *LHP*, ii, 414). Of his *ghazals*, few seem now to be extant; most of the *ghazals* attributed to him in printed versions of the *Dīwān* were really composed by another Ẓahīr, a Shīʿī poet of the 10th/16th century. Some *ḳaṣīdas* by his contemporary Shams-i Ṭabasī have also been mistaken for works of Ẓahīr (see further de Blois, v/2, 558).

ẒĀHIR al-ʿUMAR al-ZAYDĀNĪ, local ruler in northern Palestine in the 18th century (*ca.* 1690-1775).

His father and grandfather had already been *multazims* of Tiberias, and as a young man, Ẓāhir al-ʿUmar struck an alliance with the al-Ṣaḳr tribe of eastern Galilee and made Tiberias his first power base. The 1730s were filled with efforts to expand his realm and consolidate his rule. In 1738 he conquered the fortress of Djiddīn, which controlled the region of Tarshīḥa, Wabar and Abū Sinān, and Ṣafad surrendered to him shortly after. Ẓāhir's growing power between Tiberias and Ṣafad now straddled the trade route and communications between Damascus and Nablus and, by extension, those with Egypt. Repeated attempts by the governors of Damascus to dislodge him from Tiberias were defeated and ended in 1743 in a stalemate. Ẓāhir now turned his full attention westwards, aiming to control western Galilee, Acre and the lucrative cotton trade. By 1746 the French cotton merchants called him *gouverneur* of Acre. In 1751 he had walls built around the city and resided in it permanently. In 1768 he was given by the Ottoman government the title of "Shaykh of Acre, Amīr of Nazareth, Tiberias, Ṣafad, and Shaykh of all Galilee". By then he had forged a close alliance with his neighbours to the north, the Mutawālīs [*q.v.*]. At the zenith of his power now, but not strong enough against a determined Ottoman attack, Ẓāhir turned for support to ʿAlī Bey al-Kabīr of Egypt. Between November 1770 and June 1771 Egyptian troops conquered all of Palestine and Damascus only to return abruptly to Egypt when their commander, Abu 'l-Dhahab, refused to carry on an open war against the sultan. Though deserted by his ally, Ẓāhir was able to consolidate and even expand his power, holding now the whole coast from Sidon to Jaffa and sending troops into the Ḥawrān.

The Ottoman government seemingly acquiesced in his growing power, but once peace with Russia was concluded in 1774, it turned against the rebel. Abu 'l-Dhahab was encouraged to move against him, but he suddenly died. The reprieve for Ẓāhir was, however, brief because the Ottoman government now sent a naval force under the *Ḳapūdān Pasha* Ḥasan. In August 1774 Acre was conquered and Ẓāhir was killed fleeing on 21 August 1775.

Ẓāhir al-ʿUmar was unique among his contemporaries in recognising that political power was not only based on troops but on a sound economy. He also was unusual in that he realised that excessive exploitation of the peasantry was detrimental to the increase of revenues in the long run. Greater productivity had to be encouraged through investment and not extortion. With his keen interest in the local economy and commerce, he is comparable to Muḥammad ʿAlī [*q.v.*] of Egypt two generations later. It was Ẓāhir's recognition of the potential and the profitability of the cotton trade from Galilee via Acre to France for increasing his own revenues, which gave his political ambitions content and direction. He further realised that the profits could be all his if he exerted exclusive control over the cultivation and the trade of cotton, and this motivated his conquest of Western Galilee, the fortress of Acre and expansion along the coast. His policy of state economic monopoly was new to the region and was driven by the enormous profits to be made from cotton exports to France. The prosperity thus created brought a veritable boom to Acre, making it the most important city on the Syrian coast.

Ẓāhir al-ʿUmar's rise to power was part of a general contemporary trend towards greater provincial autonomy. A severely weakened Ottoman empire was unable to prevent the ascendancy of the al-ʿAẓm family in Damascus, the defiance of the Mamlūks in Egypt and the consolidation of a completely new power centre in Acre and northern Palestine. Ẓāhir was—at least for a time—more successful than his contemporaries because he was able to finance his political aspirations by innovative economic policies and by linking up with European markets.

ẒAHĪR al-DĪN MARʿASHĪ b. Nāṣir al-Dīn, Sayyid, Persian commander, diplomat and historian of the Caspian region, b. *ca.* 815/1412, d. after 894/1489. He was a scion of the important family of Marʿashī Sayyids who dominated Māzandarān from the later 8th/14th century until the province's incorporation into the Ṣafawid empire by Shāh ʿAbbās I in 1005/1596 [see marʿashīs].

Ẓahīr al-Dīn stemmed from the main branch of the Marʿas̲h̲īs, that of Kamāl al-Dīn b. Ḳiwām al-Dīn (d. 801/1379). He owned estates at Bāzargāh in Gīlān, and was employed by Sultan Muḥammad II of the Kār Kiyā line in Gīlān and then by his son and successor Mīrzā ʿAlī (*r.* 881 or 883/1476-8 to 909 or 910/1503-5). He was sent to resolve militarily a succession dispute in adjacent Rustamdār and he led other expeditions, including an unsuccessful siege of Nūr in 868/1463. It was for Mīrzā ʿAlī that Ẓahīr al-Dīn wrote his *Tārīk̲h̲-i Tabaristān u Rūyān u Māzandarān*, extending from the origins of the local dynasties up to 881/1476 (ed. B. Dorn, St. Petersburg 1850; ed. ʿAbbās S̲h̲āyān, Tehran 1333/1954-5), and his *Tārīk̲h̲-i Gīlān u Daylamistān*, carried up to 894/1489 (ed. H.L. Rabino, Rasht 1330/1912), both valuable for the intricate history of the petty principalities of the Caspian region. Another work of his that is mentioned, but not apparently extant, is a *Tārīk̲h̲-i Gurgān u Rayy*, and he wrote verse, probably under the pen-name of Ẓahīr, which are quoted by him in his histories.

(C.E. BOSWORTH)

AL-ẒĀHIRA, "the rearwards region", conventionally Dhahirah, the name given to the interior, landwards part of ʿUmān, that lying behind the D̲j̲abal Ak̲h̲ḍar range and merging into the desert fringes of the Empty Quarter [see AL-RUBʿ AL-K̲H̲ĀLĪ]. The term al-Ẓāhira contrasts with that of al-Bāṭina, the coastlands of ʿUmān. The religious and political history of this "inner ʿUmān", and its social and cultural development, with local Ibāḍī elements mingled with Sunnīs, have frequently diverged from that of the Sultanate of Muscat and Oman established for over two centuries in the coastal region [see BŪ SAʿĪD].

Bibliography: J.G. Lorimer, *Gazeteer of the Persian Gulf, 'Oman and Central Arabia*, Calcutta 1908-15, ii.A, 427-30; and see ʿUMĀN. (ED.)

AL-ẒĀHIRĪ, K̲H̲ALĪL B. S̲H̲ĀHĪN [see IBN S̲H̲ĀHĪN].

AL-ẒĀHIRIYYA, a theologico-juridical school in mediaeval Islam which may be situated, among *mad̲h̲hab*s as a whole, "at the furthest limit of orthodoxy" (R. Brunschvig, *Polémiques médiévales autour du rite de Mālik*, in *Études d'Islamologie*, ii [1976], 83). It is, furthermore, the only school that owes its existence and its name to a principle of law, Ẓāhirī in this case. Thus it relies exclusively on the literal (*ẓāhir*) sense of the Ḳurʾān and of Tradition, rejecting *raʾy*, but also *ḳiyās* [*q.vv.*], although the latter is retained by al-S̲h̲āfiʿī (d. 204/820 [*q.v.*]) who is regularly cited as the point of departure of Ẓāhirī methodology (J. Schacht, *An introduction to Islamic law*, Oxford 1964, 63-4, Fr. tr. Paris 1983, 59). In other words, and to quote R. Arnaldez in *Grammaire et théologie chez Ibn Ḥazm de Cordoue*, Paris 1956, 199, Ẓāhirism "accepts only the facts clearly revealed by sensible, rational and linguistic intuitions, controlled and corroborated by Ḳurʾānic revelation".

Sources. As the best means of reconstructing Ẓāhirī thought, recourse should be had to the writings of its founder, the traditionist Dāwūd b. K̲h̲alaf (d. 270/884 [*q.v.*]). But it has long been known that nothing of his work has survived into the present day (I. Goldziher, *Die Ẓāhiriten*, Leipzig 1884, Eng. tr., Leiden 1971, 26-30). We must therefore be content with the works of authors who quote him, in particular al-Nawawī (d. 676/1277 [*q.v.*]), al-S̲h̲aʿrānī (d. 973/1565 [*q.v.*]) and, most of all, the earlier authority Ibn Ḥazm (d. 456/1063 [*q.v.*] (Goldziher, *op. cit.*, 30-157). Following the lead of the Hungarian scholar, it has become customary to refer primarily to this Cordovan thinker who "illuminated, almost single-handedly in the Mālikī milieu, the literalist or Ẓāhirī school" (R. Brunschvig, *Pour ou contre la logique grecque chez les théologiens-juristes de l'Islam: Ibn Ḥazm, al-G̲h̲azālī, Ibn Taymiyya*, in *Études d'Islamologie*, i, 304-5).

For the constantly-burgeoning interest witnessed over more than a century in Ḥazmian studies, especially from the angle of Ẓāhirism, see A.-M. Turki, *Notes sur l'évolution du ẓāhirisme d'Ibn Ḥazm de Cordoue, du Taqrīb à l'Iḥkām*, in *SI*, lix (1984), 175-7. As to the credibility of recourse to Ibn Ḥazm, in view of this rehabilitation, see also, by the same author, *Polémiques entre Ibn Ḥazm et Bād̲j̲ī sur les principes de la loi musulmane*, Algiers 1976, Ar. tr. [2]Beirut 1994; see especially the index of this edition, 551; here are to be found 16 references to Dāwūd, 14 in which Ibn Ḥazm is in agreement with his master, the two others showing rather a convergence with the son of Dāwūd, known to be a Ẓāhirī himself. This is useful for the *uṣūl al-fiḳh* [*q.v.*] which are the subject at issue here, but it will be seen that this is also the case for the applied *fiḳh* [*q.v.*] where Ibn Ḥazm notes a scarce point of disagreement with the master.

Theological aspects. Here our exclusive source is Ibn Ḥazm in his *Faṣl fi 'l-milal wa 'l-ahwāʾ wa 'l-niḥal*, 2 vols., Cairo 1317-21/1899-1903 (Sp. tr. M. Asín Palacíos, *Abenházam de Córdoba y su historia crítica de las ideas religiosas*, 5 vols. Madrid 1927-32). In *Die Ẓâhiriten*, Goldziher drew substantially from the *Faṣl*, at that time still in manuscript. He stressed negation of the attributes (*ṣifāt*) except those mentioned in the Ḳurʾān; to underline Ibn Ḥazm's original contribution, he recalled that the Ẓāhiriyya were never called anything other than a *mad̲h̲hab fiḳhī* and that it therefore does not figure among the *mad̲h̲āhib kalāmiyya* (*op. cit.*, 123-56). Goldziher also dealt with this subject in his *Le livre de Moh. Ibn Toumert, Mahdi des Almohades*, introd. and Fr. tr., Algiers 1903, where he stated that the history of Muslim theology shows that Ẓāhirī *fiḳh* was in accordance with the most diverse dogmatic tendencies, and he insisted once more on the exclusive contribution of Ibn Ḥazm in creating a synthesis of Ẓāhirī *fiḳh* and of dogmatic Ẓāhirism.

M. Abū Zahra will serve as a guide for a considerable portion of this article; in his work on *Ibn Ḥazm, ḥayātuh wa-ʿaṣruh, ārāʾuh wa-fiḳhuh*, [2]Cairo 1393/1954, he analyses the various aspects of Ḥazmian thought, while underlining its originality by means of a brief but informative comparative study. He refers to the *Faṣl*, naturally, but also to the *Iḥkām fi uṣūl al-aḥkām*, 8 vols. in 2, Cairo 1345-7/1927-9; as well as to the *Muḥallā fi 'l-fiḳh al-ẓāhirī*, 11 vols. in 8, Cairo 1347-52/1929-33. The principal and characteristic aspects of the Ḥazmian, and thus Ẓāhirī, credo are as follows. First of all, to exalt the oneness of God, while acknowledging the exclusive privilege enjoyed by His Prophets and Messengers in terms of the manifestation of miracles, the sign of sanctity and of keeping God free from anthropomorphism (*tanzīh*); and then to declare that God is one by means of His essence, while stressing the worth of His names, to the detriment of that of His attributes. In short, Ibn Ḥazm seeks to strip his credo of any trace of anthropomorphism (*tas̲h̲bīh*). God, he further maintains, is unique in His creative action (*k̲h̲alḳ wa-takwīn*). Also, the power

of man over his actions is affirmed not only in his continually active reality but also in his gradually surmountable limitations (*op. cit.*, 207-36).

On the fate reserved for the perpetrator of great sins (*murtakib al-kabīra*), Ẓāhirism oscillates between, on the one hand, clemency and divine pardon, and on the other, the Last Judgment (*ḥisāb*) and punishment, all those notions being explicitly supported by the sacred texts (*op. cit.*, 337-40). A.M. Turki, *L'engagement politique et la théorie du califat d'Ibn Ḥazm de Cordoue*, in *Théologiens* (1982), 70, n. 10, following the lead of Abū Zahra, states that, while placing himself in a position of perfect continuity with regard to juridical classicism, Ibn Ḥazm sets forth instances which only the politico-social situation of his country could explain: legitimising the designation of a successor by the caliph already in place; and where no successor is named, occupation of the throne by the first claimant provided he is considered worthy, if only by one other person of equal worth. Notable here is the insignificant role played by the oath of allegiance (*bayʿa*) in this theory; also worth recording is the particular concern to show the political superiority of Muʿāwiya over ʿAlī [*q.vv.*]. Reverting to Abū Zahra's work, this author reviews the very detailed arguments presented by Ibn Ḥazm, still in the *Faṣl*, regarding the pre-eminence (*mufāḍala*) of the Companions. Ibn Ḥazm affirms categorically only the superiority of the wives of Muḥammad, and those of Abū Bakr and of ʿUmar. The concept of anteriority in time is also taken into account, in such a fashion that those who fought at the battle of Badr [*q.v.*] are superior to those who fought at the battle of Uḥud [*q.v.*], and so on throughout history (*op. cit.*, 253-9; cf. Turki, *L'idée de justice dans la pensée politique musulmane. L'interprétation d'Ibn Ḥazm de Cordoue*, in *SI*, lxviii [1988], 5-28). Furthermore, and still in the context of this credo founded on absolute certitude, see *La réfutation du scepticisme et la théorie de la connaissance dans les Fiṣal*, in *Théologiens*, 159-98. The point at issue is the refutation of the principle of the absolute equality of proofs (*takāfuʾ al-adilla*) all of which is related to doubt; this leads the Ẓāhirī thinker to exalt his ardent faith, which is founded on the primary evidence of the senses and of reason (*op. cit.*, 196).

Legal aspects

(a) *Principles of law* (*uṣūl al-fiḳh*). The Ẓāhiriyya above all adopted a methodology which sought to rid *fiḳh*, as far as is possible, of any trace of subjectivity, confining it within the narrow limits of the evident meaning of the sacred text. Opposing the free use of opinion (*raʾy* [*q.v.* in Suppl.]), and hence the imitation of those who practised it (*taḳlīd* [*q.v.*]), it called for an effort of search (*idjtihād* [*q.v.*]) which, far from being identified with Ḥanafī *raʾy* or with Shāfiʿī reasoning by analogy (*ḳiyās* [*q.v.*]), could only be involved with the search for a text. This current of thought has always been perceived as a continuation of Shāfiʿism. In fact, al-Shāfiʿī had recourse to *ḳiyās* in order to curb the free use of *raʾy* and to rebut *istiḥsān* [*q.v.*]. He rejected the consensus (*idjmāʿ* [*q.v.*]) of the ancient juridical schools to replace it with that of the unanimous Muslim community, for the good reason that it could only be realised on the basis of a body of Tradition which could not be overlooked by everybody. However, Dāwūd, a disciple of al-Shāfiʿī albeit an indirect one, systematised the methodological critique still further; thus he rejected *ḳiyās* on account of its recourse to the deductive principle of the motivation (*taʿlīl* [see ʿILLA]) founding the analogy; in parallel, he only admitted the validity of the consensus of the Companions. See details in Goldziher, *Die Ẓāhiriten*, 18-36, but also Schacht, *op. cit.*, 55-60. The latter has shown that the Ẓāhiriyya were themselves unable to do without deductions and conclusions on the basis of the fundamental texts, but they attempted to present these conclusions as implied by these very texts (*op. cit.*, 59). In summary, everything happens as if through a process of syllogism, reliable according to Ibn Ḥazm's terms, because here the conclusion is included in the premises. This is the famous *dalīl* [*q.v.*] which will be observed at a later stage.

Here again, reference is to be made to the works of *uṣūl al-fiḳh* of Ibn Ḥazm. Although they cannot all be cited here (see Turki, *Polémiques*, 458), mention should be made of the *Iḥkām* and of *Marātib al-idjmāʿ fi 'l-ʿibādāt wa 'l-muʿāmalāt wa 'l-iʿtiḳādāt*, Cairo 1357; another expressive title amongst these works is to be noted, sc. that of the *Mulakhkhaṣ ibṭāl al-ḳiyās wa 'l-raʾy wa 'l-istiḥsān wa 'l-taḳlīd wa 'l-taʿlīl*, Damascus 1379/1960. But within the limited scope of this article, Abū Zahra and *Polémiques* will continue to be the major points of reference.

Ibn Ḥazm does not object categorically to *taḳlīd* as practised by mankind in general (*ʿāmmī*), but he prescribes an attitude of prudence and of vigilance, even a critical disposition if the individual is capable of this (Abū Zahra, 278-81). It has already been seen that the sacred text is defined as the Ḳurʾān, Tradition and the consensus of the Companions, or the *dalīl* drawn from one of these, and this has nothing in common with the *ḳiyās* of the jurists. The presumption of continuity (*istiṣḥāb* [*q.v.*]) is accepted, but not the pretexts (*dharāʾiʿ*) invoked to legitimise a judgement (*ḥukm* [*q.v.*]). The abrogation (*naskh* [*q.v.*]) of the Ḳurʾān is possible through the *sunna* [*q.v.*], which, in turn, may be abrogated by the Ḳurʾān. Ibn Ḥazm goes so far as to accept the abrogation of the Ḳurʾān through the *khabar al-āḥād* [see KHABAR AL-WĀḤID], a tradition owing its transmission to a single authority. *Taḳlīd* is always rejected, even if is practised with reference to a Companion (*op. cit.*, 282-340, 364-81, 429-39).

For an illustration of these fundamental principles, see *Polémiques*, where there is detailed study of the original points of view of Ibn Ḥazm, with references to the *Iḥkām* in particular. Virtually all of the aspects of the *uṣūl al-fiḳh* are tackled, from a comparative angle. The overall scheme is as follows: problems of interpretation (81-93): formulation of the order; general sense; and particular sense of two contradictory traditions; problems of transmission of traditions (99-130); *khabar al-āḥād*/*sunna* and *ḥadīth*/*khabar mursal*; normative value of the practice (*ʿamal* [*q.v.*]) of the people of Medina; and licence for transmission of *ḥadīth* sc. *idjāza* [*q.v.*]. There follow the problems raised by the concept of consensus, as well as acceptance or rebuttal of reasoning by analogy (133-268, 271-393).

(b) *Application of the law* (*furūʿ*) [see FIḲH; UṢŪL]: here, reference will be made in particular to Ibn Ḥazm's *Muḥallā*, the study of which has been facilitated since the appearance of an index of topics, *Mawsūʿa taḳrīb fiḳh Ibn Ḥazm* (Cairo 1412/1992). It is possible to follow Goldziher, *op. cit.*, 30-53, and R. Strothmann, *EI*[1] art. *al-Ẓāhirīya*, in referring to the *Mīzān* of al-Shaʿrānī, who has preserved "a large number of decisions of the historical Ẓāhirīya" (Strothmann). A few typical examples picked out from the *Mīzān* by Strothmann are as follows. A point at issue is the prohibition imposed on vessels of gold and of silver and intended only for drinking; eating from them is permitted, since no prohibition is mentioned by the

ḥadīth̲. Cleaning the teeth with a tooth-pick in the course of ablutions is a necessity; knowingly neglecting to do this would render the prayer invalid. Wine, although forbidden, is not impure. There follows a host of examples concerning purification (*ṭahāra* [*q.v.*]); the minor (*wuḍūʾ* [*q.v.*]) and major (*g̲h̲usl* [*q.v.*]), as well as dry ablutions (*tayammum* [*q.v.*]): touching a copy of the Ḳurʾān in a state of impurity (*ḥadat̲h̲* [*q.v.*]) is permitted. In *wuḍūʾ*, invoking the name of God is obligatory. Reciting the Ḳurʾān in a state of major impurity (*d̲j̲anāba* [*q.v.*]) is permitted.

Schacht referred to the Ḥanbalī Muḥammad al-S̲h̲aṭṭī (d. 1305/1887-8), author of a *K. fī masāʾil al-Imām Dāwūd al-Ẓāhirī*, in which he assembles a large number of Dāwūd's decisions, compared with corresponding Hanbalite doctrines. Nevertheless the essential source remains Ibn Ḥazm. Goldziher made use of his *Ibṭāl al-ḳiyās*, but on a small scale (42-67). But Abū Zahra devotes lengthy chapters to the topic of these decisions, almost all of them drawing on the *Muḥallā*. The following are the most interesting points. On marriage, Ibn Ḥazm maintains that it is a legal obligation but one that is only incumbent on the man, and dependent on his eligibility for it; this follows from the Ẓāhirī notion that Ḳurʾānic solicitation (*ṭalab*) constitutes a necessity (*luzūm*). Ibn Ḥazm asserts the equality of the slave and the free man in contracting marriage with four wives and in taking a concubine, all of these simultaneously. He declares as forbidden, marriage with a daughter-in-law and with one raised in the bosom (*fī ḥid̲j̲rih*) of a father-in-law, according to the Ḳurʾānic position; this, naturally, after dissolution of the alliance contracted with the mother. He acknowledges the right of the *ḳāḍī* to dissolve a marriage, but for a number of lesser reasons which he takes to be ordinary; thus no account is taken of the so-called latent vices of the husband, neither his prolonged absence, nor poverty preventing him from supplying the needs of his wife. In this last case it is she who is supposed to support her husband (441-63). See also Turki, *Femmes privilégiées et privilèges féminins dans le système théologique et juridique d'Ibn Ḥazm*, in *Théologiens*, 101-58.

The following are a few more original positions regarding legacies and wills. Any decision involving patrimony taken by a man suffering from a mortal sickness is declared valid, one's state of health having no legal status (Abū Zahra, 464-80). Ibn Ḥazm maintains that making a will is a duty subject to neither restriction nor condition of any kind whatsoever. It is certainly to the advantage of close relatives (*ḳarāba*) having no hereditary rights, as is stipulated by a Ḳurʾānic verse which was never abrogated; in this last case it belongs to the one holding the authority to substitute himself for the *de cuius*, a testator who has defaulted in his lifetime.

Ibn Ḥazm also considers (in Abū Zahra, 497-8) the case of the grandmother whose hereditary capacity should amount to one-third of the patrimony if she is alone in her degree of kinship and in the absence of descendants and collaterals, brothers and sisters in this instance: he considers her as equivalent to a mother, in the latter's absence, which leads him to grant her a portion double that of her son—an unexpected solution, but drawn from the sacred text, Ibn Ḥazm asserts. See Turki, *Femmes*..., 147-9, for this specific case.

Still in the context of family law, Ibn Ḥazm rejects proportional reductions of hereditary portions (*ʿawl*) in cases where the total of these parts exceeds the unitary whole; here he adopts the viewpoint of the Companion Ibn ʿAbbās, giving certain privileged shares to the detriment of others (in Abū Zahra, 498-504). Furthermore, gifts must be given to close relatives (*aḳārib*), orphans and paupers who are present at the time when the patrimony is being distributed; doing this is incumbent upon each heir but left to his discretion. In case of refusal, it belongs to the one holding the authority to act as executor in his place. This is, Ibn Ḥazm asserts, a position dictated by the Ḳurʾānic text, which should be taken literally, so long as no *dalīl* is opposed to it (504-6), and which assumes the implementation of the principle of *istiṣḥāb*.

Various cases of transactions (*muʿāmalāt* [*q.v.*]) follow. At the time of the conclusion of a deed of sale, performance of the witnessing required by law is an obligation which can be dispensed with only if there are no witnesses available. Otherwise, an offence has been committed, but the deed remains valid. If payment is to be made in advance, putting the deed into writing is obligatory. Otherwise, an offence has been committed, but the deed is not nullified. However, the obligation lapses in the absence of a scribe. This is what Ibn Ḥazm, on the basis of the Ḳurʾānic verse, takes to be a *farḍ* [*q.v.*], imposing a duty, which others consider to be simple guidance (*irs̲h̲ād*, 507-10). The option (*k̲h̲iyār al-s̲h̲arṭ* [see KHIYĀR]) stipulated by the contracting parties to the agreement at the time of the conclusion of the deed of sale, is refuted by Ibn Ḥazm, on pain of nullification of the deed whatever the duration of the option (510-1).

A last example gives Ibn Ḥazm the opportunity to express his individualism, this time in relation to Dāwūd, as he chooses to cite him. The issue is the prohibition on hiring out land for agricultural purposes (*al-arḍ al-mazrūʿa*); whatever the formula, the contract concluded can only be nullified. The only possibility envisaged by Ibn Ḥazm is a partnership, either for sowing (*muzāraʿa* [*q.v.*]), yielding an agreed proportion of the produce of the land, or for a leasehold agreement (*mug̲h̲ārasa* [*q.v.*]). If a building is placed on the land in question it alone can be the object of the hire, from which the ground is excluded. For the details of this issue, see Ziaul Haque, *Landlord and peasant in early Islam*, Islamabad 1977, 80-9, 337-43.

History of the school. For the masters of Ibn Ḥazm, see Goldziher in *Die Ẓâhiriten*, who traced the roots of the school indirectly back to al-S̲h̲āfiʿī and, directly, to Dāwūd (19-106). This may be supplemented by Abū Zahra, 85, 268-72, and by S. Yafūt, 45-52, who supplies a list of 38 masters of Ibn Ḥazm.

For the followers of the Ẓāhirī school of Cordova, see Goldziher, *op. cit.*, 156-86, where there is a panorama of the most important representatives of the Ẓāhiriyya from the 5th/11th to the 9th/15th century. See also Abū Zahra, 516-23 and Camilla Adang, *Beginnings of the Ẓāhirī madhhab in al-Andalus*, in P. Bearman, R. Peters and F.E. Vogel, *The Islamic school of law. Evolution, devolution and progress*, forthcoming. A problem that merits mention is that of the Ḥazmian influence which might possibly have affected Ibn Tūmart (d. 520/1130 [*q.v.*]). Goldziher affirmed this, not on the level of dogma, on account of the As̲h̲ʿarism of the Mahdī, but on that of the *uṣūl al-fiḳh*. See the two studies by R. Brunschvig, with references to Goldziher, *Sur la doctrine du Mahdī Ibn Tūmart*, and *Encore sur la doctrine du Mahdī Ibn Tūmart*, in *Études d'Islamologie*, i, 281-93, 295-302.

(ABDEL-MAGID TURKI)

(AL-)**ẒAHRĀN**, conventionally Dhahran, a town of Saudi Arabia (lat. 26° 18' N., long. 50° 05' E.) in the eastern province (*al-minṭaḳa al-sharḳiyya*), situated in the Dammām oilfield just south of the Gulf port of al-Dammām. Near the site of the original discovery of oil in Saudi Arabia in 1938, the town did not really develop until after 1945 with the exploitation of oil by the Aramco company, one of whose main centres it still remains today. Situated on a hill in the town, the government-sponsored College, now University, of Petroleum and Minerals was established in 1964 and has an international reputation. Dhahran has a modern international airport and is now part of a vast urban and oil-producing ensemble stretching for some 40 km/25 miles from north to south along the Gulf, including the towns of al-Ḳaṭīf, al-Dammām and al-Khubar [*q.vv.*], the point where the bridge linking Saudi Arabia with Bahrain Island leaves the mainland. Dhahran now (2000) has a population of 130,000.

Less than 20 km/13 miles to the north al-Ḳaṭīf remains famed for its palm groves, its date production and its gardens. It is this proximity which permits one to envisage the ancient history of Dhahran (even in the shape of a settlement of unknown name), confirmed by archaeology. The natural environment is relatively favourable: although located in a zone of *sabkha* [*q.v.*] (a coastal zone with high salinity), the region has abundant springs and artesian wells, the basis of an active and long-established agriculture despite the arid climate. This last is confirmed by recent archaeological work in the immediate surroundings of Dhahran (P.B. Cornwall, 1940-1; H.R.P. and Violet Dickson, 1942; T.G. Bibby, 1962-5; and R. Stiehl 1964-6), which has produced large numbers of artefacts showing that the local hillocks were settled as soon as the waters of the Gulf receded (after 10,000 B.C.). Ceramic fragments of the Ubaid period (4th millennium B.C.) shows trade contacts with Mesopotamia, and the hundreds of burial tumuli have yielded objects indicating that the region of Dhahran formed part of the kingdom of Dilmun at the turn of the 3rd-2nd millennia B.C. (see on the archaeology of the region, D.T. Potts, *The Arabian Gulf in Antiquity*, Oxford 1990).

The actual name al-Ẓahrān does not appear in the Arabic historians and geographers, who call the region al-Baḥrayn or Yamāma [*q.vv.*]; they attest its richness, also known from the time of the Carmathian state there (8th-11th centuries [see KARMAṬĪ]), with the town of al-Ḳaṭīf often mentioned. Western travellers of recent centuries do not mention al-Ẓahrān either, although in the 1760s Carsten Niebuhr stressed the agricultural richness of the region, then under the control of the Banū Khālid; in 1863 W.G. Palgrave halted in the small port of al-Ḳaṭīf, guarded to the south by the imposing fort of al-Dammām, but does not name al-Ẓahrān among the villages there. However, in the early 1870s, the Ottoman governor of ʿIrāḳ, Midḥat Pasha [*q.v.*], invaded the province of Ḥasā and introduced various projects for improving the agriculture of the al-Dammām–al-Ẓahrān region, and the latter name now starts to appear in Ottoman documents.

Bibliography: See the *Bibls.* to AL-ḲAṬĪF and NAFṬ. 3, to which should be added A.J. Cottrell (ed.), *The Persian Gulf states, a general survey*, Baltimore and London 1980, Part 2. (J.-F. SALLES)

AL-**ZAHRĀWĪ**, ʿABD AL-ḤAMĪD, Syrian Arab politician and journalist, author of numerous writings advocating political, social and religious reform [see IṢLĀḤ. i.]. The date of his birth in Ḥimṣ is not certain; in Arabic sources, it ranges from 1855 to 1863 or even 1871 (see Tarabein, 118 n. 1, and ʿAllūsh, *Madkhal*, 12). He was born into a Sunnī family claiming descent from al-Ḥusayn b. ʿAlī and Fāṭima [*q.vv.*], and from the latter's honorific title, *al-Zahrāʾ*, the family derived its *nisba*. Over several generations, it had held the position of *naḳīb al-ashrāf* [*q.v.*] in Ḥimṣ.

ʿAbd al-Ḥamīd received his formal education at a *kuttāb* [*q.v.*] and at a *rüshdiyye* [see MAʿĀRIF. I. i.]. Later on, he studied privately with a number of local scholars who directed his interest, *inter alia*, to the writings of Ibn Taymiyya, Ibn Ḳayyim al-Djawziyya and Ibn Khaldūn [*q.vv.*].

In 1890 or slightly later he was in Istanbul and then Cairo, and in this last place came into contact with a number of Arab and Turkish intellectuals critical of the régime of Sultan ʿAbd ül-Ḥamīd II [*q.v.*]. He was in Istanbul for about four years from 1895 onwards, contributing articles to the Arabic section of the Turkish newspaper *Maʿlūmāt*. Regarded with suspicion by the Ottoman authorities, he was back in Damascus in 1899, at this time associating with Syrian Salafī circles [see SALAFIYYA], but escaped to Cairo in 1902 or afterwards, where he wrote for a number of newspapers and journals such as *al-Muʾayyad, al-Djarīda* and *al-Manār* [*q.v.*].

After the restoration of the Ottoman constitution in 1908, al-Zahrāwī returned to Ḥimṣ. Soon afterwards he was elected deputy, for the provincial district of Ḥamāt, in the lower chamber of the Ottoman parliament. In the following years, as member of parliament and also as editor of an Arab newspaper that he had founded in Istanbul, *al-Ḥaḍāra* (1910-12), he made himself known as a defender of Arab rights. At the same time, however, he called on all subjects of the Ottoman empire to support this state against the encroachments of European imperialism (his articles published in *al-Ḥaḍāra* are reprinted in *al-Aʿmāl al-kāmila*, iii, see *Bibl.*).

After the dissolution of the parliament in 1912, the military coup of January 1913 and the subsequent repression of all Arab reform committees, al-Zahrāwī began openly supporting Arab nationalism. He was elected president of the first Arab Congress held in Paris in June 1913. In October of the same year, however, he travelled to Istanbul in order to establish new contacts with the C.U.P. [see ITTIḤĀD WE TERAKḲĪ DJEMʿIYYETI] government.

In January 1914 he was nominated member of the Ottoman senate. While his acceptance of this post was regarded as a betrayal by some, al-Zahrāwī defended his step by stating that the government had finally confessed its past mistakes towards the Arabs and intended not to repeat them. Rather, it would implement the reforms demanded by the Paris congress. As a member of the senate, he showed considerable moderation—at least in public—over Arab rights. However, when in December 1914 Djemāl Pasha [*q.v.*], the commander of the Ottoman Fourth Army and military governor, arrived in Damascus, he had already been informed about the contents of French diplomatic documents implicating a number of Arabs, including al-Zahrāwī, in secret dealings with the Allies. Together with several others, al-Zahrāwī was publicly hanged in Damascus on 6 May 1916 (list of those executed in Tauber, *Arab movements*, 55).

Al-Zahrāwī's execution has made him a martyr of the Arab national movement, although some earlier and modern authors have viewed certain aspects of his career rather critically. As for the development of

his religious and political ideas, the publication of his *Aʿmāl kāmila* (see *Bibl.*) may finally allow a thorough analysis.

AL-**ZAHRĀWĪ**, Abu 'l-Ḳāsim Khalaf b. al-ʿAbbās, important Andalusian physician. Virtually nothing is known of his life or education, though it is assumed from his *nisba* that he came from or resided in Madīnat al-Zahrā' [*q.v.*], near Cordova, where a royal residence and governmental centre was established in 325/936 by ʿAbd al-Raḥmān III al-Nāṣir [see ʿABD AL-RAḤMĀN. 3]. His residence there is confirmed by references within his writings to patients being "amongst us in al-Zahrā'" (*ʿindanā bi 'l-Zahrā'*). His direct connection with the court is a matter of speculation, though later (16th-20th-century) scholars assert his service to either ʿAbd al-Raḥmān III, his son al-Ḥakam II al-Mustanṣir [*q.v.*] or al-Manṣūr bi 'llāh [*q.v.*], the *de facto* ruler of al-Andalus from 368/978 to 392/1002.

Given his subsequent influence, the biographical sources are surprisingly limited. According to al-Ḥumaydī (d. 488/1095 [*q.v.*]), he died in al-Andalus after 400/1009. Al-Ḥumaydī added that al-Zahrāwī was a person of distinction, religion, and learning, and that in the field in which he excelled, medicine, he wrote a large and famous book of great usefulness. After providing the title of al-Zahrāwī's treatise, al-Ḥumaydī quoted the fulsome praise of the work given by Ibn Ḥazm [*q.v.*]: "If indeed we were to say that no one in medicine has written a better summary with respect to expression (*ḳawl*) and practice (*ʿamal*), then we would speak the truth." No other details are provided. Ibn Bashkuwāl (d. 578/1183 [*q.v.*]) repeats verbatim the account given by al-Ḥumaydī, adding only that al-Zahrāwī was mentioned amongst the teachers of one Ibn Sumayḳ. This latter fact was omitted by al-Ḍabbī (d. 599/1203 [*q.v.*]), who repeated (without credit) the account given by al-Ḥumaydī.

At what time and to what extent al-Zahrāwī's writings were known to Arabic writers outside of Spain has yet to be determined. Ibn Abī Uṣaybiʿa (d. 668/1270 [*q.v.*]), writing in Syria, said that al-Zahrāwī was "experienced (*khabīr*) with simple and compound remedies and outstanding in therapy (*djayyid al-ʿilādj*)." The short entry is of significance since no mention of al-Zahrāwī is to be found in the biographical sources on which Ibn Abī Uṣaybiʿa is known to have relied. It differs from Andalusian sources in that no dates are given and it states that he produced several treatises, one of which was known as *al-Zahrāwī* and one was entitled *al-Taṣrīf*, the latter being the largest, most famous, and the culmination of his thought.

Later historians add very little. Al-Maḳḳarī (d. 1041/1632 [*q.v.*]), giving al-Zahrāwī's name as Khalaf b. ʿAyyāsh al-Zahrāwī, quotes in full the *risāla* on the state of literature in al-Andalus by Ibn Ḥazm which praised al-Zahrāwī. Al-Maḳḳarī also gives the addenda to Ibn Ḥazm's *risāla* by Ibn Saʿīd al-Maghribī (d. 685/1286 [*q.v.*]), in which it is said that al-Zahrāwī's treatise served as one of the sources for the *materia medica* of Ibn al-Bayṭār (d. 646/1248 [*q.v.*]). Kātib Čelebī (d. 1067/1657 [*q.v.*]) listed the *K. al-Taṣrīf* by al-Zahrāwī, stating that it consisted of 30 *maḳālāt*, most of which were on compound remedies arranged like *kunnāshāt* (a term often used for early Arabic, Greek, and Syriac therapeutic manuals).

The precise date of his death has been the subject of much speculation. According to the earliest sources, he died in al-Andalus after 400/1009. In the *De viris quibusdam illustribus apud Arabes*, completed in 1527 and attributed to Leo Africanus [*q.v.*], it is said that al-Zahrāwī was physician to al-Manṣūr [bi 'llāh], "*consiliarius*" of Cordova, and died in 404/1013 at the age of 101. Al-Maḳḳarī, in quoting Ibn Ḥazm's praise of al-Zahrāwī's book, inserted a phrase stating that he [Ibn Ḥazm] had encountered him and seen him himself (*wa-ḳad adraknāhu wa-shāhadnāhu*); this statement was subsequently interpreted as meaning that Ibn Ḥazm (d. 456/1064) had met al-Zahrāwī (see Gayangos, 464-5 n. 134; Brockelmann, I², 276; Hamarneh and Sonnedecker, 19). Others suggested that he died in 500/1106-7 (see Casiri, ii, 136; Hamarneh and Sonnedecker, 20 n. 2).

His only preserved treatise is an enormous manual usually entitled *K. al-Taṣrīf li-man ʿadjiza ʿan al-ta'līf* ("The arrangement [of medical knowledge] for one who is unable to compile [a manual for himself]"). The form and meaning of the title has generated considerable discussion, with the final word sometimes read as *al-ta'ālīf* and interpreted as for one "who cannot cope with compilations" (Spink and Lewis, viii). Occasionally the last term is written as *taṣnīf* (see Sezgin, *GAS*, iii, 324). The titles *K. al-Zahrāwī* or *K. al-Zahrāwī al-kabīr* also occur in some manuscript copies.

The *Taṣrīf* is made up of 30 books (*maḳālāt*), of which the first (on general principles), the second and largest (on the symptoms and treatments of 325 diseases discussed in sequence from head to foot), and the thirtieth (on surgery) form almost half the volume. The rest are rather short and concerned with various aspects of pharmacology, including compound remedies, substitute drugs, and the preparation of medicaments.

While al-Zahrāwī relied extensively on earlier sources (especially Paulus of Aegina, Ibn Māsawayh, Sābūr b. Sahl, Isḥāḳ b. ʿImrān, Ḳusṭā b. Lūḳā, al-Rāzī, and Ibn al-Djazzār), he also included his own experiences and case-histories, thus providing an important source for our knowledge of a practicing physician. Many claims have been made for his originality, though most have not sufficiently examined his sources. He certainly contributed a number of technological inno-

vations, including a concealed knife for opening abcesses in a manner that would not alarm the nervous patient, a variety of obstetrical forceps (though not for use in live births), new variations in specula or dilators, and a scissor-like instrument for use in tonsillectomies. The final book, on surgery, appears to be the first to have been illustrated with diagrams of instruments, for there is no evidence that Greek surgical writings were illustrated, except for a tenth-century Byzantine treatise on bonesetting.

In 870/1465-6 the surgical book was translated into Turkish by Sharaf al-Dīn Ṣābūndjī-oghlu for Meḥemmed II [*q.v.*]. The illustrator of this Turkish version, concerned with producing an entertaining manuscript for a royal patron, inserted a large number of colourful miniatures showing physicians at work, though these illustrations added nothing to the understanding of the surgical procedures or instrumentation (and had no subsequent influence in surgical literature).

In Europe the *Taṣrīf* may have had greater influence than in the Islamic world. The 30th book, on surgery, was translated into Latin by Gerard of Cremona (d. 1187) and widely influenced European surgical writing, especially that of Guy de Chauliac (d. *ca.* 1370) and through him the subsequent writing for several centuries. In the mid-13th century the first two books were translated into Hebrew and then into Latin and printed in Augsburg in 1519 as *Liber theoricae nec non practicae Alsaharavii.* At the end of the 13th century the 28th book, on the manufacture and preparation of medicaments from plants, minerals, and animals, was translated as *Liber servitoris* by Simon of Genoa and Abraham Judaeus of Tortosa and printed at Venice in 1471, with numerous subsequent printings. In Latin the author was known as Albucasis (with many variants) and as Alsaharavius (also with many variants), with the result that many early-modern European scholars thought they were two separate authors.

(EMILIE SAVAGE-SMITH)

ZAHRIYYĀT (A.), sing. *zahriyya*, from *zahr* "flower, blossom" (or, more precisely, "yellow flower, yellow blossom"), like *nawriyyāt* [*q.v.*], designates poetry dedicated to the description of flowers. The term is attested in the list of chapters of the *Dīwān* of Ṣafī al-Dīn al-Ḥillī [*q.v.*].

1. In Arabic.

Descriptions of meadows (*rawḍ, riyāḍ*) and flowers are encountered sporadically already in *djāhilī* poetry. In the *nasīb* [*q.v.*], the comparison of the scent of the beloved with the fragrance of a blooming meadow could result in a detailed description of the meadow (in the framework of a so-called extended simile). A famous example occurs in ʿAntara's *muʿallaka* (ll. 15 ff.); another in al-Aʿshā's *Waddiʿ Hurayrata* (ll. 14 ff.). In the context of his meadow description, al-Aʿshā presents one of the flowers in greater detail; its blossom he depicts with the (subsequently very frequent) metaphor "star".

Also in *djāhilī* poetry, in the description of the abandoned campsites of the beloved contained in the *kaṣīda* prologue, the depiction of its vegetation sprouting after rainfall could be included (e.g. in Labīd's

muʿallaḳa, l. 6). In the tradition of this motif one finds for the first time the comparison of flowering meadows with a variety of garments, mats, and similar objects—a comparison that later became part of the stock imagery of the genre. Garden flowers (partly with Persian names) are first mentioned by poets who were in contact with the court of al-Ḥīra [*q.v.*], impregnated as it was with a Persian life-style. Al-Aʿshā in particular, in the wine scenes of his *ḳaṣīdas*, names and describes numerous flowers that are used to adorn the wine tavern, especially roses and narcissuses. These descriptions mirror without doubt Persian mores and lifestyle; however, they cannot be used to prove the influence, on Arabic wine and flower poetry, of a hypothetical Middle Persian bacchic poetry.

The depictions of garden flowers in wine scenes lead in a direct line to the later *zahriyyāt* and subsequently develop further, mainly in the context of wine poetry (*khamriyyāt* [*q.v.*]). Abū Nuwās (d. *ca.* 200/815) stimulated this development considerably; many of his wine poems contain detailed flower descriptions and garden and spring descriptions, since in his time carousals could be held outdoors. Some of his *khamriyyāt* contain more lines describing flowers than those dealing with the wine and the party (e.g. *Dīwān*, iii, ed. E. Wagner, Stuttgart 1988, nos. 138, 293). Best known is the following much-quoted and imitated description of narcissuses: "[a wine] next to freshly-gathered narcissuses as if they were eyes, when we turn our eyes to them" (*ibid.*, no. 267, l. 12). The comparison of the narcissus with eyes (or the corresponding metaphor) is one of the most frequently used images in Arabic (and Persian) flower poetry [see NARDJIS].

Abū Tammām (d. *ca.* 231/845) resumed the tradition of depicting nature in the prologue of the *ḳaṣīda* and reached a new high point. In a famous panegyric for the caliph al-Muʿtaṣim (*Dīwān*, ed. M.ʿA. ʿAzzām, ii, [2]Cairo 1969, no. 71), he entirely replaces the *nasīb* by a long depiction of spring that also contains descriptions of the rain and of flowers of various colours. The spring description is at the same time connected with the praise in an ingenious way (spring as an imperfect image of the caliph). This innovation of Abū Tammām's acquired a model character in a singular way: numerous later Arabic poets (al-Buḥturī, Ibn al-Rūmī, al-Ṣanawbarī *et alii*), but also Persian, Hebrew, and Ottoman poets, started their *ḳaṣīdas* with spring descriptions.

In al-Buḥturī's (d. 284/897 [*q.v.*]) nature descriptions, the inventory of nature described becomes richer; in addition to flowers, he also pays attention to the wind and clouds, the song of birds, trees and rivers, and other elements of the landscape (e.g. the lands in bloom around al-Raḳḳa, in *Dīwān*, ed. Ḥ.K. al-Ṣayrafī, Cairo 1963 ff., iv, no. 903, ll. 12 ff.; the Tigris and the Djazīra, *ibid.*, no. 818, ll. 16 ff.). Within the *madīḥ* of his *ḳaṣīdas*, al-Buḥturī describes the garden of the *mamdūḥ*, at times together with his palace (*Dīwān*, iii, no. 641, ll. 25-6; cf. below). In a famous *ḳaṣīda* he develops out of the praise one of the most beautiful descriptions of the spring in Arabic poetry, the connecting thought being "Unto you came the merry spring" (*Dīwān*, iv, no. 791 ll. 25-30).

Probably the most important nature poet of the Arab East is al-Buḥturī's contemporary, Ibn al-Rūmī (d. 283/896 [*q.v.*]). In addition to prologues to *ḳaṣīdas* that often contained very detailed spring and flower descriptions (a meadow with many flowers in *Dīwān*, ed. Ḥ. Naṣṣār, Cairo 1973 ff., iii, no. 956; narcissuses in ii, no. 413; spring and red anemones in vi, no. 1223, ll. 14 ff.), he composed the first substantial independent flower poems. The most famous one is a poem of fourteen lines, in which the narcissus is given precedence over the rose (a pre-*munāẓara* [*q.v.*]) (*Dīwān*, ii, no. 470). This *zahriyya* was imitated or "refuted" countless times. Equally remarkable are a number of *rawḍiyyāt* that are unusual for the empathy for nature they express (see below, and also NAWRIYYA).

Ibn al-Muʿtazz (d. 296/908 [*q.v.*]) draws above all "epigrammatic sketches" and "poetic snapshots" (G.E. von Grunebaum) of flowers. His main techniques are the bilateral simile and the metaphor. These poems, consisting mostly of only a few lines, can be found, together with other "ecphrastic epigrams" (J.Ch. Bürgel) in the chapter *Awṣāf* "Descriptions" of his *Dīwān*. However, Ibn al-Muʿtazz also resumes the tradition of garden descriptions in wine poetry. His well-known *muzdawidja* "On criticising the morning draught" (*fī dhamm al-ṣabūḥ*) (*Dīwān*, ed. B. Lewin, Istanbul 1945-50, iv, no. 99) starts with a long flower and garden description; as with Abū Nuwās, the garden serves as the backdrop for the drinking party.

In al-Ṣanawbarī (d. 334/945-6 [*q.v.*]), the *zahriyyāt, rawḍiyyāt*, etc., form a separate genre. In addition to numerous short poems in the vein of Ibn al-Muʿtazz, he also composed many long "*ḳaṣīdas*" whose main or sole theme is a garden or spring or a field in bloom. Alongside a literary debate (a full-fledged *munāẓara*) (*Dīwān*, ed. I. ʿAbbās, Beirut 1970, *takmila*, no. 123), in which, in reaction to Ibn al-Rūmī, he gives precedence to the rose over the narcissus, he also composed a "war of the flowers" (*Dīwān*, no. 77). Nature description can form a prologue to the panegyric *ḳaṣīda* with al-Ṣanawbarī also; moreover, it penetrates almost all other genres cultivated by him (see further, NAWRIYYA).

The perception of nature in later Arabic literature is predominantly optical, aiming at the decorative (G.E. von Grunebaum). In addition to the visual, acoustic (bird song) and olfactory impressions (flower scent) are expressed, though less frequently. The main means of description are simile and metaphor which serve to visualise mostly the form and colour of the flowers; the image donors are most frequently precious stones and metals ("roses like rubies") and parts of the human body ("roses like cheeks", "narcissuses like eyes"). The natural objects are often personified (Ibn al-Muʿtazz: "riders of drops of flowers on horses urged on in the morning by the whips of wind", *Dīwān*, iv, no. 111); the animation is often combined with a fantastic reinterpretation of real qualities (*takhyīl* [*q.v.*], *ḥusn al-taʿlīl*) (Ibn al-Rūmī: "The cheeks of the roses glowed with shame"). In *zahriyyāt* like these, many of the motifs, images, rhetorical figures, and conceits can be found that are also characteristic for the poetry of European mannerism (cf. Bürgel, *Epigramme*, and Schoeler, *Naturdichtung*, 100 ff., 260-1).

Only rarely does one find something like a "romantic" feeling for nature, by which real human feelings are projected on to (personified) nature. This is the case e.g. in al-Buḥturī's famous spring depiction already mentioned: "There came to you serene Spring, strutting his stuff, laughing with beauty, so that he nearly talked; and Nawrūz, in the darkness before daybreak, has awakened the first roses which yesterday were still asleep . . ." (*Dīwān*, iv, no. 791, ll. 25 ff.).

Quite outside the customary is a small group of nature poems by Ibn al-Rūmī (cf. Schoeler, *Naturdichtung*, 219 ff.). The poet describes in these a nature

that lives its own life; a nature which through its splendour uplifts man and forces him to praise God; which animates man through the scent of its flowers and diverts him through its birdsong; and which through its cool breeze removes the sorrow of the sorrowful: "A northwind with a cool breeze which heals the heat of the fever of thirsting hearts: when it arises in the early morning in the clouded east, it removes the sorrow of the sorrowful... as if it came from the Garden of Bliss" (*Dīwān*, vi, no. 1179).

In the longer poems of al-Ṣanawbarī, one often notices a lyrical-hymnic tone; such passages sometimes replace or supplant the pure description: "Do you not rejoice at the olive trees of Bityās and at al-Ṣāliḥiyya with its cypresses and myrtles?..." (*Dīwān*, no. 180). At one point al-Ṣanawbarī regards the gardens almost as a sanctuary: "If I had for once the power to preserve the gardens, no base man would step on their grounds" (*Dīwān*, *takmila*, no. 13).

In al-Andalus flower and garden descriptions are among the favourite themes of the poets. One of the oldest Arabic anthologies from Spain, that of Abu 'l-Walīd al-Ḥimyarī (d. *ca.* 440/1048), bears the title *al-Badīʿ fī waṣf al-rabīʿ* (ed. H. Pérès, Rabat 1940) and contains exclusively spring and flower poems; likewise, in the even older work on *tashbīhāt* by Ibn al-Kattānī (d. *ca.* 420/1029), the *K. Tashbīhāt ashʿār ahl al-Andalus* (ed. I. ʿAbbās, Beirut 1966), the flower theme takes up much space.

In the 4th/10th century, under the ʿĀmirids, a new variety of *zahriyyāt* appears sporadically in al-Andalus: the short, improvised flower poem with panegyrical closure or secondary theme. Its most important representative is Ibn Darrādj al-Ḳasṭallī (d. 421/1030 [*q.v.*]) (cf. e.g. *Dīwān*, ed. M.ʿA. Makkī, Damascus 1961, nos. 16-22, 149), who also composed a long panegyrical *ḳaṣīda* addressed to al-Muẓaffar, to which is prefixed as a prologue a famous description of a drinking party, a garden, and lilies (*Dīwān*, no. 15). The theme of the prologue is artfully connected with the main theme by *metaphora continuata* (drinking party = military campaign; the lily = fort, etc.).

For the 5th/11th century, Ibn Zaydūn (d. 463/1070-1 [*q.v.*]) should be singled out, although he is not a nature poet proper. In a poem addressed to his beloved Wallāda [*q.v.*] (*Dīwān*, ed. ʿA. ʿAbd al-ʿAẓīm, Cairo 1957, 139), objects of nature participate in his longing, the relationship between man and nature being established by fantastic reinterpretations (*ḥusn al-taʿlīl*) ("the breeze... is feeble, *as if affected by pity for me*", "*it is as if the eyes of the flowers*, when they see my sleeplessness, *were weeping about that* [pain] which is in me [since they are covered with dew]...").

The most important nature poet of al-Andalus is Ibn Khafādja (d. 533/1139 [*q.v.*]). In his *Dīwān*, descriptions of nature take up much, if not most, of the space. More commonly than with other poets, in Ibn Khafādja the description of flowers and gardens is combined with other objects of nature, such as trees, rivers, dew, clouds and hills, all of these sometimes artfully intertwined, being treated in one single poem. The scenes of nature, very often combined with love and/or drinking scenes, can be lavishly appointed. An example is *Dīwān* (ed. M. Ghāzī, Alexandria 1960), no. 113, in which the following themes are taken up: the dream image of the beloved, the night drawing to a close, daybreak, and the flowers on a hill and alongside a watercourse; this description of nature is framed by a love scene. Ibn Khafādja's attitude toward nature is characterised by the fact that nature is almost constantly personified and/or seen in a relationship with man: "[a cloud] that has coined white dirhams of blossoms which fingertips of boughs have tendered *to you*" (no. 184, l. 4). Through his use of metaphors he frequently projects phenomena of the macrocosm on to the microcosm of horticulture ("An *arāk* tree that has erected over us a dewy sky, while the stars of the wine cups have been set into circular motion" (no. 221 m, p. 351).

In the foregoing, only eminent Andalusian poetic personalities who developed their own styles have been focused on; it must be stressed, however, that the average Andalusian flower poem, as found e.g. in anthologies, does not significantly diverge from the Eastern Arabic one. It may be noted, though, that in al-Andalus the theme of flowers and gardens is also taken up in strophic poems (*muwashshaḥ*, *zadjal* [*q.vv.*]).

2. In Persian.

In Persian poetry, poetic spring and flower descriptions are already found in the great lyrical poets of the 4th/10th century: Rūdakī, Daḳīḳī and Kisāʾī [*q.vv.*]. Rūdakī, in clear continuation of the Arabic tradition of Abū Tammām and al-Buḥturī (he mentions Abū Tammām in one of his poems by name, see S. Nafīsī, *Aḥwāl-u ashʿār-i... Rūdakī*... iii, Tehran 1319/1940, 1016), opens one of his panegyric *ḳaṣīdas* with a detailed spring description which leads to a short bacchic description at the end (*ibid.*, iii, 968-70). In the 5th/11th century (in such poets as ʿUnṣurī, Farrukhī, Manūčihrī and Ḳaṭrān), the spring description, often combined with a drinking party description, becomes a favourite, if not the most favourite, theme of the prologue of the *ḳaṣīda*. This may be explained by the fact that the Persian panegyrical *ḳaṣīda* was composed as a rule for a celebration, especially the spring celebration (*nawrūz*). Since also at the autumn celebration (*mihrdjān*), poems were dedicated and recited to the *mamdūḥ*, we find, besides spring descriptions, many autumn descriptions (cf. Fouchécour, *Description*, 13 ff.). Apart from the *ḳaṣīda* prologue, nature descriptions can also be inserted in the *madīḥ* section, e.g. in the context of the description of the *mamdūḥ*'s palace (as in al-Buḥturī) (cf. *ibid.*, 5). Finally, the theme may also be treated in the framework of a *ḳiṭʿa*, either in a bacchic context or completely independently. This happened already in the 4th/10th century: among the collected fragments of Kisāʾī (ed. M.A. Riyāḥī, Tehran 1347/1968) one finds a few poems with the themes of spring (77, 84), the narcissus (78) and the water lily (85).

In most of the Persian spring descriptions in *ḳaṣīdas*, the focus is not on a garden as a whole, under which the details are subsumed; rather, the poet treats a whole series of nature objects and phenomena as objects in their own right (cf. Reinert, *Probleme*, 74). The effect of spring on man is often included in the description. Rūdakī treats the following in his already-mentioned *ḳaṣīda* prologue: spring (its colours, its fragrance, the rejuvenating effect it has on man), the sky with clouds, lightning, thunder, rain; the sun, the thawing of the snow, the brook, tulip, nightingale, starling and dove. One hundred years later, in a comparable nature scene in ʿUnṣurī (d. 431/1039-40), we have wind, tree, garden, lily, earth, sun, cloud, night, stars, mountain and snow (the last present, but not mentioned) (*Dīwān*, ed. Y. Ḳarīb, Tehran 1341/1962, 45). Again, almost one hundred years later, in Amīr Muʿizzī (d. *ca.* 520/1126), we find season, earth, garden, mountain, tree, meadow, cypress, rose bough, dove, nightingale, cloud, tulip, stars and snow (again, the last not mentioned) (*Dīwān*, ed. ʿA. Iḳbāl, Tehran

1318/1939, 122-3). Finally, after another hundred years, Khāḳānī (d. 595/1199 [*q.v.*]) has the following: wind, branches with blossoms, sun, night, day, blossoms, moon, earth, cloud, pond, violet, brook, narcissus, rose bush, fragrant flowers, leaves, water, meadow, lily, cypress, tulip, jasmine, rosebud, mallow, dew, Judas tree, plane tree, ringdove, poppy, rose and nightingale (*Dīwān*, ed. M. ʿAbbāsī, Tehran 1336/1957, 177). The Persian nature scenes are, accordingly, as a rule richer than their Arabic counterparts. In the realm of imagery, metaphorical expression (which supersedes the bilateral simile for the most part or uses it only in a subordinate function) plays from the beginning a much greater role than it does in Arabic poetry (where the simile remains an important means of imagery, especially in Ibn al-Muʿtazz but also in al-Ṣanawbarī). Characteristic for Persian nature depictions are the numerous personifications (thus already in Rūdakī, "the tulip is *laughing* from afar in the field"; "see that thunder that is *moaning* like a sad lover") (cf. Reinert, *Probleme*, 74). In later poetry, personification is very often combined with fantastic etiology (*ḥusn-i taʿlīl*): the juxtaposition of two nature objects is thus reinterpreted as a cause-effect relationship; the choice of images is harmonically adjusted (*murāʿāt-i naẓīr*, cf. Ritter, *Bildersprache*, 7 ff.): "From greenness the water donned verdigris-coloured chainmail; when the lily saw this, it created a chainmail-piercing lance" (fantastic reinterpretation of the shape of the pistil of the lily) (from the aforementioned *ḳaṣīda* prologue of Khāḳānī).

Added to the images customarily used in Arabic nature descriptions for natural objects and phenomena there are a number of new images in Persian, e.g. those taken from the religious sphere (the earth in spring is a paradise [full of houris]; spring brings to life like Jesus; the garden because of its colours is a temple of idols or a picture gallery of Mani; the tulip kindles the fire of Nimrod).

After the *ghazal* had superseded the *ḳaṣīda* as the most important lyrical genre, nature descriptions also increasingly penetrated the *ghazal*. Saʿdī (d. 691/1292 [*q.v.*]) begins some of his *ghazaliyyāt* with garden and spring descriptions and then, with a phrase like "then I thought of you—and forgot the gardens", switches to the *maʿshūḳ* (*Kulliyyāt*, ed. M.ʿA. Furūghī, Tehran 1337/1958, *Ṭayyibāt*, 525, similarly 532). With Ḥāfiẓ (d. 792/1390 [*q.v.*]), the garden and spring depictions can occupy the larger part of the *ghazal*. They are often connected with a call to drinking wine and to *carpe diem*; thus e.g. in the poem beginning "Now that in the meadow the rose has stepped from non-being into being, the violet has laid its head at [the rose's] feet in prostration" (*Dīwān*, ed. M. Ḳazwīnī and Ḳ. Ghanī, Tehran [1320/1941], no. 219). However, the garden description may also be the almost exclusive topic of a Ḥāfiẓian *ghazal*, as in poem no. 295: "In the early morning I went to the scent of the rosebed in the garden, in order to heal [my] sorrow like the sad/loving nightingale" (note that a consolatory effect is here attributed to nature).

Finally, in epic poetry [see ḤAMĀSA] the description of nature is frequently used as a frame into which the poet puts his protagonist. Such descriptions can be found already in Firdawsī's *Shāh-nāma* (a spring description occurs e.g. at the beginning of Isfandiyār's fourth adventure). It is handled in virtuoso style by Niẓāmī (d. 605/1209 [*q.v.*]) (cf. Ritter, *Bildersprache*, 41 ff.). Very frequently, Niẓāmī depicts a landscape, often a spring landscape with many flowers, before he puts his hero on the stage. Niẓāmī uses nature as a staging area and as a décor of the epic action; however, he often establishes a relationship between nature and human affects; the former may be consonant or dissonant with a psychological condition (*ibid.*, 43). Thus in *Laylī-u Madjnūn* the story of Laylī's death is introduced by an autumn description, in which the images are chosen in such a way that they exactly conform to the psychological content of the subsequent narrative: "the cheek of the garden becomes pale..., the rose takes up the book of grief in its hand" (ed. W. Dastgirdī, 248; cf. Ritter, *ibid.*, 45).

Bibliography: 1. Anthologies (in addition to those mentioned in the article). al-Sarī b. Aḥmad al-Raffāʾ, *K. al-Muḥibb wa 'l-maḥbūb wa 'l-mashmūm wa 'l-mashrūb*, pts. 1-4, ed. M.Ḥ. al-Dhahabī, Damascus 1985-6 (pt. 3 = *al-Mashmūm*); Djunayd b. Maḥmūd al-ʿUmarī, *Ḥadāʾiḳ al-anwār wa-badāʾiʿ al-ashʿār*, ed. H. Nādjī, Beirut 1995.

2. Studies. Of fundamental importance are those by H. Ritter, *Über die Bildersprache Nizāmīs*, Berlin and Leipzig 1927; G.E. von Grunebaum, *The response to nature in Arabic poetry*, in *JNES*, iv (1945), 137-51; J.Ch. Bürgel, *Die ekphrastischen Epigramme des Abū Ṭālib al-Maʾmūnī*, Göttingen 1965 (on *waṣf*, but not specifically on descriptions of nature); and G. Schoeler, *Arabische Naturdichtung*, Beirut 1972. See also A. Hamori, *On the art of medieval Arabic literature*, Princeton 1974, 78-98. On Andalusian-Arabic poetry and specifically the flower and garden poetry, see H. Pérès, *La poésie andalouse en arabe classique au XI^e siècle*, ²Paris 1953; M. Raḥīm, *al-Nawriyyāt fi 'l-shiʿr al-andalusī*, Beirut 1986; Salma Kh. Jayyusi, *Andalusī poetry. The Golden Age* [and] *nature poetry in al-Andalus and the rise of Ibn Khafādja*, in *The legacy of Muslim Spain*, ed. eadem, Leiden 1992, 317-97; Schoeler, *Ibn al-Kattānīs* Kitāb al-Tašbīhāt *und das Problem des Hispanismus der andalusisch-arabischen Dichtung*, in *ZDMG*, cxxix (1979), 43-97; Magda M. al-Nowaihi, *The poetry of Ibn Khafāja. (G. SCHOELER)

ZAʿĪM (A., pl. *zuʿamāʾ*), "chief", "leader". Etymologically, *zaʿīm* denotes the spokesman of a group of individuals such as a tribe, or, metaphorically, claimant to the name of this group; but *zaʿīm* has long been used, according to different periods of history, in a political or military sense.

Of the seventeen occurrences of the term in the Ḳurʾān, in two cases (LXVIII, 40: *sal-hum ayyahum bi-dhālika zaʿīm^un*; and XII, 72: *wa-anā bihi zaʿīm^un*) it appears in the sense of "guarantor", "trustee", a meaning which recurs in numerous treatises of Islamic law. Al-Ḳalkashandī (*Ṣubḥ al-aʿshā*) notes for the Mamlūk state the meanings of "chiefs of the non-Muslim community" (in the expression *zuʿamāʾ ahl al-dhimma* applied

to the patriarchs of Christian communities, iv, 194) and of "military chief" (in Egypt, vi, 51), while the honorific title of *al-zaʿīm al-aʿẓam* may be applied to the caliph himself (v, 444, 448).

The *zeʿāmet* (Turkish pronunciation of *ziʿāma*) is a form of *tīmār*, military fief, an institution of the Ottoman patrimonial system borrowed from the Saldjūḳids [see TĪMĀR; ZEʿĀMET] and probably retained from the previous Byzantine institution. Attested since the beginning of the Ottoman period (Barkey, 36-7), it corresponded to a particularly extensive donation of land, allocated as a prebend to the chieftains of the Ottoman cavalry who controlled the provinces of the empire. In return for service in times of war and maintaining security in the province, the *zaʿīm* collected taxes on the sultan's behalf. This revenue linked to a title marks the correspondence between social power and the functions of individuals bearing certain titles, to the point where the *zeʿāmet* tended to become hereditary, and intense competition between *zuʿamāʾ* incited them to military confrontation.

The term *zaʿīm* has retained its military dimension, attested by the name of Zaʿīm-oghlu, the Egyptian general who led Muḥammad ʿAlī's expedition to the Ḥidjāz, at a time when the *iḳṭāʿ* [*q.v.*] had fallen into disuse. In modern Egyptian usage, it is applied to the leaders of political parties, for example Sa'd Zaghlūl (1860-1927 [*q.v.*]), leader of the *Wafd* in the 1920s, and especially Djamāl ʿAbd al-Nāṣir (1918-70 [see ʿABD AL-NĀṢIR, in Suppl.]). As the *Zaʿīm al-ʿarab*, the latter was the archetype of the *zuʿamāʾ*, authoritarian and charismatic leaders of the independent states of the Arab East in the second half of the 20th century, another example being the ʿIrāḳī ʿAbd al-Karīm Ḳāsim (1914-63 [*q.v.*]), *al-zaʿīm al-awḥad* "the unique leader".

In contemporary Lebanon, the organic institution of *zaʿāma* has gradually taken the place of the quasi-feudal relationship of the *iḳṭāʿ*, the latter having been abolished in the Ottoman reforms of 1858. Officially deprived of his military function, and having exchanged his status as tax-farmer (*multazim*) for the position of a landowner or a state official, the *zaʿīm* is a political entrepreneur whose function is to serve as intermediary between his community and the state—Ottoman empire, French mandatory power or Lebanese state—and to keep the inter-community game in balance. He is a central figure of the cliental system whereby a political leader, most often a parliamentary deputy, assures himself of the loyalty of a local community in exchange for economic redistribution (A. Hottinger, 104). The *zuʿāmāʾ* of Lebanon have succeeded in perpetuating a system of balanced community élites by making their status hereditary (S. Khalaf, *Lebanon's predicament*, New York 1987, 125-43). Combining manipulation with coercion, they constructed sophisticated electoral machines which enabled them to maintain control of their clientele during the crisis of 1958 (M. Johnson, *Class and client in Beirut*, London 1986, 105-11) under the patronage of the "patron" *par excellence*, the President of the Republic. The civil war of 1975-90 signalled a revival of the institution of *zaʿāma*. Certain *zuʿamāʾ* had to surrender their prestige in rural areas (the Asʿad in southern Lebanon) or in urban ones (the Salām in Beirut) to new leaders enriched or made powerful by the war (E. Picard, *Les habits neufs du communautarisme*, in *Cultures et Conflits*, xv-xvi [1994], 49-70). But the key institution of the Lebanese social and political system retains its vitality.

Bibliography: Lane, *Lexicon*, 1233-4. On the Ottoman institution, the article of reference remains that of J. Deny, *Zeʿāmet*, in *EI*[1], iv, 1221-2, which may be supplemented now by the article in *EI*[2] (s.n., S. Faroqhi) and by K. Barkey, *Bandits and bureaucrats. The Ottoman route to state centralization*, Ithaca and London 1994; see also the art. TĪMĀR. On usage of the term in the contemporary Arab East, see A. Hottinger, *Zuʿamāʾ in historical perspective*, in L. Binder (ed.), *Politics in Lebanon*, New York and London 1966, 85-105; B. Lewis, *The political language of Islam*, Chicago and Ithaca 1988, 59-60, 139-40; Y. Besson, *Identités et conflits au Proche-Orient*, Paris 1991, 131-40.

(ÉLIZABETH PICARD)

AL-**ZAʿĪM**, ḤUSNĪ (1889-1949), the first head of state in the Syrian Republic to arise out of a military coup.

An officer in the Ottoman Army and then in the Special Forces of the French mandate [see MANDATES and AL-SHĀM. 2 (b)], Ḥusnī al-Zaʿīm was born in Aleppo into a Kurdish family of Hamāt. He was imprisoned in 1944-5 for complicity with the Vichy army, but at independence, the colonel al-Zaʿīm was made inspector-general of the police. Wishing to put an end to the corruption (to which he himself was no stranger), on 30 March 1949 he overthrew the government of the President Shukrī al-Ḳuwatlī. He proclaimed himself Prime Minister, and on 25 June, Marshal and head of state with special powers, by a vote of 88.9% out of 816,321 electors. Inspired by the secularist, egalitarian and developmental ideas of Kemal Atatürk [*q.v.*], he imposed a new constitution which suppressed confessional representation, gave the right to vote to educated women, made a start on agrarian reform and abolished private *waḳfs*. Externally, fearing Hashemite ambitions, he moved closer to Egypt, Saudi Arabia and, above all, the Western powers, who had welcomed his seizure of power: France, ratifying on 16 April a financial agreement concluded on 7 February by Khālid al-ʿAẓm; and the United States, ratifying on 16 May an agreement with Aramco guaranteeing the free flow of the oil pipe line within Syria. On 12 April, he proposed to Israel, with which he had had secret negotiations since the end of 1948, to install 250,000 Palestinian refugees in the Djazīra [*q.v.*] in return for economic aid from the Truman government of the United States; these negotiations came to nothing through David Ben Gurion's refusal.

More concerned with personal glory than the national interest, and corrupted by the exercise of power, Ḥusnī al-Zaʿīm installed a police-controlled dictatorship in Syria, surrounding himself with a Kurdish praetorian guard, hounding his political opponents, from the Communists to the Muslim Brotherhood, and handling over Anṭūn Saʿāda, head of the Parti Populaire Syrien (PPS), for whose plot he had provided arms, to the Lebanese authorities on 8 July. He was overthrown on 13 July by a coalition of his former allies led by Colonel Sāmī al-Ḥinnāwī, and killed the next day by officers of the PPS.

ZAʿĪM, MEḤMED [see MEḤMED ZAʿĪM].

ZAINUDDIN [see MAPPILA].

ZĀ'IRDJA (a.) or Zā'iradja, a divinatory technique which, in the same manner as geomancy [see khaṭṭ] and *djafr* [*q.v.*], and under various outside influences, had a wide diffusion in the mediaeval Islamic lands. It involved a mechanical means of calculating portents, strongly imbued with magic and astrology, in which were strongly mingled the talismanic sciences, based on the *ʿilm al-khawāṣṣ* "knowledge of secret properties", the *ʿilm al-awfāḳ* "knowledge of conjunctions", *ʿilm al-ṭilasmāt* "knowledge of talismans" and *ʿilm al-ḥurūf* "knowledge of letters" [see ḥurūf]. *Djafr* and *ḥurūf* led to the *zā'irdja*.

1. Origins and use in mediaeval Islam.

This mechanical technique (*ṣināʿiyya*) functioned with the aid of a series of concentric circles, like the *Ars magna* of Raymond Lull, combining the letters of the alphabet, geomancy and astrology. From Ibn Khaldūn, *Muḳaddima*, i, 213-20, iii, 146-79, cf. Fahd, *Divination*, 243-4, there emerges that the table on which these calculations were made represented the image of the celestial sphere. It was formed from seven concentric circles, the largest of which had the names of the signs of the zodiac, while the fourth contained twelve circles in which were written numbers and letters. Four other circles occupied the four corners of the square in which was a circular table. The answer to a question posed to the device was implicitly contained in the question itself, whose consonantal elements were groups, differently combined, replaced by their numerical values and set out on the tablet. After having taken into account the degree of the ecliptic which rose at the horizon at the moment of operation, one proceeded to complex calculations from which there resulted a series of numbers. When these were converted into letters, they yielded a phrase giving the answer to the question posed.

There were several methods of using letters of the alphabet for divinatory aims, as set forth in a work attributed to Ibn al-ʿArabī (d. 638/1240 [*q.v.*]), the *K. Uṣūl al-ʿuḳūl fi 'l-zā'irdja* (ms. Köprülü, Fâzil Paşa 163, fols. 1-75; Bursa, Ulucami 3544, fols. 141b-194b). Two works on geomancy speak of *zā'irdja ramliyya* (ʿUmar al-Khiṭā'ī), *al-Djadāwil al-zuhariyya fī īḍāḥ ʿilm al-raml wa 'l-zā'irdja al-ramliyya*, ms. Gotha 1317, Land. Br. 476; and Aḥmad b. ʿAbd al-Salām al-Tūnisī (9th/15th century), *Kanz al-asrār al-khafiyya fī aḥkām al-zā'irdja al-ramliyya*, Bankipore, xxii, 126, 2457.

This description is to be compared with the table described by E. Savage-Smith and M.B. Smith in *Islamic geomancy and a thirteenth century divinatory device*, Malibu 1980, which gives a precise idea of the workings of the features combined from geomancy and astrology. It concerns a metallic contrivance in the British Museum, of remarkable workmanship and signed by a certain Muḥammad Khuṭlukh al-Mawṣilī and dated 634/1241-2. It is composed of four main figures (*ummahāt*), from which were derived twelve secondary figures (*banāt*), thus a total of sixteen, placed in correspondence with the lunar mansions (cf. 32 ff.), starting from the principle of the action of the heavenly bodies on the various parts of the human body and the influence of the constellations on the various countries of the world. In the eyes of the astrologers and geomancers, this allowed them to foretell the fate of humans and to predict revolutions and wars (see the review by Fahd, in *BiOr*, xxxviii/5-6 [1987], cols. 773-6).

The use of tables is also attested for horoscopes, the best-known work on this topic being the *K. al-Zā'irdjāt fi 'l-hilādj wa 'l-kadkhudāh* of the famous mathematician and astrologer Abū Saʿīd al-Sidjzī (*fl.* second half of the 4th/10th century, cf. Sezgin, *GAS*, vii, 177), who organises his subject-matter into five tables, referring to Greek sources (see Sezgin, *GAS*, vii, 177-82).

Regarding the origin of this technique, the first mention of the term *zā'irdja* goes back to Ṭumṭum al-Hindī (see Goldziher, in *OLZ*, xiii [1910], 59-61), who is reported to have himself commented upon one of his own works called *Zā'irdja* (Sezgin, iv, 119, 4). As we have just seen, it was used by al-Sidjzī, as also by Abū Maʿshar (*ibid.*, iv, 151) and Māshā'allāh (iv, 106). But the invention of the circular table and the mode of its use are generally attributed to Shams al-Dīn Abu 'l-ʿAbbās al-Sabtī (d. 698/1298?), author of *al-Risāla al-sabtiyya fi 'l-zā'irdja* (ms. Paris ar. 2694) and of the *R. al-Shuhrūr fi 'l-zā'irdja* (ms. Bursa, Ulucami 3544, fols. 195b-199b).

Bibliography: See Ibn Khaldūn, *Muḳaddima*, i, 213-20, Fr. tr. de Slane, i, 245-53, and iii, 146-79, pages not tr. by de Slane, who give instead a long note and a description of the procedure (iii, 200-6). But Rosenthal, in his Eng. tr. i, 238-45, iii, 182-214, gives two reproductions after p. 204 of this table, and at the end of vol. iii, in a pocket, there is a transliteration and tr. of the constituent elements of this table. A contemporary of Ibn Khaldūn attests the veracity of the experience in question in iii, 163 ff., 201 ff., Eng. tr. iii, 199 ff. Cf. on this subject, H.P. Reinaud, *Divination et histoire nord-africaine du temps d'Ibn Khaldūn*, in *Hespéris*, xxx (1943), 213-21. Cf. an expansion of this art. in Fahd, *La divination arabe*, Leiden 1966, repr. Paris 1987, 243-5.

(T. Fahd)

2. In mysticism and philosophy, and later survivals.

Texts of Ṣūfī inspiration hold *zā'irdja* to be a path of awareness of the highest degree, allowing direct access to divine secrets, some of which, such as knowledge in the correct order of the Ninety-Nine Names of God [see al-asmā' al-ḥusnā], guarantee entry to Paradise. Also found here are cosmological developments which insist on the correspondence (*rabṭ*) existing between heaven and earth and which could constitute the substructure on which the concentration of the diagram is based (Ibn al-ʿArabī (attrib.), *K. Uṣūl al-ʿuḳūl*, cf. O. Yahia, *Histoire et classification de l'oeuvre d'Ibn ʿArabī*, Damascus 1964, ii, 519 n. 808, and Fahd, *La divination arabe*, 244-5 no. 6; among others, B.N. ms. arabe 2684, fols. 91a, 98a, or ms. 2694, fols. 2a, 12b; and the anonymous *K. Ṭuruḳ al-sālikīn wa-kunūz asrār al-ʿārifīn*, B.N. 2684, fols. 31-52, later than al-Sabtī (see 1. above) cited on fol. 39b, cf. especially the opening and fol. 391-b).

The *zā'irdja* has attracted the attention of "Lullian" studies and of scholars researching into the history of numbers. D. Urvoy has established Lull's debt, in his *Ars magna*, to *zā'irdja*, especially when purged of its esoteric and divinatory elements; see his *Penser l'Islam. Les présupposés islamiques de "l'Art" de Lull*, Paris 1980, 23, 89-90, iii, 162-4. It was thus that the philosopher Leibnitz came into direct contact with al-Sabtī's system.

As regards the practice of *zā'irdja*, there are indications of its persistence in the 14th, 16th, 17th and even 19th centuries in North Africa (modern Morocco, Algeria and Tunisia) (Dozy, *Supplément*, i, 577; Leo Africanus, tr. A. Épaulard, *Description de l'Afrique*, Paris 1956, i, 219). The region of Ceuta in northern Morocco was probably the scene of important activity in the 6th/12th century; but E. Doutté did not mention having observed it at the beginning of the 20th century (*Magie et religion dans l'Afrique du Nord*,

Algiers 1908, repr. Paris 1994, 381-3). E.W. Lane encountered a simplified version of it in early 19th-century Cairo, see his *Manners and customs of the modern Egyptians*, ch. xi "Superstitions—*continued*," with an illustration of a table. Today, it is still practiced in Yemen by an adept of great regional renown, the *shaykh* Mahdī Amīn (cf. *al-Natīdja*, containing his annual predictions, where *z.y.r.dj.h* is noted on the fourth part of the cover). Furthermore, the treatise of ʿAbd al-Fattāḥ al-Ṭūkhī, *al-Zāʾirdja al-handasiyya fī kashf al-asrār al-khafiyya*, Cairo 1367/1948, 1-61, as also his *Zāʾirdjat al-Ṭūkhī al-falakī wa-hiya khulāṣat djāmiʿ al-zayāridj*, Cairo n.d., 139-87, also Beirut 1411/1991, seeks to perpetuate the practice.

Festugière (ed.), *La révélation d'Hermès Trismégiste*, i, *L'astrologie et les sciences occultes*, Paris 1950, repr. 1989, appx. iii, 399; R.B. Serjeant, ch. *Islam*, in M. Loewe and Carmen Blacker (eds.), *Oracles and divination*, Boulder, Colo. 1981, 239-41, repr. in Serjeant, *Society and tradition in South Arabia*, Variorum, Aldershot 1996, no. XIV. (ANNE REGOURD)

ZĀKĀNĪ, ʿUBAYD [see ʿUBAYD-I ZĀKĀNĪ].

ZAKARAWAYH B. MIHRAWAYH, one of the earliest Ismāʿīlī missionaries in ʿIrāḳ. In modern literature, the name, a Persian diminutive of Zakariyyāʾ (originally Zakarōye), is often misread as Zikrawayh.

Zakarawayh came from the village of al-Maysāniyya near Kūfa and was the son of one of ʿAbdān's [*q.v.*] first missionaries; he propagated the Ismāʿīlī doctrine among the Bedouin of the tribe of Kulayb on the fringes of the desert west of Kūfa. When in 286/899 a schism split the Ismāʿīlī community, he was instrumental in doing away with his master ʿAbdān who had apostatised from the Ismāʿīlī doctrine and fallen away from the headquarters of the movement at Salamiyya [see ISMĀʿĪLIYYA at Vol. IV, 198a-b]. Out of fear of blood vengeance, Zakarawayh had to go into hiding; in 287/900 he reappeared and was again active in missionary work among the tribes of the Syrian desert, Asad, Ṭayyiʾ and Tamīm [*q.vv.*]; his hiding-place and headquarters was the village of al-Ṣawʾar, 7 km/4 miles west of al-Ḳādisiyya. In 288/901 he sent two of his sons as missionaries to the Kalb in Palmyrene; it was these men, Yaḥyā, the "Man with the She-camel" (*ṣāḥib al-nāḳa*) and al-Ḥusayn, the "Man with the Birthmark" (*ṣāḥib al-shāma*), who in 289/902 won the support of several clans of this tribe for an armed rebellion against the ʿAbbāsid régime. They plundered the town of Ruṣāfa near the Middle Euphrates and besieged Damascus from December 902 until July 903 without success. This evidently pro-Fāṭimid rebellion seems to have been a premature undertaking on the part of Zakarawayh and his sons, unauthorised by the leaders of the Ismāʿīlī movement. It caused al-Mahdī ʿUbayd Allāh's [*q.v.*] flight from Salamiyya, and after the rebellion had been put down by an ʿAbbāsid army in 291/903, the whole enterprise was disavowed by the Fāṭimids; in later Fāṭimid sources, Zakarawayh and his sons are the subject of a *damnatio memoriae*.

After this catastrophe, Zakarawayh renewed his subversive activities in 293/906. His hordes of Kalb Bedouin plundered Buṣrā and Ṭabariyya (Tiberias) in Syria and Hīt on the Euphrates; on the day of the Feast of the Sacrifice 293/2 October 906 they made a sudden attack on Kūfa. After having defeated caliphal troops who tried to destroy his headquarters at al-Ṣawʾar, Zakarawayh in November 906 attacked the second of the three caravans of ʿIrāḳī pilgrims at al-ʿAḳaba (today a border post between ʿIrāḳ and Saudi Arabia) and captured an immense booty. But on 10 January 907/22 Rabīʿ I 294, his partisans were attacked by ʿAbbāsid troops under the command of the general Waṣīf near the so-called ruins of Iram in Wādī Dhī Ḳār (*ca.* 160 km/100 miles west of Baṣra); in a two-day battle, the Bedouin suffered a crushing defeat, and Zakarawayh himself was mortally wounded. From the interrogation of his brother-in-law, the authorities in Baghdād got the detailed information concerning Zakarawayh's whereabouts which al-Ṭabarī made use of in his chronicle.

Bibliography: The main sources are Ṭabarī, iii, 2127, 2130, 2217-50, 2255-78; ʿArīb, *Ṣila*, 9-18, 36; Ibn al-Dawādārī, *Kanz al-durar*, ed. al-Munadjdjid, vi, Cairo 1961, 47-83; Maḳrīzī, *Ittiʿāẓ al-ḥunafāʾ*, ed. al-Shayyāl, i, Cairo 1967, 155, 168-73. Of studies, see H. Halm, *Die Sohne Zikrawaihs und das erste fatimidische Kalifat (290/903)*, in *WO*, viii (1975), 30-53; idem, *The empire of the Mahdi*, Leiden 1996, 62-88, 183-90. (H. HALM)

ZAKARIYYĀʾ, also Zakariyyā, the father of John the Baptist, reckoned in the Ḳurʾān (VI, 85) along with John, Jesus, and Elias as among the righteous. The name most likely entered Arabic via its Syriac rendering. The Ḳurʾān gives the substance of Luke i. 5-25, as follows: Zakariyyāʾ guards the Virgin Mary [see MARYAM, at Vol. VI, 630] in the niche (*miḥrāb*) and always finds fresh fruits there. He prays to God; angels announce to him that a son will be born to him, Yaḥyā, a name not previously given to anyone, a pious man, a prophet, Jacob's heir, pleasing to God. Zakariyyāʾ thinks he is too old. As a sigu, he is struck dumb for three days (Ḳurʾān, III, 37-41, XIX, 1-11, XXI, 89-90).

Later legend expands the Gospel story and says that Gabriel was the announcer (Luke i. 19) and that Zakariyyāʾ was struck dumb as a punishment for his doubts (Luke i. 20). It elaborates the details as follows: nineteen people anxious to take charge of Maryam wrote their names each on a reed; these were thrown into the pool of Siloam, and the reed with Zakariyyāʾ's name came to the top. Zakariyyāʾ grew old and resigned his office of custodian, which a reed oracle gave to Joseph, the carpenter. In Mary's niche there was winter fruit in summer and summer fruit in winter; this encouraged Zakariyyāʾ to pray that his aged body also might be fruitful out of season.

Muslim legend has Zakariyyāʾ the prophet die a death of a martyr. After Yaḥyā's death, he escaped into a tree which opened for him. But the hem of his cloak remained outside the tree. Iblīs betrayed him, the tree was felled and with it Zakariyyāʾ (al-Thaʿlabī, 341-2; Ibn al-Athīr, Būlāḳ 1290, i, 120). This is modeled on the Haggada and the martyrdom of Isaiah [see SHAʿYĀ, and references cited there].

Muslim legend amalgamates the Zakariyyāʾ of the Gospel with the prophet Zechariah, of whom the Haggada records that, after his martyrdom, his blood boiled until Nebuchadnezzar's general Nebuzaradan came. The latter sought to calm the spirit with the blood of Israel but in vain. Only his final threat to kill all of Israel calmed it. Muslim legend tells this of Yaḥyā b. Zakariyyāʾ [*q.v.*, and references cited there]. Zechariah, son of the High Priest Jehoiada, who was martyred by King Joash (II Chr. xxiv. 22), is identified with Zechariah, the father of John the Baptist, not only in Muslim legend but also in Christian apocryphal texts (*Protoevangelium Jacobi*, xxiv; this text

provides the parallel for a number of other elements in the story also).

(B. Heller-[A. Rippin])

ZAKARIYYĀʾ al-ANṢĀRĪ, Abū Yaḥyā b. Muḥammad b. Zakariyyā, Zayn al-Dīn al-Sunaykī, Egyptian scholar and Ṣūfī, born *ca.* 823/1420.

After growing up in a humble milieu in the Sharḳiyya, he had the opportunity of making his way to Cairo to study Islamic sciences; he was the pupil of Ibn Ḥadjar al-ʿAsḳalānī [*q.v.*]. At the same time, he frequented Ṣūfī circles and became associated with numerous initiatory "paths" (*ṭuruḳ* [see ṬARĪḲA]). In his role as scholar (*ʿālim*), he excelled in particular in Shāfiʿī law, for which he composed commentaries which soon became part of the courses in the *madrasas* (such as the *Sharḥ Rawḍ al-ṭālib*, Cairo 1313, 4 vols.). A renowned teacher, in the course of his long career he educated three generations of Shāfiʿī scholars from all parts of the Near East. On numerous occasions he refused the post of Shāfiʿī Grand Ḳāḍī (*ḳāḍī al-ḳuḍāt*), but ultimately he was persuaded by the Mamlūk sultan Ḳāyitbāy to take on this function, which he exercised for a period of twenty years, from 886/1481 to 906/1500. When he received the honorific title of *shaykh al-Islām* [*q.v.*], he was even hailed by some as the "renovator" (*mudjaddid* [*q.v.*]) of the 9th century of the *hidjra*.

This renown acquired in the exoteric sciences enabled him to protect his spiritual life from any external scrutiny and to hide the social influence of his holiness (*walāya*): this amounted to the status of an authentic *malāmatī* [*q.v.*]. He succeeded in his enterprise, to the extent that posterity remembers him primarily as a great jurist. The pages dedicated to him by al-ʿAydarūsī, for example, present only the exoteric side of his personality (*Taʾrīkh al-nūr al-sāfir*, Baghdād 1934, 120-4). Only his closest pupils, such as al-Shaʿrānī [*q.v.*], who revered him, and certain Ṣūfī masters of Cairo, were aware of his spiritual dimension and were prepared to declare themselves on this subject (cf. al-Shaʿrānī, *al-Ṭabaḳāt al-kubrā*, Cairo 1954, ii, 122-4; *al-Ṭabaḳāt al-ṣughrā*, Cairo 1970, 37-45). Al-Anṣārī did, however, write in the domain of Ṣūfism (*al-Futūḥāt al-ilāhiyya fī nafʿ arwāḥ al-dhawāt al-insāniyya*, ed. in *Ḥaḳīḳat al-taṣawwuf al-islāmī*, Cairo 1992, 5-25; a commentary on the *Risāla* of al-Ḳushayrī, Cairo 1957; and a commentary on the *Risāla fi 'l-tawḥīd* of Shaykh Arslān, in *Shurūḥ risālat al-shaykh Arslān*, Damascus 1969, 181-99). The great influence wielded by al-Anṣārī in Cairo at the end of the Mamlūk period is clearly reflected in late compilations of initiatory lineages (*asānīd*): M. al-Sanūsī, *al-Salsabīl al-maʿīn fi 'l-ṭarāʾiḳ al-arbaʿīn*, Beirut 1968; M. al-Zabīdī, *Itḥāf al-asfiyāʾ bi-rafʿ salāsil al-awliyāʾ*, and *ʿIḳd al-djumān al-thamīn fi 'l-dhikr wa-ṭuruḳ al-ilbās wa 'l-talḳīn*, ms. dating from 1339/1920-1, private collection).

Zakariyyāʾ al-Anṣārī incarnates in fact the model of the Ṣūfī scholar, equally at home in the exoteric and the esoteric sciences; such a profile is often encountered at the end of the mediaeval period. Al-Anṣārī died aged 101, in 926/1520, and was buried in Cairo in the sanctuary of the Imam al-Shāfiʿī.

(E. Geoffroy)

ZAKARIYYĀ KĀNDHALAWĪ SAHĀRANPŪRĪ, Shaykh al-Ḥadīth Mawlānā Muḥammad, an Indian traditionist and influential member and ideologist of the Tablīghī Djamāʿat [*q.v.*], d. 1982. He was related by birth to the leaders of this movement and closely linked with them.

Born in his ancestral village of Kāndhala in what was then the United Provinces (now Uttar Pradesh), he was educated in esoteric religious studies at the seminary in Sahāranpūr [*q.v.*], which was affiliated to the school of Deoband [*q.v.*], under the direction of his father. He also had Khalīl Aḥmad Ambathawī as his teacher of *ḥadīth* and as spiritual guide. In 1915 he was initiated, and in 1925 he was authorised to initiate other disciples into the major brotherhoods (Čishtiyya, Suhrawardiyya, Ḳādiriyya and Naḳshbandiyya [*q.vv.*]). From 1916 to 1969 he taught tradition at the seminary in Sahāranpūr, and he became director there in 1954. He published commentaries on two collections of *ḥadīth* (the *Muwaṭṭaʾ* of Mālik, and the *Ṣaḥīḥ* of al-Bukhārī). He made the pilgrimage to Mecca four times (1920, 1925, 1964 and 1967), but in 1969 he had to stop teaching because he was suffering from cataracts. He went to live in Medina in 1973, and there he died and was buried in 1982.

He is famous for his prominent role in the development of the Tablīghī Djamāʿat. Between 1924 and 1964 he published in Urdu a series of treatises on the merits (*faḍāʾil*) of the fundamental practices of Islam. These are known under the collective title of *Tablīghī niṣāb*, and they have been translated into several major languages (Arabic, English and French). To this day they form the basic manuals for the movement. Muḥammad Zakariyyā was a very influential counsellor to the successive leaders of the Tablīghī Djamāʿat, and he did much to extend the movement in Arabia, in England (he travelled there twice, in 1979 and 1981), and in locations around the Indian Ocean, such as Réunion, South Africa and East Africa (where he went, also in 1981).

Bibliography: The only work of his widely available is the *Tablīghī niṣāb*, Dihlī n.d., Eng. tr. *The teachings of Islam*, Dihlī n.d., Fr. tr. *Les enseignements de l'islam*, Dihlī-Saint-Denis de la Réunion n.d.). Concerning the contents of this volume and the use that can be made of it, see B.D. Metcalf, *Living Ḥadīth in the Tablīghī Jamāʿat*, in *The Journal of Asian Studies*, lii/3 (1993), 584-608. For the biography of Muḥammad Zakariyyā, see Abu 'l-Ḥasan ʿAlī Nadwī, *Ḥaḍrat Shaykh al-Ḥadīth Mawlānā Muḥammad Zakariyyāʾ Ṣāḥib*, Lucknow 1982; M. Gaborieau, *Muḥammad Zakariyyā Kāndhalawī Sahāranpūrī*, in Gaborieau et al. (eds.), *Dictionnaire biographique des savants et grandes figures du monde musulman périphérique, du XIX^e siècle jusqu'à nos jours*, i, Paris 1992, 20.

(M. Gaborieau)

ZAKĀT (a.), the obligatory payment by Muslims of a determinate portion of speci-

fied categories of their lawful property for the benefit of the poor and other enumerated classes or, as generally in Ḳur'ānic usage, the portion of property so paid.

8. *Zakāt* in the modern period

1. Introduction.

There is disagreement as to when the obligation of *zakāt* was imposed: according to a common opinion, this occurred in the month of Shawwāl of the year 2/624 after the introduction of *zakāt al-fiṭr* in Sha'bān of the same year, or, according to others, at the same time as *zakāt al-fiṭr*. Others place its introduction in the year 1/622-3 or 4/625-6 or even as late as 9/630-1 (al-Ṭabarī, iv, 1722, cf. Ibn Ḥadjar al-'Asḳalānī, *Fatḥ al-bārī*, Cairo 1378/1959, iv, 8-9)). Another popular opinion is that *zakāt* was introduced in general terms before the *hidjra* and then in detailed fashion in Medina. *Zakāt* is one of the "pillars" (*arkān, da'ā'im*) of Islam (cf. al-Bukhārī, *al-Ṣaḥīḥ*, Cairo 1418/1998, i, 19), and to deny its obligatoriness amounts to unbelief (*kufr*). Failure to pay *zakāt* when due is a grave sin (*kabīra*) (al-Dhahabī, *Kitāb al-Kabā'ir*, Cairo 1356, 32-7). Acceptance of *zakāt* on the part of those qualified to receive it is a collective obligation (*farḍ kifāya*) (Abu 'l-Hudā al-Ṣayyādī, *Ḍaw' al-shams*, 1394/1974, ii, 5-7).

Muslim scholars almost universally regard the term *zakāt* as Arabic in origin and derive it form the verb *zakā*, which has among its meanings "to increase" and "to be pure". *Zakāt*, on this view, takes its name from its functions of increasing, i.e. blessing, the property from which it is taken and purifying from sin those who give it or their property (Lane, iii, 1241). Modern scholarship has regarded the term as a borrowing, almost certainly from the Judaeo-Aramaic *zākhūthā* or righteousness, as evidenced by its orthography in the Ḳur'ān (A. Spitaler, *Die Schreibung des Typus ṣlwt im Koran*, in *WZKM*, lvi [1960], 217), and it has been suggested that *zakāt* was formed to rhyme with *ṣalāt*, another borrowing from Aramaic (C. Brockelmann, *Semitische Reimwortbildungen*, in *ZS*, v [1927], 14). While the use of the noun *zākhūthā*, unlike the related verb *z'kā* for alms, is not attested in Rabbinic writings (M. Sokoloff, *Dictionary of Jewish Palestinian Aramaic of the Byzantine period*, Ramat-Gan 1990, 177, cf. J. Horovitz, *Zakāt*, in *Isl.*, viii [1918], 137-8), in targumic literature *zākhūthā* functioned as the Aramaic equivalent for the Hebrew *ṣ'dāḳā*, which had from its original sense of righteousness come to serve as the ordinary term for alms and was borrowed with this sense into Arabic as *ṣadaḳa* [*q.v.*]. Although some of the *zakāt* rates have obvious parallels outside of Islam, e.g. one-tenth or one-fortieth (Mishna, T'rūmōth. iv, 3), there is no reason to doubt that the classical system of *zakāt* is unique to Islam.

Ṣadaḳa, in common use for voluntary alms, is also frequently used for *zakāt*, especially *zakāt* on livestock and crops. The use of *zakāt* in the sense of voluntary alms, if known at all, is rare (cf. al-Ḳurṭubī, *al-Djāmi' li-aḥkām al-Ḳur'ān*, Beirut 1965, vi, 222 on Ḳur'ān V, 55). The forms of *zakāt*, including *zakāt al-fiṭr*, considered here, are in turn classified under the larger heading of *ṣadaḳa*, in a further, expanded sense that includes obligatory and voluntary alms as well, *kaffāra* [*q.v.*] (al-Suyūrī, *Kanz al-'irfān*, Tehran 1384, i, 318). *Zakāt* is sometimes used in a figurative sense, for any offering, even one that is intangible: thus praying for other believers is said to be the *zakāt* of one without property. *Zakāt* was used in mediaeval times for various taxes without a basis in Islamic teaching [see MAKS]. The choice of the term *zakāt* for these was likely prompted by its positive religious associations and its use for a compulsory payment, as opposed to voluntary *ṣadaḳa* (cf. H. Rabie, *The financial system of Egypt A.H. 564-741/A.D. 1169-1341*, London 1972, 86, 96; P. Jackson and L. Lockhart (eds.), *Camb. hist. Iran*, Cambridge 1986, vi, 134, 541).

2. *Zakāt* in the Ḳur'ān.

The word *zakāt* occurs thirty-two times in the Ḳur'ān, always in the singular, and, according to some, only in Medinan passages (A. Jeffery, *The foreign vocabulary of the Qur'an*, Baroda 1938, 153). In at least two such occurrences (XVIII, 81; XIX, 13) it bears the sense of righteousness. The command for Muslims to give *zakāt* is so often joined with the command to offer prayer (*ṣalāt*) that *zakāt* was later termed the "companion" (*ḳarīna*) of prayer. The same pairing occurs in connection with earlier prophets. Abraham, Isaac and Jacob were instructed to pray and give *zakāt* (XXI, 73), as were the Israelites (II, 83, cf. VII, 156) and later Jesus (XIX, 31), and Ishmael so instructed his household (XIX, 55). Muslim exegetes, however, sometimes questioned whether the *zakāt* known before Islam was identical with *zakāt* as they knew it. Only in XXIII, 4 is "doing" or "practicing" (*fā'ilūn*) *zakāt* found in place of "giving", where *zakāt*, if it refers to alms, may bear the meaning of the practice of giving, rather than as elsewhere the portion of property to be given (cf. 'Īsā, *al-Muṣḥaf al-muyassar*, Cairo 1385, 445; R. Bell, *The Qur'ān*, Edinburgh 1937, i, 327; F. Rosenthal, *Sedaka, charity*, in *HUCA*, xxiii/1 [1950-1], 422 n. 39). The command to give *zakāt* is addressed to Muḥammad's followers in II, 110; XXII, 78; XXIV, 56; LVIII, 13; and LXXIII, 20, and specifically to Muḥammad's wives in XXXIII, 33. It is addressed to the Jews of Medina in II, 43. On the use of *ṣadaḳa* in the Ḳur'ān for *zakāt*, see ṢADAḲA. *Zakāt* may also be intended in some of the frequent references to spending (e.g. VIII, 3). *Mā'ūn* in CVII, 7 has also been interpreted as *zakāt* (al-Bayhaḳī, *Ma'rifat al-sunan wa 'l-āthār*, ed. al-Ḳal'adjī, Cairo 1411/1991, vi, 9).

Those entitled to receive *zakāt* are listed in IX, 60 (*āyat al-ṣadaḳa*), said to have been revealed after the battle of Ḥunayn (8/630 [*q.v.*]) in response to criticism by hypocrites [see AL-MUNĀFIḲŪN] of the equity of Muḥammad's distribution of *zakāt* (IX, 58-9), which until then had been left to his personal judgement (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, Cairo 1386/1966, 122). Institutionalisation of *zakāt* within Muḥammad's

lifetime is evidenced by the mention of agents for its collection in IX, 60, reportedly first sent out in the year 9/630-1, and by the requirement of the pagan Arabs that they practice prayer and give *zakāt* for their lives to be spared (IX, 5) and for them to become "brethren in religion" (IX, 11, cf. IX, 18; and cf. al-Bukhārī, iii, 7). In LVIII, 13 the obligation of giving of *zakāt* is opposed to the voluntary *ṣadaḳa* for an audience with the Prophet.

Muslim interpreters have found in the Ḳur'ān references to *zakāt* on crops (II, 267; VI, 141), gold and silver (IX, 34), merchandise (II, 267; LI, 19; LXX, 24), and mines (II, 267). A reference to the intention (*niyya*, see 5.xiii below) required for the validity of *zakāt* has been found in XXX, 39. Ḳur'ān IX, 103, sometimes said to have been revealed to provide a means of atonement (*kaffāra*) for specific individuals who repented of their misconduct (al-Ḳurṭubī, viii, 242-5), is nonetheless among the most cited verses in connection with *zakāt*. Ḳur'ān XXX, 39 contrasts the intended increase of wealth in usury (*ribā* [*q.v.* in Suppl.]), which is vain in the estimation of God, with the genuine increase gained by those who give *zakāt*. The polytheists (*mushrikūn*) do not give *zakāt* (XLI, 7). The *munāfiḳ* will wish after he dies for another opportunity to obey the injunction to give *zakāt* (LXIII, 10: *fa-aṣṣadaḳa*).

Muslim jurists disagreed on the extent to which the Ḳur'ān provided adequate information for implementing the obligation of giving *zakāt*. A minority found a basis in the Ḳur'ān (IX, 103) for imposing *zakāt* on all property (*amwāl*) unless there was evidence to the contrary (e.g. the Zaydī *imām* al-Hādī, *K. al-Aḥkām*, 1990, i, 180), a position sometimes attributed to Abū Ḥanīfa. Others regarded the Ḳur'ānic provisions as insufficiently detailed (*mudjmal*) and in need of clarification from the Prophet, a position commonly ascribed to al-Shāfi'ī, who did in fact regard the clarification of the Ḳur'ānic provisions on *zakāt* provided by the *sunna* as paradigmatic of the relation between these sources of law (*al-Umm*, ed. Cairo, ii, 3).

There is disagreement whether the obligation of *zakāt* abrogated other Ḳur'ānic provisions for obligatory giving (e.g. II, 219) and more generally whether there are any Islamic obligations on property beyond *zakāt* (*fi 'l-māl ḥaḳḳ siwā al-zakāt*) (al-Ghazālī, *Iḥyā' 'ulūm al-dīn*, on the margin of al-Zabīdī, *Itḥāf al-sāda al-muttaḳīn*, ed. Beirut, iv, 105-6; Ibn al-'Arabī, *K. al-Ḳabas*, ed. Walad Karīm, Beirut 1992, ii, 461-2).

3. *Zakāt* in the *Ḥadīth*.

Apart from the Ḳur'ānic list of beneficiaries, the other major elements of the law of *zakāt* are based on *ḥadīth*: the kinds of property subject to *zakāt*, the minimum quantity (*niṣāb*) in each case, the rate of *zakāt*, and the rule of a one-year holding period (*ḥawl*) (Ibn Mādja, *al-Sunan*, Cairo, i, 547). The best-known traditions regulating the *zakāt* due on camels and sheep are reports of written instructions for their collection (*kitāb*, *ṣaḥīfa*, *'ahd*) that came to be preserved as family heirlooms. These are the instructions of the Prophet to 'Amr b. Ḥazm whom he sent to Yemen (cf. al-Nasā'ī, *al-Sunan*, ed. 'Abd al-Wārith 'Alī, Beirut 1416/1995, viii, 41-2), the instructions that the Prophet is said to have prepared but was unable to issue before his death, and which were then implemented by Abū Bakr and 'Umar, and later by 'Umar b. 'Abd al-'Azīz (Mālik, *al-Muwaṭṭa'*, ed. 'Abd al-Bāḳī, Cairo, 175-6; Abū Dāwūd, *al-Sunan*, ed. al-Khālidī, Beirut 1416/1996, i, 458-9), and the instructions of Abū Bakr to Anas b. Mālik, whom he sent to collect *zakāt* in Baḥrayn (al-Bukhārī, iii, 39-41) (on these traditions, see 'Iyāḍ b. Mūsā, *Ikmāl al-mu'lim bi-fawā'id Muslim*, ed. Ismā'īl, al-Manṣūra 1419/1998, iii, 489-90). The *zakāt* due on cattle appears in the Prophet's instructions to Mu'ādh b. Djabal, whom he sent to Yemen (Abū Dāwūd, i, 462), known, unlike the rest of Arabia, for its cattle-raising (al-Zarkashī, *Sharḥ al-Zarkashī 'alā mukhtaṣar al-Khiraḳī*, ed. al-Djibrīn, ii, 392-3, cf. al-Hamdānī, i, 201). In some formulations one can detect a mnemonic intent: "No *ṣadaḳa* is payable on less than *five* camel-loads of dates, on less than *five* ounces of silver, and on fewer than *five* camels" (al-Bukhārī, iii, 10). Similar details are found in the Shī'ī *ḥadīth* transmitted from 'Alī and the other *imāms*.

Both those who pay *zakāt* and those who collect are cautioned: the former to make sure that the collector leaves them well pleased, the latter not to exact more than is due, which is as bad as refusing to pay (al-Tirmidhī, *al-Sunan*, ed. 'Abd al-Bāḳī, Beirut, iii, 38). Owners of livestock need not pay with their most valuable animals, unless they freely choose to do so (al-Bukhārī, iii, 43). The collector who acts according to law is likened by the Prophet to the warrior in God's cause (*ghāzī*, *mudjāhid*) (al-Tirmidhī, iii, 37). While the instructions of Abū Bakr to Anas are preceded by the statement that those of whom more *zakāt* is demanded than is due are not to pay it, other traditions urge the *zakāt* payer to comply with exorbitant demands, for which the collectors will be held responsible (cf. al-Shawkānī, *Nayl al-awṭār*, ed. al-Ṣabābiṭī, Cairo 1413/1993, iv, 147). There are also warnings to those who accept *zakāt* to which they are not entitled that what they acquire is only an ache in their heads and a burning in their innards.

Failure to pay *zakāt* is a sign of hypocrisy, and the prayers of those who do not pay *zakāt* will not be accepted. No poor person would ever go hungry, lack clothing or be hard-pressed if the wealthy paid their *zakāt*, but it is admitted that there is no obligation more demanding than the payment of *zakāt*. *Zakāt* serves as a purification (*ṭuhra*, *ṭuhūr*) of those who pay. It safeguards their other property, whereas giving voluntary alms (*ṣadaḳa*) heals the sick. No property at land or sea is ever lost except on account of the withholding of *zakāt*. *Zakāt* is never left commingled with other property without bringing about its ruin. Failure to pay *zakāt* brings on drought and loss of livestock, while the payment of *zakāt* ensures rain. Property on which *zakāt* has been paid is not the treasured-up gold and silver condemned in the Ḳur'ān (IX, 34), even when it is buried deep in the earth. On the Day of Resurrection (*ḳiyāma* [*q.v.*]), equivalent to fifty thousand years in this world, those who have not paid *zakāt* will be confronted by the *zakāt* they have withheld (cf. Ḳur'ān IX, 35): their gold and silver treasure (*kanz*) will pursue them in the form of a large fearsome serpent (cf. Ḳur'ān III, 180), with the cry: "I am your treasure," and those who have withheld *zakāt* from livestock will be trampled and gored by the animals they have not paid, now grown large and fat.

4. *Zakāt* in Islamic history.

According to the Islamic sources, the collection of *zakāt* was already in full force during the lifetime of the Prophet Muḥammad. He is said to have dispatched "innumerable" collectors of *zakāt*, some of them among the most famous of his Companions, such as 'Umar and 'Alī (al-Khuzā'ī, *K. Takhrīdj al-dalāla al-shar'iyya*, ed. Abū Salāma, Cairo 1401/1981, 544; Ibn Sa'd, ii/1, 115). On the other hand, the *ḥadīth* indicates that the Prophet died before the definitive guidelines for the collection of camels and sheep were issued. The system of *zakāt* collection was gravely

threatened during the caliphate of Abū Bakr, when some of the Arabian tribes refused to acknowledge that the Prophet's authority to collect *zakāt* had passed to his successor. This movement in resistance to the collection of *zakāt* is associated with the apostasy of the *ridda* [*q.v.* in Suppl.] wars, but it became widely accepted among Muslim scholars that only some of those who withheld *zakāt* were true apostates, the others being more properly classified as rebels (*bughāt*) and not to be judged by the same standard as later Muslims who reject the obligation of *zakāt* (al-Khaṭṭābī, *Maʿālim al-sunan*, ed. al-Ṭabbākh, Aleppo 1352/1933, ii, 2-10, *locus classicus*).

Of the succeeding Rightly-Guided Caliphs, ʿUmar is reported to have had the greatest interest in the details of *zakāt* and its collection. To ʿUmar is attributed the institution of collectors posted on roads to collect *zakāt* from Muslim merchants (at the rate of 2.5%) as well as imposts on the merchandise of non-Muslim traders, both indigenous (*dhimmī*) and foreign (*ḥarbī*). From the rate applied to alien non-Muslim merchants of 10% (*ʿushr*), these collectors became known as *ʿushshār* (sing. *ʿāshir*). In the course of time, these collectors on bridges and in ports came to exceed the limits imposed by the law and acquired an exceedingly unsavory reputation for venality. ʿUmar is said to have been the first to take merit, and not merely need, into consideration in the distribution of *zakāt* (Muslim b. Abī Karīma, *Risālat Abī Karīma fi ʾl-zakāt*, ʿUmān 1982, 10). It was ʿUmar, too, according to some, who definitively declared that Islam had achieved such a state of security as to no longer need the services of "those whose hearts are to be won over," one of the Ḳurʾānic classes of recipients of *zakāt* (on these, see Ibn al-ʿArabī, *Aḥkām al-Ḳurʾān*, ed. al-Bidjāwī, Cairo 1387/1967, ii, 951-4, and AL-MUʾALLAFA ḲULŪBUHUM). But the most significant change in the practice of *zakāt* collection is attributed to ʿUthmān. This is the rule that the official collectors of *zakāt* have authority to demand payment on "apparent" (*ẓāhir, nāṭiḳ*) property only, i.e. livestock and crops, leaving owners the choice of paying *zakāt* on "unapparent" (*bāṭin, ṣāmit*) property, i.e. gold, silver and merchandise, either to the collectors or directly to the recipients of *zakāt*. It is said that ʿUthmān was concerned that rapacious collectors would enrich themselves with the property of the Muslims, and in fact allegations of corruption in the collection of *zakāt* were already made against ʿUthmān's collectors. Some, however, held that the Prophet himself never demanded payment of *zakāt* on *bāṭin* property (Ibn Ḳudāma, *al-Kāfī*, ed. al-Shāwīsh, i, 328), and others have rejected the distinction entirely: the Zaydī *imām* al-Hādī insisted that it was a contrivance of jurists aimed at checking over-reaching collectors (*K. al-Aḥkām*, i, 192-3).

During the Umayyad period, zeal in the collection of *zakāt* grew. Muʿāwiya, for example, is said to have been the first to deduct *zakāt* from state stipends (J. Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 199-200). But the increasing lack of confidence in the integrity of administration of the *zakāt* system is reflected in the reported disagreement among early jurists whether it was still appropriate to pay *zakāt* to the official collectors. The position of Ibn ʿUmar (d. 73/692) that such payment would discharge one's obligation proved to be the most influential (cf. Madelung, *ʿAbd Allāh b. ʿAbbās and Shīʿite law*, in *Law, Christianity and modernism in Islamic society*, ed. Vermeulen and Van Reeth, Louvain 1998, 21-3). A review of existing practice in the collection of *zakāt* formed part of the reform of fiscal matters under ʿUmar b. ʿAbd al-ʿAzīz (d. 101/720 [*q.v.*]), and his rulings on questions of *zakāt* are widely, sometimes inconsistently, reported in later writings, along with references to his efforts to procure copies of instructions to collectors from the Prophet's day. A prominent feature of his rule was an effort to bring the *ʿushshār* into conformity with Islamic law. The establishment of a special government office, *dīwān al-ṣadaḳa*, for the receipt of *zakāt* occurred under the caliph Hishām (d. 125/743).

From the *Kitāb al-Kharādj* of the *ḳāḍī* Abū Yūsuf (d. 182/798 [*q.v.*]), written in the form of counsel to the ʿAbbāsid caliph Hārūn al-Rashīd, it emerges that the system for the collection of *zakāt* in his day was both corrupt and inefficient. Collection of *zakāt* was in the hands of the collectors of *kharādj* [*q.v.*], who did not keep the proceeds distinct as required by law, while *zakāt* on merchandise collected by the *ʿushshār* was administered separately from the other forms of *zakāt* (*K. al-Kharādj*, with the commentary of al-Raḥbī, *Fiḳh al-mulūk wa-miftāḥ al-ritādj*, Baghdād 1975, i, 536-7). The joint administration of *zakāt* and the income of caliphal *awḳāf* (*dīwān al-birr wa ʾl-ṣadaḳāt*) introduced in 315/927 (Miskawayh, i, 152), suggests a decline in *zakāt* revenue.

Virtually nothing is known about the details of the official collection of *zakāt* throughout most of its history. References in the historical sources are scattered and meagre in detail, and the evidence of the Arabic papyri is limited (G. Khan, *Arabic papyri: select material from the Khalili Collection*, London 1992, 53). By contrast, the legal sources occasionally provide vivid details about such practices as the counting of livestock (al-Shāfiʿī, *Umm*, ii, 51, describing the procedure for collection for livestock of his uncle, a *zakāt* collector). Al-Shāfiʿī reports that collectors of *zakāt* on livestock were sent out in Muḥarram (ii, 14), while Mālik states that the practice was for them to go out in May (Saḥnūn, *al-Mudawwana*, ed. Muḥammad, Beirut 1419/1999, ii, 446, cf. *al-Khirshī ʿalā mukhtaṣar Khalīl*, ed. Beirut, ii, 161-2). The animals collected as *zakāt* were specially branded (with the words "for God", according to al-Shāfiʿī: see al-Muzanī, *al-Mukhtaṣar*, on margin of *al-Umm*, iii, 244; others state that the brand was "*zakāt*" or "*ṣadaḳa*"), although some jurists disapproved of this practice. The Ḥanafī al-Sarakhsī tells us that it was the custom of collectors to give receipts (*barāʾa*) (*al-Mabsūṭ*, ed. Beirut, ii, 161, 202), although their legal force was disputed, and this practice is corroborated by the papyri (Grohmann, *Arabic papyri in the Egyptian Library*, Cairo 1938, iii, 178-9, from 148/765-6) and historical sources (Ibn Yaʿḳūb, *Sīrat al-Imām al-Manṣūr bi ʾllāh*, ed. al-Ḥibshī, Ṣanʿāʾ 1417/1996, 29).

Little, too, is known about how governments distributed the proceeds of *zakāt* or the extent of corruption involved. Administrative costs, which in the worst case could run so high as to consume the entire *zakāt* collected, appear to have been high (cf. Abū Yūsuf, *K. al-Kharādj*, i, 536), and there is some evidence of *zakāt* farming (Khan, *Arabic legal and administrative documents in the Cambridge Genizah collections*, Cambridge 1993, 283-5, from 480/1088, cf. Khalid Abou El Fadl, *Tax farming in Islamic law (qibālah and ḍamān of kharāj): a search for a concept*, in *Islamic Studies*, xxxi/i [1992], 5-32). The local distribution encouraged by Islamic law would tend to facilitate the use of *zakāt* to reward favourites and cultivate clients. In any case, the example of the Imām al-Hādī (d. 298/911) in Yemen suggests the political obstacles that could face even a ruler of impeccable learning and religious conviction in his efforts to impose a system

of *zakāt* in accordance with the law (Madelung, *Land ownership and land tax in Northern Yemen and Najrān: 3rd-4th/9th-10th century*, in T. Khalidi (ed.), *Land tenure and social transformation in the Middle East*, Beirut 1984, 89-193).

The collectors of *zakāt* in some cases exercised further roles. In the time of the Prophet they were charged with teaching the elements of Islam (cf. al-Bukhārī, iii, 3-4), as were later the collectors sent out by the Imām al-Hādī (al-ʿAlawī, *Sīrat al-Hādī*, ed. Zakkār, Beirut 1401/1981, 45). Mālikī sources indicate that collectors of livestock possessed a limited judicial authority (*al-Khirshī ʿalā mukhtaṣar Khalīl*, ii, 149).

According to the Fāṭimid jurist al-Ḳāḍī al-Nuʿmān (d. 363/974 [*q.v.*]), *zakāt* among the Sunnīs of his day was largely limited to private distributions to the poor, despite the approval by leading Sunnī jurists of payment to the state, and those who did pay *zakāt* in any form were a distinct minority (*Daʿāʾim al-Islām*, ed. Fayḍī, Cairo 1383/1963, i, 257-8, 261-2). By about the year 493/1100, governmental collection of *zakāt* across the Muslim world had become largely a thing of the past and has remained so ever since for the great majority of Muslims. The Andalusian Mālikī Ibn ʿAbd al-Barr (d. 463/1071 [*q.v.*]) noted that the scholars of his day no longer made the coming of the *zakāt* collectors a condition for the obligation to pay, as had Mālik, in whose time they did regularly come (*K. al-Kāfī*, ed. al-Mūritānī, Riyāḍ 1398/1978, i, 311). Similarly, the Shāfiʿī Fakhr al-Dīn al-Rāzī (d. 606/1210 [*q.v.*]) in the East writes of the collectors as a class of *zakāt* recipients that no longer exists (*al-Tafsīr al-kabīr*, Cairo 1357/1938, xvi, 115), as does the ʿIrāḳī Mālikī Ibn ʿAskar (d. 732/1332) a century later (*Irshād al-sālik*, ed. Sūsa, 1989, 38). The Egyptian al-Ḳalḳashandī (d. 821/1418 [*q.v.*]) reports that, in his day, the collection of *zakāt* was confined to the activity of the *ʿushshār* in the ports and to some limited collection of livestock (*Ṣubḥ al-aʿshā*, iii, 457-8).

Rulers with a reformist mission would, as might be expected, favour a revival of *zakāt* collection: the Almohads, Ṣalāḥ al-Dīn (Rabie, 96), the Sokoto Caliphate, the Arabian Wahhābīs and the Sudanese Mahdists. In some cases, local dynasties were able to maintain a more or less traditional form of *zakāt* collection, but often alongside non-Islamic sources of revenue, into the modern period, for example, the ʿAlawīs of Morocco until 1901 and the Zaydīs of Yemen until the revolution of 1962. In Kuwayt, *zakāt* was collected on livestock, crops and fish until the increase in wealth brought about by the discovery of petroleum in the 1920s.

The general disappearance of official *zakāt* collectors did not in itself leave the distribution of *zakāt* to individual property owners, since there were intermediaries ready to fill the gap, ranging from local village *imāms* as in pre-colonial Malaysia to powerful Ṣūfī orders in Africa and elsewhere. Such intermediaries functioned as both recipients and collectors for further distribution. Sectarian groups typically developed their own channels for collection and distribution: The Shīʿī *imāms* were succeeded in this role by the leading jurists among the Twelver Shīʿīs, and by the *dāʿī muṭlaḳ* among the Indian Bohras (F. Daftary, *The Ismāʿīlīs: their history and doctrine*, Cambridge 1990, 317; and see BOHORĀS). Among these groups, as among the Ibāḍīs, *zakāt* was largely confined to the community of fellow adherents.

5. *Zakāt* in Islamic law.

The law of *zakāt* is a hybrid between the elements of ritual and revenue-raising, elements that have historically competed for primacy and continue to do so today. Insofar as paying *zakāt* is a ritual act of purification, the focus is on the payer; as a system of revenue-raising, the centre of concern is the recipients, particularly the poor. The hybrid quality of the law of *zakāt* is most strikingly evident in the distinction sometimes made by Ḥanafīs between *zakāt* proper, which is said to be a pure act of worship, and the tithe (*ʿushr*) on crops, which is a form of revenue (*muʾna*, literally impost) with an element of worship (e.g. Shaykhzāda, *Madjmaʿ al-anhur*, ed. Istanbul, i, 214), but it is also apparent in the treatment in many Shāfiʿī legal texts, following al-Muzanī's (d. 264/878 [*q.v.*]) *al-Mukhtaṣar*, of the basic rules of *zakāt* in the section on ritual (*ʿibādāt*) and the rules for its distribution (*ḳasm*) separately in a section on revenues of the state. The dimension of *zakāt* as a source of revenue is, of course, especially prominent in its treatment in the relatively small but significant legal literature on governance (*aḥkām sulṭāniyya*) and public finance (*amwāl*, *kharādj*).

Zakāt is commonly classified as a tax on property rather than income, but this is only approximately correct, since, for example, *zakāt* is due on crops only once, when they are harvested, without the requirement of a holding period. In any event, the theory developed by the classical jurists to explain why *zakāt* is payable only on certain kinds of property appeals to the notion of "growth" (*namāʾ*): *zakāt* is due on property that represents growth or is devoted to growth, actually or virtually (*taḳdīr*^an^). Thus grazing livestock and trade goods represent property actually devoted to growth, and gold and silver, by their very nature as media of exchange, property virtually devoted to growth, while crops and mined minerals represent growth itself. The requirement of a holding period of one year (*ḥawl*), where applicable, is understood to provide an opportunity for such growth, and the fact that *zakāt* is paid out of growth encourages compliance (Muḥammad b. ʿAbd al-Raḥmān al-Bukhārī, *Maḥāsin al-islām*, Cairo 1357, 17). This theory gained near-universal acceptance, to the extent that it was even invoked as an explanation of the term *zakāt* (Ibn Rushd, *al-Muḳaddimāt*, ed. Ḥadjdjī, Beirut 1408/1988, i, 271), and it remains popular today. The element of growth is even more obvious in the view of a minority of early jurists who are said to have imposed *zakāt* generally on property as soon as it was acquired (see below, 5.vi). One of the few opponents of the theory of growth was the Ẓāhirī Ibn Ḥazm (d. 456/1064 [*q.v.*]) (cf. *al-Muḥallā*, ed. al-Bindārī, iv, 45, 146, 149, 187).

There is disagreement as to whether *zakāt* is an obligation *in rem* (*fī 'l-māl*, *fī ʿayn al-māl*) or *in personam* (*fī 'l-dhimma*). The former view, itself subject to several interpretations, is that commonly defended, but if fully pressed would, among other unacceptable consequences, make the recipients of *zakāt* co-owners of the *zakāt* payer's property (al-Zarkashī, ii, 460-2; cf. Walī al-Dīn al-Baṣīr, *al-Nihāya*, ed. ʿUmayrāt, Beirut 1416/1995, 113, where they are co-owners). A more limited, commonly cited implication of the dispute arises in the case of the owner of forty sheep who fails to pay *zakāt* for two consecutive holding periods. On the *in personam* analysis, his *zakāt* liability at the end of the two years is two sheep; on the *in rem* analysis only one sheep, since with one sheep from the flock now encumbered by *zakāt* there is no longer a *niṣāb* (minimum number of forty, see below) during the second holding period (Ibn Hubayra, *al-Ifṣāḥ*,

ed. al-Dabbās, Aleppo 1366/1947, i, 141). In fact, the law of *zakāt* is a product of the application to one degree or another of both views (cf. Ibn Radjab, *al-Ḳawāʿid*, ed. Saʿd, Cairo 1392/1972, 207). There is, in any case, universal agreement that qualified recipients of *zakāt* cannot exercise self-help in taking their share but must await distribution by the government or the individual *zakāt* payer.

The theme of fairness is central to the classical theory of *zakāt*. It is considered only just that, as a charitable sharing of wealth (*muwāsāt*), *zakāt* should be in the first instance payable from the very property on which it is imposed and only from property of average quality. It is also commonly held that the rate of *zakāt* is inversely related to the effort expended in producing the growth from which *zakāt* is due, as is particularly evident in the differential rate of *zakāt* for crops according to the method of irrigation used in their production (see below) (al-Sayyāghī, *al-Rawḍ al-naḍīr*, ed. Beirut, ii, 389-90, but see al-Sarakhsī, *al-Mabsūṭ*, iii, 4, according to whom, the rationale for the different rates of *zakāt* is not knowable). Concern with fairness also appears in the balancing of interests between the payers of *zakāt* and its recipients that is attributed to the Lawgiver and that arises frequently in the discussions of the jurists.

Muslim jurists sometimes speculated as to the underlying reasonableness of the apparently arbitrary quantities that abound in the laws of *zakāt*. The Shāfiʿī al-Ḳaffāl al-Shāshī (d. 365/976) suggested that the *ṣāʿ* of grain paid as *zakāt al-fiṭr* could produce enough bread to feed a poor person for the day of the feast and the customary three-day celebration that followed, when no work would be available (al-Bādjūrī, *Ḥāshiyat al-Bādjūrī ʿalā Ibn al-Ḳāsim*, ed. Cairo, i, 280). Shāh Walī Allāh al-Dihlawī (d. 1175/1762 [see AL-DIHLAWĪ]) proposed that the minimum amounts of agricultural produce and silver subject to *zakāt* were each enough to sustain for one year a family consisting of a husband, wife and one dependent, and were thus a reasonable measure of wealth (*Ḥudjdjat Allāh al-bāligha*, ed. Ḍamīriyya, Riyāḍ 1420/1999, ii, 727-8, tr. M.K. Hermansen, *The conclusive argument from God*, Leiden 1996, 297-8). Along similar lines, it was even suggested that the apparently complex rate of *zakāt* on camels was in fact the familiar 2.5% for gold and silver and merchandise (al-Sarakhsī, ii, 150). Such speculations have re-emerged in modern discussions of *zakāt* as contemporary theorists attempt to formulate a rationalised version of the traditional law.

Muslim jurists have often rested the authority of the government to demand the payment of *zakāt* on the protection (*ḥimāya*) it provides to property, an analysis most fully developed by the Ḥanafī jurists, who use it to justify the collection of *zakāt* on merchandise, a form of *bāṭin* property, by the *ʿushshār*. The *ʿushshār* acquire the authority to demand *zakāt* on such property when the owner takes it on to the public roads and brings it into the government's sphere of protection (Ibn al-Humām, *Fatḥ al-ḳadīr*, Cairo 1389/1970, ii, 224). This analysis the Ḥanafīs extend to the imposts demanded by *ʿushshār* on the property of non-Muslims (*ibid.*, ii, 227). A similar principle is reported to have been given practical application by the Ibāḍīs of ʿUmān *ca.* 1000, who would not collect *zakāt* from foreign Muslim merchants until a year of residency had passed, which established the requisite protection (al-Bisyawī, *Djāmiʿ Abi ʾl-Ḥasan al-Bisyawī*, ʿUmān 1404/1984, ii, 190). Likewise, an Ibāḍī *imām* taking office after a break in the imāmate must wait one year before collecting *zakāt* (Muḥammad b. Yūsuf Aṭṭafayyish, *Sharḥ al-nīl*, Beirut 1392/1972, iii, 286).

Niṣāb. *Zakāt* is due on property only if a minimum quantity (*niṣāb*, pl. *nuṣub*, *anṣiba*, literally "base", less commonly *daradja*) is held, e.g. five camels (on the introduction of *niṣāb* as a legal term of art, see Abū ʿUbayd al-Ḳāsim b. Sallām, *K. al-Amwāl*, ed. Harrās, Cairo 1388/1968, 560-1, cf. Mālik, *al-Muwaṭṭaʾ*, 177). The *zakāt* payable increases with the amount of property held, and where, as in the case of livestock, such increases in the property subject to *zakāt* are not pro-rata (*bi ʾl-ḥisāb*), but set at discrete increments, each of these increments represents a further *niṣāb*, with eleven such *nuṣub* in the most complex case, that of camels. The amount of property below the first *niṣāb* and between each subsequent *niṣāb* is termed *waḳṣ/waḳaṣ* (also *shanaḳ*) (cf. al-Nawawī, *Tahdhīb al-asmāʾ wa ʾl-lughāt*, Cairo n.d., i, 193-4). It is generally held that no *zakāt* is due on the *waḳṣ* between the *nuṣub*, hence the further term *ʿafw* for the *waḳṣ*. Thus the one sheep or goat due on nine camels (the second *niṣāb* being ten) is in fact due on only five, the four additional camels being *waḳṣ*, and should four of the nine perish after *zakāt* is due, there will be no proportionate reduction in the amount of *zakāt* to be paid.

As in other areas of Islamic law, there is considerable disagreement among Muslim jurists over the details of the law of *zakāt*. The discussion here focuses on the doctrine of the Shāfiʿī school with some notice of the most salient points of disagreement between the schools. Twelver Shīʿī law alone recognises cases where *zakāt* is recommended (*mustaḥabb*) but not obligatory (cf. al-Ḥalīmī, *K. al-Minhādj fī shuʿab al-īmān*, ed. Fawda, Beirut 1979, ii, 343), a categorisation that serves to reconcile conflicting evidence for and against the imposition of *zakāt*.

i. *Zakāt* on livestock (*ḥayawān*, *māshiya*, *naʿam*). *Zakāt* is imposed on camels (*ibil*), cattle (*baḳar*), and sheep and goats (*ghanam*) according to the number of animals owned. According to the great majority of jurists, for the calculation of the number of animals in the herd, male and female animals, young and old, healthy and diseased count equally. The Ẓāhirīs alone do not count animals under one year of age (*al-Muḥallā*, iv, 82). Animals of different breeds (*anwāʿ*), such as Bactrian and Arabian camels, cattle and water buffalo, are counted together, as are sheep (*ḍaʾn*) and goats (*maʿz*). *Zakāt* is normally due in the form of adult (over one year), female, healthy, and defect-free animals. The assumption throughout is that greater age and feminine gender increase the value of the animal. Except for the Ḥanafīs, who accept male and female cattle and sheep indifferently, male animals are acceptable only where indicated below or if all the animals in the herd are male. Where the entire herd consists of under-age or unhealthy animals or those suffering from defects, these are accepted as *zakāt*, except by the Mālikīs, who even in these cases require that *zakāt* be paid with healthy, defect-free, adult animals. Where the herd consists of animals of different breeds or of both sheep and goats, the *zakāt* is to be paid in the form of animals that reflect the relative values of the different breeds in the make-up of the herd. Thus for a herd consisting of thirty female goats and ten female sheep, the one sheep or goat due as *zakāt* for forty animals must be worth as much as three-fourths of a female goat and one-fourth of a female sheep. Apart from adjustments (*djubrān*) in the form of cash or sheep, admitted by some jurists in the case of camels alone, the *zakāt* payer who cannot supply the required animals from his herd is

required to acquire them in order to make payment. The Ḥanafīs accept in all cases payment of their value (*ḳīma*), even in the form of fewer but fatter animals (see below, 5.xii).

Pasturage. According to the great majority of jurists, a condition for the imposition of *zakāt* on livestock is that the animals be put out to pasture (*sawm*) for breeding or milk. Animals that subsist on fodder (*ʿalaf*) are not subject to *zakāt*, nor are animals that live on pasturage but are put to work by the owner or hired out for work. The Mālikīs impose *zakāt* on livestock without regard to whether the animals subsist on pasturage or fodder and, in the case of camels and cattle, whether or not they are put to work, a rule also followed by some Ẓāhirīs including Ibn Ḥazm (*al-Muḥallā*, iv, 144).

Camels. There is general agreement among the Muslim jurists as to the rate of *zakāt* on camels up to one hundred twenty as follows:

number of camels	*zakāt* due
5-9 camels	1 sheep or goat
10-14 camels	2 sheep or goats
15-19 camels	3 sheep or goats
20-24 camels	4 sheep or goats
25-35 camels	1 female camel in its second year (*bint makhāḍ*)
36-45 camels	1 female camel in its third year (*bint labūn*)
46-60 camels	1 female camel in its fourth year (*ḥiḳḳa*)
61-75 camels	1 female camel in its fifth year (*djadhaʿa*)
76-90 camels	2 female camels in their third year
91-120 camels	2 female camels in their fourth year

Twelver Shīʿīs assess five sheep or goats for 25 camels and a *bint makhāḍ* for 26-35 camels. This variation, based on a tradition from ʿAlī, was also accepted by Zayd b. ʿAlī (d. 122/740 [*q.v.*]) (*Corpus juris*, ed. Griffini, Milan 1919, 90), but not by later Zaydīs (cf. Muḥammad b. Sulaymān al-Kūfī, *K. al-Muntakhab*, Ṣanʿāʾ 1414/1993, 75) nor by the Ismāʿīlī al-Ḳāḍī al-Nuʿmān (*Daʿāʾim al-Islām*, i, 253). From 121 camels onwards, there is disagreement among the jurists: for the majority, the rate thereafter is one *bint labūn* per 40 head and one *ḥiḳḳa* per 50. The exceptional circumstance of *zakāt* on camels being payable in the form of another species is explained as arising out of a desire to avoid the hardship to both *zakāt* payers and *zakāt* recipients of fractional shares (*tashḳīṣ*) of camels.

Cattle and sheep. The *niṣāb* for cattle is thirty. The rate of *zakāt* is one cow or bull in its second year (*tabīʿ*) for every thirty head and one cow in its third year (*musinna*, *thaniyya*) for every forty. The Mālikīs understand the animals required to be in their third and fourth years respectively. The Shāfiʿīs, Mālikīs and Ḥanbalīs impose this rate on multiples of thirty and forty, and according to them one *tabīʿ* is due for from 40 to 59 head of cattle. The Ḥanafīs impose *zakāt* at the rate of one-fortieth of the value of a *musinna* for each additional head from 40 to 59. For Ibāḍīs, the *zakāt* for cattle emulates that for camels, and they impose one sheep or goat for each five head of cattle to twenty-four and thereafter for each *niṣāb* substitute cattle of the required age for the corresponding camels (ʿAmr K. Ennāmi, *Studies in Ibāḍism*, [Libya] 1972, 108-9). The historian and jurist al-Ṭabarī (d. 310/923) imposed *zakāt* on cattle at the rate of one head per fifty (al-Sayyāghī, ii, 397), as did Ibn Ḥazm before he came to accept the view of the majority (*al-Muḥallā*, iv, 106).

The *niṣāb* for sheep and goats is forty. For forty sheep or goats, the *zakāt* due according to the Shāfiʿīs and Ḥanbalīs is one female sheep in its second year (*djadhaʿa*) or one female goat in its third year (*thaniyya*), while Mālikīs accept a goat in its second year. Abū Yūsuf and al-Shaybānī, but not Abū Ḥanīfa, accept animals under one year of age. For 121 animals, the *zakāt* due is two such sheep or goats, for 201, three, for 400, four, and thereafter the rate is one per hundred. The Twelver Shīʿīs impose four sheep or goats on 301 to 399, the rate thereafter being one animal per hundred.

Horses. Abū Ḥanīfa, opposed on this point by his disciples Abū Yūsuf and al-Shaybānī, imposed *zakāt* on horses, either females alone or a mixed herd of males and females. There is no *niṣāb*, so that *zakāt* is due even on a single horse, at the rate of either one dīnār per animal or, at the option of the owner, of five dirhams per 200 dirhams of the horse's value (2.5%). This rate is reported to have been applied to horses by the caliph ʿUmar. Although many Ḥanafī jurists preferred the view that horses were not subject to *zakāt*, Abū Ḥanīfa's opinion was approved by important authorities within his *madhhab* (Ibn ʿĀbidīn, *Ḥāshiyat radd al-muḥtar*, Cairo 1386/1966, ii, 282). Unlike the *zakāt* on other livestock, that on horses is not collected by the state (Ibn al-Humām, ii, 183). For Twelver Shīʿīs, *zakāt* on female horses is recommended, at the rate of two dīnārs per pure-bred animal (*ʿatīḳ*) and one dīnār per work horse (*birdhawn*) (al-ʿAllāma al-Ḥillī, *Nihāyat al-aḥkām*, ed. al-Radjāʾī, Beirut 1406/1986, ii, 376-7).

ii. *Zakāt* on crops (*harth*, *ḥubūb wa-thimār*, *nābit*, *khāridj min al-arḍ*, *muʿashsharāt*). There is considerable disagreement among the jurists as to what crops are subject to *zakāt*, ranging from the Twelver Shīʿīs, who impose *zakāt* only on wheat, barley, dates and raisins, to the Ḥanafīs and Zaydīs, who impose it on virtually all products of the soil. In the middle are the Shāfiʿīs and Mālikīs, according to whom *zakāt* is due on dates and grapes and on crops of the sort cultivated and stored by humans as a staple foodstuff (*ḳūt muddakhar*), to the exclusion of those products like vegetables that are not stored and those that are not staples like spices and condiments; the crops thus subject to *zakāt* include wheat, barley, rice, chickpeas and lentils, and for the Mālikīs, olives, *zakāt* on which is taken as oil. The Ḥanbalīs, somewhat more broadly, assess *zakāt* on crops that are measured by volume and stored, thus including almonds and pistachios, but continuing to exclude vegetables and most fruits. In addition to the four crops on which *zakāt* is obligatory, Twelver Shīʿīs recommend paying *zakāt* on crops that are measured by weight, but not on vegetables or fruits. Some jurists, including the Ḥanafīs and Ḥanbalīs, impose *zakāt* on honey.

Apart from the opinion of Abū Ḥanīfa that there is no *niṣāb* for crops, the universal *niṣāb* for crops is five *awsuḳ* (sing. *wasaḳ*), a measure of volume, which, like other legally significant measures of volume, is determined by the practice of Medina, and is reportedly equivalent to three hundred *ṣāʿ* according to the *ṣāʿ* of the Prophet. Legal texts commonly give approximate equivalents to this *niṣāb* in measures of weight, e.g. 609.84 kg. These approximations are intended as rough guides, it being understood that the *niṣāb* must be exactly satisfied (*taḥdīd*) before *zakāt* is due. The

niṣāb is applied to dates and grapes once they have been dried and to other crops once chaff and other foreign matter have been removed. The costs of preparing the harvest for measurement are borne by the *zakāt* payer. According to the Shāfiʿīs, for crops such as rice which are stored in but not eaten with their husks, the husks are deemed to constitute one-half of the harvest, and the *niṣāb* is fixed at ten *awsuḳ*. In the case of dates and grapes alone, the harvest, while still unpicked, is subject to a process on the part of the collecting authorities that estimates its yield as dry fruit (see below).

Varieties of a single species are combined for the purpose of determining whether the *niṣāb* exists; the Mālikīs go further and treat as single species wheat and barley, and so also all legumes (*ḳaṭānī*). The entire yield of a single species for a period of twelve lunar months is considered as a unit with respect to *zakāt*, without regard to different rates of ripening due to climate or other circumstances. The entire future yield becomes liable to *zakāt* once any dates or grapes ripen or other crops harden, and the owner of the crop at the time such ripening commences is liable for its *zakāt*. In the case of land leased for cultivation, Abū Ḥanīfa alone imposed *zakāt* on the owner of the land, not the lessee.

The rate of *zakāt* on crops depends on the mode of irrigation employed in their cultivation. Where the crop has been irrigated without expenditure on water or the employment of human or animal labour in conveying the water to the plants, the rate is 10% (one-tenth, *ʿushr*). This rate applies to crops watered by natural sources such as rain and surface (*sayḥ*) and underground water (*baʿl* land), as well as canals (*ʿatharī* land). The rate for crops that have been irrigated by water purchased for this purpose or with animal- or water-driven wheels is 5% (one-half of one-tenth, *niṣf al-ʿushr*). Twelver Shīʿīs in principle allow for a deduction of expenses incurred in the growing and harvesting of the crop, but jurists commonly counsel that this deduction not be taken (al-Khumaynī, *Zubdat al-aḥkām*, Tehran 1404, 119-20).

iii. *Zakāt* on gold and silver (*athmān, ʿayn, naḳd, nāḍḍ*). *Zakāt* is due on gold and silver, whether in the form of raw metal, coins or manufactured objects, but, except for the Zaydīs, on no other metals or precious stones. Twelver Shīʿīs impose *zakāt* only on gold and silver coinage, whether or not it is in actual use. The *niṣāb* for gold is twenty dīnārs (*mithḳāls*) (*ca.* 84.7 gr), present value *ca.* $800 US, and for silver 200 dirhams (five *ūḳiyya*) (*ca.* 592.9 gr), present value *ca.* $90 US. The equivalences given for these in grams by Twelver Shīʿīs are 19% lower. Like other legally significant measures of weight, these are determined by the practice of Mecca. The weight of the dirham, previously variable, was reportedly fixed under ʿUmar I or ʿAbd al-Malik b. Marwān, and subsequently ratified by consensus, at ten dirhams to each seven *mithḳāls*, the *mithḳāl* having remaining unchanged from pre-Islamic to Islamic times (cf. M. Morony, *Iraq after the Muslim conquest*, Princeton 1984, 50). The majority of jurists, but not the Shāfiʿīs, Ẓāhirīs and Twelver Shīʿīs, combine gold and silver (*ḍamm, ḍaml*) in determining whether a *niṣāb* exists and in assessing *zakāt*. The calculation proceeds according to "units" (*adjzāʾ*), that is, according to the legal exchange rate of ten dirhams per dīnār, except for the Zaydīs and Ibāḍīs, who combine the metals according to actual market value (*taḳwīm*). The Mālikīs alone allow some slight leeway in the calculation of the *niṣāb* in the case of underweight coins that are accepted commercially. The rate of *zakāt* on each metal is 2.5% (one-fourth of one-tenth, *rubʿ al-ʿushr*), which is applied pro-rata for any amount above the *niṣāb*, except by the Ḥanafīs, Twelver Shīʿīs and Ibāḍīs, who apply it only to increments of forty dirhams or four dīnārs. There is some support in the Ḥanafī school for subjecting the value of coins made of base metal (*fulūs*) to the rule for gold and silver. Others treat such coins as merchandise.

Gold and silver in the form of decorative articles for wearing (*ḥaly*) are exempted from *zakāt* except by the Ḥanafīs, Zaydīs, Ibāḍīs and Ẓāhirīs. The exemption, however, is not absolute, and the Shāfiʿīs will, for example, impose *zakāt* when the owner intends some prohibited (*muḥarram*) or disapproved (*makrūh*) use or a permitted use in an exorbitant fashion (*isrāf*) or is holding the piece as a form of wealth (*kanz*).

iv. *Zakāt* on mines (*maʿdin*) and treasures (*rikāz*). According to the Sunnī schools, except for the Ḥanafīs, *zakāt* is due on gold and silver upon extraction from a mine. The *niṣāb* is that for gold and silver as above, and *zakāt* is assessed at the same rate (2.5%). The *niṣāb* is applied to the entire yield of a mine that has been continuously worked without justified interruption. The yield becomes subject to *zakāt* once in the possession of the *zakāt* payer, but the *niṣāb* is assessed and *zakāt* paid on the metals only after the removal of dirt and other extraneous matter, the cost of which is borne by the *zakāt* payer. The Ḥanbalīs extend *zakāt* to other metals and minerals, including petroleum, extracted by mining. According to the Shāfiʿīs, gold and silver in the form of buried treasure (*rikāz*) is subject upon discovery to the same *niṣāb* as gold and silver extracted by mining, but *zakāt* is assessed at the rate of 20% (one-fifth, *khums*). The treasure subject to *zakāt* is that which bears the marks of pre-Islamic times. Other jurists treat this fifth from buried treasures as *fayʾ* [*q.v.*].

v. *Zakāt* on merchandise (*tidjāra, ʿurūḍ*). This, potentially the broadest category of property subject to *zakāt*, is recognised by all except ʿIbn ʿAbbās, the Ẓāhirīs and, among later jurists, the Yemeni al-Shawkānī (d. 1250/1834 [*q.v.*]). It is among the recommended forms of *zakāt* according to the Twelver Shīʿīs. Apart from its support in *ḥadīth*, the imposition of *zakāt* on merchandise rested on the obvious ground of public interest (*maṣlaḥa ʿāmma*) (Ibn al-ʿArabī, *K. al-Ḳabas*, ii, 470), which made it unthinkable to exempt so large a source of wealth. *Zakāt* is due on all objects, including land and slaves, acquired for a consideration (*muʿāwaḍa*) for the purpose of sale for a profit. The *zakāt* is applied not to such objects directly but to their monetary value (*ḳīma*) as determined by a sale or by a valuation for *zakāt* purposes. The consideration need not be monetary, so that property acquired by a wife as her dower (*mahr*), if she intends it for trade, is subject to *zakāt*. The Ḥanbalīs require an affirmative act of acquisition but do not require that it be for a consideration. The Zaydī *imām* al-Hādī went further and imposed *zakāt* also on the value of objects acquired for their rental income (*mustaghallāt*) (Ibn Miftāḥ, *al-Muntazaʿ al-mukhtār*, Cairo 1332, repr. Ṣanʿāʾ, i, 450-1).

The *niṣāb* for merchandise is the same as that for gold and silver, and *zakāt* is assessed at the same rate (2.5%). For the purpose of determining the existence of a *niṣāb*, the value of the merchandise is combined with the value of the gold and silver of the *zakāt* payer. The Shāfiʿīs, who assess gold and silver separately, apply one or the other of these precious metals as the standard of valuation: the appropriate metal

to be used is that with which the object was acquired, if gold or silver was in fact the consideration. Where the consideration was some other object or was not monetary in nature, the appropriate metal is that which prevails as the measure of exchange in the community (*ghālib naḳd al-balad*) at the time of acquisition.

The Mālikīs alone distinguish between active traders (*mudīr*) and investors (*muḥtakir, muddakhir*), who look to long-term gain. The former need assess the value of their stock, combined with their holdings of gold and silver, once a year. The latter owe no *zakāt* until they sell their investments and then never for more than one holding period. An active trader can assume the status of an investor by a change of intention, but the change from investor to trader requires a change in intention coupled with a transaction.

Double zakāt: In light of a tradition (*lā thinā fi 'l-ṣadaḳa*) understood to prohibit a double application of *zakāt* to the same property for the same period, the jurists had to determine which category of *zakāt* was to be given priority when more than one applied, as in the case of grazing animals held for sale. In such cases, the Shāfiʿīs and Mālikīs give preference to the imposition of *zakāt* under the heading of livestock, the Ḥanafīs and Ḥanbalīs under that of merchandise. The Ḥanafīs extend the principle of avoiding a double incidence of *zakāt* to *zakāt al-fiṭr* and do not require that it be paid on behalf of slaves held for trade.

vi. Holding period (*ḥawl*). Except for the *zakāt* due on crops, mined gold and silver, and buried treasure, *zakāt* is imposed only if the property has been held for a period of one lunar year. There is almost universal agreement on the requirement of a holding period; the Companions Ibn Masʿūd and Ibn ʿAbbās are among the few reported to have held otherwise. Twelver Shīʿīs, following a tradition from Djaʿfar al-Ṣādiḳ, consider the holding period to end with the sighting of the new moon of the twelfth month, although the next holding period begins only at the end of the twelfth month (al-Ḥillī, *Nihāyat al-aḥkām*, ii, 312).

In principle the majority of jurists require that a *niṣāb* of property subject to *zakāt* already be owned in order for the calculation of a *ḥawl* to commence and require that the *niṣāb* be maintained throughout the *ḥawl*, as opposed to the Ḥanafīs who allow a drop below the *niṣāb* during the *ḥawl*. There are, however, important exceptions made for growth, in the form of offspring or profits, from an original stock. The Mālikīs, for example, treat the offspring of livestock as sharing the *ḥawl* of their mothers, even when the latter begin the *ḥawl* below the *niṣāb*. Thus when a herd of four camels has been held for eleven months, the birth of a camel in the last month, or even on the last day, before the end of the *ḥawl* will suffice to reach the *niṣāb* of five camels and subject the herd to the *zakāt* of one sheep or goat. The Shāfiʿīs and Mālikīs make a similar exception for trade goods, the value of which must meet the *niṣāb* only at the end of the *ḥawl*, provided that the increase is derived solely from a rise in value of the original stock of merchandise or from profit earned in trading with it. Because they do not combine gold and silver, the Shāfiʿīs further require that in order for this increase to share the *ḥawl* of the original stock it must be "unrealised", that is, not reduced to the precious metal designated for the valuation of the original stock. Again in principle, the majority of jurists, as opposed to the Ḥanafīs, do not attribute the *ḥawl* of the original *niṣāb* to additions acquired other than by growth (*fā'ida, māl mustafād*). Here, too, however, the Mālikīs make an exception for livestock and impute the *ḥawl* of an original *niṣāb* to animals of the same species acquired from outside the herd. Thus the owner of five camels owes two sheep for those five and for an additional five inherited on the last day of the original holding period. This rule has been explained as a concession to the convenience of the *zakāt* collector (al-Dardīr, *al-Sharḥ al-ṣaghīr*, ed. Waṣfī, Cairo 1972, i, 593).

vii. Persons subject to *zakāt*. *Zakāt* applies almost exclusively to the property of private individuals. The property of the government, including the assets of the public treasury (*bayt māl* [*q.v.*]) is not subject to *zakāt* except according to some Zaydīs (Ibn Miftāḥ, i, 450, cf. C. Imber, *Ebu's-suʿud: the Islamic legal tradition*, Stanford 1997, 82-3; J.R.I. Cole, *Roots of North Indian Shīʿism in Iran and Iraq*, Berkeley 1988, 201). According to the Shāfiʿīs and Ḥanbalīs, property constituted as the corpus of a *waḳf* [*q.v.*] is not subject to *zakāt*, nor is the income (*ghalla*), when the beneficiaries are a general class such as the poor or the incumbents of an office such as *imām* of a mosque. When the beneficiaries of the *waḳf* are specified individuals, however, the income of the *waḳf* property is subject to *zakāt*. Thus *zakāt* is due on fruits or crops when the *niṣāb* is satisfied by the entire yield, without regard to the individual shares of the beneficiaries, according to the Shāfiʿīs (see below on co-ownership), while the Ḥanbalīs require that the share of each beneficiary amount to a *niṣāb* (cf. al-Mardāwī, *al-Inṣāf*, ed. al-Fiḳī, Cairo 1400/1980, iii, 14-15). The Mālikīs collect *zakāt* from the founder of the trust, whether the beneficiaries are specified individuals or a class. The Ḥanafīs require no *zakāt* from *awḳāf* except for the *zakāt* on crops, which they regard as an impost on the land itself.

According to the majority of jurists, the property of minors and those with an incapacity, like the mentally ill, is subject to *zakāt*, which is payable by their guardians. The Ḥanafīs do not impose *zakāt* on the property of the incapacitated with the exception of the *zakāt* for fruit and crops (cf. Schacht, *Origins*, 216-17) and *zakāt al-fiṭr*. The Twelver Shīʿīs regard the payment of *zakāt* on the property of minors, except livestock, as recommended. Except according to the Ẓāhirīs, slaves do not pay *zakāt* on property in their control. All Sunnī schools but the Mālikīs impose *zakāt* for such property on the slave-owner.

viii. Ownership. According to the Shāfiʿīs, where the property to which *zakāt* applies is subject to joint undivided co-ownership (*khulṭat shuyūʿ, ishtirāk, aʿyān*), the applicable *niṣāb* is assessed against the entire property so owned without regard to the size of the individual shares. Thus one sheep or goat is due on forty sheep or goats jointly owned by two individuals. Where the shares of the joint owners are unequal, the partner with the smaller share will have recourse against his co-owner for the amount of *zakāt* paid that exceeds his pro-rata liability, and each co-owner is authorised by law to pay *zakāt* on the entire property.

Where the property is individually owned but jointly managed (*khulṭat al-djiwār, al-awṣāf*), *zakāt* is assessed against the entire property so managed without regard to the size of the individual holdings. In the case of livestock, the test for determining whether joint management exists is the existence of common places for the watering of the animals, assembly prior to grazing (*masraḥ*), grazing (*marʿā*), and for keeping during the night, as well as the use of a common male for impregnation (*faḥl*) and common herdsmen. For fruit

and crops, joint management will be found where common watchmen are used for guarding and where the places for drying the fruit or winnowing the grain are common. Joint management of merchandise depends on a common shop (*dukkān*), and common guards and places of safekeeping as well as common appurtenances such as scales. Thus two individuals, each owning twenty sheep or goats, will be liable for the *zakāt* due on forty sheep or goats when they jointly manage their animals. The effect of joint management in this case is to create a liability to *zakāt* that would not otherwise exist, since neither individual's holding amounts to a *niṣāb*. In other cases involving livestock, joint management may have the effect of increasing an existing liability to *zakāt* or of diminishing it. Where some of the herd of a *zakāt* payer is co-owned or jointly managed while the rest is held independently, the favoured solution is to extend the effect of co-ownership or joint management to all his property (*khulṭat milk*), rather than limit it to that portion actually co-owned or jointly managed (*khulṭat ʿayn*) (al-Nawawī, *Rawḍat al-ṭālibīn*, ii, 180).

The Mālikīs and Ḥanbalīs recognise co-ownership and joint management as legally significant only in the case of livestock, with the Mālikīs requiring that the share of each owner amount to a *niṣāb*. Like the Shāfiʿīs, they require that the co-owners and joint managers all be subject to the law of *zakāt*, i.e. be Muslims. The Ḥanafīs, Twelver Shīʿīs and Ẓāhirīs give no recognition to co-ownership or joint management and look only to the property of each owner.

Possession. Although liability for *zakāt* is predicated on ownership, the law in some cases takes into account the separation of ownership from possession. Where the owner has no access to his property (*māl ḍimār*), as when it has been misappropriated or lost, the Ḥanafīs assess no *zakāt* on such property should it eventually be recovered years later, and the Mālikīs require the payment of *zakāt* for no more than one year. The Shāfiʿīs require that *zakāt* be paid for the actual time that possession was lost.

ix. Debts. Debts figure in the calculation of *zakāt* in two ways. To the extent that the *zakāt* payer is a creditor, there is the question of the payment of *zakāt* for the debts he is owed but has not collected. To the extent that the *zakāt* payer is a debtor, there is the question of what effect his debts are to be given in assessing the *zakāt* he owes.

The Shāfiʿīs include in the property subject to *zakāt* collectible currently due debts (*dayn ḥall ʿalā malīʾ*), including a wife's claim for unpaid dower (*ṣadāḳ*), but not debts payable in livestock, inasmuch as the requisite grazing cannot occur. The Mālikīs apply *zakāt* to collectible currently due commercial debts of active traders. Debts uncollectible either because a case cannot be made against the debtor or the debtor is insolvent are treated according to the rules for misappropriated property. The Ḥanafīs and Ḥanbalīs require no payment of *zakāt* that has accrued on debts until they are collected.

The Ḥanafīs deduct debts owed by the *zakāt* payer from the value of the property on which *zakāt* is payable, provided that such debts are subject to collection, in which category they include debts for unpaid *zakāt*. The value of such debts is applied in the first instance against the gold and silver and trade goods owned by the *zakāt* payer, any remaining debts being deductible from the value of livestock and crops. The Mālikīs and Ḥanbalīs allow the deduction of debts from *zakāt* on gold and silver and trade goods only. The Shāfiʿīs make no allowance for the deduction of debts.

x. Estimation. In the case of dates and grapes, it is recommended that the ruler dispatch officials to estimate (*kharṣ, takhrīṣ*) the eventual yield of the crop as dried fruit as a step in determining the *zakāt* due and ensuring that it be paid. According to the Shāfiʿīs, the estimator, who must be a reliable (*ʿadl*), free, male Muslim, can act singly and is authorised upon completing his estimation to offer the owner the option of eating or otherwise transacting in the raw fruit on the condition that the owner become personally liable (*taḍmīn*) for the *zakāt* due on the estimated yield. If the owner chooses not to accept this offer, he is not permitted to make any use of the crop until the *zakāt* has been paid. The practice of estimation is traced back to the Prophet, who employed a number of such estimators (al-Māwardī, *al-Ḥāwī*, ed. Matradjī, Beirut 1414/1994, iv, 205). In the absence of an official estimator, the owner can avail himself of the advantages of the practice by resorting to two reliable men capable of performing the estimation (al-Ramlī, *Nihāyat al-muḥtādj*, Cairo 1386/1967, iii, 82). Some opposed the practice of estimation as unduly speculative, and al-Shaʿbī (d. 103/721 [*q.v.*]) is reported to have denounced it as an "unwarranted innovation" (*bidʿa* [*q.v.*]). The Ḥanafīs do not recognise the practice at all. Only the Ḥanbalīs require that the estimator exempt one-third or one-fourth of the crop for the personal use of the owner.

xi. Recipients. Those entitled (*mustaḥiḳḳūn, maṣārif, ahl al-suhmān, ahl al-zakāt*) to receive *zakāt* fall into eight classes, enumerated in Ḳurʾān IX, 60, an enumeration understood to be exhaustive and exclusive. There is a dispute as to which of the first two classes, (1) the poor (*fuḳarāʾ*) and (2) the indigent (*masākīn*), is more disadvantaged, but the dispute is extraneous to the law of *zakāt*, and some even regarded these as a single class. In both *ḥadīth* and legal literature the needy, as the most numerous and best-known recipients of *zakāt*, stand in for the other classes. The collecting agents (*ʿāmilūn alayhā*) constitute class (3). These include the official sent by the government (*sāʿī, muzakkī, muṣaddiḳ, ḳābiḍ, wālī al-ṣadaḳa*) and his assistants. From the rule that *zakāt* on livestock was to be collected where the animals were watered, the agent for their collection was sometimes termed *wālī al-māʾ*. The most controversial of the classes are (4) "those whose hearts are won over" (*al-muʾallafa ḳulūbuhum* [*q.v.*]). These, according to the Shāfiʿīs, include converts to Islam whose enthusiasm is in doubt and prominent converts who, it is hoped, will be able to win over others, as well as converts enlisted to deal with hostile non-Muslims or Muslims who refuse to pay *zakāt*. Some jurists, including the Ḥanafīs and Mālikīs, regarded this class as having lapsed. Class (5) are the "slaves" (*riḳāb*), an expression commonly interpreted to refer to slaves who have contracted to purchase their freedom (*mukātabūn*) but are unable to make their scheduled payments. The Mālikīs, however, prefer that *zakāt* designated for this class be used to purchase the freedom of full slaves (*ḳinn*). The patronage (*walāʾ*) of such freedmen, according to the Mālikīs, inheres in the Muslim community as a whole, and not in the *zakāt* payer, a rule that removes any taint of self-interest from the payment. Class (6) are the debtors (*ghārimūn*) who lack the means to satisfy their debts. The Shāfiʿīs give preference in this class to those who have incurred indebtedness to avert possible violence among Muslims; these need not lack the means to pay their debt to qualify for *zakāt*. Those "in the path of God" (*fī sabīl Allāh*) constitute class (7). The most common interpretation is that these are the volunteers

engaged in *d̲j̲ihād* [*q.v.*]. They are to be given *zakāt* to meet their living expenses and the expenses of their military service (animals, weapons). The Twelvers came to adopt a broader interpretation that encompasses a range of public services, including the repair of mosques and bridges (H.M. Tabātabā'ī, *Kharāj in Islamic law*, London 1983, 25-6). The Ḥanafīs, among others, rejected the use of *zakāt* for such purposes on the ground that the valid payment of *zakāt* requires a transfer of ownership from one person to another (*tamlīk*). Finally, class (8) comprises the travellers (*ibn al-sabīl*) who in the course of their journey, or according to the S̲h̲āfiʿīs, even upon setting out, find themselves without immediately available assets to meet their expenses.

Given the nature of *zakāt* as a religious obligation, the law imposes a minimal burden of proof as to entitlement. Thus those who present themselves as poor will not need to establish their status by oath (cf. ʿAbd al-Razzāḳ al-Ṣanʿānī, *al-Muṣannaf*, ed. al-Aʿẓamī, Beirut 1983, iv, 149-50) or by witnesses, unless some doubt arises. The prevention of unqualified claimants from taking *zakāt* is within the authority of the *muḥtasib*.

The S̲h̲āfiʿīs are the most demanding with respect to the allocation of *zakāt* to these classes. When distribution of *zakāt* is in the hands of the ruler, all existing classes are to be allotted equal shares, and to the extent that the collected *zakāt* permits, all those entitled under each class are to be given what they require. When the *zakāt* is distributed by the *zakāt* payer he, too, to the extent possible, is obligated to give *zakāt* to each qualifying recipient in his vicinity from the existing classes, but not necessarily in equal shares. At the very least, the private *zakāt* payer must give *zakāt* to three individuals from each class to discharge his obligation. By contrast, the Ḥanafīs permit distribution to a single individual from any class. Some later S̲h̲āfiʿī jurists accepted the validity of following (*taḳlīd* [*q.v.*]) the more lenient Ḥanafī rule.

Disqualifications. Disqualified from receipt of *zakāt* under classes (1) and (2), and according to the Ḥanafīs, all other extant classes except (3) and (8), are the wealthy (*g̲h̲anī*). There is disagreement on the test to be applied for determining wealth. The S̲h̲āfiʿīs, among others, apply a means test, i.e. one is wealthy if he can meet the expenses of the lifestyle, including food, clothing and shelter, to which he and his dependents are accustomed from his lawful property, distributed over an average lifetime (said to be sixty-two years), or from his lawful earnings. Such a person is said to possess a "sufficiency" (*kifāya*). Since the test is relative, ownership of a dwelling place, fine clothing or slaves does not in itself mean that a sufficiency exists. Opportunity to earn a sufficiency is significant only if the occupation is appropriate to one's station and will not interfere with the pursuit of religious knowledge if one has an aptitude for learning. The Ḥanbalīs, Mālikīs and Twelver S̲h̲īʿīs also apply a means test but look to sufficiency for one year; the Mālikīs, however, do not take into consideration the possibility of gainful employment, even when appropriate work is available. The Ḥanafīs apply a property test to determine wealth. For them wealth is ownership of the value of a *niṣāb* of property, whether or not subject to *zakāt*, above one's basic needs, without regard to one's possible earnings. The S̲h̲āfiʿī standard allows for the same individual to be both a payer and a recipient of *zakāt*, a possibility excluded by the Ḥanafīs (although for them not every "wealthy" person will owe *zakāt*). The difference in the tests used to determine wealth is indicative of fundamentally different notions of the function of *zakāt* as an instrument to transfer wealth. Consistently with their understanding of *zakāt*, the S̲h̲āfiʿīs provide that those of the poor with trades are to be given enough to set them up in their trade for life. Those without trades are to be given enough to purchase land from the income of which they can live without future dependence on *zakāt*. By contrast, the Ḥanafīs recommend that a poor person receive enough *zakāt* to relieve him of the need to beg for one day, while they disapprove of giving to a poor person property of the value of a *niṣāb*.

A further disqualification from receipt of *zakāt* is unbelief (*kufr*), although the early jurists al-Zuhrī (d. 124/742) and Ibn S̲h̲ubruma (d. 144/776) [*q.vv.*] are reported to have permitted giving *zakāt* to poor *d̲h̲immīs* (cf. al-Ṭabarī, *D̲j̲āmiʿ al-bayān*, Cairo 1388/1968, ix, 959). Many, but not the S̲h̲āfiʿīs, recognise an exception to this disqualification for class (4) and for menial tasks under class (3). Slavery is a disqualification except for entitlement under class (5), and the payer's own slave is always disqualified from receiving his *zakāt*. The majority of jurists hold that one cannot validly pay *zakāt* to one's direct ascendants or descendants, and husbands cannot pay *zakāt* to their wives, a rule which some extend to the payment of *zakāt* by wives to their husbands. A further disqualification, according to the majority of jurists, is descent from or a client relationship with the Family of the Prophet, for these are not to be demeaned by receiving *zakāt*, which has become soiled in the process of cleansing the property of its payers (*awsāk̲h̲ al-nās*). They are, however, permitted to receive *zakāt* from one another. There is disagreement whether the disqualification of the Prophet's relatives remains in effect when they fail to receive their allotted portion of revenue (*k̲h̲ums al-k̲h̲ums*), but there is a discernible tendency among later Ḥanafī, Mālikī and Twelver S̲h̲īʿī jurists to permit them to receive *zakāt*, although strictly within their needs. The question has remained a topic of lively debate among the Yemeni Zaydīs (ʿAlī b. Muḥammad al-ʿAd̲j̲rī, *K. al-Maḳāṣid al-ṣāliḥa*, Ṣanʿāʾ 1411/1991, 220-42, cf. al-Ḥasan b. Aḥmad al-D̲j̲alāl, *Ḍawʾ al-nahār*, Ṣanʿāʾ 1405/1985, ii, 333-40). Women, according to the S̲h̲āfiʿīs, are disqualified from receiving *zakāt* under classes (3) and (7). Strict piety is not a requirement for eligibility to receive *zakāt*, although it may be a ground for preference among competing claimants. Sectarian differences are potentially more significant. Twelver S̲h̲īʿīs go so far as to require that *zakāt* be paid only to Twelvers, and a Muslim who adopts Twelver Shīʿism must pay *zakāt* a second time for past years unless the recipients were Twelver S̲h̲īʿīs.

xii. Collection and payment. It is an obligation on Muslim rulers, following the example of the Prophet and the early caliphs, to send out officials to collect *zakāt* to assist property owners in fulfilling their obligation of *zakāt*. The ruler and his *zakāt* collectors are understood to represent the recipients of *zakāt*, whose best interests they are duty bound to safeguard. While this much is agreed upon, there is considerable disagreement among the jurists as to the scope for individual distribution when the state is fulfilling its obligation of collecting *zakāt*, for the distinction between *ẓāhir* and *bāṭin* property does not in itself preclude the payment of all *zakāt* to the state (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, 113). The Zaydīs, for example, insist that all *zakāt*, whether the property is *ẓāhir* or *bāṭin*, must be paid to the official collectors representing the legitimate government of the Zaydī *imām*. Any

other form of payment will not discharge the obligation of giving *zakāt*. While the majority of Sunnīs, following Ibn ʿUmar, recognise payment of *zakāt* to even a corrupt (*dj̲āʾir*) ruler as discharging the obligation of *zakāt*, the Ḥanbalīs prefer that the payer, where possible, personally undertake its distribution, even on *ẓāhir* property (Ibn Ḳudāma, *al-S̲h̲arḥ al-kabīr*, ed. Medina, ii, 673-5). In this they represent an attenuated version of a legal tradition that was unwilling to put *zakāt* into the hands of the rulers, who could be expected to ignore the rules for its distribution. Thus Sufyān al-T̲h̲awrī (d. 161/778 [*q.v.*]) reportedly urged that one should even go so far as to swear falsely to the collectors to avoid paying them *zakāt* (*ibid.*, ii, 673). Among the Sunnī schools, the Mālikīs go furthest in their deference to the official collectors: they make the coming of the collector (*madj̲īʾ al-sāʿī*) a condition for the obligation of *zakāt* on livestock in addition to the passing of the *ḥawl*, so that payment before his coming is invalid. The S̲h̲āfiʿīs stand in the middle, preferring that *zakāt* on *ẓāhir* property be paid to the ruler, unless he is corrupt.

For the S̲h̲āfiʿīs and Mālikīs, liability (*ḍamān*) for *zakāt* requires, in addition to the passing of the *ḥawl*, actual possibility of payment (*tamakkun al-adāʾ*), which e.g. includes access to the property from which *zakāt* will be paid and the availability of qualified recipients. For the Ḥanbalīs, loss of all or part of the property after the *ḥawl* does not affect the *zakāt* due, while according to the Ḥanafīs, a loss, whether before or after possibility of payment, proportionately reduces it.

The majority of jurists require that *zakāt*, except for trade goods, be paid in kind, while the Ḥanafīs and Twelver S̲h̲īʿīs permit the payment of the value (*ḳīma*) of the *zakāt* in all cases. The Zaydīs permit payment of value when payment in kind is not possible (Ibn Miftāḥ, 1, 500; but see al-ʿAdj̲rī, *al-Maḳāṣid al-ṣāliḥa*, 218-9). The Mālikīs go only so far as to allow *zakāt* due in gold to be paid in its market value in silver and vice-versa. The requirement of payment in kind, even when strongly upheld, did not obviate constant recourse to valuation in the assessment of *zakāt*. The inconvenience of the rule against payment in cash led later S̲h̲āfiʿīs and Mālikīs to favour the Ḥanafī rule, which very likely reflected common practice.

There is disagreement as to whether it is better to pay *zakāt* privately or in the open (cf. Ḳurʾān II, 271), the majority of jurists favouring the latter view. The Mālikīs, however, prefer that one pay *zakāt* through an agent to preserve the piety of the act from self-aggrandisement. The religious quality of the act of giving is enhanced by a recommended prayer to be uttered by the payer and by a blessing uttered by the *imām* or collector (Ibn Ḳudāma, *al-S̲h̲arḥ al-kabīr*, ii, 678-9), the latter harking back to Ḳurʾān IX, 103 (cf. Ibn Saʿd, vii/1, 88, blessing by ʿUmar). Favoured months for the giving of *zakāt* are Muḥarram, Ramaḍān, D̲h̲u ʾl-Ḥidj̲dj̲a (al-G̲h̲azālī, *Iḥyāʾ ʿulūm al-dīn*, iv, 109-11), and Radj̲ab. Ibāḍī jurists go so far as to suggest a collusive transfer and re-transfer of one's property to permit timing one's giving in a favoured month (al-Dj̲annāwunī, *K. al-Waḍʿ*, ed. Aṭṭafayyis̲h̲, ed. ʿUmān, 175-6).

According to the S̲h̲āfiʿīs, the ruler, but not a private *zakāt* payer, is free to remove (*naḳl*) *zakāt* from the location of the property from which it has been collected. The *zakāt* payer is authorised to do so only in the event that the *zakāt* exceeds the needs of the local classes of recipients, in which case he may remove the *zakāt* for distribution in the nearest locality with qualified recipients. *Zakāt* for which no qualified recipients are found is retained for eventual future distribution. The Mālikīs prohibit removal and invalidate the payment of *zakāt*, unless it is removed to recipients as needy as those of the original location; the Ḥanbalīs prohibit removal but do not invalidate the *zakāt* so removed. The Ḥanafīs disapprove of removing *zakāt* unless it is for the purpose of distributing it to needy relatives or those in greater need than the local qualified recipients.

Finally, the death of the owner prior to the payment of the *zakāt* due does not terminate the obligation, according to the S̲h̲āfiʿīs and Ḥanbalīs. According to the Ḥanafīs, it always does except for *zakāt* on crops, and according to the Mālikīs, if the unpaid *zakāt* was one or more years overdue. In those cases where the obligation of *zakāt* lapses on account of death, it may still be collectible, if only in part, if the decedent has so provided by will.

Pre-payment. Provided that a *niṣāb* exists, payment of *zakāt* may be made before the end of the *ḥawl*. The Ḥanafīs permit such pre-payment (*taʿdj̲īl*) for any number of years ahead, the Ḥanbalīs for up to two years, and the S̲h̲āfiʿīs for one. The Mālikīs permit pre-payment one month in advance, except for crops.

xiii. Intention (*niyya* [*q.v.*]). The validity of the payment of *zakāt* as an act of worship (*ʿibāda*) depends on the requisite intention, which must make reference to the payment of *zakāt* or obligatory *ṣadaḳa*, but need not specify the property on which *zakāt* is being paid. The necessity of such an intention was agreed upon by all except the Syrian jurist al-Awzāʿī (d. 157/774 [*q.v.*]). There was, however, no agreement as to the role, if any, of an intention when the *zakāt* was collected by force from a recalcitrant property owner. There is evidence among later jurists of an attenuation of the requirement of an intention when one family member paid *zakāt* on behalf of another (ʿUlays̲h̲, *Fatḥ al-ʿalī al-mālik*, ed. Beirut, i, 163). There is no requirement that the payer must state to the recipient that the payment represents the giving of *zakāt*, and some jurists preferred that this not be done in order to spare the recipient embarrassment. When the *zakāt* is pre-paid, however, the failure to inform the recipient of the nature of the gift can prejudice the possibility of its recovery in the event of a change of circumstances rendering it invalid as *zakāt*.

xiv. *Zakāt* avoidance and non-payment. It is relatively simple to avoid the incidence of *zakāt*. The requirement of a holding period, especially, provided property owners with an easy means to do so. A collusive interfamilial transfer, for example, would terminate the *ḥawl*. This and other devices (*ḥiyal* [*q.v.*]) were a matter of controversy. The Mālikīs and Ḥanbalīs treat them as void, the property remaining subject to *zakāt*; the S̲h̲āfiʿīs and Ḥanafīs disapprove of such transactions but regard them as valid and assess no *zakāt*. Such transfers are, in fact, reported of some wealthy Ḥanafī scholars, but their validity did not necessarily mean that they were not subject to criticism (M.L.R. Choudhury, *The Din-i-ilahi or religion of Akbar*, Calcutta 1952, 46). Further devices were employed to recover *zakāt* paid, and disqualified recipients similarly resorted to stratagems to circumvent the law (Ibn Miftāḥ, *al-Muntazaʿ al-muk̲h̲tār*, i, 539-42).

The great majority of jurists refused to follow a tradition authorising the imposition of a fine for non-payment of *zakāt* (Abū Dāwūd, i, 462; al-K̲h̲aṭṭābī, *Maʿālim al-sunan*, ii, 33-4). Failure to pay *zakāt*, however, may subject the property owner to corrective discretionary punishment (*taʿzīr*) either on the part of the collector or the *muḥtasib*, in addition to seizure of

the *zakāt* on *ẓāhir* property. It is generally held that delay in paying *zakāt* when due results in loss of testimonial capacity.

6. *Zakāt al-fiṭr.*

Zakāt (ṣadaḳat) al-fiṭr (also *zakāt al-fiṭra* (a later term), *zakāt Ramaḍān, zakāt al-ṣawm*) is a payment due on behalf of all Muslims, male and female, minor or adult, slave or free, in connection with the termination of the fast (*fiṭr*) of Ramaḍān. For the Ḥanafīs and Twelver Shīʿīs, it is also due on behalf of non-Muslim dependents of Muslims. As a *zakāt* for persons, not property, it is also termed *zakāt al-badan* and *zakāt al-raʾs*. The amount paid (*fiṭra*) purifies the one who gives it from his unseemly conduct and other shortcomings during the fast of Ramaḍān and at the same time relieves the poor from having to beg for food on the *ʿīd al-fiṭr* [*q.v.*] (Abū Dāwūd, i, 473). The practice of giving *zakāt al-fiṭr* is based on *ḥadīth*, although Ḳurʾānic verses are sometimes cited in support (e.g. LXXXVII, 14; cf. Ibn Abī Zayd al-Ḳayrawānī, *al-Nawādir wa 'l-ziyādāt*, ed. al-Ḥulw, Beirut 1999, ii, 301). The opinion that it was abrogated by the *zakāt* for property was almost universally rejected, and *zakāt al-fiṭr* is, according to the great majority of Muslim jurists, an obligation, but its denial does not amount to unbelief. The Ḥanafīs label it compulsory (*wādjib*), in accordance with their terminology for obligations that are not entirely beyond doubt. There is disagreement as to its classification as *ẓāhir* or *bāṭin*. According to al-Māwardī, the Shāfiʿīs of his day considered it to be *ẓāhir*, but, as he notes, there was a long-standing practice of distributing it personally (*Ḥāwī*, iv, 432), and it is thus commonly classified as *bāṭin*, but not by the Zaydīs (al-ʿAnsī, *al-Tādj al-mudhhab*, Ṣanʿāʾ 1380/1961, i, 222). One need not have fasted during Ramaḍān or even be subject to the fast for *zakāt al-fiṭr* to be due (cf. al-Kāsānī, *Badāʾiʿ al-ṣanāʾiʿ*, ed. Cairo, repr. Beirut 1406/1986, ii, 70).

According to the Shāfiʿīs, those obligated to make the *zakāt al-fiṭr* payment are, with some exceptions, Muslims or non-Muslims, who are under a legal obligation to provide support (*nafaḳa*) for those persons on whose behalf it is due, and who also have the means to pay it (*yasār*). The means to pay *zakāt al-fiṭr* is defined as sufficient wealth to defray the cost of the payment beyond the needs of oneself and one's dependents (*maʾmūn*) for the day of the festival, such needs including food, clothing, shelter and the household services of slaves. The Ḥanafīs and Twelver Shīʿīs measure ability to pay *zakāt al-fiṭr* by wealth as for *zakāt* on property (see above).

It is agreed that *zakāt al-fiṭr* is payable in the form of wheat, barley, dates and raisins, to which list may be added other basic foodstuffs. The Shāfiʿīs, for example, add several milk products including dried curd (*aḳiṭ*), yogurt (*laban*) and cheese (*djubn*). The amount due is one *ṣāʿ* (*ca.* 2.03 litres) [*q.v.*], except that according to the Ḥanafīs, when payment is made with wheat, the amount due is one-half *ṣāʿ*, a rule traced back to both ʿUmar and Muʿāwiya. The Ḥanafīs also differ as to the size of a *ṣāʿ*, which they take to be the equivalent of eight Baghdādī *raṭls*, not five and one-third *raṭls* as the other schools have it. The Ḥanafīs and Twelver Shīʿīs admit payment of the value of the *zakāt al-fiṭr* due, and payment in cash is now in any case widespread (*ca.* $7 per person in the U.S.).

Although preferable that it be paid on the day of the feast prior to the festival prayer (in the absence of a valid excuse, it must be paid before sunset of the day of the feast), the Shāfiʿīs admit payment of *zakāt al-fiṭr* from the beginning of Ramaḍān, the Ḥanbalīs and Mālikīs two days prior to the festival, and the Ḥanafīs prior to Ramaḍān.

7. *Zakāt* in Ṣūfism.

Classical Ṣūfī sources portray the Ṣūfī as standing outside the system of *zakāt*. Owning no property, the true Ṣūfī pays no *zakāt*, and despite his poverty, the Ṣūfī's spiritual wealth disqualifies him as a recipient. The Ṣūfī writers, however, find ample scope for the giving of *zakāt* in a wider sense that encompasses acknowledgment of all the benefits bestowed by God. Abū Naṣr al-Sarrādj (d. 378/988 [*q.v.*]) records an opposing position among Ṣūfīs in favour of accepting *zakāt*, refusal to do so being regarded as prideful, and popular works like the *Ḳūt al-ḳulūb* of Abū Ṭālib al-Makkī (d. 386/996) and the *Iḥyāʾ ʿulūm al-dīn* of al-Ghazālī (d. 505/1111) [*q.vv.*] urged that preference in paying *zakāt* be given to the poor among the Ṣūfīs. The popularity of Ṣūfīs as favoured recipients of *zakāt* was noted by the Syrian Shāfiʿī jurist Taḳī al-Dīn al-Ḥiṣnī (d. 829/1426), himself a Ṣūfī, who warned against giving *zakāt* to heterodox or superficially pious groups whose Ṣūfī affiliation he called into question (*Kifāyat al-akhyār*, Beirut n.d., 121-2).

8. *Zakāt* in the modern period.

The period since approximately the Second World War has witnessed a re-examination of *zakāt* unprecedented since the formative period of Islamic law. During this time there has also been renewed interest in the implementation of the law of *zakāt*, both in the form of increased individual compliance and governmentally sponsored or mandated efforts at collection. Academic discussion of *zakāt* has taken place within the two camps of jurists and economists. Although Muslim jurists affiliated with the schools of law continue to develop the law of *zakāt*, more influential have been the writings of scholars with an independent point of view who have undertaken critically to survey the law of the classical period with a view to developing a law of *zakāt* appropriate for modern conditions. Efforts toward a revival of the institution of *zakāt* have led to the convening of frequent conferences, the publication of numerous manuals and pamphlets instructing Muslims how to fulfill their obligation of *zakāt*, and the formation of various private organisations that aim at assisting in this compliance. There have also been notable instances of governmental involvement in the collection and distribution of *zakāt*, and legislation has been enacted that mandates the payment of at least some forms of *zakāt*.

Even before this period, Muslim reformers had begun broadening the traditional purposes to which *zakāt* had been put. In his interpretation of Ḳurʾān IX, 60, Rashīd Riḍā [*q.v.*] had urged that the class of "slaves" might now include not only individuals but societies "enslaved" by colonialism and that the *zakāt* for the "path of God" should go, not to a *djihād* waged with arms, but to one waged with the weapons of argument and persuasion in the interest of a restoration of Islam. Some interest in directing *zakāt* to wider social purposes than recognised by the traditional law was not new (cf. Ibn ʿĀbidīn, *Ḥāshiyat radd al-muḥtār*, ii, 345-6, *ḥīla* to use *zakāt* for building a mosque); new was the willingness of the part of the reformers to resort to direct reinterpretation of the Ḳurʾān to attain their goals. One can already see in the reformers the shift from regarding *zakāt* primarily as an act of piety (an atttitude that, of course, still persists in some circles) to the emphasis on *zakāt* as the foundation of the Islamic social and economic system that dominates its modern revival.

Essential to the implementation of this vision of

zakāt is the insistence that Muslim governments must once again assume the duty of collecting *zakāt* and not leave its payment and distribution to the conscience of individuals. There is widespread agreement among the modernists that the classical distinction between *ẓāhir* and *bāṭin*, according to which the government had authority to collect only the former, is no longer tenable, either because the distinction itself was not necessarily intended to be eternally binding or because under modern conditions of saving and investing very little property is truly *bāṭin*. They have also called for an expansion of the property base (*wiʿāʾ*) on which *zakāt* is to be assessed. The modernists have no inclination, as did some jurists of the past, to blur the distinction between *zakāt* and secular taxes (cf. Ibn Hadjar al-Haytamī, *Fatāwā al-kubrā al-fikhiyya*, ed. Cairo, ii, 48; Ibn ʿĀbidīn, *op. cit.*, ii, 288-90), for *zakāt* is now seen as an entirely viable alternative to the latter.

It is now generally accepted that the generic *niṣāb* applicable to new cases is that for gold, which unlike silver has historically maintained its value. The rules for gold and silver are now widely applied to paper money, and the formerly held view that paper money be potentially treated as merchandise (ʿUlaysh, *Fatḥ al-ʿalī al-mālik*, i, 164-5) is no longer much in evidence, although it continues in the treatment of stocks and bonds. It has thus been urged that *zakāt* at the rate of 2.5% should be payable on horses and any other grazing animals with the value of the *niṣāb* for gold. Similarly, the *zakāt* for crops should encompass all produce from the soil, with the *niṣāb* for gold applicable to those crops not measured by volume. Furthermore, it is often argued, fairness dictates that the expenses incurred in the growing and harvesting of the crop be deducted in the calculation of the *niṣāb*. Similar arguments have been put forth to extend *zakāt* to all minerals derived from mining and to all products derived from the ocean, including fish. Rental income from buildings, factories, taxis, buses and ships has also been drawn into the scope of *zakāt*, at the rate for trade goods according to some, or the rate for crops according to others. Salaries from professions and trades should also be subject to *zakāt* as earned, once the *niṣāb* has been met, and the view dispensing with a holding period, formerly merely a legal curiosity, is now very much alive. A minority has gone so far as to call for an updating of the classical *nuṣub*.

Modernist writers have, like their reformist predecessors, insisted that the proceeds from the collection of *zakāt* be available for a wider range of purposes than the classical law generally allowed. They have also been concerned with the mechanisms of *zakāt* collection, and have argued that *zakāt* must be payable in cash to spare government agencies the costs of caring for livestock or storing foodstuffs. In general, however, discussions of the specifics of the administration of *zakāt* collection are less developed than those concerned with the property base and the rate of *zakāt*. Modernists are optimistic that under ordinary circumstances *zakāt* will generate sufficient revenues to fund "all the activities of a state" (Fazlur Rahman, *Major themes of the Qurʾān*, [2]Minneapolis 1994, 41). They do, however, tend to acknowledge the possibility that states may, under one circumstance or another, need to find other sources of revenue. In the interests of equity, it is often held that non-Muslim citizens of Muslim states should be subjected to a tax that mirrors *zakāt*.

At the present time payment of one form or another of *zakāt* is enforceable by law in six Muslim nations: Saudi Arabia, Libya, Yemen, Malaysia, Pakistan and Sudan. Reference to the responsibility of the state for the implementation of *zakāt* appears in the Constitutions of Yemen (Art. 21), Pakistan (Art. 31) and Sudan (Art. 10).

Collection of *zakāt* in the Kingdom of Saudi Arabia is governed by Royal Decree no. 17/2/28/8634 dated 29 Djumādā II 1370/7 April 1951 which imposed *zakāt* on both individuals and companies with Saudi nationality. *Zakāt* on livestock and crops is under the jurisdiction of the General Bureau of Public Revenues of the Ministry of Finance aind National Economy, that on other items under the Zakāt and Income Tax Department of the Ministry. Special committees composed of both government officials and private citizens assess the *zakāt* due on livestock and crops, which the owners then pay directly to those whom local committees have determined to be entitled. *Zakāt* is also collected on the merchandise, cash and other liquid assets, but not the fixed assets, of businesses, and on the income of self-employed professionals, the latter at the rate of 1.25%, the law authorising individuals to personally distribute to the needy one-half of the *zakāt* otherwise due. The entire cost of collection is borne by the public treasury. The law imposes no penalties or fines for failure to pay *zakāt*, but administrative pressures have been brought to bear against companies that have failed to make their payments and in egregious cases there is the possibility of detention by the police.

The *Zakat Law* of Libya (Law 89 of 1971) applies to all property, including paper money and company shares, but provides for the compulsory collection of *zakāt* on only *ẓāhir* property. While drawing on Mālikī law for some details, it departs from it in its broader coverage of grains and fruits and its allowance of a deduction from the crop of the expenses of harvesting as well as in applying debts against livestock, and in admitting for the payment of *zakāt al-fiṭr* in cash. In the case of non-payment, the law imposes a penalty not to exceed double the *zakāt* due. Libyan law earmarks 50% of the proceeds of *zakāt* for distribution to the poor.

Compulsory collection of *zakāt* in the Yemen Arab Republic goes back to 1975. Its collection, including that of *zakāt al-fiṭr*, which is deducted from the salary of public employees in Ramaḍān, is under the Department of Duties (*maṣlaḥat al-wādjibāt*) of the Ministry of Finance. As in Saudi Arabia, collection of *zakāt* on livestock and crops depends on local assessment. The proceeds from *zakāt* collection are deposited in the Central Bank and disbursed by the Ministry of Finance as an integral part of the state budget. The costs of collection run as high as 25%. Individuals are authorised to distribute personally 25% of their *zakāt*.

The collection of *zakāt* in Malaysia is separately administered in each state by the Religious Affairs Councils. The property from which *zakāt* is taken varies from state to state, but the greatest sources of *zakāt* revenues are rice (*padi*) and *zakāt al-fiṭr*. Noncompliance is widespread, except for *zakāt al-fiṭr* (*ca.* $1 US per person), explainable in part by the preference, going back to colonial times, on the part of some growers to distribute *zakāt* personally (*zakat peribadi*) rather than pay it to the government (*zakat raja*). The law provides for fines and imprisonment for nonpayment, but enforcement is reportedly lax.

The Pakistani and Sudanese laws have attracted the greatest interest inasmuch as they formed part of

larger programmes of Islamisation of the law. The Pakistani *Zakat and Ushr Ordinance of 1980* was enacted during the régime of General Zia ul-Haq [see ZIYĀ AL-ḤAḲḲ] and introduced by him as a fulfilment of what was considered by him as the centuries' long aspirations of the Muslims of the region. It departs from the classical law in imposing *zakāt* on various forms of what would traditionally have been classified as *bāṭin* property, including savings bank accounts, a measure justified by an appeal to Ḥanafī doctrine (cf. Tanzil-ur-Rahman, *Introduction of Zakat in Pakistan*, Islamabad [1981],15-21). The law differs from Ḥanafī teaching in imposing *zakāt* on the property of minors (*ibid.*, 24-5). Most of the traditional classes of property subject to *zakāt*, including gold and silver, trade goods and animals are left to self-assessment. The greater part of the Ordinance deals with the collection and administration of *zakāt* and provides for three levels of Zakat Funds, headed by the Central Zakat Fund, which receives the *zakāt* from savings accounts and other proceeds deducted at source, by far the greatest source of revenue under the Ordinance. The proceeds from the collection of *ʿus̲h̲r* go to the numerous Local Zakat Funds. Resistance by Pakistani S̲h̲īʿīs immediately led to an amendment providing for an exemption from the law for those Muslims following a recognised system of *fiḳh* who file a declaration that their faith and *fiḳh* do not oblige them to comply in whole or in part with the Ordinance.

Implementation of the Ordinance has been beset by substantial evasion through the transfer of savings accounts to current accounts before the annual valuation date of the first of Ramaḍān and even, it has been reported, by some conversions to S̲h̲īʿism by wealthy families. There have also been persistent complaints of corruption in collection and distribution. Low proceeds from the collection of *ʿus̲h̲r* led to the transfer in 1993 of its collection and administration from the Local Zakat Committees to the provincial revenue departments in the hope that that latter will be more successful in dealing with powerful landowners. One study of the operation of the Ordinance for the years 1987-8, while admitting some success in the goal of wealth redistribution, nonetheless concluded that the less wealthy were paying a disproportionate share of the *zakāt* and that in Sind the recipients were wealthier than the payers (G.A. Jehle, *Zakat and inequality: some evidence from Pakistan*, in *Review of Income and Wealth*, ii [1994], 205-16).

The Sudanese *Zakat and Taxation Act of 1984* (*Ḳānūn al-zakāt wa 'l-ḍarā'ib*), introduced as part of the Islamising movement during the régime of al-Numayrī (d. 1985), took the radical step of substituting *zakāt* for a wide range of taxes within the existing revenue system, a decision that precipitated a disastrous deficit in both the central and regional budgets. The *Zakat Law of 1986* remedied this situation and removed the administration of *zakāt* from the Ministry of Finance to the Ministry of Social Welfare and created a new Zakat Bureau (*dīwān*) separate from the existing tax system. Further changes were made under the *Zakat Law of 1990*. The reach of the Sudanese law is quite extensive, and it covers all the traditional classes of property subject to *zakāt* as well as the salaries of civil servants and professionals, and income from dairies, poultry farms and fisheries. *Zakāt* on crops has come to be collected in cash since practical problems arose in its collection in kind. *Zakāt* on livestock is also collected in cash, but implementation in this area has been hesitant. The law provides for payers to distribute personally 20% of their *zakāt*. A penalty not to exceed the *zakāt* due is imposed for non-payment.

The majority of Muslims continue to pay *zakāt* outside of a compulsory legal scheme for its collections and distribution. There has, however, been a movement across the Muslim world to create new intermediaries to receive voluntary payments of *zakāt*. Prominent among these are quasi-governmental agencies such as the Jordanian (1978) and Baḥraynī (1979) Zakat Funds (*ṣundūk al-zakāt*) and the more autonomous Kuwaytī Zakat House (*bayt al-zakāt*) (1982) and Egyptian Nasser Social Bank (1977). *Zakāt* paid to such agencies, like *zakāt* paid under the compulsory schemes, typically enjoys the advantage of being deductible from the national income tax. Some see in these voluntary schemes a stage on the way to compulsory collection, as in the case of Sudan, where the Zakat Fund (1980) preceded the Zakat Law. Only in Jordan did the Zakat Fund replace a scheme, albeit of limited scope, for compulsory *zakāt* collection (Law No. 35 of 1944). The activities of these intermediaries now often include the making of interest-free loans (*ḳarḍ ḥasan*), a form of assistance not provided for by the classical law of *zakāt*.

More informally-organised intermediaries continue to function throughout the Muslim world and among minority Muslim populations, both in competition with each other and sometimes in competition with legislated compulsory and voluntary schemes. Such organisations are increasingly taking advantage of modern technology such as the Internet to reach potential *zakāt* payers, and provision for payment by credit card is by no means uncommon. While insisting that *zakāt* has nothing to do with taxation, these new intermediaries have readily adopted the vocabulary (e.g. "zakatable") and trappings of modern systems of taxation, including more or less elaborate tables for calculation, and a variety of forms for "*zakāt* returns". Much, however, remains to be done in the effort toward greater compliance. For while virtually all Muslims are aware that there is an obligation of *zakāt*, accurate information about its implementation is far rarer and compliance is still very limited. A recent study of *zakāt* in rural Egypt indicated that, while 96% of the farmers knew that *zakāt* was an obligation, only 20% paid it on their crops, as compared with 76% who paid *zakāt al-fiṭr*, a relatively small obligation and one intimately associated with Ramaḍān (A.T. Abū Kurays̲h̲a, *al-Zakāt wa 'l-tanmiya*, Cairo 1999).

AL-**ZAKĀZĪK**, conventionally ZAGAZIG, a town in the east of the Nile delta of Egypt, 90 km/55 miles to the northeast of Cairo. It is now the chef-lieu of the Sharkiyya province, and in 1998 had almost 270,000 inhabitants.

The town was founded in the first third of the 19th century on the *baḥr* Muwīs, a canal following the ancient course of the Tanaitic branch of the Nile. The Egyptian ruler Muḥammad 'Alī Pasha [*q.v.*] entrusted to a specialist hydraulic engineer, Aḥmad al-Bārūdī, the construction of six dams on this canal and its branches, in order to irrigate the Sharkiyya province as a whole. The original site of al-Zakāzīk corresponds to the dockside huts of mud and reeds built for the workers on the main dam, called Kanāṭir al-Tis'a, at the bifurcation of the *baḥr* Muwīs and the *baḥr* Mashtūt. The only remarkable feature of this site was the archaeological tell of the ancient Bubastis (modern Tell Basta) at some kilometres to the south-east, at that time exploited by the *sabbākhūn*, and nearby, an ancient dam whose existence was going to be decisive for choosing the site of the new dam and for fixing the settlement. Work on the dams took from 1827 to 1832, and when they were completed, a permanent settlement, with more durable buildings, grew up on the site.

The name of the town, whose origin is controversial, is said to have come from a member of the family of a certain Aḥmad Zakzūk, which settled at the end of the 18th century half-a-kilometre to the north of the future dockyard, in a village which is said to have taken its name from the newly-arrived family/clan: Kafr al-Zakāzīk. Naturally, in the late 1820s, in order to complete the new dams, recourse would have been made to local manpower, and especially to the workers of Kafr al-Zakāzīk, including some of the descendants of Aḥmad Zakzūk, who are said to have called their dockside settlement Nazlat al-Zakāzīk. This patronymic would also be kept in the engineer Aḥmad al-Bārūdī's administrative documents and was definitively confirmed by Muḥammad 'Alī when he visited the site shortly after its completion. However, other etymologies persisted more strongly in folk memory in the later 19th and early 20th centuries. Its origin was attributed to a species of fish like the carp, the *zakzūk*, pl. *zakāzīk*, caught in large quantities in the *baḥr* of Muwīs; at the present time, the preferred derivation is from the root *zakzaka*, denoting the twittering of the large numbers of birds in the trees along the main road of the town alongside the canal.

The town rapidly developed after its foundation, thanks to the transfer at an early date of the irrigation offices of the Sharkiyya from Bilbays to al-Zakāzīk, followed a year later by the town's elevation to the rank of capital of the province (*mudīriyya*, now *muḥāfaẓa*) of the Sharkiyya, all at the expense of Bilbays. Muḥammad 'Alī considered al-Zakāzīk as having a more central site. The arrival of numerous officials was followed by that of merchants and the development of infrastructures, notably the arrival of the railway, making the town definitively the main centre of the Delta, so that it had 40,000 inhabitants in 1911. This population came from diverse origins, seen e.g. in the town's Coptic community; the family of Salāma Mūsā (1887-1958 [*q.v.*]), originally from Asyūṭ, settled in al-Zakāzīk in the years after its foundation.

The two first mosques there were built early, one by Muḥammad 'Alī on the eastern bank of the canal and the other on the western bank by a government dignitary, the *amīr* Yūsuf, the so-called "Little Mosque". The third mosque, from the second half of the 19th century, well reflects the development and modernisation of the town, being built, with steel columns, by a local rich merchant, Sulaymān al-Sharbīnī. Today, however, most important in the town is the Mosque of the Conquest financed by the singer 'Abd al-Ḥalīm Ḥāfiẓ, originally from the district. The town's Muslim community has further acquired, in less than two centuries, two tutelary saints, Abū Khalīl and Abū 'Āmir, whose *mawlid* is celebrated by Muslims and Copts equally.

The town's prosperity derives nevertheless from economic and commercial activities. In the later 19th century, al-Zakāzīk became one of the main Egyptian centres for the corn trade, and above all for the preparation and marketing of cotton. Several dozen European merchants (English, French, Greek) invested capital in the cotton industry and installed factories for cotton ginning and spinning. This foreign presence, increasingly visible through the development of land and the building of churches and of colonial villas surrounded by gardens, led, in the 1870s, to conflicts

in the town between the locals and the newcomers; hence Aḥmad ʿUrābī [see ʿURĀBĪ PASHA], originally from this region, was to find strong support from the citizens of the town at the time of his revolt in 1881.

(J.-M. MOUTON)

ZĀK̲H̲IR, ʿABD ALLĀH, polemicist, copyist, translator, printer and painter, born in Aleppo 1680, died at the Monastery of Mār Yuḥannā, al-S̲h̲uwayr, Lebanon, 30 August 1748. The son of a Greek Orthodox goldsmith, Zāk̲h̲ir learned his father's trade before studying with Christian scholars and the Muslim *s̲h̲ayk̲h̲* Sulaymān al-Naḥwī. He worked as a copyist for the Catholic missionaries in Aleppo amongst others, especially for the Jesuits, whose translations of works of theology and spirituality he also rendered into acceptable Arabic. After the Greek Orthodox former patriarch At̲h̲anāsiyūs Dabbās returned from Wallachia, having had two Arabic liturgical books printed there [see MAṬBAʿA. 1.B.1], Zāk̲h̲ir cooperated with him in setting up the first Arabic press in the Near East, using equipment, and with financial support, from Romania. Between 1706 and 1711, when it ceased working, this Aleppo press published 10 titles.

Zāk̲h̲ir's polemical writings date from 1722 onwards, when the break between Greek Orthodox and Greek Catholics became open. Accepting Papal claims to supremacy, he refuted the Orthodox teaching on the issues that separated the two traditions. The target of Orthodox hostility, he left Aleppo for Lebanon, where he eventually settled at the monastery at al-S̲h̲uwayr. The press he set up there in 1733 was to function with interruptions until 1899; the first book it produced, in 1734, was *Mīzān al-zamān*, a translation of an ascetic work by the Jesuit J.E. Nieremberg.

In his original writings and correspondance, Zāk̲h̲ir demonstrates not only command of the *ʿarabiyya* (he was a contemporary of Ḏj̲armānūs Farḥāt [*q.v.*]) but also a well-developed rhetorical sense and capacity for argument; he was understandably feared as a polemicist. Though never ordained or a monk, he lived a life of asceticism and service to others, which earned him the title of *s̲h̲ammās* (lit. "deacon"). He is perhaps the first Arab painter to have left us a self-portrait, together with portraits of some of his contemporaries.

Bibliography: Zāk̲h̲ir's biography by a disciple in *Masarra*, iv/6 (August 1913), repr. in *Masarra*, xxxiv/7 (1948) (special issue on the bicentenary of Zāk̲h̲ir's death), 386-96; J. Heyberger, *Les chrétiens du Proche-Orient au temps de la réforme catholique*, Rome 1994, index.

(HILARY KILPATRICK)

ZAK̲H̲RAFA (A.), in Islamic art, "ornament, ornamentation". The word is connected with the noun *zuk̲h̲ruf* "gold" > "ornamental work" used in Ḳurʾān, XVII, 95/93, *bayt min zuk̲h̲ruf*, and there is an adjective *muzak̲h̲raf* "ornamented"; the origin of *zuk̲h̲ruf* seems to be in a deformation, via Syriac, of Grk. *zōgrapheō* "to paint", see Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 150.

Islamic ornament possesses certain qualities that, even if not exclusive to this art, are sufficiently distinct to be recognisable. One is that it is independent from the underlying structure, be it a building or an object of art. It therefore can easily be transferred from one material to the other, and from one technique to another. As in other civilisations, the ornament can be classified either by the elements of which it is composed or by the method by which it is organised. In addition, it can be interpreted symbolically, can communicate ideas or can have metaphoric qualities.

The most common elements are vegetal, geometric, epigraphic and figural. In order to create order and harmony—one of the most characteristic functions of Islamic ornament—it is organised by two principles: geometry and symmetry. To achieve this aim, the Islamic artist used a number of methods, the most typical being framing and linking. Plants may completely grow into each other and form an infinite pattern generally termed "arabesque" [*q.v.*].

The predominance of vegetal motifs in Islamic ornament hardly needs to be reiterated. Its development can broadly be divided into three main periods: the formative, roughly between the 7th and 10th centuries A.D.; the ornamental integration, from about the 10th to the later 13th centuries, and the final phases, from about the 14th to the 17th centuries. The first centuries are characterised by an enormous variety of motifs adopted from pre-Islamic civilisations. In the course of time, acanthus and vine leaves, palmettes, half-palmettes, lotus blossoms and grapes, to mention only the most common vegetal designs, were flattened out, became two-dimensional, and made into space for additional small ornamentation. Composed without background, divided only by bevelled lines, these ornaments create abstract designs that give the impression of uniform patterns, though their floral and vegetal origin is still recognisable. The best examples attesting to the transformation and integration of these elements into ornamental patterns stem from late 8th-century Syria and 9th-century Sāmarrā, from where they spread to Egypt and other parts of the Islamic world (Plate V, Figs. 1 and 2). Only Spain was less affected by these tendencies. Depending on Umayyad tradition, such as the mosaics of the Dome of the Rock [see ḲUBBAT AL-ṢAK̲H̲RA] or the eastern façade of Ms̲h̲attā [*q.v.*], deeply carved and feathery leaves are folded over, so that the design becomes three-dimensional instead of being flattened out.

In the following centuries, the changes within plant ornaments occur primarily in the central Islamic lands. Of particular importance is the development of the arabesque. While its preliminary stages may already date from the 11th century, it reached its full scope only in the following two centuries, culminating in Asia Minor, where full use of the potential qualities of the arabesque is attested from works made in Ḳonya (Plate V, Fig. 3). Because of the Mongol invasions, Central Asian motifs—lotus blossoms, peonies, composite flowers and the like—enrich the vegetal repertoire and remain a constant feature from the second half of the 13th century onwards. The earliest Chinese-inspired floral motifs seem to occur on ceramics, but were immediately adopted also in other media such as metal, wood, glass, textiles and manuscript illuminations. Assimilated to the Islamic tradition and taste, they became favourite motifs in Persian and Central Asian architecture, and by the second half of the 14th century, intricate and organically-growing floral patterns, transformed into flat, coloured faience mosaics,

become a common decoration on religious and secular buildings alike. Thanks to trade relations and wandering workshops, this vocabulary reached also Syria, Egypt and Turkey and brought about a new taste, which preferred a more exotic and less traditional floral répertoire. In the course of the 16th and 17th centuries, Ottoman Turkey in particular excelled in combining a multitude of stalks, buds and flowers from different origins, which in colour and composition remain unique (cf. the wares of Iznīḳ [*q.v.*]).

Although not used as ornaments on religious buildings or objects produced for religious purposes, animals and birds were part of the decorative répertoire from its very beginning. At first they reflect the same artistic traditions as the vegetal ornaments. Yet by the 9th century, first in Mesopotamia, and almost instantaneously in Egypt and Persia also, these animals become less realistic. Their bodies lose plasticity, details such as hair, felt or feathers are replaced by ornaments unrelated to their indigenous shape, and the whole figure is often adapted to the shape of the object it decorates. Or, following the bevelled style of Sāmarrā, the shape of a bird is transformed into an abstract pattern, composed of fully merged three-petalled lotus blossoms, half-palmettes and undulating stems (Plate VI, Fig. 4). In eastern Persia, this abstract style continued for some time, while in Egypt the animal figure become again more realistic. The number of species increases, and on portable objects of art fabulous, occasionally even grotesque creatures figure in the centre of an object as its major decoration. The fascination with imaginary animals, including Far Eastern dragons, unicorns, qilins and the like that appear after the Mongol invasion, culminates between the 12th and 14th centuries. In the following periods, realistic animal figures become less frequent, while Far Eastern creatures continue to appear in Persian and Turkish manuscripts (Plate VI, Fig. 5) and on tiles, textiles, rugs, etc.

As with the vegetal and figural motifs, so do squares, lozenges, circles, polygons and star patterns go back to much earlier civilisations. It was, however, the preoccupation with geometric forms and their development into virtuoso intricacies which, together with symmetry, became a dominating feature in Islamic ornament. Rectilinear patterns constructed of squares divided either diagonally or inscribed within each other were employed by Islamic artisans since early Islamic times. Pattern of lozenges, polygons and stars formed by either raised or recessed bricks feature on 10th to 12th-century Persian brick buildings, and transferred to stone appear in Anatolian stone carvings and on 13th to early 14th-century Persian faience mosaics. By using glazed and unglazed bricks, terracotta tiles and faience mosaics, Persian artisans differentiated between the various forms and highlighted the stellar elements. A good example of tile and faience decoration is the ornamentation of the Madrasa G̲h̲iyāt̲h̲iyya at K̲h̲argird (846-8/1442-5) (Plate VI, Fig. 6), where dark blue and light brown faience mosaics accentuate the centre of the stars, while strips of light blue glazed brick or terracotta and white glazed cut tiles form the overall stellar grid. Similar ornaments were used for the decoration of Ḳur'ān frontispieces, Egyptian 15th and early 16th-century *minbars*, or a wooden Turkish Ḳur'ān box from the mausoleum of Sultan Selīm II. Another decoration generated by geometric forms are stalactites or *muḳarnas* [*q.v.*]. In contrast to the patterns mentioned above, they are three-dimensional, and became one of the most conspicuous architectural ornaments created in the Islamic world. Finally, signatures, foundation inscriptions, quotations from the Ḳur'ān, proverbs and the like, often became the main and only decoration of buildings or objects of art. The latter, documented since the 8th century on ceramic, glass and metal objects, even precede inscriptions on architecture. In the course of the centuries, Islamic calligraphers invented a variety of styles, and the inscriptions became integrated into the rest of the decoration [see K̲H̲AṬṬ]. Limited in time and material is a script in which either the whole letter or part of it assumes a human or animal form. Except for the ornithomorphic script, which appears for the first time on 10th-century eastern Persian ceramics, it is limited to metalwork, produced between the mid-12th and late-13th centuries. Beginning with the early 14th century, inscriptions, written in either *nasKh̲ī* or *t̲h̲ulut̲h̲* styles, became a dominant feature in architecture as well as in minor arts. Mamlūk dignitaries favoured a radiating arrangement of the script which, set in roundels or polylobed medallions, was meant to glorify their names and titles. Perhaps the first sultan who used this device was al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*] in the early 14th century (Plate VII, Fig. 7). These epigraphic roundels were equally favoured by high officers and other members of his dynasty. By the 15th century, only a few Mamlūk rulers continued to write their names and honorary titles in a radiant composition. They re-appear, however, in Ottoman epigraphic roundels of a religious content. The ornamental qualities of the script were fully exploited in epigraphic panels in which the words, made up of unadorned Kūfic letters, form a regular geometric design. This script was exclusively used for religious inscriptions, repeating the name of the Prophet, the names of the Imāms and various saints, or else the Muslim creed or *s̲h̲ahāda* [*q.v.*]. After the mid-13th century, these decorative panels enjoyed considerable popularity in Anatolian, Egyptian and Persian architecture, wood carvings and manuscript illuminations, and this popularity has continued up to the present day.

The most common means of creating an overall pattern was by means of frames and borders, which outlined the primary motifs and set them into medallions, panels, cartouches and arches, giving the pattern an inner cohesion. Due to the survival of antique elements in Syrian, Egyptian and Coptic art, niches and arcades remained a relatively frequent feature until the end of the Mamlūk period. In other instances, round enclosures or arches were provided with lobed outlines, a feature that entered Islam from China long before the Mongol invasion. They often formed continuous bands, decorating objects of art and architectural monuments alike. In patterns where the decorative elements completely eliminated the background, the basic design was repeated in a reciprocating fashion, applicable to larger surfaces as well as to closed panels and frames. Carved with slanting outlines or painted on flat surfaces, they remained in vogue up to about the 14th century, often differentiated by their colour (Plate VIII, Fig. 8). Other methods of creating coherent overall designs involved placing different geometric forms next to each other; determining the structure of a pattern by continuously crossing and overlapping bands, or creating a three-dimensional design by arranging up to four decorative schemes one on top of the other.

Ornaments, however, also communicated—either explicitly or implicitly—certain ideas. Their interpretation remains equivocal. Yet it would seem that, aside from being aesthetically attractive, some of these orna-

ments evoked additional connotations. Among these one may suggest that fruit-bearing trees were recharged with ancient connotations of fertility, conveyed blessings to the deceased in the afterlife and had associations with Paradise. Flowers seem to have conveyed notions of well-being, while arches and arcades, because of their formal resemblance to the *miḥrāb* [*q.v.*], were occasionally charged with religious symbolism. As in the domes of Late Antiquity, which were decorated with whorls and stars, domes were now given cosmological symbolism, transforming a cupola or ceramic bowl into the vault of heaven. This is further enforced by Persian poems, in which the vault of heaven is called *ṭās-i nigūn* lit. "upturned bowl", i.e. "heaven", or *ṭās-i sipihr* "bowl of heaven". Other ornaments with metaphoric qualities are fish and water creatures (Plate VIII, Fig. 9), imitations of jewellery, or animal wheels. It has, however, to be reiterated that our quest for understanding the meaning of ornaments is still at its beginning and awaits future studies in depth.

ZĀKHŪ, local pronunciation Zākhō, a Kurdish town on the Lesser Khābūr river [*q.v.*] in northern ʿIrāḳ, situated about 8 km/5 miles from the Turkish border and 20 km/12 miles from the Syrian border (lat. 37° 2' N., long 42° 8' E.). It became world-famous after the Gulf War (1990) when thousands of Kurdish refugees, fearing retaliation by the ʿIrāḳī army, tried to escape to Turkey but eventually were resettled in Zākhū or near it; as a result, by 1992 Zākhū's population rose to about 350,000 (?), compared to only about 30,000 (?) in 1950.

In addition to the largely Kurdish Muslim population, Zākhū had also a Christian community (Nestorians and Chaldaeans, Armenians, etc. totalling *ca.* 5,000 persons in 1992), and a Jewish community (about 350 families before their emigration en masse to Israel in the early 1950s). However, according to the table in M. Chevalier, *Les montagnards chrétiens du Hakkari*, 285, the estimates of various travellers vary widely. Each community lived usually in a separate quarter, close to its house of worship (4 churches, 2 synagogues, and a few mosques). The Kurds spoke the Kurmāndjī dialect of Kurdish [see KURDS, KURDISTĀN. v.], whereas the Christians and the Jews spoke Neo-Aramaic, each community having its own dialect. Zākhū's commercial and communal life centred around the river, which was, before the advent of motorised vehicles, the main route for the transport of materials from central Kurdistān to the Tigris plains, so that Zākhū was an important shipping centre. About seventy Jewish families in the town were loggers and raftsmen who transported goods and wood to Mawṣil and beyond on large rafts made of logs tied together alone or over inflated sheepskins [see KELEK]. Other typical occupations included peddlers, butchers, weavers (mostly Christians), dyers (Jewish), shop owners (mixed), carpenters, farmers (mostly Kurds), teachers and government officials (mostly Christians). Zākhū may be an old town, and probably identical with the *bēṯ zākhū* ("House of Victory") mentioned in an 11th-century Syriac manuscript (Budge, 183; cf. Fiey, 261, 880: "B[ēt]Zāḥō"). Zākhū has three modern bridges, but a fourth one, made of huge stones and associated with a legend, is popularly assumed to be from the ʿAbbāsid period. The oldest synagogue there had an inscription dated 5568 (= 1798). Social and commercial relations between the communities were generally good, with the Jews feeling secure under the protection of the local Shemdīn *aghas*.

AL-**ZAḲḲĀḲ**, ʿAlī b. al-Ḳāsim b. Muḥammad al-Tudjībī al-Fāsī, Abu 'l-Ḥasan (d. 912/1507), famous Mālikī jurist, whose *laḳab* is explained in the sources as being unconnected with the trade of making skin vessels for holding wine. He studied Khalīl's *Mukhtaṣar* with Muḥammad b. Ḳāsim al-Ḳawrī al-Miknāsī al-Fāsī (d. 872/1468) and al-Mawwāḳ al-Gharnāṭī (d. 897/1492), whose *al-Tādj wa 'l-iklīl* he also transmitted. Al-Zaḳḳāḳ is the author of an *urdjūza* [see RADJAZ] in which he explained the basic principles of the Mālikī legal school, entitled *al-Manhadj al-muntakhab ilā uṣūl al-madhhab* (ms. National Library of Madrid); a commentary was written by Mayyāra (d. 1072/1662). He also wrote a famous *Lāmiyya*, known as *al-Zaḳḳāḳiyya*, of which many mss. are preserved. It was edited by Merad ben Ali, *La Lamiya ou Zaqqaqiya du jurisconsulte maroccain Zaqqaq, manuel maroccain de jurisprudence musulmane*, Casablanca 1927; a commentary was written by Aḥmad al-Mandjūr (d. 995/1587). The *Lāmiyya* shows the existence of solutions in which the *ʿamal fāsī* was adopted. In the last years of his life, al-Zaḳḳāḳ was *khaṭīb* in the mosque of al-Andalus at Fās. Some of his descendants were also famous scholars.

(Maribel Fierro)

ZAḲḲŪM (A.), a tree that figures in Islamic eschatology as growing in Hell, with bitter fruit which the damned are condemned to eat. It is mentioned in the Ḳurʾān three times (XXXVII, 60/62; XLIV, 43; LVI, 52).

The lexicographers explain it as an evil-smelling tree that grows in the Tihāma, but also as a medically beneficial one that grows in the Jordan valley around Jericho; and as a foodstuff of the Arabs, composed of fresh butter with dates (see Lane, 1239a-b). Richard Bell, *The Qurʾān translated*, ii, 556 n. 1, cited as a parallel the same word in Syriac meaning "the hogbean"; Bell must have taken from Payne Smith, *Thesaurus Syriacus*, col. 1148, *zḳwmʾ/zāḳōmā*, citing the agricultural treatise *Geoponika*, 115 l. 20, in which *zḳwmʾ* are something dried in front of a fire before eating, and where the word is probably a corruption of *ḳwmʾ*

ZAKLISE, the Ottoman Turkish name for the Greek island of Zakynthos, Ital. Zacinto, Fr. and Eng. Zante, the southernmost of the Ionian islands, lying off the westernmost tip of the Peloponnese [see MORA].

Lost to Byzantium in 1185, it passed under the control of various Western powers until 1328 when it was seized by the Italian Tocco family, whose Ionian Islands dominions were to prosper till the later 15th century, receiving large numbers of refugees from the Greek mainland. Zakynthos, together with Cephalonia and Levkas/Aya Mavra [see LEVKAS], was briefly captured in late 1479 by Aḥmed Pasha Gedik [*q.v.*], but recovered in the next year by Count Leonardo III Tocco. In 1483, however, the Toccos were driven out by Venice, who secured possession of it and Cephalonia by an annual tribute to the Ottoman sultan, maintained until 1699 (see D. Pitcher, *The historical geography of the Ottoman empire*, Leiden 1972, 65, 86-7, 132 and Map XVI; P. Soustal and J. Koder, *Nikopolis und Kephallonia*, Vienna 1981, 77 ff., 278-9; arts. *Ionian Sea*, *Zakynthos* and *Tocco*, in *The Oxford dict. of Byzantium*, New York-Oxford 1991).

In the long Venetian period, Zakynthos suffered numerous Ottoman naval attacks and raids, in the 16th century commanded by Khayr al-Dīn Pasha, Ṭorghud Re'īs and 'Ulūdj 'Alī [*q.vv.*] (see W. Miller, *The Latins in the Levant*, London 1908, 483 ff.; idem, *The Ionian Islands under Venetian rule*, in *EHR*, xliii [1928], 209-39; A. Krantonelle, *History of piracy in the Tourkokratia*, 2 vols. Athens 1985-91, in Greek). Zakynthians participated in the battle of Lepanto in 1571, in the Russian-incited insurrection of 1770 and in the Greek War of Independence, when the island became a base for insurgents. It had been ceded by the Venetians to the French by the Treaty of Campo Formio (1797); there was a brief Russo-Turkish occupation (1799-1807); a French re-occupation (1807-14); and finally, it became a British protectorate until 1864, when the Ionian Islands were ceded to the kingdom of Greece.

(A. Savvides)

ZALĪDJ (A., pl. *zalā'idj*, also *zallīdj*, a word somehow related to Perso-Arabic *lādjward/lāzward* "lapis lazuli" (see Dozy, *Supplément*, i, 598; idem and W.H. Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'arabe*, ²Leiden 1869, 229), a mosaic composed of fragments of pottery squares with a coloured enamelled surface. The technique involved is more one of marquetry than mosaic, since the pieces are cut into shape according to the place they will occupy in the motif as a whole (G. Audisio, *La marquetterie de terre émaillée (mosaïque de faïence) dans l'art musulman d'Occident*, Algiers 1926, 8). Also attested for this technique is the Spanish term *alicatado* (see Dozy and Engelmann, *op. cit.*, 140). The usage of the term is essentially a Hispano-Maghribī one; the Moroccan traveller Ibn Baṭṭūṭa [*q.v.*] compared *kāshānī* tiles on the buildings of Nadjaf in 'Irāk with the *zalīdj* of his own country (*Riḥla*, i, 415, tr. Gibb, i, 256).

The technique is first attested in ancient Persia and Mesopotamia, e.g. on the palace of Sargon (Seton Lloyd, *The art of the ancient Near East*, London 1963), and then used by the Romans and Byzantines. The use of pieces of marble of different colours runs through the centuries, to appear in a rather clumsy fashion in the Great Mosque of Cordova and in certain pavements at al-Madīna al-Zahrā' [*q.v.*]. For *zalīdj stricto sensu*, the main attestation is at the Ḳal'at Banī Ḥammād [see ḤAMMĀDIDS] (5th/11th century), where one finds enamelled bricks and genuine marquetry (G. Marçais, *Poteries et faïences de la Kalaa des Beni-Hammad*, Constantine 1913). After this, there is the minaret of the Kutubiyya in Marrakesh (586/1190), then the Great Mosque at Tlemcen/Tilimsān (679/1280), where Saldjūḳ influence from Konya is discernible, culminating in the Alhambra at Granada. The Western Islamic lands acquired the appropriate technology and seem to have been culturally propitious for a widening use—perhaps delayed by Almohad austerity—of the art of *zalīdj*, seen in its spread within the dynastic art of the Marīnids and Naṣrids [*q.vv.*].

At first, this use of enamelled marquetry work, resistant to weather, appears on exteriors, and especially on minarets and door surrounds (Chella near Rabat, and Tlemcen) and on the retaining walls of patios. But in the 8th/14th century it was interior use, within rooms that were lived in (especially at Seville and Granada and, to a lesser extent, at Fās), that provide the finest aesthetic usage of *zalīdj*: on pavements, niches, walls and columns, though only exceptionally in *miḥrāb*s and prayer halls. Artists preferred flat surfaces, with symmetrical and repeating designs, usually on the lower parts of surfaces. Animal and human motifs are not found; the few epigraphic examples of these are to be found at Tlemcen and, above all, in the Alhambra (Tower of the Captive, Hall of the Two Sisters). The difficulty of cutting fragments with curved edges explains the rarity of floral decorations, although delicate curvilinear designs are to be found at the Alhambra (the above examples and the Hall of Ambassadors). Likewise rare, apart from a few Egyptian examples, are epigraphic motifs, difficult to execute. Use of the Kūfic script would have allowed the formation of curves and reverse curves, but was no longer fashionable in the 8th/14th century in the Muslim West, where arrangements and geometrical patterns reigned supreme. Rectilinear elements, combined with infinitely repetitive geometrical patterns, characterised Marīnid and Naṣrid decoration, which was inspired by Berber traditions but was adapted to Islamic taste.

(A. Bazzana)

AL-**ZALLĀḲA**, a decisive battle which took place in Muslim Spain near Badajoz (479/1086) and was won by the Almoravids [see AL-MURĀBIṬŪN] in their first encounter with Alfonso VI of Castile.

Alfonso's capture of Toledo (478/1085) posed a great threat to the *Ṭā'ifa* princes of al-Andalus, driving them to seek the help of the Almoravid sovereign of Morocco, Yūsuf b. Tāshufīn [*q.v.*], who responded to their appeal and called on the Andalusī *amīr*s to join his campaign. On learning of the advance of the Muslim troops, Alfonso raised his siege of Saragossa

and sought help from Sancho Ramírez of Aragon and from other Christians beyond the Pyrenees. The ensuing encounter thus assumed the character of a holy war, just one decade before the first Crusade in the East.

The battle of al-Zallāḳa (Span. Sagrajas) took place on the plain of the latter name on the banks of the Guerrero, some 8 km/5 miles north-east of Badajoz, on Friday 12 Radjab 479/23 October 1086; hence the reference to the battle in Arabic sources as *Yawm (al-)ʿarūba* ("Friday encounter").

It is quite clear from the eyewitness account of ʿAbd Allāh b. Buluggīn, the Zīrid *amīr* of Granada, that, in contrast to Alfonso's eagerness to engage in battle, Yūsuf b. Tās̲h̲ufīn was extremely reluctant to do so and even hoped that Alfonso would give up and withdraw.

The Andalusī contingents were led by al-Muʿtamid b. ʿAbbād [*q.v.*], king of Seville, while the Almoravid troops were deployed in such a way as to enable them to join battle as required. When the latter failed to arrive, however, some of the Andalusīs sought refuge within the city walls of Badajoz. The Almoravid sovereign, in the meantime, despatched a force to set fire to Alfonso's encampment, while he himself joined the fray with his big drums resounding like thunder in the hills and wreaking havoc on Alfonso's troops and horses. According to Ibn Abī Zarʿ, it was the Almoravid himself who set fire to Alfonso's encampment and then launched an attack on the Christian troops from the rear, annihilating most of them. Alfonso is said to have escaped with barely 500 survivors.

Details in Arabic sources about the battle have reached us primarily through the exaggerated accounts of later Muslim chroniclers such as al-Ḥimyarī, Ibn Abī Zarʿ and the anonymous author of the *Ḥulal*. It is surprising that the Zīrid *amīr* of Granada, himself a participant in the battle, has little to say about it. He simply refers to the encounter as the battle of Badajoz, and he does not give the day or date on which it took place, nor does he mention his role or that of other Andalusīs in the battle. All that he says is that Alfonso mounted a surprise attack, that Muslim troops were outnumbered, and that the Almoravid sovereign returned to Seville "safe and victorious" (*ʿalā ḥāli salāmatⁱⁿ wa-naṣr*). Could it be that the Zīrid's brief and somewhat casual account is due to the fact that he and other Andalusīs did not distinguish themselves?

His defeat at al-Zallāḳa cost Alfonso the loss of a large number of his seasoned troops, checked the progress of the Reconquista, stopped the payment of tributes to Alfonso by the *Ṭāʾifa amīrs* and, above all, revived the hopes and raised the morale of the Andalusīs. The Almoravid sovereign's popularity with the Andalusī masses and, of course, with the *fuḳahāʾ*, was greatly enhanced. Although the Almoravids did not attempt to recover Toledo, their intervention helped to prolong Muslim presence in al-Andalus, which, to quote al-Marrākus̲h̲ī, had been on the verge of being handed over to the Christians.

(AMIN TIBI)

ZALZAL, Manṣūr b. Djaʿfar al-Ḍārib, famous lute-player at the early ʿAbbāsid court. He was a dark-skinned *muwallad* of humble, possibly "Nabatean" origin from Kūfa [see BARṢAWMA, in Suppl.]. Under the tuition of Ibrāhīm al-Mawṣilī [*q.v.*], his future brother-in-law who gave him an education in "Arab music" (*al-g̲h̲ināʾ al-ʿarabī*), he became one of the rare musicians to be proverbially known as an instrumentalist without being a singer (*aṭrab min ʿūd Zalzal*). He seems first to have appeared at court under the caliph al-Mahdī (*r.* 158-69/775-85). Under Hārūn al-Ras̲h̲īd (*r.* 170-93/786-809) he reached the highest class (*ṭabaḳa*) of court musicians. His best known pupil in lute playing was Isḥāḳ al-Mawṣilī [*q.v.*]. During his lifetime, Zalzal had a well dug in the southern suburbs of Bag̲h̲dād, and thus for centuries the place and the neighbouring quarter were known as Birkat Zalzal.

After having been imprisoned by Hārūn al-Ras̲h̲īd, he is said to have died in 174/790. This date, mentioned by Ibn Tag̲h̲rībirdī (who describes Zalzal as a lute player *and* a singer, and a *mawlā* of ʿĪsā b. Djaʿfar b. al-Manṣūr), can be questioned. Isḥāḳ al-Mawṣilī states that Zalzal's imprisonment under Hārūn al-Ras̲h̲īd lasted for "about ten years", hence, when he was released "his hair and his beard had whitened". Accordingly, he may have died between *ca.* 185/801 and 193/809. In a *k̲h̲abar* related in *Ag̲h̲ānī*[3], v, 280-2, Zalzal is still the hero of a contest with the lute player Mulāḥiẓ in the presence of the caliph al-Wāt̲h̲iḳ (*r.* 227-32/842-7). This text, however, seems to suffer from inconsistency and anachronism. Zalzal's famous name may have slipped into the story to replace that of the less well-known lute player Rabrab, who was a contemporary of Mulāḥiẓ (*ibid.*, xi, 337).

In the history of music, Zalzal finds a place as the inventor of a lute called *ʿūd al-s̲h̲abbūṭ* on account of its shape resembling the round and flat fish of that name. His name is also connected with the introduction of the middle, or neutral, third among the frets (*dasātīn*) of the lute. The interval was called *wusṭā Zalzal* and first described by al-Fārābī [*q.v.*]. It is the characteristic interval of the main mode of Arab music called *rāst* (see MAḲĀM). Al-Fārābī placed it at the ratio of 27:22 between the nut and the bridge of the lute (355 Cents above the pitch of the open string). This corresponds to the modern note *sīkāh* as given by 19th and 20th-century theoreticians from Syria and Egypt (Collangettes; Amīn al-Dīk). Ibn Sīnā defined the *wusṭā Zalzal* differently by giving it the ratio of 39:32 (342 Cents). His value reappeared also in the 19th century, namely, in the scale of Mīk̲h̲āʾīl Mus̲h̲āḳa [*q.v.*].

(H.G. Farmer-[E. Neubauer])

ZALZALA (a.), also Zilzāl, pl. *zalāzil*, earthquake, a fact of life in many parts of the Islamic world, from Morocco to Southeast Asia, a zone that coincides in large part with the great Alpide belt stretching from the Azores to the Indonesian archipelago. Along this zone of collision between the Eurasian plate to the north and various smaller tectonic plates to the south, the main areas of activity within the Islamic heartlands are the Anatolian fault zone, the Dead Sea-Jordan transform fault system, the Red Sea and Gulf of Aden, the Alburz and Zagros ranges in Iran and the Chaman fault in Afghanistan (see Fisher, 11-23; Blake *et al.*, 26-7; Balland, 636-9; Gupta, 61-71; Barazangi; Jackson and McKenzie). (See Fig. 1.)

Earthquakes in Islamic belief, cosmology and science

The earliest surviving study of earthquakes in the Muslim world was written by D̲j̲alāl al-Dīn al-Suyūṭī, the Egyptian polymath (d. 911/1505 [*q.v.*]). His *Ka<u>sh</u>f al-ṣalṣala ʿan waṣf al-zalzala* lists some 130 earthquakes that occurred in the area from Spain to Transoxania, and was inspired by reading a report of the large earthquake of 702/1303 that was strongly felt in Egypt (al-Suyūṭī, 54-5; Ambraseys, Melville and Adams, 44). It is based on a thorough survey of the work of Muslim traditionists and Arabic chroniclers and is the fundamental source for understanding the mediaeval Islamic perception and knowledge of earthquakes (see, especially, Clément).

The name *Sūrat al-zalzala* is given to one of the early chapters of the Ḳur'ān (sūra XLIX), and the imagery of this verse, particularly the phrase *a<u>kh</u>rad̲j̲at al-arḍ a<u>th</u>ḳālahā* "The earth brought forth its burdens", is often used to convey the terror of earthquakes, regarded as one of the forerunners of the Day of Judgement (*yawm al-ḳiyāma* [see ḳiyāma]; cf. Ḳur'ān, XVII, 58-9). Another Ḳur'ānic phrase "We turned their uppermost nethermost" (XI, 84; XV, 74) is also frequently found as a descriptive formula. There is disagreement over whether sūra XLIX is a late Meccan or early Medinan revelation. The experience of earthquakes that possibly lies behind it is recorded in the earliest Islamic traditions (*ḥadī<u>th</u>*), involving the Prophet and his Companions. Following an ancient chronological practice of naming years after a universally significant (and memorable) occurrence, the 5th year of the *hid̲j̲ra* (626-7) was called the "Year of the Earthquake", according to al-Bīrūnī (*al-Ā<u>th</u>ār al-bāḳiya*, 31), apparently with reference to an event in Medina. The very birth of Muḥammad is said to have been heralded by an earthquake that shook the idols in the Kaʿba and damaged the palace of the <u>Kh</u>usraws at Ctesiphon (al-Yaʿḳūbī, i, 5; al-Suyūṭī, 21), clearly a literary fiction. Several stories concerning Muḥammad and the first caliphs give an anthropomorphic portrayal of the earth, which does not know what it is doing and needs correction; ʿUmar b. al-<u>Kh</u>aṭṭāb is particularly violent in lashing the earth with his whip to restore it to order (see e.g. al-Suyūṭī, 22; cf. Clément, 265).

Al-Bīrūnī [*q.v.*] is conspicuous among mediaeval authors for his scientific discussion of geological processes, touching on the effects of earthquakes (e.g. in his *Taḥdīd*, 20-3), and citing Ibn al-ʿAmīd's lost work on the construction of cities, which seems to have taken a practical approach to earthquake hazard. On the whole, Classical theories that attributed earthquakes to subterranean winds or escaping gasses, formulated particularly by Aristotle (*Meteorologica*, 2.7-8, and developed by Seneca, *Naturales quaestiones*, 6.16-17, 20) and probably adopted by Muslim authors such as al-Kindī (see his lost work listed in Ibn al-Nadīm's *Fihrist*, 261; cf. Taher, *Traité*, 133), did not enjoy much currency. In so far as a physical or mechanical cause was envisaged, earthquakes were explained as the movement of the bull on whose horns the world rests, or of the fish which in turn supports the bull, though logically any such movement would shake the whole world rather than a specific region. Similar, but more precise, was the explanation that each territory was underlain by a root that went back to the mountain of Ḳāf [*q.v.*] which encircles the earth; when God wished to punish a people, he ordered the angel in charge to animate the appropriate root (al-Suyūṭī, 1, 3). Al-Muṭahhar al-Maḳdisī (*al-Bad' wa 'l-ta'rī<u>kh</u>*, ed. Huart, ii, 37, tr. ii, 35), would only accept this tradition on the doubtful authority of the *Ahl al-Kitāb*, and says its purpose was to popularise the idea that God was the prime mover, rather than an independent natural cause. Other early Arabic geographers and historians also had a reasonably "philosophical" view of earthquakes, though note al-Muḳaddasī's response to the destruction of Sīrāf on the Persian Gulf (cited in Miquel, iii, 105), similar to Abu 'l-Dardā''s sermon following an earthquake in Damascus in the mid-7th century (al-Maḳdisī, *loc. cit.*).

After the 10th-11th centuries, Muslim theory more generally eschewed even such pseudo-physical explanations and regarded earthquakes simply as the signs of God's will, being sent either to assist, or to warn, or, more usually, to terrify and punish the people, each type of sin meriting a particular correction. However, in view of the numerous contradictions in the writings of the theologians and traditionists, al-Suyūṭī preferred to view earthquakes rather as a sign of God's majesty and power (Clément, 272, 275-8). A later author, Ibn al-D̲j̲azzār, writing in the aftermath of the earthquake of 984/1576, considers even the level of detail given by al-Suyūṭī to be redundant and in bad taste (cf. Taher, *Traité*, 133).

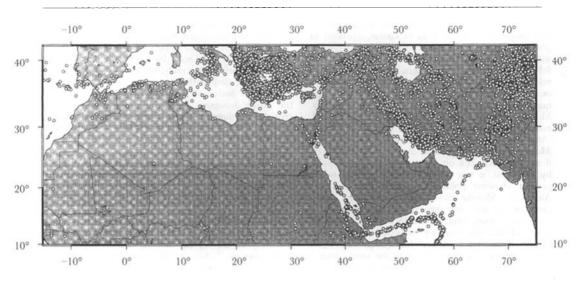
Nevertheless, in common with their European counterparts, Middle Eastern chroniclers were interested in recording earthquakes along with other natural phenomena. Some, such as Ibn al-D̲j̲awzī [*q.v.*], evidently believed that it was among their primary concerns and functions (cf. Rosenthal, 144-5 [on Ibn al-D̲j̲awzī],


Fig. 1. Earthquakes from 1964 to 1997 (International Seismological Centre).
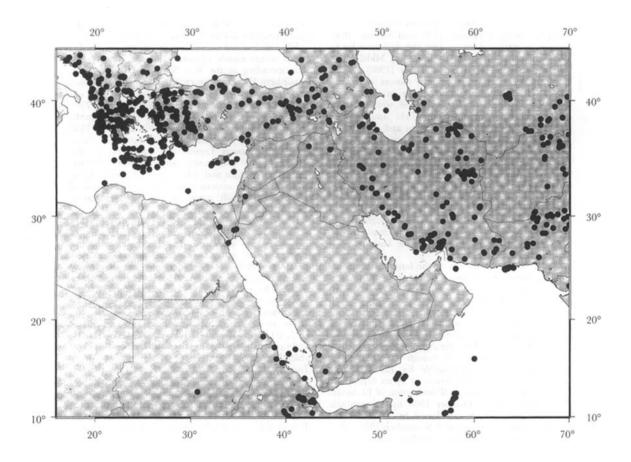

Fig. 2. Earthquakes of magnitude 6 and greater, 1900-98 (J.A. Jackson, *pers. comm.*).

252, 488). News of earthquakes and the destruction they might have caused was, of course, a matter of practical concern, and large events could be reported with a certain amount of detail, including (most usefully for the purpose of modern assessments of seismic activity) the names of the places affected. One outstanding example of this is the report of an earthquake round Ibb in Yemen in 549/1154 (Ambraseys, Melville and Adams, 34-7; al-Maneefi, esp. 151-62), evidently based on a detailed field investigation by al-ʿArashānī. Nevertheless, the title of his (lost) work, *al-Mawāʿiẓ wa 'l-ʿibar*, indicates that here as elsewhere, if any gloss was put on the report of an earthquake by historians, it was normally that the event was a portent of some political or social upheaval (see Ambraseys, Melville and Adams, 7, for some examples), or, as with the theologians, understood as a punishment from God, which encouraged people to repent of their sins (*ibid.*, see index). Al-ʿArashānī also composed another work called *al-Zalāzil wa 'l-ashrāṭ* (Taher, *Traité*, 134), probably with the same orientation. Despite such views, in general the chroniclers do provide a full and often quite factual account of the seismicity of the region and of the largest events that have occurred.

Survey of regional seismicity

Apart from the work of al-Suyūṭī, no reliable integrated catalogue of Middle Eastern seismicity exists. Early works by Tholozan (1879) and Sieberg (1932) were inaccurate and incomplete; the derivative list by Ben-Menahem (1979) for the Levantine Middle East, and the work of Poirier and Taher (1980) for the historical period, based on primary sources (see Taher, *Corpus*), are the most comprehensive in their scope. For the best part of 40 years, the work of N.N. Ambraseys has dominated the field and inspired numerous studies of different regions and periods, the most substantial being on Persia, Egypt and Turkey (Ambraseys, *A reappraisal*). A significant contribution has also been made by researchers taking the Mediterranean world as their focus (e.g. Bousquet *et al.*; Guidoboni *et al.*). This modern, long-term research, which has concentrated on retrieving archaeological and historical evidence of earthquakes in the region as well as early seismological data, though still in progress, has greatly expanded the information available about the seismicity of the Middle East and adjacent areas.

Fig. 2 shows the pattern of the largest earthquakes in the central part of the region since 1900 (magnitude greater than 6.0). As can be seen, many parts of the Islamic lands do not show up strongly on such modern maps of world seismicity, although a few recent events indicate that the risk can be serious, particularly in view of increasing population and poor building techniques. Thus the Agadir (Morocco) earthquake of 29 February 1960, though of moderate size (magnitude 5.9) was responsible for 12,000 deaths. The town was previously destroyed by an earthquake in 1731. In Algeria, the total destruction of El Asnam (Orléansville) on 10 October 1980 by a magnitude 7.3 earthquake was foreshadowed by a smaller but equally disastrous event on 9 September 1954 (M = 6.8), and earlier destructive earthquakes in central Algeria in 1716 and Oran in 1790. The recent seismicity of Tunisia and Libya is low, though an earthquake of magnitude 5.4 caused damage and around 300 casualties at Barce in Cyrenaica on 21 February 1963. Historical evidence is also rather sparse for North Africa, partly due to a dearth of sources and low population density in most of the region. For further details and references, see Adams and Barazangi, 1012-13; Ambraseys and Vogt; Vogt and Ambraseys; Ambraseys, *Libya*; Ambraseys, Melville and Adams.

Similarly, there is no evidence of earthquakes in the Sudan before the mid-19th century (Ambraseys and Adams), despite the occurrence of a large event in southern Sudan on 20 May 1990 (M = 7.2). To the north, however, Egypt has a long history of recorded earthquakes, though few were sufficient to cause significant damage (see Tucker). Most of the stronger shocks experienced originated outside Egyptian territory, in the Hellenic Arc (such as the 702/1303 earthquake) to the north or in the Gulf of Suez–Gulf of Aqaba to the east (e.g. the events of 1212, 996/1588 and 1969). In Egypt itself, the earthquake of 12 October 1992 (M = 5.2), with an epicentre about 10 km south of Old Cairo, caused heavy damage to over 9,000 buildings, killed over 500 people and injured 6,500, a reflection largely of the high vulnerability of the ageing building stock. A previous earthquake on 7 August 1847 was probably a similar event and caused widespread damage and loss of life between Cairo and Beni Suef (Ambraseys, Melville and Adams).

The Arabian Peninsula is one of the most stable areas of the world and it is only in Yemen, in the southwest corner, that significant events have occurred (Ambraseys and Melville, *Yemen*), most recently the Dhamār earthquake of 13 December 1982 (M = 6.1), which killed about 2,500 people. Seismicity in this region occurs mainly offshore along the zone of seafloor spreading in the Red Sea and Gulf of Aden. In northern Ḥidjāz, however, several large earthquakes have been reported in historical times that have not recurred in the instrumental period, notably in 259/873 (al-Yaʿḳūbī, ii, 624), 460/1068 (Ibn al-Bannā', 250-1, 256; Ibn al-Djawzī, viii, 256), and 996/1588 (al-Shādhilī, 64; al-Isḥāḳī, 154), all apparently affecting the area round Taymā' and Tabūk on the Pilgrimage route (Ambraseys and Melville, *Evidence*; Ambraseys, Melville and Adams, 27, 36-2, 56-7). These events are to be associated with the southern end of the Dead Sea fault system at the northwest boundary of the Arabian plate.

It is particularly in this area that the past century of instrumental observation is not representative of the longer-term seismicity. The Dead Sea zone has been extremely active in historical times, in clusters of activity within a few decades, alternating with long periods of seismic quiescence (Ambraseys and Barazangi). The earliest periods are covered by Russell, partly on the basis of archaeological data (see also Guidoboni *et al.*). In the 12th century, Crusader and Arabic sources report major earthquakes on 12 August 1157, 29 June 1170 and 20 May 1202 (Poirier *et al.*; Ambraseys and Melville, *An analysis*), the second of which interrupted campaigning with a temporary truce (Lyons and Jackson, 39). In the early 15th century, a series of destructive shocks culminated in a severe earthquake on 29 December 1408 round Antioch (Ambraseys and Melville, *Faulting*) and again in the 18th century, a disastrous earthquake in the Biḳāʿ (Bekaa) Valley on 25 November 1759 killed between 10 and 40,000 people according to contemporary estimates (Taher, *Textes*; Ambraseys and Barazangi, 4011). The visual evidence for the damage in Baalbek has been investigated by Lewis. All these events were associated with surface faulting and, together with a series of similar events to the northeast during the 19th century, help to delimit an East Anatolian Fault zone that does not show up on the basis of instrumental

data (Ambraseys, *Temporary quiescence*). Details of other, smaller shocks in Syria and Palestine during the Ottoman period are presented by al-Ḥāfiẓ. One of the most severe earthquakes of this century, on 11 July 1927, caused widespread damage and about 500 casualties in the region north of the Dead Sea (Kallner-Amiran, 234-6), but was only of moderate magnitude (M = 6.2).

In Turkey, the North Anatolian Fault zone, delineated by a series of surface ruptures during the present century, has been more or less continuously active throughout recorded history. The largest earthquakes this century (M > 7.0) include those of 9 August 1912 (Saros-Marmara), 26 December 1939 (Erzincan, with more than 30,000 deaths), 18 March 1953 (Yenice Valley), 28 March 1970 (Gediz) and 24 November 1976 (Çaldıran), all causing heavy loss of life (Ambraseys and Finkel, *The Saros-Marmara earthquake*; Ambraseys, *Engineering seismology*, 17-70). The largest historical event along this fault zone was the earthquake of 17 August 1668, felt throughout northern Anatolia, with an estimated magnitude between 7.8 and 8.0 (Ambraseys and Finkel, *The Anatolian earthquake*; eidem, *The seismicity of Turkey*). For earlier centuries, see Guidoboni *et al.*; Ambraseys and White; and for an assessment of risk in Turkey, Kolars).

The Alpide belt continuing east through northern Persia has been the focus of persistent heavy seismicity in both historical and modern times (Ambraseys and Melville, *Persian earthquakes*; de Planhol; Berberian, *Historical record*; idem, *Natural hazards*; Taher, *Grandes zones*). As in the case of Turkey, most of the largest events have also been associated with faulting, and have caused heavy casualties. Among the most significant, from both viewpoints, are the earthquakes of 23 January 1909 (Sīlākhūr), 1 May 1929 (Kopet Dāgh), 6 May 1930 (Salmās), 1 September 1962 (Buyīn Zahrā), 31 August 1968 (Dasht-i Bayāḍ), 16 September 1978 (Ṭabas-i Gulshan) and the recent disaster of 20 June 1990, which killed around 40,000 people in the Rūdbār-Mandjīl area of Gīlān. Given the vulnerability of traditional Persian adobe brick dwellings, even relatively small earthquakes can cause devastation in rural areas.

Among historical events of particular importance are the Ḳūmis (Dāmghān) earthquake of 242/856, a series of destructive shocks in Ādharbāydjān that have ruined the historical monuments of Tabrīz, particularly in 1721 and 1780 (Melville, *Tabriz*; Dhukā'; Berberian, *Natural hazards*, 172-98), and a series of earthquakes in Nīshāpūr that destroyed the mediaeval city (Melville, *Nishapur*). Among the other important cities of Persia, Kāshān was severely damaged by two earthquakes in the 18th century (in 1755 and 1778) (Rota) and Shīrāz suffered a series of damaging events in the 19th century (1812, 1824, 1853 and 1862). Iṣfahān, on the other hand, has seldom been affected by earthquakes, one of the reasons for the survival there of many historical structures, particularly minarets (cf. Mihdī, 86). In contrast with northern and eastern Persia (for which see also the recent study of the 1549 earthquake by Szuppe), the Zagros belt, though clearly delineated by the instrumental record of earthquakes, has generated relatively few large events, much of the deformation occurring along this zone being taken up aseismically. Most of the moderate to large events in 'Irāḳ are associated with the Zagros folded belt; the pattern of historical seismicity (Alsinawi and Ghalib) is distorted by the influence of the chief cities, Mawṣil and Baghdād, on the survival of reported felt data.

Further east, significant activity has been observed on the west-east Herat fault and its extension into Badakhshān, and the north-south Chaman fault zones, the latter associated at its northern end, in historical times, with a violent earthquake north of Kabul on 6 July 1505, felt as far as Agra (Bābur, 247-8; Badā'ūnī, i, 421-2) and at its southern extremity with a magnitude 7.6 event that destroyed Quetta on 30 May 1935 (for further details and references, see Quittmeyer and Jacob; Balland; Gupta, 67-71; and KWAṬṬA). In the same general region, on the modern Indian-Pakistan border and not far from a massive earthquake off the Makrān coast in 1945 (M = 8.0), a major event on 16 June 1819 in the Rann of Cutch caused the formation of the "Allah Bund" along a fault escarpment, with a total vertical displacement of 7-9 metres. The land level changes associated with this event, extensively discussed by Lyell and later supported by Charles Darwin's observations in Chile, were fundamental to the birth of the science of geology. Eight hundred years earlier, al-Bīrūnī had taken for granted the uplift of land from the sea (e.g. *Taḥdīd*, 17-18, 20-1), though it is true he was considering long-term processes rather than extreme catastrophic events.

(C. MELVILLE)

ZAMAK̲H̲S̲H̲AR, a small town of mediaeval Islamic K̲h̲ʷārazm [*q.v.*].

It lay between the small town of Nūzwār and Gurand̲j̲ [*q.v.*], the later mediaeval capital of the province. In the 8th/14th century Ibn Baṭṭūṭa placed it as a village four miles from the "city of K̲h̲ʷārazm", i.e. New Urgenč [*q.v.*], the city which had grown up after the Mongols had in 618/1221 devastated Old Urgenč (= the later Kunya/Kuhna "Old" Urgenč) (*Riḥla*, iii, 6, tr. Gibb and Beckingham, iii, 543). It never seems to have been of more than modest size. Al-Muḳaddasī, 289, mentions that in the later 4th/10th century it had a citadel, prison, congregational mosque, walls with iron gates and a protective ditch with bridges that were drawn up at night. Its subsequent fame came from its having been the birthplace in 467/1075 of the philologist and Ḳur'ān commentator Abu 'l-Ḳāsim Maḥmūd al-Zamak̲h̲s̲h̲arī [*q.v.*]. Al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, vi, 315-16, described it as "a large village like a small town". Whether it was sacked by the Mongols is unrecorded. Ibn Baṭṭūṭa implies that it was still in existence when he visited the great scholar's tomb (*ḳubba*) there in the first half of the 8th/14th century, but thereafter it fades from recorded history; Barthold, *Turkestan down to the Mongol invasion*[2], 148-9, thought that the modern ruins of Zmukhshir almost certainly mark the site of mediaeval Zamak̲h̲s̲h̲ar.

Bibliography: See also Le Strange, *The lands of the Eastern Caliphate*, 454, 456.

(C.E. BOSWORTH)

AL-**ZAMAK̲H̲S̲H̲ARĪ**, ABU 'L-ḲĀSIM MAḤMŪD b. ʿUmar, called D̲j̲ār Allāh, one of the outstanding scholars of later mediaeval Islamic times who made important contributions, first, in the fields of the linguistic sciences of grammar, philology, lexicography and the collecting of proverbs, in which sci-

ences he was, despite his own Iranian descent, a strong proponent of the Arab cause *vis-à-vis* the Persophile partisans of the Shuʿūbiyya [*q.v.*]; and second, in the fields of theology and Ḳurʾān exegesis, his approach to these being that of the Muʿtazila [*q.v.*], of whom he may be considered as one of their last significant representatives. He was born at Zamakhshar [*q.v.*] in Khʷārazm on 27 Radjab 467/18 March 1075 and died at Djurdjāniyya in Khʷārazm on 10 Dhu ʾl-Ḥidjdja 538/14 June 1144, where Ibn Baṭṭūṭa, *Riḥla*, iii, 6, tr. Gibb, iii, 543, was still able to view his tomb.

Al-Zamakhsharī travelled extensively and stayed at least twice in Mecca to study grammar, theology and Ḳurʾānic exegesis, which gained him his *laḳab*. Among his teachers were Abu ʾl-Ḥasan ʿAlī b. al-Muẓaffar al-Naysābūrī and Abū Muḍar Maḥmūd b. Djarīr al-Iṣbahānī (d. after 507/1113-14; al-Suyūṭī, *Bughya*, ii, 276); the latter was held responsible for the introduction into Khʷārazm of Muʿtazilism, of which al-Zamakhsharī became an ardent follower. We do not have much information about his students; among them were the Persian *mufassir* Abu ʾl-Futūḥ al-Rāzī and Abu ʾl-Faḍl Muḥammad b. Abu ʾl-Ḳāsim b. Bāʾidjuk al-Baḳḳāl al-Khʷārazmī (d. 562/1167; Brockelmann, S I, 513); a female student of his, Zaynab bt. al-Shaʿrī, is mentioned by Ibn Khallikān (*Wafayāt*, v, 171 l. 22); his favourite student seems to have been Diyāʾ al-Dīn al-Makkī (Brockelmann, S I, 513; d. *ca.* 550/1155).

Al-Zamakhsharī rejected the aims of the Shuʿūbiyya (*Mufaṣṣal*, 2); for him, Arabic is the language that has been selected by God for the revelation. Those who support the Shuʿūbiyya do not understand that Arabic grammar is the source for all the sciences, whose issues ultimately depend on the comprehension of the Arabic language and its grammar (*Mufaṣṣal*, 3 ll. 8-13). Not only that, but it is also the language that is used as the administrative language by the rulers of the Islamic empires, as shown by the fact that it is the language used on their coins.

Al-Zamakhsharī's most important grammatical work is the *K. al-Mufaṣṣal fi ʾl-naḥw* (ed. J.P. Broch, Christiania 1859, rev. ed. 1879; in the introd., 4 ll. 5-6, he calls it the *K. al-Mufaṣṣal fī ṣanʿat al-iʿrāb*), which is a compendium on Arabic grammar. The most obvious difference between this highly popular work and other grammatical writings, starting with the *Kitāb Sībawayhi*, is the arrangement of the material. Instead of the classic arrangement in syntax, morphology and phonology, al-Zamakhsharī chose to divide the treatment according to the three parts of speech (nouns, verbs and particles, with a fourth section about *mushtarak*, i.e. (morpho-)phonological topics that concern two or three parts of speech, such as *imāla*, *iddighām* and the treatment of the weak consonants). Within the sections on the noun and the verb, he first deals with constructions involving the nominative, then those involving the accusative and, finally, those involving the genitive or the apocopate. Morphological questions such as the diminutive in the nouns or the quadriliteral in the verbs are dealt with after the syntactic questions.

For all topics in the *Mufaṣṣal*, the treatment is similar: each chapter begins with a general definition and a general rule; this is followed by a number of *fuṣūl*, in which exceptions to the rule and special problems are dealt with, supported by quotations from poetry or the Ḳurʾān and including divergent opinions of other grammarians (Kūfan grammarians, for instance, are quoted 18 times). The grammarian quoted most frequently is Sībawayhi [*q.v.*] (73 times); the only other grammarians quoted with any frequency are al-Akhfash al-Awsaṭ (25 times), al-Khalīl (24 times) and al-Mubarrad (13 times) [*q.vv.*]. Al-Zamakhsharī does not very often express a personal opinion, at least not in the *Mufaṣṣal*; nevertheless, some of his divergent views are quoted by later grammarians (cf. Ḍayf 1968, 286-7). In the often-discussed matter of the regent of the predicate in a nominal sentence, he held that it is the *isnād* which governs both the topic and the predicate (*Mufaṣṣal*, 12-13). With regard to declension, he held that the nominal cases represent grammatical functions or meanings (*maʿānī*, whereas the verbal cases do not (*ibid.*, 109; cf. Sāmarrāʾī 1970, 334-9; Ermers 1999, 174-5). His view that the second and the fourth verbal measure differed in meaning in that both are causative, but the former is iterative as well (Ibn Hishām, *Mughnī*, 578), is connected with his general idea that meaning should be reflected in sound and *vice-versa* (cf. Sāmarrāʾī 1970, 285-94; Leemhuis 1977, 9).

With regard to the *shawāhid* used by al-Zamakhsharī, it may be noted that he accepted verses from modern poets (*muḥdathūn, muwalladūn*), such as Bashshār b. Burd and Abū Nuwās (e.g. in *Mufaṣṣal*, 103), as testimony of the language of the Arabs. This is noted explicitly by al-Baghdādī (*Khizānat al-adab*, ed. ʿAbd al-Salām Muḥammad Hārūn, Cairo 1979-86, i, 6-7).

The *Mufaṣṣal* was a popular work; the list in Brockelmann, I 344, S I, 507, contains a total of 24 commentaries, of which the best-known is that by Ibn Yaʿīsh [*q.v.*]. In spite of its elementary nature, the *Mufaṣṣal* has also exercised considerable influence on Western grammars of Arabic. It formed the basis for Caspari's grammar (1848) and, through its English translation by Wright, for all subsequent grammars of Arabic.

Al-Zamakhsharī occupied himself intensively with the *Kitāb Sībawayhi*. He wrote a commentary on its poetical *shawāhid* (Sezgin, *GAS*, ix, 60, quoted by al-Suyūṭī, *Bughya*, 388) and he played an important role in the reception of the *Kitāb*. Humbert (1995, 93-115) has shown that the Çorum manuscript of the *Kitāb* designated as Umumi Usul 2562-5 (completed in 647/1250) is a copy of al-Zamakhsharī's recension of the *Kitāb* (one of the later copies of this manuscript served as a basis for Derenbourg's edition under the siglum A). In this recension, al-Zamakhsharī collated several versions of the *Kitāb*, among them an Andalusī one, and added a large number of glosses from other grammarians, which are still unedited.

Among his other grammatical works (for a complete list with editions and manuscripts, see Brockelmann, I, 345-50, and *EI*[1] art. s.v. [Brockelmann]) are:

1. an excerpt from the *Mufaṣṣal* (*al-Unmūdhadj fi ʾl-naḥw*; Fr. tr. of part of this treatise with commentary by Muḥammad b. ʿAbd al-Ghānī al-Ardabīlī (d. 1036/1626) in de Sacy, *Anthologie grammaticale arabe*, [2]Paris 1829, repr. Osnabrück 1973, 240-80; Ar. text, 99-118);

2. a work on syntax (*K. al-Mufrad wa ʾl-muʾallaf fi ʾl-naḥw*);

3. a work on grammatical controversies (*al-Aḥādjī ʾl-naḥwiyya*; ed. M. al-Ḥaḍarī, Hamā 1969);

4. a commentary on Ibn Durayd's [*q.v.*] *Maḳṣūra*;

5. a collection of 3,500 Arabic proverbs (*al-Mustaḳṣā fi amthāl al-ʿArab*; 2 vols. Ḥaydarābād 1381/1962; cf. Sellheim 1954, 145-51);

6. a commentary on al-Shanfarā's [*q.v.*] *Lāmiyyat al-ʿArab* entitled *Aʿdjab al-ʿadjab* (Damascus 1408/1987). He also wrote a series of *maḳāmāt* containing moral exhortations to himself, on which he himself wrote a commentary.

In lexicography, al-Zamakhsharī wrote a thesaurus of the Arabic language, *Asās al-balāgha* (Cairo 1299/

1882, 1341/1922-3), and a bilingual Arabic-Persian dictionary, *Muḳaddimat al-adab* (ed. J.G. Wetzstein, Leipzig 1843-50); the manuscript of the latter work contains numerous glosses with information about Khwārazmian, the Iranian language of al-Zamakhsharī's country of birth [see ĪRĀN. iii. Languages (c), in Suppl.]. He also compiled a list of expressions used in *ḥadīth* (*al-Fā'iḳ fī gharīb al-ḥadīth*, ed. ʿA. Muḥammad al-Bidjāwī and Muḥammad Abu 'l-Faḍl Ibrāhīm, Cairo 1971), and a geographical lexicon (*Kitāb al-amkina*, ed. M. Salverda de Grave, Leiden 1856).

For al-Zamakhsharī's contribution in the fields of theology, Ḳur'ānic exegesis, and *adab*, see Suppl.

ZAMĀN (A.), time.

1. In philosophy

Time, for those who recognised the authority of the Greeks, sc. the *falāsifa* [*q.v.*], had numerous meanings: it denoted the near millennium and a half that separated them from the "first master", and it signified that of which Aristotle (Arisṭūṭālīs [*q.v.*]) had propounded the theory in the 4th and 8th books of the *Physics*, a work which, ancient though it was, seemed to them as if written only yesterday; see *al-Ṭabīʿa*, ed. ʿAbd al-Raḥmān Badawī, Cairo 1964-65, 2 vols., tr. of the *Physics* by Isḥāḳ b. Ḥunayn [*q.v.*], accompanied by commentaries of Abū ʿAlī b. Samḥ (d. 1207), of Yaḥyā b. ʿAdī (d. *ca.* 364/973-4), of Mattā b. Yūnus (d. 328/940 [*q.v.*]), of Abu 'l-Faradj b. al-Ṭayyib (d. 435/1043) and of a certain "Yaḥyā", under which name John Philoponus is currently recognised (sc. Yaḥyā al-Naḥwī [*q.v.*]); see also P. Lettinck, *Aristotle's "Physics" and his reception in the Arabic world, with an edition of the unpublished parts of Ibn Bājja's "Commentary of the Physics"*, Leiden 1994. This latter work adds to the analysis and paraphrase of the text and glosses appended to Isḥāḳ's translation, the commentaries of Ibn Rushd and Ibn Bādjdja [*q.vv.*] and gives, on the basis of the latter, the text of the ms. of Berlin, lost after the Second World War and recently rediscovered in Cracow). And time furthermore signified that "mobile image of eternity" which the demiurge of the *Timaeus* (37d), having become "Creator", had wanted to add to his work. Definitely, nothing of that with which the *falāsifa* nourished their thoughts was alien to time, to its essence, to its "cause" and to its duration, beginning with themselves and with the combination of distance and proximity which linked them to the Greeks. With the initial developments of *Physics*, iv, 10, setting forth *aporias* on the existence of time, the Arabic encyclopaedic tradition associates the definitions of it given by the *mutakallimūn*: for them, it is something imagined (*mawhūm*) and could indeed not exist (see below).

The *falāsifa*, for their part, were considerably less inclined to doubt its existence and conceived themselves to be its heirs. It was their duty to continue, to make fruitful, or at least to safeguard, that which the Greeks had bequeathed to them. The work demanded, as a condition of feasibility, a "history", a time appropriate to movements, to transfers of knowledge. In different ways, all assumed the representation of a cumulative and threatened science, of a durable culture whose fragile continuity enabled them to learn from their masters and to teach their disciples. All appealed equally for recognition of their right to be instructed by distant nations from which they were separated by history, geography, language and religion. See on this point, for al-Kindī [*q.v.*], the introduction to the *Livre sur la philosophie première*, in R. Rashed and J. Jolivet, *Œuvres philosophiques et scientifiques d'al-Kindī*, ii, *Métaphysique et cosmologie*, Leiden 1998; Arabic text and Fr. tr., 10-14, and in the *Risāla fī kammiyyāt kutub Arisṭūṭālīs* (*Rasā'il al-Kindī*, ed. Abū Rīda, Cairo 1950, i, 362-84) the distinction between a human science and a divine science, 372-3; for al-Fārābī, *Taḥṣīl al-saʿāda*, ed. Āl Yāsīn, in *Al-Fārābī, al-aʿmāl al-falsafiyya*, i, Beirut 1992, 181-2, Eng. tr. M. Mahdi, *Alfarabi's philosophy of Plato and Aristotle*, [2]New York 1969, 43; see also how the *Kitāb al-Ḥurūf*, 2nd part, ed. M. Mahdi, Beirut 1970, gives an account of the "historical" development that has taken place since the invention of language, culminating in the perfecting of logic and philosophy, by way of the creation of religions and the caprices of their transmission. See also the account that Ibn Abī Uṣaybiʿa attributes to al-Fārābī (*ʿUyūn al-akhbār fī ṭabaḳāt al-aṭibbā'*, ed. Müller, Cairo 1882, ii, 134-5, repr. Frankfurt 1995) of the transference from Alexandria to Baghdād of the teaching of philosophy (cf. the recent treatment of this subject by D. Gutas, *The "Alexandria to Baghdad" complex of narratives. A contribution to the study of philosophical and medical historiography among the Arabs*, in *Documenti e studi sulla tradizione filosofica medievale*, x [1999], 155-93); for Abū Bakr b. Zakariyyā' al-Rāzī [*q.v.*], see Abu Ḥātim al-Rāzī, *K. Aʿlām al-nubuwwa*, passim, fragments reproduced in P. Kraus, *Alchemie, Ketzerei, Apokryphen im frühen Islam*, Hildesheim-Zurich-New York 1994, 256 ff., text ed. Ṣalāḥ al-Ṣāwī, Tehran 1397/1977; for Ibn Sīnā [*q.v.*], see D. Gutas, *Avicenna and the Aristotelian tradition*, Leiden 1988, 199-218; for Ibn Rushd, see e.g. *Faṣl al-maḳāl*, ed. G.F. Hourani, Leiden 1959, 9-11.

It is not easy to unravel in the representations of time permeating those of their works which have survived, how much derives from physics, from metaphysics and from cosmogony, from theology, ethics or political philosophy. Al-Kindī and Ibn Rushd devote to the question all or part of several of their works, the former bound to the eastern beginnings of this scholastic tradition, and the latter to his Andalusian upbringing. Several of al-Kindī's letters (see below) devote important considerations to it, while his dialectical monument, the *Tahāfut al-tahāfut*, reserves for it the most vivid, in scale and extent, of its controversies. Between the two, all the *falāsifa*, from al-Fārābī to Ibn Ṭufayl [*q.v.*] by way of Ibn Sīnā [*q.v.*] and Ibn Bādjdja, have reflected aspects of their doctrines in a concept putting them into contact with the

mutakallimūn, since this concept engaged, among other motifs of controversy, the question of eternity (*ḳidam* [*q.v.*]) or of the creation (*ḥudūth*) of the world, but also of the Ḳur'ān, and with it, that of particular providence of causality furthermore; it was necessary for the time of the philosophers to be determined in relation to that which separated, for Islam, the creation of the world from its end and which was punctuated by the revival of prophecies, the so-called "scandal" of miracles and the rhythm of prayers (see L. Massignon, *Le temps dans la pensée islamique*, in *Opera minora*, ii, Beirut 1963, 606-12, R. Brunschvig, *Le culte et le temps dans l'Islam classique*, repr. in *Etudes d'Islamologie*, Paris 1976, i, 167-77).

Encyclopaedic Arabic surveys devote to *zamān* composite and similar treatments; see e.g. Ṣadr al-Dīn al-Shīrāzī (i.e. Mullā Ṣadrā [*q.v.*]), *al-Ḥikma al-muta'āliya fi 'l-asfār al-'aḳliyya al-arba'a*, first *safar*, 3rd part, Tehran 1383 A.H., iii, 115-16; al-Īdjī, *al-Mawāḳif, sharḥ al-Djurdjānī wa-ākharīn*, Istanbul 1286, iii, 49-70 (*al-maḳṣad al-sābi'* and *al-maḳṣad al-thāmin*); Fakhr al-Dīn al-Rāzī (d. 606/1204 [*q.v.*]), *al-Mabāḥith al-mashriḳiyya*, Beirut 1990, i, 755-6 (the article by P. Kraus, *Les controverses de Fakhr al-dīn Rāzī*, repr. in his *Alchemie, Ketzerei*..., 190-218); Abu 'l-Baḳā', *al-Kulliyyāt*, Beirut 1993, 486-7; special mention should be made of the originality of the *Faṣl fī māhiyyat al-zamān min aḳāwīl al-'ulamā'*, in *al-Risāla al-ūlā fī bayān al-hayūlā wa 'l-ṣūra* of the Ikhwān al-Ṣafā' [*q.v.*], i, 13 ff., ed. al-Ziriklī, Cairo 1347/1928.

Al-Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, opens the article that he devotes to time with the mention of the doctrine of "some ancient philosophers" (*ḳudamā' al-falāsifa*). He cites by name only Plato (Aflāṭūn [*q.v.*]) and Aristotle and begins by presenting definitions of time corresponding, with the exception of the first, to those evoked by Aristotle in the doxographical survey of *Physics*, iv, 10, 218a 32-b 18 (*al-Ṭabī'a*, 411-13): "Some declare that it is a substance separated from matter to which no body is attached, and which, by essence, does not accept that it is not (*lā yaḳbal al-'adam li-dhātihi*) and which is thus necessary through itself [...]. Some sages assert that it is the uppermost sphere [...]. Similarly, it is claimed that it is the movement of the uppermost sphere." The order and the sequence of the text testify to the dominance of the *Physics* since these remarks are followed immediately by the definition given by Aristotle himself: "He says: 'It is the measure of the movement of the uppermost sphere." Instead and in place of the first of the definitions mentioned (time is a substance), *Physics*, iv, 10, reveals *aporias* concerning the existence of time. In fact, al-Tahānawī kills two birds with one stone: the substantiality of time makes it possible to refer allusively to the traditions of Arab Neoplatonism (see below) and, turning the first definition into a *petitio principi*—if time existed as a substance, it could certainly not do other than exist, but... does it really exist?—to link the beginning of the Aristotelian treatise to the positions of the *mutakallimūn*: for them, time does not exist. It is valid only in the changing appreciation of discontinuous events, of "new events" (*mutadjaddidāt*) and recurrencies with no connection between them other than the entirely imaginary one where judgement gathers them together as a convenient way of dating them. Al-Tahānawī recalls the definition given it by the Ash'arīs (see also al-Īdjī, *op. cit.*, 69 and al-Djurdjānī, *K. al-Ta'rīfāt*, s.v.): "It is a well-known new event whereby an unknown new event is measured as a means of dispelling obscurity" (*mutadjaddid ma'lūm yuḳaddaru bihi mutadjaddid mubham li-izālat ibhāmihi*); thus in "I shall come to see you at sunrise!", it is well known that sunrise will occur and the ignorance of the moment of the visit is dispelled by its imagined association with the expectation of the dawn. The unreality of time results from its wholly exterior determination (*lā yata'ayyan*), since two persons will date two events by reference to each other, interchangeably; thus it may be said "Zayd came when 'Amr came" and "'Amr came when Zayd came". The definition retains only atomic facts, insular occurrences between which judgement builds imaginary bridges. It accords with that constellation, that "Milky Way of instants" in which L. Massignon recognised the Muslim vision of time and on which the theologians based their occasionalism (see for a critique of this position, J. Berque, *L'idée de temps dans le Coran*, in *Homenaje al Professor Jacinto Bosch Vilà*, Granada 1991, i, 1155-64; the position of al-Ghazālī, as reported and discussed by Ibn Rushd in the *Tahāfut al-tahāfut*, ed. Bouyges, Beirut 1930, 517 ff., illustrates occasionalism).

On the identity of those who saw in time a substance and did not, as Aristotle, see in it an accident, Abu 'l-Baḳā' gives an indication when, in compiling the *Kulliyyāt*, he mentions Plato, attributing to him the opinion that there exists, in the world of commandment (*'ālam al-amr*), a substance which has never begun to be, which modifies itself, changes, renews itself and wears itself out in accordance with things which change and not only with truth and essence. This substance, with regard to the relationship of its essence with fixed things, is called "eternal" (*sarmadī*); it is called "perpetuity" (*dahr*) when it is anterior to things and "time" when it is concurrent with them. It is only superficially paradoxical to attribute to Plato, of whom Aristotle says (*Physics*, viii, 251b, 11; *al-Ṭabī'a*, 810-11) that he is precisely the one never to have subscribed to it, the doctrine which holds that time, in its essence, is intemporal: the essence of time is indeed eternity, if in itself it is no more than "mobile image".

The identity mentioned by al-Tahānawī between time and the movement of the celestial sphere, or between time and the sphere itself can also claim the support of the *Timaeus*, which has the heavens and time born together with the setting in order of "that which was not in repose but moved itself without harmony and without order" (30a, tr. Robin; see de Boer, *EI*[1], art. *Zamān*: the Ancients attributed one and the other thesis, respectively, to Plato and to Pythagoras). Abū Bakr b. Zakariyyā' al-Rāzī avers very explicitly his Platonist allegiance: "That which Plato affirms on the subject of time is not in any way opposed to what I think" (in Abū Ḥātim al-Rāzī, *K. A'lām al-nubuwwa*, in P. Kraus, *Alchemie, Ketzerei*..., 269). He does not believe that he is at odds with the *Timaeus* when he affirms the existence of two quite distinct times: *al-zamān al-lābith* (*lābith* for "delay"), a number of movement of bodies, is concomitant with them, but it has, like the life of a man or the duration of a reign, a beginning and an end, i.e. it is *maḥṣūr*. It takes place in a limitless flux of "now" which, for its part, never stops, an "absolute time" which is extension and perpetuity, and has never begun: *zamān muṭlaḳ*... *huwa al-mudda wa 'l-dahr wa-huwa al-ḳadīm wa-huwa mutaḥarrik ghayr lābith* (*op. cit.*, 268; see for a synthetic presentation of the five principles of al-Rāzī, M. Mahdi, *Remarks on al-Rāzī's principles*, in *BEO*, xlviii [1996], 145-53).

It is in the same tradition of the *Timaeus*, but subject to monotheistic modifications and taken in terms of an entirely different inspiration, that the Neo-Platonist speculations of pseudo-Aristotle belong (see

the recent study by G. Endress, *L'Aristote arabe. Réception, autorité et transformation du Premier Maître*, in *Médioevo*, xxiii [1997], 1-42; C. D'Ancona Costa, *Recherches sur le Liber de Causis*, Paris 1995, and the art. of Maroun Aouad on the *Theology*, in R. Goulet (ed.), *Dictionnaire des philosophes antiques*, i, Paris 1989, 541-90). The *Theology* (ed. ʿAbd al-Raḥmān Badawī, in *Aflāṭūn ʿind al-ʿarab*, ²Kuwait 1977) and the *De Causis* (*K. al-Īḍāḥ fi 'l-k͟hayr al-maḥḍ*, ed. idem in *al-Aflāṭūniyya al-muḥdat͟ha ʿind al-ʿarab*, Kuwait 1977) develop an emanatist cosmogony which sets out the first principle as "the cause of time" (*ʿillat al-zamān*). The former of these apocrypha opens with the following declaration: the intention of the treatise is "to discuss sovereignty, to make appear that which is, what is the first cause, and show that perpetuity and time are subordinate to it..." (ed. Badawī, 6). The fifth *mīmar*, devoted to creation (*ibdāʿ*) denies to the "Creator" any form of temporality: whether they are temporal or not, things are accomplished in Him, complete and perpetual. It is only when they are expressed outside Him that those among them which are temporal "are extended" and "unfold" (*imtaddat wa-nbasaṭat*), that they admit the before and the after and become, to one another, causes of generation (*ibid.*, 67). In his commentary on the treatise, Ibn Sīnā distinguishes between the "domains" which keep the first principle away from generation and corruption: "The superior world is in the domain (*ḥayyiz*) of eternity (*sarmad*) and of perpetuity (*dahr*); it is a fixed world. It is not an innovating (*mutad͟jaddid*) world like that in which deliberation and remembrance supervene (*al-fikr wa 'l-d͟hikr*). The world of innovation (*ʿalam al-tad͟jaddud*) is the world of movement and of time" (*Arisṭū ʿind al-ʿarab*, ed. Badawī, Cairo 1947, 46; see also *al-K͟hayr al-maḥḍ*, 4-5; the first cause is "superior to perpetuity and is anterior to it" (*aʿlā min al-dahr wa-ḳablahu*), the Intellect is with perpetuity and the Soul is in the inferior domain of perpetuity and above time).

The heritage of the *Timaeus* placed in the first rank of philosophical preoccupations the question of eternity or of the creation of the world and of time. The work supported both interpretations, since according to Plotin, Proclus [see BURUḲLUS] and John Philoponus could equally lay claim to it. According to the former, if Plato is entitled to describe the world as a "benevolent god" (*Timaeus*, 34b, 8-9) it is because all reality, sensible or intelligible, emanates eternally from its author: it is a part of him. As for the demiurge, he is himself only an emanated hypostasis; for Philoponus, on the other hand, the demiurge becomes the God, henceforward the sole God, Who one day took the free decision to create the world (see K. Verrycken, *Philoponus' interpretation of Plato's cosmogony*, in *Documenti e studi sulla tradizione filosofica medievale*, viii [1997], 269-318). From Proclus, Ḥunayn b. Isḥāḳ had translated the proofs favouring the eternity of the world (see G. Endress, *Proclus Arabus. Zwanzig Abschnitte aus der Institutio Theologica in arabischer Übersetzung*, Beirut 1973); the *De Aeternitate Mundi contra Proclum* by Philoponus was also translated into Arabic but only a few fragments of this translation have been preserved. The hazards of the transmission of the Greek heritage to the Arabs gave rise to bizarre attributions: Proclus finds himself credited with propositions deriving from Philoponus, which is also the case for Alexander of Aphrodisias (see R. Goulet and M. Aouad, art. *Alexandros d'Aphrodisias*, in *Dictionnaire des philosophes antiques*, 125-39 and Aḥmad Ḥasnāwī, *Alexandre d'Aphrodise vs. Jean Philopon. Notes sur quelques traités d'Alexandre "perdus" en grec, conservés en arabe*, in *Arabic Science and Philosophy*, iv/1 [1994], 53-109). Alexander himself is reputed to be the author of texts that are in fact based on the *Elements of Theology* of Proclus (see F. Zimmerman, *Proclus Arabus rides again*, in *ibid.*, 9-51).

Against Philoponus, Abū Naṣr al-Fārābī aimed a riposte: *al-Radd ʿalā Yaḥyā al-Naḥwī* (ed. M. Mahdi, *The Arabic text of Alfarabi's work against John the Grammarian*, in *Medieval and Middle Eastern studies in honor of Aziz S. Atiyya*, Leiden 1972, 264-84, analysis and Eng. tr. by Mahdi, *Alfarabi against Philoponus*, in *JNES*, xxvi [1967], 233-60). Following Muhsin Mahdi (*ibid.*, 236), it is possible to identify succinctly two camps in this dialectical morass of arguments and attributions. On the side of Philoponus, to varying degrees, were: al-Kindī, Abū Bakr b. Zakariyyāʾ al-Rāzī, the school of Christian philosophers of Bag͟hdād in the 4th/10th and 5th/11th centuries, al-G͟hazālī and Abu 'l-Barakāt al-Bag͟hdādī; confronting them in the opposing camp were al-Fārābī, Ibn Sīnā, Ibn Bād͟jd͟ja and Ibn Rus͟hd. Shlomo Pinès has expressed some reservations regarding this division (*An Arabic summary of a lost work of John Philoponus*, in *IOS*, ii [1972], 320-52, repr. in *The collected works of Shlomo Pinès*, ii, Jerusalem-Leiden 1986, 294-326, 312-13 n. 266). Certainly, real affinities exist between the arguments of al-G͟hazālī (*Tahāfut al-falāsifa*) and those of Philoponus, but al-Bayhaḳī is perhaps exaggerating when he suggests that "the majority of points evoked by al-G͟hazālī (...) are a re-affirmation of the arguments of Yaḥyā al-Naḥwī" (*Tatimmat Ṣiwān al-ḥikma*, ed. S͟hāfīʿ, Lahore 1953, 24, cited in Pinès, *ibid.*, 339). In any case, the belief of Abū Bakr al-Rāzī in a creation of the world and his critique of Aristotle are surely inspired by the religious motifs which al-Kindī and al-G͟hazālī direct towards comparable themes.

Abu 'l-Barakāt al-Bag͟hdādī [*q.v.*], called *Awḥad al-Zamān*, himself occupies a singular place. His *K. al-Muʿtabar fi 'l-ḥikma*, Ḥaydarābād 1356, reviews in two instances, in pages marked by the seal of his throwing off all authority, the question of time (2nd part, 69-70 and 3rd part, 35-6). Instructive in this regard is the critique that he delivers of the distinctions between *sarmad, dahr* and *zamān* which Avicenna, glossing Plotinian texts, insists should insulate the All-Powerful from change. "We have explained that the being in every being (*wud͟jūd kulli mawd͟jūd*) is in an extension (*mudda*) which is time; that it is impossible for a being that is not in time to be represented. Those who, seeking to rescue the being of their Creator from time, affirm that He is in 'perpetuity' and in 'eternity' (*al-dahr wa 'l-sarmad*), even that His very being is perpetuity and eternity, may indeed have changed the names of time, but not its meaning" (*op. cit.*, 3rd part, 41). Abu 'l-Barakāt has recourse to the first certitude: the soul seizes time at the same time that it seizes itself and seizes being, before any other thing. It is a primary notion co-extensive with being: "It would be much better to say that it is the measure of being (*miḳdār al-wud͟jūd*) than declare that it is the measure of movement" (*ibid.*, 39). It follows that the Creator is, just as we are, in time.

Finally, if Ibn Ṭufayl is absent from this roll-call of the opposing camps, it is no doubt because Ḥayy b. Yaḳẓān [*q.v.*], the protagonist of his narration, expounds both theses as a spectator but declines to take sides. The author furthermore professes externally equal allegiance to al-G͟hazālī and to Ibn Sīnā (*Hayy ben Yaqdhân, roman philosophique d'Ibn Thofaïl*, Arabic text and Fr. tr. L. Gauthier, ²Beirut 1936, 61-5 of the tr., 80-6 of the text) and, according to the deductions of Ḥayy, the two positions lead to the same

consequences. Al-Tahānawī speaks as the echo of equivalence: "Know, according to what we have mentioned, that it is the same whether we say 'the world has been created by a temporal creation' (*ḥādith bi 'l-ḥudūth al-zamānī*) as is the opinion of the *mutakallimūn*, or by an 'essential creation' (*bi 'l-ḥudūth al-dhātī*), as is the opinion of the sages."

Al-Kindī often returns to the question of time (see *Oeuvres philosophiques et scientifiques d'al-Kindī*, ch. 2, *Philosophie première*, 26-38; on *L'unicité de Dieu et la finitude du corps du monde*, 135-47; on *La quiddité de ce qui ne peut être infini et que l'on appelle infini*, 149-55; *Pour expliquer la finitude du corps du monde*, 157-65, texts to which should be added the *Sermo de tempore* from the *Liber de quinque essentiis* [Latin text and Arabic tr. by Abū Rīda], in the second volume of this same scholar's edition of the *Rasā'il al-Kindī*, Cairo 1953, 33-5). For the sake of simplicity, his position reverts to the extension to time of the Aristotelian considerations of the *Physics*, iii, 5, 204a, 8-206a, 9, on the finitude of place. Furthermore, the Arabic translation of this last text is matched by a commentary of Philiponus which purports to prove by a mathematical argument the impossibility of an infinite in action and, in particular, that of an infinite time. For Philiponus as for al-Kindī, time must have a beginning and an end (see P. Lettinck, *Aristotle's "Physics"*..., 235-6). Doubtless the arguments of Philiponus would have inspired al-Kindī, who developed some very similar concepts. This heritage takes in his thinking the form of a definition of time which favours the transference to it of the finitude of the body; time is an interval, an extension, an extent measured by movement, *mudda ta'udduhā al-ḥaraka, ghayr thābitat al-adjzā'* (*Risāla fī ḥudūd al-ashyā'*, ed. Abū Rīda, *Rasā'il*..., i, 167). The letter of the definition is not Aristotelian, but its spirit is not so far removed from that continuous quantity which, according to Aristotle, renders time interchangeable with movement in terms of measure (*Physics*, iv, 220b, 14-32). There appears, in any case, a genuine ambiguity in the writings of Aristotle, in the definition of the "now" (is it a simple mathematical limit or *plenum*, totality? See on this subject, V. Goldschmidt, *Temps physique et temps tragique chez Aristote*, Paris 1982, 147-8). This alternative definition is also to be found in a letter attributed to Alexander (*Maḳāla li-Iskandar al-Afrūdīsī fī 'l-zamān*, ed. Badawī, in *Commentaires sur Aristote perdus en grec et autres épîtres*, Beirut 1971, 19-24; see in this regard the article by Aouad in *Dictionnaire des philosophes antiques*, 135). Its stated object is to disclose "the opinion of Aristotle on the nature of time and the demonstration of its quiddity, of its essence [...], without contradicting it in any respect. It is the number of the movement of the uppermost sphere [...], according to another definition, it is an extension numbered by movement".

When al-Kindī specifies the sense that he gives to *mudda*, sc. "extension is that in which there is existence (*mā huwa fīhi huwiyya*), meaning that in which a being is what it is" (*Philosophie première*, tr. Jolivet, 34-5), he transfers to time the limit of space: "The existence of the body of the universe is necessarily finite; it is thus impossible that the body of the universe be eternal" (*ibid.*). For al-Kindī, the world began and it will have an ending (see J. Jolivet, *Al-Kindī, vues sur le temps*, in *Arabic Sciences and Philosophy*, iii [1993], 55-75: "We have shown that body, movement and time did not precede one another in existence; therefore neither body nor movement nor time is eternal, but there is an eternal essence at the beginning of existence" (*Philosophie première*, tr. Jolivet, art. cit., 66).

The position evidently contradicts the Aristotelian deduction of an infinite time and of an eternal movement (see *Physics*, iii, 203b, 13-7; viii, 1, 250b, 11-252b, 7, see respectively *al-Ṭabī'a*, 212-4 and 801-2; Lettinck, *op. cit.*, 217-18 and 563-4, and the arguments of Yaḥyā and of Abu 'l-Faradj). What may be retained from this "demonstration" is the formulation attributed to Alexander in the letter cited above: "The demonstrative proof (*burhān*) that time has neither generation nor beginning nor end is that generation supervenes only in time. We do not say 'he was', 'he shall be', 'he is', 'he was not' except in terms of time, and the same applies when we say 'before', 'after', 'when', etc. If somebody declares: 'previously, this time was not, but it is now' or 'it is now but afterwards it will not be', it follows necessarily that there is a time before time, and a time after the end of time. If the 'before' and the 'after', the 'was' and the 'will not be' did not require time, then the hour, the day and the month would not require it either. In itself, time is one. It does not multiply itself except according to our imagination. In itself it is one, permanent (*dā'im*), continuous (*muttaṣil*), in a single state (*'alā ḥāl wāḥida*)" (*op. cit.*, 24; cf. the *Maḳāla* attributed to Alexander, *fī mabādi' al-kull bi-ḥasab ra'y Arisṭūṭālīs al-faylasūf*, in Badawī, *Arisṭū*..., 264, l. 8: time is exempt from generation and corruption; on this treatise, cf. Aouad's art. in *Dictionnaire des philosophes antiques*..., 135-6). The rest may be presented as the dialectical avatars of this simple argument in favour of the infinitude of time. Reduced to itself and invariably taken up by the encyclopaedias (e.g. Fakhr al-Dīn al-Rāzī, *Mabāḥith*, i, 772-3), it amounts to this paradox: saying that time has an origin or an end amounts to denying that it has an end or an origin.

In the judgement of al-Fārābī, it could be in order to avoid the fate of Socrates (*ḥattā lā yanālahu* [...] *mā nāla Suḳrāṭ*) and to reassure his co-religionists as to his orthodoxy that Philoponus undertook to contradict Aristotle on this point (*al-Radd 'alā Yaḥyā al-Naḥwī, "The Arabic text"*, 277, Eng. tr. in *Alfarabi against Philoponus*, 256-7). But in doing this, he would have chosen to take inspiration from opinions institutionalised in religions, however remote they might be from the nature of things. To obtain a similar outcome without sacrificing the *Physics* of Aristotle, could have been the objective pursued by al-Fārābī himself in the treatment of time in his treatise on *L'harmonie entre les opinions de Platon et d'Aristote* (Arabic text and Fr. tr. Fawzi Mitri Nadjdjar and D. Mallet, Damascus 1999, 128-9; of al-Fārābī's commentary on the *Physics*, only the extracts quoted by Ibn Bādjdja and Ibn Rushd have been preserved): "Time results from the movement of the sphere and it is thus impossible that the creation of the latter should have a beginning in time. It thus becomes certain that [the sphere] results from a creation *ex nihilo* on the part of the Creator on a single occasion without duration in time and that, from its movement, time results." Al-Fārābī would thus preserve the Aristotelian analyses, sc. that, taken as a whole, the world has neither beginning nor end, and render them reconcilable with a Creator-God Who would be, of the world and of time, simultaneously the final and efficient cause (Mahdi, *Alfarabi against Philoponus*, 236; Pines, *An Arabic summary, loc. cit.*). Whatever reservations the Neo-Platonist texts of al-Fārābī may have inspired in him (see e.g. *Tahāfut al-tahāfut*, 179), Ibn Rushd rallies to this position in the *Faṣl al-maḳāl* (ed. Hourani, 19-20; see also *Tahāfut al-tahāfut*, 124, Eng. tr. S. Van Den Bergh, *Averroes' Tahafut al-Tahafut*, London 1954, i, 73) when he accepts

that there exist three classes of beings. The first comprises that which is apprehended by the senses, brought into being by an efficient cause and preceded by time; the second comprises that which is apprehended by demonstration, which derives from nothing and which time does not precede (God); the third comprises the world taken as a whole (*al-ʿālam bi-asrihi*) which no time precedes but which derives from an efficient cause. It does no violence to the text to draw the conclusion that, according to Ibn Rus͟hd, there is strictly speaking no connection between the "creation" of the world which philosophy conceives and the "creation" which the theologians, among whom Abū Ḥāmid al-G͟hazālī stands out, imagine on the basis of a *ḳiyās al-g͟hāʾib ʿalā ʾl-s͟hāhid*. The reproach addressed to the former, of not giving credence to the erroneous results of their own analogies with generation, turns to the advantage of philosophy. It is in the same fashion that Ibn Rus͟hd repels another of the three principal indictments issued by al-G͟hazālī, that of not believing in the divine science of the particulars. As with the preceding question, here time is clearly the nexus of the dispute. Al-Tahānawī alludes to it by saying, if Abu ʾl-Barakāt is wrong and "if the Creator, the Most High, is not in time, there will not be in relation to Him past nor present nor future and therefore from His awareness of things which change there will ensue no change in His awareness".

Ibn Rus͟hd reviews the question. It forms the subject of the *Ḍamīma*, of several lines of the *Faṣl al-maḳāl* (ed. Hourani, 18) and of the thirteenth dispute of the *Tahāfut al-tahāfut* (see on this subject Mahdi, *Averroes on divine law and human wisdom*, in *Ancients and Moderns. Essays on the tradition of political philosophy in honor of Strauss*, ed. J. Cropsey, New York-London 1964, 114-31). The solution of Ibn Rus͟hd is in form very similar to that posited for the preceding question: in terms of knowledge man and God are solely homonyms (*ism al-ʿilm al-maḳūl ʿalayhimā bi-is͟htirāk al-ism*). "To know" is said of one and of the other as *ṣārim* is said of the dawn and of the black night, and *d̲j̲alāl* of a trifle and of enormity (*Faṣl, loc. cit.*). In God, knowledge (as with the other "attributes") added to Himself makes only one. His intellect is His essence; a pure act, it derives its intelligence from knowledge which is inclusive, since it causes all things which are. The *Tahāfut* concludes this point with several lines borrowed from a mystical feeling, the codification of which is associated, perhaps, in the spirit of their author, with the evocation of his senior Ibn Ṭufayl: "Such is clearly what is meant by the opinion of the Ancients when they affirm that God is Himself all the beings, with which He provides us in His munificence (*al-munʿim bihā*) and of which He is the author (*al-fāʿil*). This is why the mystical masters (*ruʾasāʾ al-ṣūfiyya*) say: 'He is that which He is' (*lā huwa illā huwa*). But only those who are rooted in knowledge know this. It does not need to be written, nor should all be required to make of it an article of faith. This is surely why the Law does not teach it. He who reveals it to those who should be ignorant of it commits a fault, as does he who hides it from those who should know it" (*Tahafut al-tahafut*, 463).

2. In the sense of timekeeping. See the entry Time in the *Index of subjects*.

ZAMĪNDĀR (P., lit. "land-holder"), a term used in Muslim India for landowners, possessors of estates.

It seems to be a term of exclusively Indian origin; it does not appear in pre-modern lexicons compiled in Persia, while, on the other hand, it occurs in fairly early Persian texts and in lexicons compiled in India. It is defined in an 8th/14th-century dictionary, the *Farhang-i Ḳawwās* as "controller of a territory". The historians Ḍiyāʾ Baranī (d. 758/1357 [*q.v.*]) and S͟hams Sirād̲j̲ ʿAfīf (d. *ca.* 802/1400 [see S͟HAMS AL-DĪN. I. SIRĀD̲J̲ ʿAFĪF]) employ it generally for Hindu chiefs outside, as well as within, the limits of the Dihlī Sultanate. But by the second half of the 8th/14th century, the sense was extended to cover all holders of superior rights over land: in 754/1353, in a royal proclamation, village headmen (*muḳaddams*), land holders appointed by the administration (*mafrūḍiyān*) and landowners (*mālikān*), are all put under the general designation of *zamīndārs*. Yet until the reign of the Mug͟hal emperor Akbar (*r.* 964-1013/1556-1605 [*q.v.*]), the term does not seem to have obtained wide currency. It does not, for example, appear in Bābur's *Memoirs*.

The term seems to spring into wider use in texts written after 988/1580. The *Āʾīn-i Akbarī*, the great official manual and statistical record compiled by Abu ʾl-Faḍl ʿAllāmī (in 1003/1595 [*q.v.*]), adopted it (together with what was deemed to be its synonym, a freshly-coined term, *būmī*) as a blanket term for all rural superior holders of rights over land, in whatever varied ways the right might have originated, whether by its holder being the descendant of earlier chieftains, or having risen to local eminence through subordinating peasants to himself, or obtaining the land or any kind of right over it by purchase. Generally, however, the *zamīndār* was not part of the state apparatus, and his rights or jurisdiction did not derive from the Emperor's own nomination. But from Awrangzīb's reign (1068-1119/1659-1707), grants or even temporary assignments of *zamīndārī* rights begin to appear.

Moreland's assumption that the term was exclusively used for chieftains and that *zamīndārs* were not present in directly-administered areas of the Mug͟hal empire, no longer holds when considered in the light of the tabulation of *zamīndār* castes in the *Āʾīn-i Akbarī* and the extensive documentation from the 11th/17th century that is now available.

The universalisation of the term *zamīndār* in Mug͟hal administrative use was brought about by its replacing various local terms for corresponding agrarian rights, such as *satārahī* and *biswī/bīsī* in Awadh, *bhaum* in Rad̲j̲asthān, *bānth/vanth* in Gud̲j̲arāt and *vartana* in Mahārāshtrā (whence the *waṭan* of 12th/18th-century Mahārās͟htrā). The actual features of the right became subject to some general imperial regulations. It was held to be a proprietary right (*ḥaḳḳ-i milkiyyat*) and as such could be freely sold and purchased (except in case of chieftaincies), and was inheritable according to Hindu and Muslim laws. Women could also accordingly be *zamīndārs*. It entitled the holder to certain customary claims over the peasant's land (a particular charge or fee on harvest) together with levies on jungle and water produce. He was also paid an allowance (*nānkār*) out of the land-revenue (*māl/k͟harād̲j̲*), it being expected that he would collect the land revenue due from peasants within his jurisdiction. Should he fail to do so, he could be removed from a role in tax-collection, but then an allowance known as *mālikāna*

("proprietor's allowance" [see MĀLIKĀNE]) was still held to be due to him; this amounted generally to a tenth of the land revenue, except for Gudjarāt, where it amounted to a quarter.

There is some evidence that the *zamīndār* was entitled to allot uncultivated land to peasants and the *ḳāḍī* Muḥammed Aʿlā (early 12th/18th century) would even allow him the right to evict peasants, though in conditions of land abundance the right was not of much consequence.

The *zamīndārs*' territories were paralleled by those known as *raʿiyyatī* or purely peasant-held, which theoretically had no *zamīndārs*. Such villages might by sale or even by imposition of *zamīndārs* by the state, get converted into *zamīndārī* villages; conversely, *zamīndārī* villages might become *raʿiyyatī* by the decline or dispersal of the original *zamīndārs*.

The *zamīndārs* were of use to Mughal administration primarily as revenue-payers and revenue-gatherers. *Zamīndārs* who paid revenue not only on their own jurisdictions but also on those of other *zamīndārs*, began to be called *taʿallukdārs*, from the late 11th/17th century onwards. Inevitably, in many cases, the *zamīndārs* came to be treated almost on a par with other revenue officials, as in Awrangzīb's *farmān* to Rasikdās (1075/1666).

An essential attribute of *zamīndārī* was the maintenance of armed retainers by the *zamīndār*, a right fully recognised by the Mughal administration, as is evident from the testimony of the *Āʾīn-i Akbarī*, which gives the number of *zamīndārs*' retainers in the entire empire as exceeding 4.4 million and then goes on to give a detailed break-down of these figures by localities. These retainers were mainly foot soldiers (4,277,000) but also included 385,000 cavalry; *zamīndārs* in some localities are also shown as possessing elephants, guns and boats. The larger *zamīndārs* could also maintain their castles (*ḳilaʿčas* and *gaṛhīs*). The maintenance of an armed force was an essential means for enforcing their rights; and however much the Mughal authorities felt irritated by this presumption and possible potential for sedition, they themselves often needed the *zamīndārs*' assistance to collect the revenue.

The British in the beginning tended to treat the *zamīndārs* in the same manner as their Mughal predecessors. But the East India Company's drive for maximum revenue led to a financial crisis in Bengal, for which the system of Permanent Settlement was proposed as a solution. Proclaimed in 1203/1789 and confirmed in 1206/1792, this decreed the *zamīndārs* to be proprietors of the land but fixed a perpetual tax on them, which was theoretically set at $^{10}/_{11}$ of the rental, thus leaving only one-eleventh for the *zamīndārs*. It took time for *zamīndārs* to grow into landowners, helped partly by a slow expansion of cultivation and the 13th/19th-century inflation. A modified, short-term (and harsh) settlement was made with *zamīndārs* in upper Gangetic areas (1237/1822) and a very liberal one with the Pandjāb *zamīndārs* later in the century. On the other hand, settlements in the Madras and Bombay Presidencies (1230s/1820s) were termed "ryotwari" (*raʿiyyatwārī*), the revenue being fixed on the fields, and theoretically (though not so much in practice) excluding the *zamīndārs*. Here, too, commercialisation often led to the growth of landlordism which, in popular eyes, was seen to be a new form of *zamīndārī*.

In independent India, agrarian reform has especially been directed against the growth of landlordism; and the U.P. Zamindari Abolition Act of 1951 was the first important measure in this direction, followed by other laws of various degrees of radicalism in other states of the Indian Union.

(SHIREEN MOOSVI)

ZAMĪNDĀWAR, the name found in pre-modern usage for a region of what is now eastern Afghānistān, also appearing in mediaeval Arabic usage as its Arabic equivalent Bilād al-Dāwar. The region straddled the courses of the upper Helmand river and the Arghandāb to the north of their confluence at Bust, hence it was bounded on the north by Zābulistān and al-Rukhkhadj [*q.vv.*] on the south and southeast, but the boundaries of all these regions were indeterminate, and Zamīndāwar, in particular, seems often to have been confused in the sources with that of Zābulistān.

The early Arabic geographers and historians mention it, usually as Bilād al-Dāwar, in connection with Arab raids from Sīstān and Bust into the region [see the references for these given in AL-RUKHKHADJ and ZĀBULISTĀN]. When the Arabs raided from Sīstān and Bust towards the end of the 7th century, Bilād al-Dāwar is mentioned as having its own *marzbān* (al-Balādhurī, *Futūḥ*, 394). The celebrated shrine of the local deity Zūn or Zhūn [*q.v.*], cult centre of the local rulers, the Zunbīls, was located in Zamīndāwar. J. Marquart and J.J.M. de Groot, *Das Reich Zābul and der Gott Zūn, vom 6.-9. Jahrhundert*, in G. Weil (ed.), *Festschrift Eduard Sachau*, Berlin 1915, 280-1, 287, saw the title Zunbīl as a theophoric one going back to an MP original, **Zūn-dātbar* "Zūn the justice-giver" or **Zūn-dādh* "given by Zūn"; in the first case, the geographical name Zamīndāwar would also reflect this, from **Zamīn-i Dātbar* "land of the justice-giver".

In the 4th/10th century the *Ḥudūd al-ʿālam*, tr. Minorsky, 111, comm. 345, mentions as amongst its towns Till or Dartall and Darghash, situated on the right bank of the Helmand, which were frontier posts (*thughūr* [*q.v.*]) against the pagan region of Ghūr [*q.v.*]; other towns mentioned by the geographers include Baghnīn and Sarwar. The Ghaznawid historian Bayhaḳī states that peacocks were bred in Zamīndāwar; that Maḥmūd of Ghazna regarded it as blessed because it was the first place his father Sebüktigin gave him to govern; and that on two or three occasions Maḥmūd used it as the base for attempts to raid into Ghūr (*Tārīkh-ī Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1945, 111, 113, 120). The name of the province continued in use long after the Ghaznawid period.

D̲j̲ūzd̲j̲ānī mentions it several times. Bābur campaigned there in *ca.* 928/1522 against the Arg̲h̲uns (*Bābur-nāma*, tr. A.S. Beveridge, London 1922, 27, 337-9; cf. also Mīrzā Muḥammad Ḥaydar Dug̲h̲lāt, *Tārīk̲h̲-i Ras̲h̲īdī*, tr. Elias and Ross, London 1895, 202); but in recent times the name seems to have dropped out of use.

Bibliography (in addition to references given in the article): Marquart, *Ērānšahr*, 37 and index s.v. Dāwar; Le Strange, *The lands of the Eastern Caliphate*, 339, 345-6. (C.E. BOSWORTH)

ZAMM, a town on the left bank of the Oxus river [see ĀMŪ DARYĀ] in mediaeval Islamic Central Asia.

It lay some 190 km/120 miles upstream from Āmul-i S̲h̲aṭṭ [see ĀMUL. 2.] in the direction of Tirmid̲h̲ [*q.v.*], hence this Āmul was sometimes called "the Āmul of Zamm", from Zamm's being the next crossing-place along the river (see e.g. al-Balād̲h̲urī, *Futūḥ*, 410). Zamm was significant as a crossing-place connecting K̲h̲urāsān with Mā warā' al-nahr [*q.vv.*]. It figures in historical accounts of the early Arab invasions of Transoxania as an entry-point for armies aiming at Paykand, Buk̲h̲ārā, etc. (e.g. *ibid.*, 420; al-Ṭabarī, ii, 1145-6, 1186, 1189, 1198, 1548, 1584-5). In the account of al-Ḥad̲j̲d̲j̲ād̲j̲'s operations against the rebel Ibn al-As̲h̲ʿat̲h̲ [*q.v.*] there is mentioned in Yazīd b. al-Muhallab's forces the *ṣāḥib* of Zamm, G̲h̲azwān b. Iskāf, who had converted to Islam at al-Muhallab's hand (*ibid.*, ii, 1078). The 4th/10th century geographers often group Zamm administratively with Ak̲h̲sīsak on the opposite bank of the river and say that it was the same size as Āmul; according to al-Muḳaddasī, Zamm was a considerable town with a covered market and a congregational mosque. Al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, vi, 321-2, and Yāḳūt, *Buldān*, ed. Beirut, iii, 151, mention various *ʿulamā'* from the town.

Ancient Zamm is marked by the modern town of Kerki (lat. 37° 53' N., long. 65° 10' E.), now within the Turkmenistan Republic.

ZAMZAM (A.), the sacred well located at the perimeter of the sacred complex of Mecca. It is situated to the east of the Kaʿba [*q.v.*] alongside the wall where the "Black Stone", *al-ḥad̲j̲ar al-aswad*, is enshrined, a little further from the centre than the *maḳām Ibrāhīm* [*q.v.*], the "station of Abraham". The well is currently a subterranean arrangement, also opening towards the east. The sacred water is distributed through taps (on earlier architectural features since the beginning of the ʿAbbāsid era, see M. Gaudefroy-Demombynes, *Pèlerinage*, 77-80, where is found information concerning the *ḳubba* [*q.v.*], the basin for ablutions and the circular basin around the curb-stone of the well where water for drinking was collected in buckets and lifted with the aid of a system of pulleys, to be subsequently transferred to pitchers or earthenware casks).

The noun *zamzam* is of onomatopoeic type. It is apparently to be associated with the qualificatives *zamzam* or *zumāzim* which denote, according to mediaeval Arabic dictionaries, an "abundant supply of water", *mā' zumāzim* = *kat̲h̲īr* or, reverting to a regular sense of *mā'* in ancient contexts, a "water-point" regarded as "never drying up".

In the Islamic textual sources of the ʿAbbāsid period, the Meccan well is integrated into a mythic discourse on the past which goes far beyond what seems to be authorised by the Ḳur'ānic text, which does not refer directly to the well. This mythic discourse can no longer be regarded as relating historical facts. A brief list of the numerous versions of accounts relating to the sacred well is to be found in Yāḳūt, *Muʿd̲j̲am al-buldān*, which reviews earlier data (s.v. *Zamzam*). The modern survey which, in the most thorough fashion, provides traditional information as well as references from the classical era to the administration of the well and the rituals associated with it, is that of M. Gaudefroy-Demombynes in *Le pèlerinage à la Mekke*, Paris 1923, 71-101; for the caliphal period, he relies especially on accounts relayed by Abu 'l-Walīd al-Azraḳī (d. 249/858) in his *Ak̲h̲bār Makka*, ii, 39-61; he also quotes important visual evidence which the Andalusian pilgrim of the second half of the 6th/12th century, Ibn D̲j̲ubayr, conveys in his *Riḥla* on the administration of the well and the veneration with which it was treated, a text expertly annotated by Demombynes in *Ibn Jobair. Voyages*, Paris 1949, introd. 15, tr. 103-4, 154, 162-6.

Explanations given in these mythic accounts are mostly constructed according to the sense—also of onomatopoeic type—which associates the qualificatives *zamzam* and *zumāzim* with a dull sound. This sound can apply equally well to a distant roll of thunder presaging rain, or to any guttural sound with closed mouth emitted by an animal (camel or horse, etc.) or by a man. In the last-mentioned case, it refers to a murmuring perceived as unintelligible and therefore ultimately as the vehicle for sacrality and for mystery. The abundant water of the water source could also be associated with this basic notion of sound.

The mediaeval Arabic sources generally attribute the murmuring of the *zamzama* to the sayings or to the prayer of the Zoroastrians [see AL-MAD̲J̲ŪS; ZAMZAMA]. Their association with the well of Zamzam is described in the following fashion: they made regular pilgrimages to Mecca on account of "their kinship with Abraham" (*sic*), and are said to have prayed, according to their own custom, over the sacred well. This account is relayed by the polygraph al-Masʿūdī (whom Yāḳūt quotes by name; a passage effectively attested in the *Murūd̲j̲*, in the chapter *d̲h̲ikr ansāb fāris*). In another version relayed by Yāḳūt (who is content to pass on successive explanations without expressing a preference for any of them), it is the angel Gabriel, D̲j̲ibrīl, himself who is said to have murmured thus over the well, bearing in mind the fact that, in the sacred but non-Ḳur'ānic accounts relating the legend of Hagar and her son Ismāʿīl, brought by Abraham to Mecca, it is the angel who makes an inexhaustible supply of water spring up for the woman and the child who are on the verge of dying of thirst (Ibn His̲h̲ām, *al-Sīra al-nabawiyya*, i, *d̲h̲ikr ḥafr zamzam*). Another account that is definitely later is even further from any context of origin. It is relayed by al-ʿAynī, the annotator of al-Buk̲h̲ārī (quoted by Gaudefroy-Demombynes, 73) in his *ʿUmdat al-ḳārī'*. This account, which does not feature in the work of Yāḳūt, loses all etymological association with the word. According to al-ʿAynī, the noun *zamzam* is to be understood as deriving from *zamāzima*, the precious "bridles" that the eponymous ancestor of the Sāsānids is supposed to have donated to the well.

However, it is apparent that not all of these accounts are of the same period or of the same provenance or purpose. An attempt to establish a chronology would be a worthwhile project. Thus the accounts relayed by Ibn His̲h̲ām and, in part, those of al-

Azraḳī, seem to belong to a more ancient stratum than those of al-Masʿūdī. The account of the pilgrimage of the Zoroastrians is not mentioned before the latter. On the other hand, there is very early reference to the story of Hagar and the discovery of the source of water (which was to be embellished and amplified in the later versions such as that of Yāḳūt) as well as the rediscovery of the source, accompanied by miraculous signs, attributed to ʿAbd al-Muṭṭalib, the grandfather of Muḥammad. In the latter case, it is a typical revival story. This is taken to justify the function of giving water to pilgrims, *siḳāya*, which was to remain in the lineage of al-ʿAbbās, one of the sons of ʿAbd al-Muṭṭalib, uncle of Muḥammad and ancestors of the ʿAbbāsid dynasty (on the *siḳāya* and the composition of the beverage known as *sharāb, nabīdh* or *sawīḳ*, prepared by macerating raisins and subsequently dates—ingredients which could be pressed by hand, yielding a fermented liquor which was rapidly transformed by the heat into vinegar—doubtless to improve the taste of the water, see Gaudefroy-Demombynes, *Pèlerinage*, 90-4).

Before its revival by the family of Muḥammad, the water source which had sprung up "in the time of Hagar" was dried up by God on account of the misconduct of the Djurhum [*q.v.*]. This tribe, supposedly of Yemeni origin, is associated with Ismāʿīl, who is said to have married into the tribe once he had settled in Meccan territory. Various accounts tell of this alliance, which is said to have been blessed by Abraham himself in the course of his visits to Mecca with the intention of finding his son.

The grandfather of Muḥammad is supposed to have found in the well that he had just rediscovered offerings consisting primarily of gazelles cast in gold and precious swords. Al-Masʿūdī sees this as proof of the coming of "Persians" to Mecca since, according to him, the local tribes would have been incapable of contributing such luxuries (*Murūdj*, ed. Pellat, Paris 1962, i, 215, 216; tr. and commentary on numerous accounts relating to Zamzam and to this episode, J. Chabbi, *Le Seigneur des tribus*, Paris 1997, 163-9, and 34-5 on Ḳurʾān, XIV, 35, 37). The last representative of the "Magians" is said to have been Sāsān, ancestor of the dynasty of the same name. The Sāsānids (destined to be vanquished by the Muslims) would subsequently turn away from this cult. According to this vision, which could be described as opportunist, converted Iranians are said thus to have rediscovered, through Islam, the lost religion of their forebears, making a form of return to sources. Wellhausen, *Reste arabischen Heidentums*, ²Berlin 1897, reckoned that, if offerings were brought to the Meccan site (without commenting on their nature, since the precious objects evoked is more than problematical), they would have been destined for the dry well located in the sacred enclosure of the Kaʿba rather than for the well of Zamzam with its plentiful water, even if it is the latter which seems to monopolise the accounts. The former, adjacent to the functioning well and situated in a place infused with sacrality, could have played the role of a simulacrum in a ritual of donation.

However, it does not appear that any of these accounts is associated with a Ḳurʾānic theme. On the contrary, in the vulgate, Abraham leads his family to Mecca for their safety (XIV, 35, 37). All of these narratives seem to derive from the exegetical imagination emanating from various milieux of the early ʿAbbāsid period. The models then constructed were clearly directed towards the quest for foundation stories, intended to establish a new Muslim identity which would become common to populations of different origin and traditions. The Persianisation of the account, as presented by al-Masʿūdī, is utterly foreign to the Ḳurʾān. It therefore appears, in this respect, particularly significant.

Even if these sacral accounts attributing a supernatural origin to the discovery of the water are left aside, it appears that the presence, and probably the consecration, of the well must have been considerably anterior to the Muslim period. In the absence of archaeological elements which have long been inaccessible, a hypothesis of historical topography should be proposed. It could be thought that the presence of this probably perennial water (Wellhausen describes it as a *Quelle*, a spring which is said to have been the only Meccan water, *Reste*, 76, n. 2; Gaudefroy-Demombynes relays the information given by mediaeval Arab geographers, according to which the well was allegedly supplied by three springs, *Pèlerinage*, 81; given the orientation of these springs, "towards the Black Stone", for example, it might be thought that myth is already beginning to dictate the narrative), in a place which is the confluence of numerous dry valleys in the lowest part (vulnerable to occasional flooding by pluvial streams; dates of devastating floods of the Muslim era are supplied by Gaudefroy-Demombynes, *op. cit.*, 39-41) of the Meccan site, called *al-Baṭḥāʾ*, the "hollow" or *baṭn Makka* "the belly of Mecca" (in the sense of cavity or basin for the retention of water).

It is on the basis of this singularity of terrain that the installation came about of the betylic complex which probably constituted the original perimeter of the Kaʿba and its adjacent sacred stones (al-Ṣafā and al-Marwa). This sacred complex would have taken precedence over the water-point, relegating it to second place in ritual and in representation.

Wellhausen had already proposed the hypothesis of the origin of the site on the basis of the water-point in his *Reste*, 76-7. The complex would then have pursued what was most likely to be a local development (there is no case, in fact, for adhering to the notion, all too evocative of an Islamic ideal, of the sacred Meccan site radiating its influence over the whole of Arabia), culminating in the "visit", *ʿumra*, to the sacred places of the city. The *ʿumra* [*q.v.*], often known as "Lesser Pilgrimage", probably attracted other citizens of western Arabia, Yathribīs and people of the neighbouring city of al-Ṭāʾif, but certainly not the prosperous Bedouin herdsmen of Nadjd. The Meccan visitation was apparently characterised by circumambulations (*ṭawāf* [*q.v.*]), still practised today, but also by sacrifices on various sacred rocks. That of al-Marwa is said to have been named, significantly, the "feeder of vultures", *muṭʿim al-ṭayr*. Such sacrifices are well attested before Islam (Wellhausen, *Reste*, 78) and even in ancient Muslim tradition (Chabbi, *Seigneur*, 322-4, 327-9). But this *intra-muros* sacrifice was subsequently to disappear, as did all the other Meccan sacrifices, to the benefit of the exterior site of Minā. The specifically Meccan pilgrimage of the *ʿumra* was thus to be distinguished from the unified pilgrimage with departure from the site towards ʿArafāt which was to become the Muslim pilgrimage (a combination of a pilgrimage of herdsmen, the *ḥadjdj*, with that of the *ʿumra* specific to Mecca). The instituting of the larger pilgrimage should thus be placed at the extreme end of the Medinan period with the "pilgrimage of farewell", *ḥadjdjat al-wadāʿ*, in the tenth year of the Hidjra, shortly before the death of Muḥammad.

Gaudefroy-Demombynes (*Pèlerinage*, 81) writes with

justification that "the cult of Zemzem... has not taken its place (in the pilgrimage) in the form of an obligatory rite"; he also draws attention (74-5) to doubts regarding "the sovereignty of Zemzem" under the Umayyads, who are said to have confiscated a spring on Mount Thabīr and to have used it to improve the supply of water to the lower city of Mecca. This aroused the hostility of the inhabitants, even though the water thus provided was more pure and more pleasant to drink than that of the sacred well.

Despite this downgrading of this cult at Mecca, the fervent faith of pilgrims, from early Islamic times to this day, has not ceased to lend outstanding qualities to the water of the well of Zamzam, which is perceived as bearer of *baraka* and as a "curative source" (*ibid.*, 81-2). It is stressed that Muḥammad drank this water and used it regularly for various purposes (prophetic traditions are to be found in Wensinck, *Concordance*, index of places, viii. In his article on Zamzam, Yāḳūt attributes to Mudjāhid, taken to be a habitual transmitter of Ibn ʿAbbās, the following words: "If you drink at Zamzam in the hope of a cure, God will cure you; if you are thirsty, God will quench your thirst; if you are hungry, God will satisfy you!" This fervour has led to modes of conduct which can be described as being of a magical type (e.g. linen dipped in the holy water to serve later as a shroud, calculated to avert the anger of certain jurists, Gaudefroy-Demombynes, *Pèlerinage*, 85; the question of ablutions, and which parts of the body may be sprinkled with the water of Zamzam is also posed, *ibid.*, 86). *Zamzamiyyāt*, small phials (of clay or metal) sealed and sold as containing water from the sacred well, are still today highly-prized by pilgrims and taken back by them to their own countries (on the role of accredited and licensed drawers of water, the *zamāzim*, pl. of *zamzamī*, since mediaeval times, see *ibid.*, 87, 88).

There are also popular traditions that other holy wells, e.g. the one in the Great Mosque at al-Ḳayrawān, are subterraneously connected with Zamzam.

Bibliography (in addition to references in the text): see the geographers for the elements concerning the well of Zamzam in the description given by each author of the Meccan stage of the Pilgrimage: Iṣṭakhrī, i, 15, 16; Ibn Ḥawḳal, ii, 28; Muḳaddasī, iii, 72; Ibn Rusta, vii, 40-2 (the most detailed account); Ibn al-Faḳīh al-Hamadānī, v, 18, 19, supplies a description strewn with mythical allusions (he mentions the curative properties of the water of Zamzam). Yaʿḳūbī, curiously, does not mention the well of Zamzam, but notes that the Meccans are watered by a system of canals supplied by wells dug on the order of a princess, daughter of the caliph al-Manṣūr, vii, 316. Nor is there any mention in the works of caliphal functionaries such as Ibn Khurradādhbih, vi, 132, or Ḳudāma b. Djaʿfar, vi, 187. See also Ibn Ḥabīb (d. 245/860), *al-Munammaḳ fī akhbār Ḳuraysh*, 133 (the part played by Zamzam in a conversion), 333, 334 (the rediscovery of the well by ʿAbd al-Muṭṭalib and the exclusive right of *sikāya* awarded to him: all other members of the tribe fall ill). T. Fahd, *Le panthéon de l'Arabie centrale*, Paris 1968, 208-12, presents pan-Semitic speculations regarding the sacred Meccan site and the well of Zamzam which appear difficult to sustain. See also on the development of the cult of Zamzam, G.R. Hawting, *The disappearance and rediscovery of Zamzam and the "well of Mecca"*, in *BSOAS*, xliii (1980), 44-54.

(Jacqueline Chabbi)

ZAMZAMA (a.), in early Arabic "the confused noise of distant thunder" (Lane, 1249b), but widely used in the sources for early Islamic history for the priests of the Magians reciting and intoning the Zoroastrian prayers and scriptures, producing (to the Arabs' ears) an indistinct, droning sound. Thus in al-Ṭabarī, i, 1042, we have the *zamzama* of the Herbadhs, in 2874 the *muzamzim* or adherent of Zoroastrianism, and in 2880 *zamzama* for the Zoroastrian rites and *zamāzima* for the Magians in general.

The term may have passed into Christian Sogdian texts, probably in the early Islamic period, as *zmzm'*, see M. Dresden, in *Camb. hist. Iran*, iii/2, 1225.

Bibliography: Given in the article. (Ed.)

ZANĀNA (p.), conventionally Zenana, lit. "female, womanly", whence the particular use of the term especially in Muslim India for the private quarters of the womenfolk in a house, the equivalent of Arabic *ḥarīm* [*q.v.*], *ḥaram* and Turkish *ḥaramlïḳ*. See Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian words and phrases*, 2London 1903, 980; and ḤARĪM.

ZANĀTA, the name in Arabic sources of one of the major groups of the Berber population which dominated the greater part of the Maghrib in the 4th/10th and then in the 7th-9th/13th-15th centuries.

Al-Masʿūdī was one of the first to compile an inventory of the nomads (*bawād*in) of his time, including a list of the names of Berber groups, twenty-seven in number, among which he located, in second place, the Zanāta. A century later, al-Bakrī supplies information regarding the geo-political characteristics of the group, with particular reference to the situation existing at the end of the 4th/10th century: the Zanāta were the masters of the central Maghrib; the seat of their political power was located at Tlemcen; they were most numerous between Tahart and Tlemcen, but they were encountered as far away as Constantine and beyond, and to the south they held Sidjilmāsa from 366/976-7 onward; and they were firmly established at Awdaghost at the end of the trans-Saharan route.

Transhumant stock-breeders (*ḳawm raḥḥāla*) as they certainly were, the Zanāta were also cultivators, and sedentary (*mutaḥaḍḍirūn*), al-Idrīsī was to say, describing their major rural settlement of Ibn Mudjabbir. They were also beyond any doubt traders, as is shown by their long-range activity on the western trans-Saharan route or indeed by the foundation, by one of their members, an Ifranī, of the old market of Fakkān. Finally, as a politico-military power, the Zanāta asserted themselves by means of their cavalry (*akthar Zanāta fursān*, according to al-Idrīsī).

In the 4th/10th century, their confederation effectively came to dominate a shifting Maghribī political landscape, benefiting from the diplomatic support, the politico-religious legitimacy and the state wealth of the Umayyad caliphs of Cordova from the reign of ʿAbd al-Raḥmān III onwards. At this time, the Maghrāwa [*q.v.*] imposed their leadership over the Zanāta as a whole, with their tribal chieftains Muḥammad b. Khazar or Zīrī b. ʿAṭiyya superseded by the chieftain of the Banū Ifran, among whom was Abū Yazīd [*q.v.*] "the man on the donkey", instigator of a revolt against the Ṣanhādja Fāṭimids of Ifrīḳiya. Restoring their relations with al-Andalus, many of the Zanāta came to settle there and were recruited, especially under al-Manṣūr, in the caliphal armies. In the 5th/11th century they played their own game amid the struggles for power in Cordova and contributed

considerably, with the Ṣanhādja of the eastern regions, to the hastening of the end of the Umayyad caliphal régime.

Subsequently, as domination passed into the hands of two other major Berber groups, the Sanhādja Almoravids (422-541/1050-1147) and the Maṣmūda Almohads (525-667/1130-1269), the Zanāta were dispersed and, as minority groups, concluded alliances sometimes with the Almoravids, constituting, for example, an entire corps of the army of ʿAlī b. Yūsuf, and at others with the Almohads, to whom they contributed administrative personnel (in the case of ʿAbd Allāh al-Zanātī or of the Zanāta of Tifsart) and military elements (the squadrons of Abū Ḥafṣ, according to al-Baydhaḳ, "are composed of Almohads as well as of Zanāta"). The Kūmiya, the tribe of ʿAbd al-Mu'min himself, was also an offshoot of the Zanāta.

The collapse of the Almohads gave the Zanāta of the Banū Wasīn branch the opportunity to regain the political initiative and to assume power in the central and the western Maghrib with the dynasty of the ʿAbd al-Wādids at Tilimsān/Tlemcen (646-962/1248-1554) and that of the Banū Marīn at Fās (633-861/1235-1465 [see MARĪNIDS]). Although genealogically close, the two dynasties opposed each other in a cyclical fashion, and with the decline of the Marīnids, a third grouping appeared on the scene, the Banū Waṭṭās [see WAṬṬĀSIDS], who were to mark the final phase of the political power of the Zanāta in the Maghrib.

The second wave of the Zanāta was differentiated from the first by the development of alliances which had become inevitable with the Arab tribal chiefdoms which with their powerful contingents dominated the regions outside the city states. Arabisation became definitive under the reign of the Zanāta. This is clearly seen in the debate on the subject of their origins. It was not only authors such as al-Idrīsī who insisted on endowing them with a Muḍarī Arab ancestry ("Djana, the father of the Zanāta of the Maghrib is the son of Luwā, son of Barr, son of Ḳays, son of Yās, son of Muḍar"), but there is also the fact that all reasoning depended on the framework of Arab genealogical science, based on patrilineal descent, incompatible with the social and political organisation of Berber kinships. Ibn Khaldūn, the leading informant on the subject of the Zanāta, contributed extensively to an Arab reading of their history. At one point, however, he revives the question, when he credits them with "a language of their own among the Berbers, with a specific nature that is recognised as such and is distinct from other Berber dialects" (*ʿIbar*, vii/2). In another domain, al-Idrīsī holds that the Zanāta of his time are specialists in "the science of the omoplate", i.e. a form of divination, and following him Ibn Khaldūn adds (*Muḳaddima*, Fr. tr. Monteil, Eng. tr. Rosenthal, i, 229) that "among the people who have practised geomancy... and have written books on the principles of this art is Abū ʿAbd Allāh al-Zanātī". The writings of this author deserve scrutiny, since they have for some time constituted the obligatory reference for everything involving geomancy in Muslim Africa.

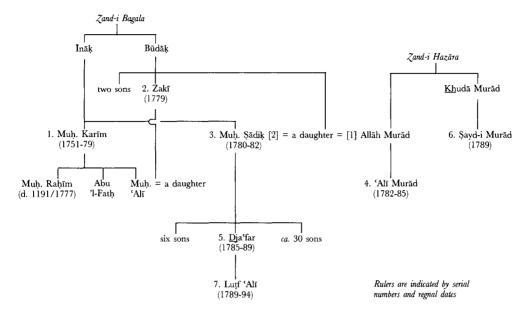
ZAND, an Iranian pastoral tribe of the eastern central Zagros, from which sprang a dynasty that ruled western Persia 1164-1209/1751-94.

The Zand belonged to the Lakk group of Lurs [see ĪLĀT], centred on the villages of Parī and Kamāzān near Malāyir. In 1144/1732 Nādir Shāh [*q.v.*] launched punitive raids on several Zagros tribes and deported thousands of Bakhtiyārī and a number of Zand families to northern Khurāsān. After Nādir's assassination in 1160/1747, they made their way home, the Bakhtiyārī under ʿAlī Mardān Khān and the Zand under Muḥammad Karīm Beg (also called Tūshmāl Karīm, and later Karīm Khān [*q.v.*]). When Nādir's successors were unable to reassert Afshārid hegemony over Iṣfahān, these two chieftains in alliance occupied the former Ṣafawid capital in 1163/1750 in the name of a Ṣafawid princeling, whom they styled Ismāʿīl III. ʿAlī Mardān made an unsuccessful bid for sole power, but was defeated in battle and later (1167/1764) assassinated. Karīm Khān adopted his title of *wakīl al-dawla* or regent. Having defeated three other contestants for power by 1176/1762, he pacified most of western Iran from the Caspian littoral and Ādharbāydjān to Kirmān and Lār, and took up residence in Shīrāz from 2 Ṣafar 1179/21 July 1765 until his death on 13 Ṣafar 1193/1 March 1779.

Karīm Khān did not assume the title of *shāh*, being content with that of *wakīl*; this, moreover, he reinterpreted as *wakīl al-raʿāyā* "representative of the subjects", the designation of a local official appointed by the Shāh to investigate crimes and complaints of administrative abuse (Perry, *Justice for the underprivileged*). "Ismāʿīl III" predeceased him in 1187/1773, and the fiction of a Ṣafawid revival was finally dropped. Karīm Khān did not attempt to recover Khurāsān, which fell intermittently into the orbit of the Afghān monarch Aḥmad Shāh Durrānī [*q.v.*], but devoted his efforts to reviving trade and agriculture in Fārs and western Persia. He remodelled Shīrāz, adding a covered bazaar and other fine buildings that are still standing. He concluded commercial agreements with the East India Company at Būshahr (Bushire), the natural port of Shīrāz. His control over the outlying provinces (where he generally appointed local leaders as governors) was enhanced by marriage alliances and hostages kept at court, though these were never subjected to reprisals. One of them, Āghā Muḥammad Khān Ḳādjār, escaped from Shīrāz on Karīm Khān's death and began to consolidate Ḳādjār power at Astarābād.

The *wakīl* had neglected to make provision for his succession, and his four incompetent sons immediately became pawns in a power struggle between his brothers and cousins. Zakī Khān slaughtered most of his rivals even before the funeral, and ruled in Shīrāz in the name of Muḥammad ʿAlī; ʿAlī Murād Khān, of the Hazāra branch of the Zand, seized Iṣfahān in the name of Abu 'l-Fatḥ. When Zakī marched on Iṣfahān, his own men, outraged by the atrocities which he committed in the village of Īzadkh^wāst, mutinied and killed him. ʿAlī Murād was distracted by a Ḳādjār threat, enabling Karīm's brother Ṣādiḳ Khān to seize

Simplified Genealogical Table of the Zand Dynasty


Shīrāz as effective ruler in 1195/1780. 'Alī Murād captured Shīrāz the following year, killing Ṣādiḳ and all his sons, but was again forced to march north against the Ḳādjārs. His half-brother (and Ṣādiḳ's son) Dja'far Khān marched on Iṣfahān, and 'Alī Murād died on his way back to defend the city in Rabī' II 1199/February 1785. From this time forth, Zand control of northern Persia was relinquished to the Ḳādjārs. Dja'far was twice driven from Iṣfahān to Shīrāz by the forces of Āghā Muḥammad Khān Ḳādjār, and was poisoned and beheaded in 1203/1789 in a palace coup led by Ṣayd-i Murād Khān. Dja'far's eldest son, Luṭf 'Alī Khān [*q.v.*], then at Kirmān, sought refuge and reinforcements from Shaykh Nāṣir of Būshahr and, aided from within Shīrāz by the *kalāntar* (mayor), Ḥādjdjī Ibrāhīm, secured the Zand capital.

Luṭf 'Alī's youth and courage appeared to have won him the support of the populace. He held Shīrāz against a Ḳādjār assault, recaptured Kirmān and in 1205/1791 marched on Iṣfahān. Suspicious of Ḥādjdjī Ibrāhīm's loyalty, he took the *kalāntar*'s son with him as a hostage; the *kalāntar* thereupon seized control of Shīrāz and, through his brother, fomented a mutiny in Luṭf 'Alī's field army. From this time forth, Luṭf 'Alī, with the gates of the Zand capital closed against him, fruitlessly sought support and refuge on the Gulf coast and in Kirmān, pursued by the Ḳādjār army. In 1207/1792 Āghā Muḥammad entered Shīrāz in triumph. Luṭf 'Alī was driven from refuge in Kirmān, where the Ḳādjārs in reprisal killed or blinded the adult male population, and fled to Bam. Handed over by the governor, he was tortured and executed at Tehran in Rabī' II 1209/November 1794.

The dynasty's reputation rests on its founder Karīm Khān, who was able to weld together an army from the Iranian pastoral tribes of the Zagros and also to build a measure of trust and some lasting alliances with the bureaucrats and magnates of the major cities of western Persia (Iṣfahān, Shīrāz, Tabrīz and Kirmān). He endorsed the majority Twelver Shī'a, without seeking the support of the *'ulamā'*. Bandar 'Abbās and other Gulf ports often withheld revenue, and the Turkmen Ḳādjārs at Astarābād were never completely subdued. The *wakīl* took advantage of Ottoman weakness to occupy the rich port of Baṣra in 1190/1776, but his subsequent death forced a withdrawal and negated any commercial advantage. His shrewd economic policies and notable humanity (by the standards of the time) are recorded in many popular anecdotes. His successors, none of whom aspired to the title of *wakīl*, devoted their energies to internecine warfare; they were unable to inspire confidence in the urban establishment, as typified by Ḥādjdjī Ibrāhīm, and so forfeited the Zand mandate to the Ḳādjārs.

ZANDAḲA [see ZINDĪḲ].

AL-**ZANDJ** (A.), a term found in Arabic literature,

but apparently of non-Arabic origin, denoting the peoples of Black Africa, and especially those with whom the Arabs came into contact through their voyages and trade in the western part of the Indian Ocean and living in the eastern parts of Africa. For the territories in question, the term *bilād al-Zandj* was used.

1. As a territorial term.

Here, it forms the second of al-Idrīsī's four divisions of the eastern coast of Africa. The term first occurs in Strabo (A.D. 6), who uses a Greek form *Azania*; in Latin, Pliny (A.D. 79) writes of *Azania* as north of Adulis on the Ethiopian coast, and of a people whom he calls Zangenae, of uncertain location. In agreement with al-Idrīsī 1,100 years later, the anonymous Alexandrine *Periplus of the Erythraean Sea* (*ca.* A.D. 50) describes Azania as the area of the coast from Ras Hafun in modern Somalia as far as Rhapta, a trading station of greatly disputed location. Claudius Ptolemy, whose present text on eastern Africa represents a revision probably edited *ca.* 400, places "Rhapta metropolis" on a river, possibly the Rufiji. Cosmas Indicopleustes, an Alexandrine merchant who travelled down the Red Sea in 524, and wrote his account in a monastery in 547, writes of an area called *Zingion* and of a Cape *Zingion*. All of these terms seem transitional to the form used by the Arab authors and in Swahili.

The *Bilād al-Zandj*, peopled by the Zunūdj, is an area whose name is cognate with the Swahili Unguja, still used in current speech for Zanzibar and for the ancient, deserted site of the former capital, Unguja Kuu. It is first attested by the poet Djarīr (d. 110/728-9), and by al-Djāḥiẓ. Buzurg b. Shahriyār of Rāmhurmuz (d. 342/953) speaks of trading visits to Zandj; the traveller al-Masʿūdī visited Zandj in 303/916, and gives an account of its government and its trade. It was known to the geographers Ibn Ḥawḳal (4th/10th century) and al-Idrīsī (549/1154), and to Yāḳūt al-Ḥamawī, whose geographical encyclopaedia was completed in 625/1228. Marco Polo did not visit Zandj; his description seems rather to have derived from ill-informed gossip in India *ca.* 1295. His statement that Zanzibar is an island 2,000 miles round suggests confusion in his mind between the mainland area described by the Arab authors and the island of Zanzibar. The pharmacological writer Ibn al-Bayṭar says that black rhubarb is called *zandj* from its colour and not from its provenance, but *zandj* and *zunūdj* mostly mean "black people" in Arabic literature, see 2. below. Likewise, the use of "Azania" by some southern African political movements is anomalous. In 1964, when the former Tanganyika united with the Republic of Zanzibar, it was thought necessary to find a new name for the political union. After discussion, the name Tanzania (< Tan[ganyika] + Zan[zibar] + ia) was decided upon, thus approximately recalling a history of the term already some 2,000 years old.

Before the colonial period there were no unitary states in the modern political sense but rather a series of coastal merchant states, self-governing as separate entities. For these individual states, see the articles listed below in the *Bibl.*, including those concerning trading relations.

The history of Islam in the region has not yet been written. The earliest reference is in al-Djāḥiẓ, and the second one to conversion to Islam of a mainland indigenous sovereign in Buzurg b. Shahriyar. So far only one ancient mosque, occupied for worship until the 9th/15th century, has been fully excavated. At Shanga, in the Lamu Archipelago, it was the ninth successive mosque on the same site, each successor mosque becoming slightly more elaborate than its predecessor: the most ancient of all has been ascribed by M.C. Horton on ceramic grounds to the mid-2nd/8th century, that is, to the period of Djarīr. The earliest mosque was a simple enclosure of reeds orientated towards Mecca, its successors constructed first in mud and wattle and finally, as the community became more prosperous, in stone, with a carved *miḥrāb*. There is no literary history of the mosques of the region, and inscriptions recording dates of foundation hardly occur before the 10th/16th century. The earliest such inscription, however, is that of the Friday Mosque at Kizimkazi, Zanzibar, 500[/1106-7].

2. The Zandj revolts in ʿIrāḳ.

The Zandj, like many other black slaves originally from the East African coastlands (whether obtained by capture, purchased or received as tribute from tributary powers), were imported into ʿAbbāsid ʿIrāḳ in large numbers from an undetermined date onwards. Their living conditions must have been extremely harsh, since they rebelled three times within a space of two centuries.

(a) The first rising was in 70/689-90 during the time of Khālid b. ʿAbd Allāh, the successor to Muṣʿab b. al-Zubayr. It seems to have been of small significance, since it apparently involved small bands of rebels engaged in pillaging, which were dispersed without great effort by the caliphal forces. The prisoners were beheaded and their corpses gibbeted (see references in Popovic, *La révolte des esclaves en Iraq au III^e/VIII^e siècle*, 63).

(b) The second revolt took place five years later, in 75/694. It seems to have been more important and, above all, better prepared. The Zandj had a leader, one Rabāḥ (or Riyāḥ ?), called *Shīr Zandjī* "The Lion of the Zandj", and the authorities had to march against him twice in order to crush the rebels. The character of this revolt seems to have been more complex, but our information about it is scanty: "The information we possess on this movement does not allow us to uncover its true character; but one has to believe that it did not break out spontaneously and that the Zandj had been worked upon by a certain amount of propaganda" (Ch. Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, Paris 1953, 41-2).

(c) The third revolt of the Zandj is best known, for it caused a violent disturbance over fifteen years (255-70/869-83) in Lower ʿIrāḳ and Khūzistān, causing innumerable material losses and tens of thousands of lives lost. It was the work of a remarkable person, apparently without scruples, ʿAlī b. Muḥammad, called *Ṣāḥib al-Zandj* [see ʿALĪ B. MUḤAMMAD AL-ZANDJĪ]. A revolutionary character, of obscure origins—but one able to approach the highest levels of power, such as

court circles of his period—he was a talented poet, educated, well-versed in the occult sciences, follower of various doctrines and instigator of several previous risings (notably in Baḥrayn and at Baṣra), and he succeeded in stirring up the greatest servile insurrection in the history of the Islamic world.

Four reasons underlie his success and the long duration of his revolt. These were, first, the extreme misery of these bands of slaves. The rebels were employed, according to our main source, al-Ṭabarī, iii, 1742-87, 1835-2103, Eng. tr. D. Waines, *The History of al-Ṭabarī. An annotated translation. XXXVI. The revolt of the Zanj*, Albany 1992, 29-67, 108-207, tr. P.M. Field, *XXXVII. The ʿAbbāsid recovery*, Albany 1987, 1-43, as workers on the soil, *kassāḥīn*, cultivating the earth of Lower Mesopotamia, removing the nitrous topsoil (*sibākh*) and putting it into small piles in order to render cultivable the ground of the Shaṭṭ al-ʿArab [*q.v.*] region; in the words of Massignon, *EI*[1] art. *Zandj*, "they were penned up in working gangs of 500 to 5,000 men, and dumped there permanently with only a few handfuls of meal, semolina and dates". Second, the region was suitable for guerilla warfare [see AL-BAṬĪḤA]. Third, there was the precarious nature of the central authority in Baghdād at this time (anarchy in the central lands, and severe problems in more distant provinces). Fourth, there were the personal qualities—as organiser, warrior and politician—of ʿAlī b. Muḥammad.

Two periods of the revolt can be clearly distinguished. The first (255-66/869-79) was one of expansion and success for the rebels; the central power was unable, for internal and external reasons, to combat them efficaciously. The rebels organised themselves, procured arms and fortified themselves within camps in inaccessible places, from where they launched their raids. After many ambushes and battles that went in their favour (for the "army" of the rebels was continually being strengthened by freed slaves), they seized temporary control of the main cities of Lower ʿIrāḳ and Khūzistān (al-Ubulla, ʿAbbādān, Baṣra, Wāsiṭ, Djubbā, Ahwāz, etc.). The ʿAbbāsid forces reoccupied, without great difficulty, the towns that the Zandj had taken, sacked and abandoned, but were unable to extinguish the outbreak or to inflict a decisive defeat on an enemy everywhere and nowhere. Also, since the government in Baghdād had other more urgent problems to solve, for several years the rebellion of the Zandj was relegated to the second rank of importance. During this time, the "Master of the Zandj" was solidly installed in the canal region, where he had his "capital" [see AL-MUKHTĀRA], minting his own coins, organising his "state" and attempting, with varying degrees of success, to establish links with other anti-caliphal movements of the time (e.g. those of Ḥamdān Ḳarmaṭ [see ḲARMAṬĪ] and of Yaʿḳūb b. al-Layth [*q.v.*]).

The second period (266-70/879-83) was just a drawn-out agony before the final crushing of the movement. The suppression of the Zandj now became the prime consideration for the caliphate, which moved methodically, cleansing the territories before it and driving the Zandj to take refuge in the canal region, where they were subjected to a methodical siege directed by the regent al-Muwaffaḳ [*q.v.*] and his son Abu 'l-ʿAbbās (the future caliph al-Muʿtaḍid [*q.v.*]). Finally, ʿAlī b. Muḥammad was killed and his close companions and commanders taken as prisoners to Baghdād, where they were beheaded two years later, whilst some members of his family ended their days in prison.

One may conclude by saying that the Zandj revolt was both a political one, in its aim at securing power, and also a social one, aiming at relieving the harsh living conditions of one class of the population; but several important points involved in this remarkable episode merit an extended consideration (the personality of the revolt's leader, his alleged genealogy, his credo and ideology, the political and social organisation of the new "state", and its relations with the various classes of the population and with other movements of the time) which cannot be gone into here. One may nevertheless stress one essential aspect, sc. that if the movement has a unique place amongst various insurrections in the history of mediaeval Islam, it is because it put paid to a unique attempt, in the Islamic world, at transforming domestic slavery into a colonial-type slavery.

(A. POPOVIC)

ZANDJĀN, a town of northwestern Persia, situated on the Zandjān Rūd, a right-bank affluent of the Safīd Rūd [*q.v.*]. It lies on the highway from Tehran and Ḳazwīn to Tabrīz at a distance of 314 km/195 miles from Tehran and 302 km/188 miles from Tabrīz, and at an altitude of 1,625 m/5,330 feet (lat. 36° 40' N., long. 48° 30' E.).

The mediaeval geographers mostly placed Zandjān in Djibāl province, usually linking it with Abhar [*q.v.*] or Awhar some 80 km/50 miles to its south-east, but they usually stated that it was on the frontier with Ādharbāydjān, and some authorities attributed it to Daylam or to Rayy. According to legend, it had been founded, as Shahīn, by the first Sāsānid Ardashīr b. Pāpakān (Mustawfī, *Nuzha*, 61, tr. 67). It was conquered *ʿanwat^{an}* in 24/645 by Arabs led by al-Barrāʾ b. ʿĀzib after Abhar and Ḳazwīn, and al-Balādhurī further narrates that, in the late 2nd/early 9th century, the people of Zandjān, weary of the depredations of bandits (*ṣaʿālīk* [see ṢUʿLŪK] and the oppression of local governors, placed themselves under the protection of the governor of northern Persia, Hārūn al-Rashīd's son al-Ḳāsim so that Zandjān and its region became part of the caliphal estates (*al-ḍiyāʿ al-khāṣṣa*) (*Futūḥ*, 322-3). In the 4th/10th century, it came within the sphere of local Daylamī dynasties like the Musāfirids [*q.v.*]. The Arab traveller Abū Dulaf [*q.v.*] visited it, noting mines of iron sulphate, borax and alum in the adjacent mountains; the manuscript of his *Second Risāla* records the name as spelt with initial *zh*, sc. Zhandjān (*Abū-Dulaf Misʿar ibn Muhalhil's travels in Iran (circa A.D. 950)*, ed. and tr. Minorsky, Cairo 1955, § 11, tr. 34, comm. 71).

In the early 7th/13th century, Zandjān was held by the Kh^{w}ārazm-Shāh's son Djalāl al-Dīn (Djuwaynī-Boyle, ii, 702), but then devastated by the Mongols and its extensive walls demolished. For the Mongols, the upland pastures between the region of Zandjān and Tabrīz were favoured grazing grounds, and the name of the district Ūryād preserves the name of the Oyrat Mongols. Not far south of Zandjān was the Il-Khānid capital Sulṭāniyya [*q.v.*], and the Il-Khān

Arghun was buried at nearby Sudjās (the *koruk-i Arghūn*, Mustawfī, 64, tr. 69). Zandjān shared in the general prosperity of northwestern Persia at this time, and Mustawfī fixed its revenues at 12,000 dīnārs plus another 8,000 from the hundred or so villages around it, and also stated that the inhabitants spoke "pure Pahlawī", i.e. a Median or northern form of Persian (*Nuzha*, 61-2, tr. 67).

In later times, fighting between the Ottomans and the Ṣafawids and their successors extended as far as Zandjān, but the town became best known in the 19th century as a centre of the Bābīs [*q.v.*], being the birthplace of one of the Bāb's leading supporters, Mullā Muḥammad ʿAlī Ḥudjdjat al-Islām Zandjānī. The Zandjān rising of 1266/1850 by the Bābīs of the town, numbering only a few hundreds, caused a crisis for the Ḳādjār state, since government troops were for several months unable to quell the rebels, and the resistance of Zandjān may have influenced the decision to execute the Bāb himself in Shaʿbān 1266/July 1850 (see E.G. Browne, *Personal reminiscences of the Bábí insurrection at Zanján in 1850...*, in *JRAS* [1897], 761-827; Abbas Amanat, *Resurrection and renewal. The making of the Babi movement in Iran, 1844-1850*, Ithaca and London 1989, 101-2, 397 and index; J. Walbridge, *The Babi rising in Zanjan: causes and issues*, in *Iranian Studies*, xxix/3-4 [1996], 339-62). Despite the bloody suppression of the outbreak, Zandjān continued to produce some of the leading Bābī and Bahāʾī figures (see Browne, *Materials for the study of the Bábí religion*, Cambridge 1918, 36).

Zandjān was formerly the chef-lieu of a *shahrastān* of the same name in the province of Gīlān, but is now the *markaz* of an independent province of Zandjān. In the late 1930s it became a station on the Tehran-Tabrīz railway. Its population in *ca.* 1950 was 48,000, which had risen by the 1996 census to 286,295. Although somewhat detached geographically from the main Azeri speech area, the population of Zandjān is ethnically Turkish and essentially Turkish-speaking.

AL-ZANDJĀNĪ [see Suppl.].

ZANDJIBĀR (or AL-ZANDJABĀR), officially spelt ZANZIBAR, is an island in lat. 6° S., with a capital of the same name. It is about 53 miles in length and 24 miles at its broadest. The area is about 640 sq miles. A channel about 20 miles wide separates it from the Tanzanian mainland. Its history and economy are bound up with the prevailing winds, the south-west and north-east monsoons, which set in with clockwork regularity. The south-west monsoon begins in March, bringing the *Masika*, or Long Rains, which last with decreasing vigour for about three months. The *Mvuli*, or Short Rains, fall in October and November. Until the coming of the steamship, the whole economy of eastern Africa depended on these monsoons.

Although linked with the mainland United Republic of Tanzania, Zanzibar is a self-governing territory, together with the island of Pemba [*q.v.*] and some small islands of trifling importance. Except for Tumbatu [*q.v.*], they are uninhabited, and visited only by fishermen and tourists.

1. The island and town of Zanzibar up to 1890.

(a) *In Antiquity and prehistoric times*

Before the coming of Islam to eastern Africa, certainly up to the 8th century A.D., there are only some scattered and casual allusions in Greek and Roman writers, for which see ZANDJ. One major source, *The Periplus of the Erythraean Sea*, refers to it in *ca.* A.D. 50. It is an account of trading voyages down the eastern African coasts, along southern Arabia and as far as India, if not to China. It has links with Egypt and the western Indian Ocean. Scholars have disputed endlessly whether its reference to a single island, Menuthias, off the eastern African coast, is to Pemba or to Zanzibar or to Mafia. Ptolemy even thought the island to be Madagascar. Menuthias is said to have numerous rivers: Zanzibar has one only; Pemba has some streams, but also numerous deep inlets which, seen from the sea, resemble estuaries. It is low and wooded. Pemba reaches a maximum of 150 m above sea level, Zanzibar 100 m. Again, Pemba's deep inlets with hilly sides give the impression of a hilly island when seen from the sea, whereas Zanzibar is more uniformly level. Both islands are wooded. The inhabitants are said to be fishermen who employ fish traps, dug-outs and also "sewn boats", that is, with their timbers sewn together with coconut coir. The "sewn boats" are no longer constructed but the other practices survive. The balance of probability could swing either way.

Two of the sites so far excavated have pre-Islamic occupation levels, Fukuchani in the north and Unguja Ukuu in the south of the island. From these are imported sherds from the Persian Gulf and from Roman North Africa, at occupation levels dating probably from the 5th to 8th centuries A.D. The most recent excavations at Unguja Ukuu (1999) show that it was a major exporter of ivory to Egypt, whence to Constantinople and through the Mediterranean, via Pelusium. The evidence is based on the existence of sherds of Byzantine pottery and on carbon dating. In Unguja Ukuu there are found in middens of the same period bones of *rattus rattus*, the black rat, which is not indigenous of Africa but whose fleas are the vectors of bubonic plague. The first recorded outbreak of the Great Plague of 541-7, in which more than a quarter of a million people died in Constantinople alone, was at Pelusium, which makes it logical to ascribe the source to Zanzibar. Local pottery suggests that the inhabitants belonged to the Early Iron Age communities of East Africa, whose working of shells and iron formed part of the economy of the time.

(b) *Before the Portuguese*

Pending further investigation it can be said that the claims of W.H. Ingrams (*Zanzibar*, London 1931) and others, of the existence of a "Heliolithic Culture", or of the presence of Sumerians, Assyrians, Akkadians, Chaldaeans, Medes, Persians, Ancient Egyptians or Phoenicians, rest on no historical or archaeological foundation. There are Palaeolithic remains at Kilwa [*q.v.*] and of the Early Iron Age in Mafia [*q.v.*].

The Swahili *History of Pate* [see PATE] whose redaction in its present state cannot be dated before 1810, claims that the fifth Umayyad caliph, ʿAbd al-Malik b. Marwān (695-705), heard of East Africa "and that his soul desired to found a new kingdom". He sent Syrians, who founded "the cities of Pate, Malindi, Zanzibar, Mombasa, Lamu and Kilwa". Other towns are mentioned in oral traditions, from Mogadishu as far as the Comoros.

Next, Hārūn al-Rashīd (*r.* 786-801 [*q.v.*]) is alleged to have founded many coastal towns, but not in Pemba

or Zanzibar. He is said to have sent Persians. There is no evidence to support these claims; they could well be 19th-century embroidery upon what could be known from 10th-century sources, such as al-Masʿūdī and Buzurg b. Shahriyār. Neither of these refer to Zanzibar, but mention Ḳanbalū, most likely Ras Mkumbuu in Pemba. There, recent excavation has disclosed a mosque capable of accommodating seventy worshippers; it rested upon the remains of two earlier mosques, one of stone and the other of timber. The topmost building is possibly 10th century, the substrata from the 9th and 8th centuries, the earliest Islamic structures yet found in sub-Saharan Africa. It seems clear that Pemba, and particularly Ras Mkumbuu, had an importance that Zanzibar lacked.

Nevertheless, history is not entirely mute. The Arabic *History of Kilwa*, redacted as we have it perhaps *ca.* 1550, claims that Zanzibar gave refuge to a deposed sultan of Kilwa in *ca.* 1035, and then reinstated him on the throne. Not long afterwards, a mosque was built at Kizimkazi in Zanzibar, of which original sections still survive; it has an elaborate *miḥrāb*, with a carved foundation inscription dated 500/1107. This last is in a Kūfic script similar to a number of inscriptions excavated in Sīrāf. The stone, however, is of Zanzibar coral and so could only have been carved on Zanzibar. Local traditions assert that there was a local sultanate based on Kizimkazi, where a number of (later) stone buildings survive.

João de Barros preserves a second *History of Kilwa*, originally written in Arabic, in a Portuguese translation. It was redacted perhaps in 1505. It asserts that Sulaymān b. al-Ḥasan of Kilwa (*r.* 1170-89) made himself "lord of the commerce of Sofāla" [*q.v.*], and of the islands of Pemba, Mafia and Zanzibar, and a great part of the mainland shore". In 1224 Yāḳūt's *Muʿdjam al-buldān* reports that Languja was the residence of the King of the *Zunūdj*. Languja is a corruption of al-Unguja, still the ordinary Swahili name for Zanzibar. If not independent, he may have been a subject of Kilwa.

In 1865 a hoard of dīnārs was "discovered" in a mound in the centre of Unguja Ukuu, which was turned over in the hope of finding further treasure. One piece survived, dated to A.D. 797. There are now no visible standing walls earlier than the 19th century. A mosque was noted in 1920; its well is still in use. There are local traditions of a Portuguese *feitoria* ("factory" or trading agency) but nothing survives. Recent excavations conducted by the Zanzibar Director of Antiquities have disclosed buildings believed to date to the 10th century, with quantities of imported pottery, chiefly from the Persian Gulf, of the 8th to 10th centuries. Some sherds from there of African Red Slip pottery have been dated by radiocarbon dating to the 6th century. Occupation ceased in the 10th/11th century, with some reoccupation in the 16th. This site would certainly appear to be the Languja of al-Djāḥiẓ. Its abandonment may be linked to a decline in the market for *zandjī* slaves following the Zandj revolt. So far, it can be said that very many pieces of what is a jig-saw puzzle have been found; how to fit them together is another question.

Of possible relevance is the limited excavation that has taken place at Mkokotoni, in the northwest of the island and opposite Tumbatu. The first phase covers the 8th-10th centuries but is much eroded by the sea. Its stone buildings have been entirely robbed but cover an area extending 500 m along a low cliff. There is a hiatus until the 14th century, which is very rich in deposits. Particularly striking are the bead finds, in huge quantities that suggest either a huge store or their manufacture. Locals searching for beads have also found quantities of coins, both Chinese and Indian, but none of any local currency. It was here that a major coin hoard was found in 1984 and smuggled out of the country. It may have included three gold coins of al-Ḥasan b. Sulaymān of Kilwa III (*r.* 1310-33), which were brought to London and of which casts were made in the British Museum. They were reported to have been "found at Tumbatu".

Returning to the historical record, the *History of Pate* already quoted asserts that the Pate ruler ʿUmar b. Muḥammad (*r.* 1332-48) gained possession of all the Swahili towns from Pate as far as the Kerimba Islands but failed to take Zanzibar. There is no evidence elsewhere for this alleged event, which perhaps was no more than a raid.

In 1442, when there was a dispute about the succession to the throne in Kilwa, the *Amīr* of Zanzibar is said to have intervened but was bought off by a bribe of 100 gold *mithḳāls*. At this time, Zanzibar had its own copper currency.

There are many minor traditions and legends associated with smaller sites. There are numerous traditions of people known in Swahili as Wa-debuli and Wa-diba (*wa-* being a prefix denoting the class). They had no fixed settlements but moved from place to place; the Wa-debuli could well have been itinerant Indian traders from the port of Daybul [*q.v.*] and the Wa-diba from the Maldive Islands, which the Arab geographers term Diba.

Midden excavations at Unguja Ukuu and Fukuchani have shown evidence of the diet of the people in the form of bone remains. Cattle, goat and sheep are not unexpected. Pig also are included. Chicken and pigeon, too, were eaten; the nearby ocean abounded, as it still does, in fish. Bone remains also included the Zanzibar Pouched Rat (*cricetomys gambianus* Cosensi) known locally as *buku*. They are reported to be nearly three feet long from snout to the end of the tail. It is unknown today for them to be eaten in Zanzibar but some non-Islamic groups on the mainland like them. Monkeys were also eaten in some quantity.

As to religion, al-Masʿūdī reports (*ca.* 920) that the kings of the Zunūdj and their subjects were pagan. By the time of al-Idrīsī (1154), the inhabitants of Unguja, Swahili speakers, although mixed, were mostly Muslims. The excavated evidence from mosques suggests that al-Masʿūdī was not well informed. Certainly, Islam was not the official religion of the kings whom he describes, but the process of Islamisation would have been a slow one, which, it may safely be assumed, had begun by the 8th century A.D. This is not to say that ancient beliefs did not linger on, as they still do today, notably in the Nairozi ceremonies [see NAWRŪZ. 2.] and those connected with *rites de passage*.

(c) *Under Portuguese hegemony 1505-1698*

For the Portuguese period local sources are silent, and we are dependent upon Portuguese historians and writers. Local traditions allege two fortified houses or farms to have belonged to the Portuguese, at Mvuleni and at Fukuchani, the latter built over an earlier pre-Islamic site.

In 1499 Vasco da Gama, returning from India, anchored off Zanzibar to take on provisions and water. It was for one night only; he and his men were eager to return home. Next, in 1503, a single vessel commanded by Rui Lourenço Ravasco arrived and cruised off the island, blockading it and capturing twenty local vessels laden with provisions. These, says Damião de Goes, he ransomed for money. It is alleged that the

locals opened hostilities with "many guns and arrows", to which Ravasco replied with a bombardment. Both sides accused the other, and subsequently Ravasco was censured in Lisbon. Nevertheless, Zanzibar paid a tribute of 130 gold *mithkāls*—a sum compared with 1,000 paid at Kilwa and 100 at Pate.

In 1528 Nuno da Cunha's fleet lost its bearings and was driven up a creek in southwestern Zanzibar. A captive pilot conducted them to a safe anchorage. Two hundred sick men were left ashore, but it is not apparent whether a permanent *feitoria* was set up.

If, indeed, it was set up, it was not of stone. By 1571 Fr Monclaro S.J. reported that the ancient capital, "once as large as Kilwa.... is now destroyed and in ruins". Perhaps this was the result of Ravasco's bombardment, but "there were Kaffir rebels from the mainland, who kept the country in confusion". The people were in fear; the Portuguese fought the rebels, with the result that the King of Zanzibar made a gift of the island to Portugal "with great solemnities". Some Portuguese resided on the island and had their own chapel and chaplain. They were traders in cloth, beads, iron, ivory and some ambergris. The island was very fertile. There is no mention of a *feitoria*.

The first positive evidence of a *feitoria* comes from Edmund Barker of Ipswich, the Lieutenant of the *Bonaventure*, under Sir James Lancaster, who wintered there in 1591-2. He was told of the mean and spiteful dealings of the Portuguese by a Christian Moor, but with no details. Gaspar de São Bernardino O.P. reports that a cargo of slaves was carried from Zanzibar to Mombasa in 1606, but there is no reason to suppose that it was a regular item of trade. The King of Zanzibar is reported to have been friendly. João dos Santos O.P. speaks of the rough and high-handed conduct of the Portuguese. He had converted to Christianity a nephew of the king, whom he sent to Goa to be educated.

A report of 1606 speaks of Augustinian "vicars" at Lamu, Pate and Faza on the mainland, in addition to their convent at Mombasa, but not at Zanzibar. An Augustinian stationed in Zanzibar with a chapel is not mentioned until a Papal Bull of 1612. The two dates would seem to bracket the foundation of the chapel, as being an adjunct of the *feitoria*. Recent excavations in the centre of what eventually was reconstructed as an ʿUmānī fort suggest that it was on the site of a 12th-century fishing and trading village. Sgraffiato, Chinese celadon and monochrome porcelain, as well as local red wares have been found. The foreign connection was not just casual. A large hoard of copper coins, locally minted, has been found, and ascribed to the 14th or the 15th century.

Parts of the church still exist. It was cruciform. In 1710 the ʿUmānīs fortified it, rebuilding it completely in 1760. Nevertheless, in a strange way it has kept its name. In Swahili the fort is spoken of as *gereza*, a corruption of Portuguese *igreja* "church". In the 19th century, when the ʿUmānīs had ceased to use the fort as a residence, it was made into a prison. The name Gereza remained, to become the name for a prison wherever Swahili is spoken. In the 1920s it had a new twist of fortune. It was partly demolished to provide a railway station for the seven-mile line from the town to the plantations at Bububu. By 1946 it was derelict, and restored for use as a purdah Ladies' Club. In the 1990s it became an open-air theatre.

There is little trace today of the Portuguese period. The principal cultural legacy was of the slightest, some 120 words which passed from Portuguese into Swahili. It is intelligible that a quarter of them concern the sea and shipping. A second large group are of useful fruit, trees and vegetables, some of which—cashew, cucumber, lime, pawpaw, avocado and guava, potatoes, cassava (manioc), tobacco, and most usefully, *mboleo* "manure"—have taken permanent root. There is a small domestic vocabulary, and one for the games of dice and picquet. The Swahili word for a tavern or brothel, *dangelo*, derives from *danceador*. These are only a few examples. In the Torre do Tombo National Archives in Lisbon, and in the National Library, there is evidence of another kind, of Portuguese written in Arabic script, and of Swahili also. It would seem that for a time Portuguese was a *lingua franca* in the Indian Ocean until it was superseded by English.

The expulsion of the Portuguese from Fort Jesus, Mombasa, in 1698, does not seem to have had any immediate repercussions in Zanzibar. No appointment was made as successor to Fr. Manoel de Conceiçao O.S.A. as Vicar of Zanzibar, who had been murdered by tribesmen in 1694. A queen of Zanzibar, Fatuma or Fatima, gained peaceful possession, only to be subject to new overlords. The site of her palace is pointed out near the Gereza.

(d) *Under the ʿUmānī Arabs* ca. *1700-1890*

Now for more than a century history is almost silent. In 1712 a spy employed by the Portuguese Viceroy of Goa reported that the "Arabs" had constructed "a ridiculous fort" out of the *feitoria* and a stone house built by João Nunes at the end of the 17th century. The Swahili royalty remained in office, but control was in the hands of the Mazrūʿī [*q.v.*] rulers of Mombasa until their final eviction by Sultan Sayyid Saʿīd [*q.v.*] in 1837.

A. Sheriff's *History and conservation of Zanzibar Stone Town* gives valuable details of its expansion. The Portuguese *feitoria* and church may have had no more than palm-thatched huts around them. They lay on a peninsula connected to the mainland by a narrow isthmus. Two maps published by him, of 1846 and 1896, provide an instructive summary for the period. The peninsular buildings are almost exclusively from the 19th and 20th centuries; a creek separates the Stone Town from the mainland, on which, in 1846, very few constructions, all apparently huts, were to be found. The town thus consists, as now, of two parts, the Stone Town, the older part; and the opposite side of the creek known in Swahili as *Ngambo*, meaning "the other side". The creek, when kept clean, provided a sheltered harbour for Portuguese vessels; the shallow draught of the almost flat-bottomed Swahili vessels and boats meant that they were generally drawn up on shelving beaches, any larger vessels being propped up on stilts at low tide. By 1896 Ngambo had grown to four times the size of the Stone Town, a clear indication of mercantile prosperity.

Inscriptions and other evidence for the foundation dates of mosques are likewise instructive. The earliest mosque in the Stone Town is dated 1766; one other was built in the 18th century. Sayyid Saʿīd first visited Zanzibar in 1828, removing his court to Zanzibar only in 1842. Three mosques were erected in 1830 and one more in 1840. From 1850 to 1890, no less than twenty-seven mosques were erected, with five more in the present century. Scholarship was not deficient, and Sir Richard Burton, never slow to criticise, particularly admired the eminent knowledge of Shaykh Muḥyī al-Dīn b. Shaykh b. ʿAbd Allāh al-Khaytānī, *ḳāḍī* of Zanzibar from 1841 to 1870. He wrote works of history and *fiḳh*, and was a poet. The greater number of mosques reflects population growth and the flourishing economy, of which C.S. Nicholls

has given a portrait in depth up to Sayyid Saʿīd's death in 1856. It is carried forward by M.R. Bhacker up to the proclamation of the British Protectorate in 1890. Traders were attracted from all quarters, Arabs from ʿUmān and Ḥaḍramawt, Indians (the majority), and American, British, French, German and Portuguese entrepreneurs. Sayyid Saʿīd said modestly "I am only a merchant", but truly he made Zanzibar a "metropolis of the Indian Ocean".

European immigrants and officials formed a more or less homogeneous society, the easterners deeply divided by race and sects. The Arabs and Swahili were of the Shāfiʿī legal school, save for the ʿUmānī rulers who were of the Ibāḍī branch of the Khāridjites. They had few differences with the Shāfiʿīs and were tolerant. Among Indians, Hindus were wholly apart, as were Parsis; among Indian Muslims were Sunnīs, Twelver Shīʿa and Khōdja Ismāʿīlīs, who predominated over the Dāʾūdī Bohorās and smaller sects. In addition, there were Sikhs and Baluch, these last providing the Sultanic guard. Few of them mixed with the local population. Whereas in former times Africans had brought their products to the coast, under Sayyid Saʿīd Indian-financed caravans now journeyed into the African interior as far as Uganda and Kinshasa. Islamic religious brotherhoods had members among them and set up pockets of their adherents along the trade routes. By the 20th century, substantial areas were Islamised. The Swahili, both in the town and countryside, still reflect syncretistic practices as part of their local traditions.

Sayyid Saʿīd had sixty or seventy concubines, in accordance with the regal dignity of the age. A number of palaces survive, of which many are mentioned in Princess Salme's (Emily Saʿid Ruete) memoirs (*An Arabian princess between two worlds*, tr. E. van Donzel, Leiden 1993, originally published as *Memoirs of an Arabian princess*, New York 1888). They provided homes for his numerous surviving children. His principal residence was at Mtoni, enlarged with Persian baths, a more spacious *ḥarīm* and stores as well as reception rooms, from a former private house. A short way away was a private mosque, a square *muṣallā*, the roof supported by a single column, and the *miḥrāb* set in the thickness of the wall in the Ibāḍī fashion. There was a separate palace at Dunga for the Mwinyi Mkuu, the last of the indigenous rulers, with a room for the royal *siwa* (horn) and drums.

2. Since 1964.

The Zanzibar revolution in January 1964 brought a sudden end to the newly-independent sultanate. The revolution was organised by John Okello (b. 1937), a Ugandan worker who came to Zanzibar in 1959 and who believed that he had a God-given mission to lead a revolution of African liberation (J. Okello, *Revolution in Zanzibar*, Nairobi 1967, 72-3). Okello named established opposition figures as leaders of the new régime, with Abeid Karume (1905?-1972), head of the Afro-Shirazi Party (ASP), as president. Karume soon consolidated his position by securing the exclusion of Okello from Zanzibar in March 1964, and, in April, led Zanzibar into union with Tanganyika.

Karume established a radical, one-party régime similar to many in the Africa of the 1960s. During the revolution, Zanzibarians of Asian and Arab origin, who had been part of the old political and economic élite, were harassed and many were killed or fled. Karume continued these policies, with the result that the traditional Muslim scholarly and devotional leadership was weakened. Established lines of transmission of both Ṣūfī piety and Islamic studies were disrupted (Allyson Purpura, *Knowledge and agency: The social relations of Islamic expertise in Zanzibar Town*, Ph.D. diss., City University of New York 1997, unpubl., 136-9). During Karume's rule, the activities of Islamic organisations like the Ṣūfī orders were severely limited and Islamic scholarship restricted.

Karume was murdered in 1972, but the ASP one-party régime continued under his successor Aboud Jumbe (b. 1920). However, Jumbe moved away from the authoritarianism of Karume, reduced the commitment to leftist economic policies, and relaxed restrictions on Islamic organisations. In an attempt to gain religious support, he established BAMITA (*Baraza la Misikiti wa Tanzania*, Council of Tanzanian Mosques). In the early 1980s, support for Zanzibari separatism grew, and in 1984 Jumbe was forced to resign because he was unable to control these tendencies. His successor as president of Zanzibar (and Vice-President of Tanzania) was Ali Hassan Mwinyi, a close associate of Julius Nyerere, who succeeded Nyerere as national president when the latter retired in 1985. The next presidents of Zanzibar were Idris Abdul Wakil (1985-90) and Salmin Amour who won the last one-party elections in 1990 and also, by a bare 50.2% of the votes, the first multiparty election in 1995.

During the final two decades of the 20th century, Islamic activist sentiments have increased in Zanzibar. With the end of the authoritarianism of Karume, Muslim teachers and scholars began to reassert their position as intellectual and devotional leaders. Older Ṣūfī *ṭarīkas* had survived the times of suppression, and new groups of scholars inspired by Islamist movements in other parts of the Muslim world became more visible. By the 1990s, strict purist teachers such as Shaykh Khamisi Jafar were popular among the students and younger professionals, advocating a style of Islamic interpretation similar to that articulated by the Muslim Brotherhood in the Middle East.

Two incidents illustrate the revival of Muslim activism. In 1988, Sophia Kawawa, the wife of the then secretary-general of the Tanzanian ruling party, made disparaging remarks about the situation of women under Islamic law. This sparked major demonstrations in Zanzibar, reflecting both resentment against mainland control of island affairs and Islamic sensitivities. In 1993, it was announced that Zanzibar had joined the Organization of the Islamic Conference (OIC). While this was popular in Zanzibar, a parliamentary commission declared the association to be unconstitutional and Zanzibar withdrew. It was clear by the late 1990s

that Muslim sentiments in Zanzibar had been significantly influenced by the global resurgence of Islam. This was expressed locally by increased demands for Zanzibar separatism and by more visible expressions of Islamist sentiments similar to those in other parts of the Muslim world.

(J.O. Voll)

ZANGĪ, Abu 'l-Muẓaffar ʿImād al-Dīn b. Ḳasīm al-Dawla Aḳsunḳur b. Il-Turghān, Turkmen commander, governor of ʿIrāḳ, later ruler of al-Mawṣil and Aleppo (521-41/1127-46) and founder of the Zangid dynasty, d. 541/1146.

Early youth. Born in Aleppo in 480/1087-8, he was the last surviving son of the Saldjūḳ commander Aḳsunḳur [*q.v.*], who became governor of Aleppo 480-7/1087-94. After his father's death in 487/1094, Zangī was raised at the court of the governors of al-Mawṣil [*q.v.*] and distinguished himself in the internal warfare of rival Saldjūḳ princes and the wars against the Crusaders.

Governor in ʿIrāḳ 516-21/1122-7. In 516/1122-3 Zangī led a successful expedition against the Mazyadid *amīr* Dubays b. Ṣadaḳa [see mazyad, banū] in southern ʿIrāḳ. On behalf of Aḳsunḳur al-Bursuḳī [*q.v.*], governor of ʿIrāḳ and Zangī's protector, he was given his first appointment as governor of Wāsiṭ and al-Baṣra. In 519/1125 he crushed an army of the caliph al-Mustarshid [*q.v.*], who was trying to conquer southern ʿIrāḳ and expel the Saldjūḳs. On 18 Dhu 'l-Ḥidjdja 519/4 January 1126 sultan Maḥmūd b. Malik Shāh [*q.v.*] appeared on the outskirts of Baghdād attacking the caliph. Reinforcing Maḥmūd, Zangī moved with a powerful army with surprising rapidity up the Tigris valley and decided the battle in favour of the sultan, who in Rabīʿ I 520/April 1126 appointed him governor (*shiḥna* [*q.v.*]) of Baghdād and ʿIrāḳ.

Establishing the amīrate 521-2/1127-8. Later in that year, Aḳsunḳur al-Bursuḳī, then governor of al-Mawṣil, Diyār Rabīʿa, Diyār Muḍar, parts of the Diyār Bakr and Aleppo, was assassinated. Maḥmūd finally made Zangī governor of al-Bursuḳī's provinces in exchange for his ʿIrāḳī ones. He placed two sons, Alp Arslān and Farrukhānshāh (Elisséeff, ii, 381, argued that they were the same person) under Zangī's tutelage and bestowed on him the title of Atabeg. Zangī made his formal entrance into al-Mawṣil in Ramaḍān 521/September-October 1127, and then took Djazīrat Ibn ʿUmar, Naṣībīn, Sindjār, the Khābūr valley and Ḥarrān [*q.vv.*], some of them having been previously annexed by the Artuḳids. Under the constant pressure from the Crusaders, Aleppo had fallen into internal strife and anarchy. Zangī sent a force to restore order on entering the city in Djumādā II 522/June 1128, and was much welcomed in memory of the days of his father.

Consolidation of an autonomous amīrate within the Saldjūḳ empire 522-30/1122-36. Meanwhile in al-Rayy, the supreme sultan Sandjar [*q.v.*] had ordered Maḥmūd to take al-Mawṣil from Zangī and to bestow it upon Dubays. However, the caliph opposed Maḥmūd. After a meeting with Zangī in 523/1129, Maḥmūd finally confirmed him as king of the west (*malik al-gharb*). In the same year Zangī took Ḥamāt from the Būrids [*q.v.*] and in the next year the Crusader stronghold of Athārib near Antioch. In 525/1131 Zangī and the caliph al-Mustarshid became estranged over the issue of Dubays. After the death of sultan Maḥmūd in 525/1131, Zangī was drawn into the wars of succession amongst the Saldjūḳs. In retaliation for an attack on Baghdād by Zangī and Dubays in the previous year, the caliph besieged al-Mawṣil for three months in 527/1133, during which the Būrid of Damascus, Shams al-Mulūk Ismāʿīl, took the opportunity to regain Ḥamāt. In 528/1133-4 Zangī consolidated his power by occupying the strongholds in the vicinity of al-Mawṣil and in Diyār Bakr at the expense of the Artuḳids and the Kurds, who had supported the caliph previously. After the murder of al-Mustarshid in Dhu 'l-Ḳaʿda 529/August-September 1135, Zangī allied himself with the new caliph al-Rāshid [*q.v.*] and the Saldjūḳ pretender Dāwūd in order to fight sultan Masʿūd. In 530/1135-6 Masʿūd conquered ʿIrāḳ and Baghdād, with Zangī and al-Rāshid fleeing to al-Mawṣil. Masʿūd in turn set up a new caliph al-Muḳtafī [*q.v.*], who was acknowledged throughout the empire except by Zangī; only later that year did he acknowledge Masʿūd, Sandjar and al-Muḳtafī as his overlords, receiving in return the territories he already possessed.

Period of expansion 529-38/1135-44. The only possibility of further expansion, without the risk of conflicts with the Saldjūḳs in ʿIrāḳ, lay in campaigns in the west, in Syria and northern Mesopotamia, at the expense of the Būrids, the Crusaders and the Artuḳids. In Djumādā I 529/February 1135, he laid siege to Būrid Damascus. Unexpectedly, the city was well defended, and Zangī only achieved recognition as overlord in Damascus. On his way back to Aleppo he regained Ḥamāt, then attacked outposts of the principality of Antioch, but at the end of the year, after an unsuccessful attack on Ḥimṣ, had to return to al-Mawṣil for affairs in ʿIrāḳ. However, in 531/1137 he resumed his military campaigns in Syria, and gained the strategic Crusader castle of Baʿrīn (Monsferrandus) between Tripoli and Ḥamāt.

In 531-2/1136-8 the Byzantine emperor John II invaded Cilicia and northern Syria. After allying himself with Raymond of Antioch, he attacked Aleppo, but unable to take the city by force, he besieged Shayzar [*q.v.*] instead; after accepting ransom money he returned to Antioch in Ramaḍān 532/May-June 1138. Later that year, Zangī obtained Ḥimṣ by diplomacy as a dowry from the Būrids, and re-occupied the lost strongholds between Antioch and Aleppo.

In 533-4/1139-40 Zangī made his last attempt to reach his ultimate strategic goal, Damascus, in order to complete his supremacy over the western parts of the Saldjūḳ empire. In 533/1139 he took Baʿlabakk [*q.v.*] by force and went on to besiege Damascus in Rabīʿ II 534/December 1139. He had to lift the siege five months later in order to fight the Crusaders, who had overrun the Ḥawrān, but returned for a sudden attack on Damascus on 7 Dhu 'l-Ḳaʿda/22 June, only to withdraw in the end to al-Mawṣil. He had achieved two aims, the capture of the strategic fortress of Baʿlabakk dominating the fertile Biḳāʿ valley [*q.v.*] and suzerainty over Damascus. In the following years, Zangī had to check numerous raids by the northern Crusader states Antioch and Edessa as well as by the Artuḳids and the Kurds.

At the zenith of his power; the fall of Edessa. In 538/1143-4 sultan Masʿūd tried again to remove the overmighty Zangī, whom he held responsible for the continous unrest within his realm, but Zangī came to an agreement with the sultan and promised an indemnity. He turned his attention to the Artuḳid Diyār

Bakr, and utilised the absence of Joscelin II from his capital to seize Edessa after a 28 days' siege, on Saturday 26 Djumādā II 539/23 December 1144. This was the first Muslim reconquest of a major capital of the Crusaders. The victory led western Christianity to undertake the Second Crusade and earned Zangī an outstanding reputation as hero of *djihād* among the Muslims.

Zangī's death. In the following years Zangī faced many troubles and setbacks. After an unsuccessful siege of al-Bīra [*q.v.*], at the strategic crossing of the Euphrates, the Crusaders abandoned it to the Artukid ruler Ḥusām al-Dīn Timurtāsh, a vigorous opponent of Zangī. In Dhu 'l-Ḳa'da 539/May 1145 the Saldjūḳ prince Alp Arslān (Ibn al-Athīr) or Farrukhānshāh (Ibn al-Ḳalānisī and Ibn al-'Adīm) (see above) made an unsuccessful rebellion in al-Mawṣil. In 541/1146 Zangī set out to attack the 'Uḳaylid stronghold of Ḳal'at Dja'bar [*q.v.*], but some of his own *mamlūks* murdered him in the night of Sunday, 6 Rabī' II 541/14-15 September 1146. He was succeeded by his sons Sayf al-Dīn Ghāzī in al-Mawṣil and Nūr al-Dīn Maḥmūd in Aleppo.

The historians, in particular Ibn al-Athīr, have bestowed the highest praise on Zangī for his political and military qualities and his achievements, especially with regard to the war against the Crusaders; nevertheless, they were aware of his unscrupulousness. Zangī was the first Muslim ruler who fought the Crusader states effectively; however, he never fought them with the same vigour as he did in the case of the strategically much more important Damascus. Ibn al-Athīr also praises him for the return of prosperity to al-Mawṣil and all his lands after the period of Bedouin domination and of continuous warfare amongst the Saldjūḳs, his main political aim to carve out an autonomous amīrate within the framework of the Saldjūḳ empire.

ZANGĪ ĀTĀ or Zangī Bābā, Ṣūfī saint of Central Asia, d. 657/1259.

He was a shepherd from Tashkent, with swarthy colouring from his Arab origins, whence his name (*zangī* "black"). His father Tāsh Ātā was a descendant of Arslān Bāb, the master of the great saint of Central Asia, Aḥmad Yasawī [*q.v.*]. Zangī Ātā was first of all initiated by his own father into the mystical way, and then, after his father's death he became the disciple of Ḥakīm Ātā, Aḥmad Yasawī's famous *khalīfa*. At Ḥakīm Ātā's death, he went on pilgrimage to his tomb in Khʷārazm, and married Anbar Bībī, the saint's widow. The Naḳshbandī 'Ubayd Allāh Aḥrār [see aḥrār, in Suppl.) held Zangī Ātā in high regard, and claimed to have heard God's voice when he was at the saint's tomb in Tashkent. Zangī Ātā also cultivated the practice of "*dhikr* of the saw" (*dhikr-i arra*).

Amongst his four main *khalīfas*—Uzun Ḥasan Ātā, Sayyid Ātā, Ṣadr Ātā and Badr Ātā—the second of these was sent into the Dasht-i Ḳipčaḳ to spread Islam and to convert the ruler Özbeg Khān to that faith. In the 19th century, oral tradition attached Zangī Ātā to the Ḳādirī *ṭarīḳa* ("Khodrié", see Schuyler), which was, in reality, simply the Naḳshbandiyya-Djahriyya. Built on Tīmūr's orders, the ensemble around his mausoleum (16 km/10 miles from Tashkent) is one of the finest architectural works in Central Asia and one of the oldest pilgrimage places in the region. It comprises the saint's tomb, a *madrasa* dating from the 18th-19th centuries, a hostel for pilgrims, a mosque (1870), a minaret (1914-15) and a monumental portal. There is a great basin stretching out in front of the ensemble and a vast cemetery on one of its sides. Nearby is the tomb of his wife, Anbar Bībī. Each year, at the beginning of September, there was a religious festival in Zangī Ātā's honour, he having become the patron saint of Tashkent. The festival lasted two or three days, gathering together the whole population of Tashkent in prayers, communal meals and festivities. It was described in the second half of the 19th century by the American traveller Eugene Schuyler (*Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara, and Kuldja*, London 1876, i, 138-40), and several traditions linked with the saint's mausoleum were collected by J. Castagné in his study of the saints of Central *Asia* (*Le culte des saints de l'Islam au Turkestan*, in *L'Ethnographie*, Paris 1951, 53-4). Since the break-up of the USSR, the pilgrimage has taken on a new life, and practices linked with popular Islam (healing sessions by *bakhshīs* [*q.v.*], amongst others) have taken place at the approaches to the funerary complex of Zangī Ātā. The saint's name further appeared in incantations put together by *bakhshīs* in the last century (see the text of a Ḳazaḳ *bakhshī* collected by Castagné).

(Th. Zarcone)

ZANGIDS, a Turkmen dynasty which reigned over Syria, Diyār Muḍar and Diyār Rabī'a [*q.vv.*] from 521-2/1127-8 onwards, in the tradition of Turkmen-Saldjūḳ collective familial sovereignty: in Aleppo until 579/1183, in al-Mawṣil until 631/1233, and with minor branches in Sindjār, Djazīrat Ibn 'Umar and in Shahrazūr.

The progenitor Aḳsunḳur [*q.v.*], a Turkish *mamlūk* commander in the service of the Saldjūḳ sultan Malik Shāh, was appointed governor of Aleppo in 480/1087-8. During the wars of succession following the sultan's assassination, Aḳsunḳur was executed in 487/1094.

His eldest son and eponym of the dynasty, Zangī [*q.v.*], was raised and trained at the court of the governors of al-Mawṣil. In Rabīʿ II 520/April 1126 the sultan entrusted him with the military governorship of Baghdād and ʿIrāḳ. After the assassination of his protector Aḳsunḳur al-Bursuḳī [*q.v.*], the sultan gave Zangī the former possessions of al-Bursuḳī, al-Mawṣil, Aleppo and parts of the Djazīra. He placed one or two of his sons [see ZANGĪ] under Zangī's tutelage and bestowed on him the title of an *atābak* [*q.v.*], which became almost synonymous for the rulers of al-Mawṣil. During 521-2/1127-8 Zangī took possession of his realm, which had been rent by internal strife and had been annexed partially by the Artuḳids.

Zangī's policy encompassed four main directions. First, he consolidated his amīrate within the Saldjūḳ empire and made it almost autonomous. He took part in the continuous power struggles of the Saldjūḳ sultans, pretenders and the caliphs. In 523/1129 he achieved acknowledgement as king of the west (*malik al-gharb*) by sultan Maḥmūd [*q.v.*]. In the wars of succession after the murder of the caliph al-Mustarshid [*q.v.*] in 530/1136, Zangī sided with the short-reigning caliph al-Rāshid [*q.v.*], but was forced to acknowledge the new caliph al-Muḳtafī and the sultans Masʿūd and Sandjar as overlords.

The persisting political instability in Masʿūd's realm allowed Zangī to turn his attention to matters in Syria, the second direction. He launched four campaigns into the autonomous realm of the Būrids [*q.v.*] with the ultimate goal of conquering Damascus between 523/1129 and 533-4/1139-40. He never succeeded in this, though he gained Ḥamāt and Ḥimṣ [*q.vv.*], and eventually had to be content with the nominal overlordship.

The third direction of expansion was towards the Artuḳid and Kurdish principalities in Diyār Bakr. In various campaigns, raids and intrigues with the Artuḳid houses of Mārdīn and Ḥiṣn Kayfā he gained several strongholds there.

The fourth direction was towards the Crusader principalities. He seized fortresses mainly in the region between Antioch and Aleppo, and at the zenith of his power in 539/1144 conquered al-Ruhā [*q.v.*], the capital of the Crusader County of Edessa. This caused the Second Crusade and earned Zangī his outstanding reputation among Muslim historians as a hero of the *djihād*.

The succession of Zangī after his death in 541/1146 was disputed between his sons, but it resulted in practice in a division of territories between two of them, Sayf al-Dīn Ghāzī in al-Mawṣil with the territories in Djazīra, and Nūr al-Dīn Maḥmūd [*q.v.*] in Syria and al-Ruhā. Sayf al-Dīn Ghāzī first became the head of the family, and then later Nūr al-Dīn.

The principality of Aleppo. After the murder of his father, Nūr al-Dīn Maḥmūd achieved control in Aleppo. He spent the first year of his reign in consolidating his territory, threatened by an unsuccessful attempt of Joscelin of Edessa to retake his capital with the help of the resident Armenians. He reached a conciliation with his brother Sayf al-Dīn Ghāzī, acknowledging the latter's suzerainty. In the south, Muʿīn al-Dīn Unur of Damascus, together with the Crusaders of Jerusalem, tried to regain territory and independence.

The first eight years were occupied with the unification of Syria under his rule. In July 1148 the leaders of the Second Crusade in Jerusalem made the ill-fated decision to attack Damascus, although the Būrids had been the allies of Jerusalem for years against Zangīd ambitions. Unur of Damascus had to call in Nūr al-Dīn. On his advance, the Crusaders lifted the siege. The year 544/1149-50 saw four major events favourable for Nūr al-Dīn. In Ṣafar 544/June 1149 he won a decisive battle against the Crusaders near Inab, where Raymond of Antioch was killed. He then took Afāmiya, Ḳalʿat Muḍīḳ and Ḥārim. In Rabīʿ II 544/August 1149 his opponent Unur of Damascus died. In Djumādā II 544/November 1149 his brother in al-Mawṣil died and was succeeded by his third and younger brother Ḳuṭb al-Dīn Mawdūd. The supremacy within the family confederation was disputed, but eventually it was agreed that Nūr al-Dīn should get the rich family treasure, which had been deposited in Sindjār, for financing the *djihād*, as well as the major cities in Diyār Muḍar and also Ḥimṣ. In Dhu 'l-Ḥidjdja 544/April 1150 Joscelin of Edessa was captured by Turkmens, which provided an opportunity for Nūr al-Dīn to seize the remaining strongholds of the former county of Edessa. In Ṣafar 549/April 1154 he finally conquered Damascus and extended his realm as far as Buṣrā and Ṣalkhad.

A power struggle in the already-weakened Fāṭimid caliphate in 558/1163 resulted in a competition between Amalric of Jerusalem and Nūr al-Dīn over political and military domination of Egypt as the key to hegemony in the region. Three times between 559/1164 and 564/1168, their armies both penetrated into Egypt. Finally, in Rabīʿ II 564/January 1169 Shīrkūh, the commander of Nūr al-Dīn's army, became master of Egypt as *wazīr* of the Fāṭimid caliph. After the death of the last Fāṭimid, al-ʿĀḍid, on 10 Muḥarram 567/12-13 September 1171, Ṣalāḥ al-Dīn [*q.v.*], who had succeeded his uncle Shīrkūh as *wazīr*, changed the *khuṭba* and *sikka* in favour of Nūr al-Dīn Maḥmūd and the ʿAbbāsid caliph, thus re-establishing Sunnī supremacy in Egypt.

Two years before, Ḳuṭb al-Dīn Mawdūd had died in Dhu 'l-Ḥidjdja 565/September 1170. Sayf al-Dīn Ghāzī II, the leader of a faction hostile to Nūr al-Dīn, became the lord of al-Mawṣil. The question of supremacy within the Zangīd family was raised again. In 566/1170-1 Nūr al-Dīn conquered the Djazīra in order to restructure the Zangīd realm. Ghāzī II remained in al-Mawṣil but acknowledged Nūr al-Dīn's suzerainty. Nūr al-Dīn's candidate for al-Mawṣil, ʿImād al-Dīn Zangī II, the younger son of Mawdūd, was compensated with Sindjār, but had to acknowledge the suzerainty of his brother in al-Mawṣil. With a united Syria, Diyār Muḍar and the rich province of Egypt, as well as the overlordship of al-Mawṣil and Diyār Rabīʿa, Nūr al-Dīn was at the zenith of his power in order to fight the Crusaders. In the following years, he tried to gain the Crusader castles Karak and Shawbak [*q.vv.*], but Ṣalāḥ al-Dīn's increasing tendency to build up Egypt as his independent power base hindered these ambitions. Nūr al-Dīn Maḥmūd died on 11 Shawwāl 569/15 May 1174. He founded several urban institutions, *madrasas* and hospitals and restored the fortifications of the cities and citadels in Aleppo, Damascus and al-Mawṣil. He was the patron of Sunnī orthodoxy, to the detriment of the Shīʿī population and institutions.

He was succeeded by his son al-Ṣāliḥ Ismāʿīl, an eleven-year-old boy. His uncle Sayf al-Dīn of al-Mawṣil immediately challenged his position and in 569/1174

reconquered the Zangīd Djazīra for al-Mawṣil. In the south, Ṣalāḥ al-Dīn advanced from Egypt, taking Damascus and Ḥamāt in 570/1174. After a victory over the combined Zangīd forces in Shawwāl 571/April 1176, he revoked the fiction of al-Ṣāliḥ Ismāʿīl's overlordship, thus creating a formally independent principality. When al-Ṣāliḥ died in Radjab 577/1181 he left a principality threatened by Ṣalāḥ al-Dīn and bequeathed to ʿIzz al-Dīn Masʿūd of al-Mawṣil. However, instead of fighting Ṣalāḥ al-Dīn, in Shawwāl 577/February 1182 Masʿūd exchanged Aleppo for Sindjār in order to expel Zangī II from the immediate neighbourhood of al-Mawṣil. During his first Djazīra campaign in Ṣafar 579/June 1183, Ṣalāḥ al-Dīn took Aleppo from Zangī II in exchange for Sindjār.

The principality of al-Mawṣil. After the death of Zangī, Sayf al-Dīn Ghāzī became head of the family. The politics of the Mawṣil branch were intent on maintaining a balance of power and concentrated on the economic and cultural development of the principality. Ghāzī, his successors and the élite of al-Mawṣil became patrons of architecture and art, benefactors of religious institutions and scholars. When Ghāzī died in 544/1149, the *amīrs* of al-Mawṣil transferred the government to his younger brother Ḳuṭb al-Dīn Mawdūd. An intervention by Nūr al-Dīn reduced the principality considerably (see above). Al-Mawṣil at that time was run by the powerful regent al-Djawād and the *amīr* ʿAlī Küčük [see BEGTEGĪNIDS]. Only in 554/1159 did al-Mawṣil once again enter the persistent Saldjūḳ power struggles, when ʿAlī Küčük briefly supported the Saldjūḳ pretender Sulaymān Shāh, who had been detained in al-Mawṣil for several years. The death of Mawdūd in 565/1170 resulted in a succession crisis, in which Nūr al-Dīn intervened. The realm of the successor Sayf al-Dīn Ghāzī II became rather diminished and divided (see above). However, as soon as Nūr al-Dīn died, Ghāzī extended his realm at the expense of his nephew al-Ṣāliḥ Ismāʿīl (see above). The weakness of the Syrian régime drove Ghāzī into war with Ṣalāḥ al-Dīn in 570-1/1175-6. A treaty concluded in Muḥarram 572/July 1176 confirmed the status quo. Back in al-Mawṣil, Ghāzī II installed Mudjāhid al-Dīn Ḳaymaz as *wazīr*, who directed the affairs with only one interruption up to 595/1198. In 576/1180 Ḳaymaz administered the succession of the deceased *atābak* in favour of the brother ʿIzz al-Dīn Masʿūd. The sons of Ghāzī II received only an *iḳṭāʿ*, Djazīrat Ibn ʿUmar and al-ʿAḳr al-Ḥumaydiyya, both of which formed the nucleus of later Zangīd principalities.

Ṣalāḥ al-Dīn made two expeditions into the Djazīra, in 578-9/1182-3 and in 581/1185-6, in order to subdue the Zangīds and to direct the resources of the Djazīra to battlefields in Syria and Palestine. After his first campaign, the principality of al-Mawṣil became reduced to al-Mawṣil itself and Djazīrat Ibn ʿUmar and some territories east of the Tigris. Due to an intrigue, the powerful regent of al-Mawṣil Ḳaymaz was forced to step down in Djumādā I 579/August-September 1183. Sandjar Shāh of Djazīrat Ibn ʿUmar and Yūsuf b. ʿAlī Küčük of Irbil saw the opportunity to secede from al-Mawṣil, and acknowledged the suzerainty of Ṣalāḥ al-Dīn. After ten months, Masʿūd re-installed Ḳaymaz. His immediate attempts to regain Irbil were the cause for Ṣalāḥ al-Dīn's second campaign. Both campaigns fragmented the Zangīd realm into five separate principalities, all of them acknowledging Ayyūbid suzerainty in the *khuṭba* and *sikka*: two Begtigīnid principalities (Ḥarrān/al-Ruhā and Irbil) and three Zangīd principalities (al-Mawṣil, Djazīrat Ibn ʿUmar and Sindjār/Naṣībīn). On 27 Ṣafar 589/4 March 1193 Ṣalāḥ al-Dīn died, and Masʿūd, Zangī II of Sindjār and other lords of the Djazīra tried vainly to break away. Ṣalāḥ al-Dīn's brother al-ʿĀdil [*q.v.*], the Ayyūbid lord of Mesopotamia, secured the Ayyūbid supremacy. In the aftermath of these campaigns, Masʿūd died on 29 Shaʿbān 589/30 August 1193, and Ḳaymaz directed the succession of Nūr al-Dīn Arslān Shāh. In 594/1198, after the death of Zangī II of Sindjār, a clash over the possession of Naṣībīn resulted in a weakening of both principalities and the death of Ḳaymaz in Rabīʿ I 595/January 1199. The death of the formal head of the Ayyūbid house, al-ʿAzīz ʿUthmān, in 595/1198 provided the opportunity for the three Zangīd principalities to rebel against al-ʿĀdil in favour of al-Afḍal ʿAlī b. ʿUthmān and his supporter al-Ẓāhir Ghāzī of Aleppo [*q.v.*]. Al-ʿĀdil succeeded in subjugating the Zangīd principalities. At the beginning of 601/September 1204, a treaty was arranged on the basis of the *status quo ante*. In 606/1209 al-ʿĀdil attempted to annex the Zangīd states, beginning with Naṣībīn, but Kökbürī of Irbil and Arslān Shāh joined forces in order to thwart al-ʿĀdil's ambitions. A reconciliation was achieved, but Naṣībīn and the Khābūr valley remained in the hands of al-ʿĀdil, and the Zangīds had to send provisions for his campaigns. In Radjab 607/January 1211 ʿIzz al-Dīn Masʿūd II succeeded his father. Arslān Shāh had chosen his *mamlūk* Badr al-Dīn Luʾluʾ [*q.v.*] as regent of al-Mawṣil. Luʾluʾ's power grew to such an extent that in 631/1233 he was able to depose the Zangīds from being *atābaks* of al-Mawṣil. Arslān Shāh's second son ʿImād al-Dīn Zangī III was compensated with the fortresses of al-ʿAḳr al-Ḥumaydiyya and al-Shūsh as *iḳṭāʿ*s. In Rabīʿ II 615/July 1218 Luʾluʾ secured the smooth succession for Nūr al-Dīn Arslān Shāh II in al-Mawṣil. The death of al-ʿĀdil in Djumādā II 615/August 1218 encouraged rulers in the Djazīra to revolt and expand their territory. Zangī III took the fortresses of al-ʿImādiyya that were dependent on al-Mawṣil, which remained loyal to the Ayyūbids. He became master of the Kurdish mountain region north and northeast of the city, supported by Kökbürī of Irbil. Luʾluʾ sought help from al-Ashraf Mūsā, the successor of al-ʿĀdil in the Djazīra. Luʾluʾ in turn served al-Ashraf Mūsā as check on Ayyūbid enemies in the east. The caliph mediated a peace agreement. Soon afterwards, in 616/1219, Arslān Shāh II died and Luʾluʾ secured the succession of the three-year-old al-Nāṣir al-Dīn Maḥmūd b. Masʿūd II, but Zangī III and Kökbürī challenged Luʾluʾ in Kurdistān. From 620/1223 to 624/1227 an internal war broke out in the Ayyūbid realm, which strengthened Luʾluʾ's power as ally of al-Ashraf Mūsā. When in 630/1233 Kökbürī died, he had bequeathed his territory to the caliph in Baghdād. He had been the last powerful advocate of the Zangid cause, and Luʾluʾ, now at the zenith of his power, could get rid of the last Zangīd of the al-Mawṣil line. In Rabīʿ I 631/December 1233 he received an investiture diploma for al-Mawṣil and the honorific of *al-Malik al-Raḥīm* as official recognition from the caliph.

The principality of Sindjār. This was set up by Nūr al-Dīn in 566/1170-1 for his nephew ʿImād al-Dīn Zangī II, who had to acknowledge his brother Sayf al-Dīn Ghāzī of al-Mawṣil as immediate overlord. The relation between the branches in Sindjār and al-Mawṣil remained tense and frequently hostile. In 577/1182 Zangī II exchanged Sindjār with Masʿūd for Aleppo. Ṣalāḥ al-Dīn conquered Sindjār as early as Ramaḍān 578/December 1182 and gave it in the next year,

together with Naṣībīn, the Khābūr valley, al-Raḳḳa and Sarūdj, to Zangī II in exchange for Aleppo (see above). The possession of Naṣībīn remained strongly disputed between Sindjār and al-Mawṣil. In Muḥarram 594/November 1197 Ḳuṭb al-Dīn Muḥammad succeeded his father; in 595/1199 he joined the coalition against al-ʿĀdil, but was the first to recognise him as overlord again in 600/1204. In 606/1209 al-ʿĀdil captured the Khābūr valley and Naṣībīn and unsuccessfully besieged Sindjār. Ḳuṭb al-Dīn had a good reputation as a just ruler and a supporter of commerce. When he died in Ṣafar 616/April 1219, a violent dynastic crisis arose and within a year his two sons fought and succeeded each other. Then in Djumādā I 1617/July 1220 the last Zangīd ruler of Sindjār transferred his principality to al-Ashraf Mūsā.

The principality of Djazīrat Ibn ʿUmar. After the death of Ghāzī II in 576/1180, his son Muʿizz al-Dīn Sandjar Shāh obtained Djazīrat Ibn ʿUmar as *iḳṭāʿ* within the realm of al-Mawṣil. It can be regarded as autonomous principality from 579/1183, when he acknowledged the overlordship of Ṣalāḥ al-Dīn after the deposition of Ḳaymaz. Following the death of the Ayyūbid al-ʿAzīz ʿUthmān, Sandjar Shāh took part in the rebellion against al-ʿĀdil, but in 600/1204 changed sides, now fighting Arslān Shāh in al-Mawṣil. Sandjar Shāh was murdered in 605/1208-9 and his son, al-Muʿaẓẓam Maḥmūd, succeeded him. Like his father, the latter is described as tyrannical, but he managed to rule for over forty years by keeping good relations with the Ayyūbids as well as with Luʾluʾ in al-Mawṣil. When he died in 648/1251, he was succeeded by his son al-Malik al-Masʿūd Shāhānshāh, but Luʾluʾ absorbed this principality, too. With an investiture diploma from the Ayyūbid al-Nāṣir Yūsuf II, he conquered the city in 649/1251. The last ruling Zangīd was drowned in captivity on the way to al-Mawṣil.

The principality of Shahrazūr [*q.v.*]. This was the final result of the succession regulations in 607/1211. ʿImād al-Dīn Zangī III received the fortresses of al-ʿAḳr al-Ḥumaydiyya and al-Shūsh as *iḳṭāʿ*s. In 615/1218, when Luʾluʾ placed Arslān Shāh II on the throne of al-Mawṣil, Zangī III felt deprived of his claim and vainly attempted to displace Luʾluʾ with the support of Kökbūrī. When al-ʿĀdil died in the same year, Zangī III tried to extend his power into the northern region of al-Mawṣil. In 617/1220 he lost his fortresses and all his territorial gain to Luʾluʾ and fled to Ādharbāydjān, in 619/1222 attempting anew to regain his possessions but was compelled to abandon them in exchange for the distant Shahrazūr, acknowledging the overlordship of Kökburī. In Ramaḍān 633/May 1236 he was succeeded by his son Nūr al-Dīn Arslān Shāh III. After his death in 14 Shaʿbān 642/15 January 1245, Shahrazūr was given to an *amīr* of the caliph, and four months later it was conquered by the Mongols.

After one-and-a-half centuries of Bedouin domination and urban decline in Syria and northern Mesopotamia, the Zangīds, following the Saldjūḳ conquest, brought back an urban-based political structure to the region. They rebuilt the devastated cities, and founded numerous urban and religious institutions. They promoted Sunnī Islam where Shīʿism had earlier prevailed. They cared for scholarship, commerce and the development of an indigenous currency. Together with the Artuḳids, they created at their courts a distinctive style of classical revival, and it may be said that the Zangīds laid the institutional foundation on which the Ayyūbids and Mamlūks could build.

ZĀR, the name for a popular cult of spirits found in northeastern Africa and such adjacent regions as the Arabian peninsula.

1. In the Horn of Africa and the Arabian peninsula.

The *zār* ritual or practice seems to have originated in the Horn of Africa and, especially, in Ethiopia. According to E. Cerulli, the word (Ar. *zār*, Amharic *zar*, Somali *saar*, etc.), may be said to derive from "the name of the supreme god of the pagan Cushitic peoples, the Sky-God called in Agaw (Bilen) *djār*, and in the Sidamo languages (Kaffa) *yarō* and (Buoro) *darō*". The Italian scholar further thought that, in the context of Ethiopian Christianity, this god must have been reduced to the role of an evil spirit, one which has been likewise retained among the Muslims and, probably, among the Falasha. These propositions do not provide answers to all the questions involved, but are still of value in so far as they have not been replaced by more information. Etymologies deriving *zār* from the Arabic verb *zāra* "to visit" seem fantastic, although current in Arab milieux.

An important Cushitic people, the Oromo, who entered Ethiopia from the 16th century onwards, could have played an important role in the formation of the ritual and its diffusion. Nevertheless, it spread (sometimes with changes of name and assimilating local practices and beliefs) throughout northeastern Africa, the Maghrib and the Arabian peninsula, above all in the 19th century. Slaves carried off from the Horn of Africa contributed to this expansion and, in

more recent times, the Ethiopian, Eritrean and Somali diasporas. Links with other similar rituals in West Africa and the Arab world are clear but remain to be clarified.

In Ethiopia itself the *zar* ritual assumes many forms, but it is possible to discern a basic structure. It is devoted to spirits capable of sparking off illnesses and all sorts of accidents of life among those possessed by them. The *zar* can fasten on any person, but in order to make that person openly ill, spontaneously invoke a trance or provoke an accident, the person in question must have "a star easily gripped", receive a *zar* through heredity or find him or herself in one of the circumstances or the places favourable to and attractive for the *zar* (seasons, places, odours, the victim's failure to fulfil various usages or his or her faults towards the *zar*, etc.).

In practice, the *zar* ritual is only found in urban centres. Those who are possessed—comprising mainly women—form a sort of fraternity or sorority under the power of a healing man or woman (Amhar. *baläzar*) "superior possessed person", whom the very important *zars* allow to release sufferers from the less important *zars* who afflict them. The sick or possessed persons group themselves round the *baläzar* during the sessions (*wädadja*), during which spirits are evoked by clapping the hands or beating drums or by singing. The healer then proceeds to bring about peace between the *zar* and the possessed person. He makes the *zar* give his name and makes him "come down to" the sufferer, who then goes into a trance (*gurri*), and afterwards negotiates with him. The *zar* has to promise, after an exchange of sacrifices or presents (jewels, necklaces, etc., at the cost of the possessed person and which will be borne by him or her because he/she has become the incarnation of his or her *zar* or "mount"), not to trouble the sufferer any longer. In addition to propitiatory sacrifices of chickens, sheep, cows, etc., there are rites of expulsion (the sufferer is rubbed with the corpse of a slaughtered animal, into which the illness passes), ablutions in vegetable decoctions, the spitting out of quids of *ḳāt* [*q.v.*] chewed by the *baläzar* over the patient, unctions of coffee grounds, etc.

The *zar* are not demons (they have a white face, whilst demons have black ones), nor *budas*, nor *ḳolles*, nor *djinn*, but sometimes they have complex relations with these other spirits. The invisible world of these spirits is the image of Ethiopian society and its members. The *zar* wear clothes, eat, have their own special character (they are delicate and sensitive), temperaments, origins and histories. They include both males and females, they marry, and can even become crossed with demons and *djinn*, producing a class of métis or halfbreeds. Hence they have their own genealogies, and all social groups are represented.

Islamic elements are present within the ritual as a whole (proper names given to the *zar*, the vocabulary of the rituals, use of *ḳāt* which, in Ethiopia, is a "Muslim" plant, etc.), which leads one to think of a large involvement of the Ethiopian Muslim peoples—Oromo, Argobba, etc.—and a prominent role of the great Muslim centre of Harar [*q.v.*] in the diffusion of the cult into Somaliland on the one hand, and to Aden and the Yemen on the other. The Somalis themselves have been able to relay or strengthen this diffusion from their centres of emigration within the Arabian peninsula, such as Aden and Sūr in ʿUmān. At the present time, the *zar* ritual is widespread in the Persian Gulf region, not only on the Arab coasts but also on the Persian ones, in ʿUmān and in Yemen, especially at Aden and in the Tihāma. In this last region, introduction of the ritual is attributed to the Akhdām, a people of African origin who have to endure a special status and who have made music and dancing their specialities. The importance of the *zar* ritual in Saudi Arabia, where it has long been attested, is difficult to estimate.

The *zar* ritual displays not only medico-magical aspects but also has religious, sexual, familial and societal, legal and moral, economic, aesthetic and artistic aspects which cannot be gone into here. It has been attacked (and its adepts sometimes persecuted) by religious authorities, Christian and Muslim, by the British colonial power, by the Marxists of the former P.D.S.Y., and now by Islamic fundamentalists. It is often recognised within Islamic countries that the *zar* is a mental affliction and a means for women to create a space of freedom for themselves.

Bibliography: This has over the years become especially abundant for the Sudan and Egypt (see 2. below), whereas the Arabian peninsula has had little treatment by scholars, probably because research on such subjects is frowned upon by the authorites. The bibls. given in the works below should be consulted, and in the work of Makris and Nakvig given below, there is reference to bibls. and analyses of 106 articles and books.

(A. Rouaud)

2. In Egypt.

The existence of the *zār* ritual has been recorded on the shores of the Red Sea from 1860 onward, then in the remainder of the country, especially in Upper Egypt, in Alexandria and in Cairo. Its introduction into the harems of Egyptian and Turkish *pashas* is attributed to Sudanese and Ethiopian slaves and concubines.

The ritual structure of the *zār* is very flexible, facilitating its adaptation to different social, cultural and religious circles. The adepts are mostly women—of any

age, civil or socio-economic status and education—and Muslim. Christians and men, primarily homosexuals, participate sporadically in the rites.

The *zār* in Egypt has developed and enriched the ancient belief in possession by *djunūn*: these spirits, living in an invisible world and capable of anger and even of infatuation with a woman, enter her body and provoke a state of trance, a physical or mental illness, or various other problems. The spirits of the *zār*, called "masters" (*asyād*), often grouped into families (of e.g. African, Egyptian, Turkish, European, Indian origin, etc.), are identified by name, sex, status or occupation (king, queen, soldier, physician, lawyer, schoolgirl, etc.), land of origin, place of residence (mountain, river, cemetery, mosque, the threshold of a house, etc.), religion (Muslim, Christian, Jewish, polytheist), clothing and ornamentation, colour, incense, an emotion or sentiment, and, finally, by songs and dances, foodstuffs and specific sacrificial animals (pigeon, chicken, sheep, calf, camel, etc.). These elements characterise and distinguish the spirits from one another and constitute the liturgy of the *zār*.

Once possessed, the victim organises ceremonies for as long as she lives and in different places, with the aim of being reconciled with the spirits. The possessed person, called "bride" (*ʿarūsa*), under the guidance of the chief celebrant, known as *kūdiya* (a term of unknown origin) or *shaykha*, concludes a pact of alliance with her "masters", one after the other. The rite takes on the appearance of a marriage ceremony between the spirit and the adept, with the celebrant introducing at different times divination by dreams, called "discovery of traces" (*kashf al-āthār*), the music and dance called "beating" (*dakka*) which accompany the trance, ablutions and fumigation with incense, the use of different ritual objects, the sacrifice of edible animals, and offerings of foodstuffs and ritual meals. Currently, the groupings of ritual music are "the Egyptian", "the Sudanese" and a third which belongs to the Ṣūfī brotherhood of the master Abu 'l-Ghayth. The first is constituted by women who play drums and tambourines. The second is a mixed group that also includes dancers with a belt made from sheep-skin shoes (*mandjūr*), and a leader who plays the lyre (*tambūra*), a sacred instrument, considered the dwelling-place of African spirits. Finally, the Ṣūfī one is constituted by dancers with little castanets, long hair and the *tannūra*, a large swirling woman's dress, and players of tambourines and flutes, who sing the praises of the Muslim saints.

The ritual structure reproduces the fundamental stages of a woman's life such as marriage, maternity and birth. These are staged according to a process of transformation: the novice, starting as the spouse of the spirit, subsequently becomes a mother and then a newborn child: the animal changes from its position as substitute for the spirit to that of substitute for the novice; it is slaughtered and the different parts distributed between the novice, the celebrant and the persons invited (the blood is poured over the novice, the meat and the entrails are cooked and eaten). Furthermore, there are ceremonies which are part of an initiatory process whereby the adept can become a celebrant, by passing through various ritual stages which permit her to progress and which are underlined by the adoption of different titles.

The Egyptian *zār* is not simply a therapeutic ritual; it is considered a religious ritual, and its celebrants and disciples are recognised as good Muslims. However, the spirituality of the *zār* transcends religions, whether they be Muslim, Christian or Jewish, while recognising them and embracing them in its ritual. It is thus considered a ritual of actualisation and of manifestation of the "grace" (*baraka*) of Allāh. The *kūdiya* becomes the vehicle of God's blessing, and assists the other possessed persons in their processes of transformation, by virtue of her special relationship with the spirits and her mastery of possession, which implies having the authority, knowledge and power necessary to perform the rites effectively. She is also called "she who knows the way" (*ʿārifat al-sikka*). Thus *zār*, while presenting the syncretic elements of the recognised religions, is thus revealed to be a specific and uniquely feminine-orientated religious form. Hence, while popular and widely diffused among various countries, *zār* is all too often misunderstood and opposed by men of religion, both orthodox and mystics, as well as by governments.

The religiosity of *zār* is expressed in the form of the union, "of love", between the "spouse of the *zār*" (whether she be possessed or celebrant) and the spirits. This marital relationship is confined to the rites in the case of possessed, but becomes permanent in the case of celebrants. Renewal of the alliance pact takes place through the constant performance of the rites. Each one of the ensemble of rites comprises variations of the model ceremony according to the intervention of a different spirit linked to a specific place and demanding the sacrifice of a particular animal. This initiatory process is the catalyst for the actualisation and organisation of the hierarchical universe of spirits and a particular cosmology, since *zār* appeals not only to natural or zoomorphic spirits but also to other categories, including the Christian saints Jesus and Mary, the family of the Prophet, and Muslim saints or mystics.

The Egyptian *zār* displays a complex structure combining a series of repetitive ceremonies. The celebrant is the pivot of the system around which the ritual unfolds and without her the rites could not take place while, at the same time, as a former possessed initiate herself, she is the culmination of the ritual system.

The rite of possession as thus defined shows that these ceremonies are only the links in a chain of initiation that leads from suffering to religious mastery. And this initiation is specifically feminine because any woman can, by successfully completing the ritual phases, become a *kūdiya*. The *zār* is thus differentiated from other initiatory rites, such as the rites of Ṣūfī brotherhoods, where ascent to the highest ranks of the religious hierarchy is achieved by way of a hereditary, essentially masculine path.

ZARĀDUSHTIYYA [see MADJŪS].

ZARĀFA (A.), pls. *zarāfāt, zarāfī, zarāʾif, zurāfa*, the giraffe (in Persian, *ushtur-gāw-palang* "camel-cow-leopard"), a large African mammiferous animal, one of the two representatives of the Giraffid family and well

known through its western type *Giraffa camelopardalis* or cameleopard. In Antiquity, and according to all the ancient writers on natural history, the giraffe was considered as a hybrid coming from crossings of wild species of camelids, bovines and felines, male or female, and because of its long front legs and short back ones, as involving a limping and jerky gait.

It is astonishing that al-Damīrī makes no mention of the giraffe in his *Ḥayāt al-ḥayawān al-kubrā*, nor does al-Ḳazwīnī in his *ʿAdjāʾib al-makhlūḳāt*; only al-Djāḥiẓ speaks of it, refuting and criticising all the beliefs asserting that this large, long-necked beast was a hybrid (*Ḥayawān*, Cairo 1947, i, 38, 241-3). In short, one may say that the Arabs hardly knew the giraffe and were uninterested in it; for them, its only asset was the beauty of its spotted coat, since they regarded it as stupid, and only localised it in Nubia.

In astronomy, the Giraffe is the name given to a secondary boreal constellation situated between that of the Waggoner (*Mumsik al-aʿinna, Dhu 'l-ʿinān*) and that of the Little Bear (*al-Dubb al-asghar*).

ZARAFSHĀN, conventionally Zerafshan, a landlocked river of Central Asia, now coming within Tajikistan and Uzbekistan.

In early Islamic times, it was known as "the river of Sogdia", Nahr Ṣughd [see ṣughd] or "the river of Bukhārā" (see al-Yaʿḳūbī, *Buldān*, 293-4, tr. Wiet, 110-11; al-Iṣṭakhrī, 319-21; Ibn Ḥawḳal, ed. Kramers, ii, 495-7, tr. Kramers and Wiet, ii, 475-7; *Ḥudūd al-ʿālam*, tr. Minorsky, 55, 73, comm. 198, 211). It flowed westwards from sources in what the geographers called the Buttamān mountains, in fact, between what are now the east-west-lying ranges of the Turkistan mountains, separating the Zarafshān from the upper Sïr Daryā [*q.v.*] valley, and the Hissar mountains separating it from the rivers running southwards through Čaghāniyān [*q.v.*] to the upper Oxus. Its waters served a series of towns, from Pandjikath to Samarḳand and Bukhārā, and their agricultural areas, with a complex irrigation system for the Samarḳand district beginning at the village of Waraghsar "head of the dam"; al-Yaʿḳūbī says that the river was as important as the Euphrates. Ultimately, it petered out in marshes in the desert before it could reach the middle Oxus towards Khʷārazm.

The name Zarafshān "gold spreader" (the mountains around its headwaters being famed as auriferous and bearing many useful other metals in early Islamic times) only appears from the 18th century onwards. An earlier name corruptly given in the text of al-Yaʿḳūbī, 293, tr. 111, was interpreted by Barthold, *Turkestan down to the Mongol invasion*[2], 82, and then Marquart, *Wehrot und Arang*, 30, as **Nāmik*, to be compared with the Chinese rendering *Na-mi*, and Marquart went on to suggest an etymology from Iranian *nāmik* "famed", citing the name for the river in Greek sources πολυτίμητος "highly honoured"; but all this remains speculation.

The mountain valleys where the Zarafshān rises have provided a refuge area for the Middle Iranian language, Yaghnobi [see īrān. iii. Languages, in Suppl.].

(C.E. Bosworth)

ZARANDJ [see zarang].

ZARANG, Arabised as Zarandj, the main town of the early Islamic province of Sīstān. Its ruins lie a few miles north of what was in the late 19th and early 20th centuries the administrative centre of Persian Sīstān, Nuṣratābād or Nāṣirābād, modern Zābul. Its remaining traces are visible within the vast ruined site known as Nād-i ʿAlī, to the east of the present course of the Hilmand river [*q.v.*] before it peters out in the Hāmūn depression [see zirih] just inside Afghān Sīstān; the site has, however, been much depleted by periodic flooding and the re-use of its materials for local building. In recent years, a "New" Zarang has been founded as a minor administrative centre just inside the Afghān border.

Zarang is an ancient name. The province Zarangianē (< Drangiana) appears in the Greek text of Isidore of Charax (? *flor.* 1st century A.D.), and had already figured in the Behistun inscription of Darius I and the Persepolis one of Xerxes as *Zara(n)ka* or *Zra(n)ka*, Akkadian *za-ra-an-ga* (cf. W. Tomaschek, in *PW*, new ed. iv/2, cols. 1665-7, s.v. *Drungai*). In Sāsānid times, coins were minted at *Sakastān (*SK*) from the time of Shāpūr II (309-79) onwards, and specifically at Zarang (*ZR, ZN, ZRNG*) from the first reign of Kawadh I (488-97). Sīstān (i.e. Zarang) figures as the seat of a Nestorian bishopric in the acts of councils of 430 and 577; Christians are still mentioned there at the beginning of the 11th century.

In the first century of Islam, the Arabs first appeared before Zarang in 31/651-2 when ʿAbd Allāh b. ʿĀmir [*q.v.*] sent al-Rabīʿ b. Ziyād al-Ḥārithī against Sīstān. After a battle with the incomers, the *dihḳān* of Zarang decided to make a peace agreement and promised to pay an annual tribute of money and slaves, an arrangement confirmed by the Marzbān or Ispahbadh of Sīstān. Coins of Arabo-Sāsānid type were minted in Sīstān, presumably at Zarang (which appears on such coins as *ZR*) from the years 31 and 32 (cf. E. von Zambaur, *Die Münzprägungen des Islams*, i, Wiesbaden 1968, 132, 139). When in 33/653-4 ʿAbd Allāh b. ʿĀmir appointed a new governor, ʿAbd al-Raḥmān b. Samura, Zarang revolted and had to be pacified, this time with a heavier tribute; it was ʿAbd al-Raḥmān's twelve-year governorship which now made Arab rule firm in Sīstān. Zarang now became a base for Arab raids further eastwards, to Bust and against the local rulers in eastern Afghānistān, the Zunbīls [*q.v.*], and beyond them, the Kābul-Shāhs. It remained the bastion of Arabic rule in Sīstān, even when, up to the 3rd/9th century, much of the surrounding countryside was controlled by anti-caliphal, Khāridjite bands.

The uncertain political situation in Khurāsān caused by Abū Muslim's revolt plunged Zarang into disorder, with various Arab tribal factions disputing power there; it was not until 138/755 that the caliph al-Manṣūr's authority was established. At the end of the 8th century, Sīstān and much of eastern Khurāsān was shaken by the thirty years' Khāridjite revolt of Ḥamza b. Ādharak. Although Zarang remained faithful to the ʿAbbāsid connection, its governors had little control over the countryside outside the city, and the forwarding of revenue from the province was cut off. In 206/821 the governor of Khurāsān, Ṭāhir b. al-Ḥusayn Dhu 'l-Yamīnayn [*q.v.*], was able to appoint a governor for Sīstān, and taxation started flowing once more from the province to Nīshāpūr and, ulti-

mately, to Baghdād. But this period was short-lived, for the last Ṭāhirid governor in Sīstān, Ibrāhīm b. al-Ḥuḍayn al-Ḳūsī, had to abandon Zarang in 239/854 to local *ʿayyār* leaders, out of whom there emerged as *amīr* in Zarang Yaʿḳūb b. al-Layth al-Ṣaffār [*q.v.*].

For the next 150 years, till the Ghaznawid occupation of 393/1002, Zarang was the capital of the Ṣaffārids [*q.v.*], for the first part of this, of a vast empire in the Eastern Islamic world. In these years, Zarang reached a peak of prosperity. We have detailed descriptions of it from such 4th/10th century geographers as al-Iṣṭakhrī, Ibn Ḥawḳal and al-Muḳaddasī, when the city was flourishing under the *amīrs* Abū Djaʿfar Aḥmad and his son Khalaf. André Miquel has used these to put together a picture of Zarang as a typical Islamic *miṣr* or provincial capital, having the institutions of government and commerce and being integrated with the agrarian economy of its hinterland; he estimates that the whole urban area may have been 10 km/6 miles across (*La géographie humaine du monde musulman jusqu'au milieu du 11^e siècle*, iii, *Le milieu naturel*, Paris-The Hague 1980, 211-15). It appears to have been basically a concentric-patterned city on the Baghdād model, with the three-fold division of a *rabaḍ*, suburb; a *madīna* or *shahristān*, town proper; and a *ḳalʿa* or *arg*, citadel. There were walls protecting both the *rabaḍ* and the *madīna*, the latter one with five iron gates. The *rabaḍ* had palaces built by Yaʿḳūb and ʿAmr b. al-Layth respectively, and the *madīna* contained the citadel built by ʿAmr, housing his treasury, and also the Friday mosque and the government building or *dār al-imāra*. In a woodless and stoneless environment, the standard building material was sun-dried brick. There was a plentiful water supply brought by canals from the Hilmand when that river had an adequate flow, and when its flow was high, it was possible to sail in a boat along the final stretch, the Sanārūdh canal, up to the city itself. The surrounding agricultural area was rich, but the drawbacks were the scorching heat and the notorious "wind of 120 days" in spring and summer, which swept along the sand dunes so that barriers of brushwood, shrubs, etc., were necessary to protect the city's buildings.

The city suffered considerably in the rising of 393-4/1003-4 aimed at the Ghaznawid conquerors of Sīstān, with the Friday mosque plundered by the Ghaznawid troops and many people slaughtered; but it revived to become the capital of the Naṣrid *maliks* (421-622/1030-1225) and then of the Mihrabānid ones (from 633/1236 onwards). The actual name Zarang drops out of usage on coins and in literature around the mid-5th/11th century, to be replaced by locutions like *madīnat Sidjistān* and *shahr-i Sīstān*. It is assumed that the ancient Zarang, whatever its current name, continued on the same site until Tīmūr's sack of the Sīstān capital at the end of the 8th/14th century (see below). The Mongols had swept into Sīstān and reached Zarang in Dhu 'l-Ḳaʿda 619/December 1222, killing there the Naṣrid *malik* Nuṣrat al-Dīn b. Yamīn al-Dīn Bahrām Shāh, but it was Tīmūr's devastations, in Shawwāl 785/November-December 1383, which finally finished Zarang/Shahr-i Sīstān; hence in 826/1422 the Mihrabānid *malik* Shams al-Dīn began the construction of a new capital, Shahr-i Sīstān, on a fresh site called ?B.r.k or Mirak "well away from the sands and by the banks of the Hilmand", in the words of the local historian of Sīstān Malik Shāh Ḥusayn.

ẒARF (A., pl. *ẓurūf*), lit. "vessel, container", in grammar denotes a subset of nouns of place or time in the dependent (*naṣb*, *vulgo* "accusative") form indicating when or where the event occurs, e.g. *djalastu yawm-a-n warāʾ-a-hu* "I sat one day behind him". Because of their dependent form, the Arab grammarians classify them as objects of the verb, specifically as the "object of location", *mafʿūl fīhi*, lit. "thing in which something is done". Neither of the western terms "adverb" or "preposition" can properly be applied to these elements, whose noun status is confirmed by, amongst other things, the existence of diminutives such as *ḳubayla* and *buʿayda* "a little before", "a little after". The Greek origin of the term proposed by Merx in 1889 (*angeion* "vessel", cf. Versteegh and Elamrani-Jamal) is interesting but unverifiable. Whether *ẓarf* in the technical sense can really be traced back to al-Khalīl b. Aḥmad (d. *ca.* 175/791 [*q.v.*]) likewise cannot be proved (cf. Talmon), though at least we can be certain that it was fully current by the time of Sībawayhi (d. *ca.* 180/796 [*q.v.*]).

There are two general limitations: (a) not all *ẓurūf* have the full range of nominal functions, e.g. *ʿinda* "at", *thamma* "there", *maʿa* "with" (but note the indefinite form *maʿan* "together"), which makes them appear misleadingly similar to our adverbs and prepositions, and (b) nouns denoting a particular place (whether proper names or defined by the article) cannot normally function as *ẓurūf*: *dakhaltu 'l-bayta* "I went [into] the house" or *dhahabtu 'l-Shāma* "I went [to] Syria" are tolerated only as extensions of standard usage (*saʿat al-kalām*). This second limitation is probably universal, arising from the essential difference between what Sībawayhi calls a "point" in time (*waḳt fi 'l-azmina*) and a "point" in space (*waḳt fi 'l-amkina*) in his discussion of this topic (*Kitāb*, ed. Derenbourg, i, 12, ed. Būlāḳ, 16). There was also considerable debate among the grammarians as to whether locative phrases can be predicates in verbless sentences, the consensus being that sentences of the type *zaydun ʿindaka* "Zayd is with you" presuppose an elided verb or participle such as *yastaḳirru*/*mustaḳirrun* "is situated".

(M.G. Carter)

ẒARĪF (A.), pl. *ẓurafāʾ*, denotes in mediaeval Islamic social and literary life a person endowed with *ẓarf* "elegance", "refinement", also translatable as "man of the world", "dandy", or, in the plural, "refined people".

The *ẓarīf* (or *mutaẓarrif*) is generally considered as a type of *adīb*, indeed *taẓarruf* is viewed as an intensification of certain features, intellectual, literary, social, and personal, that are held to characterise the man of *adab* [*q.v.*]. Interestingly, *ẓarf* was not deemed gender-specific: Ibn al-Was͟hs͟hāʾ (d. 325/936-7) refers to *baʿḍ mutaẓarrifāt al-ḳuṣūr* (*K. al-Muwas͟hs͟hā*, ed. Brünnow, 42). The first exponent of *ẓarf* as an individual who combined the literary and social dictates of refinement is held to be al-ʿAbbās b. al-Aḥnaf (d. in the first decade of the 9th century A.D. [*q.v.*]), although attempts to read his *dīwān* as a summa of *taẓarruf* are inconclusive and unconvincing, as are attempts to identify an emergent concept of *ẓarf* in the early Islamic period. Ibn al-Was͟hs͟hāʾ (*op. cit.*, 50), for example, presents al-ʿAbbās in a negative and foolish light, which is not what one would expect from a supposedly anachronistic codification of a defunct socio-ethical ideal based on the character of al-ʿAbbās as paradigmatic of that ideal.

Ibn al-Was͟hs͟hāʾ's work is to be viewed as part of the current that culminated in the Aristotelian ethics of the *Tahd͟hīb al-ak͟hlāḳ* of Miskawayh (*ca.* 320-421/*ca.* 932-1030 [*q.v.*]), an attempt to harmonise an ʿAbbāsid vision of pre-Islamic *muruwwa* [*q.v.*], *adab* and *ẓarf* within an encompassing Islamic context; as such it is distinct from an exclusively and rigorously *ḥadīt͟h-sunna*-based ethic, such as that promoted, for example, by al-Buk͟hārī. The *K. al-Ẓahra* of Ibn Dāwūd endeavours to strike a balance between the two visions of an Islamic ethic. It is controversial to attempt to extrapolate theories of social stratification, class mobility, humanism or individuality from such texts, as they argue for and present visions of an Islamic order which are often in competition, but which were also often received in combination (see e.g. Bauer, *Raffinement und Frömmigkeit*).

(J.E. MONTGOMERY)

AL-**ZARḲĀʾ**, conventionally Zarka or Zerka, a city of modern Jordan, situated 23 km/15 miles to the northeast of the capital ʿAmmān (lat. 32° 04' N., long. 36° 06' E., altitude 619 m/2,030 feet). It lies on a plateau bordering the desert and intersected by various small valleys which, in the winter, pour water into the Zarḳāʾ river, the main east-bank tributary of the Jordan after the Yarmūk river. The site is also known for its underground water and springs, recognised by mediaeval geographers and travellers, and Pilgrimage caravans used to halt there to replenish their water supplies.

There does not seem to have been any settlement there in the Mamlūk and early Ottoman periods, although a Ḳaṣr S͟habīb al-Tubbaʿī (a person about whom nothing is known) is mentioned there, and this *ḳaṣr* was restored and fortified by the Ottoman authorities in 1899 and garrisoned by their troops as protection against Bedouin marauders. In 1903, some 66 Čečen families, refugees from the Caucasus, were settled there, and subsequently, some Circassians. The small community was surrounded by a wall against Bedouin of the Ḥasan, Ṣak͟hr, Ruwala and S͟harārāt tribes. In 1910 nomads of the region took part in the rebellion against the Ottomans [see AL-URDUNN. 2. History (b)]. The Ḥid͟jāz Railway passed through al-Zarḳāʾ, with a station there. During the First World War, it was a communications and supply centre for the Ottoman army, but was occupied by the British in 1917. During 1918-20 it came within the S͟harīf Fayṣal b. al-Ḥusayn's amīrate based on Damascus, and from 1921 came within the new state of Transjordan under his elder brother Amīr, later King, ʿAbd Allāh.

The new administration in 1926 chose al-Zarḳāʾ to be the headquarters of the border force, so that security was established in the region. Military and administrative personnel began to move there, together with people from outside the country, including some arriving after the 1925 Druze revolt against the French mandatary power in Syria, and in the wake of the discovery of phosphates in the region. Christian immigration included Armenians, and in 1949 there also arrived 800 Palestinians, so that al-Zarḳāʾ became a town of significance. It has continued to expand, with a population in 1996 of 585,000 and with several industries, including an oil refinery.

Bibliography: Admiralty Handbooks, Naval Intelligence Division, *Palestine and Transjordan*, London 1943, 408-10, 469, 475, 483, 510; Kamal Salibi, *The modern history of Jordan*, London and New York 1993, index.

(M.A. AL-BAKHIT)

ZARḲĀʾ AL-**YAMĀMA**, lit. "the blue-eyed woman of Yamāma", a semi-legendary figure of early Arabic lore. She was endowed with such piercing eyesight that she could descry an object some thirty miles away, hence the proverb *abṣaru min Zarḳāʾ al-Yamāma*.

She belonged to the tribe of Ṭasm [*q.v.*], but was married to a member of the sister tribe D͟jadīs. After the massacre of the former by the latter, a survivor, her brother, invoked the aid of the South Arabian king Ḥassān, who marched against D͟jadīs in Yamāma. Although Ḥassān's army was camouflaged with leafy branches (cf. the march of Birnam Wood in Shakes-

peare's *Macbeth*), Zarḳāʾ caught sight of it and warned Djadīs, but they did not believe her, whereupon Ḥassān fell upon them unawares and massacred them. He captured Zarḳāʾ, gouged out her eyes, and found the veins of her eyes treated with antimony. He then crucified her on the gate of Djaww al-Yamāma. The kernel of truth in the account is discernible, supported by echoes in the genuine verses of three of the poets of the *Muʿallaḳāt*, al-Nābigha, al-Aʿshā and al-Ḥārith.

Yellow journalism in early Islamic times accused her of lesbianism [see SIḤĀḲ], involving the Lakhmid princess of al-Ḥīra, Hind bt. al-Nuʿmān (early 7th century). Ṭasm and Djadīs were "archaic" tribes that belonged to the category of *al-ʿArab al-bāʾida* "the extinct Arabs"; hence the three centuries or so that separate Hind from Zarḳāʾ invalidate the slanderous charge, already rejected totally by the sober ʿAbd al-Ḳādir al-Baghdādī in his *Khizāna*.

(IRFAN SHAHÎD)

AL-**ZARḲĀLĪ**, ABŪ ISḤĀḲ IBRĀHĪM b. Yaḥyā al-Naḳḳāsh al-Tudjībī, known as WALAD AL-ZARḲIYĀL (Ṣāʿid al-Andalusī, *Ṭabaḳāt al-umam*, Beirut 1985, 179-81, tr. Blachère, 138-9; Ibn al-Ḳifṭī, 57), Spanish Muslim writer on practical and theoretical astronomy, d. 493/1100. Although al-Zarḳālī is the conventional form of his name, in Ibn al-Abbār, *Takmila*, Algiers 1920, 169-70, we have al-Zarḳālluh. It therefore seems likely that al-Zarḳālluh or al-Zarḳiyāl are the correct forms, and that al-Zarḳālī/Zarḳānī and al-Zarḳāla are classicised Eastern forms undocumented in Andalusī sources.

Life.

According to Isaac Israeli's *Liber Jesod ʿolam seu Fundamentum mundi* (1310), ed. Goldberg and Rosenkrantz, Berlin 1846-8, bk. IV, ch. vii, he worked as an instrument maker in Toledo for Ṣāʿid al-Andalusī [*q.v.*] and the Dhu 'l-Nūnid prince al-Ma'mūn amongst others. His patrons lent him the necessary books for teaching himself astronomy, so that he assumed a leading position in the group around Ṣāʿid, mentioned in the *Ṭabaḳāt* as belonging to the younger Toledan generation (*al-aḥdāth*), though he was active from at least 440/1048-9 onwards and must have begun his solar observations by the early 1050s at the latest. An anonymous Toledan contemporary states that he used a large-size instrument. Al-Zuhrī in his *K. al-Djaʿrāfiyya*, ed. Hadj-Sadok, 223-4, describes a water-clock that marked the date of the lunar month and that was built at Toledo by a certain Abu 'l-Ḳāsim b. ʿAbd al-Raḥmān, known as al-Zarḳāl, but it is doubtful whether he is referring to the same person.

Ibn al-Zarḳālluh (as he will be henceforth termed here) left Toledo for Cordova either at the beginning of the reign of Yaḥyā II al-Ḳādir or when Alfonso VI conquered Toledo. In Cordova, he was patronised by the ʿAbbādid al-Muʿtamid [*q.v.*], to whom he had already dedicated a work on the use of the instrument called *al-ṣafīḥa al-ʿabbādiyya* in 440/1048-9, when the future ruler al-Muʿtamid was only eight or nine years old, and he continued his observations there until at least 480/1087-8, dying in Cordova on 8 Dhu 'l-Ḥidjdja 493/15 October 1100 (Ibn al-Abbār).

Works.

1. *Astronomical instruments.*

(a) A treatise on the construction of the armillary sphere, extant in an Alfonsine Castilian translation; see M. Rico, *Libros del saber de astronomía*, 5 vols. Madrid 1863-7, ii, 1-24.

(b) Two treatises on two variants of the same universal astrolabe, which he calls *al-ṣafīḥa al-mushtaraka li-djamīʿ al-ʿurūḍ* ("the common plate for all latitudes") [see SHAKKĀZIYYA]. This instrument, also called *ṣafīḥa zarḳāliyya*, had, on its face, a double grid of equatorial and ecliptical coordinates and a ruler-horizon, and, on the back, a zodiacal scale, and orthographic projection of the celestial sphere, a sine quadrant and a diagram (circle of the moon) which, combined with a most elaborate alidade (transversal ruler), allowed the computation of the geocentric distance of the moon for a given time (R. Puig, *Los tratados de construcción y uso de la azafea de Azarquiel*, Madrid 1987; idem, *Al-Zarqālluh's graphical method for finding lunar distances*, in *Centaurus*, xxxii [1989], 294-309; J. Samsó, *Islamic astronomy and medieval Spain*, Variorum, Aldershot 1994, no. XV). At a later date, he seems to have dedicated a new account of his instrument to the same al-Muʿtamid, usually called *al-shakkāziyya*, divided into 60 chapters. The instrument is apparently a simplified version of the *ʿabbādiyya* type, with only one complete grid of equatorial coordinates and an ecliptical grid limited to the great circles of longitude for the beginnings of the zodiacal signs on its face, while its back resembles that of a standard astrolabe (Puig, *Concerning the ṣafīḥa šakkāziyya*, in *ZGAIW*, ii [1985], 123-39; idem, *Al-Šakkāziyya. Ibn al-Naqqāš al-Zarqālluh*, Barcelona 1986).

(c) Two treatises on the construction of the equatorium which he calls *al-ṣafīḥa al-zīdjiyya* (M. Comes, *Ecuatorios andalusíes*, Barcelona 1991, 189-236). The oldest reference to this instrument, a collection of Ptolemaic planetary models made to scale and used to solve graphically the problem of the determination of planetary longitudes, appears in the *Zīdj al-ṣafāʾiḥ* of Abū Djaʿfar al-Khāzin (d. *ca.* 350-60/961-71 [*q.v.*]) and, in al-Andalus, an earlier equatorium was designed by Ibn al-Samḥ [*q.v.*] *ca.* 416/1025-6. The latter instrument consisted of a series of plates kept within the mother of an astrolabe, but Ibn al-Zarḳālluh's equatorium is totally independent and represents all the planetary deferents and related circles on both sides of a single plate, while a second plate bears all the epicycles. The complexity of the Ptolemaic Mercury model led him to represent Mercury's deferent not as a circle but as an ellipse, which he identified as such: this is the first known instance of the use of conic sections in astronomy (Samsó and H. Mielgo, *Ibn al-Zarqālluh on Mercury*, in *Jnal. Hist. Astronomy*, xxv [1994], 289-96).

(d) Al-Marrākushī's *Djāmiʿ* attributes to Ibn al-Zarḳālluh a sine quadrant with movable cursor (*madjarra*) in the line of the *quadrans vetustissimus* (J.M. Millás, *La introducción del cuadrante con cursor en Europa*, in *Isis*, xvii [1932], 218-58; repr. in idem, *Estudios sobre historia de la ciencia española*, Barcelona 1949, 65-110), although Ibn al-Zarḳālluh's cursor is only a graphic scale of solar declinations in which the argument used is the solar longitude and not, as in the *quadrans vetustissimus*, the date of the Julian year.

2. *Astronomical tables.*

(e) The *Toledan Tables* are known through a Latin translation; they seem to be the result of an adaptation of the best available astronomical material (al-Khʷārazmī, al-Battānī) to the coordinates of Toledo made by a team led by Ṣāʿid and in which Ibn al-Zarḳālluh seems to have had an outstanding position (G.J. Toomer, *A survey of the Toledan Tables*, in *Osiris*, xv [1968], 5-174; L. Richter-Bernburg, *Ṣāʿid, the Toledan*

Tables, and Andalusī science, in D.A. King and G. Saliba (eds.), *From deferent to equant*, New York 1987, 373-401; R. Mercier, *Astronomical tables in the twelfth century*, in C. Burnett (ed.), *Adelard of Bath. An English scientist and Arabist of the early twelfth century*, London 1987, 104-12). In them, the mean motion tables are original and the result of observations, the parameter for the solar mean motion was not altered in Ibn al-Zarkālluh's later works and it reappeared in the Andalusī-Maghribī school of *zīdjs* which begins with Ibn Isḥāḳ [see ZĪDJ]. Ṣā'id does not mention these tables, although they had been completed before the writing of the *Ṭabaḳāt* (460/1068); Abū Marwān al-Istidjdjī quotes repeatedly "our corrected *zīdj* (*zīdjunā al-muṣaḥḥaḥ*)" in his *Risāla fi 'l-tasyīrāt wa-maṭāriḥ al-shu'ā'āt* (ms. Escorial 939) dedicated to Ṣā'id from Cuenca.

(f) The *Almanac*, which has been preserved in Arabic, Latin and in an Alfonsine translation (Millás, *Estudios sobre Azarquiel*, Madrid-Granada 1943-50, 72-237; M. Boutelle, *The Almanac of Azarquiel*, in *Centaurus*, xii [1967], 12-19, repr. in E.S. Kennedy *et al.*, *Studies in the Islamic exact sciences*, Beirut 1983, 502-10), is based on a Greek work computed by a certain Awmātiyūs in the 3rd or 4th century A.D., although the solar tables seem to be the result of the Toledan observations, and its purpose is to simplify the computation of planetary longitudes; for that purpose, Babylonian planetary cycles ("goal years") are used. After the completion of one of these cycles, the longitudes of a given planet will be the same on the same dates of the year as at the beginning of the cycle. Perpetual almanacs seem to be characteristic of Andalusian astronomy, and they were also used in the Maghrib and in mediaeval Spain.

3. *Astronomical theory*.

(g) A lost work in which he summarises his twenty-five years of solar observations and which was probably written between 467-72/1075-80. Its title was either *Fī sanat al-shams* ("On the solar year") or *al-Risāla al-djāmi'a fi 'l-shams* ("Comprehensive epistle on the Sun"). Its contents are known through secondary sources, both Arabic and Latin (Toomer, *The solar theory of az-Zarqāl. A history of errors*, in *Centaurus*, xiv [1969], 306-36; idem, *The solar theory of az-Zarqāl. An Epilogue*, in King and Saliba (eds.), *From deferent to equant*, 513-19; Samsó, *Isl. astr.*, no. X). In it, Ibn al-Zarkālluh established that the solar apogee had its own motion of about 1° in 279 Julian years, and he designed a solar model with variable eccentricity which became extremely influential both in the Maghrib and in Latin Europe until the time of Copernicus [see SHAMS].

(h) A treatise on the motion of the fixed stars, written *ca.* 476/1084-5 and extant in a Hebrew translation (Millás, *Azarquiel*, 247-343; B.R. Goldstein, *On the theory of trepidation according to Thābit b. Qurra and al-Zarqalluh and its implications for homocentric planetary theory*, in *Centaurus*, x [1964], 232-47; Samsó, *Isl. astr.*, nos. VIII, IX). It contains a study of three different trepidation models, in the third of which variable precession becomes independent of the oscillation of the obliquity of the ecliptic. Trepidation had already attracted the attention of Ṣā'id and his team; the trepidation table extant in the *Toledan Tables*, which also appears in some manuscripts of pseudo-Thābit's *Liber de motu octaue sphere*, is probably due to the Toledan group and, according to Ibn al-Hā'im, Abū Marwān al-Istidjdjī wrote a *Risālat al-Iḳbāl wa 'l-idbār* ("Epistle on accession and recession").

(i) We have indirect references to two other lost theoretical works: one is a *Maḳāla fī ibṭāl al-ṭarīḳ allatī salakahā Baṭlīmūs fī istikhrādj al-bu'd al-ab'ad li-'Uṭārid* ("On the invalidation of Ptolemy's method to obtain the apogee of Mercury") mentioned by Ibn Bādjdja [*q.v.*]. On the other hand, Ibn al-Hā'im had read in Ibn al-Zarkālluh's own writing (*bi-khaṭṭ yadihi*) a description of a modified lunar Ptolemaic model; the centre of the Moon's mean motion in longitude was not the centre of the Earth but was placed on a straight line linking the centre of the Earth with the solar apogee. The maximum correction in the lunar mean longitude amounted to 24'. This correction appears in Andalusī (Ibn al-Kammād) and Maghribī (Ibn Isḥāḳ, Ibn al-Bannā') *zīdjs* as well as in the Spanish canons of the first version of the *Alfonsine Tables*.

4. *Magic*.

Mss. Vienna 1421, B.L. 977 (Add. 9599), Cairo National Library Taymūr *Madjāmi'* 424 and *Ḥurūf wa-awfāḳ* 124 contain the only known magical work by Ibn al-Zarkālluh, *Risāla fī ḥarakāt al-kawākib al-sayyāra wa-tadbīrihā* ("On the motions and influences of planets") (Millás, *Azarquiel*, 480-3; King, *A survey of the scientific manuscripts in the Egyptian National Library*, Winona Lake, Ind. 1986, B87, 50). These mss. contain, at least, two very different recensions of the text, and a third one appears in a summarised Latin translation in ms. Vienna lat. 5239 (J. Sesiano, *Un traité médiéval sur les carrés magiques. De l'arrangement harmonieux des nombres*, Lausanne 1996, 10, 34). It is a treatise on talismanic magic which uses magic squares for the making of talismans.

Bibliography: Given in the text. The essential general survey is still Millás, *Azarquiel*; an updated revision is in J. Samsó, *Las ciencias de los antiguos en al-Andalus*, Madrid 1992, 147-52, 166-240.

(J. SAMSÓ)

AL-ZARKĀLLUH [see AL-ZARKĀLĪ].

AL-ZARNŪDJĪ, BURHĀN AL-DĪN, Muslim scholar and traditionist, probably from eastern Persia, who in the late 6th/12th or early 7th/13th century composed a popular treatise on educational etiquette and ethics.

Very little is certain about him; not even his *ism* is known, and his period can only be approximately stated. W. Ahlwardt in the Berlin Catalogue under no. 111 estimated that he flourished about 620/1223, but the correct date may be slightly earlier. The various authorities cited in his treatise *Ta'līm al-muta'allim* suggest that al-Zarnūdjī lived and wrote at the end of the 6th/12th or the beginning of the 7th/13th century. For example, he several times identifies Burhān al-Dīn 'Alī b. Abī Bakr al-Farghānī al-Marghīnānī [*q.v.*], author of the *Hidāya*, an important Ḥanafī textbook, as his teacher; his comments make it clear that he was writing after al-Marghīnānī's death in 593/1197. He also names as his teacher Fakhr al-Islām al-Ḥasan b. Manṣūr al-Farghānī Ḳāḍīkhān [*q.v.*], who died in 592/1196. In another passage he records that the Shaykh Ẓahīr al-Dīn al-Ḥasan b. 'Alī al-Marghīnānī [*q.v.*] recited verses before him; al-Ḥasan had himself been the teacher of both Burhān al-Dīn al-Marghīnānī and Ḳāḍīkhān. He further tells us that he heard a story from Shaykh Fakhr al-Dīn al-Kāshānī; the reference is almost certainly to Abū Bakr Mas'ūd b. Aḥmad (d. 597/1191; see Brockelmann, *GAL*, I², 465). Finally, he tells us that Rukn al-Dīn Muḥammad b. Abī Bakr, known as Imām Khʷāharzāda, recited something to him; this probably refers to a *muftī* of Bukhārā who died in 573/1177-8 (see von Grunebaum and Abel, 60). If we take all these data together, we come to the conclusion that al-Zarnūdjī may have flourished a little earlier than Ahlwardt thought, but his work was certainly composed after 593/1197.

Al-Zarnūdjī's only known work, *Taʿlīm al-mutaʿallim ṭarīḳ al-taʿallum* "Teaching the learner the method/way of learning", was one of the most popular examples of a common genre of mediaeval Islamic literature, sc. treatises outlining the proper manner of behaviour for individuals involved in the study of the religious sciences. As such, it parallels works by Badr al-Dīn Muḥammad Ibn Djamāʿa (d. 733/1333) and Abū Yaḥyā Zakariyyāʾ al-Anṣārī (d. 916/1511), as well as portions of Abū Ḥamid al-Ghazālī's (d. 505/1111) famous *Iḥyāʾ ʿulūm al-dīn*. Al-Zarnūdjī has much to say concerning the physical and mental conditions necessary for successful study, the manner of instruction, attitudes to the written and spoken word, and especially the ideal character of the teacher-student relationship.

There were a number of late mediaeval commentaries on the *Taʿlīm al-mutaʿallim*; on them, see Brockelmann, *GAL*, I², 606, S I, 837. The text itself was printed in Leipzig in 1838, in Cairo in 1311/1893-4, and in several modern editions. It was translated into English by G.E. von Grunebaum and Theodora M. Abel, *Instruction of the student: the method of learning*, New York 1947, and into Spanish by Olga Kattan, *Instruccion del estudiante: el metodo de aprender*, Madrid 1991.

Bibliography: In addition to the editions cited in the text, see M.A. Khan, *The Muslim theories of education during the Middle Ages*, in *IC*, xviii (1944), 418-33; J. Berkey, *The transmission of knowledge in medieval Cairo. A social history of Islamic education*, Princeton 1992. (M. Plessner-[J.P. Berkey])

ZARWĀNIYYA [see madjūs].

ZĀTĪ [see dhātī].

ZĀTĪ (SULAYMĀN) [see sulaymān dhātī, in Suppl.].

ZĀWA, a district and town of Khurāsān. The town (modern Turbat-i Ḥaydarī or Ḥaydariyya, see below) is some 140 km/88 miles south of Mashhad on the road to Gunābād and lies at an altitude of approximately 1,280/4,200 feet (lat. 35° 16' N., long. 59° 08' E.).

Al-Muḳaddasī, 319 n. *a*, describes it as being just a rural district with no town, but Yāḳūt, *Buldān*, ed. Beirut, iii, 128, names its *ḳaṣaba* as Rukhkh or Rīkh. In Il-Khānid times, the town of Zāwa seems to have flourished, with 50 villages dependent on it, producing silk and fruits (Mustawfī, *Nuzha*, ed. Le Strange, 154, tr. 152; Ḥāfiẓ-i Abrū, ed. D. Krawulsky, *Ḫorāsān zur Timuridenzeit*, Wiesbaden 1982, text 41). Its rise must have been at least in part connected with the *baraka* and the shrine of a local *shaykh*, Ḳuṭb al-Dīn Ḥaydar (d. 630/1232), founder of the Ḥaydariyya dervish order. Ibn Baṭṭūṭa visited Zāwa and noted the ascetic practices of the Ḥaydariyya, including loading their limbs with iron rings and infibulation of the penis (*Riḥla*, iii, 79-80, tr. Gibb, iii, 583; cf. J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, 39). Presumably after this time dates the transformation of the town's name to its contemporary one, Turbat-i Ḥaydarī, the shrine there—a brick-built mausoleum of the saint—being still venerated. In *ca.* 1950 it had a population of 2,354, which had risen by 1991 to 81,781.

Goldsmid, *Eastern Persia, an account of the journey of the Persian Boundary Commission 1870-1872*, London 1876, i, 353; Curzon, *Persia and the Persian question*, i, 203, ii, 517; Le Strange, *The lands of the Eastern Caliphate*, 356; Razmārā (ed.), *Farhang-i djughrāfiyā-yi Īrān-zamīn*, ix, 196; Krawulsky, *Īrān—das Reich der Īlḫāne. Eine topographisch-historische Studie*, Wiesbaden 1978, 325-6; L. Adamec (ed.), *Historical gazetteer of Iran. II. Meshed and northeastern Iran*, Graz 1981, 650-5; M.R. Khusrawī, *Djughrāfiya-yi tārīkhi-yi wilāyat-i Zāwa*, Mashhad 1366/1988. (C.E. Bosworth)

ZAWĀḲĪL (a.), a shadowy group of Arab brigands and mercenaries active in al-Shām and al-Djazīra [*q.vv.*] during the ʿAbbāsid period (the etymology of the designation is unclear: the Arabic verb *zawḳala* means "to let the two ends of a turban hang down from one's shoulders").

Although most of the *zawāḳīl* known by name hail from Ḳaysī tribes (as noted by D. Ayalon, *The military reforms of Caliph al-Muʿtaṣim* . . ., 16-18, in *Islam and the Abode of War*, London 1994), they appear to have been a group of tribal outcasts, like many such brigand groups [see ṣuʿlūk and liṣṣ]. ʿAmr b. ʿAbd al-ʿAzīz al-Sulamī, for example, is mentioned with the famous Naṣr b. Shabath [*q.v.*] as one of the leaders of the *zawāḳīl* during the Fourth Civil War between al-Amīn and al-Maʾmūn (al-Ṭabarī, iii, 845). He began his career as an escaped convict—as a soldier he had murdered his commander—and then took to brigandage in southern al-Shām (Michael the Syrian, 491/iii, 21). The ʿAbbāsid authorities certainly saw the *zawāḳīl* as social flotsam: al-Maʾmūn's letter to Naṣr derides the latter's followers as coming "from the near and distant corners of the lands, with their scum and worst elements, those thieves and robbers who have rallied to your side and those whom their land has spewed forth, or whose tribe has expelled because of their bad reputation within it" (al-Ṭabarī, iii, 1070-1, tr. C.E. Bosworth, *The History of al-Ṭabarī*, xxxii, *The reunification of the ʿAbbāsid caliphate*, Albany 1987, 141-2).

The *zawāḳīl* are first mentioned in connection with the revolt of the Ḳaysī notable Abu 'l-Haydhām al-Murrī in and around Damascus in 176-7/792-3. In the Ḳays-Yaman factionalism preceding the revolt, a group of Ḳaysī tribesmen enlisted the aid of the *zawāḳīl* and "a group of *mawālī* of Ḳuraysh" to exact revenge for a slain kinsman. During the revolt itself, these *zawāḳīl* fought on the side of the Ḳaysiyya against the Yamanīs and the ʿAbbāsid authorities (Ibn ʿAsākir, *Taʾrīkh madīnat Dimashḳ*, ed. ʿAmrāwī, Beirut 1995, xxvi, 66). One of their leaders was a Duʿāma b. ʿAbd Allāh, who had been one of a triumvirate of bandit leaders in southern al-Shām (*ibid.*, vii, 162). Shortly after the revolt, *zawāḳīl* are mentioned in 180/796-7 as participants in another explosion of tribal factionalism in al-Shām, which was summarily supressed by Djaʿfar b. Yaḥyā al-Barmakī (al-Ṭabarī, iii, 639).

As might be expected, the collapse of central authority in al-Shām and the west with the death of al-Rashīd and the accession of al-Amīn in 193/809 provided an ideal context in which the *zawāḳīl* could achieve a degree of local autonomy or could otherwise derive profit. In the early years of al-Amīn's reign, the *zawāḳīl* leaders Naṣr b. Shabath and al-ʿAbbās b. Zufar terrorised the region around Ḳurus/Cyrrhus and co-operated against mutual rivals. One of the latter was the Ḳaysī ʿUthmān b. Thumāma from the region of Ḳinnasrīn, who later joined Naṣr. At Aleppo, the descendants of the ʿAbbāsid noble Ṣāliḥ b. ʿAlī called upon Naṣr, al-ʿAbbās and their followers to put down a rebellion of Yamanī tribesmen of Tanūkh (al-Yaʿḳūbī, ii, 541; al-Balādhurī, *Futūḥ*, 145-6; Michael the Syrian, 497/iii, 31).

Groups of *zawāḳīl* (under ʿAmr b. ʿAbd al-ʿAzīz al-Sulamī) turn up as mercenaries yet again in 195/811 during the revolt of the Umayyad pretender Abu 'l-ʿUmayṭir al-Sufyānī against the local governor in

Damascus (Michael the Syrian, 491/iii, 21-2; Ibn Manẓūr, *Mukhtaṣar ta'rīkh Dimashk*, ed. A. Murād, Damascus 1984-, xviii, 111-12). In this conflict, the *zawāḳīl* supplied mercenaries to Abu 'l-ʿUmayṭir's predominantly Yamanī following and to the Ḳaysī counter-rebellion as well. Ibn ʿAsākir's account of the revolt has the Yamanīs scorn their foes as "these [mere] *zawāḳīl*" (*hādhihi al-zawāḳīl*), while later sending for contingents of their own (*baʿathū ilā zawāḳīlihim*).

Not long afterward, ʿAmr b. ʿAbd al-ʿAzīz and his followers left these events in Damascus and headed for al-Raḳḳa [*q.v.*], where they joined Naṣr b. Shabath, al-ʿAbbās b. Zufar, and a host of other *zawāḳīl al-Shām*, all responding to al-Amīn's call for irregular troops to assist him in his conflict against his brother al-Ma'mūn. It was here that a conflict broke out between, on the one hand, the *zawāḳīl* and the other Syro-Djazīran troops, and, on the other, al-Amīn's loyal troops from the *Abnā'* [*q.v.*] and the *ahl Khurāsān*. According to the account of al-Ṭabarī, the fighting broke out because one of the *Abnā'* had been among the ʿAbbāsid troops defeated during Abu 'l-ʿUmayṭir's revolt in Damascus, and he recognised his horse among those of the *zawāḳīl* assembled in al-Raḳḳa. In the ensuing mêlée, the *zawāḳīl* and their Syrian companions were routed; many fled back to their homes (al-Ṭabarī, iii, 842-5).

After the accession of al-Ma'mūn, the fate of the *zawāḳīl* becomes more obscure, compounded by the tendency of some authors to use the name as a term for brigands and mercenaries in general. After the débâcle at al-Raḳḳa, some of the *zawāḳīl* stayed on with Naṣr b. Shabath in his stronghold of Kaysūm in the Djazīra, from which he fended off the approaching armies of al-Ma'mūn. It seems, though, that the *zawāḳīl* were soon co-opted by the state, finding a niche in the ʿAbbāsid military. Indeed, Naṣr's defeated followers were absorbed into the army of the victorious general ʿAbd Allāh b. Ṭāhir and accompanied him to Khurāsān, where they were decimated in battle in 213/828 (al-ʿAẓīmī, *Ta'rīkh Ḥalab*, ed. I. Zaʿrūr, Damascus 1984, 247). Some may also have joined later; al-Mutawakkil had a contingent of *zawāḳīl* in his army (al-Ṭabarī, iii, 1463; al-Masʿūdī, *Tanbīh*, 362).

The final fate of the Syro-Djazīran brigand group or groups known as the *zawāḳīl* is unknown. Ibn al-ʿAdīm, writing in Aleppo *ca.* 640/1242, discusses the long-standing enmity between two local tribes, the Ḥabbāliyyūn of Asad and the Ḳaysī Zawāḳila of Kilāb (*Bughyat al-ṭalab min ta'rīkh Ḥalab*, ed. S. Zakkār, Damascus 1988, i, 536-7), but the relationship of the latter to the *zawāḳīl* is only presumed. It may be that, over time, the *zawāḳīl* came to identify themselves as a separate tribe despite the diverse origins of their early members [cf. ḤILF].

Bibliography: In addition to the references given in the article, see I. ʿAbbās, *Ta'rīkh bilād al-Shām fi 'l-ʿaṣr al-ʿabbāsī*, ʿAmmān 1993; P.M. Cobb, *White banners. Contention in ʿAbbāsid Syria, 750-880*, Albany 2001, index at 221. (P.M. COBB)

ZAWĀRA, a small town in Persia lying some 15 km/9 miles to the northeast of Ardistān, on the southwestern edge of the central desert of the Dasht-i Kawīr (long. 52° 25' E., lat. 33° 30' N.). It falls administratively within the *ustān* or province of Iṣfahān and is the chef-lieu of a canton or *dihistān*. In *ca.* 1951 it had a population of 5,400; and according to the census of 1375/1996-7, one at that time of 7,710, representing 1,911 households.

This small and isolated place has played no role in wider Persian history, but is of significance for its surviving architecture. It clearly enjoyed prosperity and a local importance in Saldjūḳ and Il-Khānid times, attested by two monuments there. The Masdjid-i Pā Minār was restored, and a minaret built for it, according to an inscription on the latter from 461/1068-9, the time of Alp Arslan, by a local patron. The Friday mosque, from 530/1135, i.e. the reign of Masʿūd b. Muḥammad, provides the first dated example of a mosque with a central courtyard and four *īwāns* [*q.v.*].

AL-**ZAWĀWĪ** [see IBN MUʿṬĪ].

ZAWDJ (A., pl. *azwādj*), basically "two draught animals yoked together", from which, in both literary and dialectal Arabic usage, a number of senses have developed, including "piece of land which a yoked pair of beasts can plough in a determined time", "two things", "pair, couple", from which verbal forms have also developed. At the side of "one part of a pair", "half of a couple" (especially "spouse", and often with the fem. ending *-at* "wife"), the signification "couple, pair", though rejected by the purists, is attested from mediaeval Islamic times onwards, and the co-existence of the two concepts is frequent in most varieties of Arabic.

1. Etymology and early usage.

Although the classical philologists and lexicographers were convinced that it was a pure Arabic word, no Semitic parallel forms exist, and there is no doubt that *zawdj* stems from Grk. *zeugos* "yoke", probably via Aramaic; from this last, the word passed also into Rabbinical Hebrew, Ethiopic and Syriac. The word is thus distantly cognate with Skr. *jugám*, Lat. *iugum*, Ger. *Joch*, Eng. *yoke*, Fr. *joug*, etc. It must have been an early entrant into Arabic, since it appears in pre-Islamic poetry, e.g. in ʿAntara, and is frequent in the Ḳur'ān in various nominal and verbal forms (II, 23/25, 33/35, 96/102, 234, etc.). In the Ḳur'ān, the dominant usage of *zawdj* is in the sense of "spouse" = "wife, woman", but there are also several instances (e.g. XI, 42/40; XIII, 3; XXIII, 27; XLI, 49; LIII, 46/47; LXXV, 39) where the dual *zawdjayn* means "pairs, groups of two", which may be further specified as "... of man and woman". The later form *zawdja* "wife" nowhere appears in the sacred text. The differentiation of sex *zawdj/zawdja* is clearly a later development, but seems to have taken place by the end of the first century A.H., since *zawdja* "wife" is found in the poetry of al-Farazdaḳ and Dhu 'l-Rumma.

2. Usage in the dialects of the Muslim West.

Whilst in numerous Eastern dialects, the metathesised form *djawz* (hence a homonym of the loan from

Persian *djawz* "nut") is used for "spouse" and "pair," in the Maghrib the form is without metathesis but often has assimilation of the voiced post-alveolar fricative and the voiced alveolar fricative, which may be regressive: *djūdj* and variants (esp. in the west: Morocco), or progressive (*zūz* and variants (esp. in the east: Tunisia, Libya). In numerous dialects, especially the urban ones of Algeria and Morocco, and for a long time back (as attested in mediaeval Maghribī, Andalusī and Sicilian Arabic, and also in Maltese), this form serves as a cardinal numeral "two". But in none of these has it completely eliminated the old **ithnayn*, the only word used when enumerating the cardinal numbers ("one, two, three . . .") and also the word appearing almost always in the composed numeral forms (a form like *jūj u khamsīn* "52" is rare, if not indeed exceptional). **Zawdj* "two" (sometimes in the diminutive, *zwayyidj*) is attested, either alone or at the side of **ithnayn* in dialects which have kept alive usage of the dual (and where its use often therefore serves to reinforce the dual), and alone in those which have only a "pseudo-dual"; it seems that there is a linkage between the disappearance of the dual and the replacement of **ithnayn* by **zawdj*.

The syntagm associating the noun of the object counted with the cardinal number has two constructions (which may be mutually exclusive or co-exist, according to different dialects): (a) *zawdj* + pl. noun, and (b) *zawdj* + particle (*d*, *dyāl*, etc.) + def. article + pl. noun (each of these constructions has a variant where the noun is in the sing., for certain types of collectives, or for certain units of measure, of money, etc.). In Maltese, there is a third construction in which the cardinal number assumes a special form when standing in the construct state (*zewdjt-*). In all the dialects concerned, the sense of "pair" remains in general for **zawdj*; it is sometimes distinguished from that of "two" by a special form in *-a* or by the diminutive *zwīdja*, but the plural remains in that case that of **zawdj*. The choice between collective or pl. in the noun of the object counted, or the use of the dual or pl. of **zawdj*, in some cases allows one to get round the ambiguities of "two", "pair", "element of a pair". Thus at La Chebba, Tunisia, one finds *zūz klāsṭ* or *zūzēn klāsṭ* "a pair of socks". Finally, one should note that some dialects (mainly Algerian, it seems) have made an ordinal number out of **zawdj*, sc. *jāwej* (La Saoura), *zāwadj* "second".

Bibliography: For the forms, usages and constructions of **zawdj* "two", this article has used the well-documented monograph of K. Mörth, *Die Kardinalzahlwörter von eins bis zehn in den neuarabischen Dialekten*, Vienna 1997, 25, 33-5, 138-49, 212-13 and map 6, and 302 sections *h* and *i*. For older attestations, see J. Blau, *The emergence and linguistic background of Judaeo-Arabic*, [2]Jerusalem 1981, 117; F. Corriente, *A grammatical sketch of the Spanish Arabic dialect bundle*, Madrid 1977, 88. (J. LENTIN)

3. Usage in the dialects of the Muslim East [see Suppl.].

ZĀWĪ B. ZĪRĪ b. Manād al-Ṣanhādjī, the Berber founder of an independent taifa (*ṭā'ifa* [see MULŪK AL-ṬAWĀ'IF. 2]) or principality in Granada at the time of the dismemberment of the Umayyad caliphate of Cordova and its first ruler (403-10/1013-19).

The Zīrids, who belonged to the Talkāta, the most important tribe of the Ṣanhādja [*q.v.*], had settled in the area between Ifrīkiya and the central Maghrib. Zāwī and his followers, including the two sons of his brother Māksan, were among the prominent Berbers in North Africa who were invited by the ʿĀmirid *ḥādjib* of Cordova, ʿAbd al-Malik al-Muẓaffar [*q.v.*], to join him in his perennial campaigns against the Christians of northern Spain. Al-Muẓaffar's father al-Manṣūr, however, had his own misgivings about Zāwī, who was reputed to be cunning, shrewd and troublesome.

After the fall of the ʿĀmirids and the outbreak of civil strife in al-Andalus, Zāwī is said to have contemplated returning to North Africa but changed his mind when the people of Elvira sought his protection. In fact, the Zīrids played a decisive role in the course of events, and it was largely thanks to Zāwī that the Umayyad Sulaymān al-Mustaʿīn was proclaimed caliph (Rabīʿ I 400/November 1008). If Zāwī had really intended to leave al-Andalus, one may well ask why he had stayed behind for eight years and taken such an active part (Ibn Ḥayyān describes Zāwī as "the spark that kindled the civil war after the ʿĀmirid dynasty") in events which secured for his people the rich province of Elvira.

It was the Berbers who had forced Sulaymān to divide between them the southern districts of al-Andalus and, consequently, the province of Elvira fell to Zāwī and his kinsmen. It is most unlikely that Zāwī's arrival in Elvira was, as claimed by the last Zīrid *amīr* of Granada (*Tibyān*, 59, tr. 45), in response to an invitation from the Elvirans, who had recently suffered so much at his hands. The Elvirans probably had no say in the matter. It is more likely that, prior to Sulaymān's re-entry into Cordova (403/1013), Zāwī had already established himself in Elvira and Sulaymān had to accept that as a *fait accompli*.

Aware of the bitter hostility of the Andalusians to the Berbers, Zāwī suggested that the people of Elvira move to the nearby and more defensible mountain fortress of Granada. Soon after, the Andalusians, led by the newly-proclaimed Umayyad caliph al-Murtaḍā, launched an assault but were routed just outside Granada, almost six years after Zāwī had settled there. The Zīrids' victory was swift and decisive, thanks mainly to the defection from al-Murtaḍā's ranks of the ʿĀmirid Khayrān of Almeria and of al-Mundhir b. Yaḥyā of Saragossa.

Shortly after his victory, however, Zāwī surprisingly decided to return to Ifrīkiya, prompted no doubt by his keen awareness of the Andalusians' hostility and their numerical superiority. Moreover, he aspired to the throne of Ḳayrawān, whose occupant at the time was an eight-year-old Zīrid, al-Muʿizz b. Bādīs [*q.v.*], a great grandson of Zāwī's brother Buluggīn. Ibn Ḥayyān also mentions Zāwī's obsessive fear that the Zanāta Berbers, traditional foes of the Ṣanhādja, might join forces with the Andalusians against the Zīrids, hence Zāwī's description of the Zanāta as "the real enemies" (Ibn Bassām, *Dhakhīra*, i/1, 402; Ibn al-Khaṭīb, *Aʿmāl*, 131).

Zāwī, who was born and brought up in North Africa, must have felt isolated and insecure throughout his 18-year sojourn in al-Andalus, and it is not surprising that his thoughts should turn to his native land. Furthermore, the situation in North Africa had completely changed since his arrival in al-Andalus in 392/1002; the Fāṭimid caliphs had moved from Ifrīkiya to Egypt; the Zanāta ruler of Fās, Zīrī b. ʿAṭiyya, could no longer count on Umayyad support; and the internecine struggle, raging since 409/1014 between the Zīrids of Ifrīkiya [*q.v.*] and their kinsmen the Ḥammādids of al-Ḳalʿa [*q.v.*], had exhausted both sides.

Zāwī left Almuñecar (al-Munakkab) for Ifrīkiya some

time in 410/1019-20, with the consent of al-Muʿizz who is said to have come out in person to greet him. At least initially, Zāwī's kinsmen in Ḳayrawān seemed to welcome his return, since they badly needed someone of his age and calibre to head the Zīrid house and fill the vacuum left by the death of al-Muʿizz's father. There were those amongst al-Muʿizz's *wazīrs*, however, who regarded "the accession of the child al-Muʿizz. . . ., over whom they had control, preferable to surrendering power to a shrewd character like Zāwī, over whom they had not a scrap of authority. Someone was therefore hired to administer poison to Zāwī, who died in that country" (*Tibyān*, 64, tr. 51).

Ibn Ḥayyān says that Zāwī died in Ḳayrawān of the plague but does not give the date of his death; nor does *amīr* ʿAbd Allāh in the *Tibyān*.

ZAWĪLA, the mediaeval Islamic capital of the Fazzān [*q.v.*], today south-western Libya (lat. 26° 11' N., long. 15° 06' E.).

Zawīla (Zuwayla) was established probably in the early 2nd/8th century. It did not yet exist in 46/666-7 when the Arab conqueror ʿUḳba b. Nāfiʿ [*q.v.*] passed by the site, but had a century later become the centre of the region. It was then dominated by Hawwāra Berbers, predominantly Ibāḍīs.

After he had crushed the first Ibāḍī state in Tripolitania, the ʿAbbāsid general Muḥammad b. al-As͟hʿat͟h al-K͟huzāʿī sent a force to Zawīla. It fell in 145/762-3 and its leader ʿAbd Allāh b. Ḥayyān al-Ibāḍī was killed. However, Zawīla remained an Ibāḍī centre. During the Rustamid period, it was partly under the control of Tāhart, but on the periphery of their influence. Thus both the Wahbī and other Ibāḍī currents (in particular the K͟halafiyya [*q.v.*]) coexisted in the town. In 306/918-19, after the fall of Tāhart [*q.v.*], the Banū K͟haṭṭāb established an independent Ibāḍī dynasty that lasted until the 6th/12th century. During at least part of the mediaeval period, the Fazzān was divided into two. The western region was then a separate polity dominated by the older capital D͟jarma (Garama), while the eastern and probably the richest part had Zawīla as its capital. Both followed the Ibāḍiyya [*q.v.*].

Zawīla was a prosperous town, with ample irrigation producing dates and vegetables. It had in the 3rd/9th century inhabitants from K͟hurāsān, Baṣra and other remote regions, and a lively Ibāḍī scholarship. The basis of its economy was the trans-Saharan trade through Kawar to the Lake Chad region, in particular to Kanem. The main trade item was slaves, but also other goods contributed to its prosperity. Zawīla also produced a special leather called *zawīla*. Besides the Berber majority, there was a smaller free population of Sudanic origin, either Teda [see tubu] or (proto-)Kanuri speakers. The Fāṭimids recruited a corps of *zawīla* soldiers from this group (hence the Bāb Zuwayla in their capital al-Mahdiyya and later in Cairo).

From the 5th/11th century, raiders from the Sudanic state of Kanem [*q.v.*] started to appear. The Banū K͟haṭṭāb dynasty was ended in 572/1176-7, when an Armenian *mamlūk*, S͟haraf al-Dīn Ḳarāḳūs͟h [*q.v.*] came from Egypt and conquered Zawīla and the Fazzān, passing on to Tripolitania. In the chaotic period that followed, Kanem increased its hold, and had by the end of the century taken effective control of the Fazzān. The rulers of Kanem established their own capital in Trāg͟han a few miles west of Zawīla.

Kanem retained control thoughout the 7th/13th century, but later their governors broke free and established an independent dynasty, the Banū Nasūr. In the early 9th/15th century, the province came under the (perhaps fluctuating) domination of the Ḥafṣids of Tripoli, and the capital was probably returned to Zawīla. At the same time, troubles in Kanem led to a reduction of the trans-Saharan trade that the town lived on. When trade later started to pick up, Zawīla had lost its rank of capital and trade centre. In the first half of the 10th/16th century, the Awlād Muḥammad dynasty took political power in Fazzan. They built a new capital at Murzuḳ [*q.v.*], slightly west of Zawīla. Trade now went there, and Zawīla soon thereafter declined into obscurity.

(K.S. Vikør)

ZĀWIYA (a., pl. *zawāyā*), lit. "corner, nook [of a building]", originally the cell of a Christian monk and then, in the Islamic context, a small mosque, oratory or prayer room. In late mediaeval times, particularly in North Africa (see 2. below), the term came to designate a building designed to house and feed travellers and members of a local Ṣūfī brotherhood.

1. Architecture.

In plan, these buildings often comprised cells arranged around a courtyard. Both form and decoration resemble those used in other communal institutions such as the *madrasa*, and without epigraphic or textual evidence, it can be difficult to distinguish a *zāwiya* from another type of building. For example, a ruined building discovered at ʿAyn Ḳarwash in Morocco was first thought to be a house but then identified as either a *madrasa* or *zāwiya*.

*Zāwiya*s were often constructed around the tomb of the founder. As the number of disciples increased, the units were incorporated into larger complexes that not only provided space for teaching and accommodation for the devotees but also served as centres of pilgrimage, gathering, and retreat for the community at large. By nature agglomerative, these popular shrines were often restored and rebuilt.

*Zāwiya*s were introduced to Morocco under the Marīnids (614-869/1217-1465 [*q.v.*]). The sultan Abu 'l-Ḥasan ʿAlī (*r.* 731-49/1331-48) ordered a *zāwiya* in

the family necropolis known as Chella (Ar. Shālla), south of Rabāṭ on the site of the Roman outpost of Sala Colonia. Now ruined, the complex was a rectangular block (44 × 29 m) comprising a mosque, minaret, and several tombs, as well as the *zāwiya* proper in the northern third. Reached down a flight of steps, the two-story *zāwiya* was set around a large pool with fountains. Galleries on the long sides gave access to cells. On the east, or *ḳibla* end, was a sanctuary; facing it on the west was another hall and a small tiled minaret. Although the building is commonly identified as a *zāwiya*, the term is not used epigraphically. Abu 'l-Ḥasan's son and successor Abū 'Inān Fāris (*r.* 749-59/1348-58) built the *zāwiyat al-nussāk* outside Salé. Excavations have revealed an unusually spacious plan, but all that remains is a door.

Zāwiyas became more common and more elaborate in Morocco under the patronage of the Sa'did (916-1069/1510-1659) and 'Alawid (1041-/1631-) *sharīfs*, descendants of the Prophet who often allied themselves with local religious fraternities. The largest and finest *zāwiyas* were those endowed by rulers, such as the complex built in Marrakesh in the mid-10th/16th century for the *shaykh* al-Djazūlī (d. 869/1465 [*q.v.*]). His followers had been instrumental in bringing the Sa'dids to power, and al-Djazūlī became one of the seven patron saints (*sab'atu ridjāl* [*q.v.*]) of the city. His *zāwiya* is a large, irregularly-shaped complex set around a court (Blair and Bloom, fig. 323). It includes a mosque, the saint's tomb, a cemetery for his followers, a school with a fountain, a residence for the superintendent who also served as leader of the order, a hospice for pilgrims and members of the order, ablution facilities and a bath across the street. These shrines were often recipients of lavish fittings and devotional objects including silken tomb covers and pilgrimage banners and illustrated prayer books (*ibid.*, figs. 331, 332).

Zāwiyas appeared in Tunisia during the period of Ḥafṣid rule (627-982/1229-1574). The oldest are thought to be in Ḳayrawān. The *zāwiya* of Sīdī Ṣāḥib (also known as the Mosque of the Barber), for example, was founded in the 8th/14th century around the grave of the Prophet's companion Abu 'l-Balawī but reconstructed in the 11th/17th century (*ibid.*, fig. 317), and the *zāwiya* of Sīdī 'Abīd al-Gharyānī was begun by a Ḥafṣid prince before 724/1324 but only completed in 804/1402 when the present tomb was associated with it. The most celebrated in Tunis are those of Sīdī Ben 'Arūs (895/1490) and Sīdī Ḳāsim al-Djalīzī (*ca.* 901/1496). The latter is elaborately decorated with tilework reflecting the occupation of the founder, a maker of tiles (*zallīdj* [*q.v.*]) who had emigrated from Andalusia to Tunis, where his spiritual merits brought him to the attention of the Ḥafṣid princes.

Zāwiyas were also established in Mamlūk Egypt as institutions for popular Ṣūfism, distinct from the more formal *khānḳāh* [*q.v.*], and often built for foreign *shaykhs*. Many are mentioned in texts (al-Maḳrīzī, for example, lists 26 in Cairo), but the only building epigraphically designated a *zāwiya* is the one for Zayn al-Dīn Yūsuf (d. 697/1298) in the southern cemetery of Cairo. Begun in 697/1297-8 as subsidiary rooms around the *shaykh*'s domed tomb (*ḳubba* [*q.v.*]), the stone complex was enlarged to a cruciform plan in 725/1325-6. Later in 736/1335-6 a large portal was added on the street side of the complex, now called a *zāwiya* in the foundation inscription. No patrons are mentioned, though the fine construction and lavish decoration bespeak significant funding. Texts suggest that there were many *zāwiyas* in 9th/15th-century Egypt, but the lack of surviving examples makes it difficult to say anything about their architectural form.

Turkish scholars also use the term *zâviyeli* to refer to a type of "Convent Mosque" with a domed or vaulted central hall flanked by side rooms or *īwāns* [*q.v.*]. This distinctive T-plan was common in the complexes built by the Ottoman sultans at Bursa, beginning with the one founded by Orkhān Ghāzī *ca.* 739/1339 (Blair and Bloom, fig. 171). The side rooms are thought to have been hostels for travelling dervishes and the religious brotherhoods who provided much of the support for Ottoman expansion. The term *zāwiya*, however, is not used in the foundation inscriptions for these constructions, which are called mosque (*masdjid*) or noble and blessed building (*'imāra sharīfa mubāraka*).

(SHEILA S. BLAIR)

2. In North Africa.

The term in North Africa denotes a social institution with a wide range of forms and functions. Sometimes rendered as "lodge" in English and "monastère" in French, the *zāwiya* is primarily a meeting place for spiritual pursuits and religious instruction. In this sense it is the Maghribī counterpart of the *khānaḳāh* or the *tekke* [*q.vv.*]. In the eastern Islamic world, the term *zāwiya* was often specifically applied to a smaller mosque or Ṣūfī meeting place (D.B. Little, *The nature of* khānqāhs, ribāṭs, and zāwiyas *under the Mamluks*, in *Islamic studies presented to Charles P. Adams*, Leiden 1991, 91-105). In the Maghrib, a *zāwiya* is typically associated with a religious lineage. Frequently housing a *walī*'s *ḳubba* or tomb and surrounded by a cemetery, it may be a shrine and a place of pilgrimage.

Beyond serving as the residence of the *shaykh* [*q.v.*] or head of the *zāwiya*, as well as his family and retainers, some rural *zāwiyas* also provide lodging for pilgrims (*funduḳ*) and contain libraries, schools, mosques, workshops and granaries stockpiled for local relief in times of famine. In addition, a *zāwiya* may function as an intellectual centre, a sanctuary offering asylum, and a political focus. In the past, *zāwiyas* often played an important commercial role by protecting trade routes and creating networks of exchange among its members. In contrast, a *zāwiya* in an urban setting is often not much more than a room where local members of a wide-ranging or regional *ṭarīḳa* [*q.v.*] meet to perform *ḥaḍra* or *dhikr* recitation. Finally, beyond referring to an actual building, the word *zāwiya* in the Maghrib is also used to denote the *ṭarīḳa* itself and is synonymous for the *ṭarīḳa*'s collective membership.

Historically, the *zāwiya*'s financial support derived from *ḥubūs* [see WAḲF] lands and the gifts of pilgrims or its members' dues in the case of a *ṭarīḳa*; both sources of revenue are known as *ziyāra* or pilgrimage offerings. In theory, all revenues are charity and are thus considered divine gifts. Colonial governments

confiscated the *wakf* lands of *zāwiyas* in the late 19th and early 20th centuries in an effort to reduce their political power. Some *zāwiyas* continue to receive governmental stipends for their maintenance and preservation as part of the national patrimony. Over the past century *zāwiyas*, which were also opposed by reformist Salafī Muslims [see SALAFIYYA], have suffered a reduction in prestige and a limitation in their social role.

The *zāwiya* as an institution antedates the establishment of the Ṣūfī *ṭarīḳas* in North Africa. It finds its sources in the *ḳubba* shrine as well as the *rābiṭa*, a hermitage to which a holy man retired and was surrounded by his followers, and the *ribāṭ* [*q.v.*], in the Maghrib an institution that had served *inter alia* as a centre for waging *djihād* [*q.v.*]. The *zāwiya*'s administrative organisation is, however, fundamentally that of the *ṭarīḳa*. The *shaykh* of the *zāwiya* acts primarily as a spiritual guide to the *zāwiya*'s members, but in some instances he is the descendant of the holy personage buried in the *zāwiya*'s shrine and thus an inheritor of his *baraka* [*q.v.*] or charisma. This distinction between *zāwiyas* affiliated with Ṣūfī orders and *zāwiyas* primarily associated either with a sharīfian descent or a holy lineage led colonial-era French commentators to make a distinction between "confrérie" or "brotherhood" *zāwiyas* and "maraboutic" *zāwiyas*.

Below the *shaykh* in the administrative hierarchy of the *zāwiya* is his *khalīfa* or deputy, sometimes also referred to as a *nā'ib* or *naḳīb*. The *khalīfa* himself or an officer known in some instances as a *wakīl* has responsibility for the day-to-day operation of the *zāwiya* and oversees servants known as *khuddām* or *shuwwāsh*. Administering individual local *zāwiyas* is a delegate of the *shaykh* known as a *muḳaddam* [*q.v.*], who initiates, instructs and supervises members. A *muḳaddam* receives no official remuneration for his role. In some *ṭarīḳas*, couriers known as *rukkāb* also served to link the local *zāwiyas* with the "mother" *zāwiya*.

Members of North African *zāwiya* can go by a variety of names: *aṣḥāb* "companions", *khuddām* "servants", *fuḳarā'* "poor men" and *ikhwān* "brothers". An individual seeking guidance from a *shaykh* is a *murīd* or aspirant. Female members are known as *khwatāt* "sisters" and are placed under the supervision of a female deputy of the *shaykh* known as a *muḳaddama*. While *muḳaddams* and *muḳaddamas* are appointed by the *shaykh*, they are named with the agreement of the majority of the members of a *zāwiya*. Factors in their nomination include length of time in the *ṭarīḳa*, knowledge or ritual, moral character and personal qualities, piety, and an ability to maintain harmony among the *zāwiya*'s members. A family tie to the *shaykh* may be a positive factor but is not a requirement for being appointed a *muḳaddam*.

Dhikr recitation sessions known as *ḥaḍra* provide regular, most often weekly, occasions for *zāwiya* members to gather. Presided over by the *shaykh*, the recitation is led by the *shaykh al-ḥaḍra*. In urban areas the character of the membership in the various *zāwiyas* typically reflects the social stratification of the community. Certain professions or one social stratum predominate in one *zāwiya*, with other professions predominating in another. On the occasion of anniversary celebrations of a *walī*, known as *mawāsim* [see MAWSIM], thousands of pilgrims may attend festivities at a *zāwiya*.

In rural areas, *zāwiya* heads often mediate in local tribal factional disputes or between the tribes and the central government. With the Sanūsiyya [*q.v.*] *ṭarīḳa* in Libya and the eastern Sahara in the 19th century, the creation of scores of *zāwiyas* led to the identification of a tribe with its *zāwiya*. In periods of weak authority by the Moroccan *makhzan* or central government, such as the 10th-11th/16th-17th centuries, some *zāwiyas*, like the Nāṣiriyya *zāwiya* in Tamgrūt [*q.v.*], were regional centres of power and operated almost as autonomous principalities. Other *zāwiyas* contested and occasionally sought to supplant the central government. At other times, for example, under the Ḥafṣids and under the Ḥusaynid Beys in 19th-century Tunisia, *zāwiyas* received governmental support and patronage.

In the 19th century, *zāwiya* membership was widespread; in 1880 Rinn estimated there to be over 355 *zāwiyas* in Algeria, with a membership of 167,019 out of an Algerian Muslim population of slightly less than three million (*Marabouts et khouan*). Estimates for Morocco put members in 1939 at between 5% and 10% of the population. While some *zāwiyas* and *ṭarīḳas* took an active role in organising opposition to colonial rule, others have been condemned as collaborationist. Although the *zāwiyas* have generally been opposed by nationalists in North Africa, significantly the organisational model of the *zāwiya* was employed in Morocco by the Istiḳlāl or Independence Party [see ḤIZB. i, at Vol. III, 525]. Its leader ʿAllāl al-Fāsī [*q.v.* in Suppl.] was referred to as the *shaykh*, and party members, self-styled *ikhwān*, called themselves ʿAllāliyya and ʿAllāliyyūn, organised local chapters known as *ṭā'ifas*, and levied dues known as *ziyāra*.

3. In sub-Saharan Africa.

The institution of the *zāwiya* is linked, in Islamised black Africa, to the development of the network of Islamic brotherhoods (*ṭuruḳ*) and is consequently a late phenomenon (12th-13th/18th-19th centuries). Saharan staging-posts played a capital role, as models for the

functioning of *zāwiyas* and as instruments of diffusion.

Such was the case with the *zāwiya* of Shaykh Sīdī Mukhtār al-Kuntī (d. 1226/1811) in the region of the Azawad (Mali). It was through his teachings, writings and disciples, but also through the commercial network of his tribe, the Kunta [*q.v.*], that settlements of the Ḳādiriyya came into being in western Africa. Some Kunta *zāwiyas* were established at Timbuktu by one of the sons of the founder, Sīd Aḥmad al-Bakkāy (d. 1281/1865), and at Talaya, in the Adrār of the Ifoghas, in Tuareg circles, by one of the grandsons, Sīdī Bay (*ca.* 1281-1348/1865-1929). To them is owed the adherence to the Ḳādiriyya of the Djihādist ʿUthmān Dan Fodio (Sokoto) and of Shaykhū Aḥmadū (Māsina).

A second Saharan staging-post was provided by the *zāwiya* of Būtilimit of the Ahl Shaykh Sīdiyya, the founder of which, Shaykh Sīdiyya al-Kabīr (1195-1286/1780-1869) was raised among the Kunta. From this *zāwiya* was to emerge the Senegalese brotherhood of the Murīd of Aḥmadu Bamba Mbacké (1270-1346/1853-1927), whose *zāwiyas* covered the Wolof land and monopolised the cultivation of the groundnut [see MURĪDIYYA].

Shaykh Muḥammad Fāḍil (1176-1286/1780-1869) and his numerous descendants constituted a third staging-post of the Ḳādiriyya in the direction of black Africa. Located in the Mauritanian Ḥawḍ, his *zāwiya* extended his influence beyond the river Senegal into Gambia and Guinea. His son, Shaykh Saʿd Būh (d. 1336/1917), based at his *zāwiya* of Nimdjat (Mauritanian Trārza), educated numerous *talāmīdh*, including two leading Senegalese scholars, Shaykh Mūsā Kamara, the author of *Ẓuhūr al-basātīn* (1344/1925) and Siré-Abbas Sūh, the author of *Chroniques du Fouta sénégalais* (1331/1913).

All the *zāwiyas* of Ḳādiriyya allegiance are part of a pastoral Saharan society where activities take place either in the tent (*khayma*) or, sometimes, on the move, with herds and families. Occasionally, the *zāwiya* constitutes the origin of a fixed settlement, as in the case of the Sīdiyya at Būtilimit. Income is derived from stockbreeding but also from the gifts or *hadāyā* of pupils and the fruits of visits to shrines (*ziyāra*) performed by the *shaykh*. General and mystical instruction remains their principal function.

The Tidjāniyya [*q.v.*] have also evolved through Saharan intermediaries, in the person of Muḥammad al-Ḥāfiẓ (d. 1246/1830) and his tribe of the Idawali. However, the centres of this brotherhood developed directly in black Africa. The best known of these *zāwiyas*, on account of its colonial history and its network of subsidiaries, has been that of Shaykh Ḥamāllāh (1301-63/1883-1943 [see ḤAMĀLIYYA]) at Nioro-du-Sahel (Mali). Some of its characteristics may be applied to the totality of African *zāwiyas*. Thus the family of the *shaykh*, teachers, disciples, students, and domestic staff, all live, eat and sleep in the *zāwiya*, perform the canonical prayers there (rather than in the mosque) and carry out the rituals of the *dhikr*. It is often a place of independence and economic wealth. Among the offshoots of the Ḥamāliyya of Nioro, the twelve current *zāwiyas* of Ouagadougou (Burkina Faso) should be included. That of the Ḥamdallāhiyya quarter, built in 1378/1958 by Shaykh Doukouré has, for some time, been the rival of the *zāwiya* of the Kamsonghin quarter, founded in 1374/1954 by al-Ḥādjdj Būbakar Maiga. In the decade commencing 1348/1930, these two *shaykhs* had, respectively, been responsible for the creation of the *zāwiyas* of Djibo and Ramatoullaye, in the north of the country. Thus the transfer of centres of brotherhoods from rural zones towards the cities, and especially towards the capitals, appears to be a gradual but radical evolution since *zāwiyas* have been often transformed into institutions subject to national legislation and have lost some of their independence. The Ḥamāliyya have also reached the Ivory Coast with the establishment, from 1357/1938 onwards, of the *zāwiya* of Yaʿḳūba Sylla (d. 1408/1988), at Gagnoa, characterised as much by its commercial as by its religious activity. Also to be noted are branches in Niger (the *zāwiya* of Shaykh ʿAlī Gaty at Niamey-Karadjé, since 1366/1946), in Senegal, Mauritania, Nigeria and France.

The network of the Ḥamāliyya, broadly decentralised, has nonetheless retained a certain degree of coordination, both in regard to individuals and also in connection with religious considerations. This is much less the case with other centres of the Tidjāniyya, especially those in Senegal. Here, each *zāwiya* represents an independent unit and tends to be concentrated around a religious dynastic line. Such is the case of the *zāwiya* of Sy (al-Ḥādjdj Mālik Sy, 1272-1341/1855-1922), founded at Tivaouane in 1326/1906; and it is still the case of the closed community that resided at Madina-Gounasse from 1355/1936 onwards, on a utopian model, under the leadership of the Peul Mamadu Saydu Ba, and only became open to the outside world in 1397/1977, when the founder was succeeded by his heir. The history of the branch of Shaykh Ibrāhīma Nyās (1320-95/1902-75) whose *zāwiya* is at Kaolack, shows a break with the preceding model since from 1371/1951 onwards, it has been spreading in the north of Nigeria (Kano). Senegalese *zāwiyas*, without exception, practise annual gatherings which attract considerable crowds, e.g. the *Magal* of the Murīds at Touba, in honour of their founder, and the *Gamu* of Tivaoune, marking the anniversary of the birth of the Prophet.

These festivities have their equivalent in eastern Africa, with the celebration of the *mawlid* [*q.v.*] of the Prophet, which gives the *zāwiyas* the opportunity to exercise, at large gatherings, their mystical rituals. This part of Africa was affected at a later date and in a less dense fashion by the Ṣūfī brotherhoods, which often emanated from Somalia (cf. the role of Shaykh ʿUways, 1263-1327/1847-1909, of Brava). Worth mentioning among the *zāwiyas* of the Ḳādiriyya are that of Shaykh Ramiyya at Bagamayo (Tanzania, 14th/late 19th-early 20th centuries), that of Shaykh Mtumwa at Nkhota-kota (Malawi, 14th/early 20th century) and the *zāwiya* of the Ḥusayniyya at Isiolo (Kenya).

Attempts by the Sanūsiyya [*q.v.*] to migrate from Libya towards black Africa saw the creation of *zāwiyas* in Niger (Chemidour, 1279/1862) and especially in Chad (since 1318/1900: Bir Alali, Gouro, Ayn Galakka, etc.). These *zāwiyas*, political institutions in spite of themselves, were administered by Arabic-speaking foreigners and depended directly on the leading *zāwiya*.

The same centralism has persisted in the Sudan, with the Mīrghaniyya [*q.v.*] (or Khatmiyya) maintained by the descendants of the founder (al-Ḥasan al-Mīrghanī, 1235-86/1819-69, *zāwiya* of the Khatmiyya, in the Sudan; Sayyid Hāshim, 1265-1319/1849-1901, *zāwiya* of Massala, in Eritrea). Conversely, the Ḳādiriyya generated independent branches, such as the Madjdhūbiyya (12th/18th century), with its commercial *zāwiya* of al-Damīr, or indeed the Mikashfiyya (early 14th/late 19th century) and its village-*zāwiya* of Shikaynayba.

While the African movement of the Ṣūfī brotherhoods of the late 14th/20th century has adopted the path of urbanisation, of concentration in capitals and

of emigration out of Africa, past history indicates that the model of the *zāwiya* was rural and extremely diversified in its modes of organisation, its functions and material arrangements.

ZAWZAN (in local Persian pronunciation, Zūzan), a town of mediaeval Islamic K͟hurāsān, now only a village in the *s͟hahrastān* of K͟hʷāf in the province of K͟hurāsān (lat. 59° 52' N., long. 34° 21' E.). It lies 35 km/22 miles to the southeast of K͟hʷāf [*q.v.*] and 60 km/37 miles from the present Afg͟hān frontier on a plain called the D͟julga-i Zawzan.

The latest archaeological investigations on the site (2000) tend to show that colonisation of the then arid plain of Zawzan must have occurred after the introduction of *ḳanāt*s [*q.v.*] to bring water for irrigation; Polybius, *History*, x. 26, mentions these for the Seleucid period in the neighbouring province of Ḳūmis. The oldest archaeological layer at Zawzan itself seems to be Sāsānid, found beneath the ruins of the *ḳibla īwān* of the imposing mosque of Zawzan. An ancient tradition attributed the foundation of Zawzan to the establishment there of a fire temple (Yāḳūt, ii, 958), and the prophet and Zoroastrian reformer Bihʾāfrīd [*q.v.*], executed in 131/749 by Abū Muslim at the behest of the Zoroastrian priests, is said to have been a native Zawzanī (al-Bīrūnī, *al-Āt͟hār al-bāḳiya*, 210; Gardīzī, *Zayn al-ak͟hbār*, ed. Ḥabībī, Tehran 1347/1968, 119). The date of the Arab conquest of Zawzan is unknown, but may have occurred *ca.* 31/651-2 when ʿAbd Allāh b. ʿĀmir [*q.v.*] marched on Nīs͟hāpūr (al-Ṭabarī, i, 2884-5; al-Balād͟hurī, *Futūḥ*, 404).

In the first centuries of Islam, Zawzan was governed by local potentates with the title *raʾīs*, sufficiently independent and sometimes powerful enough to lead rebellions, e.g. in 444/1052 (Nāṣir-i K͟husraw, *Safar-nāma*, ed. Dabīr-Siyāḳī, Tehran 1356/1977, 172, tr. W.M. Thackston, Albany 1986, 102). The countryside there was flourishing, and produced cotton cloth (*karbās*), felt and possibly also silk and madder (al-Muḳaddasī, 321; *Ḥudūd al-ʿālam*, tr. 103; Mustawfī, *Nuzhat al-ḳulūb*, ed. Le Strange, 154, tr. 152).

Remains of round or polylobed columns of fired brick of the first mosque there, the *d͟jāmiʿ*, bear witness to the town's significance already in the 3rd/9th century, called by al-Muḳaddasī in the next century a *miṣr* (47, 50, 321; see map and the monumental epigraphic remains in Adle, *Masd͟jid wa madrasa-i Zawzan*, in *Āt͟hār*, xv-xvi [1367/1989], 231-48, at 245). However, this *d͟jāmiʿ* and its *īwān* became inadequate and were enlarged in the 5th-6th/11th-12th centuries. One of the finest *miḥrāb*s of Persian mosques, made by one Abū Saʿd at the behest of the *raʾīs* Abū Muḥammad towards the end of the 5th/11th century, has been recovered almost intact from its surroundings. The town was important at this time for its artisans and its scholars, hence was known as "little Baṣra" (al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, vi, 342; Yāḳūt, ii, 958-9). In the early G͟haznawid period it had produced the official and littérateur Abū Sahl Zawzanī, who served Sultan Masʿūd I but who was regarded by the historian Bayhaḳī as that ruler's evil genius (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 60-1); and slightly later, the *adīb* al-Ḥusayn b. Aḥmad al-Zawzanī (d. 486/1093), who composed a well-known commentary on the *Muʿallaḳāt*, much used by early Western scholars writing on these poems, and on the famed *bāʾiyya* ode of D͟hu 'l-Rumma (see Sezgin, *GAS*, ii, 51, 397, ix, 256).

But it was on the eve of the Mongol invasions that Zawzan reached its apogee, when the *malik-i muʿaẓẓam* of Zawzan, Abū Bakr b. ʿAlī al-Zawzanī, controlled a principality stretching eastwards towards Kābul and westwards to the frontiers of Fārs, and from near Nīs͟hāpur to Hormuz and the shores of the Gulf of Oman; yet he never coined his own money, and acknowledged ʿAlāʾ al-Dīn Muḥammad K͟hʷārazm S͟hāh as his suzerain (see Adle, *Une contrée redécouverte: le pays de Zuzan à la veille de l'invasion mongole*, in Denise Aigle (ed.), *L'Iran face à l'invasion mongole*, Tehran 1997, 23-36). His residence, the *ḳalʿa-i ḳāhira*, situated in the citadel (*kuhandiz*) to the east of the town, is described as imposing by contemporary historians, and the remains of its 15 m high walls still dominate the hidden town. The town at that time had a quasi-rectangular plan, but thinking its second mosque inadequate, its lord began to raze it and to start on a third, yet more magnificent one. This was left unfinished because of his assassination in S͟hawwāl 614/ January 1218, followed by the arrival of the Mongols three years later. The mosque (or *madrasa*, according to Sheila S. Blair, *The madrasa at Zuzan. Islamic architecture in eastern Iran on the eve of the Mongol invasion*, in *Muqarnas*, iii [1985], 75-9) comprised at that time an *īwān* to the east and another towards the conventional *ḳibla*, sc. to the west, vast and with a height of 30 m. It is dated Rabīʿ I 615/June 1218 on the façade, and inside has a great epigraphic frieze in *kas͟hī* [*q.v.*] in the name of Abū Ḥanīfa and dated 616/1219. Terrified by the Mongols, the people of Zawzan prevented the last K͟hʷārazm S͟hāh D͟jalāl al-Dīn from taking refuge in the *ḳalʿa-i ḳāhira* (Adle, *op. cit.*, 35). Hence the town was spared but it was destroyed later by a violent earthquake that struck the region in 737/1336. The vault of the great *īwān* disintegrated and the palace of the lord of Zawzan, G͟hiyāt͟h al-Dīn Fīrūz, was destroyed, its owner being crushed to death in it; 30,000 to 40,000 people are said to have died in the region (K͟hʷāfī, *Rawḍa-i k͟huld*, ed. M. Farruk͟h, Tehran 1346/1948, 117; Faṣīḥī, *Mud͟jmal*, ed. Farruk͟h, 3 vols. Tehran 1339-40/1960-1, iii, 52-3; N.N. Ambraseys and C. Melville, *A history of Persian earthquakes*, Cambridge 1982, 44-5 and Fig. 3.7).

Zāwiya for the ʿAdawiyya *shaykh* Zayn al-Dīn Yūsuf (d. 697/1298) in the southern cemetery of Cairo, as seen from the east. Photo: Jonathan M. Bloom, April 1978.

The monumental mosque at Zawzan.

Zawzan never recovered. Its present inhabitants are not indigenous to the region, but according to the accounts of elders, were largely brought from south-western Persia—perhaps in the 18th century—in order to repopulate the cultivable land. Present family names there, e.g. the Arabic tribal name Khuzāʿī, may reflect this. The population of Zawzan was only 680 in the late 1940s (*Farhang-i djughrāfiyā-Īrān-zamīn*, ix, 201) and 786 in 1966 (*Farhang-i ābādīhā-i kishwar*, iv, *Ustān-i Khurāsān*, Tehran 1347/1969, 16), but by the 1991 census it had reached 2,087 with the demographic explosion since the Islamic Revolution of 1969. Contrary to the people of the numerous neighbouring villages who are Ḥanafīs, the population of Zawzan has been since its repopulation wholly Shīʿī.

Khusrawī, *Djughrāfiyā-yi tārikhī-yi wilāyat-i Zāwa*, Mashhad 1366/1988. (C. Adle)

ZĀY, also, more rarely, **ZĀʾ**, the eleventh letter of the Arabic alphabet, numerical value 8. The former variant of the letter name retains the /y/ of the original letter name (as in Hebrew *zayin*), while the latter has the innovative ending *-āʾ*, which occurred legitimately with *fāʾ* (Hebr. *pē*) and *hāʾ* (Hebr. *hē*) and then spread to *bāʾ* (Hebr. *bēt*), *tāʾ*/*thāʾ* (Hebr. *tāw*), *ḥāʾ*/*khāʾ* (Hebr. *ḥēt*), *rāʾ* (Hebr. *rēsh*), *ṭāʾ*/*ẓāʾ* (Hebr. *ṭēt*), and *yāʾ* (Hebr. *yōd*), with loss of the final consonant of the original letter name.

The letter is transliterated /z/ and represents a voiced sibilant (*ḥarf al-ṣafīr*), which forms a triad with the unvoiced /s/ and the "emphatic" (pharyngealised) unvoiced /ṣ/. A neighbouring sound is the voiced interdental /dh/. Minimal pairs are: *zāda* "he increased" vs. *sāda* "he ruled", *ṣāda* "he hunted", and *dhāda* "he drove [s.o.] away".

For the "emphatic" variant /ẓ/, see ẒĀʾ.

Arabic /z/ appears as /z/ everywhere else in Semitic. However, Egyptian transliterations of Northwest Semitic words show that the sibilants were earlier on pronounced as dental affricates (/t^s/, /d^z/, /$ṭ^s$/ [or, more likely, an ejective /$t^{sʾ}$/]), and this is usually posited for Proto-Semitic.

A number of roots in Arabic (and in other Semitic languages) show a variation between /z/ and /ṣ/, more rarely also between /z/ and /s/: *zaʿaqa* vs. *ṣaʿaqa* "he screamed", *bazaka* vs. *baṣaka* and *basaka* "he spat").

For assimilations that either produce or replace a /z/, both word-internally and in sandhi, see Cantineau, 47-8; Fleisch, 86-7. In the VIIIth form the infixed /t/ becomes /d/ after /z/: **iztāna* > *izdāna* "it became adorned", but the grammarians allow also total assimilation: *izzāna* (cf. Fleisch, 97).

In loanwords and transliterations from Greek, /z/ represents /ζ/, but a Syriac intermediary is likely in most cases: Ζευς > *Zāwush* (and variants, see P. Kunitzsch, *Zeus in Bagdad*, in W. Diem and S. Wild (eds.), *Studien aus Arabistik und Semitistik Anton Spitaler zum siebzigsten Geburtstag*, Wiesbaden 1980, 99-113), and ζευγος > Syr. *zawgā* > *zawdj* "one of a pair, spouse", Pahlavi /z/ is retained in Arabic: *nāzag* "lance" > *nayzak* "lance, meteorite". Several *nisbas* referring to Persian places have an intrusive *-z-* borrowed from Persian, as in *Rāzī* (from *al-Rayy*), *Marwazī* (from *Marw*), *Sidjzī* (from *Sidjistān*; used alongside *Sidjistānī*).

The dialects of Arabic have mostly preserved /z/.

The mosque at Zawzan. Façade of the main *īwān* just before the beginning of the restoration works in 1988.

In some Jewish dialects in North Africa, /z/ and /ž/ (< /dj/) coalesce and are pronounced either /z/ or /ž/, depending on the environment (cf. Fischer and Jastrow, 253). In some dialects the interdentals have been shifted to sibilants (Kozluk-Sason group and some other dialects of Anatolian Arabic and Uzbekistan Arabic), thus /dh/ > /z/ (Jastrow, 34-9; Fischer and Jastrow, 50). The same shift is also typical for loans from the standard language into sedentary dialects that have not preserved the interdentals; speakers try to imitate /dh/ by using /z/ (rather than the dialect equivalent /d/), compare the *fuṣḥā* loan *dhahāb* > *zahāb* "going" with the true dialect form *dhahab* > *dahab* "gold". A special case of de-emphatisation and assimilation is the frequent word *zghīr* < *ṣaghīr* "small" (also in the diminutive *zghayyir*).

The grapheme <z> has become identical in shape with <r> and is distinguished from it by a diacritical dot on top (already in the oldest Arabic papyrus, dated 22/643, see Gruendler, 22a). In carefully written manuscripts, the <r> may be additionally marked by a v-shaped sign on top (*ʿalāmat al-ihmāl*). One of the reasons for *zāy* and *rāʾ* acquiring the same shape is the fact that neither can be connected to the left in Nabataean cursive writing, a fact that is continued in the Arabic script (for the historical development of the shape, see Gruendler, 60-3).

In Persian, <z> is used to render /z/ in Persian words (and, of course, those Arabic words that have it). The phoneme /z/ may, however, be written <z>, <ẓ>, <dh>, or <ḍ>, depending on the Arabic etymology. The grapheme <z> is also used to create a grapheme for /ž/, by adding three triangularly arranged superscript dots. For Pashto, a special sign for retroflex /z/ has been developed which looks like a *rāʾ* with two dots diagonally across its middle, and in Kashmiri the Persian grapheme <ž> is used to write /ts/.

ZĀYANDA-RŪD, lit. "river which increases", a river of the central basin of Persia which flows past Iṣfahān. It is so called because it was believed that springs along its course increased the volume of its water (Ibrāhīm Khān Taḥwīldār, *Djughrāfiyā-yi Iṣfahān*, ed. M. Sotoodeh, Tehran AHS 1342/1963-4, 37). Early authors called it Zinda-Rūd. In the *Bundahishn* it is mentioned as Zendeh Rud (A. Houtum-Schindler, *Eastern Persian Irak*, London 1898, 17). Abū Ḥusayn b. Muḥammad b. Abi 'l-Riḍā Āwī states that it was also known as Zarīn-Rūd, the "Golden River", because of the abundance and wealth which its waters bestowed on the land that it irrigated (*Tardjuma-i Maḥāsin Iṣfahān*, ed. ʿAbbās Iḳbāl, Tehran AHS 1328/1949-50, 47-8).

The principal source of the river is the Čashma-i Djanān on the eastern slope of the Zarda Kūh [see iṣfahān, at Vol. IV, 98). After a run of about 18 km/11 miles it receives the waters of the Čihil Čashma and is then called Djanāna-Rūd. Further on it receives the Khursang River from Firaydan on the north and the Zarīna-Rūd from Čahār Maḥall on the south and is then known as the Zinda-Rūd. Flowing south-east, it enters the Āydughmish district of Lindjān and continues through Lindjānāt and Mārbīn to Iṣfahān, receiving from the left the overflow drainage from Tīrān and Karwan. Passing through Iṣfahān, it flows through Djay, Barzarūd, Karāridj, Baraʾān and Rūydasht into the Gāwkhānī marsh. A total of 105 major canals (*mādīs*) are led off from it between its entrance into Lindjān and its end in the Gāwkhānī (Houtum-Schindler, 17-18; Taḥwīldār, 37; Ḥusayn ʿĀbidī states that there are 150 canals (*Iṣfahān*, Iṣfahān AHS 1334/1955-6, 76), but this is presumably a printer's error. All other authorities give 105). Writing at the end of the 19th century, Houtum-Schindler stated that in summer the Gāwkhānī had very little water, a few inches in depth covering about 15 square miles, but that in spring it formed a lake 35 miles in length and 8-10 miles in breadth and was in parts 15-18 feet deep (126). During the spring when the snows are melting, the river carries a considerable flow, part of which was formerly lost in flood water. In 1809 there was much damage done by flood water in Iṣfahān and the neighbourhood (Morier, *A Journey through Persia, Armenia, and Asia Minor to Constantinople in the years 1808 and 1809*, London 1812, 213). In recent years, the Gāwkhānī has virtually dried up owing to the drawing off of water for irrigation higher up the river.

Fourteen bridges span the river. The first was a temporary wooden bridge a few miles above Lindjān, erected only in the spring season, and the fourteenth is near Warzāna in Rūydasht (Houtum-Schindler, 17-18; ʿĀbidī, 70-1 gives only thirteen). Five of these bridges are in the city of Iṣfahān: the Mārnān Bridge between Djulfā and Iṣfahān; the Allāhwardī Khān Bridge, called after ʿAbbās I's general of that name, also known as the Sī u Sih Čashma Bridge, connecting Iṣfahān with the eastern part of Djulfā [see ʿabbās i]; the Djūy Bridge and the Khādjū Bridge, built by ʿAbbās II [*q.v.*] on the ruins of an older bridge, and the Shahristān Bridge. During the reign of Muḥammad Riḍā Shāh Pahlawī, an iron bridge was also built over the river (ʿAlī Djawāhir Kalām, *Zinda-Rūd*, ²Tehran AHS 1348/1969-70, 47). Below the Warzāna Bridge there were three dykes for the purpose of raising the water to the lands on both sides of the river: the Band-i Marwān in Rūydasht; the Band-i Allāh Ḳulī Khān, built in the reign of Nādir Shāh [*q.v.*]; and the Band-i Shānzdah Dih built in the reign of Shāh Sulaymān (Houtum-Schindler, 19). Orders were apparently given for this last dam in 1100/1688-9 (Luṭf Allāh Hunarfar, *Gandjīna-i āthār-i tārīkhī-i Iṣfahān*, Iṣfahān AHS 1344/1966-7, 637).

In the reign of Ṭahmāsp I (930-84/1524-76 [*q.v.*]) an abortive attempt was made to divert water from the source of the Kārūn River into the Zāyanda-Rūd. When Iṣfahān became the capital of the empire under ʿAbbās I, the need to increase cultivation to feed the growing population and the fact that the land round Iṣfahān (the Maḥāll), which was watered by the Zāyanda-Rūd, belonged to the royal *dīwān*, made the availability of the water of the Zāyanda-Rūd and its regulation of special interest to the state. In 1027/1618 Shāh ʿAbbās sent Muḥibb ʿAlī Beg Lāla, the *sarāy-dār-bāshī* of the royal buildings, to Kūhrang to report on the possibility of diverting the water of the Kārūn (see R.D. McChesney, *Four sources on Shah ʿAbbās's building of Isfahan*, in *Maqarnas*, v [1988], 122) and subsequently Imām Ḳulī Khān Beglarbegi of Fārs, Ḥusayn Khān, governor of Luristān, and Djahāngīr Khān Bakhtiyārī were ordered to start operations. This attempt also proved abortive. In 1030/1620-1 Shāh ʿAbbās himself set out for the source of the Zāyanda-Rūd. New operations to cut through the mountain

were begun but remained unfinished (Iskandar Munshī, *Tārīkh-i ʿĀlamārā-yi ʿabbāsī*, Tehran AHS 1334/1956, ii, 949-50, 959). Work was renewed under ʿAbbās II, but again proved abortive as also were later projects. It was not until after the Second World War that the problem of feeding a growing population again brought the plan to divert the headwaters of the Kārūn into the Zāyanda-Rūd to the fore; it was accorded high priority in successive development plans. The diversion was finally accomplished in the 1950s and 1960s by means of a tunnel driven through the mountain ridge which forms the watershed between the Kārūn River and the Zāyanda-Rūd. Various plans were also put forward for the construction of storage reservoirs on the upper reaches of the river. Under the Third Development Plan (1962-8), a dam called the Shāh ʿAbbās Great Dam, was constructed, having a height of 95 m and a storage capacity of 450 million m^3, enabling (officially) 100,000 ha. to be irrigated in the Iṣfahān area and permitting the generation of 60,000 kw of electricity. By the time the Fourth Development Plan began, the dam was well established and the area it fed was gradually extended.

The basis of the division of the waters of the Zāyanda-Rūd is probably of great antiquity. The distribution in force in the mid-20th century went back at least to Ṣafawid times. The details are contained in a document known as Shaykh Bahāʾī's *tūmār*, which is (or was) held in the Department of Finance, Iṣfahān. Ibrāhīm Bāstānī Pārīzī mentions an edition published by the Department of Agriculture, Iṣfahān (*Siyāsat wa iḳtiṣād-i ʿaṣr-i Ṣafawī*, Tehran AHS 1348/1969-70, 89). The present writer has not been able to obtain a copy of this. The authorship and date of the *tūmār* are uncertain. The document contains the words "Written in the sealing office of the late Shāh Ṭahmāsp in 923/1517". This is clearly an anomaly. Shāh Ṭahmāsp did not ascend the throne until 930/1524; and Shaykh Bahāʾī, to whom the document is attributed, was not born until 953/1546-7. He became *ṣadr* of Iṣfahān under Shāh ʿAbbās I and may have been responsible for a revision of the traditional regulation of the river water. Among other anomalies in the document there is mention of various *mādīs* which had no share assigned to them in the original distribution. According to the *tūmār*, the water of the river was regulated in detail from the Kalla Bridge in Āydughmish to Warzāna in Rūydasht, having regard to the cropping needs of each *bulūk* or district [see MĀʾ. 6. Irrigation in Iran, at Vol. V, 873-4].

The present writer was told by an official in the Department of Agriculture, Iṣfahān, in 1938 that the regulation of the river water as laid down in Shaykh Bahāʾī's *tūmār* had some years previously fallen into disuse but that in 1928-9 local people had requested that it be re-activated and, in due course, the system, with some modifications, was again brought into force. She was also told that a *mīrāb* was not invariably appointed and was not necessarily from among the *kadkhudās* of Djay as Shaykh Bahāʾī's *tūmār* had laid down; if he was appointed, his wages were fixed on a daily basis and paid locally. If no *mīrāb* was appointed, each *bulūk* sent a representative to oversee the division of the water within that *bulūk* when its turn came. Ibrāhīm Taḥwīldār states that this was the case in 1877 (*Djughrāfiyā-yi Iṣfahān*, 128). The *mādī-sālārs* (those in charge of the major canals leading off from the river) were appointed locally and paid (in most cases) by the landowners. In recent years, with the increased flow of water after the construction of storage dams in the upper reaches of the river, major modifications have been made in the distribution of water.

(ANN K.S. LAMBTON)

ZAYD B. ʿALĪ B. AL-ḤUSAYN, great-grandson of ʿAlī b. Abī Ṭālib and Fāṭima and leader of the revolt that gave rise to the Zaydiyya [*q.v.*] branch of the Shīʿa.

He was born in Medina in 75/694-5 according to his son al-Ḥusayn. This date seems more reliable than the year 79/698 or 80/699 usually mentioned by the Sunnī sources. He was thus at least 18 years younger than his brother Muḥammad al-Bāḳir, who became the head of the Ḥusaynids after the death of their father ʿAlī Zayn al-ʿĀbidīn in 94/712-13 and was widely recognised as the *imām* by the Shīʿa. Zayd's mother was a woman of slave origin from Sind named Djaydā, who is said to have been presented to his father by the Shīʿī rebel leader al-Mukhtār or was bought by the father. Zayd acquired a high standing in religious learning in his family and in Medina and is known to have transmitted from his father, his brother Muḥammad, Abān b. ʿUthmān, ʿUrwa b. al-Zubayr and ʿUbayd Allāh b. Abī Rāfiʿ.

As head of the Ḥusaynids, his brother Muḥammad entrusted him with the litigation on their behalf in the long-standing dispute between the families of al-Ḥasan and al-Ḥusayn over the control of the endowments (*ṣadaḳāt*) of ʿAlī b. Abī Ṭālib. The case was pursued before the Umayyad governors of Medina Ibrāhīm b. Hishām (106-14/724-32) and Khālid b. ʿAbd al-Malik (114-17/732-5). The Ḥasanids were at first represented by Djaʿfar b. al-Ḥasan b. al-Ḥasan and then by his brother ʿAbd Allāh b. al-Ḥasan, who was in fact in control of the endowments after the death of his father. The case evidently involved the leadership of the descendants of Muḥammad through Fāṭima and thence their potential claim on the caliphate. ʿAbd Allāh b. al-Ḥasan, who harboured ambitions, at first for himself and later for his son Muḥammad al-Nafs al-Zakiyya [see MUḤAMMAD B. ʿABD ALLĀH], is reported to have accused Zayd before the governor of aspiring to the caliphate although he, as the son of a non-Arab slave woman, was not qualified for it. When Zayd complained to his aunt Fāṭima bt. al-Ḥusayn, the mother of ʿAbd Allāh b. al-Ḥasan, about the insult to his mother, she encouraged him to answer by insulting herself. Zayd then took revenge by casting aspersions on his aunt's undignified conduct toward an earlier governor. As it became evident, however, that the governor Khālid b. ʿAbd al-Malik was using the dispute to discredit the Family of the Prophet in front of the public of Medina, Zayd broke off the litigation, assuring ʿAbd Allāh b. al-Ḥasan that he would never again raise the case before the governor. Reports that the dispute was further pursued before the caliph Hishām do not seem to be reliable. According to another report, Zayd vainly tried to raise it before the caliph, who refused to receive him. A letter of Hishām to the governor Yūsuf b. ʿUmar confirms, however, that Zayd was engaged in litigation against ʿUmar b. al-Walīd, son of the caliph al-Walīd b. ʿAbd al-Malik, before Hishām (al-Ṭabarī, ii, 682). No details are known about the case.

When Khālid al-Ḳasrī was replaced as governor of ʿIrāḳ by Yūsuf b. ʿUmar in Djumādā I 120/May 738, he claimed, under torture by his successor, that Zayd and several other men of Ḳuraysh were in possession

of deposits of his. According to some accounts, it was Khālid's son Yazīd or his *ghulām* Ṭāriḳ who made the claim, but it must, in any case, have concerned deposits belonging to the deposed governor. Yūsuf b. ʿUmar informed the caliph Hishām, who sent for the Ḳurashīs. That Zayd was already present at the caliph's court, as some reports state, is unlikely. All of the accused denied the claims against them. Hishām cleared them of suspicion but insisted on sending them to Yūsuf b. ʿUmar in al-Ḥīra in order to confront them with their accuser. Zayd's son ʿĪsā was born in al-Ḥīra. As their accuser withdrew his charges, they were freed. While most of the Ḳurashīs returned to Ḥidjāz, Zayd stayed in Kūfa together with the ʿAbbāsid Dāwūd b. ʿAlī. The caliph now sent a letter to Yūsuf b. ʿUmar instructing him to send Zayd forthwith to Ḥidjāz and not to let him tarry. He had, so he wrote, observed Zayd in his dispute with ʿUmar b. al-Walīd to be argumentative, loquacious, apt to forge and to distort in his discourse, and to beguile men by the sweetness of his tongue. If he were allowed to stay among the Kūfans, who believed in the superior religious status of his family, he would incite them to rebellion, thus splitting the Muslim community.

Yūsuf ordered his deputy in Kūfa, al-Ḥakam b. al-Ṣalt, to press Zayd to leave, but the latter, offering various excuses, remained four or five months in the town. When he left and reached al-Ḳādisiyya or al-Thaʿlabiyya, Kūfan Shīʿīs caught up with him and urged him to return, promising him massive support. They said they hoped he would become the Manṣūr who would overthrow the Umayyad régime. Dāwūd b. ʿAlī warned him of the fickleness of the Kūfans and continued on to Ḥidjāz, but Zayd decided to return. He stayed secretly, moving from tribe to tribe, for over ten months, interrupted by a two months' visit to Baṣra. He married two women of the tribes of Sulaym and al-Azd in order to strengthen his ties with them. His summons to the people called for *djihād* against the wrongdoers, redress of grievances and support of the Family of the Prophet in general against their enemies. Twelve or fifteen thousand men are said to have pledged allegiance to him in Kūfa. He also sent his summons abroad and gained followers in the Sawād, in al-Madāʾin, Baṣra, Wāsiṭ, Mawṣil, Upper Mesopotamia, Rayy and Djurdjān. Support for him was nevertheless patchy. Some *ʿulamāʾ* actively backed him, but others, while offering sympathy, expressed doubts that the Kūfans would stand up for him. Abū Ḥanīfa is said to have sent him money but to have excused himself from fighting. The Banū Hāshim, ʿAlids and ʿAbbāsids, also failed to show solidarity, in part probably because of ambitions of others among them. ʿAbd Allāh b. al-Ḥasan is reported to have warned him in a letter of the well-known treachery of the Kūfans. Muḥammad al-Bāḳir's son Djaʿfar al-Ṣādiḳ is said to have advised his followers to pledge allegiance to Zayd. Most of them withdrew their backing, however, when Zayd refused to condemn the conduct of the early caliphs Abū Bakr and ʿUmar. The sources stress this incident, describing it as the cause of the schism between the radical Imāmiyya and the moderate Zaydiyya.

As Zayd's presence in Kūfa was betrayed to Yūsuf b. ʿUmar, he was forced to call the revolt before the date originally set. On Yūsuf's order, al-Ḥakam b. al-Ṣalt had summoned the Kūfan leaders and warriors to the great mosque and detained them under a guard of Syrian soldiers. Thus less than three hundred men followed Zayd's call to revolt, though the number then swelled to around a thousand. They were fought mainly by a force of Syrians whom Yūsuf had brought to Kūfa. On the third day, Zayd was hit in the evening by an arrow penetrating his brain. He died when a physician or a cupper extracted it. Various dates are mentioned for his death. The most likely is Thursday, 2 Ṣafar 122/7 March 740. His followers sought to hide his body by burying him at night in a spot that they drenched with water. The location, however, was betrayed the next day, and his body was exhumed. His head was sent to Hishām in Damascus, who exhibited it and then sent it to Medina. His body was crucified on the Kunāsa in Kūfa and left there until after the death of Hishām some three years later, when his successor al-Walīd b. Yazīd ordered Yūsuf to burn it and scatter the ashes in the Euphrates. Revenge for Zayd became one of the slogans of the ʿAbbāsid revolution and, after its success, Hishām's remains were unearthed in Damascus, crucified and burned.

Zayd's activity as a scholar and his religious opinions are largely obscure. He was given the honorary title *ḥalīf al-Ḳurʾān* and numerous readings of his Ḳurʾān codex are cited in the Sunnī works on *ḳirāʾāt.* They do not reflect a notable Shīʿī tendency (see A. Jeffery, *The Qurʾān readings of Zaid b. ʿAlī*, in *RSO*, xvi [1936], 249-89, and *Further Qurʾān readings of Zaid b. ʿAlī*, in *ibid.*, xviii [1940], 218-36). Zaydī tradition has preserved various theological treatises ascribed to him. These are too disparate in style and doctrinal positions to be the work of a single author and may mostly be seen to represent currents in the early Kūfan Zaydiyya. A compendium of religious law attributed to him was collected by the Zaydī Ibrāhīm b. al-Zibriḳān (d. 183/799) on the basis of the transmission of the Kūfan Abū Khālid al-Wāsiṭī who claimed to have heard it from Zayd while visiting Medina as a pilgrim in five years. The work, first published by E. Griffini as *Corpus Iuris di Zaid b. ʿAlī* (Milan 1919), reflects Kūfan legal tradition and it is unlikely that Zayd had any significant part in it. Abū Khālid also transmitted a commentary on the difficult (*gharīb*) words of the Ḳurʾān (ed. Ḥ.M. al-Taḳī al-Ḥakīm, Beirut 1992). In these texts, Zayd appears as an anti-Ḳadarī supporter of predestination and as upholding a moderately anti-anthropomorphist concept of God. This agrees with the views of the early Kūfan Zaydiyya. Late Zaydī tradition describes him as agreeing with Muʿtazilī teaching.

(W. MADELUNG)

ZAYD B. ʿAMR b. Nufayl, a so-called *ḥanīf* [*q.v.*] and "seeker after true religion", who lived in Mecca before Muḥammad's mission (though some pronounced him a Companion of the Prophet). In a major battle before Islam Zayd reportedly led the Ḳuraysh [*q.v.*] clan to which he belonged, the ʿAdī b. Kaʿb. The cycle of reports about him in Islamic historiography all but presents him as Muḥammad's precursor. Some scholars even went as far as declaring him a prophet who received revelations, and a

messenger sent to mankind. Precisely like Muḥammad before his call, Zayd is said to have practiced *taḥannuth* [*q.v.*] on Mt. Ḥirāʾ [*q.v.*]. Other rites attributed to him, such as prostration in the direction of the Kaʿba, are consonant with Islamic practice.

In a widespread account, Zayd appears as an old man leaning against the Kaʿba and claiming to be the only Ḳurashī holding on to the *dīn Ibrāhīm*. His claim to exclusivity smacks of competition with other Ḳurashīs who repudiated idol worship. Far more problematic, however, are reports involving Muḥammad in which Zayd is given a spiritual advantage over the future prophet. One account reportedly going back to his son Saʿīd b. Zayd [*q.v.*] (through his son and grandson), is a typical itinerary of a *ḥanīf* in quest of true religion. Zayd was travelling with Waraḳa b. Nawfal [*q.v.*], who soon became Christian, abandoning the search. Continuing his journey, Zayd learned from a monk that the religion he was looking for was about to be initiated in his own land. Having returned to Arabia, Zayd was offered by Muḥammad, but declined, the meat of an animal slaughtered in association with idol worship. Following Zayd's example, Muḥammad abstained from such meat and, what is more, abandoned idol worship.

At least some of these unorthodox statements originated with Zayd's offspring and other members of the ʿAdī b. Kaʿb. They were not discarded because they included an element of *dalāʾil al-nubuwwa* "proofs of prophethood". Instead, they gave rise to various forms of apologetics, since they contradicted the more comprehensive form of *ʿiṣma* [*q.v.*] or infallibility, which developed over the period preceding Muḥammad's mission.

(M. Lecker)

ZAYD B. ḤĀRITHA al-Kalbī, or Zayd *al-ḥibb* "the beloved", a slave, and later a *mawlā* [*q.v.*] and adoptive son of the Prophet Muḥammad. The details of his early biography are disputed. One account has it that he was sold into slavery in Mecca by members of his own tribe.

However, according to al-Wāḳidī's [*q.v.*] account, Zayd's father died amidst his wife's tribe, the Ṭayyiʾ [*q.v.*], bequeathing to his son an unspecified number of camels. Certain Bedouin who hired the camels from the stripling, treacherously sold him at the market of ʿUkāẓ. The buyer was Ḥakīm b. Ḥizām who was trading on behalf of his paternal aunt Khadīdja [*q.v.*].

According to al-Kalbī's account, Zayd and his mother, while on a visit to her tribe, were attacked by horsemen of al-Ḳayn [*q.v.*] b. Djasr. The attackers sold Zayd at ʿUkāẓ to Ḥakīm b. Ḥizām who purchased him for Khadīdja. After her marriage to Muḥammad, Khadīdja gave him Zayd. In al-Kalbī's version, Zayd's father (who was still alive) vowed to look for his son. Having been discovered in Mecca by fellow tribesmen, Zayd chose to remain Muḥammad's slave, and in due course became Muḥammad's adoptive son.

Zayd's offspring transmitted—at least to the 4th/10th century—a different account. Zayd grew up in his mother's family and when she died, he remained with his grandfather. Then he was carried off by horsemen of the Fazāra [*q.v.*] who sold him at ʿUkāẓ to Khadīdja's paternal cousin, Waraḳa b. Nawfal [*q.v.*]. Zayd was recognised by a fellow tribesman, but chose to stay with Muḥammad. In this account Zayd's father (and, after a while, also his brother, Djabala) embraced Islam. As attested by the Companion dictionaries, the family managed to secure Companion status for both of them.

Zayd's earliest marriage link, with Muḥammad's dry nurse and *mawlāt* Umm Ayman (Baraka), took place in Mecca, probably not long after Muḥammad's call. She gave birth to Usāma [*q.v.*] eight or ten years before the Hidjra. Although Usāma was dark-skinned while Zayd was fair, a physiognomist [see ḲIYĀFA] reportedly removed all doubts regarding Zayd's parentage.

Zayd's other marriages took place in Medina after the Hidjra. He married Muḥammad's cousin, Zaynab bt. Djaḥsh [*q.v.*] (whose mother was Muḥammad's paternal aunt). Zaynab's marriage to Muḥammad shortly afterwards gave rise to claims by the so-called Hypocrites, that Muḥammad was acting against his own ruling which prohibited marriage to the former wife of one's son. Consequently, a verse (Ḳurʾān, XXXIII, 5) was revealed terminating the state of adoption and returning Zayd to his Kalbī affiliation. With regard to the same situation, Zayd is the only Companion of Muḥammad whose name appears in the Ḳurʾān (XXXIII, 37). Several years later Zayd married successively three women of Ḳuraysh, one of whom was yet another cousin of Muḥammad (the daughter of his paternal uncle, Abū Lahab [*q.v.*]). At some stage Zayd was married to a woman of the Medinan Khazradj [*q.v.*]).

Zayd, a fine archer who led several military expeditions, was killed in the battle of Muʾta [*q.v.*] of 8/629, aged fifty or fifty-five.

(M. Lecker)

ZAYD B. AL-ḤUSAYN B. ʿALĪ (1898-1970 or 1972), fourth son of the Grand Sharīf of Mecca, al-Ḥusayn b. ʿAlī [*q.v.*] by a Circassian wife. His involvement in Hāshimī activities and politics was limited. He participated as a leader in the early stages of the Arab Revolt in Ḥidjāz in 1916. He was his father's representative in 1924 at a British-sponsored conference in Kuwayt which tried to resolve Hāshimī-Suʿūdī border differences. In 1947 he was a minister in London for ʿIrāḳ after Britain decided to refer the Palestine problem to the United Nations.

ZAYD B. THĀBIT, an Anṣārī [see ANṢĀR] Companion of the Prophet Muḥammad credited with a crucial role in the collection of the Ḳur'ān [*q.v.* at Vol. V, 404b-405b]. He belonged to the Banu 'l-Nadjdjār of the Khazradj, or more precisely, to the ʿAbd ʿAwf b. Ghanm b. Mālik b. al-Nadjdjār. His mother, al-Nawār bt. Mālik, was of the ʿAdī b. al-Nadjdjār. Much of the rather detailed biographical information about Zayd was preserved by *ḥadīth* transmitters from among his offspring who were intensely interested in the life and work of their great ancestor.

Zayd's father was killed in the battle of Buʿāth [*q.v.*], when Zayd was six years old; at the time of the Hidjra [*q.v.*], Zayd was eleven. His education between these events was of major importance for his career. Already before the Hidjra he acquired Arabic literacy at the *midrās* or *kuttāb* [*q.v.*] of a Jewish group called Māsika; his knowledge of the Hebrew or Syriac script presumably goes back to the same period.

Zayd's first-born son was probably Saʿīd, hence Saʿīd's mother, Umm Djamīl bt. al-Mudjallil of the Ḳuraysh [*q.v.*], must have been Zayd's first wife. Widowed in Ethiopia, she arrived at Medina after the conquest of Khaybar [*q.v.*] in 7 A.H. with two small children. Neither of the children was called Djamīl, and it follows that she could have been married twice before marrying young Zayd.

As one of the Prophet's scribes, Zayd wrote down Ḳur'ān verses as well as letters to "the kings". Some said that Zayd was the scribe of Abū Bakr and ʿUmar, and he was also said to have officiated as *ḳāḍī* under ʿUmar and ʿUthmān.

Zayd's literacy was accompanied by a knowledge of arithmetic: he was a famous expert on the division of inheritances [see FARĀ'IḌ] and was considered an authority on calendrical calculations. Abū Bakr instructed him to calculate the *khums* of the Kinda [*q.v.*] captives brought to Medina from al-Nudjayr (in Ḥaḍramawt), and Zayd later collected their ransom. After the Battle of the Yarmūk, Zayd divided the spoils, having done the same for the Prophet at Khaybar and Ḥunayn [*q.v.*]. When food supplies sent by ʿUmar's governor in Egypt were to be distributed, Zayd prepared written orders for the transfer of subsistence (*ṣikāk*) which were made of papyrus [see ḲIRṬĀS] and stamped at the bottom; he was the first Muslim to prepare such orders. ʿUthmān appointed him over the treasury (*bayt al-māl* [*q.v.*]) after Zayd's predecessors had resigned because of ʿUthmān's illegal use of state money. In due course, ʿUthmān allowed Zayd to appropriate a surplus of more than 100,000 dirhams. However, a pro-ʿUthmānī source denies all this: the former officials grew old and were too weak to function; the surplus was of 1,000 dirhams only, and Zayd spent it on construction works in the Prophet's mosque.

When ʿUthmān was later besieged in his court, Zayd protected him in defiance of his fellow Anṣār, most of whom supported ʿAlī. Abū Ayyūb al-Anṣārī [*q.v.*] accused Zayd of being motivated by the many palm trees which he received from ʿUthmān. It should be borne in mind that at the *saḳīfa* [*q.v.*], immediately after the Prophet's death, Zayd—whose first wife was probably of the Ḳuraysh—eloquently supported the political supremacy of the *muhādjirūn* [*q.v.*] over the Anṣār.

Zayd was one of the few Anṣār who did not pledge their allegiance to ʿAlī; a pro-Shīʿī source explained that ʿUthmān appointed him over both the *dīwān* [*q.v.*] and the treasury. Obviously, Zayd was not a member of ʿAlī's administration, but at the beginning of Muʿāwiya I's [*q.v.*] reign we again find him in charge of the *dīwān* of Medina. Zayd advised Muʿāwiya and his governor in Medina, Marwān b. al-Ḥakam [*q.v.*], on various legal matters.

The dates given for Zayd's death range from 42/662-3 to 56/675-6. The large amount of gold and silver that he bequeathed had to be cut with a broad iron instrument called *mifrāṣ*; in addition, he left orchards and estates valued at 100,000 dīnārs, or, alternatively, at 150,000 dīnārs and 700,000 dirhams. Considering Zayd's humble starting-point, his career during the first half-century of Islam was phenomenal.

There is much controversy over the collection of the Ḳur'ān. One thing is, however, certain: when ʿUthmān looked for a qualified scholar to oversee the preparation of its official edition, Zayd's total commitment to the Ḳurashī cause was taken into consideration.

ZAYDĀN, DJURDJĪ (b. 14 December 1861 in Beirut, d. 21 July 1914 in Cairo), outstanding representative of the *Nahḍa* [*q.v.*] or Arabic cultural and literary renaissance of the 19th and early 20th centuries.

Son of an illiterate Greek Orthodox cook who considered education, except for some reading and writing skills, unnecessary, Zaydān was more than any other Arab intellectual of his time a self-made man. His autobiography (Eng. tr. Th. Philipp, 1979, 1990) gives information on his amazing intellectual development, from being a waiter and cook in his father's small restaurant at the age of 11, to apprenticeship in a workshop for European-style shoes, to bookkeeping for his father, until his enrolment for studying medicine in the Syrian Protestant College in September 1881. He soon became top of his class, but left with some friends after an incident caused by one of the American teachers' lecturing on Darwinism, which the students ardently supported, claiming a right of free speech in this regard. Supported financially by a friend, he went to Cairo in 1883 to continue his studies, but the Armenian owner of the newspaper *al-Zamān* offered him its editorship, which he undertook till 1884. Then he joined Wolseley's expedition to relieve Gordon in Khartūm as a dragoman and

guide, and after its failure, returned to Beirut in 1885 to study Hebrew and Syriac. In the summer of 1886 he travelled to London, where he became acquainted with the works of European orientalists. Health troubles led him to return to Cairo, where he henceforth resided permanently. He was offered the job of administrative manager and assistant editor of the journal *al-Muktataf* [see DJARĪDA i. A], which he took over for 15 months. After quitting this post, he produced his first books. In *al-Alfāẓ al-ʿarabiyya wa ʾl-falsafa al-lughawiyya* (1886, republ. 1904, 1964), which gained him membership of the Royal Asiatic Society of Italy, he applied evolutionary theory to languages. A historical study of Freemasonry—which highly attracted Arab intellectuals at that time [see FARMĀSŪNIYYA, in Suppl.]—and a book on the modern history of Egypt, used in schools, appeared in 1889. Probably for financial reasons, he became head teacher for Arabic at a Greek Orthodox School. In 1890 he published a small *General history*, intended as a textbook. Together with a friend, he founded in 1891 a small printing house which, however, closed down in 1892. Zaydān re-opened it alone in 1893 and renamed it in 1896 as the *Maṭbaʿat al-Hilāl*. In 1891 he published his first historical novel *al-Mamlūk al-shārid* (German tr. M. Thilo, 1917), whose success encouraged him to leave his teaching job. Up to his death, Zaydān published 22 novels, which were most recently republished with commentaries in 1984 and are still widely read. They have been translated into other oriental languages, such as Persian, Ottoman Turkish, Hindi and Uzbek Turkic. His goal was to awaken in the Arab public a historical consciousness and a pride in the great days of Arabo-Islamic history. Only *Djihād al-muḥibbīn* (1893) is a love story, probably based on his love for the Syrian Christian immigrant Maryam Maṭar, his wife since 1891. Enthusiastic in his youth about folk romances told in old Beirut, he wrote in a plain style mixing historical facts, events and personalities, such as famous persons like *al-Ḥadjdjādj ibn Yūsuf* (1902), *Abū Muslim al-Khurāsānī* (1905) *al-Amīn wa ʾl-Maʾmūn* (1907), *Ṣalāḥ al-Dīn al-Ayyūbī* (1913) and *Shadjar al-Durr* (1914), with fictitious love stories, intrigues and adventures. This and his rather openly anti-Umayyad standpoint annoyed Arab nationalists and fundamentalists. Showing narrative skill, Zaydān produces tension and excitement, although his heroes are mainly either good or evil and remain static. Except where the historical facts stand in the way, he closes with a happy ending or a tragic death. He is incontestably the pioneer of the historical novel as a literary genre in Arabic.

Still of value today amongst his many scholarly works, with which he aimed to popularise Western knowledge and methods of work and thought, are *Tarādjim mashāhīr al-shark fi ʾl-karn al-tāsiʿ ʿashar* (1907, republ. 1960 as *Buhāt al-nahḍa al-ʿarabiyya*) and volume iv of his *Taʾrīkh Ādāb al-lugha al-ʿarabiyya* (1910-13) since they provide information on contemporaries. The fourth volume of his *Taʾrīkh al-tamaddun al-islāmī* (i-v, 1901-6) was translated by D.S. Margoliouth into English (GMS IV, Leiden and London 1907) because amongst Zaydān's sources used for it were unpublished manuscripts. In his *al-ʿArab kabl al-Islām* (1907-8, republ. 1958) and other works he was certainly the first Arab intellectual to trace Arab history back to Hammurabi and the Pharaohs, thus creating a new Arab identity at a time of the emergence of Arab nationalism and an Arab bourgeoisie as a social class. In other publications, he characterised the Arabic language, one based on the Kurʾān but regarded as a living and developing organism, as the unifying link for all Arabs and the basis of their culture. In 1892 Zaydān founded *al-Hilāl*, a journal still existing today. In 22 volumes, he gave information on scientific developments and cultural events, and on European and Arab publications, later including (for female readers) information on health, hygiene and family problems; and he serialised his novels and longer essays. Deeply convinced of the civilising value of education and learning, he abstained, however (like other prominent Arab Christians of the *Nahḍa*), from political statements, except for espousing the cause of the Young Turks in 1908 and after, but he provided background information to political events and personalities. In 1910 he was offered a professorship of Islamic history at the Egyptian University, but this was withdrawn after heated debates occasioned by his Christian origin.

(WIEBKE WALTHER)

ZAYDĀN, MAWLĀY [see SAʿDIDS].

ZAYDIYYA, a branch of the Shīʿa [*q.v.*] arising out of the abortive revolt of Zayd b. ʿAlī b. al-Ḥusayn [*q.v.*] in Kūfa in 122/740. During the preparations for the revolt, a part of the Kūfan Shīʿa withdrew their support from Zayd in protest against his refusal to condemn unconditionally the early caliphs preceding ʿAlī and backed Zayd's nephew Djaʿfar al-Ṣādiḳ as their *imām*. This schism led to a lasting division of the Shīʿa into a radical and a moderate wing in terms of their religious break with the Sunnī Muslim community. The Zaydiyya, as the moderates, did not classify the Sunnī Muslims generally as infidels. In political terms, however, they were, in contrast to the radical but quietist Imāmiyya, militant, espousing revolt against the illegitimate Sunnī rule as a religious duty.

1. The early Kūfan phase.

The Zaydiyya was initially formed by the merger of two currents in Kūfan Shīʿism, the Djārūdiyya [*q.v.*] and the Batriyya [*q.v.* in Suppl.]. The Djārūdiyya were named after Abu ʾl-Djārūd Ziyād b. al-Mundhir, a former companion of Zayd's brother Muḥammad al-Bāḳir, who backed Zayd's revolt when he was deserted by most of al-Bāḳir's followers. They brought some of the radical elements of al-Bāḳir's teaching into the Zaydiyya. Thus they rejected the imāmate of the three caliphs preceding ʿAlī, holding that ʿAlī had been appointed by the Prophet as his legatee (*waṣī*) and implicitly as his successor. Condemning the majority of the Companions and the Muslim community for their desertion of the rightful *imām*, they repudiated the legal tradition transmitted by the Sunnī traditionists and upheld the transmission of the religious law by the Family of the Prophet as solely legitimate. In contrast to the Imāmiyya, however, they did not confine legal teaching authority to their *imāms* but accepted in principle the teaching of any member of the *ahl al-bayt* qualified by religious learning. The Batriyya were at first a group of moderate Shīʿīs who were critical of some of al-Bāḳir's teaching and failed to accept him as their *imām*. While considering

ʿAlī as the most excellent of Muslims after the Prophet, they generally admitted the imāmate of his predecessors since he had pledged allegiance to them. They did not concede any superior knowledge to the Family of the Prophet, but recognised the religious knowledge handed down in the Muslim community as valid and allowed the use of individual reasoning (*idjtihād, ḳiyās*) in establishing the law. The Batriyya were part of the general Kūfan traditionalist movement. As Kūfan traditionalism became absorbed by Sunnism during the 3rd/9th century, the views of the Djārūdiyya came to prevail among the Zaydiyya.

The legitimate imāmate was at first not confined to the descendants of ʿAlī. Before the fall of the Umayyad caliphate, Kūfan Zaydīs backed ʿAbd Allāh b. Muʿāwiya [*q.v.*], a descendant of ʿAlī's brother Djaʿfar. In the 4th/10th century there was still a group of Zaydīs known as Ṭālibiyya who recognised all descendants of ʿAlī's father Abū Ṭālib as eligible for the imāmate. The majority, however, considered only descendants of al-Ḥasan and al-Ḥusayn as legitimate claimants. According to common Zaydī doctrine, the first three *imāms*, ʿAlī, al-Ḥasan and al-Ḥusayn, were *imāms* by designation (*naṣṣ*) of the Prophet. After al-Ḥusayn, the imāmate became legally established through armed rising (*khurūdj*) and a formal summons (*daʿwa*) to allegiance by a qualified candidate. Among the qualifications, religious knowledge was emphasised. Many Zaydī *imāms* throughout the centuries have been highly educated religious scholars and authors. They were, however, generally not considered as immune from error and sin (*maʿṣūm*), although some late Zaydīs conceded such immunity to the first three *imāms*.

In theology, the Kūfan Zaydiyya were determinist, strongly opposed to the Ḳadariyya and Muʿtazila, though also admitting some responsibility of man for his acts. They were anti-anthropomorphist, but upheld the reality of the attributes of God against their reduction to descriptions of the divine essence by the Muʿtazila. They rejected the doctrine of the created nature of the Ḳurʾān, but did not insist on belief in its coeternity with God. Against Murdjiʾī doctrine, they taught that works were part of faith (*īmān*). Like the Ibāḍiyya, they classed the grave offender (*fāsiḳ*) as an unbeliever by ingratitude (*kāfir niʿma*), not by polytheism (*shirk*) or by denial of God (*djuḥūd*). Land under Sunnī domination was an abode of unbelief by ingratitude (*dār kufr niʿma*). As for the Ibāḍiyya [*q.v.*], this justified their revolt against the established order while also allowing them to associate peacefully with other Muslims.

In religious law, the Zaydiyya relied at first on the teaching of various ʿAlid authorities, among them Muḥammad al-Bāḳir, Djaʿfar al-Ṣādiḳ, Zayd b. ʿAlī and Muḥammad al-Nafs al-Zakiyya, and sometimes on the claim of a consensus of the Family of the Prophet. In the 3rd/9th century four legal schools emerged on the basis of the teaching of Aḥmad b. ʿĪsā b. Zayd [*q.v.* in Suppl.], al-Ḳāsim b. Ibrāhīm al-Rassī [*q.v.*], al-Ḥasan b. Yaḥyā b. al-Ḥusayn b. Zayd and Muḥammad b. Manṣūr al-Murādī. They are described by Abū ʿAbd Allāh al-ʿAlawī (d. 445/1053) in his *Kitāb al-Djāmiʿ al-kāfī* as authoritative among the Kūfan Zaydiyya in his time.

Among the abortive revolts supported by Kūfan Zaydīs were those of Muḥammad al-Nafs al-Zakiyya and his brother Ibrāhīm in 145/762-3, al-Ḥusayn b. ʿAlī Ṣāḥib Fakhkh in 169/786, Yaḥyā b. ʿAbd Allāh in 176/792, Muḥammad b. Ibrāhīm Ṭabāṭabā in 199/814, Muḥammad b. al-Ḳāsim Ṣāḥib al-Ṭālaḳān in 219/834, and Yaḥyā b. ʿUmar b. Yaḥyā in 250/864. Thereafter, Zaydī activity successfully shifted to remote mountain regions south of the Caspian Sea and in Yemen, which tended to elude the control of the central government.

2. The Caspian Zaydiyya.

Zaydī Islam was first preached on a limited scale among the non-Muslim Daylamīs by the ʿAlid rebel leader Yaḥyā b. ʿAbd Allāh [*q.v.*] and his Kūfan supporters in 175/791-2. Much more effective was the missionary activity of some local followers of al-Ḳāsim b. Ibrāhīm (d. 246/860) in western Ṭabaristān, the region of Rūyān, Kalār and Shālūs. Al-Ḳāsim's teaching in theology represented a shift from early Kūfan Zaydī doctrine to more anti-determinist and radically anti-anthropomorphist positions, dissociating God from evil acts and stressing the absolute dissimilarity of God to all creation. While distinct from contemporary Muʿtazilī doctrine, it paved the way for the adoption of Muʿtazilī theology among his later followers. His teaching in the religious law represented a Medinan moderate Shīʿī tradition relatively independent of Kūfan Zaydī school doctrine. In 250/864 the people of Rūyān revolted and invited the Ḥasanid al-Ḥasan b. Zayd from al-Rayy to lead them. Al-Ḥasan established the first Zaydī state, with the capital in Āmul. He officially supported Shīʿī ritual and law and Muʿtazilī theology, and is known to have written books on law and the imāmate. However, neither he nor his brother Muḥammad, who succeeded him and ruled until 287/900, was recognised as *imāms* by the later Zaydīs, and his teaching was ignored by the school tradition.

After the overthrow of Muḥammad b. Zayd, the Ḥusaynid al-Ḥasan b. ʿAlī al-Uṭrūsh al-Nāṣir li ʾl-Ḥaḳḳ was active in Gīlākdjān and Hawsam [*q.v.* in Suppl.], converting the Daylamīs north of the mountain range and the Gīlīs east of the Safīd Rūd. In 301/914 he conquered Āmul and restored Zaydī rule in Ṭabaristān, reigning until his death in 304/917. Al-Nāṣir left numerous writings on law and theology and was generally recognised as an *imām*. His teaching differed to some extent from that of al-Ḳāsim b. Ibrāhīm. In its basic theses his theology was similar to al-Ḳāsim's, but also polemically anti-Muʿtazilī. In ritual and law he was closer than al-Ḳāsim to the Kūfan Zaydī tradition and often to Imāmī Shīʿī doctrine. Thus he adopted the Imāmī law of inheritance, repudiating the privileged position accorded to the agnates in Sunnī law, and the Imāmī prohibition of the irrevocable triple repudiation of the wife (*ṭalāḳ al-bidʿa*).

The Caspian Zaydiyya was thereafter divided into two rival schools and communities, the Ḳāsimiyya prevailing in western Ṭabaristān, Rūyān and the adjoining Daylam, and the Nāṣiriyya among the eastern Gīl and the interior Daylam. The Ḳāsimiyya maintained close ties with the family of al-Ḳāsim. His grandson Yaḥyā b. al-Ḥusayn al-Hādī ilā ʾl-Ḥaḳḳ [*q.v.* in Suppl.] came to Āmul during the reign of Muḥammad b. Zayd, but aroused the suspicion of the latter by being addressed by some of his followers as *imām* and had to leave quickly. After he established Zaydī rule in Yemen, he was joined by groups of Zaydī volunteers from Ṭabaristān and Kalār. Al-Hādī's works on religious law were immediately adopted by the Ḳāsimiyya and commented upon by Caspian ʿAlid scholars. The close relationship between the Ḳāsimiyya and the Yemeni Zaydiyya was to continue for a long time. The Nāṣiriyya tended to look to the descendants of al-Nāṣir li ʾl-Ḥaḳḳ for leadership. All of these were given the *laḳab* al-Nāṣir, and al-Nāṣir li ʾl-Ḥaḳḳ's tomb in Āmul remained for centuries a place of pilgrimage for the Nāṣiriyya. However, only one of his descen-

dants, al-Ḥusayn b. Dja'far al-Nāṣir ruling in Hawsam (432-72/1040-80), gained recognition as a Zaydī *imām*. The antagonism between the two schools was initially intense until the Imām Abū 'Abd Allāh b. al-Dā'ī al-Mahdī li-Dīn Allāh (d. 360/970) actively promoted the thesis that both school doctrines were equally valid.

Conditions among the Caspian Zaydiyya, where often 'Alids without the full qualifications for the imāmate came to reign, or two or more 'Alids contemporaneously gained local support, required recognition of a rank of legitimate ruler below that of *imām*. These were commonly called *dā'īs* "summoners", and themselves frequently adopted titles composed with this term. Al-Ḥasan b. Zayd, his brother Muḥammad, and al-Ḥasan b. al-Ḳāsim, who succeeded al-Nāṣir li 'l-Ḥaḳḳ, all took the title al-Dā'ī li 'l-Ḥaḳḳ, while others claimed the title al-Dā'ī ilā 'l-Riḍā, *al-riḍā* referring to the expected *imām* of the Family of the Prophet. Other Zaydī 'Alid rulers merely adopted the title *amīr*.

In spite of their mutual recognition, the two Caspian Zaydī communities often backed different rulers. After the final fall of the Zaydī rule in Āmul, Hawsam became the centre of learning of the Nāṣiriyya and the seat of an 'Alid dynasty founded by Dja'far b. Muḥammad al-Thā'ir fi 'llāh [*q.v.*], grandson of a brother of al-Nāṣir li 'l-Ḥaḳḳ. Although their reign in Hawsam was often disputed by descendants of al-Nāṣir and others, they regularly regained control of the town. When Hawsam was replaced by Lāhīdjān [*q.v.*] as the chief town of eastern Gīlān in the 6th/12th century, descendants of al-Thā'ir came to rule there. Among the Ḳāsimiyya, Langā, located between Hawsam and Shālūs, became the seat of several *imāms* during the later 4th/10th and the 5th/11th centuries. Later, as much of the Zaydī territories in Rūyān and Daylamān came under the control of the Nizārī Ismā'īlīs, some Ḳāsimiyya *imāms* were active in eastern Gīlān.

Religious scholarship among the Ḳāsimiyya reached a peak in the *imāms* Aḥmad b. al-Ḥusayn al-Mu'ayyad bi 'llāh (d. 411/1020), and his brother Abū Ṭālib al-Nāṭiḳ bi 'l-Ḥaḳḳ (d. *ca.* 424/1033). Born in Āmul, both studied for some time in Baghdād and then belonged to the circle of the Būyid vizier al-Ṣāḥib Ibn 'Abbād, an active promoter of Mu'tazilī theology and Shī'ism, and of the Mu'tazilī chief *ḳāḍī* 'Abd al-Djabbār in al-Rayy. Both wrote major legal works and commentaries in the Ḳāsimiyya school tradition, though al-Mu'ayyad is sometimes considered the founder of a new school, the Mu'ayyadiyya. In theology they fully adopted the Baṣran Mu'tazilī school doctrine represented by 'Abd al-Djabbār. The close ties between Zaydiyya and Mu'tazila at this time were reflected in the increasingly pro-'Alid tendency in the Mu'tazilī doctrine on the imāmate. Two Mu'tazilī scholars and authors of the school of 'Abd al-Djabbār, Abu 'l-Ḳāsim al-Bustī and al-Muḥsin b. Karāma al-Ḥākim al-Djushamī (d. 484/1101 [*q.v.* in Suppl.]), became active Zaydīs. The numerous works of the latter, in particular, became prestigious among the Zaydiyya. Al-Mu'ayyad also wrote a treatise on Ṣūfī devotion, *Risālat Siyāsat al-murīdīn*, which remained influential in defining the Zaydī attitude to Ṣūfism. It praises the early Ṣūfīs from Fuḍayl b. 'Iyāḍ to al-Djunayd, endorsing the ascetic, penitential and devotional aspects of their practice, but denounces the delusions of the Ṣūfīs that induce them to engage in practices contrary to the religious law, such as listening to chants and dancing.

In the course of the 6th/12th century, the Caspian Zaydiyya declined substantially, partly because of the expansion of Ismā'īlism which confined it to eastern Gīlān and partly because of quarrels between 'Alid pretenders backed by different factions. Little is known about developments in the following century and a half. In 769/1367-8 Sayyid 'Alī Kiyā b. Amīr Kiyā, backed by Zaydī penitents (*tā'ibān*), set out to conquer eastern Gīlān. He gained recognition as *imām* by the Zaydī scholars of Rānikūh and Lāhīdjān. His descendants ruled in Lāhīdjān on the basis of dynastic succession as Zaydīs until 933/1526-7, when Sulṭān Aḥmad Khān, with most of his Zaydī subjects, converted to Imāmī Shī'ism. The survival of a tradition of Zaydī learning in eastern Gīlān until that date is attested by a number of manuscripts of Zaydī texts written there in the last phase before the conversion.

3. The Zaydiyya in Yemen.

The Zaydī imāmate in Yemen was founded in 284/897 by al-Ḳāsim b. Ibrāhīm's grandson al-Hādī ilā 'l-Ḥaḳḳ, who had been invited by local tribes in the hope that he would settle their feuds. Although Shī'ī sentiments had been manifest in parts of Yemen since the rise of Islam, there is little evidence of specifically Zaydī activity before his arrival. Al-Hādī established his capital in Ṣa'da [*q.v.*]. He and his sons Muḥammad al-Murtaḍā (d. 310/922) and Aḥmad al-Nāṣir li-Dīn Allāh (d. 322/934), both of whom were consecutively recognised as *imāms*, were buried in the congregational mosque there, and Ṣa'da has ever remained the stronghold of Zaydī faith and learning in Yemen. Al-Hādī's teaching in the religious law, laid down in his *Kitāb al-Aḥkām* and *Kitāb al-Muntakhab*, was based on that of his grandfather al-Ḳāsim, but adopted more Shī'ī positions, for instance in prescribing the *ḥay'ala*, the Shī'ī formula of the call to prayer. It has remained basic for the Hādawiyya legal school, the only one authoritative among the Zaydiyya in Yemen. In theology, his doctrine was close to the contemporary Baghdād school of the Mu'tazila, but he did not expressly state his agreement with it. Regarding the imāmate, he upheld the Djārūdī position, unambiguously condemning Abū Bakr and 'Umar as usurpers.

After Aḥmad al-Nāṣir, the descendants of al-Hādī quarrelled among themselves and none gained recognition as *imām*. The imāmate was restored by al-Manṣūr bi 'llāh al-Ḳāsim al-'Iyānī (388-93/999-1003 [*q.v.*]), a descendant of al-Hādī's uncle Muḥammad b. al-Ḳāsim. Al-Manṣūr's son al-Ḥusayn al-Mahdī li-Dīn Allāh (401-4/1010-13) was also recognised as *imām*. His qualification of religious knowledge, however, was soon questioned. He defended himself, making extravagant claims that he equalled the Prophet in rank and that he was the Expected Mahdī. When he was killed in battle, his followers and his family asserted that he had not died and would return. Thus a sect arose, called the Ḥusayniyya. Led by descendants of al-Mahdī's brother Dja'far, the Ḥusayniyya, having acquired and fortified the impregnable mountain stronghold of Shahāra, became the main force of opposition to the Ismā'īlī rule of the Ṣulayḥids [*q.v.*] in northern Yemen during the 5th/11th century.

In the same period another Zaydī sect arose, the Muṭarrifiyya [*q.v.*], founded by Muṭarrif b. Shihāb (d. after 459/1067). Muṭarrif explicitly based his religious teaching on the works of al-Ḳāsim b. Ibrāhīm, al-Hādī, and the early Yemeni *imāms*, as well as on some statements ascribed to 'Alī. He interpreted them, however, in an arbitrary manner, developing a theology and cosmology that deviated substantially from Mu'tazilī doctrine. This brought him in conflict with the Baṣran Mu'tazilī teaching espoused by the Caspian Ḳāsimiyya *imāms*. The Muṭarrifiyya also manifested distinct ascetic and pietist tendencies. On the basis of the doctrine

of *hidjra*, the obligation to emigrate from the land of injustice, that had been taught by al-Ḳāsim b. Ibrāhīm and other Zaydī authorities, they founded "abodes of emigration" where they congregated to engage in worship, ritual purification, ascetic practices and teaching. These *hidjras*, usually forming a protected enclave in tribal territory, became the prototype of the protected teaching centres called *hidjras* common among the later Yemeni Zaydiyya in general.

At first, during the Ṣulayḥid age, the Muṭarrifiyya could spread without strong opposition from the mainstream Zaydiyya. After the restoration of the imāmate by Aḥmad b. Sulaymān al-Mutawakkil ʿalā ʾllāh (532-66/1137-70), they came under increasing pressure. Al-Mutawwakkil favoured the unity of the Zaydiyya in and outside Yemen, equally recognising the Caspian and Yemeni *imāms*. He acknowledged the pro-Shīʿī wing of the Muʿtazila as close allies, asserting that the founder of the Muʿtazila, Wāṣil b. ʿAṭāʾ [*q.v.*], had received his doctrine from the Family of the Prophet. He furthered the teaching of Caspian Zaydī scholars and of Yemeni scholars who had studied with Zaydī scholars in the Caspian region, Rayy and Kūfa, and encouraged a massive transfer of Caspian Zaydī religious literature to Yemen. A leading part in this transfer and in spreading Caspian Zaydī and Muʿtazilī teaching was played by the *ḳāḍī* Djaʿfar b. Abī Yaḥyā Shams al-Dīn [*q.v.* in Suppl.]. Al-Mutawakkil severely criticised the Muṭarrifiyya and the Ḥusayniyya for splitting the unity of the Zaydiyya. The Imām al-Manṣūr bi ʾllāh ʿAbd Allāh b. Ḥamza (593-614/1197-1217), a strong supporter of Muʿtazilī theology, declared the Muṭarrifiyya dangerous heretics, persecuted them, and destroyed their *hidjras*. Both Ḥusayniyya and Muṭarrifiyya vanished during the 9th/15th century.

The domination of Muʿtazilī theology, as espoused by the school of *ḳāḍī* Djaʿfar, did not, however, remain unchallenged. The Sayyid Ḥumaydān b. Yaḥyā (early 17th/13th century) demonstrated in several of his treatises that the early Zaydī authorities, in particular al-Ḳāsim b. Ibrāhīm and al-Nāṣir li ʾl-Ḥaḳḳ, had differed on many points with the Muʿtazila, while accusing the latter of heretical innovations in numerous details of their teaching. He ignored the Caspian Ḳāsimiyya *imāms* and claimed, with tenuous arguments, that even al-Manṣūr ʿAbd Allāh b. Ḥamza in reality did not support Muʿtazilī theology.

The teaching of the Imām al-Muʾayyad bi ʾllāh Yaḥyā b. Ḥamza (719-47/1328-46), a prolific author, reflected a lack of sectarian zeal and openness to Sunnī learning. He praised Abū Bakr, ʿUmar and ʿUthmān as early Companions of Muḥammad on a par with ʿAlī. He adopted the Muʿtazilī theology of the school of Abu ʾl-Ḥusayn al-Baṣrī which, in contrast to the school of *ḳāḍī* ʿAbd al-Djabbār, previously prevalent, recognised the reality of *karāmāt*, the miracles of Ṣūfī saints. His book on religious ethics *Taṣfiyat al-ḳulūb min daran al-awzār wa ʾl-dhunūb* was patterned on al-Ghazālī's *Iḥyāʾ ʿulūm al-dīn* and quoted widely from the sayings of the early Ṣūfīs. He sharply criticised al-Ghazālī, however, for his approval of *samāʿ*, listening to music and singing by the Ṣūfīs.

The spread of Ṣūfī orders in the Sunnī lowlands of Yemen during this period put pressure on the Zaydiyya to re-examine their attitude to Ṣūfism. The militant anti-Shīʿī stand of these orders made it difficult to come to terms with them. A Zaydī school of Ṣūfism was founded, however, by ʿAlī b. ʿAbd Allāh b. Abi ʾl-Khayr, an initiate of the Kurdish Ṣūfī *shaykh* al-Kūranī [*q.v.*], and his disciple Ibrāhīm al-Kaynaʿī (d. 793/1391). Al-Kaynaʿī was closely associated with the Imām al-Nāṣir Ṣalāḥ al-Dīn Muḥammad (783-93/1371-91), and was able to found Ṣūfī communities and *hidjras* throughout northern Yemen. The majority of the *imāms* thereafter, however, were opposed to Ṣūfism and denounced the Ṣūfīs for their unlawful practices and fanciful claims of inspiration.

The stigmatising of Ṣūfism as heretical reached a peak under the Imam al-Manṣūr al-Ḳāsim b. Muḥammad (1006-29/1598-1620 [see AL-MANṢŪR BI ʾLLĀH]), the founder of the Ḳāsimi dynasty of *imāms*. Al-Manṣūr's anti-Ṣūfī polemics were partly provoked by the strong support of the Ṣūfī orders for the Ottoman Turkish occupiers of Yemen, against whom he fought a relentless war. He likened the Ṣūfīs to the Ismāʿīlīs, who had long been the arch-enemies of the Zaydiyya, describing them as Bāṭiniyya whose basic thought was derived from Zoroastrianism and Mazdakism, and he singled out Ibn al-ʿArabī for particular condemnation, calling him the chief of the Ṣūfī incarnationists (*ḥulūliyya*).

Al-Manṣūr generally upheld the Shīʿī foundation of the Zaydiyya by re-affirming the Djārūdī position on the imāmate. Inspired by Ḥumaydān's views, he stressed the differences between the teaching of the Zaydiyya and the Muʿtazila. While admitting that they agreed in their basic theological theses, he maintained that the early *imāms* had confined their teaching to what could be safely established by reason, the unambiguous text of the Ḳurʾān and the generally-accepted Sunna. They had not followed the Muʿtazila in their abstruse speculation and absurd fantasies.

Descendants of al-Manṣūr reigned Yemen until the fall of the imāmate in 1382/1962. Whereas some of his early successors were learned men in the Zaydī tradition, the later *imāms*, while still claiming the title of *imām*, in fact ruled on the basis of dynastic succession. As the Zaydī *imāms* gained control of the more populous and prosperous lowlands of Yemen, they found it increasingly expedient to accommodate the religious views and sentiments of the majority of their subjects. Thus they came to favour the neo-Sunnī school that first arose out of the teaching of the *sayyid* Muḥammad b. Ibrāhīm al-Wazīr (d. 840/1436). Ibn al-Wazīr, member of an ʿAlid family of distinguished Zaydī scholars, had accepted the Sunnī canonical collections of *ḥadīth* as unconditionally authoritative in religion. On this basis, he had systematically defended Sunnī school doctrine and criticised the opposing Zaydī teaching in his voluminous *al-ʿAwāṣim wa ʾl-ḳawāṣim fi ʾl-dhabb ʿan sunnat Abi ʾl-Ḳāsim*. He insisted, however, that he was not joining any Sunnī school and was simply employing sound, independent *idjtihād*. Major scholars and authors of his school were Ṣāliḥ b. Mahdī al-Maḳbalī (d. 1108/1696-7), Muḥammad b. Ismāʿīl al-Amīr (d. 1182/1768-9) and Muḥammad b. ʿAlī al-Shawkānī (d. 1250/1834 [*q.v.*]). The latter, *muftī* and chief judge under several *imāms*, vigorously attacked traditional Zaydīs in his writings and, in his official position, persecuted some of their intransigent leaders. He gained wide recognition in the Sunnī world and is considered one of the founders of Islamic modernism. In the Republic of Yemen, Zaydī (Hādawī) law, as expounded in the *Kitāb al-Azhār fī fiḳh al-aʾimma al-aṭhār* and its *Sharḥ* by Muḥammad b. Yaḥyā b. al-Murtaḍā (d. 840/1437), is officially recognised as valid next to Shāfiʿī law. Official ideology, however, favours the neo-Sunnī school and is putting the traditional Zaydiyya on the defensive.

ZĀYIRDJA [see ZĀʾIRDJA].

ZAYLAʿ, a port on the Gulf of Aden [see ʿADAN] and on the African coast, situated in lat. 11° 21' N., long. 43° 30' E. (Ar. Zaylaʿ, Somali Seylac, Audal; Fr., Ital., Eng. Zeila, Zeyla, etc.). In the colonial period it came within British Somaliland (1884-1960), and then in the Republic of Somalia, inaugurated in July 1960 by the union of the former British Somaliland and the Italian colony of Somalia [see SOMALI. 3. History]. The falling-apart of the Republic of Somalia, since 1991, has placed it once more in the newly-independent Somaliland, which has become independent *de facto* but has not as yet (2000) been recognised internationally.

The town is over 200 km/125 miles west of the capital Berbera [*q.v.*], but only some 40 km/25 miles from the frontier separating Somaliland from the Republic of Djibouti/Djibūtī [*q.v.*]. Opposite the town, which offers a secure anchorage, protected on the east by a peninsula, are the isles of Saʿd al-Dīn and, somewhat larger, of Aybat. The population of the hinterland is today made up of ʿIssas/ʿIse Somalis.

Zaylaʿ has through the centuries been one of the points of contact between the Horn of Africa and the outside world via the Red Sea and the Indian Ocean. Its port was in lively relationship with all the other ports of the region, with Tadjūrra, but above all with al-Mukhā [*q.v.*]/Mocha and the other ports of Western and Southern Arabia. It was also the point of arrival and departure for caravans connecting the coastlands with the southern part of the Ethiopian highlands. Certain of these started from the well of Tocoshah for Shoa and Christian Ethiopia [see ḤABASH, ḤABASHA], others from the well of Warambot for Gildessa. At Gildessa, the road bifurcated, one way going towards Erer and Ankober in Shoa, and the other to Harar [*q.v.*], where caravans entered by the Bāb al-Futūḥ. This last destination was the most important, to the point that Zaylaʿ could be called "the port of Harar". Other tracks then led towards the Arusi country, the southwest and the region of the East African lakes. Coffee, hides, gum, resin, fats, ostrich plumes, cattle, slaves, ivory, etc. were exported from Zaylaʿ; imports comprised rice, salt, tobacco, textiles, manufactured objects, etc. Hence it was via Zaylaʿ that Arab merchants penetrated into the southern part of the Horn of Africa, as also slave dealers, and with them, Islam and various outside influences.

The oldest mention of Zaylaʿ under that name is in al-Yaʿḳūbī (late 3rd/9th century), and most of the Arab travellers who crossed the region mention the town; however, it existed before this, at the time of the *Periplus of the Erythraean Sea*. It always played in the south the role that Maṣawwaʿ [*q.v.*]/Massawa played in the north, sc. that of a privileged access into Ethiopia. In the 7th/13th century, Zaylaʿ belonged to the sultanate of Ifat/Awfat [*q.v.*], from where the first attacks on Christian Ethiopia were launched in the 8th/14th century. Ethiopia at first successfully resisted. The Negus Yesḥāḳ defeated the ruler of Ifat, Saʿd al-Dīn [see ADAL] in 1415, but soon had to appeal to the Portuguese for assistance. Pedro de Covilham, sent by João II in 1487 to organise a Portuguese-Ethiopian alliance, arrived in the land via Zaylaʿ. After the permanent defeat of Islam and the incorporation of the Red Sea region into the Ottoman empire *ca.* 1540, the town received a governor who was dependent, according to various periods, on the Yemeni towns of al-Mukhā and al-Ḥudayda.

Some centuries later, it was also from Zaylaʿ that the second great Islamic attack on Ethiopia—this time by the Egyptians—was launched. In August 1875, Raʾūf/Rawf Pasha seized control of Zaylaʿ and its hinterland in the name of the Khedive Ismāʿīl Pasha [*q.v.*]. The Egyptians, however, were only nominally in control, and in order to protect caravans, they had to seek the help of the *ugās* of the ʿIssas and of Abū Bakr, the former "Sultan" of Zaylaʿ. From their base on the coast, the Egyptians seized Harar, occupying it for ten years and thus controlling the Zaylaʿ-Harar axis. At Zaylaʿ, they demolished the walls and four of the five gates, and prohibited the slave trade. On their departure, Major Hunter landed at Zaylaʿ in February 1884, inaugurating the period of British rule which lasted till 1960. At the same time, Ethiopia lost its outlet to the sea, which gradually became Eritrea Italiana. At various times, the British had the idea of ceding Zaylaʿ to Addis Ababa, which sought an outlet to the sea, in exchange for various advantages, mainly territorial, but the cession of Eritrea to Ethiopia in 1952 ended this possibility for the British.

The decline of Zaylaʿ, which had begun with the silting-up of its port, was largely accomplished by the mid-19th century. The creation of Djibouti (1896), the construction of the railway linking this new port with Addis Ababa (1897-1917), and the growing importance of Berbera (which had in its favour a location well to the south of Aden) brought about the definitive ruin of Zaylaʿ, whilst the relegation in importance of Harar, overshadowed by Diredawa, the new stopping-place on the railway, finalised the disappearance of the Zaylaʿ-Harar route. Today the town is reduced to a dilapidated village with a few hundred inhabitants, held by a small garrison of the army of Somaliland, although it has a radio mast for the service of the fishing industry.

Bibliography: Since there is no monograph on Zaylaʿ, the sparse items of information must be sought in the Arab and European travellers' accounts and in works about Ethiopia and Somaliland, their Islamisation and on the history of Egyptian expansion in the Red Sea region. See the various works of I.M. Lewis, esp. his *Modern history of Somalia. Nation and state in the Horn of Africa*, ²London 1988 (¹1965), and, for the references in them; J. Doresse, *Histoire sommaire de la Corne orientale de l'Afrique*, Paris 1971; R. Pankhurst, *History of Ethiopian towns*, 2 vols. Wiesbaden 1982-5. Alfred Bardey, the employer of Rimbaud, has left a precious report of his first caravan journey, *Barr-Adjam. Souvenirs d'Afrique orientale, 1880-1887*, to which is prefixed J. Tubiana, *Le patron de Rimbaud*, Paris 1981. (A. ROUAUD)

ZAYN AL-ʿĀBIDĪN ("Ornament of the Worshippers") ʿALĪ B. AL-ḤUSAYN B. ʿALĪ B. ABĪ ṬĀLIB, the fourth Imām of the Twelver Shīʿa. His *kunya* is variously given as Abū ʿAbd Allāh, Abū Bakr, etc. According to many sources he was born (in Medina) in 38/658-9, though the years 33, 36 and 37 are also given. If accounts that he had not reached puberty at the time of the Karbalāʾ massacre (61/680) are to be trusted, this would put his birthdate forward to the 40s/660s; these accounts are, however, rejected by al-Wāḳidī and other authorities.

His mother's name is variously given as Barra, Ghazāla, Djaydā, etc.; some say that she was an *umm*

walad [*q.v.*] from Sind (or Sidjistān), while Shīʿī tradition has it that she was a daughter of the last Sāsānid emperor Yazdagird III and that her Persian name was Djihānshāh, Shahrbānū(ya) or Shāhzanān. Some say she threw herself into the Euphrates after the battle, but others maintain that she was among the survivors of Karbalāʾ. Shīʿīs refer to ʿAlī as *ibn al-khiyaratayn* "the son of the two elect" since, according to a tradition of the Prophet, the Ḳuraysh are the elect of the Arabs and the Persians are the elect of the non-Arabs.

Zayn al-ʿĀbidīn was not the only son of al-Ḥusayn called ʿAlī; another was killed at Karbalāʾ and is known as ʿAlī al-Shahīd. Some historians, including Ibn Saʿd, Ibn Ḳutayba, al-Balādhurī and al-Ṭabarī, refer to him as ʿAlī al-Akbar and to Zayn al-ʿĀbidīn as ʿAlī al-Aṣghar. Others (e.g. al-Ḳāḍī al-Nuʿmān) maintain that Zayn al-ʿĀbidīn was the older of the two, and accordingly refer to him as ʿAlī al-Akbar and to his martyred brother as ʿAlī al-Aṣghar. For many Twelver authors, the title ʿAlī al-Aṣghar refers to an infant brother who was also killed at Karbalāʾ; some of these authors maintain that Zayn al-ʿĀbidīn was the middle brother (hence ʿAlī al-Awsaṭ), while the eldest was ʿAlī al-Shahīd; others reverse the position of the two older brothers.

At Karbalāʾ, Zayn al-ʿĀbidīn is said to have been too ill to join in the fighting; after the battle Shamir b. Dhi ʾl-Djawshan found him lying on a mat in the women's tent and ordered him to be killed but was overruled by ʿUmar b. Saʿd, the commander of the Syrian army. When ʿAlī was brought before ʿUbayd Allāh b. Ziyād in Kūfa, the governor ordered his execution, but relented after pleas by al-Ḥusayn's sister Zaynab. ʿAlī and the other survivors were taken to Yazīd in Damascus, and he sent them back to Medina. The *mashhad ʿAlī*, forming part of the great mosque in Damascus, is said to have been built at the place of Zayn al-ʿĀbidīn's incarceration (cf. L. Pouzet, *Damas au VII^e/XIII^e siècle*, Beirut 1988, 352).

In Medina ʿAlī led a pious life which earned him the honorifics Zayn al-ʿĀbidīn, al-Sadjdjād ("he who constantly prostrates himself"), al-Zakī ("the pure") and Dhu ʾl-Thafināt (referring to the calluses on his skin in the places touching the ground in prostration). Whenever the time of prayer drew near, he would tremble and go pale, and his devotional practices caused fears for his health. He was counted among the *bakkāʾūn* [*q.v.*], since for years he would weep for his father and the other martyrs of Karbalāʾ. He used to go out at night with his face covered in order to distribute charity (*ṣadaḳat al-sirr*), and it was only after his death that people discovered the identity of their benefactor. When his body was washed, marks were found on his shoulders, the result of his carrying heavy loads of food at night for the poor.

ʿAlī studiously avoided any involvement with the authorities and adopted a quiescent attitude towards the Umayyads and the Zubayrid anti-caliphate. After the battle of the Ḥarra (63/683), Muslim b. ʿUḳba [*q.v.*], acting on orders from Yazīd, treated him with respect and did not try to exact from him an oath of allegiance to the caliph. The reasons for this special treatment were that ʿAlī had been unwilling to be associated with the Medinan rebels and had sheltered the entourage of Marwān b. al-Ḥakam, including Marwān's wife ʿĀʾisha bt. ʿUthmān, at his estate at Yanbuʿ. Non-Shīʿī sources describe a friendly relationship between ʿAlī and the caliphs Marwān and ʿAbd al-Malik: the former lent him money to purchase concubines and, before his death, decreed that his heirs should not demand that it be repaid; the latter consulted him about a message he had received from the Byzantine emperor. Shīʿī authors, in contrast, maintain that ʿAlī's dealings with the authorities were based on *taḳiyya*. ʿAlī proved magnanimous even when wronged: Hishām b. Ismāʿīl used to insult him during his four years as governor of Medina, yet after Hishām's dismissal by al-Walīd (7 Rabīʿ I 87/26 February 706) ʿAlī forbade his family and friends to speak ill of him. A famous story has it that when the future caliph Hishām b. ʿAbd al-Malik came to Mecca on pilgrimage, he was unable to approach the Kaʿba because of the crowds; for ʿAlī, however, the crowds parted, allowing him unhindered access. On that occasion, al-Farazdaḳ [*q.v.*] is said to have improvised a poem in praise of ʿAlī, thereby arousing Hishām's ire; but the eulogy, which exists in various versions, has been judged to be mostly or entirely unauthentic (J. Hell, *Al-Farazdaḳs Loblied auf ʿAlī ibn al-Ḥusain (Ẓain al-ʿĀbidīn)*, in *Festschrift Eduard Sachau*, ed. G. Weil, Berlin 1915, 368-74; J. Weiss, in *Isl.*, vii [1917], 126-7). ʿAlī did not pledge allegiance to ʿAbd Allāh b. al-Zubayr, but he did escort his sister Sukayna bt. al-Ḥusayn [*q.v.*] to ʿIrāḳ for her marriage with ʿAbd Allāh's brother Muṣʿab b. al-Zubayr [*q.v.*], from whom he received a gift of 40,000 dīnārs.

Among the Shīʿa, ʿAlī at first enjoyed little support; most Shīʿīs turned to Muḥammad b. al-Ḥanafiyya, whose imāmate was promoted by al-Mukhtār [*q.v.*]. In their polemical writings, Twelver authors attempt to show that Ibn al-Ḥanafiyya acknowledged ʿAlī's leadership; an oft-repeated story has it that the two agreed to abide by the ruling of the Black Stone in the Kaʿba; the stone miraculously spoke, upholding ʿAlī's rights. Abū Khālid al-Kābulī, who had originally adhered to Ibn al-Ḥanafiyya, is said consequently to have switched his allegiance to ʿAlī. In the view of some Ismāʿīlīs, Ibn al-Ḥanafiyya had been appointed by al-Ḥusayn as a veil (*sitr*) in order to protect ʿAlī's identity as the true *imām*; he was a temporary *imām* (*mustawdaʿ*, lit. "trustee"), while ʿAlī was the permanent *imām* (*mustaḳarr*). Following Ibn al-Ḥanafiyya's death, a subgroup of the Kaysāniyya [*q.v.*] reportedly recognised ʿAlī as *imām*; in contrast, due to ʿAlī's quietism most (but not all) Zaydīs did not regard him as an *imām* (cf. R. Strothmann, *Das Staatsrecht der Ẓaiditen*, Strassburg 1912, 107; W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm und die Glaubenslehre der Ẓaiditen*, Berlin 1965, 172).

The relationship between ʿAlī and al-Mukhtār was an uneasy one: when al-Mukhtār sent ʿAlī a gift of 100,000 dirhams, ʿAlī did not wish to accept it but dared not send it back; after al-Mukhtār's death he offered the sum to ʿAbd al-Malik, who told him to keep it. Various stories told about the two reflect the ambivalent attitude of Twelver authors to al-Mukhtār. Among these are the claim that al-Mukhtār was anxious to gain ʿAlī's support and only turned to Ibn al-Ḥanafiyya after being rejected; and the report that ʿAlī publicly cursed al-Mukhtār; or the account that al-Mukhtār gained ʿAlī's gratitude by sending him ʿUbayd Allāh b. Ziyād's head after the latter's death in the battle on the river Khāzir (67/686).

In Sunnī *ḥadīth* collections ʿAlī appears as a transmitter from ʿAbd Allāh b. ʿAbbās, from his father, his uncle al-Ḥasan and others. Among those who transmitted from him were some of his sons, as well as Abū Isḥāḳ al-Sabīʿī, al-Ḥakam b. ʿUtayba, ʿAmr b. Dīnār and al-Zuhrī. According to al-Zuhrī (who held ʿAlī in high esteem), he transmitted little (*kāna ḳalīl al-ḥadīth*).

ʿAlī is said to have died in 94/712 or 95/713; other dates mentioned are 92, 93, 99 and 100. He was buried in al-Baḳīʿ cemetery. Shīʿī authors maintain that he was poisoned on the orders of the reigning caliph al-Walīd or his brother Hishām. He is said to have had between eight and fifteen offspring, of whom four were sons from his wife Umm ʿAbd Allāh bt. al-Ḥasan b. ʿAlī, the rest being from concubines.

A number of short texts are ascribed to ʿAlī, including a certain *al-Ṣaḥīfa fi ʾl-zuhd* (Kulīnī, *Kāfī*, viii, 14-7). He is also credited with a *Risālat al-Ḥuḳūḳ*, preserved (in two versions) in two 4th/10th century works: Ibn Bābawayh's *K. al-Khiṣāl* (Nadjaf 1391/1971, 529-36) and Ibn Shuʿba's *Tuḥaf al-ʿuḳūl* (Beirut 1394/1974, 184-95). ʿAlī's collection of prayers known as *al-Ṣaḥīfa al-kāmila* or *al-Ṣaḥīfa [al-kāmila] al-sadjdjādiyya* gained wide popularity; there are numerous redactions and over twenty commentaries, and it was translated into Persian in the Ṣafawid period. Fifteen "whispered prayers" (*munādjāt*) ascribed to ʿAlī have been added to several modern editions of the *Ṣaḥīfa*; an English translation of the entire work is now available (Imām Zayn al-ʿĀbidīn ʿAlī b. al-Ḥusayn, *The Psalms of Islam: al-Ṣaḥīfat al-kāmilat al-sajjādiyya*, tr. with an introd. and annotation by W.C. Chittick, London 1988).

ZAYN AL-ʿĀBIDĪN, the regnal name of the Kashmīr Sultan Shāhī Khān b. Iskandar, greatest of the line of Shāh Mīr Swātī, hence called Bud Shāh "Great King", *r.* 823-75/1420-70.

It was his merit to put an end to the persecutions of his father Sikandar But-Shikan [*q.v.*], who had forcibly converted Hindus and destroyed their temples. Zayn al-ʿĀbidīn now in effect abolished the *djizya*, allowed the rebuilding of temples, etc. The realm was secured by strong military policies, and internal prosperity secured by such measures as the digging of canals and the founding of new towns. He encouraged arts and crafts, and paper-making and book-binding were introduced from Samarḳand. Himself a poet in Persian, he patronised learning, and under him, the *Mahābhārata* and Kalhaṇa's metrical chronicle the *Rājataranginī* were translated into Persian. His reign was very much a Golden Age for Kashmīr, but much of his work was undone by his weaker successors.

ZAYN AL-ʿĀBIDĪN MARĀGHAʾĪ, Persian merchant and writer (1255-1328/1839-1910).

From a Kurdish family which had recently become Shīʿī, Marāghaʾī from the age of sixteen engaged in the family trading activity. After failing at Ardabīl, he sought his fortune in the Caucasian region and became Persian consul-general at Tiflis in Georgia, where he again took up commerce but ruined himself helping indigent Persians. Fleeing to Russian territory, he surfaced in the Crimea and in Istanbul. Before the Russo-Turkish War of 1877 he was a cloth merchant at Yalta; he supplied the Imperial family with goods and assumed Russian citizenship, with his three children learning only Russian.

Ca. 1890, in search of his religious and national identity, he sold his trading business and went to Istanbul, moving amongst the Persian reformist milieux, and in 1904 abandoned his Russian nationality and re-assumed his Persian one. In Istanbul, he contributed to the reformist newspaper *Akhtar* and published anonymously, at Cairo, the first volume of his

Siyāḥat-nāma-i Ibrāhīm Beyg, to which he later added two more volumes, only revealing his name at the end of the third one. In the style of James Morier's *Hajji Baba of Ispahan*, he tells of the travels in Persia of a young Persian patriot, of liberal views, born in Egypt, in which he discovers the moral and political decadence of his land. Referring to Islam, citing Ṭālibūf [*q.v.*]/Talibov and influenced by Malkom Khān [*q.v.*], he displays the bad conscience of an idealistic patriot who only knows his country through travellers' accounts. His convincing ardour in denouncing despotism was to assure him a great, immediate success (reprints in Istanbul, India and even at Tehran in 1323/1905). As a good representative of the preconstitutionalist Ādharī milieu, linked with the Caucasus region, which spread within Persia the democratic ideal, Marāghaʾī was to inspire not only the revolutionaries of 1906 but also several succeeding reformers up to the present time, such as Aḥmad Kasrawī [see KASRAWĪ TABRĪZĪ].

ZAYN AL-ʿĀBIDĪN SHĪRWĀNĪ, called "Mast-ʿAlī Shāh", with the pen-name "Tamkīn", Persian scholar and mystic (1193-1253/1779-1837). He was born into a Shīʿī family of Shīrwān, accompanied his father Mullā Iskandar to Karbalā at five years of age and studied there for twelve years. Having made the acquaintance of the Niʿmatallāhī Ṣūfī masters Maʿṣūm ʿAlī Shāh Dakanī and Nūr-ʿAlī Shāh Iṣfahānī (both d. 1212/1797), he made his way to Baghdād and thence embarked on a life of travel, punctuated by encounters with mystical masters or political leaders, whom he evokes in his major encylopaedic works (for example, *Riyāḍ al-siyāḥa*, ed. Rabbānī, 129-30). Having crossed the Iranian plateau, he reached Kābul where he spent four years in the company of the master Ḥusayn-ʿAlī Iṣfahānī (d. 1216/1801-2). After the death of the latter, he travelled around India for eight years, then returned to Persia via Kābul and Khurāsān. From the Persian Gulf, he made his way to the Ḥidjāz and traversed the entire Arabian Peninsula from north to south. After the Pilgrimage and a stay in Mecca, he travelled to Egypt and then to Damascus and Istanbul, stopping for months at a time at each stage of the journey. On his return to Persia in 1229/1814, having enjoyed honorific receptions everywhere, he tried to establish his domicile in various places, finally settling in Shīrāz where he trained his disciple Zayn al-ʿĀbidīn Raḥmat-ʿAlī Shāh (d. 1278/1861). Harassed by the Shīʿī clergy, he moved his residence to the vicinity of Iṣfahān. Once again the victim of a wave of anti-Ṣūfī intolerance, he tried to flee from Persia but in the process only narrowly escaped death and lost all his goods and his writings. After some time in Kāshān, he returned to Shīrāz (1241/1825-6), where he remained until a final Pilgrimage to Mecca, in the course of which he died. Since the accession of Muḥammad Shāh (1249/1834), protector of the Ṣūfīs, he had enjoyed a quiet life and the revenues of an estate given to him by the ruler.

In those of his works that have survived, Shīrwānī tells of the various places that he visited and expands upon the teaching of Ṣūfism and upon his personal philosophy. The Persian historian A. Hairi has shown that, fascinated by the Britons encountered in India, Zayn al-ʿĀbidīn lost all critical sense (*Nakhustīn rūyārūʾī-hā*, 436-7). Rather than a mystical work, it is a mine of information on Niʿmatallāhī Ṣūfism and on the daily and cultural life of the early 19th century. Riḍā-Ḳulī Hidāyat was among the direct disciples of Shīrwānī.

ZAYN AL-DĪN, SHAYKH AḤMAD [see MAPPILA].

ZAYNAB [see AL-MURĀBIṬŪN].

ZAYNAB BT. ʿABD ALLĀH AL-MAḤḌ b. al-Ḥasan al-Muthannā, Umm al-Ḥusayn, the mother of the Ḥasanid ʿAlid martyr al-Ḥusayn b. ʿAlī, Ṣāḥib Fakhkh [*q.v.*], who led a revolt in Medina in 169/786 during the caliphate of Mūsā al-Hādī. According to Abu ʾl-Faradj al-Iṣfahānī, *Maḳātil al-ṭālibiyyīn*, Nadjaf 1385/1965, 285-6, she and her husband were so famed for their religious devotion that they were known as "the pious couple", *al-zawdj al-ṣāliḥ*.

(ED.)

ZAYNAB BT. DJAḤSH b. Riʾāb al-Asadiyya, one of the Prophet's wives, whom he married after her divorce from Muḥammad's freedman and adopted son Zayd b. Ḥāritha [*q.v.*].

Zaynab's mother was a maternal aunt of the Prophet, Umayma bt. ʿAbd al-Muṭṭalib, and her father, from the tribe of Asad, a client of the clan of ʿAbd Shams. One of the first emigrants to Medina, she was a virgin (according to some traditions, a widow) when Muḥammad gave her in marriage to Zayd. In the year 4/626 Muḥammad saw Zaynab alone in her house, was taken with her and had Zayd divorce her so that he himself might marry her, she being at that time about 35 years old. Zayd's scruples were set aside by the Ḳurʾānic revelation XXXIII, 37-8, and she received a dowry of 400 dirhams. Zaynab is reported as being proud of the circumstances of her marriage, and as saying that her marriage to the Prophet was superior to the other ones because it had the confirmation of divine revelation. The "verse of veiling", *āyat al-ḥidjāb* (XXXIII, 53), is said to have been revealed at the time of her wedding feast, and some traditions also connect LXVI, 1, with Zaynab and with the other wives' envy of her.

Zaynab was friendly with ʿĀʾis̲h̲a [*q.v.*], and supportive of her during the so-called "affair of the lie" (*ḥadīt̲h̲ al-ifk*). Her charity was famed, as "the longest-handed" of the Prophet's wives; ʿUmar allotted to her a large stipend, but when she died (according to Ibn Saʿd, in 20/641), she was penniless, having given it all to the poor.

In medieval Christendom, the episode of Muḥammad's infatuation with Zaynab and his compelling Zayd b. Ḥārit̲h̲a to divorce her, was made much of by anti-Muslim propagandists (cf. L. Marracci, *Prodromus ad refutationem Alcorani*, Padua 1691, 562; N. Daniel, *Islam and the West, the making of an image*, Edinburgh 1960, 31, 97-100, 292). Reacting to this, modern Muslim apologists and biographers of the Prophet have endeavoured to place it in a more favourable light (cf. Muḥammad Ḥusayn Haykal, *Ḥayāt Muḥammad*, Cairo 1936, 307 ff.; M. Lings, *Muhammad, his life based on the earliest sources*, London 1983, 212-14).

Bibliography: Ibn His̲h̲ām, 734, tr. Guillaume, 495-6; Ibn Saʿd, viii, 71-82, Balād̲h̲urī, *Ansāb al-as̲h̲rāf*, i, ed. M. ZAYNAB BT. **K̲H̲UZAYMA** b. al-Ḥārit̲h̲ al-Hilāliyya, from the tribe of ʿĀmir b. Ṣaʿṣaʿa [*q.v.*], one of the Prophet's wives, already known in the *D̲j̲āhiliyya* as Umm al-Masākīn "Mother of the destitute" from her charitable activities. Her first husband divorced her, and her second one, ʿUbayda b. al-Ḥārit̲h̲, was killed fighting at Badr [*q.v.*]. Muḥammad then married her in either 4/626 or the preceding year when she was about 30 years old, and gave her a dowry of 400 dirhams; but according to al-Balād̲h̲urī, she died eight months later at the end of Rabīʿ II 4/early October 625. She was buried in the cemetery of Baḳīʿ al-G̲h̲arḳad [*q.v.*].

(C.E. BOSWORTH)

ZAYNAB BT. **MUḤAMMAD**, daughter of the Prophet by his first wife K̲h̲adīd̲j̲a [*q.v.*], and said to have been his eldest one. Before Muḥammad began his public ministry, she married a rich man of Ḳurays̲h̲ from the clan of ʿAbd S̲h̲ams, her maternal cousin Abu 'l-ʿĀṣ Laḳīṭ b. al-Rabīʿ.

She was in al-Ṭāʾif at the time of Muḥammad's *hid̲j̲ra*, and did not follow him to Medina. Her husband, still a non-Muslim, was captured at Badr. Zaynab sent a necklace that had belonged to her mother K̲h̲adīd̲j̲a to ransom him, and the Prophet freed him on condition that Zaynab should come to Medina. On the way thither she was maltreated by al-Habbār b. al-Aswad and had a fall which caused her to miscarry; al-Habbār only escaped subsequent punishment for this by a timely conversion to Islam. Zaynab's husband was taken prisoner a second time in 6/627 during the expedition of al-ʿĪṣ, and freed by his wife's intercession. He became a Muslim in 7/628 and was re-united with his wife by a second marriage.

Zaynab died in Medina in 8/629. She had two children, ʿAlī, who died in infancy, and Umāma, who married ʿAlī b. Abī Ṭālib after Fāṭima's death.

AL-**ZAYNABĪ**, ʿALĪ B. ṬIRĀD (or ṬARRĀD) b. Muḥammad, Abu 'l-Ḳāsim S̲h̲araf al-Dīn, vizier to the two ʿAbbāsid caliphs al-Mustars̲h̲id and al-Muḳtafī [*q.vv.*] in the first half of the 6th/12th century, b. 462/1069-70, d. 538/1144.

The *nisba* refers to descent from Zaynab bt. Sulaymān b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās, and this ʿAbbāsid descent doubtless helped al-Zaynabī's father Ṭirād or Ṭarrād, called D̲h̲u 'l-S̲h̲arafayn, to secure in 453/1061 the office of *naḳīb* [see NAḲĪB AL-AS̲H̲RĀF] of the Hās̲h̲imī *s̲h̲arīf*s and also to pursue a career in diplomacy on behalf of the caliphs. ʿAlī inherited this office after his father's death in 491/1098 and in 517/1123 combined it with the *niḳāba* of the ʿAlids also. He eventually acquired the *laḳab* of Niẓām al-Ḥaḍratayn from his liaison work between the two courts of the ʿAbbāsids and the Sald̲j̲ūḳ sultans in Bag̲h̲dād.

He had already functioned as vizier to the caliph in fact if not in name, when in Rabīʿ II 523/March-April 1129 he formally became vizier to al-Mustars̲h̲id until succeeded by his bitter rival Anūs̲h̲irwān b. K̲h̲ālid [*q.v.*] in 526/1132. Al-Mustars̲h̲id was murdered and his son al-Rās̲h̲id [*q.v.*] succeeded him in 529/1135, but the new caliph was deposed after a year by a *fatwā* of the *ʿulamāʾ* and *fuḳahāʾ* at the instigation of al-Zaynabī; on the intervention of the Sald̲j̲ūḳ sultan Masʿūd b. Muḥammad [*q.v.*], al-Muḳtafī was made caliph with al-Zaynabī as his vizier (530/1136). The two men soon quarrelled, however; al-Zaynabī sought the protection of the sultan but was dismissed in 534/1139-40. He was soon afterwards reconciled to al-Muḳtafī and was able to return to Bag̲h̲dād. He died there in straitened circumstances on 1 Ramaḍān 538/8 March 1144, but, says al-Ṣafadī, he had nevertheless continued to pay allowances he had customarily made (*idrār*) to all his dependents and protégés.

Al-Zaynabī is conventionally praised in the sources for his piety and good works, and was the *mamdūḥ* of such poets of the time as Ḥayṣa Bayṣa [*q.v.*].

ZAYT (A.), in the classical lexicon, the oil or expressed juice of the olive (*zaytūn* [*q.v.*], botanical

name *Olea europaea* L.), although it could apply today to any oil. Here only the use of olive oil will be discussed. In his Book on Dietetics (*K. al-Aghdhiya*), al-Isrā'īlī (d. *ca.* 935) adds that oil extracted from any plant other than the olive was called *duhn*.

Cultivated throughout the Mediterranean basin since about 3,000 B.C., the fruit of the olive tree was used for cooking, as food, as a cosmetic and for lamp oils. It is in this last usage that *zayt* occurs in the famous Ḳur'ānic "Verse of Light" (XXIV, 35). This reference gave rise to Traditions from the Prophet who approved its use because it came from "a blessed tree". Graded according to the acidic content, the very best "virgin" oil would contain 1% of oleic acid, while poor oil with acidity too high for eating would be used as lamp oil. The term *zayt maghsūl* ("washed oil" or alternatively *zayt al-mā'*) might refer either to the Roman technique of removing a bitter glucoside from the fruit by first soaking it in a solution of lye followed by a thorough washing, or by crushing the olives and then purifying the liquid by floating it on water. Al-Isrā'īlī again notes that both the previously-mentioned terms refer to oil extracted (after crushing?) by means of hot water. On the other hand, in the dietetic treatise of the Andalusī author Abū Marwān 'Abd al-Malik b. Zuhr (d. 557/1162), he says that the very best olive oil is taken from ripe olives that have not been mixed with salt or other substance, as this adulterates the fruit's moist elements and unbalances its nature; this may reflect a traditional Iberian taste for the more acidic grades of the oil.

Ibn Ḥabīb's (d. 238/853) small medical compendium preserves a couple of sayings attributed to the Prophet Muḥammad indicating the several uses of olive oil and its magical property of protecting from Satan for forty days anyone who is anointed with it. The composition of olive oil was described as hot and moist in the first degree. In the mediaeval Arab culinary tradition, represented by the anonymous *Kanz al-fawā'id* (see index s.v.), olive oil was employed in a variety of preparations. As a frying agent, it was also occasionally replaced by sesame oil (*shīradj*), as in the preparation of fish; in egg preparations, the two oils were often used together. Oil sprinkled over a prepared condiment lent its flavour to the dish. A mixture of salt, water and oil was used to clean chicken before cooking it, and oil was used in a herbal-based mixture in which to marinate fish.

(D. Waines)

ZAYTŪN (A.), the olive and olive tree (*Olea europaea* L., the cultivated olive; *O. oleaster*, the wild one).

1. In materia medica and folklore.

Olives and their oil (*zayt* [*q.v.*]) have been used as a food and medicine since ancient times. In the Ḳur'ān, Sūrat al-Tīn, XCV, 1, we have an introductory oath "By the fig and the olive ...".

According to Dioscorides, leaves of wild and cultivated olive are beneficial for the eyes, skin conditions, pains and inflammations (i, 137-140). Al-Zahrāwī describes the extraction and use of oils (*adhān*) notably various types of olive oil. Green unripe olives give *infāḳ* (*omphakion*: cf Dioscorides, i, 29); according to him, oil washed in water is *rikābī*, a "vehicle" for other ingredients (but see 2. below for another, more widespread explanation of the term). Olive oil is mentioned as useful in ointments (*marāhim*) which need astringent properties; his *maḳāla* 24 on ointments lists 86 prescriptions, of which 47 contain oil. He quotes Dioscorides that oil warms and softens the skin and protects from the cold (Albucasis 81, 90, 98-100, 114-15, cf. Dioscorides, i, 30) Ibn Sīnā recommends it for many internal and external ailments (*Ḳānūn*, i, 309-10). Al-Kindī uses oil for burns (nos. 120, 135) and abscesses (nos. 129, 131), whilst Galen recommends it for headache (310-12).

Olive oil has long featured in folk medicine, continuing up to the present time. It has the authority of the Prophet, for it is "from a blessed tree", and is recommended in particular for erysipelas, itch, ulcers, and skin eruptions (*Medicine of the Prophet*, tr. Johnstone, 227). In Persia of the 1930s, it was "much used in magical rites". Gabriel was said to have told Adam to plant an olive tree and from the fruit to extract an oil which could be used for any pain; thus it was said to cure "every illness except that one from which a person is destined to die" (Donaldson, *The wild rue*, 141, 144). Earlier, in Palestine, it is mentioned as being used for wounds (Canaan, *Aberglaube*, 69). In this region in the 1970s, it was recommended, in villages or by the local herbalist (*'aṭṭār*), for earache, sprains, as a massage on the throat for the tonsils, and on the joints for cases of acute influenza; with ghee (*samna*) and sesame oil (*shīradj*) it was used for ulcers on the leg. It could also be used with soap and egg white as a "plaster" for fractures, and was drunk in small quantities for kidney stone.

Modern Western use is mainly culinary, but also as eardrops and in compound oils.

2. Olive cultivation.

The domesticated olive tree was an important food plant in the Mediterranean region and Asia Minor during the Islamic era. The primary centre of cultivation was Syria and Palestine, but substantial groves were also found in Spain. In Egypt there was limited production of olives in the Delta, especially near Alexandria, according to al-Muḳaddasī and al-Ḳalḳashandī. Olives were cultivated in the Fayyūm and the Sīwa oasis since the Hellenistic period. Ethnographic descriptions of olive planting and the folklore surrounding olives focus on Syria and Palestine (see Crowfoot and Baldensperger, and Dalman), especially in reference to biblical studies (see Moldenke).

Information is available in the major mediaeval agricultural treatises about the cultivation of olives and their use in the form of olive oil (*zayt*), although much of this is copied from earlier classical texts. The

most extensive source on olive cultivation comes from the widely-quoted *al-Filāḥa al-Nabaṭiyya* attributed to Ibn Waḥshiyya [*q.v.*] and reflecting much older practices in the region of ʿIrāḳ and Syria. According to this source, the best time for planting olive trees is when the sun is at the midpoint of the zodiacal house of Pisces until it reaches the middle of Taurus, during February and March; this general time frame is frequently reported in the mediaeval almanacs. In most cases, the young shoots should be irrigated, especially right after the planting, and manure is recommended. Classical sources quoted by Arab authors indicate that human dung is not suitable for fertilising olive trees. Much of the technical advice is mixed with magical claims for pomoting growth, protecting from pests and treating diseases, changing the taste or colour of the olives, and preparation of olive oil. For example, planting is said to be more propitious if the moon is waxing and is in the one of the two houses of Saturn.

A variety of methods are recorded for planting olive trees from shoots around the base of an existing tree. These are sometimes grafted with stock from wild varieties. The sources note that trees planted from seed, which usually occurs in late autumn, do poorly under domestication. The sources suggest planting in fine and pliable soil in locations protected from hot winds. Olives do not grow well in saline soils. Cultivation is preferable in the mountains because of the cool air.

Olive production occurs after the tree reaches maturity, generally in about 15 years. It is difficult to kill an olive tree by cutting it down, since new shoots will be sent up from the roots. In Palestine, excessive dew and heavy moisture can damage the pollen when the olive tree is flowering. The best olives come from trees which are 40-60 years old. Olives were traditionally harvested in November in Palestine and Syria, either by men climbing the trees and throwing the olives down or by beating the trees with sticks. Al-Aṣmaʿī quotes ʿAbd al-Mālik b. Ṣāliḥ b. ʿAlī that olives trees can survive up to 3,000 years (!).

One of the best varieties of olives was the Syrian *rikābī*, so-called because it was exported from Syria on camelback. Al-Thaʿālibī noted that this variety was especially regarded for the purity and clarity of its oil. *Rikābī* olives and their oil were exported widely in the Islamic world, including Yemen and Mecca, where olives were not grown.

(D.M. Varisco)

ZAYTŪN, or more probably Zītūn, the name given in the later Arabic geographers (Ibn Saʿīd al-Maghribī [*q.v.*], who flourished in the 7th/13th century, being apparently the first to mention it) and in Muslim travellers like Ibn Baṭṭūṭa [*q.v.*] (who landed there after his Chinese voyage of *ca.* 1346-7) to a great commercial port of China. It is usually identified as Ch'üan-chou or Quanzhou in the modern Fukien or Fujian province, facing the Formosa strait (lat. 24° 53' N., long. 118° 36' E.) or possibly as the nearby Chang-chou or Zhangzhou near Amoy in this same province (lat. 24° 31' N., long. 117° 40' E.). In Sung and Yüan times (12th-14th centuries) it had a flourishing colony of Arab and Persian Muslim merchants, who lived in a separate urban area of their own with all necessary buildings for the practice of their cult and for the meeting together of Ṣūfīs, whilst the Christian community had its own suffragan bishopric there under the Roman Catholic archdiocese of Khānbalīḳ or Peking (one incumbent of Zaytūn is mentioned as Andrew of Perugia) and Franciscan convents.

(C.E. Bosworth)

ZAYTŪN, in Ottoman usage Zeytūn, a town of southeastern Anatolia, now called Süleymanlı. The town (lat. 37° 53' N., long. 36° 50' E., altitude 940 m/3,080 feet) lies in the basin of the upper reaches of the Djayhān [*q.v.*]/Ceyhan river, and the old part of it rises in terraces on the slopes of a steep hill crowned by a Turkish-period fortress.

Its former Armenian inhabitants called it Zetʿun or Ulnia, or simply Kegʿ "village". An Aplgharip (? ʿAbd al-Ḳarīb) of Fornos, to the southwest of Zaytūn, is mentioned at the beginning of the reign of Leon I of Little Armenia (1129-37) (*Rec. hist. Crois., Doc. arm.*, i, 636, iii, 636). On the other hand, the town of Zaytūn is first mentioned after the capture of the last Rupenid King of Little Armenia (1375). According to local tradition, the inhabitants came from the fortress of Ani or Anē-dzor, which probably lay in the Cilician plain. The earliest mention of the town which Alishan could find is in 1526 (Bishop Narses of Zethun, *Sissouan*, 199, 201). Paul of Aleppo calls Zaytūn in 1699 "the well-known town of the Armenians". The inhabitants were for long (till about 1864) able to maintain a certain independence. A rising broke out in 1819 as a protest against the heavy taxes imposed by the Porte. The people of Zaytūn resisted Ibrāhīm Pasha from Egypt on behalf of the Turks. The troubles of 1862 lasted till 1872 and broke out again in 1878 and 1884. In the summer of 1876 the residence of the governor was burned down; it was rebuilt in 1877. The conflagrations of 22 September 1884 and 26 July 1887 were much worse, and almost the whole of the town was destroyed. New unrest was caused by the outbreak of smallpox, from which 400 children in Zaytūn died in 1890. The worst was the uprising of 1895-6 following the general persecution of Armenians in Turkey. The governor of Marʿash besieged the little town in which 15,000 fugitives from the surrounding country had taken refuge; completely exhausted by bombardments, epidemics and lack of munitions, the defenders were only able to secure peace and an amnesty from the Porte through the intervention of the European Powers, notably France; they had to surrender their arms and were granted government by a Christian *ḳāʾim-maḳām*. The massacres during the First World War and shortly afterwards led to the migration of the surviving Armenians to Syria and beyond, and Zaytūn has since been a Turkish town.

In *ca.* 1880, the population of Zaytūn and its

surrounding district was estimated at nearly 36,000, including 27,500 Armenians and 8,300 Turks. It was the seat of an Armenian bishopric. The men of the town had been engaged in the iron mines of the Berit Dağı to the north of Zaytūn, and silkworms had also been reared in the region, as well as cultivation of the olive tree which gave the place its name.

In late Ottoman times, Zaytūn was the chef-lieu of a *ḳaḍā* in the *wilāyet*, formerly *sandjaḳ*, of Marʿash [*q.v.*]. In modern Turkey, it comes within the *il* or province of Kahramanmaraş.

ZAYTŪNA, Djāmiʿ al-, the celebrated mosque-university in the city of Tunis.

1. Archaeological survey and construction of the mosque.

Foundation. ʿAbd Allāh al-Bakrī (5th/11th century) gives two facts: the building by ʿUbayd Allāh b. Ḥabḥāb [*q.v.*] in 114/732-3 of a Friday mosque, *djāmiʿ*, and the building of a *masdjid* by Ḥassān b. al-Nuʿmān [*q.v.*] at the time of his capture of Tunis *ca.* 79/698-9 (*K. fī dhikr al-bilād Ifrīḳiya wa 'l-Maghrib*, Algiers 1911, 37). This account has given rise to two theses, taken up by modern historians. Most of these trace the creation of the Zaytūna mosque to the end of the 7th century A.D., assuming that Ibn Ḥabḥāb rebuilt it. Lucien Golvin, on the other hand, considered that Ibn Ḥabḥāb built the original Zaytūna mosque but places the date in 116/734, the year in which he became governor of Ifrīḳiya (*Essai sur l'architecture religieuse musulmane*, Paris 1974, iii, 152). In fact, there is nothing to confirm the thesis of a continuity between the two buildings, which al-Bakrī seems to describe as two separate buildings.

Do we have here a creation *ex nihilo*? Historians raise the question of the reconstruction of a former Byzantine church dedicated to St. Olive. Restoration work from 1969-70 allows one to affirm that the mosque was built on stone pillars which ran from west to east, being survivals of an ancient building covering a cemetery (conclusion of Ḥāmid al-Adjābī, director of the restoration work, in *Ifriqiyyata. Revue de l'Institut national des antiquités et des arts*, Tunis n.d., vii-viii, 15-24). Putting forward a new thesis, Muḥammad al-Bādjī Ibn Māmī believes that there may be here an ancient Byzantine defensive construction, with the Arab conquerors building their mosque within the ramparts of a fort (*Djāmiʿ al-Zaytūna*, in *al-Muʾarrikh al-ʿarabī*, Baghdād [Dec. 2000]).

The building and its history. The architectural history of the mosque and a description of it have been delineated by Golvin, *op. cit.*, iii, 159-62, and restated by Muḥammad al-ʿAzīz Ibn ʿĀshūr, *Djāmiʿ al-Zaytūna, al-maʿlim wa-ridjāluhu*, Tunis 1991, and ʿAbd al-ʿAzīz al-Dawlātlī, *al-Zaytūna, ʿashra ḳurūn min al-fann al-miʿmārī al-tūnisī*, Tunis 1996. The mosque was built under the Aghlabids. Inscriptions bearing the date 250/864 testify that the prayer hall, if not the entire mosque, were reconstructed and enlarged, probably reaching their present area. During a second building spell, 380-5/990-5, under the Zīrids, were built the galleries of the court (*mudjannabāt*), the crypt (*dāmūs*) and the dome (*ḳubba*) of the Bāb al-Bahw. The Ḥafṣids completed the construction of the mosque: a *siḳāya* or basin in 648/1250, restoration and decorative works in 676/1277, rebuilding of the wall of the prayer hall in 716/1316, construction of *maḳṣūras* or antechambers in 751/1351 and 822/1419, etc. Significantly, the Ḥafṣids provided the great mosque of al-Zaytūna with a minaret *ca.* 842/1438-9 on the site of the modern minaret. The absence of a minaret, from the mosque's foundation till the mid-9th/15th century, seems to strengthen the hypothesis of an original fort in which watch towers replaced minarets for making the call to worship.

The actual building of the great mosque is the Aghlabid one restored and enlarged by the Ḥafṣids. The present prayer hall, a rectangle 56 m × 24 m, covering 1344 m², is much less spacious than ʿUḳba b. Nāfiʿ's mosque at al-Ḳayrawān [*q.v.*]. It has fifteen naves, on average three metres wide, except for the centre and extreme ones which are wider (4.50 m). It has some common features with the mosque at al-Ḳayrawān: its T-shape, a dome before the *miḥrāb* and perpendicular naves on the base wall (A. Lézine, *Deux villes d'Ifrīqiya. Études d'archéologie, d'urbanisme et de démographie: Sousse, Tunis*, Paris 1971, 159). The pillars, mainly of marble, came from Roman or Byzantine buildings, probably at Carthage. The gallery-narthex, made up of a single east-west passage, is ornamented at its central part by the famous dome of Bāb al-Bahw, which gives on to a court 1,810 m². The present minaret, rebuilt in 1312/1894, is 40 m high and belongs to the Maghribī-Andalusī style.

2. Instruction in the mediaeval period.

Can one state, as a historically-attested fact, that the Zaytūna mosque was a centre for scholarship and instruction right from its foundation? Ḥ.Ḥ. ʿAbd al-Wahhāb seems to have asserted this when he said "this is the oldest centre for instruction in the Arab world" (*Waraḳāt*, i, 31). Celebrated *ʿulamāʾ* were probably educated in its precincts, but explicit references to the Zaytūna are late. There were probably some

courses of instruction in the religious sciences and related spheres, given voluntarily by *ʿulamāʾ*, but nothing like organised teaching (Mahmoud Abdel Moula, *L'université zaytounienne et la société tunisienne*, Tunis 1971, 31).

As an analysis of the biographies of scholars attests, the Zaytūna only succeeded in overtaking in prestige the mosque of ʿUḳba b. Nāfiʿ at al-Ḳayrawān at the beginning of the Ḥafṣid period, when the latter place declined and Tunis flourished as the capital of Ifrīḳiya (Muḥammad Ḥassān, *al-Madīna wa 'l-bādiya fi 'l-ʿahd al-ḥafṣī*, Tunis 1999, ii, 706). Nevertheless, higher education was by no means centralised on Tunis, nor, *a fortiori*, monopolised by right or in practice by the Zaytūna, even at the time of its apogee; the biographies of scholars show a multiplicity of centres of instruction in Ifrīḳiya, above all at al-Ḳayrawān, which was able to support some highly celebrated great masters, and in urban centres which were centres for more modest education. At Tunis, a certain number of well-known *ʿulamāʾ* were often summoned by the ruler to teach in the madrasas (al-Zarkashī, *Taʾrīkh al-Dawlatayn, al-muwaḥḥidiyya wa 'l-ḥafṣiyya*, Tunis 1289/1872-3, 41, 58).

The system of teaching, in its organisational principles, methods used and subjects of courses, was similar to that of other Islamic *djāmiʿs* [see MADRASA. I. 6]. Attendance was voluntary and students followed the courses of the monasters of their own choice. The rhythm of teaching was rather relaxed, with weekly holidays on Thursdays and Fridays, periods of leave, the Muslim festivals and, probably, no courses in the summer. There were no examinations, but certificates of *idjāza* [*q.v.*] attesting the following of a course and authorisation to teach it in turn. We have little information on the teaching at the Zaytūna before the 8th/14th century, when signs of the decline of Arab-Islamic culture began to appear (see IBN KHALDŪN, in Vol. III, 828a). Placing foremost the teaching of Islamic knowledge and the juridical-theological disciplines (Ḳurʾānic exegesis, *ḥadīth*, *fiḳh*, Arabic grammar, division of inheritances, etc.), the instructor used manuals, résumés, explanations and commentaries on the works of the Golden Age masters (Muḥammad Ḥassān, *op. cit.*, ii, 709). Even so, these methods did not prevent the emergence of great scholars and outstanding personalities such as Muḥammad b. ʿArafa and Ibn Khaldūn. Increased affluence in the 8th/14th century meant that over 70 circles in mosques could be counted then.

The occupation of La Goletta on 14 July 1534 by the Spanish, their entry into Tunis, their breaking into the Zaytūna and the dispersion of its library, inevitably brought with them great traumas.

Bibliography (in addition to references given): Ibn Khaldūn, *Muḳaddima*; Brunschvig, *Ḥafṣides*; Muḥammad al-Bādjī Ibn Māmī, *Madāris madīnat Tunis min al-ʿahd al-ḥafṣi ilā 'l-ʿahd al-murādī*, diss. in Études arabes, Fac. of Letters and Human Sciences of Tunis 1981, 2 vols., unpubl.

3. Instruction in the modern and contemporary periods.

A widespread judgement is that teaching declined in the period of the transition of power from the Ḥafṣids to the Ottomans. This crisis, however, seems to have been rapidly surmounted, with teaching at the Zaytūna speedily recovering its audience. Introducing new norms for evaluating the *ʿulamāʾ*, sc. *al-riwāya* (transmission of knowledge) and *al-dirāya* (discernment), Ibn Abī Dīnār [*q.v.*] thought that all his contemporaries, some of whom had acquired great fame, were limited to *riwāya*, whilst Muḥammad Tādj al-ʿĀrifīn al-Bikrī and his son Abū Bakr were at a much higher level through their mastery of both *riwāya* and *dirāya* (*al-Muʾnis fī akhbār Ifrīḳiya wa-Tūnis*, Tunis 1387/1967-8, 314-19). The editing of the *Dhayl* of Ḥusayn Khodja now allows a better knowledge of the disciplines taught and the manuals used, these being essentially late commentaries, *ḥāshiyas* and glosses (*Dhayl bashāʾir al-īmān bi-futūḥāt āl ʿUthmān*, Tunis 1975, 197-8, 201). Certain scholars, such as Muḥammad al-Ḥadjdjī (d. 1109/1696-7) became famed for editing a large number of abridgements.

In the 18th century, the Zaytūna benefited by a renewed wave of interest. Until then financially based essentially upon its *waḳfs*, the financing of courses was assisted by the Ḥusaynid Beys who used to pay salaries for the teachers out of the yield of the capitation tax (see for the measures taken by ʿAlī b. Ḥusayn Bey in 1183/1769-70, Ḥammūda b. ʿAbd al-ʿAzīz, *al-Kitāb al-bashī*, Tunis 1970, 204, 296). However, the Zaytūna continued to use the same methods of instruction, and one may further note that there was a serious regression in the teaching of the profane sciences.

In defining the evolution of teaching during the 19th century, a severe verdict must be pronounced, and Tunisian historians have often spoken of "a schlerotic system of instruction" (e.g. Ahmed Abdesselem, *Les historiens tunisiens des XVII^e, XVIII^e et XIX^e siècles, essai d'histoire culturelle*, Tunis 1973, 81) and of a fixed, crabbed system of knowledge. Bonaparte's Egyptian expedition in Egypt (1798-1801) and the occupation of Algiers in 1830 revealed a European superiority, of which the military aspect was only a beginning. But the "establishment" of the Zaytūna opted for passive resistance to change, avoiding all idea of reform and upgrading. It was, however, from graduates of the Zaytūna that the reforming Tunisian élite was recruited, such as Maḥmūd Ḳābādū (1812-71), Aḥmad Ibn Abī Ḍiyāf (1804-74 [*q.v.*]), Bayram V (1840-99), etc., strengthened by the adherence to their ideas of the minister Khayr al-Dīn (1822-90 [*q.v.*]). The latter's master work, *Aḳwam al-masālik fī maʿrifat aḥwāl al-mamālik*, published in 1867, affirmed the backwardness of the Muslim lands and called for an enlargement of the spheres of the sciences and knowledge as a *sine qua non* for the development of civilisation (89, 93, 122-8). Reform of the Zaytūna system of teaching became the order of the day from now onwards. As a supreme act of defiance against the *ʿulamāʾ*, Ibn Abī Ḍiyāf announced that "*idjtihād* had continued uninterruptedly" (Ṭayyib al-ʿAnnābī, *Wathāʾiḳ tūnisiyya*, in *Ḥawliyyāt al-Djāmiʿa al-Tūnisiyya* [1967], no. 4, 153-9).

Minded to abolish a fact of discrimination, on 24 February 1840 Aḥmad Bey gave to the Mālikī *ʿulamāʾ* the same treatment as their Ḥanafī colleagues. In practice, the Mālikī Zaytūna had had to integrate Ḥanafī teaching with their own since the establishment of the Ottomans, who favoured the scholars of that school. On 27 Ramaḍān 1258/1 December 1842 Aḥmad Bey reformed the organisation of the Zaytūna's functioning. Each *mudarris* had to give two courses a day in the different disciplines. Periods of holiday were henceforth fixed: two days per week, the two festivals of the *ʿĪds* and the month of Ramaḍān. The institution was placed under the control of *ḳāḍīs* of the two law schools and of the two *shaykh al-islāms*. Within the framework of this reform, the Bey nominated 30 *mudarrisūn*, following the pattern of parity between the two schools established by him and reserved for financing this the revenues of the *bayt al-māl* (Aḥmad Ibn Abī Ḍiyāf, *Itḥāf*, iv, 35, 65-7). During his time as

Grand Vizier (1873-7), Khayr al-Dīn had to take in hand, in parallel with the creation of the modern al-Ṣādiḳī college [see AL-ṢĀDIḲIYYA], the reform of teaching at the Zaytūna. His *manshūr* or circular of 28 Dhu 'l-Ḳa'da 1292/26 December 1875, completed a month later, contained proposals for reorganising teaching at the Zaytūna, but an examination of the material (dominated by teaching of the religious sciences) and of the list of books used for teaching purposes shows that a certain sluggishness stifled the will to reform. A far-reaching innovation was that the internal reform envisaged instituting an academic handbook and regulated such topics as application to work and discipline (Mongi Smida, *Khereddine, ministre réformateur*, Tunis 1970, 320-7).

After the establishment of the French Protectorate (1881), the Zaytūna inevitably became a centre of dispute. Probably influenced by the development of modern education, its students organised to demand reform of teaching methods and programmes. The history of the Zaytūna, from 1910 to 1952, was marked by cycles of student unrest (1910-12, 1920, 1928-30, 1935-7, 1947-50) and desires for reform, studied by special commissions for this, but the results were below expectation. But, apart from the threefold system of primary (*ahliyya*), secondary (*taḥṣīl*) and higher education (*'ālimiyya*), the commissions were unable to envisage reforms or to introduce the teaching of the sciences (see Mukhtār al-'Ayyāshī, *al-Bī'a al-zaytūniyya 1910-1945*, Tunis 1990, 21-82, 143-75). Remarkably, this traditional system of education was to see developing within its midst, as a reaction, an avant-garde cultural movement, seen in the great poet Abu 'l-Ḳāsim al-Shābbī (1909-40 [*q.v.*]) and the reformer Ṭāhir al-Ḥaddād, who shook the Zaytūna establishment by publishing at Tunis in 1930 a book-manifesto advocating the freedom of women and abolition of polygamy, *Imra'atunā fi 'l-sharī'a wa 'l-mudjtama'*. The growing number of students at the Zaytūna (600 in 1881, 9,818 in 1927 and almost 20,000 in 1956), in the two annexes of Tunis and the sections created in the provinces (eight of these from 1949), showed the development of its recruitment.

After independence, primary and secondary education were undertaken by modern schools and colleges for public instruction. The Zaytūna was made into a faculty and then into a university specialising in the religious sciences and installed in modern premises; its rich library was integrated within the National Libraries of Tunis.

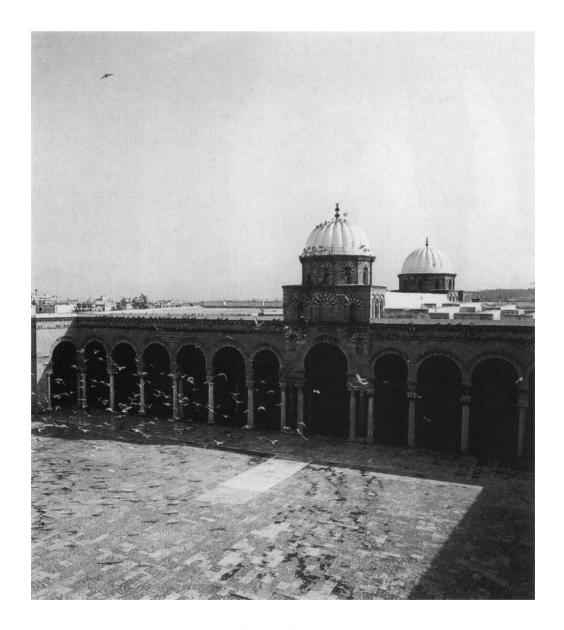
(KHALIFA CHATER)

AL-**ZAYYĀNĪ**, ABU 'L-ḲĀSIM B. AḤMAD b. 'Alī b. Ibrāhīm, Moroccan statesman and historian of the 18th century.

Al-Zayyānī, a member of the great Berber tribe of the Zayyān in central Morocco, was born in Fās in 1147/1734-5. He received his education in this city. At the age of 23, he accompanied his parents on the Pilgrimage to Mecca and after an exciting journey, coming as well as going, which lasted over two years, he returned to Fās, where he obtained a position as secretary to the *makhzan* [*q.v.*] of sultan Muḥammad III b. 'Abd Allāh. His ability, his knowledge of Berber dialects and the course of events rapidly brought him to the fore; having played an active part in the suppression of a rising against the tribe of the Ayt Amālū, he gained the confidence of his ruler and was entrusted with negotiations with the various un-subdued Berber elements of the empire. He now travelled up and down Morocco incessantly and made several journeys to distant Tāfīlālt. In 1200/1786 al-Zayyānī was charged by the sultan with a mission to the Ottoman ruler 'Abd al-Ḥamīd I [*q.v.*]. He reached the Ottoman capital after many vicissitudes, and spent over three months there, which enabled him to write on his return a very full description of it. On his return, after carrying out several confidential missions, he was appointed governor of Sidjilmāsa [*q.v.*], where he remained till the death of Muḥammad III b. 'Abd Allāh in 1204/1790.

The sultan's successor, his son Yazīd, put an end to the political career of al-Zayyānī, whom he hated. It was only by a miracle that the latter escaped death when Yazīd in 1206/1792 himself succumbed to a wound received in a fight against the pretender Hishām. Al-Zayyānī, at the time a prisoner in Rabāṭ, was set free and immediately took an active part in the proclamation at Meknès of another son of Muḥammad b. 'Abd Allāh as sultan, Mawlāy Sulaymān (Slīmān). The latter gave him the office of governor (*'āmil*) of the district of the town of Udjda [see WADJDA], but on taking up his post, al-Zayyānī was attacked and defeated by the people he had been sent to govern. This misfortune gave him a distaste for public life, and he retired to Tlemcen, where he spent 18 months in studious seclusion, which only ended when he decided to undertake once again the journey to Istanbul, this time in a private capacity and to perform the pilgrimage for a second time. On his return in 1210/9175-6), he was summoned by Mawlāy Sulaymān and returned to Fās. In spite of his great age, he was now employed on a number of important missions and received the title of *dhu 'l-wizāratayn*, as the head of the sovereign's *makhzan*. He remained in office for several years, then was dismissed and died at Fās in 1249/1833 at the age of 99. He was buried in the *zāwiya* of the Ṣūfī brotherhood of the Nāṣiriyya in the Siyādj quarter.

Famous in Morocco as a statesman, al-Zayyānī was no less celebrated as a writer. In the course of his stirring life, he found time to write some fifteen books, almost all on history and geography. The first in date of these works was a general history of Islam entitled *al-Turdjumān al-mughrib 'an duwal al-Mashriḳ wa 'l-Maghrib*, in which he focussed on the Sharīfian dynasties of Morocco and which he later continued, keeping pace with events down to the year 1228/1813. The part of the *Turdjumān* relating to the 'Alids of Morocco was published and translated into French in 1886 by O. Houdas as *Le Maroc de 1631 à 1812* (*PELOV*, 2nd ser., vol. xviii). It is a narrative, in parts a résumé, of events in Morocco from the foundation of the 'Alid dynasty to the early years of the 19th century. A more detailed version of this part of the *Turdjumān*, in which he dealt specially with events in which he had himself played a part, or of which he had been


D̲j̲āmiʿ al-Zaytūna.

D̲j̲āmiʿ al-Zaytūna.

a witness, was later prepared by al-Zayyānī, and he gave it two different titles: *al-Bustān al-ẓarīf fī dawlat awlād Mawlāya ʿAlī al-Sharīf*, and *al-Rawḍa al-sulaymāniyya fī dhikr mulūk al-dawla al-ismāʿīliyya*. Another important work of his was a very full account of his various journeys, to which he added all kinds of digressions, literary, historical and biographical; he called it *al-Turdjumāna al-kubrā allatī djamaʿat akhbār mudun al-ʿālam barr^an wa-baḥrā*. This book, which is both *riḥla* and *fahrasa*, is also a very curious geographical treatise, with maps (e.g. a map of the seas, reproduced in Lévi-Provençal, *Historiens des Chorfa*, between pp. 188 and 189). All these works of al-Zayyānī are to be found in manuscript in Morocco in various private libraries. A complete list is given in *ibid.*, 167-8.

Al-Zayyānī's work is the principal source we possess, with the more recent *K. al-Istiḳṣā* of al-Nāṣirī al-Salāwī [see AḤMAD AL-NĀṢIRĪ AL-SALĀWĪ], for the history of the ʿAlid dynasty of Morocco. It is full of valuable details and deserves serious study. It gives throughout an impression of accuracy and precision in historical as well as topographical matters. Information is given about innovations and social reforms and about the monumental history of the towns of Morocco. Al-Zayyānī also shows a remarkable acquaintance with events in Europe. Finally, all that he tells us about what he saw on his journeys to Istanbul is worth publishing in full.

Bibliography: al-Nāṣirī al-Salāwī, *K. al-Istiḳṣā*, Cairo 1312/1894, iv, 33, 108-9, 116-18, 132; Kattānī, *Salwat al-anfās*, Fās 1313/1895, i, 263; O. (E. LÉVI-PROVENÇAL)

ZAYYĀNIDS [see ʿABD AL-WĀDIDS].

ZĀZĀ, an ethnonym designating the speakers of Zāzākī, an Iranian language spoken in southeastern Anatolia, to the northwest of the Kurdish-speaking regions. Its centre of dissemination is the triangle between the towns of Siverek, Erzincan and Varto. There are no reliable statistics about its number of speakers; in southeastern Anatolia they may number between 1.5 and 2 millions. About the same number of Zāzā have emigrated to the urban centres of Western Anatolia, and to Western Europe, during the last 40 years. These numbers include all "ethnic" Zāzā, however, a large number of whom may have become assimilated to Turkish or Kurdish in the meantime, with no longer an active command of their mother tongue.

The people. In religion, all Zāzā are Muslims, but in their home country they are divided into one northern and one southern group (of about the same size), the first of which follows the ʿAlawī Shīʿī religious confession, and the second which follows one of the Sunnī *madhāhib* (mostly the Shāfiʿī one). Their common religious confession connects the Sunnī Zāzā closely with the neighbouring (to the southeast) Sunnī Kurds. Therefore, the question whether all the Zāzā constitute one people has to be separated from the question (to be answered in the affirmative) whether Zāzākī is a language in its own right. As very little was known about the Zāzā and their language up to the early 1980s, it was always taken for granted that they are Kurds speaking a dialect of Kurdish. Only recently has Zāzākī been increasingly written (starting in the European diaspora), and parallel to this a growing number of Zāzā (mainly ʿAlawīs) have become aware of their own language, culture, and distinct identity. But to this day, many Zāzā still feel that their common cultural and political ties to the Kurds weigh more heavily and do not insist on a separate Zāzā ethnic identity.

The name "Zāzā" seems to have been a pejorative label originally, possibly suggesting incomprehensible speech (like English "bla bla"). Although as such it was not the self-denomination of the majority of Zāzā (many Sunnī Zāzā call their language *Dimlī*, some ʿAlawī Zāzā call it *Kirmāndjkī* or simply *zōnē mā* "our language"), it seems to have gained the widest acceptance today. The name *Dimlī* can be understood as pointing to the geographical origins of the Zāzā, if it is to be connected to the historical region of Daylam south to the Caspian Sea (there are no other sources relative to the Zāzā's earlier history).

The language. Zāzākī was not written or studied before the mid-19th century. It is a NW Iranian language; other NW Iranian languages that are most closely related to it include Gūrānī (spoken in southern Kurdistan) and the Iranian Ādharī dialects (e.g. Harzandī). Although Zāzākī has been heavily influenced by neighbouring (Kurmāndjī) Kurdish for a long time (especially in lexicon, phraseology and syntax), it is genealogically not a very close relative of Kurdish (as compared to Gūrānī and Ādharī). Zāzākī has undergone most of the sound changes that characterise NW Iranian, e.g. IE (Indo-European) **k'/*g'* > Zāz. *s/z*, **g(^u)(h)^pal* > *-ǰ-*, **tr* > *(hī)r*, **d(h)w* > *b*, **rd/*rz* > *r̄/rz*, **sw* > *w* (e.g. Zāz. *zān-*, *ǰinī*, *hīre*, *ber*, *serī*, *wen-* "to know, woman, three, door, year, to eat"; Kurdish has undergone only the first two of these, cf. *zān-*, *žin*, but shows SW development in: *sē*, *der*, *sāl*, *xō*).

Zāzākī noun morphology shows a system of two cases (rectus and obliquus), two numbers (sg., pl.), and two grammatical genders (m., f.). In addition, it can distinguish definiteness and animacy. In some dialects, a suffix *-(e)r* originating from the IE relationship suffix *-tér-* has been generalised as a feminine oblique ending. Attributive adjectives and nouns in genitive relation that qualify a (head) noun follow it immediately and are connected to it with an enclitic particle, the *iḍāfa*. Together with the inflectional endings that can precede them, the forms of the *iḍāfa* constitute a system of four cases, where a particle *-d-* (apparently borrowed from NW Semitic) is an important oblique marker (e.g. *lāžē mi* "my son", but *lāždē mi* "[to, of, etc.] my son").

The Zāzākī verbs distinguish three persons and two numbers, and, in the 2nd/3rd persons sg. of indicative verbs, also grammatical gender. The verbal system includes the following tenses: present (formed with the suffix *-(e)n*, not as in Persian and Kurdish with a prefix), analytical future, preterite, imperfect, perfect I/II and pluperfect. The present is formed from the present stem, and all past tenses from the preterite stem. The present subjunctive is formed from a third stem, the subjunctive one (from which can also be derived, with the suffix *-(i)y-*, passive forms).

Syntactically, Zāzākī is a SOV language and shows morphological split ergativity (only with verbal forms

derived from the past stem). In noun phrases (see above) the modifier always follows the head; there is a complex system of adpositions in which postpositions predominate, but in which there are also various pre- and circumpositions.

ZEKĀ'Ī DEDE (1824-97), one of the most important 19th-century Turkish composers, often considered the last great master of the classical style. Born at Istanbul in Eyyūb, he became an expert calligrapher under his father's guidance, while his musical talent brought him to the attention of Ḥammāmī-zāde Ismā'īl Dede, who accepted him as a pupil. In 1845 he entered the service of Muṣṭafā Fāḍil Pasha [*q.v.*], and spent the greater part of the following 13 years with him in Cairo, returning definitively to Istanbul in 1858, when Muṣṭafā Fāḍil was appointed vizier.

Unfortunately, very little is known about his musical contacts and activities in Egypt, although he did compose a number of hymns to Arabic texts (*shughl*). In 1864 he entered the Mewlewī [see MAWLAWIYYA] order, and in 1884 became *ḳudümzenbashî* at the Bahāriyye *mewlewī-khāne*. He composed five vocal cycles (*āyīn*) for the Mewlewī ceremony, and a large number of hymns (*ilāhī*) and pieces in other religious genres, but his extensive output was by no means confined to these: it also included songs in the large-scale *kār* and *beste* forms as well as lighter *sharḳîs* [*q.v.*]. In addition he was an active and successful teacher who maintained traditional methods of oral tuition and transmission, thereby helping to ensure the survival of the repertoire he himself had been taught. Among his many pupils were a number of major composers and scholars, including Ra'ūf Yektā Bey, Ṣubḥī Ezgi, and his own son Aḥmed Irsoy, thanks to whose efforts much (although by no means all) of his work has been preserved.

ZENOBIA [see AL-ZABBĀ'].

ZENTA (Serbian Senta), a town on the right bank of the Tisza in the ancient Hungarian county of Bács-Bodrog, today in northern Serbia. A decisive battle was fought in its vicinity on 24 Ṣafar 1109/11 September 1697 between the forces of Sultan Muṣṭafā II [*q.v.*] and Prince Eugene of Savoy.

Ottoman rule in Hungary collapsed relatively rapidly after Buda was recaptured in 1686. Resistance to the allied Christian armies was sparse and took place along the Drava-Danube line only. Following a serious defeat at Szalánkemén (Stari Slankamen) in 1102/1691, where the Grand Vizier Köprülü Muṣṭafā [*q.v.*] also lost his life, and an abortive attempt to regain Waradīn [*q.v.*] in 1694, the next great Ottoman offensive started in 1697. This campaign, unprecedented since the siege of Eger [*q.v.*] and the battle of Mezőkeresztes [*q.v.*] in 1596, was led by the sultan in person. A successful assault on Titel encouraged the Ottomans to cross the Tisza. First, they simulated a march against Waradīn, but were in reality intent on reconquering Szeged, the key fortress blocking their route along the Maros to Transylvania, and they soon turned northwards. Misled by this stratagem, the allied troops left their post near Zenta and arrived at the Danube on 6 September. They had to return by a forced march to their original place, where a circumvallation was being constructed by the Turks. The fight between the two armies, numbering some 50-70,000 warriors on both sides (the Ottomans slightly outnumbering their enemy), started shortly before nightfall and quickly ended in a great Christian triumph. The Ottomans lost the Grand Vizier Elmās Muṣṭafā, the *agha* of the Janissaries, and several *sandjak-begis*, as well as some 20,000 warriors.

The defeat at Zenta led to the Peace of Ḳarlofča [*q.v.*] (Karlowitz) in 1699, which put an end to a long period of wars and to Ottoman rule in most of the former Hungarian territories.

ZERBADIS, Zerbadees, a term, of unknown origin, denoting a Muslim community in Burma [*q.v.*].

It was formerly used in a slighting or even contemptuous way to describe the offspring of Indian Muslim males and Burmese females—the latter usually being converts to Islam. Burma has always been and remains an overwhelming Buddhist country, and the Muslim minority was never more than 4% of the total population at any time. The latest complete figures are from the 1931 census and give a total of just under six millions. This includes (a) the Arakan [*q.v.*] Muslims, (b) Indian immigrant Muslims from British India, and (c) the Zerbadis, also known as "Burmese (or Burma) Muslims". The Zerbadis have been estimated as comprising just about a half of the total Muslim community. The 1931 census was the last complete count done (the returns for 1941 were destroyed in the Second World War) though partial returns for 1953 and 1954 suggest a Muslim presence of about the same percentage. However, as against this it should be remembered that many Indian Muslims left India in 1962-4 when severe restrictions were placed on those who were not "Burmese citizens". There are no data from 1964, when the imposition of military rule effectively closed down the institutions of civil society. The Zerbadis are culturally Burmese in all things except religion, but this was enough for the rather chauvinist Burmese to lump

them together with the Indian immigrant Muslims. Like the latter, they were targets in the severe anti-Muslim riots of 1938, though they had little in common with the Indian Muslims. But the fact of being Muslims militates against a full acceptance, despite the fact that they usually attend Burmese schools, speak Burmese and generally know no other language, except that some can recite by rote parts of the Ḳur'ān. The Zerbadi insistence on Burmese language was a major issue of contention between them and the Indian Muslims, who insisted on Arabic and, for the majority, Urdu. The result was an increasingly severe split between the communities, with the Zerbadis emphasising their identity as Burmese and having also their own separate associations. In politics, the Zerbadis were supporters of the Burmese National Movement, whilst the Indian Muslims looked towards India and the Muslim League. The former envisage a national integration for themselves in independent Burma, and object to pan-Islamism. For the majority Burmese population, this is not really enough; for them, one is only truly Burmese if one is Buddhist. Adherence to a "foreign" religion diminishes one's national identity.

This is nowhere more clearly illustrated then in matters of law. A prevalent question was to what extent the Burmese "Buddhist" (i.e. customary) law applied to Zerbadi matters? The issue arose because the female party to a marriage was ethnically Burmese and was related to Burmese Buddhists, as were her children. In certain matters, especially inheritance and wills, the rules of Burmese Buddhist law were more advantageous to the wife and female children than were those of the *Sharīʿa*. They should, therefore, apply on the twin grounds of ethnicity and kinship. The question was debated for the half century from the 1890s to the 1950s, the argument being that Burmese Buddhist law was a "customary law" and thus would be an exception to the rule that Islamic law applied in the affairs of Muslims. The result turned on the provisions of the Burma Laws Act of 1898 (section 13), which provided that each religious and racial group in British Burma had its own law: Burmese Buddhist law for Burmese, (Anglo-)Hindu law for Hindus, and (Anglo-)Muhammadan law for Muslims. The decisions given in the courts were consistent: Burmese Buddhist law could not apply as a customary exception. Islamic law had a clear and exclusive jurisdiction in Muslim matters. On a strictly technical reading of the legislation, this is an acceptable result. However, it is difficult not to suppose that judicial policy also played a part, i.e. the courts were most reluctant to create internal conflict by mingling the two different laws. Needless to say, this approach satisfied nobody, and in 1939 (in the wake of the 1938 riots) Buddhist women were protected by special legislation. But what was a "Buddhist" woman when married to a Muslim? This raises the vexed questions of conversion and apostasy which troubled the courts in British Burma from the 1860s onwards and were, of course, centred on the Zerbadis. It appears that conversion was for the purposes of marriage only, and quite often, conversion was merely "simulated". In such cases, "apostasy" was not allowed to end a marriage as the classical *Sharīʿa* would direct. Religion was not permitted to be used in such a way, and a conversion, once made, was binding in respect of divorce and succession.

The fate of the Zerbadis in post-1964 Burma is not clear. Assimilation to the Buddhist majority must be a possibility, given the sometimes minimal adherence to the religion of Islam.

The history of the Zerbadis is instructive as illustrating yet again the impossibility of maintaining a law that has no cultural roots in a foreign state. It can never be more than artificial and, given the Burmese identity of the Zerbadis and their wish to be identified with the majority Burmese, the future for Islam would seem problematical. But this may perhaps be too pessimistic a view.

ZEYBEK, a generic name for the Turkish mountaineers in Western Anatolia, especially in the regions of Izmir, Aydın, and Manisa.

Various etymologies have been proposed for Zeybek, none completely satisfactory. Thus M.R. Gazimihal claimed that it derived from a place name among the Kirghiz in Central Asia (*Zeybek sözü*, in *Fikir*, no. 2 [1947], 20-3); H.H. Bayındır asserted that it came from *sağbek*, meaning a wise, trustworthy man (*Tarihte zeğbeklik ve musiki*, Aydın 1964, 17); and S. Türkoğlu suggested that it originated from either *su/sü bek*, meaning a military leader, or *zeyl-i beğ* (i.e. *dheyl-i beg*) meaning a kind of assistant to a *beg* (*Tarih içinde Zeybek kıyafeti*, in *III. Milletlerarası Türk folklor kongresi bildirileri*, Ankara 1987, v, 418).

The origin of the Zeybek as fiercely independent, swashbuckling mountaineers is unclear. Their roots may go back to the settlement of Türkmen or Yürüks [*q.vv.*] in Western Anatolia in the 13th century (Mehmet Eröz, ch. 7, *Zeybeklik ve Zeybekler*, in his *Millî kültürümüz ve meselelerimiz*, Istanbul 1983, 85-6), but they were not, as F. Babinger states (*EI*[1], art. *Zeibek*), a tribe. On the basis of close similarities in costume, it has been proposed that the Zeybek were the successors of the Levends (İ.H. Uzunçarşılı, *IA*, art. *Levend*), freebooters who overran parts of Western Anatolia between the 16th and 18th centuries (İ. Özboyacı, *Ege'de Zeybek giyimi ve kışlık olarak kullanılan "aba"*, in *III. Milletlerarası Türk folklor kongresi bildirileri*, v, 292).

The Zeybek do not appear in official Ottoman documents until the first half of the 19th century (Özboyacı, *ibid.*, 298). We do not know when they first appeared in folklore, but it was no doubt somewhat earlier. Ewliyā Čelebi (d. *ca.* 1684/1095) does not mention them except perhaps indirectly (cf. M.R. Gazimihal, *Sarı Zeybek*, in *Fikirler*, no. 6 [1947], 24). The first European traveller to describe the Zeybek was the Hon. George Keppel (*Narrative of a journey across the Balcan...*, London 1831, esp. i, 124-26, 339), followed by F.V.J. Arundell (*Discoveries in Asia Minor*, London 1834, ii, 212-14; for additional references to travellers' accounts, see W. Heffening, *Türkische Volkslieder*, in *Isl.*, xiii [1923], 251 n. 1).

The chiefs of the Zeybek communities were called *efe* and their assistants were called *kızan*. The *efe*'s word was law, even the decision whether or not a young man should marry or abduct a girl (on their character traits, see E.B. Şapolyo, *Efe, Zeybek, kızan... yaşayışları ve âdetleri*, in *Türk yurdu*, i [1954], 43-55, with early photographs).

The Zeybek apparently constituted a kind of militia for local notables at the end of the 18th century and beginning of the 19th century. According to Keppel (*op. cit.*, ii, 124), the Zeybek were a band of mercenary mountaineers who were employed as body guards to the pashas. They also formed a kind of

guard in the coffee-houses and could levy a tax on travellers for their protection. Throughout the 19th century, they participated as volunteer units in the Ottoman Army (T. Baykara, *Zeybekler* [*Zeybek elbisesi giyme yasaği*], in *Belgelerle Türk tarihi dergisi*, no. 22 [July 1969], 59). They joined the Turkish Nationalists in 1920-2.

Today the term Zeybek applies not so much to the mountaineers of Western Anatolia but to their folk costume and dance (including music and song). The distinctive male dress of the Zeybek, which was noted by 19th-century travellers (the earliest illustration being the frontispiece in Keppel, i) and raised the ire of the Ottoman authorities, was as follows: on the head, a red fez around which was wrapped a headkerchief printed with flowers and with needle embroidered flowers along the edge; on the back, a striped quilted jacket with stiff collar, over it a double-breasted waistcoat of violet broadcloth embroidered with black braids, over it another waist coat called a *cepken* or *sallama* with eyehooks on the sleeves; from the waistcoats to the knees, baggy trousers (*şalvars*) made out of two metres of silk cloth and with black braids embroidered around the leg openings and on the borders of the pockets; at the waist, between the groin and the chest, a knitted sash over which was wound a shawl, over which was a weapons' belt made of black or red leather and attached with three rows of straps, and covering the torso up to the breasts; tucked into the front of the weapons' belt was a handkerchief embroidered with silver; on the feet, wool socks, light shoes called *yemeni* and gaiters from ankle to knee (M. Özbek, *IA* art. *Zeybek*).

In the 19th century, various Ottoman officials regarded the Zeybek's short baggy trousers in particular as offensive to the Muslim sense of propriety. A government attempt to forbid their dress in 1838 resulted in an uprising that could only be suppressed with much loss of life. Nevertheless, the Zeybek continued to wear their traditional costume. Attempts to suppress it in 1894 and 1905 were equally ineffective (see Baykara, *op. cit.*, 59-61).

As for the Zeybek dances, they are no longer confined to Western Anatolia. Indeed, variations on them have spread throughout much of Central Anatolia and even to the Western Black Sea region. Zeybek dances can be performed by one or more persons, men, women, or men and women together. The archetypical Zeybek dance, expressing bravery and heroism, is performed by one or two men, but always in solo character. This dance is preceded by a slow introductory part in which the dancer takes leisurely steps. This is done with the arms at the side, then at shoulder level, and finally outstretched with elbows as high as the shoulders and fingers snapping. Meanwhile, the dancer keeps one leg in half-bent position between hops, and from time to time drops to his knees (M. And, *Turkish dancing*, Ankara 1976, 159, illustrations in pl. 81). The main centres of Zeybek dances are still in the west: Izmir, Balıkesir, Muğla, Aydın and Denizli.

(G. Leiser)

ZHŌB, a river of what is now the north-easternmost part of Pakistani Balūčistān, and also an administrative District of that province, with its centre in the town of Zhōb (the former Fort Sandeman, at lat. 31° 25' N., long. 69° 20' E.). In British Indian times, Zhōb was an administrative division of British Baluchistan. The river rises in the northern end of the Sulaiman range and flows in a southwesterly direction into the Gomal river. The present District comprised in 1981 27,129 km², with a recorded population of 361,647. The region is important for its position to the southwest of the Gomal Pass [see GŪMĀL, in Suppl.], one of the age-old conduits for peoples, commodities and ideas passing between highland Afghānistān and the Indus valley.

Ethnically, Pashtūns are most numerous in Zhōb, with the Kākaṙ [*q.v.* in Suppl.] as the main permanent residents of the Zhōb river valley. In the continuum of Pashto pronunciation, these Zhōb Pashtūn speakers fall within the middle of the conventional (but rather too hard-and-fast) division between speakers of "hard" and "soft" varieties of the language [see AFGHĀN. (ii)]. Sulaymān Khēl [*q.v.* in Suppl.] of the Ghalzay Pashtūns predominate among the more transient and commercially active Afghān nomads (variously called *kūčīs*, *lōhānīs* and *pōwindas*).

Little is known of the region's early history. Pashtūn genealogies and histories from the Mughal period give the Sulaiman range in eastern Zhōb as the destination of migrations from Ghūr [*q.v.*] by the immediate descendants of Ḳays ʿAbd al-Rashīd, progenitor of all the Pashtūns. On a firmer historical basis, Pashtūn tribal and Hindu merchant elements were to be found there by Mughal times, along with a development of agriculture by *kārīz* irrigation [see ḲANĀT] and "tribal transit trade" via the frontier market towns of Ḳandahār and Dēra Ismāʿīl Khān [*q.vv.*]. The Zhōb district came within the Durrānī dominions shortly after Aḥmād Shāh Durrānī [*q.v.*] began to constitute his empire in 1747, but in the early 19th century was once more autonomous. British encroachment began in the 1830s but subsided after the First Afghan War (1839-42). In the 1870s and 1880s renewed British interest in Balūčistān and the Gomal Pass region, under the impetus of Sir Robert Sandeman, who founded the military centre of Fort Sandeman at the former Apozay, drew Zhōb into the British Indian orbit, and in 1890 the region was formally ceded by the Afghān government to British India.

Since then, Zhōb has come under various administrative arrangements. Its internal and external economic relations were transformed by the establishment of Fort Sandeman and the related establishment of the Hindūbagh (now Muslimbagh) and Ḳalʿa-i Sayfallāh *ḳaṣabas*. The most notable change of the period of Pakistani rule has been the almost complete replacement of mainly Hindu (principally Shikārpūrī) banking and trading communities by non-Pashtūn Muslim groups, such as Balūčī, Hindkō, Sirāikī, Pandjābī and Urdū speakers, and these minority ethnic groups remain vital components of Zhōb's society and economy.

(Shah Mahmoud Hanifi)

ZIʿĀMET (T. < A. *ziʿāma*), a term of Ottoman Turkish military and land tenure organisation.

The *ziʿāmet* was in fact a larger size *timār* [*q.v.*], which in the 10th/16th century was worth between 20,000 and 100,000 *aḳčes*; in earlier periods, the limits were less clearly defined. In early 10th/16th century *id̲j̲māls*, we sometimes encounter the heading "*timārhā-i zuʿamā ve erbāb-i timār*" which indicates that the expression *timār* was used generically, to encompass *ziʿāmet* as well (*387 numaralı muhâsebe-i vilâyet-i Karaman ve Rûm defteri* (*937/1530*), Ankara, T.C. Başbakanlık Devlet Arşivleri Genel Müdürlüğü (from now on DAGM), 1997, ii, 44, and elsewhere). The holder is known as a *zaʿīm*. Similarly to *timār*-holders, most *zaʿīms* served in the Ottoman army when called upon. *Zaʿīms* assigned to seaboard provinces also commanded detachments which were carried in ships of the navy (*12 numaralı mühimme defteri, 978-979/1570-72, özet, transkripsiyon ve indeks,* Ankara, DAGM 1996, ii, 37).

While at home, *ziʿāmet* holders might be ordered to pursue robbers after consultation with the local *ḳāḍī* (*3 numaralı mühimme defteri 966-968/1558-1560, özet ve transkripsiyon*, Ankara, DAGM 1993, 132). A *zaʿīm* with a reputation for local knowledge concerning the remote province of Menteshe might be charged with police duties in lieu of military service (*5 numaralı mühimme defteri (973/1565-66), özet ve indeks*, Ankara, DAGM 1994, 224, no. 1386). In other instances, we find *zaʿīms* along with other soldiers occupied as tax collectors (*ibid.*, ii, 118-19). Often *ziʿāmets* were granted to middle-level commanders such as those known as *ṣubas̲h̲ī*, who were responsible for urban citadels (Metin Kunt, *The Sultan's servants. The transformation of Ottoman provincial government, 1550-1650*, New York 1983, 12). The *id̲j̲māl* register covering the *wilāyets* of Diyār-i Bekr, ʿArab and D̲h̲u 'l-Ḳadriyye of 937/1530 records the issuance of *ziʿāmets* to the *mīr-alay* and *ser* [or *mīr-i*] *ʿasker* (*998 numaralı muhâsebe-i vilâyet-i Diyar-i Bekr, ʿArab ve Zü'l-Kadiriyye defteri* (*937/1530*), Ankara, DAGM 1998, i, 122, of the facsimile).

In areas bordering the Syrian desert, *ziʿāmets* might be granted to tribal dignitaries (*3 numaralı mühimme defteri*, 27). Such dignitaries also were assigned *ziʿāmet* as *od̲j̲aḳ*. This implied that they had to finance the soldiers to be drafted from their province; thus the *ziʿāmet*-holders of the eastern Anatolian *ḳaḍā* of Pertek, who belonged to the *d̲j̲emāʿat-i millī*, in 979/1571-2 were required to contribute to the upkeep of the *piyāde* soldiers serving in the armies conquering Cyprus (*12 numaralı mühimme defteri*, Ankara, DAGM 1996, ii, 60). In border territory, special services might be rewarded by a *ziʿāmet*; thus in 973/1565-6, a Caucasian soldier who was to bring a Persian woman to Erzurum was to be awarded a *ziʿāmet* if he fulfilled his promise (*5 numaralı mühimme defteri, özet ve indeks*, 206, no. 1269). A fortress commander delegated to oversee the procurement of saltpetre also received a *ziʿāmet* (*12 numaralı mühimme defteri*, i, 110, no. 135).

Non-military dignitaries were occasionally awarded *ziʿāmet* as well. Thus a register from the reign of Bāyezīd II mentions an Ottoman princess possessing this source of revenue (N. Beldiceanu, *Le timar dans l'État ottoman, début XIV^e-début XVI^e siècle*, Wiesbaden 1980, 46). In 973/1565-6, a *reʾīs ül-kuttāb* enjoyed this privilege as well (*5 numaralı mühimme defteri* (*973/1565-66*), 151, no. 889). During the conquest of Cyprus, financial officials such as the *defter emīni* might receive a *ziʿāmet* (*12 numaralı mühimme defteri*, i, 329, no. 519).

The *ziʿāmet* normally fell into the category of *serbest* tax assignments. This implies that certain dues, the amount and type of which varied from one province to the next, could be retained by the *zaʿīm* himself; in non-*serbest timārs*, these were collected by the holder of a nearby *serbest timār*, such as the provincial governor (*sand̲j̲aḳbegi*) (Beldiceanu, *Timar*, 36-7). In exceptional cases when the collection of revenues was particularly difficult, a *zaʿīm* might receive permission to farm out his revenues, but the administration in the 10th/16th century was concerned that this practice might lead to the exploitation of the taxpayers (*6 numaralı mühimme defteri* (*972/1564-65*), Ankara, DAGM, 1995, ii, 57).

Similarly to *timārs*, the extent of *ziʿāmets* was, in principle, determined in the course of preparing the *taḥrīr* [*q.v.*]. Governors in outlying provinces occasionally asked for permission to make rearrangements, but this permission was often refused. Thus the *beglerbegi* of D̲h̲u 'l-Ḳadriyye was warned that it was not permitted to divide the holding of a deceased *zaʿīm* as a fresh (*ḳilič*) *timār* among his sons (*5 numaralı mühimme defteri*, 146, no 850). Equally, the *beglerbegi* of Bag̲h̲dād was not allowed to join an existing *ziʿāmet* to the *k̲h̲āṣṣ* already enjoyed by a local governor (*12 numaralı mühimme defteri*, i, 94, no. 98). However, the situation might be different if a *ziʿāmet* was reported to be worth more than 200,000 *aḳčes*, in which case it might be taken from the holder and added to the *k̲h̲awāṣṣ-i hümāyūn* in order to determine its veritable yield (*5 numaralı mühimme defteri*, 23-4, no. 121).

(SURAIYA FAROQHI)

ZĪB AL-NISĀʾ BEGUM [see MAK̲H̲FĪ].

ZIʾBAḲ (A.), mercury, a heavy silver-white metallic element which is liquid at atmospheric temperature and also called quicksilver (*argentum vivum*, ἄργυρος χυτός, ὑδράργυρος = Hg). It was first mentioned by Aristotle [see ARISṬŪṬĀLĪS] in his *De Anima*. Variant forms of the Arabic term include *zaybaḳ*, *zība/iḳ*, and *zāwuḳ* (< Persian *z̲h̲īwa* < Sanskrit ?). From ancient times, quicksilver was associated with the Graeco-Egyptian god Hermes-Thoth and his Roman counterpart Mercury; it is therefore ascribed to Hermes Trismegistos [see HIRMIS], the alleged founder of occult science, and represented by the sign of the planet mercury ☿ [see ʿUṬĀRID]. In the Islamic Middle Ages, quicksilver came mainly from mines in Spain and Central Asia [cf. MAʿDIN].

In alchemy [see KĪMIYĀʾ], quicksilver was considered a "spirit" (*rūḥ*), i.e. one of the ultimate elements or principles of which all material substances were supposed to be compounded, and a means of converting one metal into another. Thus it played a crucial role in the struggle of the alchemists to synthesise gold. Next to the theory of the elixir [see IKSĪR], the so-called quicksilver-sulphur method seemed to be the most promising approach to imitate nature, namely, by determining the exact ratio of these two baser substances as contained in gold, and by recreating the latter on the basis of this ratio. The alloys of quicksilver or amalgams were well known and employed for various procedures, as was cinnabar, its red crystalline sulphide and principal ore (HgS); quicksilver was further used in the construction of mechanical devices and clocks and in jewellery. Finally, and in consequence of the alchemists' concern to keep the making of gold a secret, quicksilver occurs in the relevant literature under more than 140 cryptonyms (*rumūz*).

In medicine [see ṬIBB], quicksilver was considered a "kind of silver" (*min djins al-fiḍḍa*), and Muslim physicians generally shared the attitude of their ancient fellow-medical men who hardly ever used it because of its toxicity. Warnings are frequent, particularly against the noxious properties of its "vapour" (*dukhān*), which was said to cause hemiplegia, tremors, fainting, loss of hearing and sight, madness, etc. However, an unguent prepared from the "dust" (*turāb*) of the sublimate, with either vinegar or rose oil, was supposed to cure itching and scabies when applied to the skin; this powder was also used as a pesticide to kill lice and mice and to drive out snakes, scorpions and other vermin.

AL-**ZIBRIḲĀN** B. **BADR**, tribal leader and poet of the Tamīm [*q.v.*] who was a Companion of the Prophet Muḥammad. His real name was al-Ḥusayn, but he was nicknamed al-Zibriḳān "the moon" because of his beauty: he used to enter Mecca (at the time of pilgrimage) wearing a turban so as not to seduce the womenfolk; or he was given this nickname because in battle he wore a yellow turban (*yuzabriḳu ʿimāmatahu*, i.e. in order to make himself visible to the enemy).

He belonged to the Bahdala b. ʿAwf b. Kaʿb b. Saʿd b. Zayd Manāt b. Tamīm (see chart at Vol. X, 174); or more precisely, to the Khalaf b. Bahdala, Khalaf being al-Zibriḳān's great-grandfather. Originally, though, he was of the Yashkur b. Bakr b. Wāʾil. He was married to al-Farazdaḳ's [*q.v.*] paternal aunt.

Al-Zibriḳān came to the Prophet Muḥammad as a participant in the Tamīm delegation [see WUFŪD], and was charged with levying taxes from part of the Saʿd b. Zayd Manāt and from the Ribāb. (It is noteworthy that al-Zibriḳān's mother was of the ʿUkl, who were a component of the Ribāb.) The rest of the Saʿd had another tax-collector, namely, Ḳays b. ʿĀṣim [*q.v.*], and it appears that the Ribāb came under al-Zibriḳān's authority so that the military balance within the Saʿd was maintained.

At the beginning of the *ridda* [*q.v.* in Suppl.], Muḥammad reportedly asked both al-Zibriḳān and Ḳays b. ʿĀṣim—through a messenger—to co-operate in order to kill Musaylima [*q.v.*]. Al-Zibriḳān is said to have remained loyal to Islam and to have brought to Abū Bakr the camels he had received as taxes. However, at some stage he must have had contacts with Musaylima and Sadjāḥ [*q.v.*]. During the conquest of ʿIrāḳ, he was Khālid b. al-Walīd's [*q.v.*] deputy in al-Anbār [*q.v.*].

Al-Zibriḳān was also employed as tax-collector by ʿUmar b. al-Khaṭṭāb. Moreover, three of al-Zibriḳān's sons-in-law were governors under ʿUmar. By far the most important among them was the governor in Kūfa, Saʿd b. Abī Waḳḳāṣ [*q.v.*]. The other two were in charge of regions which were closer to al-Zibriḳān's tribal territory: the governor of ʿUmān and Baḥrayn, ʿUthmān b. Abi ʾl-ʿĀṣ al-Thaḳafī, and ʿUthmān's brother, al-Ḥakam, who was his deputy in Baḥrayn. (Al-Ḥakam's wife, Bakra bt. al-Zibriḳān, was reportedly the first Arab woman who sailed the sea; this was no doubt related to her husband's expeditions across the Persian Gulf.) However, al-Zibriḳān's goodwill was crucial not only for the state, but also for merchants traversing central Nadjd.

Al-Zibriḳān was still alive at the time of Muʿāwiya I [*q.v.*]. His descendants in the Arabian desert and in al-Andalus were numerous. In al-Andalus they settled in a village called al-Zabāriḳa (pl. of al-Zibriḳān), and later in Talavera.

ZĪDJ, in Islamic science an astronomical handbook with tables, after the models of the Sāsānid Persian *Zīk-i Shahriyār*, the Indian *Sindhind* [*q.v.*], and Ptolemy's *Almagest* and *Handy Tables* [see BAṬLAMIYŪS]. A typical *zīdj* might contain a hundred folios of text and tables, though some are substantially larger than this. Most of the relevant astronomical and astrological concepts are clearly explained in the *Tafhīm* of al-Bīrūnī [*q.v.*]. The history of Islamic *zīdjs* constitutes a major part of the history of Islamic astronomy [see ʿILM AL-HAYʾA].

i. ETYMOLOGY

Arabic *zīdj* (pl. *zīdjāt*) is best translated as "astronomical handbook"; although it normally contains tables, it is not merely a "collection of astronomical tables", but has explanatory material as well. Moreover (as Mercier has noted) Arabic authors apply this word also to Indian astronomical writings, although these do not contain tables. The Arabic word *zīdj*, which is also attested in the meaning "plumbline", was generally recognised to be a borrowing from Persian. Al-Khwārazmī (*Mafātīḥ al-ʿulūm*, 219) and al-Bīrūnī (*al-Ḳānūn al-Masʿūdī*, i, Ḥaydarābād 1954, 271; English tr. and commentary on the passage by de Blois, *apud* Panaino, 155-7), derive it from Persian *zih* "bowstring". In fact, it comes from Middle Persian *zīg*, attested in the meanings "rope, towline" and also (in one post-Sāsānid work) "astronomical handbook". Although *zih* and *zīg* do come from the same root, they are not identical. Al-Bīrūnī claims that astronomical books are called *zīdjāt* because astronomers need to know about "chords" (*awtār*, literally "bowstrings"); for this alleged technical use of *zih* he compares Arabic *djīb* ("half-chord, sine"), which, as he says rightly, comes from Sanskrit *jīva* "bowstring". If Middle Persian *zīg* was really used for "chord" or "sine", one could indeed imagine that the Persians gave this name to astronomical handbooks because they contained trigonometrical tables.

The Indo-Persian dictionaries claim that *zīg* means "a weaver's warp" (*tār*), but the word is not in fact attested in this meaning in any text. Nallino, taking his cue from these lexica, thought that the *zīdj* had its name from the fact that the lines separating the columns of the tables look like the threads of a warp. Mercier has recently suggested that *zīg* is a translation of Sanskrit *tantra*, literally "warp, loom", but used in ancient India also to mean "textbook, system of learning" and applied specifically to certain astronomical treatises. Although this seems more apposite than Nallino's suggestion, it shares with it the difficulty that *zīg* ("rope") does not actually mean the

same as *tantra* ("warp"). Panaino, on the other hand, linked *zīdj* with the ancient Persian notion that the planets are attached to the earth by strings.

Mercier, art. *Zīj*, in *Encyclopaedia of the history of science, technology and medicine in non-Western cultures*, Dordrecht [1997], 1057-8; idem, *From tantra to zīj* (unpubl. typescript); A. Panaino, *Tessere il cielo*, Rome 1998 (with detailed discussion of the etymology). (F.C. de Blois)

ii. The Scope of the *Zīdj* literature

1. *The number of* zīdjs *compiled in the Islamic Middle Ages.*

In the 7th/13th century, the Yemeni astronomer Muḥammad b. Abī Bakr al-Fārisī was able to cite the names of 28 *zīdjs*, and the 10th/16th-century Indian encyclopaedist Abu 'l-Faḍl al-ʿAllāmī [*q.v.*] listed in his *Āʾīn-i Akbarī* the titles of 86 works of this genre. In 1956 E.S. Kennedy presented information on some 125 *zīdjs*. We now know that over 200 *zīdjs* were compiled in the Islamic world between the 2nd/8th and 13th/19th centuries. They constitute a major source for our understanding of the development and application of mathematical astronomy in the mediaeval period. Of these works, just less than one-half are lost and known only by references to their titles or their authors, but enough survive to convey a very clear impression of the scope and variety of the activities of the Muslim astronomers in this field and to reveal some of their most outstanding contributions.

Most *zīdjs* are intended to serve a single locality, in the sense that a terrestrial longitude underlies the solar, lunar and planetary tables and a terrestrial latitude underlies the tables for spherical astronomy. Some of the more important *zīdjs* were the results of serious observational programmes [see marṣad, and also Sayılı, *The observatory in Islam*]. However, many *zīdjs* were simply rehashings of earlier ones, with minor variations, such as a change of meridian for the planetary tables, or a new set of spherical astronomical tables for a different latitude. Such modified versions can be of singular historical importance if the original works are no longer extant. Not all *zīdjs* contain the extensive explanations of the astronomical and mathematical background typical of, say, Ptolemy's *Almagest*. Furthermore, there are numerous extensive sets of related tables which are not usually found in *zīdjs*.

Already in the 19th century, extracts dealing with observation accounts from the *Zīdj* of Ibn Yūnus had been published by A.P. Caussin de Perceval, and the introduction to the *Zīdj* of Ulugh Beg had been published by L.-A. Sédillot. Before 1950 only two *zīdjs* had been published in their entirety, namely, those of al-Battānī by C.A. Nallino and of al-Khʷārazmī by H. Suter *et al.* (the latter is extant only in a form substantially different from the original). In 1952 J. Vernet published the canons of the *zīdj* of Ibn al-Bannāʾ. The *zīdj* of al-Bīrūnī was published in 1954-6, in an edition orginally prepared by M. Krause. In 1956 E.S. Kennedy published his survey of some 125 *zīdjs* and laid the foundation for serious study of this genre of literature. In 1962 O. Neugebauer published an English translation of the text of the *Zīdj* of al-Khʷārazmī in the form in which it survives for us, together with a commentary and an analysis of the tables. The year 1985 saw the publication of a Byzantine recension of the *zīdj* of al-Fahhād by D. Pingree. Most recently, in 1999, a doctoral thesis by A. Mestres presented an analysis of the *Zīdj* of Ibn Isḥāḳ. Full references to these studies are found in the *Bibl.* Many studies of parts of other *zīdjs*, of specific topics in several *zīdjs*, or of individual tables of particular interest, have been published during the past 50 years; only a few of these will be mentioned in this article, although most are found in the collected studies and festschrifts listed in the *Bibl.* Also, certain mediaeval treatises on the concepts underlying *zīdjs*, of the genre *kutub ʿilal al-zīdjāt* [see ʿilla], have attracted attention: these include the works of al-Hāshimī, Ibn al-Muthannā, Ibn Masrūr, Ibn ʿEzra and Muḥammad b. Abī Bakr al-Fārisī. Others are lost (including those by al-Farghānī, al-Sarakhsī, Thābit b. Ḳurra and al-Bīrūnī), or are currently being studied (notably that of al-Samawʾal al-Maghribī, on which see Sezgin, *GAS*, vi, 65-6).

In the 1970s, various categories of tables not found in *zīdjs* were identified, many even more extensive than a typical *zīdj*. In view of the lack of any article on tables in general, called *djadwal* in Arabic, such tables will also be briefly treated below (see *Categories of Tables*). (The article djadwal deals mainly with magical arrangements of letters and symbols.)

2. *The purpose of a* zīdj.

A *zīdj* could provide astronomers with all that they needed in the way of theory and tables for such tasks as calculating the positions (longitudes and latitudes) of the Sun, Moon and five naked-eye planets, and the time of day or night from solar or stellar altitudes. In addition, the astronomer could use a *zīdj* to determine the possibility of lunar crescent or planetary visibility. Stellar positions he could simply take from the star-catalogue. Calculations for meridians other than that underlying the tables could be modified for the longitude differences apparent from the geographical tables. The astronomer could calculate the duration of twilight and the altitude of the Sun at midday or at the time of the afternoon prayer. He could apply the mathematical procedures outlined in the *zīdj* to specific geographical data and compute the *ḳibla* [*q.v.*] of any locality. He could also determine the ascendant at a given time and the longitudes of the astrological houses, and having calculated the positions of the Sun, Moon and planets, he could set up a horoscope: it could be argued that this was the main purpose of *zīdjs*, but there is precious little historical evidence how these works were used in practice. In any case, there are a host of other useful operations one can learn from any *zīdj*. But a *zīdj* was only part of the astronomer's equipment. Other sets of tables were compiled which were not usually contained in *zīdjs* and which greatly facilitated some of the above tasks. In addition, various instruments were available, notably for solving problems relating to spherical astronomy and timekeeping [see asṭurlāb; mizwala; rubʿ; shakkāziyya].

3. *The regional schools of astronomy and their* zīdjs.

The earliest Islamic *zīdjs* from the 2nd/8th century were based on Indian and Persian models, but in the 3rd/9th century the Ptolemaic tradition was introduced and eventually predominated, if not universally. After the 4th/10th century, regional schools of astronomy developed in the Islamic world, with different authorities and different interests and specialities. They also achieved different levels of sophistication and had different fates, both with regard to their own internal development and to the nature of their encounter with the new Western science from the 16th century onwards. In the past few years, some attention has been paid to these regional schools, and the main studies are listed in the *Bibl.* In particular, each regional school had its favorite *zīdj* or *zīdjs*.

In the central lands of Islam, the *Mumtaḥan* tradition was important, together with al-Battānī and Abu 'l-Wafā' al-Būzdjānī. In Persia and Central Asia, numerous early *zīdj*s eventually gave way to the *Zīdj-i Īlkhānī* of Naṣīr al-Dīn al-Ṭūsī. In Egypt, the *Ḥākimī Zīdj* of Ibn Yūnus was never surpassed. In al-Andalus, the *zīdj*s of al-Khwārazmī and al-Battānī, based respectively on the Indo-Persian and Hellenistic traditions, played a role perhaps greater than either deserved, and the contributions made by Ibn al-Zarḳālluh were highly significant. In the Maghrib, the *Zīdj* of Ibn Isḥāḳ and a mini-version thereof prepared by Ibn al-Bannā' dominated the scene. In the late period, the only *zīdj* to achieve any kind of supremacy all over the Islamic world was the *Zīdj-i Sulṭānī* of Ulugh Beg (see below for details of these).

iii. An Overview of *zīdj* production

1. *The Indo-Persian tradition.*

The first Islamic *zīdj*s were part of an Indo-Persian tradition which has a pre-Ptolemaic Greek origin. This is the case of the *Zīdj al-Arkand* written in Arabic in 117/735 probably in the Sind region, which is related to the *Khaṇḍakhādyaka*, composed in Sanskrit by Brahmagupta in 665. The same main influence appears in the *Zīk-i Shahriyār*, translated into Arabic *ca.* 175/790 as the *Zīdj al-Shāh*: it was used by an unidentified astrologer who, soon after A.D. 679, computed a series of horoscopes illustrating the early history of Islam. The *Zīdj al-Shāh* was also used by Māshā'allāh (see below), Nawbakht, 'Umar b. Farrukhān al-Ṭabarī and al-Fazārī to compute the horoscope for the foundation of Baghdād on 30 July 762. Although neither the Pahlavi nor the Arabic texts of the *Zīdj al-Shāh* are extant, its main features are known from indirect sources studied by E.S. Kennedy and D. Pingree, who established, for example, the parameters of the mean motion of Saturn, Jupiter and the lunar nodes using the collection of historical horoscopes compiled by the Jewish astrologer of Baṣra Māshā'allāh (d. *ca.* 200/815) [*q.v.*, and also the art. in *DSB*] and computed with this *zīdj*. Both the *Zīdj al-Shāh* and the *Zīdj al-Arkand*—as well as, probably, other early *zīdj*s—were the vehicles by means of which the astrology of great conjunctions was introduced in Islam [see ḳirān].

The third great *zīdj* within the Indo-Persian tradition was the *Sindhind*. This text seems to derive, indirectly, from the Sanskrit *Brahmāsphuṭasiddhānta* composed in 629 by Brahmagupta, through a work the title of which was probably *Mahāsiddhānta*. According to tradition, this *Mahāsiddhānta* was introduced in Baghdād in 154/771 or 156/773 by an Indian embassy sent to the court of the caliph al-Manṣūr. With the help of one of the members of this embassy, the astronomers Ya'ḳūb b. Ṭāriḳ and al-Fazārī translated the Sanskrit text of the *Sindhind* into Arabic. Both these men compiled several *zīdj*s based on the *Sindhind* system, which was used by them to compute the tables of the mean motions of the planets, although the planetary equations were taken from the *Zīdj al-Shāh*. At the same time, the extant scattered indirect quotations from these *zīdj*s bear witness to the first limited appearance of Ptolemaic elements in Islamic astronomy (see D. Pingree, *The fragments of the works of Ya'qūb Ibn Ṭāriq*, in *JNES*, xxvii [1968], 97-125; and idem, *The fragments of the works of al-Fazārī*, in *ibid.*, xxix [1970], 103-23).

The influence of the Indo-Persian tradition in future Islamic astronomy was secured by the revision of the *Sindhind* prepared by al-Khwārazmī (*ca.* 210/825) [*q.v.*, and also the art. in *DSB*], the first Islamic *zīdj* which is still extant, and which has been published and translated, albeit in a form substantially different from the original. Most of al-Khwārazmī's original text has not been preserved, but we do possess one complete Latin translation, made by Adelard of Bath (*fl.* 1116-42) of a revision of the *zīdj* by Andalusī astronomers. Other Khwārazmian materials can be recovered from various commentaries. See further van Dalen, *Al-Khwārizmī's tables revisited*, 196-211, and also below, iv. The Contents of *zīdj*s, 4.

2. *Al-Ma'mūn and the earliest Ptolemaic* zīdjs.

The first translation of Ptolemy's *Almagest* was into Syriac. The date is not certain, but the Syriac translation clearly preceded the first Arabic one, prepared either by a certain al-Ḥasan b. Ḳuraysh for the caliph al-Ma'mūn (according to Ibn al-Ṣalāḥ) or somewhat earlier by other translators for Yaḥyā b. Khālid b. Barmak (d. 189/805 [see al-barāmika]), in effect the *wazīr* of Hārūn al-Rashīd (according to Ibn al-Nadīm). Neither of these translations is extant. The new translation from the Greek was achieved by al-Ḥadjdjādj b. Yūsuf b. Maṭar in 212/827-8. This survives in one complete manuscript and another fragmentary one. A related translation from the Greek is by Isḥāḳ b. Ḥunayn [*q.v.*], prepared for the *wazīr* Abu 'l-Ṣaḳr b. Bulbul (d. *ca.* 280/890). Shortly thereafter, this was revised by Thābit b. Ḳurra [*q.v.*], whose version survives in ten manuscripts, only two of which are complete, the version of Isḥāḳ being available only in the form of quotations (by Ibn al-Ṣalāḥ). The Isḥāḳ/Thābit version was edited by Naṣīr al-Dīn al-Ṭūsī [*q.v.*] in 672/1274, whose version survives in several copies. Djābir b. Aflaḥ [*q.v.*] used the translations of both al-Ḥadjdjādj and Isḥāḳ that were available in al-Andalus in the 6th/12th century, and this is confirmed by the Latin translation of Gerard of Cremona, also from that century.

The Muslim astronomers were concerned from the outset to test and to improve what they found in the astronomical traditions to which they were heirs. Al-Ma'mūn's reign marks a turning point in the development of Islamic astronomy. Although al-Nihāwandī (*fl. ca.* 175/790) had made observations of his own in Djundishapur [*q.v.*], the first systematic programme of astronomical observations took place between 213/828 and 218/833 in the Shammāsiyya quarter of Baghdād (in 213/828, led by Yaḥyā b. Abī Manṣūr) and in the monastery of Dayr Murrān in Mount Ḳāsiyūn, near Damascus (218/833, led by Khālid b. 'Abd al-Malik al-Marwarrūdhī) [see marṣad]. Al-Ma'mūn may have sponsored these observations for astrological reasons (like his predecessor al-Manṣūr, he was a keen believer in astrology), although it seems probable that the main purpose of the programme was to reach definite conclusions about the problem of contradictory parameters and geometrical models in use in early Islamic astronomy, resulting from the simultaneous application of three main known traditions: Indian, Persian and Greek. The programme seems to have concentrated mainly on solar, lunar and stellar observations but it also determined new parameters for the mean planetary motions. Several *zīdj*s were written as a result of these observations: the official one was compiled by Yaḥyā b. Abī Manṣūr and bore the title of *al-Zīdj al-mumtaḥan*. Other astronomers who were directly or indirectly associated with the observatories of Baghdād and Damascus also wrote their own *zīdj*s: among these, the *zīdj* of Ḥabash al-Ḥāsib [*q.v.*] is the most prominent. This is extant in two manuscripts in Istanbul and Berlin. Only the former has been properly investigated, although it has not been published. The latter is a later recension.

Although Ḥabash (d. *ca.* 864-74) does not seem to have taken an active part in the Ma'mūnī observations, he used their results for the compilation of his *zīdj*. An analysis of both Ḥabash's and Yaḥyā's *zīdj*s shows that they are Ptolemaic in character and that they improved certain parameters, especially the solar ones. On the other hand, both *zīdj*s preserve a certain number of elements from the Indo-Persian tradition.

After al-Ma'mūn, Islamic astronomy followed along the same lines. Observations continued almost without interruption either in small private observatories or in more or less organised institutions with official support. These resulted in the compilation of new *zīdj*s in which the old Indo-Persian tradition seems to be forgotten (except in al-Andalus—see below, 4), and the tradition of the *Almagest* and the *Handy tables* was followed. The authors accepted Ptolemy's kinematic models but used new parameters and destroyed some dogmatic beliefs of the *Almagest*, such as the invariability of the obliquity of the ecliptic, the constant character of the precession of equinoxes, the immobility of the solar apogee, and the impossibility of annular solar eclipses. Some of the changes introduced are improvements, whilst others are understandable mistakes resulting from the fact that Muslim astronomers relied excessively on the accuracy of observations made in Antiquity and in their own times. In any case, it is obvious that Ptolemaic astronomy was not always followed unquestioningly. In particular, Muslim astronomers made substantial contributions to the development of spherical trigonometry and the solution of problems in spherical astronomy by projection methods.

3. *The major Mashriḳī* zīdjs.

It is possible to mention only a limited number of later *zīdj*s from the Mashriḳ, arranged here more or less according to the geographical location where they were compiled.

Al-Zīdj al-Ṣābi' of al-Battānī [*q.v.*, and also the art. in *DSB*] (Raḳḳa *ca.* 300/900), is a respectable and orderly work, if lacking the originality of the *zīdj*s of Yaḥyā and Ḥabash. This was one of the most important works for the transmission of Ptolemaic astronomy to Europe, but it enjoyed far less influence in the Islamic world (not least because there it had more competition). The tables of a *zīdj* were engraved on the mater and plates of an astrolabe [see ASṬURLĀB] in an instrument labelled *Zīdj al-ṣafā'iḥ* by Abū Dja'far al-Khāzin (Baghdād *ca.* 350/950 [*q.v.*]), of which an example survives in Berlin. Two *zīdj*s by Kūshyār b. Labbān (*ca.* 400/1000) [*q.v.*, and also the art. in *DSB*] entitled *al-Zīdj al-djāmi'* and *al-Zīdj al-bāligh* are extant in several copies of varying content.

The unique manuscript of a *zīdj* entitled *al-Madjisṭī* by Abu 'l-Wafā' al-Būzdjānī (*ca.* 370/970) [*q.v.*, and also the art. in *DSB*] alas lacks the tables; nevertheless, the sections on trigonometry and spherical astronomy are extensive and systematic and of considerable historical interest. The later, anonymous *zīdj* entitled *al-Zīdj al-shāmil*, was based on that of Abu 'l-Wafā', and was clearly of some influence, with some spherical astronomical tables for the latitude of Mardin.

Al-Ḳānūn al-Mas'ūdī by al-Bīrūnī (421/1030), dedicated to the newly-acceded Sulṭān Mas'ūd I [*q.v.*] of Ghazna, is much more than an ordinary *zīdj*, being a great astronomical handbook, full of good sense, containing substantial information about the author's personal astronomical research as well as about the development of astronomy in Islamic regions until the author's time. The *Ḳānūn* was not as influential as it should have been (the same is true of al-Bīrūnī's other productions); some of the trigonometric tables were taken over in the *Zīdj-i Īlkhānī* (see below) and the geographical tables, albeit in a slightly modified form, as if read from a map, in the *Sandjarī Zīdj* by 'Abd al-Raḥmān al-Khāzinī (*fl. ca.* 1120, see the art. in *DSB*). No recensions or modified versions of the *Ḳānūn* have come to light. The *Sandjarī Zīdj* dedicated to the Saldjūḳ sultan Sandjar b. Malik Shāh, is another imposing work on which much more research needs to be done.

Several *zīdj*s, including one called *al-Zīdj al-'Alā'ī*, are associated with al-Fahhād (Shirwān, *ca.* 550/1150), none extant in their original form. The Yemeni astronomer Muḥammad b. Abī Bakr al-Fārisī, as well as various Byzantine astronomers, used al-Fahhād's work and preserve for us substantial portions of it. Before we discuss later developments in Iran and Central Asia, we will mention the main activity in Egypt, Yemen and Syria.

A monumental work entitled *al-Zīdj al-Ḥākimī al-kabīr*, compiled *ca.* 400/1000 for the Fāṭimid caliph al-Ḥākim by Ibn Yūnus [*q.v.*, and also the art. in *DSB*], is some four times as large as the *Zīdj*s of Yaḥyā and al-Battānī. Substantial parts of the work survive in manuscripts in Leiden, Oxford and Paris. Of particular historical interest are the accounts of observations by the author and his predecessors in 'Abbāsid Baghdād. The *Ḥākimī Zīdj* was influential in later Egypt and also the Yemen. Thus e.g. the Geniza astrological almanacs as well as the mediaeval Yemeni ephemerides [see TAḲWĪM and also below, v. CATEGORIES OF TABLES NOT CONTAINED IN *ZĪDJ*S, 3] are based on calculations using the mean motion and equation tables of the *Ḥākimī Zīdj*. The *Muṣṭalaḥ Zīdj* was the most popular *zīdj* in mediaeval Egypt, and relied heavily on the *Ḥākimī Zīdj*. Later Egyptian *zīdj*s include recensions of those of Ibn al-Shāṭir and Ulugh Beg.

Altogether, some 18 *zīdj*s are known from the Yemen, starting with al-Hamdānī [*q.v.*] in the early 4th/10th century, and the latest from the 13th/19th century. Their historical importance derives not only from the fact that they attest a serious Yemeni tradition of mathematical astronomy for close to a millennium but also from the fact that they preserve for us 'Abbāsid and Fāṭimid materials which would otherwise have been lost (see King, *Astronomy in Yemen*).

Al-Zīdj al-djadīd of Ibn al-Shāṭir (Damascus *ca.* 750/1350; see the art. in *DSB*) contains equation tables based on the author's new planetary models, which represent the culmination of the Islamic activities to replace those of Ptolemy [see 'ILM AL-HAY'A]. This work merits detailed investigation. Several recensions were made for Damascus in later centuries, also one for Algiers and another for Cairo.

The major production of a group of astronomers working at Marāgha [*q.v.*] under Naṣīr al-Dīn al-Ṭūsī and purportedly based on their observations is the *Īlkhānī Zīdj*, still in the Ptolemaic tradition. The parameters underlying the solar, lunar and planetary tables were, however, taken from Ibn al-A'lam and Ibn Yūnus, and the trigonometric tables lifted from Ibn Yūnus and al-Bīrūnī. What is new is the calendrical material [see TA'RĪKH. 2]. There is no influence of the important modifications of the Ptolemaic planetary models conceived by the Marāgha astronomers.

The *Zīdj-i Īlkhānī* was revised and corrected by Djamshīd al-Kāshī in his *Zīdj-i Khāḳānī*, a work completed towards 820/1420, before the end of the cycle of observations made by the team of astronomers at the Samarḳand observatory. These latter observations were, however, used by Ulugh Beg (796-853/

1393-1449 [*q.v.*]) to compile his *Zīdj-i Sulṭānī* (completed between 1437 and 1448), which is the last great Ptolemaic *zīdj* of the Islamic Middle Ages. This *zīdj* is extant in numerous manuscripts, yet to be sorted. The main parts of the *zīdj*, namely, the tables, have still not received the attention they deserve. (See, most recently, E.S. Kennedy, *Ulugh Beg as scientist*, and *The heritage of Ulugh Beg*, first published in idem, *Studies*, nos. X-XI.) Recensions were prepared for Damascus, Cairo, Istanbul, Tunis and India.

Two *zīdjs* for Istanbul were compiled by Taḳī al-Dīn (*ca.* 980/1580 [*q.v.*]) and remain to be studied. Turkish recensions of the astronomical tables of Cassini (d. 1756) and Lalande (d. 1807) and other European astronomers are available (see İhsanoğlu, *Introduction of Western science to the Ottoman world*).

From India we have the *Zīdj-i Nāṣirī*, compiled by Maḥmūd b. ʿUmar *ca.* 650/1250 for the Dihlī Sultan Nāṣir al-Dīn Abu ʾl-Muẓaffar Maḥmūd b. Shams al-Dīn Iltutmish [*q.v.*]. A copy of this appears to be preserved in a private library in Tabriz (Storey, *PL*, ii/1, 52) but it has never been studied. It could be a work of considerable historical interest.

Later Indian *zīdjs* are based either on Ulugh Beg or on European works (see Khan Ghori, *Development of zīj literature in India*).

4. *Andalusī and Maghribī* zīdjs.

For al-Andalus and al-Maghrib, the history of astronomy has been studied more intensively than for other regions of the Islamic world. It is thus possible to place the activity relating to the compilation of *zīdjs* in a clearer historical perspective.

The first *zīdjs*, probably based on an Indo-Persian tradition, were introduced in al-Andalus in the time of ʿAbd al-Raḥmān II (206-38/822-52); one of these was al-Khwārazmī's *Zīdj al-Sindhind* (D. Pingree, *Indian astronomy in medieval Spain*, in *Vernet Festschrift*, i, 39-48). This *zīdj* (see below, iv. The Contents of *zīdjs*, 1) was the object of new recensions by Maslama al-Madjrīṭī (d. 398/1007-08 [*q.v.*]) and his disciples Ibn al-Ṣaffār (d. 426/1035 [*q.v.*]) and Ibn al-Samḥ (d. 426/1035 [*q.v.*]), as well as by Ibn Ḥayy (d. 456/1064) and ʿAbd Allāh al-Sarāḳusṭī (d. 448/1056-7), who wrote a treatise on the errors of the *Sindhind* method. Of all these materials, only a disappointing fragment of Ibn al-Ṣaffār's version is extant in Arabic (M. Castells and J. Samsó, *Seven chapters of Ibn al-Ṣaffār's lost* Zīj, in *AIHS*, xlv [1995], 229-62), while Maslama's version has been preserved in the Latin translation of Adelard of Bath and in a recension by Petrus Alfonsi. Adelard's version contains materials derived from al-Khwārazmī's original *zīdj*, Maslama's modifications and additions and, probably, other later materials, such as the table, attributed elsewhere to a certain al-Ḳallās, as yet unidentified, for determining the visibility of the new Moon for a latitude of 41;35° (Saragossa?). Maslama introduced modifications in the chronological and in the mean-motion tables (al-Khwārazmī used the Persian calendar and the era of Yazdidjird III, while the extant tables use the Muslim calendar and the beginning of the Hidjra). He also adapted the radix positions of the lunar ascending node and of the mean oppositions and conjunctions of the Sun and the Moon to the meridian of Cordova which, in these tables as well as in a passage of Ibn al-Ṣaffār's canons, is placed at a distance of 63° west of Arīn (not 79;40° as in al-Khwārazmī's original *Zīdj*). This correction appears in a horoscope cast in Cordova and dated 328/940, and it has the effect of reducing the length of the Mediterranean to a much more reasonable value than was implied by Ptolemy. Other Maslamian additions can be found in trigonometric (sine and cotangent) and astrological tables such as those concerned with the equalisation of the houses and the projection of rays, computed for a latitude of 38;30°, presumably Cordova, and much better than the original tables of al-Khwārazmī, preserved in another source. (For an overview of the origin of the various tables in the Latin version see van Dalen, *Al-Khwārizmī's tables revisited*, 196-211.)

Al-Khwārazmī's astronomical tradition was never fully abandoned in al-Andalus or in the Maghrib. It was followed by Ibn Muʿādh (d. 485/1093) in his *Tabulae Jahen* (that is, the *zīdj* of Djayyān: Jaén in al-Andalus), of which only the canons are extant in a Latin translation by Gerard of Cremona (see H. Hermelink, *Tabulae Jahen*, in *AHES*, ii [1964], 108-12). Arabic passages of these canons as well as tabular materials have been discovered in late Maghribī sources (see Samsó and H. Mielgo, *Ibn Isḥāq al-Tūnisī and Ibn Muʿādh al-Jayyānī on the Qibla*, first published in Samsó, *Studies*, no. VI; A. Mestres, in *Vernet Festschrift*, i, 402-3, 435; Samsó, *ibid.*, ii. 601-10; and idem, in *ZGAIW*, xi [1997], 91-2).

Far more successful were the *Toledan Tables*, the result of an adaptation of the available astronomical material (mainly al-Khwārazmī and al-Battānī) to the coordinates of Toledo made by a group of Toledan astronomers led by the famous *ḳāḍī* Ṣāʿid al-Andalusī (d. 462/1070 [*q.v.*]). Even if the results achieved were not brilliant, the mean-motion tables are original and constitute the result of a programme of observations which must have begun earlier than 460/1068 and which was continued by Ibn al-Zarḳālluh (Azarquiel) (d. 493/1100 [see al-Zarḳālī]), one of the collaborators of *ḳāḍī* Ṣāʿid, until much later. (On the *Toledan Tables* and Ibn al-Zarḳālluh's *Almanac*, see G.J. Toomer, *A survey of the Toledan Tables*, in *Osiris*, xv [1968], 5-174; L. Richter-Bernburg, *Ṣāʿid, the Toledan Tables, and Andalusī science*, in *Kennedy Festschrift*, 373-401; F.S. Pedersen, *Canones Azarchelis. Some versions and a text*, in *Cahiers de l'Institut du Moyen Age Grec et Latin* (Copenhagen), liv [1987], 129-218; J.-M. Millás Vallicrosa, *Estudios sobre Azarquiel*, Madrid-Granada 1943-50, 72-237; and R. Mercier, *Astronomical tables in the twelfth century*, in *Adelard of Bath. An English scientist and arabist of the early twelfth century*, ed. C. Burnett, London 1987, 87-118, esp. 104-12. On the date of the *Toledan Tables*, see Samsó and H. Berrani, *World-astrology in eleventh century al-Andalus: the Epistle on* tasyīr *and the projection of the rays by al-Istijjī*, in *JIS*, x [1999], 293-312. An edition of the *Toledan tables* is being prepared by F.S. Pedersen.) These tables, like those of al-Khwārazmī, presented sidereal longitudes but added trepidation tables allowing the calculation of tropical longitudes. The topic of trepidation studied by several members of Ṣāʿid's team (Ṣāʿid himself, Ibn al-Zarḳālluh and Abū Marwān al-Istidjdjī), together with other theoretical innovations developed by Ibn al-Zarḳālluh (cycles that regulate the obliquity of the ecliptic, motion of the solar apogee, solar model with variable eccentricity, corrections in the Ptolemaic lunar model), became standard in the Andalusī and Maghribī tradition. Ibn al-Zarḳālluh also adapted a perpetual *Almanac* from a Hellenistic work computed by a certain Ammonius in the 3rd or 4th century A.D., which allowed astrologers to obtain planetary longitudes without all the computation involved in the use of a *zīdj*. (This was published in Millás Vallicrosa, *op. cit.*, 72-237; preliminary analysis in M. Boutelle, *The Almanach of Azarquiel*, in *Centaurus*, xii [1967], 12-19, repr. in Kennedy *et al.*, *Studies*, 502-10; corrections

by N. Swerdlow, in *Mathematical Reviews*, xli/4 [1971], no. 5149; also Samsó, *Ciencias de los Antiguos*, 166-71.) This kind of table was often used in al-Andalus, the Maghrib and mediaeval Christian Spain (see below on the tables of Zacut).

Ibn al-Kammād (active in Cordova *ca.* 510/1110) and Ibn al-Hā'im (*fl. ca.* 600/1200) wrote *zīdj*s in the Zarkāllian tradition. The former was probably a disciple of Ibn al-Zarkālluh and composed three such works, of which only one, *al-Muktabas*, is extant in a Latin translation, although materials from the other two can be recovered in Castilian translations or in Maghribī sources. Ibn al-Kammād (like Ibn al-Hā'im, Ibn Ishāk, Ibn al-Rakkām in his *Shāmil Zīdj*, and Ibn ʿAzzūz al-Kusantīnī, on whom see below) apply the Zarkāllian motion of the solar apogee (1° in 279 Julian years) to that of the apogees of the other planets, which poses the problem of establishing whether this was Ibn al-Kammād's contribution or whether it already appeared in the lost work of Ibn al-Zarkālluh. Apart from Zarkāllian materials, Ibn al-Kammād also used other sources such as Yaʿkūb b. Ṭārik (*fl. ca.* 175/790) and the *Mumtaḥan Zīdj* of Yaḥyā b. Abī Manṣūr (*fl.* A.D. 830), which seems to have been known to Maslama. Ibn al-Kammād deviated from Zarkāllian orthodoxy in several items, such as his trepidation model (in which trepidation of the equinoxes is connected to the oscillation of the obliquity of the ecliptic), and he was strongly criticised by Ibn al-Hā'im, who dedicated his *al-Zīdj al-kāmil fi 'l-taʿālīm* to the Almohad caliph Abū ʿAbd Allāh Muḥammad al-Nāṣir (595-610/1199-1213). This work is not a standard *zīdj* as it contains an extremely elaborate set of canons (173 pages in the unique ms. Oxford Bodl. Marsh 618), with careful geometrical proofs, but no numerical tables. It also contains a great amount of historical information on the work done by the Toledan school in the 5th/11th century, as well as corrections in the Zarkāllian parameters. (On Ibn al-Kammād, see J. Chabás and B.R. Goldstein, *Andalusian astronomy*: al-Zīj al-Muqtabis [*sic*] *of Ibn al-Kammād*, in *AHES*, xlviii [1994], 1-41; idem, *Ibn al-Kammād's star list*, in *Centaurus*, xxxviii [1996], 317-34; J.L. Mancha, *On Ibn al-Kammād's table for trepidation*, in *AHES*, lii [1998], 1-11. On Ibn al-Hā'im's *Kāmil Zīdj*, see E. Calvo, *Astronomical theories related to the sun in Ibn al-Hā'im's* al-Zīj al-Kāmil fī 'l-taʿālīm, in *ZGAIW*, xii [1998], 51-111; and two new studies, R. Puig, *The theory of the moon in the* al-Zīj al-Kāmil fī-l-taʿālīm *of Ibn al-Hā'im (ca. 1205)*, in *Suhayl*, i [2000], 71-99, and M. Comes, *Ibn al-Hā'im's trepidation model*, in *ibid.*, ii [2001]. The *Muktabas Zīdj* seems to be the main source of the astronomical tables prepared in the 14th century for King Peter IV of Aragon (Chabas, *Astronomia andalusí en Cataluña: las Tablas de Barcelona*, in *Vernet Festschrift*, i, 477-525).

After Ibn al-Hā'im, the main development of Western *zīdj*s took place in the Maghrib. There, already at the beginning of the 5th/11th century, the famous astrologer Ibn Abi 'l-Ridjāl al-Kayrawānī [*q.v.*] had composed a *zīdj* entitled *Hall al-ʿakd wa-bayān al-raṣd*, which has not survived. No other *zīdj*s are extant until *ca.* 600/1200, when we have the set of tables prepared by Abu 'l-ʿAbbās Ibn Isḥāk al-Tamīmī al-Tūnisī (*fl.* Tunis and Marrakesh *ca.* 589-619/1193-1222), which survive, among other materials, in a unique Ḥaydarābād manuscript (copied in Ḥimṣ in 716-17/1317). According to Ibn Khaldūn [*q.v.*], Ibn Isḥāk's tables were based on observations made by a Sicilian Jew; this does not seem to be true and Ibn Isḥāk's authentic tables seem to derive directly from the Andalusī tradition. But Ibn Isḥāk's *zīdj* was left unfinished; it lacked an adequate set of canons and four "editions" at least of this work were prepared, in the Maghrib, by three different astronomers of the end of the 7th/13th and beginning of the 8th/14th centuries. One of them was the compiler of the Ḥaydarābād manuscript, who, *ca.* 665-80/1266-81, added to the original *zīdj* an impressive collection of materials (both canons and numerical tables) in which the predominant influence is clearly Andalusī, but the compilation was enormous and ill-suited for practical use. (See now the publications of A. Mestres listed in the *Bibl.*)

Ibn al-Bannā' of Marrakesh (654-721/1256-1321 [*q.v.*]) wrote his *Minhādj al-ṭālib fi taʿdīl al-kawākib* with an entirely different structure, mainly a selection of Ibn Isḥāk's tables accompanied by a readily comprehensible collection of canons which makes the *zīdj* accessible for the computation of planetary longitudes. This is accompanied by some formal modifications intended to make calculations easier: for the first time in the western Islamic world Ibn al-Bannā' uses "displaced" equations for the Sun and the planetary equations of the centre, and he applies the Ptolemaic lunar method of calculation to the computation of the equation of anomaly of Saturn and Jupiter which, like the Moon, have small epicycles. (See J. Vernet, *Contribución al estudio de la labor astronómica de Ibn al-Bannā'*, Tetuán 1952; Samsó, *Studies*, no. X; and Samsó and E. Millás, *The computation of planetary longitudes in the Zīj of Ibn al-Bannā'*, in *ASP*, viii [1998], 259-86.)

The two other "editions" of Ibn Isḥāk's *zīdj* were prepared by Muḥammad b. al-Rakkām (*fl.* Tunis and Granada, d. 715/1315). His two *zīdj*s are entitled *al-Zīdj al-shāmil fi tahdhīb al-Kāmil* and *al-Zīdj al-kawīm fi funūn al-taʿdīl wa 'l-takwīm*. The former was composed in Tunis in 679/1280-1 by copying, word for word, the canons of Ibn al-Hā'im's *Kāmil Zīdj*, but omitting all the careful geometrical demonstrations. To this he added the numerical tables of Ibn Isḥāk. The *Kawīm Zīdj* seems to contain a simplified rewording of the canons of the *Shāmil Zīdj* but it adds a few tables adapted to the geographical coordinates of Granada—after Ibn al-Rakkām's arrival in this city under Muḥammad II (671-701/1273-1302)—for which the author uses a latitude of 37;10°, identical to the modern value. (See E.S. Kennedy, *The Astronomical tables of Ibn al-Raqqām, a scientist of Granada*, in *ZGAIW*, xi [1997], 35-72. A partial edition of, and commentary on the *Shāmil Zīdj* is M. ʿAbd al-Raḥmān, *Ḥisāb aṭwāl al-kawākib fi 'l-Zīj al-shāmil fī tahdhīb al-Kāmil li-Ibn al-Raqqām*, diss. University of Barcelona 1996, unpubl.) A third *zīdj* by Ibn al-Rakkām, *al-Zīdj al-mustawfi*, is extant in Rabat and Tunis, but the relation between it and the *Zīdj* of Ibn Isḥāk has not yet been studied.

The Andalusī tradition was also developed by two astronomers from Constantine who were active in Fez in the 8th/14th century. One of them is Ibn ʿAzzūz al-Kusantīnī (d. 755/1354), who compiled his *al-Zīdj al-muwāfik* correcting the mean motion parameters in Ibn Isḥāk's *zīdj* on the basis of observations made in Fez *ca.* 745/1345, later corrected using a peculiar "experimental" method: the mean motions were adjusted for casting horoscopes which could fit the historical reality of well-known events of the past, such as the battle of Faḥṣ Ṭarīf (El Salado, 741/1340). Other materials in this *zīdj* also derive from Andalusī sources, mainly Ibn al-Kammād, but it also contains interesting information such as tables of planetary velocities (also attested in the Alfonsine tradition), and

the oldest mention of a lunar cycle of 11,325 days which can be used for the computation of lunar longitudes using almanac techniques. (See Samsó, *Andalusian astronomy in 14th century Fez*: al-Zīj al-Muwāfiq *of Ibn ʿAzzūz al-Qusanṭīnī*, in *ZGAIW*, xi [1997], 73-110; idem, *Horoscopes and history. Ibn ʿAzzūz and his retrospective horoscopes related to the Battle of El Salado (1340)*, in *North Festschrift*, Leiden 1999, 101-24.) Ibn ʿAzzūz included in his *Zīdj* a table for planetary velocities that is also found in many Latin copies; the original compiler of this table has not been determined, but he was almost certainly Andalusī. (See Samsó, al-Zīj al-Muwāfiq, 88-9, 104-5; Goldstein, Chabás and J.L. Mancha, *Planetary and lunar velocities in the Castilian Alfonsine tables*, in *Procs. Amer. Philosophical Soc.*, cxxxviii [1994], 61-95.)

Another person of the same origin, Abu 'l-Ḥasan ʿAlī al-Ḳusanṭīnī, compiled a small *zīdj*, the canons of which were written in verse so that they could easily be learnt by heart. This work is the only known Western Islamic document extant in Arabic in which the planetary theory is Indian and not Ptolemaic. In addition to this material, ultimately due to al-Khʷārazmī, this *zīdj* also however shows the influence of Ibn Isḥāḳ and Ibn al-Bannāʾ. (See E.S. Kennedy and D.A. King, *Indian astronomy in fourteenth-century Fez: the versified* Zīj *of al-Qusunṭīnī* [*sic*], in *JHAS*, vi [1982], 3-45, repr. in King, *Studies*, A-VIII.)

The *zīdj*s derived from Ibn Isḥāḳ were used in the Maghrib until the 13th/19th century, for they allowed the computation of sidereal longitudes which were used by astrologers. We have, however, a limited amount of information about observations made in the Maghrib in the 7th/13th and 8th/14th centuries which established that precession exceeded the amounts fixed in "Andalusī" trepidation tables and that the obliquity of the ecliptic had fallen below the limits of Ibn al-Zarḳālluh's model and tables. This explains the introduction of eastern *zīdj*s in the Maghrib from the 8th/14th century onwards. In them, mean motions were tropical, trepidation was replaced by constant precession and there were no tables to compute the obliquity of the ecliptic. The *Tādj al-azyādj* of Ibn Abi 'l-Shukr al-Maghribī (d. 680/1283) and the *al-Zīdj al-djadīd* of Ibn al-Shāṭir (d. 777/1375) were known in Tunis from the late 8th/14th century onwards, while the *Zīdj-i sulṭānī* of Ulugh Beg was known in the Maghrib towards the end of the 11th/17th, and it became very popular during the next two centuries. There were at least two Tunisian recensions of this *zīdj* prepared by Muḥammad al-Sharīf, called Sandjaḳ Dār al-Tūnisī, and by ʿAbd Allāh Ḥusayn Ḳuṣʿa al-Tūnisī; the former was produced in the late 11th/17th century and it contains, for the first time in the Maghrib, double-argument tables which combine the equation of the centre with the equation of the anomaly. The transmission was not all one-way; e.g. the Maghribī astronomer Abū ʿAlī al-Marrākushī [*q.v.*], who was active in Cairo *ca.* 680/1280, mentioned Ibn al-Zarḳālluh and Ibn al-Kammād in his monumental book on instrumentation, *Mabādiʾ wa-ghāyāt*. Also, the unique Ḥaydarābād manuscript of the *Zīdj* of Ibn Isḥāḳ was copied in Syria, and fragments attributed to the same author are found in various Yemeni sources.

The change of mentality represented by these eastern *zīdj*s also reached the Maghrib in the 10th/16th century through a different channel. The Jewish astronomer of Salamanca, Abraham Zacut, left Portugal in 1496 and lived in Fez, Tlemcen and Tunis until at least 911/1505. In one of these cities he compiled a new set of astronomical tables (1501) and his perpetual *Almanac* was translated from the printed Castilian version of 1496 into Arabic in the Maghrib in the early 11th/17th century by Aḥmad b. Ḳāsim al-Ḥadjarī. The new Arabic tables were the object of several commentaries. The *Almanac* represented not only a renewal of the old Andalusī tradition but also the introduction in the Maghrib of Alfonsine astronomy and of the astronomical research made in Southern France by Levi ben Gerson in the 14th century. It was still used in Morocco in the 19th century. (See Goldstein, *The Hebrew astronomical tradition: new sources*, in *Isis*, lxxii [1981], 237-51; idem, *Abraham Zacut and the medieval Hebrew astronomical tradition*, in *JHA*, xxix [1998], 177-86; and now Chabás and Goldstein, *Astronomy in the Iberian Peninsula. Abraham Zacut and the transition from manuscript to print*, in *Trans. Amer. Philosophical Soc.*, Philadelphia 2000.)

iv. The Contents of *zīdj*s

1. *Sexagesimal alphanumerical notation.*

The entries in the tables in *zīdj*s and other corpora of tables are expressed sexagesimally, that is, to base 60, although integers are invariably expressed decimally. (In the modern notation standard in the history of the exact sciences, a number expressed in the form a,b;c,d stands for $a \times 60 + b + c \div 60 + d \div 3600$.) The entries are written in Arabic alphanumerical notation [see abdjad], with the attendant traps for the careless copyist and the trusting reader. One of the challenges to modern investigators is the restoration of original values from carelessly-copied entries. The standard errors are inevitable or careless or compound. "Inevitable" refers to those cases where the omission of a diacritical point or two in one copy of a table invites an ambiguous interpretation in the next copy (thus, 14 ↔ 54 or 38 ↔ 33 or 80 ↔ 100). "Careless" refers to situations where the sloppy rendition of one letter or ligature leads to its misinterpretation as another (thus, 0 ↔ 5, 14 ↔ 15, 40 ↔ 47, 50 ↔ 7, 20 or 21 ↔ 9, 38 ↔ 18, 44 ↔ 47, or 18 ↔ 70). "Compound" refers to a combination of the previous two (thus 14 ↔ 15 ↔ 55 or 58 ↔ 18 ↔ 13 or 150 ↔ 87). (See R.A.K. Irani, *Arabic numeral forms*, in *Centaurus*, iv [1955], 1-12, repr. in Kennedy *et al.*, *Studies*, 710-21; Kennedy and Kennedy, *Islamic geographical tables*, x; Kunitzsch, *Sternkatalog des Almagest* (cited below, 10), i, 19-21; and King, *World-maps*, 161-63.)

2. *Chronology and calendar conversion.*

All *zīdj*s begin with one or more chapters and sets of tables devoted to the definition of the various eras and calendars in use at the time and place of writing, to methods of converting dates from one calendar to another, and to the problem of determining the *madkhal*, that is, the day of the week corresponding to the first day of a given year and month in a given calendar. The most common are the lunar Hidjra calendar and various solar calendars, including the Seleucid (Alexander), the Coptic (Diocletian), and the Persian (Yazdidjird), and, in the West, the Julian (A.D. and Spanish Era). The Persian calendar, using the Egyptian year of 365 days and no intercalation, is particularly convenient for astronomical purposes. Less commonly treated calendars are the Jewish, Syrian, Mālikī, Śaka and Chinese-Uighur [see ta'rīkh. 2.]. A few *zīdj*s treat the lunar mansions and the Arab system of dividing the year according to the mansions [see manāzil and anwāʾ].

3. *Trigonometry.*

All *zīdj*s contain trigonometric tables, usually of at least the sine (*al-djayb*) and the cotangent (*al-ẓill*) func-

tions. The sine, first used by Indian astronomers, replaced the Ptolemaic chord function (*al-watar*) amongst the Muslims. The argument of the sine was an arc (rather than an angle) θ of a circle of radius R units, where R is a base, usually 60, occasionally 1. In the Indian tradition R was usually taken as 150; in the Hellenistic tradition it was taken as 60. The mediaeval sine function is denoted by Sin θ and is related to Ptolemy's chord function and the modern function by: $\text{Sin}\,\theta = 1/2\ \text{Chd}\,(2\theta) = R \sin\theta$. In timekeeping, the versed sine (*al-sahm*) [*q.v.*] was also used ($\text{Vers}\,\theta = R - \text{Cos}\,\theta$), and occasionally also the cosecant function (*kuṭr al-ẓill*) ($\text{Cosec}\,\theta = R^2/\text{Cos}\,\theta = R \operatorname{cosec}\theta$). The earliest sine tables, from the 3rd/9th century, gave values to three sexagesimal places for each 1° of argument. By the 9th/15th century, accurate tables were available displaying the function to five places for each minute of argument. This was achieved by first deriving a very precise value of Sin 1° and utilising a clever method of second-order interpolation. The cotangent function invariably had the solar altitude as argument, and used a base equal to the length of a gnomon, so that the function measures the length of the horizontal shadow cast by the gnomon. The units for the gnomon length used were 12 digits (*iṣba*ʿ, pl. *aṣābi*ʿ), or 7 feet (*ḳadam*, pl. *aḳdām*), although other values were also used. Al-Bīrūnī has a detailed discussion in his treatise *On shadows* (*Ifrād al-maḳāl fī amr al-ẓilāl*). The cotangent function was also first tabulated in the 3rd/9th century.

Trigonometric functions were occasionally tabulated independently, that is, not in *zīdj*s. Various procedures were used for interpolation in tables [see TAʿDĪL BAYN AL-SAṬRAYN]. (See further Kennedy, *Zīj survey*, 139-40; Schoy, *Beiträge zur arabischen Trigonometrie*, in *Isis*, v [1923], 364-99, and idem, *Die Gnomonik der Araber*, Bd. I: F of E. von Bassermann-Jordan (ed.), *Die Geschichte der Zeitmessung und der Uhren*, Berlin and Leipzig 1923, both repr. in idem, *Beiträge*, ii, 448-83 and 351-447; al-Bīrūnī, *Shadows*, 71-80. See also J.L. Berggren, *Episodes in the mathematics of medieval Islam*, New York, etc. 1986, 127-56.)

4. *Spherical astronomical functions.*

The study of spherical astronomy, sc. the mathematics of the celestial sphere and of the apparent daily rotation of the sphere, was of prime concern to Muslim astronomers, not least because of the importance of astronomical time-keeping [see MĪḲĀT]. The formulae for deriving time from solar or stellar altitude were known from the 2nd/8th century onwards and are discussed in every *zīdj*. (On the basic tables for spherical astronomy, see Kennedy, *Zīj survey*, 140-1; D.A. King, *Astronomical works of Ibn Yūnus*; al-Bīrūnī, *Maḳālīd*; al-Marrākus̲h̲ī, *Mabādiʾ wa-g̲h̲āyāt*; Berggren, *Spherical astronomy in Kūshyār ibn Labbān's* Jāmiʿ Zīj, in *Kennedy Festschrift*, 15-33; Kennedy, *Spherical astronomy in al-Kāshī's* Khāqānī Zīj, in *ZGAIW*, ii [1990], 1-46, repr. in idem, *Studies*, no. VII.)

We can distinguish between several groups of functions that were regularly tabulated in *zīdj*s:

a. The solar declination as a function of solar longitude. Underlying such tables was a value for the obliquity of the ecliptic, a parameter which changes slowly with time [see MAYL; S̲H̲AMS; MINṬAḲA].

b. The half length of daylight for different latitudes, as a function of solar longitude, in equatorial degrees and minutes, or in hours and minutes. Sometimes the latitude-dependent tables would be presented for the climates of Antiquity [see IḲLĪM].

c. The right ascensions as a function of ecliptic longitude, defining the rising time of a given arc of the ecliptic (measured from the vernal point) over the horizon at the equator, and the oblique ascensions, defining the corresponding times for the horizons of different localities [see MAṬĀLIʿ]. Often the latter would be tabulated for a series of latitudes.

d. The solar meridian altitude, and less frequently the rising amplitude of the Sun and the solar altitude in the prime vertical, all for specific latitudes. Likewise the solar altitude in the azimuth of the *ḳibla* [*q.v.*] for specific localities, also tabulated for each degree of solar longitude.

e. Certain functions with no immediate astronomical significance were also tabulated on account of their utility in the computation of other functions. We may mention as examples such "auxiliary" functions as the tangent of the declination (labelled *fuḍūl al-maṭāliʿ li 'l-arḍ kullihā*), the sine of the right ascension (*dj̲ayb al-maṭāliʿ*), and the product of the cosines of the declination and the terrestrial latitude (*al-aṣl al-muṭlaḳ*) (see King, *SATMI*, i). The culmination of this activity was the compilation of sets of tables of a series of such functions, combinations of which could yield solutions to problems of spherical astronomy for any latitude. Of these only the auxiliary tables of Ḥabas̲h̲ al-Ḥāsib are found in a *zīdj*: see further below, v. CATEGORIES OF TABLES NOT CONTAINED IN *ZĪDJ*S, 7.

Numerous other minor tables are found in corpora of tables relating to astronomical time-keeping, independent of *zīdj*s; see below, *ibid.*, 8. These collections also contain some more extensive tables for time-keeping; the only variety of these occasionally found in *zīdj*s is a table displaying the time (T) since rising of the Sun or any star as a function of the meridian altitude (H) and the instantaneous altitude (h), for a specific latitude: these tables are trapezoidal in shape since $h < H$ and are called *zīdj al-ṭaylasān*, after the name of a shawl.

5. *Planetary mean motions, equations and latitudes.*

These constitute the hard core of all *zīdj*s. Extensive tables display the epoch positions and the mean motions (*wasaṭ*, pl. *awsāṭ*) of the "planets" (*al-kawākib al-sayyāra* or *al-mutaḥayyara*), that is, the Sun, Moon and five naked-eye planets. The tables are intended for a specific terrestrial longitude, usually that of the locality where the *zīdj* was compiled; if required, they can easily be modified to the meridian of another locality. The motions for a given number of completed years, months, days and hours are be added to the epoch positions (Ar. *aṣl*, Lat. *radix*) to derive the actual mean positions. These then needed to be modified by equations (*taʿdīl* [*q.v.*], pl. *taʿādīl*) to derive the true ecliptic positions (sometimes called *al-muḥkam* or *al-muʿaddal*). The operation of finding the true positions is called *taḳwīm* [*q.v.*], an expression also used for ephemerides. In the Ptolemaic tradition, the equations are calculated by successive applications of a series of auxiliary trigonometric functions for each planet [see S̲H̲AMS, and more especially ḲAMAR and TAʿDĪL]. (See Kennedy, *Zīj survey*, 141-2; Kennedy and H. Salam, *Solar and lunar tables in early Islamic astronomy*, in *JAOS*, lxxxvii [1967], 492-7, repr. in Kennedy *et al.*, *Studies*, 108-13.) More extensive double-argument tables for the equations are sometimes found in *zīdj*s (see M.J. Tichenor, *Late medieval two-argument tables for planetary longitudes*, in *JNES*, xxvi [1967], 126-8, repr. in Kennedy *et al.*, *Studies*, 122-4; C. Jensen, *The lunar theories of al-Baghdādī*, in *AHES*, viii [1971-2], 321-8; and G. Saliba, *The double-argument lunar tables of Cyriacus*, in *JHA*, vii (1976), 41-6), and sometimes tabulated separately (see below, *Categories of Tables*, 6). The apogees (*awdj*, pl. *awdj̲āt*) of the planets need to

be considered in such calculations, and their positions, which vary with time, were also tabulated. Occasionally, especially—but not only—in Andalusī and Maghribī *zīdj*s, we find tables relating to trepidation (*al-iḳbāl wa 'l-idbār*), the presumed oscillation of the equinoxes; see above, iii. AN OVERVIEW, 4. Additional auxiliary tables enabled the computation of the planetary latitudes (*al-ʿarḍ*). In the case of the Moon, a single table would suffice, the argument being the nodal distance, derived from the lunar longitude and the position of the ascending node, which was tabulated along with the mean motions. In the calculation of solar and lunar eclipses (see below), also the equation of time [see TAʿDĪL AL-ZAMĀN], that is, the difference between true and mean solar time, with a maximum of around 30 minutes, had to be considered; tables for this function were likewise standard *zīdj*s. (See, most recently, Kennedy, *Two medieval approaches to the equation of time*, in *Centaurus*, xxxi [1988], 1-8, repr. in idem, *Studies*, no. VIII; van Dalen, *Al-Khwārizmī's tables revisited: analysis of the equation of time*, in *Vernet Festschrift* i, 195-252.) All of the necessary instructions for using these various tables are found in the typical *zīdj*.

6. *Planetary stations and visibility*.

Additional tables enabled the investigation of the direct and retrograde motions of the planets, their stations, and their visibility, which depends on their apparent elongation from the Sun.

7. *Solar and lunar parallax and eclipses*.

In *zīdj*s we also find tables for calculating the parallax of the Sun and Moon (*ikhtilāf al-manẓar*), preparatory to the prediction of eclipses (*kusūf* for the Sun and *khusūf* for the Moon [see KUSŪF]). This would be achieved by means of tables of the times of syzygies, of true solar and lunar motions in small critical periods of time, of apparent solar and lunar radii, and others. (See Kennedy, *Zīj survey*, 143-4; idem, *Parallax theory in Islamic astronomy*, in *Isis*, xlvii [1956], 33-53, repr. in idem *et al.*, *Studies*, 164-84.)

8. *Lunar visibility*.

Particular attention was paid by Muslim astronomers to the prediction of the visibility of the lunar crescent on the first evening after a conjunction of the Sun and Moon [see RUʾYAT AL-HILĀL]. From the 3rd/9th century onwards, tables were prepared to facilitate such predictions, underlying which were limiting conditions on various functions based on the apparent positions of the Sun and Moon relative to each other and to the local horizon. Numerous such tables, of varying sophistication and complexity, are found in various *zīdj*s. (See, for example, King, *Some early Islamic tables for determining lunar crescent visibility*, in *Kennedy Festschrift*, 185-225, repr. in idem, *Studies*, C-II; and J.P. Hogendijk, *Three Islamic lunar crescent visibility tables*, in *JHA*, xix [1988], 29-44.)

9. *Geographical tables*.

Tables displaying longitudes and latitudes of numerous localities are standard in *zīdj*s. They have been published in various formats, that is, according to locality, source, increasing longitudes and increasing latitudes, by E.S. and M.H. Kennedy, who provided a valuable research tool (*Geographical coordinates of localities from Islamic sources*, Frankfurt am Main 1987) that is currently being extended by M. Comes of Barcelona. These geographical coordinates were included in *zīdj*s in order to facilitate the use of planetary tables for other meridians, for which the longitude difference has to be taken into consideration, and also for computing the *ḳibla*. A minority of tables also display the *ḳibla* for each locality.

10. *Star catalogues*.

In a typical *zīdj* we find a table displaying the ecliptic or equatorial coordinates of selected stars [see NUDJŪM]. Procedures for coordinate conversion are also described. The star catalogue in the Arabic *Almagest* has been published by P. Kunitzsch (*Claudius Ptolemäus-Der Sternkatalog des Almagest-Die arabisch-mittelalterliche Tradition*, 3 vols., Wiesbaden 1986-91; see also idem, *Studies*, as well as *Kunitzsch Festschrift*). More research is necessary to establish the relationships between individual star catalogues, not all of which are related in a trivial way to that in the *Almagest*. Thus, for example, the tables in the *Kitāb Ṣuwar al-kawākib, On constellations*, by ʿAbd al-Raḥmān al-Ṣūfī [*q.v.*], and those in the *Zīdj* of Ulugh Beg, are essentially Ptolemaic (see E.B. Knobel, *Ulughbeg's catalogue of stars*, Washington, D.C. 1917; M.Y. Shevchenko, *An analysis of the errors in the star catalogues of Ptolemy and Ulugh Beg*, in *JHA*, xxi [1990], 187-201; K. Krisciunas, *A more complete analysis of the errors in Ulugh Beg's star catalogue*, in *JHA*, xxiv [1993], 269-80). Independent star-tables are found in the *Mumtaḥan Zīdj*, the *Ḥākimī Zīdj*, the *Huihui li* (a Chinese tr. of an independent Islamic *zīdj*), etc.

11. *Tables for mathematical astrology*.

*Zīdj*s usually contain tables useful for astrological purposes [see NUDJŪM, AḤKĀM AL-] notably, for drawing up a horoscope for a certain moment or for a series of such moments, such as each year in the life of an individual. Given the horoscopus or ascendant, that is, the point of the ecliptic instantaneously rising over the horizon [see ṬĀLIʿ], one needs to determine the positions of the astrological houses and to assign the Sun, Moon and five naked-eye planets to the appropriate house, and then to investigate the supposed significance of their positions relative to each other. Some *zīdj*s contain tables displaying the ecliptic longitudes of the cusps of the houses as a function of the longitude of the horoscopus, for a fixed latitude. Occasionally we find tables displaying the longitude of the horoscopus as a function of the altitude of the Sun throughout the year or of various fixed stars, also for a fixed latitude. Various tables in *zīdj*s serve the astrological notions of the "projections of the rays" (*maṭāriḥ al-shuʿāʿāt*), the "year transfers" (*taḥāwīl al-sinīn*), the "excess of revolution" (*faḍl al-dawr*), and the duration of gestation (*makth al-mawlūd fī baṭn ummihi*) (see Kennedy and H. Krikorian-Preisler, *The astrological doctrine of projecting the rays*, in *Al-Abhāth*, xxv [1972], 3-15, repr. in Kennedy *et al.*, *Studies*, 372-84; several papers in Kennedy *et al.*, *Studies*, 311-84, and idem, *Studies*, nos. XV-XVIII; idem, *The astrological houses as defined by medieval Islamic astronomers*, in *Vernet Festschrift*, ii, 535-78, repr. in Kennedy, *Studies*, no. XIX; Hogendijk, *The mathematical structure of two Islamic astrological tables for casting the rays*, in *Centaurus*, xxxii [1989], 171-202; idem, *Mathematical astrology in the Islamic tradition* (dealing with houses, rays and progressions), in a forthcoming publication including selected papers given at a conference "New perspectives on science in medieval Islam" held at the Dibner Institute, Cambridge, Mass., 6-8 Nov. 1998; see also below, v. CATEGORIES OF TABLES NOT CONTAINED IN ZĪDJS, 12.) We may also find tables of the positions of the elusive, not least because fictitious, astrological body *al-Kayd* [*q.v.*]. Of all the aspects of mediaeval Islamic astronomy, mathematical astrology is the least researched.

12. *Analysis of tables and parameters*.

Already in the early 1960s, Kennedy applied the electronic computer to facilitate the analysis of medi-

aeval tables, an activity that was continued by some of his students and independently by R. Mercier. A third generation of younger researchers is currently active: statistical techniques have been applied to individual tables and groups of tables, notably by B. van Dalen and G. Van Brummelen. The former scholar has reactivated a file of over 2,000 parameters found in *zīdj*s which was started by Kennedy. (See Kennedy, *The digital computer and the history of the exact sciences*, in *Centaurus*, xii [1968], 107-13, repr. in idem *et al.*, *Studies*, 385-91; van Dalen, *Ancient and mediaeval astronomical tables: mathematical structure and parameter values*, Utrecht 1992; idem, *A statistical method for recovering unknown parameters from medieval astronomical tables*, in *Centaurus*, xxxii [1989], 85-145; G. Van Brummelen, A *survey of the mathematical tables in Ptolemy's* Almagest, in A. von Gotstedter (ed.), *Ad radices* . . ., Stuttgart 1994, 155-70; and Mielgo, *A method of analysis for mean motion astronomical tables*, in *Vernet Festschrift*, i, 159-80.)

v. Categories of tables not contained in *zīdj*s

The varieties of tables mentioned here rarely occur in *zīdj*s, sometimes because the individual tables were even more voluminous than a typical *zīdj*, occasionally because they are more suited to inclusion in treatises on instruments, or simply because they formed part of a corpus of tables for time-keeping for a specific latitude.

1. *Sexagesimal multiplication tables.*

These are tables of sexagesimal products m × n (m, n: 1, 2, . . ., 60) and they are common in the manuscript sources (*al-djadwal al-sittīnī*); they invariably contain some 3,600 entries. Less common were larger tables for m = 0;1, 0;2, . . . 59;59 and n = 1, 2, . . ., 60 containing some 216,000 entries (aptly called *al-djadwal al-sittīnī al-kabīr*). These were of use in the extensive sexagesimal calculations involved in working with a *zīdj*. (See further King, *On medieval Islamic multiplication tables*, in *HistMath*, i [1974], 317-323, and idem, *Supplementary notes* . . ., in *ibid.*, vi [1979], 405/17, repr. in idem, *Studies*, A-XIV and XV.)

2. *Trigonometric tables.*

In Mamlūk Egypt, the sine and cotangent functions for each minute of argument were tabulated separately. Such tables, to greater accuracy, were found in the *Sulṭānī Zīdj* of Ulugh Beg (see above), and these were also copied separately.

3. *Ephemerides.*

Ephemerides displaying positions of the Sun, Moon and five planets for each day of a given year were compiled already in Baghdad in the 3rd/9th century and the production continued in various centres until the 13th/19th century. [For details, see taḳwīm.]

4. *Auxiliary tables for compiling ephemerides.*

Since the motions of the Sun, Moon and planets are cyclical, a given set of tables defining one complete cycle can be used to calculate positions by simply plugging into the table at the right place for beginning of a given year: the positions for the entire year can then be derived with facility. This was recognised already in Antiquity, and some Islamic tables reflect this, for example, the tables of Ibn al-Zarḳālluh and Zakut, which could be used to calculate individual positions. Two other sets of such auxiliary tables specifically for generating ephemerides are known, but there are surely more: an anonymous set for the Sun and Moon, compiled in Persia at the end of the 5th/11th century, and tables for the Sun and Moon compiled by Ibn al-Madjdī in Cairo in the 9th/15th century, with tables for the planets contributed by various later Egyptian astronomers (see Kennedy, *A set of medieval tables for quick calculation of solar and lunar ephemerides*, in *Oriens*, xviii-xix [1967], 327-34, repr. in idem *et al.*, *Studies*, 114-21; and idem and King, *Ibn al-Majdī's tables for calculating ephemerides*, in *JHAS*, iv [1980], 48-68, repr. in King, *Studies*, A-VI).

5. *Tables for determining lunar crescent visibility.*

In addition to the tables in *zīdj*s, we also find occasional sets of calculations for visibility over a series of months, or lists of minimum apparent distances between the Sun and Moon to assure visibility, with values given to the nearest degree for each zodiacal sign [see ru'yat al-hilāl].

6. *Double-argument planetary equation tables.*

In the case of the extensive lunar equation tables attributed to Ibn Yūnus [*q.v.*], these are not presented in a *zīdj*, although the unique manuscript is labelled as such (see King, *A Double argument table for the lunar equation attributed to Ibn Yūnus*, in *Centaurus*, xviii [1974], 129-46, repr. in idem, *Studies*, A-V). Numerous later sets from Egypt to India were likewise copied separately.

7. *Auxiliary tables for solving spherical astronomical problems for all latitudes.*

Muslim astronomers compiled several sets of tables of trigonometric functions with no specific significance but so conceived that ordered applications of them could lead to the solution of problems of spherical astronomy (see already above, iv. The Contents of *zīdj*s, 4). Their progress in mathematical methods is well reflected in these tables, of which over a dozen sets are known (these are surveyed in King, *SATMI*, i-9). The four most significant examples are the following: the *Djadwal al-taḳwīm* of Ḥabash al-Ḥāsib (Baghdād and Sāmarrā, 3rd/9th century) with five functions and 450 entries, found in his *Dimashḳī Zīdj* and also in the *Muṣṭalaḥ Zīdj* (see Irani, *The* Jadwal al-taqwīm of *Ḥabash al-Ḥāsib*, M.Sc. thesis, American University of Beirut 1956, unpubl.); the *Djadwal al-daḳā'iḳ* of Abū Naṣr b. ʿIrāḳ (Gurgān, *ca.* 400/1000) with five functions and 225 entries (analysed in C. Jensen, *Abū Naṣr's approach to spherical astronomy as developed in his treatise* The table of minutes, in *Centaurus*, xvi [1971], 1-19); the *Djadāwil al-dā'ir al-āfāḳī* of Nadjm al-Dīn al-Miṣrī (Cairo, *ca.* 700/1300), serving both as a table for finding the time of day or night from the altitude of the Sun or any non-circumpolar star and also as a universal auxiliary table, with a single main function for three independent arguments and a grand total of *ca.* 420,000 entries (see now F. Charette, *A monumental medieval table for solving the problems of spherical astronomy for all latitudes*, in *AIHS*, xlviii [1998], 11-64); and *al-Djadwal al-āfāḳī* of Shams al-Dīn al-Khalīlī (Damascus, *ca.* 760/1360) (see the art. on him in *DSB*, Suppl.) with three main functions and *ca.* 14,000 entries (see King, *Al-Khalīlī's auxiliary tables for solving problems of spherical astronomy*, in *JHA*, iv [1973], 99-110, repr. in idem, *Studies*, A-XI; also Van Brummelen, *The numerical structure of al-Khalīlī's auxiliary tables*, in *Physis*, xxviii [1991], 667-97). These tables are part of a tradition in Islamic astronomy of devising solutions to problems of spherical astronomy for all latitudes (see King, *Universal solutions in Islamic astronomy* (publ. 1987), and idem, *Universal solutions to problems of spherical astronomy from Mamluk Egypt and Syria* (publ. 1988), repr. in idem, *Studies*, C-VI and VII, and again in idem, *SATMI*, vi; see also idem, *World-maps*, chs. 2-4 and 9).

8. *Tables for time-keeping by the Sun and stars.*

Extensive corpora of tables of the hour-angle (*faḍl al-dā'ir*) and the time since rising (*al-dā'ir*), as well as the azimuth (*al-samt*), for specific latitudes were compiled [see mīḳāt]. All such tables are analysed in King, *SATMI*, i.

9. *Tables for regulating the times of Muslim prayer.*
The first tables for regulating the times of prayer [see MĪḲĀT; AL-SHAFAḲ] were compiled in the 3rd/9th century. All such tables are analysed in King, *SATMI*, ii.

10. *Tables for finding the* ḳibla.
Between the 3rd/9th and 8th/14th centuries, Muslim astronomers compiled various tables displaying the *ḳibla*, measured from the local meridian, as a function of longitude difference and latitude difference from Mecca [see ḲIBLA].

11. *Tables for constructing astrolabes and sundials.*
A series of Muslim astronomers addressed the problem of the calculation of the size and position of the various markings on astrolabes and sundials in trigonometric terms, as well as using the better-known methods of geometric construction [see ASṬURLĀB; MIZWALA, and also King, *Islamic astronomical tables*, 51-5].

12. *Astrological tables.*
There are all manner of astrological tables to be found in works other than *zīdj*s (Sezgin, *GAS*, vii, 22-5, lists some important sources, mainly unstudied).

vi. CONCLUDING REMARKS

The scope of the *zīdj* literature and Islamic astronomical tables in general is a clear indication of the interest of Muslim scholars in astronomy for over a millennium. It is an accident of Islamic history that a few of these *zīdj*s became known in mediaeval Europe and that this spawned an interest there too. Alone the computational accuracy of the vast majority of the tables in the *zīdj*s is a clear sign of the competence of their compilers. Their errors, if they are original and not due to copyists, can provide useful clues to the way in which the tables were calculated. But the accompanying texts also merit our attention, and sometimes the tables cannot be understood without them. The study of Islamic mathematical astronomy is progressing slowly but constantly, and the reader should understand that this brief overview is intended to encourage the reader to consult Kennedy's *Zīj survey* and the many writings it has already inspired and will continue to inspire in the future.

Also important for the study of transmission of Islamic tables to Byzantium and Europe are Tihon, *Studies*: A. Tihon, *Études d'astronomie byzantine*, Variorum, Aldershot 1994, and Poulle, *Studies*: E. Poulle, *Astronomie planétaire au Moyen Âge latin*, Variorum, Aldershot 1996. Other studies are published in collected works, such as *Kennedy Festschrift*: D.A. King and G. Saliba (eds.), *From deferent to equant. A volume of studies in the history of science in the ancient and medieval Near East in honor of E.S. Kennedy*, in *Annals of the New York Academy of Sciences*, d [= 500] (1987); *North Festschrift*: A. Vanderjagt and L.L. Nanta (eds.), *Between demonstration and imagination. Essays in the history of science and philosophy presented to John D. North*, Leiden 1999;

Kunitzsch Festschrift: M. Folkerts and R.P. Lorch (eds.), *Sic itur ad astra. Studien zur Geschichte der Mathematik und Naturwissenschaften. Festschrift für den Arabisten Paul Kunitzsch zum 70. Geburtstag*, Wiesbaden 2000; and *Vernet Festschrift*: J. Casulleras and J. Samsó (eds.), *From Baghdad to Barcelona. Studies in the Islamic exact sciences in honour of Prof. Juan Vernet*, 2 vols., Barcelona 1996.

The standard bio-bibliographical sources for the history of Islamic astronomy are (in chronological order): Suter, *MAA*: H. Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*, in *Abh. zur Geschichte der mathematischen Wissenschaften*, x (1900), and *Nachträge und Berichtigungen*, in *ibid.*, xiv (1902), 157-85, repr. Amsterdam 1982, and again in Suter, *Beiträge*, i, 1-285 and 286-314; Renaud, *Additions à Suter*: H.J.P. Renaud, *Additions et corrections à Suter, "Die Mathematiker und Astronomen der Araber"*, in *Isis*, xviii (1932), 166-83; M. Krause, *Stambuler Handschriften islamischer Mathematiker*, in *Quellen und Studien zur Geschichte der Mathematik, Astronomie und Physik*, Abt. B: Studien, Band 3, Heft 4 (1936); Storey, ii/1: *A. Mathematics. B. Weights and measures. C. Astronomy and astrology. D. Geography*, London 1958, repr. 1972: Sezgin, *GAS*, esp. v, *Mathematik*, vi, *Astronomie*, vii, *Astrologie*; Matvievskaya and Rosenfeld, *MAMS*: G.P. Matvievskaya and B.A. Rosenfeld, *Matematiki i astronomi musulmanskogo srednevekovya i ikh trudī*, 3 vols., Moscow 1983; *Cairo ENL survey*: King, *A survey of the scientific manuscripts in the Egyptian National Library* (Publications of the American Research Center in Egypt, Catalogs, 5), Winona Lake, Ind. 1986; E. İhsanoğlu (ed.), *Ottoman astronomy* and *Ottoman mathematics*: idem (ed.), *Osmanlı astronomi literatürü tarihi*, 2 vols., and *Osmanlı matematik literatürü tarihi*, 2 vols. (IRCICA Studies and Sources on the History of Science, 7-8), Istanbul 1996, 1999.

An indispensable research tool is Kennedy and Kennedy, *Islamic geographical coordinates*: E.S. and M.H. Kennedy, *Geographical coordinates of localities from Islamic sources*, Frankfurt 1987. References are also made to King, *SATMI*: King, *Studies in astronomical timekeeping in medieval Islam*, 10 pts., including i, *A survey of tables for reckoning time by the sun and stars*; ii, *A survey of tables for regulating the times of prayer*; vi, *Universal solutions in medieval Islamic astronomy*, Leiden, forthcoming; idem, *World-maps for finding the direction and distance to Mecca*, Leiden-London 1999.

Most of the underlying astronomical and astrological notions are outlined in Bīrūnī, *Tafhīm*: R.R. Wright, *The Book of instruction in the elements of the art of astrology by Abu 'l-Rayḥān ... al-Bīrūnī*, London 1934, repr. Baghdād n.d. On spherical astronomy, two indispensable works are Bīrūnī, *Maḳālīd*: M.-Th. Debarnot (ed. and tr.), *al-Bīrūnī, Kitāb Maqālīd ʿilm al-hayʾa. La trigonométrie sphérique chez les Arabes de l'est à la fin du X^e siècle*, Damascus 1985, and Marrākushī, *Mabādiʾ wa-ghāyāt*, A-B: J.-J. Sédillot, *Traité des instruments astronomiques des Arabes composé au treizième siècle par Aboul Hhassan Ali de Maroc*, 2 vols., Paris 1834-5, repr. in 1 vol., Frankfurt 1985, and L.-A. Sédillot, *Mémoire sur les instruments astronomiques des Arabes*, in *Méms. de l'Acad. Royale des Inscriptions et Belles-Lettres de l'Institut de France*, i (1844), 1-229, repr. Frankfurt 1989. The approaches to the subject are quite different in these two works, being based on spherical trigonometry and projection methods, respectively. See also Bīrūnī, *Shadows*: E.S. Kennedy, *The exhaustive treatise on shadows by Abū al-Rayḥān ... al-Bīrūnī. Translation and commentary*, Aleppo 1976.

On regional developments in Islamic astronomy, see first Sayılı, *The observatory in Islam*. On the development of the professional astronomers responsible for the regulation of the calendar and times of prayer, see King, *On the role of the muezzin and the muwaqqit in medieval Islamic society*, in F.J. Ragep and S.P. Ragep, with S.J. Livesey (eds.), *Tradition, transmission, transformation. Proceedings of two conferences on pre-modern science held at the University of Oklahoma*, Leiden, etc. 1996, 285-346. The following regional surveys are available. Early Islamic (mainly ʿIrāḳ and Persia): D. Pingree, *The Greek influence on early Islamic mathematical astronomy*, in *JAOS*, xciii (1973), 32-43; idem, *Indian influence on Sassanian and early Islamic astronomy and astrology*, in *The Journal of Oriental Research* (Madras), xxxiv-xxxv (1964-6), 118-126. ʿIrāḳ: al-ʿAzzāwī, *Taʾrīkh ʿilm al-falak fi 'l-ʿIrāḳ*, Baghdād 1958 (to be used with caution). Egypt, Syria and Yemen: King, *Aspects of Fatimid astronomy*, in M. Barrucand (ed.), *L'Égypte Fatimide: son art et son histoire. Actes du colloque organisé à Paris les 28, 29 et 30 mai 1998*, Paris 1999, 497-517; idem, *The astronomy of the Mamluks*, in *Isis*, lxxiv (1983), 531-55, repr. in idem, *Studies*, A-III; idem, *L'astronomie en Syrie à l'époque islamique*, in S. Cluzan *et al.* (eds.), *Syrie, mémoire et civilisation*, Paris 1993, 386-95, 432-43, 480; idem, *Mathematical astronomy in medieval Yemen. A biobibliographical survey*, Malibu, Ca. 1983. On the *Zīdj* of Kāshī, see various studies by Kennedy, including *Spherical astronomy in Kāshī's* Khāqānī Zīj, in *ZGAIW*, ii (1985), 1-46, repr. in idem, *Studies*, no. VII; idem, *On the contents and significance of the* Khāqānī Zīj *by Jamshīd Ghiyāth al-Dīn al-Kāshī* (*Islamic Mathematics and Astronomy*, lxxxiv), Frankfurt 1998. On the *Sulṭānī Zīdj* of Ulugh Beg, see Sédillot, *Prolégomènes des tables astronomiques d'Oloug-Beg. Traduction et commentaire*, 2 vols., Paris 1847-53, for the text and the chronological tables. (D.A. King and J. Samsó)

ZIḤĀF (a.), refers in Arabic metrics to the optional reduction of a long to a short syllable (CVC → CV; or CV̄ → CV) or of two short syllables to one (CVCV → CVC; CVCV → CV̄; or CVCV → CV).

The alternation between two short syllables in one line and one syllable in another occurs in *wāfir*, *kāmil* and *mutadārik*; in the other metres the choice is between one long and one short syllable. Per line of verse, there usually are between four to six anceps positions that allow *ziḥāf* reductions.

In indigenous Arabic metrical theory or *ʿarūḍ* [*q.v.*], *ziḥāf* is presented as a deviation from the standard foot or *djuzʾ*, and, more particularly, from that part of the foot which is designated as *sabab* [*q.v.*]. Corresponding to the two types of reduction mentioned above, two types of *sabab* are distinguished: the *sabab khafīf*, defined as a moving letter + a quiescent letter (i.e. a consonant with a short vowel followed by a vowelless consonant: CVC), the second of which is elided in the case of *ziḥāf*, and the *sabab thaḳīl* or two moving letters (CVCV), the second of which becomes vowelless or is elided. Any such change thus concerns the second letter of the *sabab*, as is stated in the definition of *ziḥāf* as "a non-obligatory change, specific to the second letters of *sababs*" (*taghyīr mukhtaṣṣ bi-thawānī 'l-asbāb muṭlaḳ^an^ bi-lā luzūm*, al-Damanhūrī, 40).

Ziḥāf provides Arabic verse with versatility: four anceps positions will spawn 16 metrical variants, six as many as 64. It therefore contrasts with *ʿilla* [*q.v.*], the other change phenomenon of Arabic theory, which, being obligatory in all lines of the composition, provides rigidity rather than variation and is only a change insofar as it represents a departure from the idealised circle metre or *baḥr* [see ʿarūḍ].

Arabic theory has special names for cases of *ziḥāf* where the second, fourth, fifth or seventh vowelless letter of the foot is elided (respectively *khabn*, *ṭayy*, *ḳabḍ* and *kaff*); cases where the second or fifth vowelled letter is elided (*waḳṣ* and *ʿaḳl*, respectively); and cases where the second or the fifth vowelled letter of the foot is rendered vowelless (*iḍmār* and *ʿaṣb*, respectively). E.g. in the foot *mustafʿilun* (– – ⏑ –) the variant ⏑ – ⏑ – is a case of *khabn* and – ⏑ ⏑ – a case of *ṭayy*; in *faʿūlun* (⏑ – –) the variant ⏑ – ⏑ is a case of *ḳabḍ*; in *mutafāʿilun* (⏑ ⏑ – ⏑ –) the variant – – ⏑ – is a case of *iḍmār*.

A distinction is also made between single (*mufrad*) and double (*muzdawidj*) *ziḥāf* (respectively one or two cases of *ziḥāf* per foot). The four types of double *ziḥāf* are called: *khabl* (combines *khabn* and *ṭayy*); *khazl* (*iḍmār* + *ṭayy*); *shakl* (*khabn* + *kaff*); and *naḳṣ* (*ʿaṣb* + *kaff*). E.g. the foot *fāʿilātun* (– ⏑ – –) with *shakl* becomes ⏑ ⏑ – ⏑. Many of these *ziḥāfāt* are rare in practice and some do occasionally occur in ancient, but not in later poetry.

Arabic metrical theory discusses three aesthetic categories of *ziḥāf*: good (*ḥasan*), acceptable (*ṣāliḥ*) and bad (*ḳabīḥ*). In *ṭawīl*, e.g., the reduction of the long third or tenth syllable counts as "good" (it belongs to the system and is found in any poem in this metre); the reduction of the long sixth syllable of either hemistich, which is seldom found in later poetry, counts as "acceptable". The rare case of the reduction of the seventh syllable of the second hemistich in *Mufaḍḍaliyya*, 47 l. 2 (verse by Muraḳḳish) is "bad".

In Persian prosody, where Arabic metrical concepts are forced upon an essentially different type of metre, *ziḥāf* occurs as a technical term, but its function is different: it is not an element of variation within the same poem, but is used to distinguish one metre from the other, rather like *ʿilla*.

mīzān ash'ār al-'arab, [3]Paris 1954, 8-20; Muḥammad al-Damanhūrī, *al-Irshād al-shāfī*, [2]Cairo 1957, 38-60; L.P. Elwell-Sutton, *The Persian metres*, Cambridge 1976 (contains a full account of all *ziḥāf* forms in Arabic and Persian); W. Stoetzer, *Theory and practice in Arabic metrics*, Leiden 1989 (contains *inter alia* a short Arabic text on the aesthetic divisions of *ziḥāf*). A list of *ziḥāfāt* described as a set of erasure rules is given in G. Bohas, J.-P. Guillaume and D.E. Kouloughli, *The Arabic linguistic tradition*, London and New York 1990, 145-8.

(W. Stoetzer)

ZIMĀM (a., pl. *azimma*), lit. "rein, halter", refers to a department of the central administration in the mediaeval caliphate and then comes to refer in Fāṭimid times to a person in control, one holding the reins of power.

The *dīwān al-azimma*, an office of control and audit, is traditionally said to have been founded by the 'Abbāsid caliph al-Mahdī in 162/778-9 (al-Ṭabarī, iii, 522), when it seems that the task of overseeing and controlling all the *dīwān*s of the administration was too much for a single hand. H.F. Amedroz suggested that every *dīwān* came to have a *zimām* attached to it by way of control but that all the *azimma* might be held by one man, who had a general function of control over all the *dīwān*s (*Abbasid administration in decay, from the Tajarib al-Umam*, in *JRAS* [Oct. 1913], 829-32). M.G. Morony has, however, noted the existence of a department concerned with the registration of documents, headed by a *ṣāḥib al-zimām* (in the tradition of Ibn al-Muḳaffa' and al-Madā'inī), in much earlier times and going back to the Sāsānids of Persia (*Iraq after the Muslim conquest*, Princeton 1984, 66-7).

Under the Fāṭimids, the term had a wide range of meanings, including director of the treasury and major domo. It appears also in military and naval contexts, meaning "officer, commander", alongside such terms as *'arīf, ra'īs, muḳaddam* and *mutawallī*, but it must be pointed out that the structure of command in the Fāṭimid armed forces and navy is vague.

Bibliography (in addition to references in the article): See the sources mentioned in D. Sourdel, *Le vizirat 'abbāside*, Damascus 1959-60, i, 112-14; Paula Sanders, *Ritual, politics, and the city in Fāṭimid Cairo*, New York 1994, index s.v. *zimām*.

(Ed.)

ZINĀ or **ZINĀ'** (a.), unlawful sexual intercourse, i.e. intercourse between a man and a woman who are not married to one another nor in a state of lawful concubinage based on ownership (the relationship between the owner and his female slave). The Ḳur'ān disapproved of the promiscuity prevailing at that time in Arabia and forbade e.g. the prostitution of slave girls by their masters (XXIV, 33). Several verses refer to unlawful sexual intercourse. Some of these mention that it is a sin (*fāḥisha*) and that it will be punished in the Hereafter (XVII, 32, XXV, 68-9). Most verses, however, deal with the legal aspects. Making *zinā* a punishable offence was a means to enforce the uniform system of marriage introduced by Muḥammad. IV, 15-16 lay down that both parties to it must be punished and required four witnesses for proving the offence. The punishment mentioned in IV, 15 for women committing *zinā*, viz. detention in their homes, is commonly regarded as abrogated by XXIV, 2, which verse stipulates that fornicators must be punished with one hundred lashes. XXIV, 3 ("The male fornicator (*zānī*) shall only marry a female fornicator or a polytheist and the female fornicator (*zāniya*) shall only be married to a male fornicator or polytheist") was regarded as problematical by later commentators. They generally hold that the verse has been abrogated by later verses.

The Ḳur'ān does not mention the punishment of stoning for *zinā*. The enforcement of this penalty is based on the *sunna*. Nearly all *ḥadīth* collections include three *ḥadīth*s that are central in the legal arguments about the punishment for *zinā*: one to the effect that the Prophet has enforced this punishment in a case of unlawful intercourse among Jews on the basis of the Torah (cf. V, 43-4); a second one, transmitted by Abū Hurayra and Zayd b. Khālid al-Djuhanī relating that the Prophet, in a case of intercourse between a young man and a married woman, sentenced the woman to stoning and the young man to flogging and banishment for a year; and a third one in which 'Umar b. al-Khaṭṭāb asserts that there was a revelation (*āyat al-radjm*) to the effect that those who are *muḥṣan* [*q.v.*] and have unlawful intercourse are to be punished with stoning, but that this verse was left out in the final version of the Ḳur'ānic text, cf. Ibn Ḥadjar, *Bulūgh al-marām*, nos. 1230, 1232, 1236. The *ḥadīth* related by Abū Hurayra and Zayd b. Khālid al-Djuhanī has been the basis of the *fiḳh* doctrine, as we shall see. The jurists have argued that this *ḥadīth* has specified the meaning of XXIV, 2 (or, according to some, even abrogated it). J. Burton has plausibly argued that the story about the verse of stoning was put into circulation by Shāfi'ī scholars who did not accept that a *sunna* can abrogate a Ḳur'ānic revelation and were forced to find a source with higher authority for the lawfulness of stoning for fornication (Burton, *Origin*).

All Sunnī schools of jurisprudence agree that *zinā* is to be punished with stoning if the offender is *muḥṣan*, i.e. adult, free, Muslim (except in Shāfi'ī law, where a *dhimmī* can also be *muḥṣan*) and having previously enjoyed legitimate sexual relations in matrimony (regardless of whether the marriage still exists). The Ḥanafīs and Ḥanbalīs require that both partners in the act be *muḥṣan* for stoning to be applied. Persons who are not *muḥṣan* are punished with one hundred lashes if they are free and with fifty lashes if they are slaves (cf. IV, 25), followed, according to all schools except the Ḥanafīs, with banishment for the period of one year (six months for slaves). The offenders must have acted out of their free will; a woman who has been raped (*mustakraha*) cannot be punished with the *ḥadd* penalty.

About homosexual intercourse, *liwāṭ* [*q.v.*], there is difference of opinion. The Shāfi'īs and Ḥanbalīs regard it as *zinā*. If the act has been testified to by four male eyewitnesses, the active partner, if he is *muḥṣan*, is to be punished with stoning, the passive partner with flogging and banishment. The Mālikīs do not require *iḥṣān* for the imposition of stoning. According to the Ḥanafīs, homosexual intercourse can only be punished on the strength of *ta'zīr* [*q.v.*].

Shī'ī doctrine on *zinā* is somewhat different. Here *zinā*, in addition to heterosexual intercourse, includes a great variety of sexual behaviour: buggery, both with men and women, lesbian intercourse and petting. Furthermore, Shī'ī legal doctrine defines *muḥṣan* as an adult, free Muslim who is in a position lawfully to have sexual intercourse and whose partner is actually available and not e.g. imprisoned or absent on a journey. The punishments are the same as in Sunnī Islam. However, a non-*muḥṣan* can be sentenced to death if there are aggravating circumstances such as incest (intercourse between close relatives), rape or intercourse between a non-Muslim man with a Muslim

woman. Homosexual intercourse with penetration (*īḳāb*) is, according to the S͟hīʿī doctrine, to be punished with death by way of *ḥadd* punishment, whereby the *ḳāḍī* has the choice between execution with a sword, by stoning, by throwing the offender from a [high] wall or by burning him. If there has been no penetration, and in cases of sexual activity between women (*musāḥaḳa* [see SIḤĀḲ]), the *ḥadd* punishment is one hundred lashes.

Minimal proof for *zinā* is the testimony of four male eyewitnesses. The S͟hīʿīs, however, also admit the testimony of women, if there is at least one male witness, testifying together with six women. All witnesses must have seen the act in its most intimate details, i.e. the penetration (like "a stick disappearing in a kohl container (*mukḥula*)," as the *fiḳh* books specify). If their testimonies do not satisfy the requirements, they can be sentenced to eighty lashes for unfounded accusation of fornication (*ḳad͟hf* [*q.v.*]). If the accused admits the offence, the confession must be repeated four times according to the Ḥanafīs, the Ḥanbalīs and the S͟hīʿīs. Circumstantial evidence is not admitted, with one exception: under Mālikī law, pregnancy of an unmarried woman is regarded as evidence of fornication. However, even if the act has been proved, punishment can be averted by *s͟hubha* [*q.v.*], viz. uncertainty about the unlawfulness of the proven act, due to circumstances that confer to it a semblance of legality, such as intercourse between two parties to a marriage that is null and void, between the master and a female slave of whom he is a co-owner or whom he has acquired on the strength of an invalid purchase, or between a blind man and a woman whom he takes for his wife or female slave.

In Saudi Arabia and in those countries where Islamic criminal codes have been introduced, *zinā* is a criminal offence to be punished according to the prescriptions of the *fiḳh* (Libya, Law 70 of 1973 on the introduction of the *ḥadd* punishment for *zinā*, which actually does not impose stoning but only flogging; Pakistan, Offence of Zina (Enforcement of Hudood) Ordinance, 1979; Penal Code of Sudan, 1991, arts. 146-52; Criminal Code of Iran, 1991, arts. 63-134; Penal Code of Yemen, 1994, arts. 163-281). According to reports of human rights organisations, the punishment of stoning has recently only been enforced in Saudi Arabia and Iran.

ZINDĪḲ.

1. *The word.*

Zindīḳ, pl. *zanādiḳa*, abstract/collective noun *zandaḳa*, is an Arabic word borrowed (at least in the first instance) from Persian, and used in the narrow and precise meaning "Manichaean" (synonym: *Mānawī*, or the quasi-Aramaic *Manānī*), but also loosely for "heretic, renegade, unbeliever", in effect as a synonym for *mulḥid*, *murtadd* or *kāfir*. The earliest attestation of the word, in any language, is in the Middle Persian inscription of the Zoroastrian high priest Kirdīr on the so-called Kaʿba-yi Zardus͟ht, from the end of the 3rd century A.D. (precisely at the time when the Sāsānid state was busy combating Manichaeism), which boasts of the author's success in suppressing various foreign religions and their followers, among them Jews, Buddhists, Brahmanists, Christians and *zndyḳ* (see Ph. Gignoux, *Les quatre inscriptions du mage Kirdīr*, Paris 1991, 60). Then, in the 5th century, the Armenian Christian author Eznik, in his polemics against Manichaeism, uses the word *zandik* to designate the followers of that religion, and it is applied in the same way by the Armenian historian Ełis͟he (whose date is the subject of controversy). Similarly, in Zoroastrian religious books in Middle Persian there are a fair number of passages where *zandīk* is used unambiguously in the sense "Manichaean" (collected in de Menasce). But also in Arabic, *zindīḳ* is quite commonly used for "Manichaean", that is, as the name for the follower of a specific religion; the usage as a vague term for Muslim or non-Muslim "heretics" is clearly secondary, though widespread. Muslim law denies Manichaeans the status of *ahl al-d͟himma*, putting them in the same legal position as renegades from Islam, and it is evidently for this reason that the words *zindīḳ* and *mulḥid* became interchangeable. A parallel for this semantic development is the German word *Ketzer*, originally a deformation of the self-designation of the dualist Christian sect of the *Cathari* (i.e. καθαροι "pure ones") but then applied indiscriminately to all religious dissenters, finally becoming the usual German word for "heretic".

Al-Masʿūdī (*Murūd͟j*, ii, 167-8 = § 594) says that the name *zindīḳ* first appeared at the time of Mānī, and for the following reason: Zoroaster had once brought to the Persians a book called the Avesta (*bastāh*), together with a commentary called the *zand*, which was a clarification of the allegorical interpretation (*taʾwīl*) of the Avesta. Thus whenever anyone "introduced into their religion anything that was at variance with the revelation, namely the Avesta, and turned towards the allegorical interpretation, namely the *zand*, the Persians called him a *zandī*". The Arabs, he continues, changed this to *zindīḳ*. "The dualists (*t͟hanawiyya*) are *zanādiḳa*, but with these are grouped together anyone else who believes in the doctrine of pre-eternity (*ḳidam*) and denies the creation of the world." Similarly, al-Samʿānī (*Ansāb*, s.v. *zandī*) says that Mānī was called a *zindīḳ* because he claimed that his book *S͟hābuhragān* was the *zand*, or commentary (*tafsīr*), of Zoroaster's book; ʿAbd al-D͟jabbār (*Tat͟hbīt*, i, 170) also says that Mānī produced a *tafsīr* of the Avesta, but he does not link this with the name *zindīḳ*. On the other hand, al-K͟hʷārazmī (*Mafātīḥ al-ʿulūm*, 37-8) says that it was Mazdak who brought forth a book which he called the *zand* and which he claimed contained the *taʾwīl* of the Avesta, and that consequently his followers took the name *zandī*. And al-Bīrūnī (*al-Āt͟hār al-bāḳiya*, in J. Fück, *Documenta islamica inedita*, Berlin 1952, 79; missing in Sachau's edition), after saying much the same thing, goes on to claim that the name *zindīḳ* is applied to the Manichaeans only "in a figurative and metaphorical sense", as it is also to "the *bāṭiniyya* in Islam". In other words, the real *zanādiḳa* are the Mazdakites. This is naturally wrong, for, as mentioned, the word *zandīk* was used already by Kirdīr, 300 years before the time of Mazdak. But the explanation given by al-Masʿūdī is also quite untenable. The *zand*, which the Persians believed to have been revealed by their prophet, is not an "allegorical interpretation" of the Avesta, but a translation into Middle Persian (with commentary)

of what the Zoroastrians of the Sāsānid period perceived to be the literal meaning of the scripture; there can consequently be no question of the Manichaeans having turned away from the Avesta to the (Zoroastrian) *zand*, as al-Masʿūdī implies (see Darmesteter). Nor is there any evidence that the Manichaeans produced a *zand* of their own (as al-Samʿānī and ʿAbd al-D̲j̲abbār claim) or that they considered their religion to be an allegorical interpretation of the Avesta (as Schaeder has argued). In fact, extant Manichaean writings make it quite clear that they did not accept the Avesta as a genuine prophetic revelation. It seems rather that the etymology offered by al-Masʿūdī and his successors results from an analogy between Manichaeism and "the *bāṭiniyya* in Islam", i.e. Ismāʿīlism, and specifically from an attempt to tarnish the latter by association with Manichaeism. But this analogy is spurious. Manichaeism was not an esotericist, but a literalist religion, one which saw truth in the literal meaning of Mānī's own writings.

From the vantage point of modern linguistic knowledge it would seem more likely that Middle Persian *zandīk* was borrowed from Aramaic *zaddīḳ* "righteous" (thus already Bevan, in Browne, *LHP*, i, 159-60). We know from Syriac authors that Manichaeans used *zaddīḳē* as a designation for their "elect", that is, the full members of the Manichaean community, just as Muslim authors (Ibn al-Nadīm, al-Bīrūnī, etc.) use the equivalent Arabic *ṣiddīḳūn* for the Manichaean "elect" and *sammāʿūn* for the lower-ranking "auditors". The so-called dissimilation of the geminated stop to nasal plus stop can be observed in other Aramaic loan words in Persian, e.g. Persian *s̲h̲amba* "Saturday", versus Syriac *s̲h̲abbt̲h̲ā*, or Persian *gund* (cf. Ar. *d̲j̲und*) "army", versus Syriac *guddā*. It is naturally possible that already in Middle Persian the loan word *zandīk* was reinterpreted as **zandīg* "follower of a *zand*", but this is hardly the original meaning.

2. *The history of Manichaeism, especially in the Arab and Islamic world.*

The name of the founder of Manichaeism appears in Arabic as Mānī (Greek Μάνης, Latin Manes, Syriac and New Persian Mānē, in Persian poetry rhyming with *yā'-i mad̲j̲hūl*). He was born in 527 Seleucid (A.D. 216-17) in Babylonia and was brought up in a community of Elchasaites, a Jewish Christian baptist sect (Ibn al-Nadīm's *mug̲h̲tasila*). As a young man Mānī began to receive revelations from his supernatural "Twin", who eventually instructed him to leave the Elchasaites and propound his own gospel. He travelled extensively in the Persian empire, preaching. Early in the reign of the second Sāsānid ruler, S̲h̲ābuhr (Ar. Sābūr) I, probably in 240, or shortly thereafter, Mānī attached himself to the court of the emperor. Two of S̲h̲ābuhr's brothers converted to Manichaeism and the king himself was the dedicatee of Mānī's *S̲h̲ābuhragān*, a systematic account of his faith. Mānī retained the favour of S̲h̲ābuhr's son, Hormizd I, but fell out with his successor, Wahrām (Ar. Bahrām) I, who had the prophet thrown into prison, where he died, probably in 274 or 277. Manichaean texts, imitating Christian imagery, sometimes speak of Mānī's "crucifixion", just as those composed in the Buddhist environment of Central Asia refer to his death as an "entry into nirvāṇa"; Muslim authors, misled by the former phrasing, generally state that Mānī was actually crucified/gibbeted (*ṣuliba*).

The prophet's death was followed by a severe persecution of the Manichaeans in the Sāsānid realm, but missionaries had already put down firm roots outside of the empire, in Roman territory (especially in Egypt) and in Central Asia among the Iranian (mainly Sogdian) population. There is evidence for Manichaean missions among the Arabs as well. A Coptic text reports on how, during the reign of the Sāsānid Narseh (ruled 293-302), the Manichaeans were protected by a king called Amarō, in which we must see a Coptic spelling of the Arabic name ʿAmr. Narseh's own inscription at Paikuli mentions, in the list of his vassals, two kings of this name: "*'mrw* king of the Lak̲h̲mids" (evidently the ʿAmr b. ʿAdī of Arab tradition) and "*'mrw* [king] of the sons of Abgar" (perhaps an otherwise unrecorded member of the Arab dynasty at Edessa), but it is debated which of the two is intended by the Coptic text (see the relevant articles by Tardieu and de Blois, with different conclusions). A later tradition, reported by Ibn al-Kalbī, Ibn Ḳutayba and others, says that before Islam some of the Arabs were Christians, some Jews, some Zoroastrians (*mad̲j̲ūs*), and others *zanādiḳa*; this last religion was followed, it is claimed, by some of the Ḳurays̲h̲, who had it from al-Ḥīra (references, and discussion of the conflicting versions of this story, in de Blois, *The Sabians*, 48-50, where it is suggested that the *ṣābi'ūn* of the Ḳur'ān [see ṢĀBI' and ṢĀBI'A] might have been these Arab Manichaeans). The fact that *zanādiḳa* are mentioned alongside other specified religions would seem to indicate that the word is used here to mean "Manichaeans", and not undiscriminated "heretics", but it is naturally debatable whether the story has any historical value.

Despite harassment by the Sāsānids, a Manichaean community survived in Babylonia (ʿIrāḳ), which remained the seat of the *archegos* (Ar. *imām*), though his authority was contested by the Manichaeans in Transoxania (in Arabic called the Dīnāwariyya, from the Sogdian word for "elect"). After the Muslim conquest, Manichaeans benefited from the tolerance (or indifference) of the Umayyads. The *archegos* Mihr, who flourished at the time when K̲h̲ālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*] was governor of ʿIrāḳ (*ca.* 105-20/*ca.* 723-38), and who (according to his enemies) accepted luxurious gifts from the Muslim governor, made attempts to regain the allegiance of the Dīnāwariyya, but he was faced by dissent within his own community; this led to the formation of a rival faction under a certain Miḳlāṣ. ʿAbd al-D̲j̲abbār (*al-Mug̲h̲nī*, v, 18-9, quoting al-Mismaʿī) gives a brief account of the doctrinal differences between the Miḳlāṣiyya and what he simply calls "the Manichaeans" (evidently meaning the followers of Mihr), from which emerges that the former upheld the (in fact orthodox Manichaean) doctrine of the eternal damnation of the souls of sinners while the latter held the (revisionist) view that all particles of light (i.e. all souls) would eventually be liberated from darkness. Ibn al-Nadīm (*Fihrist*, ed. Tad̲j̲addud, 397-8) quotes, from a pro-Mihrī Manichaean source, what must be a wildly exaggerated account of the successes of the Mihriyya in winning over the followers of the Dīnāwariyya and the Miḳlāṣiyya, but he goes on to indicate that the Miḳlāṣiyya in fact survived at least until the time of al-Muʿtaṣim (218-27/833-42). A Sogdian Manichaean text (published by Sundermann) contains polemics against certain "Syrian" co-religionists, evidently Manichaeans from the Near East who had recently emigrated to Central Asia, and mentions the Mihrī and Miḳlāṣī factions, unfortunately in a broken context.

The only systematic Muslim persecution of Manichaeans that we know about began in 163/779 by order of the ʿAbbāsid caliph al-Mahdī and continued at least until the end of the reign of al-Hādī in

170/786. The sources do not give a clear indication of the reason for the persecution, but it is surely no coincidence that it occurred shortly after the conversion of the Uyg͟hur rulers to Manichaeism in 762; Manichaeism became the state religion of an important neighbouring kingdom and was evidently henceforth perceived as a threat to the security of the caliphate. A special inquisitor, called *ṣāḥib al-zanādiḳa*, ferreted out the suspects, who were confined in a particular prison (*ḥabs al-zanādiḳa*). Those who abjured their beliefs were required to spit on the portrait of Mānī and released; those who refused were beheaded. After 170/786 we have reports only of sporadic persecution, and the Manichaeans succeeded in maintaining a limited presence in Bag͟hdād for another two centuries. Al-Ma'mūn (198-218/813-33) is said to have organised a debate between the Manichaean leader Yazdānbuk͟ht and Muslim theologians and to have given the former safe conduct and assigned guards to protect him from the mob, but other reports speak of the persecution of Manichaeans by the same caliph. Ibn al-Nadīm wrote that in the days of Muʿizz al-Dawla (334-56/945-67) he had personally been acquainted with "about 300" Manichaeans in Bag͟hdād, but that "now (i.e. in 377/987-8) there are not even five in the capital", though they still survived in Sogdiana, their leader residing in Samarḳand. And about a decade later al-Bīrūnī (*Āt͟hār*, ed. Sachau, 209) similarly speaks of a thriving Manichaean community in Samarḳand, where they were called *ṣābiʾūn*. On the other hand, Ibn al-Nadīm's story, from a non-Manichaean source (ed. Tad͟jaddud, 400-1), of how the Manichaeans migrated back and forth between Transoxania and ʿIrāḳ and how, at the time of al-Muḳtadir (*r.* 295-320/908-32), the Manichaeans in Samarḳand were protected from their Muslim overlords through an intervention of "the king of China", bristles with anachronisms and has little historic value.

After the 4th/10th century, there is no firm evidence for Manichaeism anywhere in the Islamic world, but it survived in Central Asia, even after the fall of the Uyg͟hur kingdom to the Ḳïrg͟hïz in 840, in the remnant Uyg͟hur principality in the Turfan [*q.v.*] basin (in modern Xinjiang), probably until the time of the Mongol invasions.

3. *Muslim accounts of Manichaeism and of the so-called* zanādiḳa *in Islam.*

The earliest substantial Muslim description of Manichaean cosmology of which any trace survives is by Abū ʿĪsā al-Warrāḳ [*q.v.*] from about the middle of the 3rd/9th century; extensive and explicit quotations have been preserved by Ibn al-Malāḥimī and briefer extracts (quoted at second hand, via a lost work by al-Ḥasan b. Mūsā al-Nawbak͟htī) from Abū ʿĪsā form the main substance of the accounts by ʿAbd al-D͟jabbār, al-S͟hahrastānī, Ibn al-Murtaḍā and others, though both al-Nawbak͟htī and those who copied from him also had other documents at their disposal. Abū ʿĪsā is the principal source of the picture of Manichaeism in Muslim theological writings, a picture which, without being exactly wrong, is excessively schematic, overly cerebral and largely ignores the religious content of Manichaeism, namely, its ethics and its doctrine of personal salvation.

The most extensive, and most valuable account of Manichaeism by a Muslim author is in the *Fihrist* of Ibn al-Nadīm. This contains a sketch of the life of Mānī, a detailed summary of the Manichaeans' cosmology and eschatology, a description of their ethics and cultic practices, of the Manichaean sects after the prophet's death and a long list of books by Mānī and his pupils. Much of this is evidently derived from authentic Manichaean writings in Arabic that were not used by any other extant author, but it is interspersed with data from Muslim sources. Two uncredited quotations from Abū ʿĪsā's version (*Fihrist*/ Tad͟jaddud, 393:3-5 and 393:23-394:21; cf. Ibn al-Malāḥimī, 562:5-9 and 563:11-565:ult., respectively) have been inserted, confusingly, into a much better account of the cosmological myth, and there is also some worthless material, e.g. the absurd statement that Mānī taught that Jesus was sent by the devil.

Al-Bīrūnī had access to translations of Mānī's own books, from which he brings some important quotations. Otherwise, Muslim accounts are of limited value. The verbose refutations of Manichaeism and other forms of dualism in Muslim writers are of real interest only for the history of Islamic theology. See also T͟HANAWIYYA, where much of this is assessed differently.

After the above-mentioned account of Manichaeism, Ibn al-Nadīm appends a list of "the theologians who outwardly professed Islam but inwardly professed *al-zandaḳa*", of poets who fell into the same category, and of "the kings and grandees who were accused of *al-zandaḳa*", lists which can be supplemented from other sources. It is, however, impossible to confirm that any of these people were really Manichaeans and it is more likely that the only thing they have in common is that their enemies accused them of not being good Muslims, and consequently "secret *zindīḳs*". It is clear that *zindīḳ* was used quite freely as a term of abuse; it is consequently futile for modern historians to attempt to construct a picture of the "*zanādiḳa* in Islam" as a coherent intellectual movement.

For example, the previously-mentioned Abū ʿĪsā al-Warrāḳ was himself suspected of Manichaeism evidently only because he wrote about (but also refuted) that religion. The poet al-Maʿarrī was accused of being a *zindīḳ* by his contemporaries mainly because he was a vegetarian, like the Manichaean elect. Many of the Ṣūfīs, beginning with al-Ḥallād͟j, were accused of *zandaḳa*, though their whole world outlook is diametrically opposed to Manichaean dualism. Even in the case of the famous littérateur, and universally decried *zindīḳ*, Ibn al-Muḳaffaʿ [*q.v.*], the evidence that he was ever really a Manichaean is not conclusive. Al-Mismaʿī (quoted by ʿAbd al-D͟jabbār, *al-Mughnī*, v, 20; also in Ibn al-Malāḥimī, 590) reports, on the one hand, that Ibn al-Muḳaffaʿ was a dualist who taught that Light manipulated (*dabbara*) Darkness and introduced itself into Darkness only for its own advantage; the idea that the mixture of Light and Darkness was intentionally provoked by the former is indeed a specifically Manichaean doctrine which distinguishes it clearly from Zoroastrianism and from other forms of dualism. But al-Mismaʿī goes on to say that "he rejected the disgusting stories which the Manichaeans told about the war between the two principles". The implication is thus that Ibn al-Muḳaffaʿ was not a member of the Manichaean church (for which the cosmological myth was an indispensable article of faith), though he shared some of the theoretical premises of Manichaeism.

4. *Manichaeism and Islam.*

Until the end of the 19th century, Manichaeism was known only from reports in non-Manichaean sources, but the subsequent spectacular discovery of a large number of Manichaean manuscripts in Egypt (in Coptic and Greek) and Central Asia (mainly in Middle Iranian languages and Old Turkish) means that it is now possible to form a very precise picture of Manichaean doctrine and practice from original

sources. But there is much disagreement about the place of Manichaeism in the history of religion. Some scholars still regard Manichaeism as an essentially Iranian phenomenon, an off-shoot of Zoroastrianism, but the prevalent view is that its roots lie mainly in Western traditions, in Christianity or Gnosticism, and that, although Mānī was aware of Zoroastrianism (and of Buddhism), the influence of Iranian and Indian doctrines on his teaching was at best superficial.

As a dualist religion, which posited two co-eternal opposing principles of good (light) and evil (darkness), Manichaeism stands in a very stark contrast to Islam, with its implacable monotheism. Muslim theologians were quite right to insist on this difference. At the same time, the two faiths do have some points of contact. Both teach that God has instructed mankind through a series of prophets, all of whom brought essentially the same message at different times. Some Manichaean sources see Mānī as the successor of prophets from the Judaic tradition like Adam, Seth, Enosh, Shem and Enoch, others mention only the Buddha, Zoroaster and Jesus as his predecessors, yet others combine the two series. Mānī, like Muḥammad, is the "seal of the prophets" (discussed, with controversial conclusions, by Colpe and Stroumsa) and the Paraclete predicted by Jesus. The Buddha, Zoroaster and Jesus taught the pure religion, but did not commit their teachings to writing; the books that their followers now read were written after the deaths of the prophets and corrupted their teachings, but Mānī wrote down his own teachings and produced a definitive written account of the true religion (for a similar view in Islam, see TAḤRĪF). Finally, both Manichaeism and Islam deny that Jesus actually died on the cross. But it is doubtful whether any of this indicates a direct influence of Manichaeism on Islam. It is more likely that both share a common substratum in Jewish Christianity.

Bibliography: 1. Primary sources. Ibn al-Nadīm's account of Manichaeism and the *zanādiḳa* was first published, with translation and very copious notes, in G. Flügel, *Mani, seine Lehre und seine Schriften*, Leipzig 1862; text repr. in his posthumous edition of the *Fihrist*, 327-38; re-edited (from an old manuscript, sometimes, but not always, with better readings than Flügel) in ed. R. Tadjaddud, 391-402; Dodge's translation has to be used with caution. Virtually all of the then available Arabic and New Persian sources were reprinted in the immensely useful book by S.Ḥ. Taḳīzāda and A. Afshār Shīrāzī, *Mānī wa dīn-i ū*, Tehran 1335 sh/1956; the principal new texts are ʿAbd al-Djabbār, *al-Mughnī fī abwāb al-tawḥīd wa 'l-ʿadl*, v, ed. al-Khuḍayrī, Cairo 1965, 10-21; idem, *Tathbīt dalāʾil al-nubuwwa*, ed. ʿAbd al-Karīm ʿUthmān, Beirut [1966], i, 80, 106, 114-5, 169-71, 184, 187; Ibn al-Malāḥimī, *al-Muʿtamad fī uṣūl al-dīn*, ed. McDermott and Madelung, London 1991, 561-97.

(F.C. DE BLOIS)

ZINDJIRLI, Modern Tkish. Zincirli, a village of southeastern Turkey, lying in the Karasu valley between the Gâvur Dağları (Amanus) and the Kurd Dağı/Djabal al-Akrād, near the small town of Islahiye. It now comes within the western part of the *il* or province of Gaziantep.

A tell there, excavated by Berlin archaeologists 1888-1902, revealed the capital *Yʾdy*; the earlier vocalisation as Yaudi is now regarded as uncertain, but it is to be identified with the place known as Samʾal in the records of the Assyrian king Tiglath Pileser III. A stele of a later Assyrian king Esarhaddon (680-669 B.C.) has been found. There has been considerable interest in the official Aramaic inscriptions found at or near the site, particularly the colossal statue of the god Hadad erected by Panammu I, who styles himself *mlk yʾdy* "king of Yʾdy", and those erected as a result of building activity on the site by Bar-rakkab *mlk smʾl* "king of Samʾal", one in honour of his father Panammu II and another in which he swears allegiance to Tiglath Pileser, who allowed him to succeed to the throne after his father.

No trace of the name Samʾal seems to have survived into the Islamic period, and the origin of the recent Turkish name, literally "enchained, placed in a chain or series", remains obscure, unless it is a corruption of the name of the fortress Zandjtara mentioned by al-Nuwayrī (see Honigmann, in *EI*[1] s.v.).

ZĪRIDS, the name of two mediaeval Berber dynasties of the Muslim West.

1. The Zīrids (Banū Zīrī) of Ifrīḳiya

This was the first great Ṣanhādja Berber dynasty in North Africa, originating in the central Maghrib and established in al-Ḳayrawān in 361/972 by Buluggīn b. Zīrī [*q.v.*] on the departure of the fourth Fāṭimid caliph al-Muʿizz [*q.v.*] to Egypt. The dynasty, collateral with the Ḥammādids of Ḳalʿat Bani 'l-Ḥammād [*q.v.*] and the Zīrids of Spain (see 2. below), ruled for some 176 years (361-543/972-1148) until the last *amīr*, al-Ḥasan b. ʿAlī, lost the kingdom to the Normans of Sicily.

With the approval of the Fāṭimids, the dynasty's progenitor Zīrī b. Manād had founded a principality at Ashīr [*q.v.*] in *ca.* 328/940 as a bulwark against the anti-Fāṭimid Zanāta Maghrāwa [*q.v.*], allies of the Umayyads of Cordova. Zīrī's most signal service to the Fāṭimids was the relief of their capital al-Mahdiyya when it was about to fall into the hands of the Khāridjite rebel Abū Yazīd [*q.v.*] in Ṣafar 334/September 945. Before moving to Egypt, and in recognition of Zīrī's loyalty, the caliph al-Muʿizz appointed Zīrī's son Buluggīn governor of Ifrīḳiya and all the territory he could wrest from the pro-Umayyad Zanāta in the Maghrib. On assuming power, Buluggīn campaigned vigorously in the Maghrib and, in the course of his last campaign (368-73/979-84), he took Fās and Sidjilmāsa, but died on the return journey (21 Dhu 'l-Ḥidjdja 373/25 May 984). Five years before Buluggīn's death, Tripolitania (but not Sicily) was ceded to him by the Fāṭimid caliph al-ʿAzīz.

Unlike his father, al-Manṣūr b. Buluggīn (373-86/984-96) began to act in every way like an independent ruler. As soon as he assumed power, al-Manṣūr declared to the notables of al-Ḳayrawān, "I am not one of those who get appointed and dismissed by a stroke of the pen, for I have inherited the kingdom from my father and my ancestors" (*Bayān*, i, 240).

Bādīs b. al-Manṣūr (386-406/996-1016 [*q.v.*]) entrusted his uncle Ḥammād b. Buluggīn with campaigning against the Zanāta and promised to let him rule any territories he conquered. Having succeeded in his campaigns against the Zanāta in the central Maghrib, Ḥammād, who founded the Ḳalʿa in 398/1008, carved out for himself an independent entity immediately to the west of Ifrīḳiya.

The realm of al-Muʿizz b. Bādīs (406-54/1016-62) was the largest the Berbers had held in Ifrīḳiya, and his reign was the most luxurious and ostentatious (Ibn Khaldūn, vi, 158). Ifrīḳiya seems to have enjoyed economic prosperity at the start of al-Muʿizz's reign, as attested by the abundance of the wheat crop particularly in the Bādja region, a fact which probably encouraged al-Muʿizz in 440/1049 to renounce his allegiance to the Fāṭimid caliph al-Mustanṣir and to proclaim his allegiance to the ʿAbbāsids. The Fāṭimid caliph retaliated by encouraging the Arab nomad tribes of the Banū Hilāl and the Banū Sulaym [*q.vv.*] in Upper Egypt to overrun and ravage the Zīrid kingdom, thus ridding himself of a troublesome group of people and ensuring that they would bring about the downfall of the Zīrids. Al-Muʿizz's army was routed at Ḥaydarān, between Ḳābis and al-Ḳayrawān, on 11 Dhu 'l-Ḥidjdja 443/14 April 1052, and in 449/1057 al-Muʿizz had to abandon al-Ḳayrawān and take refuge with his son Tamīm, governor of al-Mahdiyya on the coast. The Hilālīs, meanwhile, occupied large parts of the interior. Ibn Khaldūn was the first historian to stress the destructive role of the invaders, comparing them to a cloud of locusts. More recently, however, it has been argued that the invasion was not so destructive and that, prior to the arrival of the Hilālīs, the Zīrid state was disintegrating and in decline.

With most of their territory overrun and ravaged by the Hilālīs, the Zīrids turned their attention to the sea; they built a fleet and sought to interfere in Sicily's affairs. In 416/1025-6, a Zīrid fleet, on its way to Sicily, was destroyed by a storm off Pantelleria. Between 417/1026 and 426/1035 the Zīrid fleet frequently raided Byzantine territory in the Adriatic and the Aegean Seas.

Tamīm b. al-Muʿizz (454-501/1062-1108 [*q.v.*]) inherited a kingdom politically divided and economically weak. As a result of the Hilālī invasion, Tamīm's authority was confined to the coastal strip stretching from Sūsa to Ḳābis. In 480/1087, in retaliation for Zīrid maritime raids, a combined Genoese and Pisan fleet occupied and sacked al-Mahdiyya and its suburb Zawīla and, in order to get rid of the invaders, Tamīm had to pay them a sum of 100,000 dīnārs. It was also during Tamīm's reign that the Normans of southern Italy completed in 484/1091 their conquest of Muslim Sicily. After a reign of almost 50 years, Tamīm left the kingdom in a worse state than before.

Yaḥyā b. Tamīm (501-9/1108-16) built a large fleet and launched several raids aginst Genoa and Sardinia. Under ʿAlī b. Yaḥyā (509-15/1116-21) relations worsened with Roger II of Sicily after the Zīrid had sought the help of the Almoravid sovereign ʿAlī b. Yūsuf for launching joint naval operations against Sicily. In 517/1123 an Almoravid flotilla occupied and sacked Nicotera in Calabria, an operation which Roger believed was instigated by the Zīrid, and so he launched a counter-attack against the Zīrid fort of al-Dīmās; this was, however, checked, thanks largely to the resistance of the Hilālī Arabs. In 529/1135 the Normans occupied the island of Djerba [see djarba] but, although it was nominally under Zīrid suzerainty, the Zīrid *amīr* of al-Mahdiyya failed to come to its rescue.

From the close of the 4th/10th century, the economy of Zīrid Ifrīḳiya was in steady decline due to a number of factors, namely, the transfer of the Fāṭimid caliphate to Egypt, the destructive effect of the Hilālī invasion, the Norman occupation of Sicily, the frequent hostilities with the Ḥammādids and the Normans, the disruption of trans-Saharan trade as the caravan routes shifted from Ifrīḳiya westwards to Almoravid Morocco and Ḥammādid Bidjāya (Bougie) and eastwards to Egypt, and the rise of the Italian maritime city-states and their growing control of Mediterranean trade.

Following further sea raids by the Almoravids on Norman territory, Roger II decided to seize al-Mahdiyya at a time when the Zīrid state was weakened by successive years of drought and famine. In the reign of al-Ḥasan b. ʿAlī (515-43/1121-48), the Zīrid capital surrendered (543/1148) to a Norman fleet under the command of George of Antioch, and thus the Zīrid dynasty came to an end. Al-Ḥasan sought refuge with his Ḥammādid cousin, Yaḥyā b. ʿAzīz, who kept al-Ḥasan under surveillance in Algiers lest he establish contacts with the Almohad caliph ʿAbd al-Muʾmin in Marrākush. Al-Ḥasan, however, joined ʿAbd al-Muʾmin when the latter took Algiers in 547/1151. In Marrākush, al-Ḥasan kept urging the Almohad caliph to liberate al-Mahdiyya from Norman occupation until eventually this took place on 10 Muḥarram 555/22 January 1160. An Almohad governor was installed in the city, but al-Ḥasan was allowed to reside in Zawīla, where he spent eight years. On the death of ʿAbd al-Muʾmin, al-Ḥasan was ordered by the new Almohad caliph, Yūsuf b. ʿAbd al-Muʾmin, to move to Marrākush, but on his way to the Almohad capital, al-Ḥasan died in Tamesna (563/1167).

2. The Zīrids of Spain

This line was established in Granada by Zāwī b. Zīrī [*q.v.*] shortly after the fall of the ʿĀmirids [*q.v.* and see al-Manṣūr] and the outbreak of civil strife in al-Andalus. The dynasty, under four successive *amīrs*, lasted for almost 80 years (403-83/1013-90) until the last *amīr*, ʿAbd Allāh b. Buluggīn [*q.v.*], was deposed by the Almoravids, who annexed Granada and Málaga to Morocco.

Following Zāwī's departure for Ifrīḳiya (410/1019), his nephew Ḥabbūs b. Māksan (410-29/1019-38) assumed power in Granada. Ḥabbūs impressed on his Ṣanhādja kinsmen the imperative need for unity since, like his paternal uncle Zāwī, he was very conscious of the Andalusians' hostility to, and numerical superiority over, the Ṣanhādja. He entrusted running the affairs of the kingdom to a Jewish vizier, Samuel Ibn al-Naghrilla (ha-Nagīd; Abū Ibrāhīm Ismāʿīl, in Arabic sources), a thing unprecedented in Muslim Spain.

Ḥabbūs was succeeded by his son Bādīs, whose long reign (429-65/1038-73) marked the zenith of Zīrid power in Spain. Initially, Bādīs had to deal with a rival to the throne, his cousin Yiddīr, as well as his neighbours who cast covetous eyes on his kingdom, hence Bādīs's suspicion throughout his reign of Andalusian and Berber elements among his subjects, and reliance even more than his father on Samuel Ibn al-Naghrilla and, later, on Samuel's son Joseph (Yūsuf) for running the affairs of his kingdom.

Bādīs managed to rid himself of Yiddīr and triumphed over Zuhayr, the *amīr* of Alméria who, on receiving news of Ḥabbūs's death, had marched against Granada in the hope of seizing it.

Bādīs grew in stature, becoming the redoubtable leader of the Berbers in opposing the aggressive and anti-Berber policy of al-Muʿtaḍid b. ʿAbbād [*q.v.*], king of Seville. Bādīs became so furious at al-Muʿtaḍid's annexation of the Berber-held principalities of Morón, Arcos and Ronda in 445/1053—thanks partly to the pro-ʿAbbādid sympathies of their Arab populations—that he is said to have seriously considered the massacre of the Arab population of Granada, had it not been for his Jewish vizier Samuel, who eventually managed to persuade Bādīs not to do so lest all Andalusians should rise against him. In 446/1054, al-Muʿtaḍid seized Algeciras and, to forestall a similar fate for Málaga, Bādīs proceeded to annex Málaga to his kingdom.

On the death of Samuel Ibn al-Naghrilla (448/1056), his son Joseph succeeded him as vizier, but, unlike his father, was detested by the Muslims of Granada because of his arrogance and the many favours he bestowed on his co-religionists. He is accused in Andalusian sources of having poisoned Buluggīn, heir presumptive to Bādīs, and of having conspired with the *amīr* of Almeria, Ibn Ṣumādiḥ, to surrender Granada to him on condition that "a state for the Jews is established in Alméria with himself as prince" (*Bayān*, iii, 266). An uprising took place against the Jews of Granada on 10 Ṣafar 459/30 December 1066, as a result of which Joseph Ibn al-Naghrilla and some 3,000 Jews were massacred.

Bādīs's growing domestic troubles in the last five years of his reign whetted the appetites of his neighbours: al-Muʿtaḍid unsuccessfully tried to wrest Málaga from Bādīs (458/1066), while Ibn Ṣumādiḥ of Almería seized Guadix. Despite his advanced years and domestic troubles, Bādīs nevertheless repulsed the ʿAbbādid assault on Málaga, and recovered Guadix from Ibn Ṣumādiḥ (459/1067) and Jaén from his rebellious son Māksan.

By the end of Bādīs's reign, Granada grew into an important city surrounding the citadel on the west bank of the Darro (*Hadarro*). The Zīrids established their court in the old Alcazaba district, now part of the Albaicin. Two of the gates to the Zīrid fortress and large stretches of the wall which protected it have survived. A bridge on the Darro, still called "Puente del Cadi", was built in 447/1055 by the *ḳāḍī* of Granada ʿAlī b. Muḥammad b. Tawba and named after him *ḳanṭarat al-ḳāḍī*, as was the adjoining mosque immediately to the south of the bridge. Muʾammal, a *mawlā* of Bādīs, is credited with a number of public works in Granada, such as the public fountain at Bāb al-Fakhkhārīn and the poplar promenade along the bank of the Genil named after him (*Ḥawr Muʾammal*), which survived until the time of Ibn al-Khaṭīb three centuries later.

ʿAbd Allāh, son of Buluggīn b. Bādīs, succeeded his grandfather on the throne of Granada (465/1073), while his brother Tamīm became independent ruler of Málaga. Taking advantage of ʿAbd Allāh's youth, his neighbours (al-Muʿtamid b. ʿAbbād of Seville in particular) cast covetous eyes on ʿAbd Allāh's territory. To avoid being attacked by al-Muʿtamid, who was in alliance with Alfonso VI, King of Castile, ʿAbd Allāh concluded an agreement with Alfonso whereby he undertook to pay him an annual tribute of 10,000 dīnārs. Fortunately for ʿAbd Allāh, al-Muʿtamid became embroiled with the *amīr* of Toledo, al-Maʾmūn b. Dhi ʾl-Nūn [see dhu ʾl-nūnids], who had managed to annex Cordova for a few months. A few years later, al-Muʿtamid was pre-occupied with Murcia where his favourite vizier Ibn ʿAmmār [*q.v.*] sought independence (471/1079). ʿAbd Allāh seized the opportunity to get rid of his all-powerful vizier Simādja and assumed himself full power in his kingdom. The Zīrid then mounted successful expeditions against his brother Tamīm in Málaga and Ibn Ṣumādiḥ of Almería, both of whom had been encroaching upon his territory.

To check Alfonso's growing threat after his capture of Toledo (478/1085), ʿAbd Allāh joined al-Muʿtamid in appealing to the Almoravid sovereign Yūsuf b. Tāshufīn [*q.v.*] for assistance and, subsequently, took part in the battle of al-Zallāḳa [*q.v.*]/Sagrajas (479/1086) and in the siege of Aledo castle. Growing suspicious and disillusioned, however, after the abortive siege of Aledo (481/1088), ʿAbd Allāh began to

strengthen his fortresses as a precautionary measure, probably having learnt a lesson from the failure of the Almoravids to seize Aledo castle. At the same time, the Zīrid sought to win over the Ṣanhādja in Granada by enlisting more of their numbers in his service, thereby redressing the imbalance which, under Bādīs, had been tilted in favour of the Zanāta whom ʿAbd Allāh refers to as the outsiders (*al-ṣinf al-barrānī*), a step taken by him at that particular time probably in order to ingratiate himself with the Ṣanhādja Almoravids.

Time and again in his memoirs (see below), ʿAbd Allāh claims that his defamation in the eyes of the Almoravids was the work of the *faḳīh* Ibn al-Ḳulayʿī and a number of disgruntled functionaries who had defected and falsely accused him of collusion with Alfonso VI against the Almoravids.

Yūsuf b. Tāshufīn's third crossing to al-Andalus (483/1090) had no objective other than the deposition of ʿAbd Allāh, who initially seems to have been bent on resistance but soon decided to surrender after seeing his fortresses fall one-by-one to the Almoravids without resistance. ʿAbd Allāh's Ṣanhādja troops, on the one hand, had sided with their Almoravid kinsmen, while the masses in Granada welcomed the Almoravids because they sought to be free from the payment of taxes other than alms and tithes.

Having surrendered to the Almoravids (10 Radjab 483/8 September 1090), ʿAbd Allāh was exiled to Āghmāt [*q.v.*] in southern Morocco. Soon afterwards, his brother Tamīm was removed from Málaga and banished to al-Sūs [*q.v.*], but was allowed later to settle in Marrākush, where he died in 488/1095.

It was during his exile in Āghmāt that ʿAbd Allāh, the last Zīrid *amīr* of Granada, wrote his memoirs, the *Tibyān*, in which he chronicled the history of the Zīrids since their arrival in al-Andalus up to the author's deposition by the Almoravids. Among the salient points emphasised in the *Tibyān* are: the division of the Muslims in 5th/11th-century Spain into two distinct and hostile groups (Andalusians and Berbers); the practice of dividing property by lottery among the Berber chieftains in al-Andalus; the reasons which led Ḥabbūs b. Māksan and his son Bādīs to appoint Jews, rather than Andalusians or fellow Berbers, as viziers; and the active, and often important, role of women in Berber society.

ZIRIH, Zarah, an inland lake in Sīstān [*q.v.*], now straddling the borders of Persia and Afghānistān and the largest stretch of inland fresh water on the Iranian plateau. The name comes from Avestan *zrayah-*, O Pers. *drayah-* "sea, lake". The lake played a role in ancient Iranian legend about a Saoshyant or Redeemer, a son of Zoroaster, who would arise from it; Islamised versions of such legends describe King Solomon as commanding his army of jinn to lower the surface of the lake so that the land masses thereby appearing could be used for agriculture (see Bosworth, *The Saffarids of Sistan*, 36).

The mediaeval Islamic geographers emphasised the variability of the Zirih's extent, fed as it was by rivers from the mountains of central and eastern Afghānistān: the Helmand or Hilmand [*q.v.*], and the Khʷāsh, Farāh and Hārūt Ruds, with its maximum extent in the late spring when the snows had melted. The *Ḥudūd al-ʿālam*, tr. Minorsky, 55, cf. comm. 185, describes it as 30 *farsakhs* long by 7 wide, but sometimes it expanded so much that it flooded lowlands as far as the borders of Kirmān province. In mediaeval times, the reedy, shallow waters of the lake supported fishermen, whilst a flourishing agriculture along its shores was supplied by irrigation waters from the lake and its feeders (Ibn Ḥawkal, ed. Kramers, 405-6, tr. Kramers and Wiet, 417-18).

The lake has clearly shrunk in more modern times, judging by the descriptions of late 19th-early 20th century European travellers and officials (such as P.M. Sykes, C.E. Yate, and G.P. Tate and his colleagues on the Seistan Boundary Commission of 1903-5) of the Hāmūn depression as a whole; they also mention the cattle-raising along its shores and the population element of the *ṣayyāds*, fisherfolk and wildfowlers, who navigate through the reeds in cigar-shaped rafts of reeds called *tūtins*. Modern geographers estimate that the lake covers, at its maximum extent in May, some 1,158 sq. miles. However, intense summer evaporation reduces the water to three separate, permanent sheets of water, sc. the Hāmūn-i Hilmand proper, the Hāmūn-i Ṣābarī to its north and the Hāmūn-i Puzāk to its northeast. Also, water runs out of the southern end of the Hāmūn-i Hilmand in times of flooding and flows southeastwards through the Shela channel or Rūd-i Shalaḳ into the Gawd-i Zirih depression south of the Hilmand bend and in the extreme southwestern tip of modern Afghānistān. Irrigation works of recent decades along the course of the Hilmand in southeastern Afghānistān may have reduced the flow of water into the Hāmūn basin and adversely affected the hydrography and environment of Sīstān as a whole.

ZIRYĀB, Abu 'l-Ḥasan ʿAlī b. Nāfiʿ, the greatest musician of Muslim Spain. His nickname Ziryāb (a black bird) is said to have referred to both his dark-coloured complexion and his versatile tongue.

Born, probably around 175/790, into a family of *mawālī* of the caliph al-Mahdī, Ziryāb was educated, at an early age, by Ibrāhīm al-Mawṣilī [*q.v.*]. Isḥāḳ al-Mawṣilī [*q.v.*] introduced him to Hārūn al-Rashīd (170-93/786-809) who, as later sources tell us, was greatly impressed by the young musician. This seems to have provoked Isḥāḳ's jealousy to the extent that Ziryād was forced to quit Baghdād. Several years later

we find him in the service of the Aghlabid ruler at Ḳayrawān, Ziyādat Allāh I (201-23/817-38). After falling into disgrace he turned to the Umayyad court at Cordova, where, in the year 206/822, he was received by ʿAbd al-Raḥmān II (206-38/822-52) who treated him with the greatest consideration. Being well versed in poetry, history, astronomy and geography, Ziryāb was considered the perfect boon companion (*nadīm*). He propagated also the latest fashion in cooking, clothing and the other arts of the *ẓurafāʾ* of the eastern capital. In Cordova he founded a music school in which he taught the theory and practice of the Mawṣilī school of Baghdād. Ziryāb died in Cordova, about forty days before his patron, at the end of Ṣafar 238 or beginning of Rabīʿ I/middle of August 852.

His pupils and three of his eight sons, in particular, ʿAbd al-Raḥmān, secured the survival of his musical teachings. The philosopher and musician Ibn Bādjdja (d. 533/1139 [*q.v.*]) was still credited with a musical "enrichment" (*ziyāda*) of an "eastern composition" (*talḥīn mashriḳī*) once introduced and performed by Ziryāb. Several innovations regarding the lute and lute playing [see AL-ʿŪD. II] were ascribed to him. He is said to have added a fifth string to the four-stringed lute and to have attributed it to the soul (*nafs*), giving it the red colour of blood. Both coloured strings and the addition of a fifth string were, however, already familiar to his contemporaries in Baghdād. Another novelty attributed to Ziryāb was the use of the quill feather (*ḳādima*) of a vulture (*nasr*) instead of a wooden plectrum. He is also said to have used gut of young wolves for the production of the two lower strings of the lute, and to have propagated a different method of cleaning the silk used for the two higher lute strings. Finally, he pretended that his own lute was lighter by about one-third than other lutes. Ziryāb practised the eastern style of beginning a measured song (*basīṭ; ʿamal*) with an unmeasured recitative (*nashīd; istihlāl*), and he followed the eastern scheme of increasing lightness and tempo in text and music in a performance, thus supporting the development of the later musical form of the vocal "suite" or *nawba* [*q.v.*]. A collection of his song texts (*K. fī Aghānī Ziryāb*), described as "a very extraordinary collection" (*dīwān ʿadjīb djidd*[an]), was edited by the brother of one of his sons-in-law, the *adīb* Aslam b. Aḥmad b. Saʿīd b. Aslam b. ʿAbd al-ʿAzīz.

(H.G. FARMER-[E. NEUBAUER])

ZISHTOWA, the usual Ottoman Turkish rendering of the Bulgarian town Svištov. In the Ottoman registers it appears variously as Zigitewa, Zigit, Zishtovi and Zishtowa. The town is situated on the right bank of the river Danube in its lower course, in the neighbourhood of the ancient city of Nove, where a small fortress was erected probably in the 12th-13th centuries A.D.; it was conquered by the Ottomans in 1388. In 1598 it was put to fire by the Wallachians. In 1791 the separate peace treaty between Austria and the Ottoman Empire was signed in Svištov. In 1810 it was destroyed by a Russian detachment and was in fact built anew. After the Russo-Turkish War in 1877-8, the town became part of the Bulgarian state.

Under the Ottomans, the settlement was first the centre of a *nāḥiye* and from the 17th century, a *ḳaḍā* in the *sandjaḳ* of Nikopolis. In the 18th and the 19th centuries, the town rose as a trade centre. With the opening of Austrian navigation along the lower course of the Danube in the 1840s, and the construction of its port, Svištov became the most important point on the lower course of the river.

After the seizure by the Ottomans, a small garrison was stationed in Svištov, but the majority of the population were Orthodox Christians, sc. Bulgarians and Vlachs; in the 18th century Greeks settled there too. The Muslim *maḥalle* appeared only in the 17th century, including an *imām* and a *müʾedhdhin*. After the Treaty of Carlowitz [see ḲARLOFČA], many Muslim families settled in Svištov, and new Muslim *maḥalles* came into being. According to Ewliyā Čelebi, in 1651-2 there had always been a small garrison consisting of 8 soldiers and a *dizdar* in the fortress of Svištov, with barracks and a mosque. The town (the *varosh*) was situated below on the river bank and comprised 300 houses. The census of 1865 recorded 4,554 Turks, 674 Bulgarians and 6,116 Gypsies, that is, 11,915 inhabitants altogether, and in 1874-5, 8,088 Muslims and 14,856 non-Muslims; nowadays, there are about 30,400 inhabitants altogether and 3,000 Turks. The *waḳf* documentation from the middle of the 17th century shows that there was a mosque in the town, the "New mosque" in the fortress, a *mekteb* and an *ʿimāret*. In the 18th and especially in the 19th centuries, new Muslim places of worship emerged, such as the Yîldîrîm Djāmiʿ (1728), the mosque at the Horse Market with a *medrese*, or all in all, according to the *sālnāme* from 1872-3, 19 mosques, 1 *medrese*, 1 *mekteb-i rüshdiyye* and 3 *mektebs*. In 1900 there was only one Turkish grammar school. A library was established by Dār ül-Saʿāde Beshīr Agha (d. 1746) at the Old mosque; some of the manuscripts are preserved in the town museum. Some of the mosques were preserved until the 1920s, but only one remains today. Under the Ottomans, a few churches were built.

There emerged around the port a significant business nucleus with *khāns* and warehouses. In the 1870s there were in Svištov 746 workshops, 170 *maghazas*, 17 *khāns*, 6 tanneries and 22 watermills. In 1765-6 a clock tower was built (today a monument of culture) as a *waḳf* of the *voyvoda* Ḥüseyn Agha b. ʿAlī. In the middle of the 19th century, Ḥādjdjī Emīn built all the *waḳf* fountains in Svištov. A two-metre column dedicated to the visit of Sultan Maḥmūd II is preserved in the town museum.

ẒIYĀ GÖK ALP [see GÖKALP ZIYĀ].

ZIYĀ' AL-ḤAKK, ḌIYĀ' AL-ḤAKK, conventionally Zia ul-Haq, Muḥammad (1924-88), called after his death *Shahīd al-Islām*, administrator of martial law and then President of the Islamic Republic of Pakistan from 1977 till his death in an accident in 1988.

Born on 12 August 1924 at Djullundār into a modest family in the eastern Pandjāb, Zia ul-Haq belonged to the community of the Araʿins. He entered the then Indian Army at the end of the Second World War, and within the Pakistani Army rose rapidly through the various ranks. In 1976 the President Dhu 'l-Fiḳār ʿAlī Bhutto made him Joint Services Chief of Staff. Considering his youthfulness, it was hoped that he could be easily manipulated. The rigged elections of 1977 provoked an unprecedented wave of agitation, and on 5 July, Zia ul-Haq, at the head of a group of officers, arrested and detained Bhutto, proclaiming himself administrator of martial law. He refused to pardon Bhutto, who was accused of complicity in an assassination, and Bhutto was hanged in 1979.

In his first speeches, Zia presented himself as a simple *mu'min* or believer to whom God had provisionally entrusted the government of Pakistan. He quoted the Ḳur'ān profusely, and never missed an occasion to make the point that he had performed the Ḥadjdj several times and prayed five times a day. He repeated that Islam was the cornerstone of Pakistan and that the *niẓām-i muṣṭafā* was not on the agenda of the main political parties. To reinforce the legitimacy of his power and to make up for a lack of charisma compared with his predecessor, he met Mawdūdī [*q.v.*] and relied on the support of his party, the *Djamāʿat-i islāmī*. After the Soviet invasion of Afghānistān, Mawdūdī proclaimed *djihād* as legitimate.

From 1979 onwards, Zia promulgated a series of Islamic laws hailed by Mawdūdī as the first steps towards the installation of an Islamic state. The first series, known as the "Hudood Ordinances", created a category of "Islamic crimes", such as adultery, rape, theft, fornication, etc. These crimes were to be dealt with by special courts with the task of applying the Ḳur'ānic penalties. These courts were themselves placed under the authority of the Federal Sharia Court, made up of judges and *ʿulamā'*. In 1980, the second series of measures envisaged the Islamisation of the economic sector. Two islamic taxes, the *zakāt* and the *ʿushr* [*q.vv.*], were created. Bank loans were regulated on a basis of the Ḳur'ānic prohibition of usury, *ribā* [*q.v.*]. The law envisaged a division of the risks run by the borrower and the lender. Interest was fixed on the basis of a common agreement, and indexed according to the financial performance of the banks.

In 1985 the war in Afghānistān entered a new phase with the Soviet Russian retreat. Zia at last organised elections, which marked a decline in support for the *Djamāʿat*. He then decided to seek the support of the Muslim League and the ethnic parties. The break was made, and the *Djamāʿat* then accused Zia of using Islam for political ends. In the economic sphere, Zia introduced reforms which, aided by favourable economic circumstances, brought about a growth in the national income of 7%. On the international level, partly thanks to the Afghān War, he managed to get increased American support whilst at the same time moving closer to China. Inter-ethnic troubles persuaded him, certainly in a very gradual fashion, to move towards democracy. In 1988 he announced that new elections would take place, but on 17 August of that year he died in an aeroplane accident whose circumstances remain obscure.

ŻIYĀ PASHA, ḌIYĀ PASHA, renowned Ottoman poet and essayist of the *Tanẓīmāt* [*q.v.*] era.

Żiyā Pasha's given name was ʿAbd ül-Ḥamīd Żiyā' ül-Dīn. He was born in Kandilli on the Bosphorus in 1829, the son of Ferīd ül-Dīn Efendi, a native of Erzurum who worked as clerk in the Galata customs, and ʿIṭīr Khānïm. After graduating from the School of Literary Education (*Mekteb-i ʿUlūm-i Edebiyye*), and having learned Persian and Arabic, he worked as scribe at the Grand Vizierate (*Ṣadāret-i ʿUẓmā Mektūbī Odasï*) for nine or ten years. During this period he frequented literary circles. Through the goodwill of the Grand Vizier Reshīd Pasha [*q.v.*], he was engaged in 1855 as fifth scribe of the imperial palace (*Mābeyn-i Hümāyūn*) and promoted to fourth scribe in 1859. In this position he also learned French and started translating from this language.

In 1862 he was dismissed, and the rest of his career is characterised by his repeatedly being sent away to posts distant from Istanbul. In 1862 he was appointed governor (*mutaṣarrif*) of Cyprus, then member of the Supreme Council of Judicial Ordinances (*Medjlis-i Wālā-yï Aḥkām-ï ʿAdliyye*), governor of Amasya in 1863 and of Canik in 1865. In 1866 he was re-appointed a member of the Supreme Council of Judicial Ordinances. When in 1867 the Grand Vizier ʿĀlī Pasha [*q.v.*] decided to send him away from Istanbul again as governor of Cyprus, Żiyā Pasha refused and on 17 May 1867 fled to Paris with Nāmïḳ Kemāl [*q.v.*], followed by other members of the Society of New Ottomans (*Yeñi ʿOthmānlïlar Djemʿiyyeti* [see YEÑI ʿOTHMĀNLÏLAR]). After a few months he went to London and published, initially there together with Nāmïḳ Kemāl and later on alone in Geneva, the newspaper *Ḥürriyyet* "Liberty".

In 1871 he returned to Istanbul and first became chairman of the Executive Assembly of the Council of Judicial Ordinances (*Dīwān-ï Aḥkām-ï ʿAdliyye Idjrā Djemʿiyyeti*), the executive branch of the newly-divided Supreme Council (*Medjlis-i Wālā*), then member of the legislative branch of the same, the Council of State (*Shūrā-yï Dewlet*), and lastly, under-secretary for educational affairs (*maʿārif müsteshārï*). After ʿAbd ül-Ḥamīd II's ascension to the throne in 1876, he worked together with Nāmïḳ Kemāl in the Constitution Commission (*Ḳānūn-ï Esāsī Endjümeni*). In 1877 he was again sent away from Istanbul, being appointed governor first of Syria, then of Konya and, in 1878, of Adana, where he died on 17 May 1880. His grave is in the cemetery of the Ulu Djāmiʿ in Adana.

Żiyā Pasha is a representative of the transition period of Ottoman literature from the *Dīwān* literature to western-oriented literature. More traditional and less consistent in his outlook on literature than Nāmïḳ Kemal, he was of a more political and ideological turn of mind than Shināsī Bey [*q.v.*] and influential through the articles he wrote in Europe on subjects such as justice, equality, individual morality, prevailing conditions, etc.

As a poet, Żiyā Pasha remained true to *Dīwān*

poetry, using (with only rare exceptions) *ʿarūḍ* [*q.v.*] and classical forms such as the *ḳaṣīde*, *ghazel*, *terdjīʿ-i bend*, *terkīb-i bend*, etc. The main merits of his poems are their straightforward language and, above all, the innovative use of satire.

Besides his articles in newspapers (mainly in *Mukhbir* and *Ḥürriyyet*) and his translations from French (of works by Molière, J.-J. Rousseau, Fénelon *et alii*), he published the anthology *Kharābāt* in 1874. This consists of three volumes of Turkish, Persian and Arabic poetry, and an introduction (in *methnewī* verse) which is not consistent with his previous literary opinions as published in his essay *Shiʿr we inshā* (*Ḥürriyyet*, no. 11, 1868). He included a considerable number of his own poems in this anthology, a fact which was severely criticised by Nāmiḳ Kemāl in his *Takhrīb-i Kharābāt* and *Taʿḳīb*.

Ziyā Pasha's important satirical work is *Ẓafer-nāme*, which he wrote in Paris to criticise ʿĀlī Pasha. It consists of a *ḳaṣīde* of 66 verses, the *takhmīs* of this *ḳaṣīde*, and a commentary on the same. In *Rüʾyā*, which resembles Weysī's [*q.v.*] *Khᵛāb-nāme*, he criticised ʿĀlī Pasha and the Sublime Porte, and in *Werāthet-i Salṭanat-ī Seniyye*, which consists of two letters, Fuʾād Pasha [*q.v.*].

Ziyā Pasha's collected poems were published only posthumously (first ed. *Eshʿār-ī Ẓiyā*, Istanbul 1881).

ZIYĀD b. ABĪHI, Abu 'l-Mughīra, governor of ʿIrāḳ and the eastern provinces of the Umayyad caliphate during the reign of Muʿāwiya b. Abī Sufyān [*q.v.*].

Ziyād was born out of wedlock in al-Ṭāʾif, probably some time in the first year of the *Hidjra*, A.D. 622, or in 2/623-4, and died in al-Thawiyya (or al-Thuwayya) near al-Kūfa in Ramaḍān 53/673. His name is variously given as Ziyād b. ʿUbayd, Ziyād b. Sumayya, Ziyād b. Abī Sufyān, Ziyād b. Ummihi (Ibn Abi 'l-Ḥadīd, xvi, 179-80) and Ziyād *al-amīr* (Ibn ʿAsākir, xix, 164-5). A Shīʿī tradition relates that ʿĀʾisha [*q.v.*] was accustomed to call him Ziyād b. Abīhi (the son of his father), since his father was not known (*Biḥār al-anwār*, xliv, 309). Lammens thought that this offending *nisba* appeared during the ʿAbbāsid era, while Ziyād himself used the *nisba* Ibn Sumayya or Ibn Abī Sufyān (Lammens, 43).

The sources diverge on the origin of Ziyād's mother, Sumayya. According to al-Balādhurī, she was a female slave of a Yashkurī living in the suburbs of Kaskar (the place on which Wāsiṭ was built). Having been ill, he performed the *ḥadjdj* and was treated successfully in al-Ṭāʾif by the physician al-Ḥārith b. Kalada al-Thaḳafī [*q.v.* in Suppl.]. He gave Sumayya to al-Ḥārith, who was the natural father of Nāfiʿ and of the Companion (*ṣaḥābī*) Nufayʿ, known as Abū Bakra [*q.v.*]. Later, al-Ḥārith gave Sumayya to one of his wife's slaves, ʿUbayd, who was *rūmī* (not necessarily of Byzantine origin, in many cases of Syrian origin). An allusion to this non-Arab origin appears in a version of Ziyād's reply to Muʿāwiya's letter: "He will find that I am a Persian [warrior] ... after his adoption by Muʿāwiya, he became an Arab from the Banū ʿAbd Manāf" (*la-yadjidannī aḥmara ḍarrābᵃⁿ bi 'l-sayfi ... fa-lammā iddaʿāhu Muʿāwiyatu ṣāra ʿarabiyyᵃⁿ manāfiyyᵃⁿ*, Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, ed. ʿAbd al-Salām Hārūn, Cairo 1981, 366-7).

Ziyād was born "on the bed of ʿUbayd" (*ʿalā firāshi ʿUbaydⁱⁿ*, al-Balādhurī, *Ansāb*, ivA, 163-4). He was thus, according to *djāhilī* usage and Muḥammad's precepts, the legal offspring of ʿUbayd, the owner of the bed (U. Rubin, *Al-walad li-l-firāsh*, 5-7). ʿAwāna al-Kalbī [*q.v.*] claimed that Sumayya was a female slave of the *dihḳān* [*q.v.*] of Zaydaward in Kaskar. She was given to al-Ḥārith, who was invited to the region to treat the Sāsānid king (Kisrā) and later attended the *dihḳān* (Ibn ʿAsākir, 173).

Some traditions relate that Sumayya was the mother not only of Ziyād, but also of the Companion ʿAmmār b. Yāsir [*q.v.*]. Modern research proves that there were two different women named Sumayya, both connected with al-Ḥārith (G.R. Hawting, *The development of the biography of al-Ḥārith ibn Kalada and the relationship between medicine and Islam*, 131-2). Abū ʿUbayda [*q.v.*] reports that Ziyād (or his family) claimed that his mother was Sumayya (or Asmāʾ) bt. al-Aʿwar, from the Banū ʿAbd Shams b. Zayd Manāt of Tamīm (al-Balādhurī, *Ansāb*, ivA, 169; *Aghānī*[1], xvii, 67).

Ziyād became a Muslim during the caliphate of Abū Bakr [*q.v.*]. He was one of the first Muslim settlers in the great garrison town of al-Baṣra [*q.v.*]. He arrived with his half-brothers Nāfiʿ and Abū Bakra, accompanying the son-in-law of al-Ḥārith b. Kalada, ʿUtba b. Ghazwān al-Māzinī, the first governor of the new settlement. Ziyād was in his teens when his unusual abilities were first noticed. He began performing little jobs in the *dīwān* [*q.v.*] of Baṣra during the caliphate of ʿUmar b. al-Khaṭṭāb [*q.v.*].

Ziyād's first appearance in the public arena took place when he was very young. Al-Madāʾinī reports that Ziyād was 14 years old when ʿUtba asked him in 14/635 to be the distributor (*ḳāsim*) of the booty of al-Ubulla (Apologos), in southern ʿIrāḳ (al-Ṭabarī, i, 2388). He distinguished himself as an intelligent, open-minded secretary, who was devoted to his master and to public service. He showed an unusual aptitude for accounting and had an excellent command of epistolary art. The sources report that ʿUmar was impressed by some of Ziyād's letters and by the fact that the governor (*ʿāmil*) of Baṣra, Abū Mūsā al-Ashʿarī [*q.v.*], appointed him as his *locum tenens* when he had to leave the city to take part in the conquests. ʿUmar summoned Ziyād to Medina and subjected him to a test. The results were remarkable. The caliph granted him 1,000 dirhams which he used to manumit his father ʿUbayd (al-Balādhurī, *Ansāb*, iv/A, 164-5) or his mother Sumayya (al-Ṣafadī, xv, 12).

It seems that in the same year he was appointed secretary (*kātib* [*q.v.*]), in the service of ʿUtba. After ʿUtba's death in 15/636, Ziyād pursued his career under four of his successors: Abū Mūsā al-Ashʿarī, al-Mughīra b. Shuʿba [*q.v.*] of Thaḳīf, both on behalf of ʿUmar, ʿAbd Allāh b. ʿĀmir on behalf of ʿUthmān and ʿAbd Allāh b. al-ʿAbbās on behalf of ʿAlī b. Abī Ṭālib [*q.vv.*] (Ibn ʿAsākir, xix, 169).

Ziyād's reputation grew when he was invited to Medina in 17/638 to testify in the case of al-Mughīra, who had been charged with adultery. Three witnesses, including two of Ziyād's half-brothers, Abū Bakra and Shibl b. Maʿbad al-Badjalī (*Tahdhīb*, iv, 305) so attested as required in Ḳurʾān, XXIV, 4, but Ziyād gave a partial testimony which meant the acquittal of al-Mughīra and the flogging of those three. ʿUmar did

not conceal his relief (Abū al-ʿArab Muḥammad b. Aḥmad al-Tamīmī, *K. al-Miḥan*, ed. Yaḥyā Wahīb al-Djabbūrī, 1983, 284-5; Ibn Abi ʾl-Ḥadīd, xii, 227-46).

In 36/656, after the battle of the Camel, ʿAlī appointed his cousin ʿAbd Allāh b. al-ʿAbbās governor of Baṣra and named Ziyād responsible for the collection of the real estate taxes and the treasury (*ʿalā ʾl-kharādj wa-bayt al-māl*). ʿAlī's appreciation of Ziyād's talents was so great that he ordered his cousin to accept Ziyād's advice. However, Ibn al-ʿAbbās soon left the city to take part in ʿAlī's preparations against Muʿāwiya; he designated Ziyād as acting governor of the province (Ibn Ḥabīb, *al-Muḥabbar*, 295; Ps.-Ibn Ḳutayba, *al-Imāma wa ʾl-siyāsa*, 105-6). At the end of the hostilities at Ṣiffīn (37/657), ʿAlī sent Sahl b. Ḥunayf as governor of Fārs, but the Muslim army there expelled him. ʿAlī then sent Ziyād, who won their confidence and was therefore able to collect the taxes (Muḥammad b. Ḥibbān al-Bustī, *al-Sīra al-nabawiyya wa-akhbār al-khulafāʾ*, ed. Sayyid ʿAzīz Bek, Beirut 1987, 545). It seems that Ziyād stayed in a fortress in Fārs for three or four years, and considered himself a representative of the legal government of ʿAlī, even after ʿAlī was murdered in 40/661. As a result of this, the fortress was called Ḳalʿat Ziyād (Ibn ʿAsākir, xix, 173) and later, Ḳalʿat Manṣūr (Ibn al-Djawzī, *al-Muntaẓam*, v, 160). Busr b. Abī Arṭāt, the emissary of Muʿāwiya, seized the offspring of Ziyād in Baṣra and threatened to kill them. Ziyād surrendered. ʿAwāna reports that Ziyād made use of the opportunity of Maṣḳala b. Hubayra being on his way to visit Muʿāwiya, and demanded that he ask the caliph if there was reason to believe the rumours claiming that Ziyād was the son of Abū Sufyān (Ibn ʿAsākir, 172-3). This seems to be the starting point of the idea of the *istilḥāḳ*, the official recognition of Ziyād as the son of Abū Sufyān.

The *istilḥāḳ* of Ziyād in 44/665 caused a strong reaction in the ranks of the Umayyad family: Muʿāwiya's son Yazīd and the Marwānids protested against this act. It was reported that ʿAbd Allāh b. ʿĀmir, Ziyād's predecessor as governor of Baṣra, threatened to procure a *ḳasāma* (50 persons who would swear in confirmation of something) attesting that Abū Sufyān never met Sumayya. The resolute intervention of Muʿāwiya silenced Ibn ʿĀmir. The Marwānids feared the results of the *istilḥāḳ*, which took place after ʿAmr b. al-ʿĀṣ [*q.v.*] joined Muʿāwiya and became governor of Egypt. Abū ʿUbayda [*q.v.*] reports that Muʿāwiya threatened to flog (*ḥadd al-ḳadhf*) some Marwānid leaders for having rejected the relationship and recognition of it, even though it was supported by witnesses, in confirmation with Ḳurʾān, XXIV, 4 (al-Zubayr b. Bakkār, *al-Akhbār al-muwaffaḳiyyāt*, ed. Sāmī Makkī al-ʿĀnī, Beirut 1996, 155-63). Muʿāwiya paid money to soften the opposition to the adoption of Ziyād (al-Ābī, *Nathr al-durr*, ii, 33 a).

It seems that Ziyād's affiliation was a catalyst in the polemic within the new Muslim society about affiliation (*istilḥāḳ, diʿwa*) of an illegitimate child (*walad zinā*), a custom which was usual in the *Djāhiliyya*. ʿUmar b. al-Khaṭṭāb, to whom Muslim historians ascribe the institution of many legal proceedings, initiated the rule that a *walad zinā* born in the *Djāhiliyya* could be attributed to his biological father on condition that the father paid to the mother's owner the price of the child. In this case the child was liberated and affiliated with his father's pedigree. If the intercourse and the claim of genealogy had taken place in the Islamic period, the claim was annulled and the child continued to be a slave. Later jurists opposed this opinion and this may well be the reason for their disapproval of Ziyād's affiliation by Muʿāwiya (*LA*, s.v. *s-ʿ-ā*, xiv, 387). Pro-Umayyad authors pretended that Muʿāwiya had supposed that Ziyād's affiliation was legal (Ibn al-ʿArabī, *al-ʿAwāṣim min al-ḳawāṣim*, 248-57).

A few months after the *istilḥāḳ*, in Rabīʿ II or Djumādā I 45/July 665, Ziyād was nominated as governor of Baṣra and of the provinces which depended on it, Khurāsān and Sidjistān. His inaugural speech in the mosque of Baṣra just after his nomination is considered a masterpiece of eloquence. This discourse is named *al-batrāʾ* or *al-butayrāʾ* (Ibn ʿAsākir, xix, 179), "the truncated speech", since at the beginning of his address Ziyād did not praise God and did not bless the Prophet (*li-annahu lam yaḥmidi ʾllāha fīhā wa-lam yuṣalli ʿalā ʾl-nabī*) (*LA*, s.v. *b-t-r*). In it, Ziyād defined his policies very clearly: since transgressors, libertines and thieves predominated at Baṣra, he declared that he would inflict a penalty even if a person was merely suspect, and that he was ready to kill anyone who would not be ready to turn from his wrong ways. Ziyād promised to pay the stipends regularly, not to send the warriors too far away and not to keep them in the field overlong (*tadjmīr* [*q.v.*]).

After the death of al-Mughīra b. Shuʿba in 50/670, Kūfa was added by Muʿāwiya to Ziyād's governorship. He used to spent the summer there, leaving Samura b. Djundab [*q.v.*] as substitute, and the winter in Baṣra, leaving ʿAmr b. Ḥurayth as his deputy in Kūfa. Ziyād is considered the first governor of these two towns together (*awwal man djumiʿa lahu ʾl-miṣrānⁱ*). He had to face two hostile groups, the Khāridjites [*q.v.*] in Baṣra and the ʿAlids in Kūfa, in addition to the problems raised by the different clans. He used one group to control another. The Khāridjites transplanted their activities outside Baṣra. The ʿAlids persisted in their agitation in Kūfa under the leadership of Ḥudjr b. ʿAdī al-Kindī [*q.v.*]. Ziyād's predecessor, al-Mughīra, treated him with clemency. Ziyād forewarned Ḥudjr on several occasions and made it clear that he was ready to execute him if he continued to curse Muʿāwiya publicly (*idhā aẓhara laʿna Muʿāwiya*). Ziyād succeeded in isolating Ḥudjr and his supporters. In 51/671, Ḥudjr was arrested and sent to Damascus. He was put to death in Mardj ʿAdhrāʾ, east of Damascus, with six of his supporters. This capital punishment, the first political execution in Islam, had its expected effects (Shaban, *Islamic history*, 89-90; I. Hasson, *Recherches sur Muʿāwiya b. Abī Sufyān, sa politique tribale, militaire et agraire*, unpubl. Ph.D. thesis, The Hebrew University, Jerusalem 1982, 133-9, 157-60).

There are some reports indicating that Ziyād aspired to be elected by Muʿāwiya as heir to the throne (Ibn ʿAsākir, xix, 196-7), but the caliph acted rapidly and nominated his son Yazīd [*q.v.*] as *walī ʿahd*. Ziyād asked Muʿāwiya to add Ḥidjāz to his governorship. Al-Kalbī reports that the caliph complied with Ziyād's wish but that the appointment reached its destination only shortly before Ziyād's death (Ibn ʿAsākir, xix, 204-5).

Ziyād is known as one of the most gifted governors of the Umayyad era. He had a good understanding of his task as governor, and had a great influence on his successors concerning the conception of the duties of rulers. At the beginning of his rule, he gave several examples of severity to win the confidence of the population. He implemented important administrative reforms, first in Baṣra and later in Kūfa, aiming to put an end to the chaotic situation prevailing in these *amṣār* in consequence of the large influx of tribesmen. The system of the *ʿarīf* [*q.v.*] and *ʿirāfa* (small group

of tribesmen massed together for the purpose of the distribution of the stipends, *ʿaṭāʾ* [*q.v.*]), set up in the time of ʿUmar, had became inefficient. This system was based on the nobility (*as͟hrāf*), whose status was fixed by their receiving from the government a grant of 2,000-2,500 dirhams annually (al-Balād͟hurī, *Ansāb*, v, introd., 11). Ziyād gave rise to new *ʿirāfa*s by joining related clans into larger tribal divisions. He created five groups (*k͟hums*, pl. *ak͟hmās*) in Baṣra and four groups (*rubʿ*, pl. *arbāʿ*) in Kūfa instead of the seven groups (*subʿ*, pl. *asbaʿ*), as determined by ʿUmar. This reorganisation contributed to a better control of the cities (Shaban, *Islamic history*, 86-90; M.G. Morony, *Iraq after the Muslim conquest*, 58). Ziyād updated the records of the *dīwān*, paid the *ʿaṭāʾ* regularly and succeeded in maintaining order and security not only in Baṣra and Kūfa, but in the entire eastern provinces.

In spite of his internal preoccupations in Baṣra, Ziyād used K͟hurāsān as a base to continue the conquests in the East. His lieutenants al-Ḥakam b. ʿAmr al-G͟hifārī, G͟hālib b. ʿAbd Allāh (or Fuḍāla) al-Layt͟hī and Rabīʿ b. Ziyād al-Ḥārit͟hī re-established Muslim authority in Ṭuk͟hāristān. Balk͟h and Ḳūhistān were re-occupied. It was reported that al-Ḥakam had crossed the River Oxus (al-Ṭabarī, ii, 81-2, 84, 109-11, 155-6).

Ziyād struck coins in the Sāsānid style bearing his own name in the form of "Ziyād ibn Abī Sufyān" (Morony, *op. cit.*, 46). He initiated many development schemes, such as the digging of the canal called Nahr Maʿḳil in Baṣra, wrongly attributed to Maʿḳil b. Yasār (Ibn Durayd, *al-Is͟htiḳāḳ*, ed. ʿAbd al-Salām Hārūn, Bag͟hdād 1979, 181). He transferred population from one country to another. He conveyed 50,000 Arab families from Baṣra and Kūfa to K͟hurāsān to settle with the Muslim Arab army there. They formed the nucleus of the later Ahl K͟hurāsān. His deliberate intention was to establish a permanent Arab settlement in this province (M. Sharon, *Black banners from the East*, 66 n.)

Ziyād is charged with alleged cruelty: he mutilated or crucified some ʿAlids and mistreated their corpses (*Musnad Abī Yaʿlā al-Mawṣilī*, ix, 79-80; *al-Imāma wa ʾl-siyāsa*, 202-3; Ibn Aʿt͟ham, *K. al-Futūḥ*, iv, 203; al-Mad͟jlisī, *Biḥār*, xliv, 126, 213).

Some sources indicate that Ziyād transmitted utterances of the Prophet, not directly but with ʿUmar's intermediacy. He is considered a Successor (*tābiʿī* [see TĀBIʿŪN]), belonging to the first class (*ṭabaḳa*) of the Baṣrans (K͟halīfa b. K͟hayyāṭ, *K. al-Ṭabaḳāt*, ed. A.Ḍ. al-ʿUmarī, Riyāḍ 1982, 191). The pro-Umayyad author Abū Bakr Ibn al-ʿArabī (d. 543/1149) regards him as a Companion (*al-ʿAwāṣim min al-ḳawāṣim*, 250). Abū Nuʿaym al-Iṣfahānī [*q.v.*] said that he was a *zāhid*. He is regarded by some as an expert on the Ḳurʾān and its precepts, and as skilled in jurisprudence (Ibn ʿAsākir, xix, 165-7).

Ziyād was considered a first-rate orator. The question of the authenticity of his inaugural speech remains open, even though it is found in sources belonging to different genres and tendencies: *adab*, rhetoric, history and polemics (al-D͟jāḥiẓ, *al-Bayān wa ʾl-tabyīn*, ii, 61-6; Ibn Ḳutayba, *ʿUyūn al-ak͟hbār*, ii, 241-3; al-Ṭabarī, ii, 73-5; Ibn ʿAbd Rabbih, *al-ʿIḳd al-farīd*, iv, 110-13; Ibn Abi ʾl-Ḥadīd, *S͟harḥ Nahd͟j al-balāg͟ha*, xvi, 200-3). Fragments of Ziyād's speeches and utterances are often cited as examples of excellent oral or written expression. Ibn Abi ʾl-Ḥadīd (i, 278-9) charged him with trying to imitate ʿAlī's style, considered as the highest level of Arabic after the Ḳurʾān and the sayings of the Prophet.

S͟hīʿī sources tried to discover early signs of his treachery and his dishonesty in the interval between the battle of the Camel and Ṣiffīn. Thus it is reported that ʿAlī reprimanded Ziyād for mistreating his emissary (Ibn Abi ʾl-Ḥadīd, xvi, 196). The same sources attribute Ziyād's talent and ingenuity to the fact of his being an offspring of illicit intercourse, since such offspring are intelligent (*awlād al-zinā nud͟jub*^un^) (al-Mad͟jlisī, *Biḥār al-anwār*, lith. Tabrīz n.d., viii, 522).

Ziyād is supposed to be the first author of a treatise on *mat͟hālib* [*q.v.*] (*GAS*, i, 261). If this is true, then he evidently collected reports on vices, immoral practices or habits, and sexual immorality, especially prostitution among the different tribes in the *D͟jāhiliyya* and early Islamic era, with the purpose of using them against his detractors.

The interest in Ziyād's history started at a very early stage. Treatises called *Ak͟hbār Ziyād b. Abīh* were composed by Abū Mik͟hnaf, His͟hām b. Muḥammad al-Kalbī and ʿAbd al-ʿAzīz b. Yaḥyā al-D͟jalūdī (*GAS*, i, 262). In the literature of the *awāʾil* [*q.v.*], Ziyād occupies a noticeable place. He is often included in the category of the three or four shrewd politicians and statesmen (*dāhiya*, pl. *duhāt*) among the Arabs, the other three being Muʿāwiya, al-Mug͟hīra and ʿAmr b. al-ʿĀṣ.

(I. HASSON)

ZIYĀD B. ṢĀLIḤ AL-ḤĀRITHĪ [see ZIYĀD B. ṢĀLIḤ AL-KHUZĀʿĪ].

ZIYĀD B. ṢĀLIḤ AL-KHUZĀʿĪ, Arab commander in the service of Abū Muslim at the time of the ʿAbbāsid Revolt (d. 135/752-3).

He was one of the *naḳībs* [*q.v.*] chosen by Abū Muslim from the leaders of the Arabs in Khurāsān in 1340/747-8. With the triumph of the ʿAbbāsid cause, Abū Muslim appointed Ziyād governor of Bukhārā and Sogdia, where he suppressed a rebellion of the discontented Arab garrison in Bukhārā led by Sharīk (or Shurayk) b. Shaykh al-Mahrī (133/750-1). Shortly afterwards he commanded the Arab expedition sent into the land of the Turks beyond the Syr Darya in order to combat a Chinese army which had appeared in Central Asia and had attacked Čač or Shāsh (the later Tashkent [*q.v.*]). In a great battle near Talas or Ṭarāz [*q.v.*], known mainly from the Chinese sources, Ziyād won a great victory over the Korean general Kao hsien-chih and wrought great slaughter in his army (Dhu 'l-Ḥidjdja 133/July 751); in effect, this was the end of Chinese intervention in the Western lands.

Ziyād's own downfall followed shortly after this, however. In 135/752-3 he rebelled in Sogdia against Abū Muslim, but was abandoned by his commanders. He fled to Bārkath, whose *dihḳān* handed him over to Abū Muslim for execution. It seems that Ziyād had not acted entirely of his own accord, but had been secretly promised the governorship of Khurāsān by the ʿAbbāsid caliph al-Saffāḥ if he would rise up against his over-mighty subject Abū Muslim.

Bibliography: Ṭabarī, ii, 1988, iii, 80, 81-2; Barthold, *Turkestan down to the Mongol invasion*², 194-6; Gibb, *The Arab conquests in Central Asia*, London 1923, 95-6; W. Samolin, *East Turkistan to the twelfth century, a brief political survey*, The Hague 1964, 66-7; E.L. Daniel, *The political and social history of Khurasan under Abbasid rule 747-820*, Minneapolis and Chicago 1979, 87-8, 89, 111-12.

The above is not to be confused with his homonym and contemporary Ziyād b. Ṣāliḥ al-Ḥārithī (from the Yemeni tribe of al-Ḥārith b. Kaʿb [*q.v.*] or Balḥārith), who was governor of Kūfa for the last Umayyad governor of ʿIrāḳ, Ibn Hubayra, in 132/749-50 but who soon afterwards defected to the advancing ʿAbbāsids. See Patricia Crone, *Slaves on horses. The evolution of the Islamic polity*, Cambridge 1980, 172; M. Sharon, *Black banners from the east. II. Revolt. The social and military aspects of the ʿAbbāsid revolution*, Jerusalem 1990, 218-19.

(C.E. BOSWORTH)

ZIYĀD AL-AʿDJAM, Ibn Salmā (or Sulaym, or Sulaymān, or Djābir, see al-Bakrī, *Simṭ al-laʾālī*, *Dhayl*, ed. al-Maymanī, 8) Abū Umāma, poet of the Umayyad period. Of Persian origin, he was a *mawlā* of the ʿĀmir b. al-Ḥārith, a branch of the ʿAbd al-Ḳays [*q.v.*]. For his biography, the primary source is the *K. al-Aghānī*, most of the information being provided by ʿUmar b. Shabba and Ibn ʿĀʾisha.

According to Yāḳūt (*Irshād*, iv, 221), in 23/643 he is said to have participated with Abū Mūsā al-Ashʿarī and ʿUthmān b. al-ʿĀṣ in the conquest of Iṣṭakhr, where he is said to have subsequently lived, according to Ibn Sallām (*Ṭabaḳāt*, 693). In fact, he spent his entire life in the entourage of governors of Khurāsān and of Fārs such as ʿUmar b. ʿUbayd Allāh b. Maʿmar (*Agh.*, xiv, 104-6), ʿAbd Allāh b. al-Khashradj (*ibid.*, x, 151, 155, xiv, 105; Ibn Sallām, *Ṭabaḳāt*, 696) and ʿAbbād b. al-Ḥuṣayn (*Agh.*, xiv, 106), whose patronage he sought.

He associated himself at an early stage with the Umayyad general al-Muhallab b. Abī Ṣufra [*q.v.*], whose victory over the Khāridjites near Nahr Tustar he applauded in a *bāʾiyya*, of which five verses have been preserved by al-Dīnawarī (*al-Akhbār al-ṭiwāl*, ed. ʿĀmir, Cairo 1960, 272), and numerous episodes in his life are linked to his connection with him and his family. In particular, it seems that al-Muhallab protected him and defended his rights even at the expense of his own sons; thus when al-Muhallab's son, Ḥabīb, tore a silk robe that Ziyād wore in the Persian fashion, in revenge for a previous quarrel in which his father had also given his support to Ziyād (*Agh.*, xiv, 103-4), he composed verses declaring that it was not only his robe that had been torn but also the skin of al-Muhallab. The latter again supported him and demanded that his son pay compensation (Ibn Khallikān, *Wafayāt*, ed. ʿAbbās, biography of al-Muhallab, no. 754). Evidently al-Muhallab feared his satirical mode, of which he had had a taste in two scarcely flattering verses composed by Ziyād on the subject of the circumcision, late in life, of al-Muhallab's father Abū Ṣufra. According to Yāḳūt (*Irshād*, iv, 222), Ziyād died *ca.* 100/718 and, according to *Agh.*, xiv, 10, in Khurāsān.

Ziyād owed his nickname al-Aʿdjam to the fact that he had a strong Persian accent; according to anecdotes cited by the *Aghānī*, his mastery of spoken Arabic was not perfect, either in pronunciation or even in grammar. Al-Muhallab presented him with a well-spoken slave to recite his poems on his behalf (*Agh.*, xi, 165), provoking a hostile reaction on the part of another poet at the court of al-Muhallab, al-Mughīra b. Ḥabnāʾ. In exchanges of invective between the two, al-Mughīra b. Ḥabnāʾ never tired of reminding Ziyād of his barbarous origins; he also poked fun at the Rabīʿa who, as a tribe, had asked for a barbarian "of *aʿdjamī* tongue" to defend their honour in his poetry (*Agh.*, xi, 166-7).

But his status as a *mawlā* did not prevent Ziyād from gaining a reputation as a political satirist or from being recognised as "our *lisān*" by the Rabīʿa (*Agh.*, xi, 167). The other poet of the court of al-Muhallab with whom Ziyād exchanged invective was Kaʿb al-Ashkarī, of the Azd, in a conflict which erupted between the latter and the ʿAbd al-Ḳays. Ziyād attacked Kaʿb, vowing that he would make "him and his people the target of every tongue" (*Agh.*, xiii, 58-9). Even al-Farazdaḳ, who intended to attack the ʿAbd al-Ḳays, abandoned his project in the face of Ziyād's riposte (*Agh.*, xiv, 107-8; Ibn Ḳutayba, *Shiʿr*, ed. Shākir, 431; verses also in Ibn Sallām, *Ṭabaḳāt*, 695-6). Ziyād also satirised the Banū Yashkur, in circumstances which vary according to the sources: Ibn

Kutayba (*Shiʿr*, 430) mentions the name of the Yashkurī poet Katāda; Ibn Sallām quotes two of Ziyād's verses concerning this tribe, *Ṭabakāt*, 699; according to *Agh*., xi, 171, cited by al-Baghdādī, *Khizāna*, ed. Hārūn, vi, 126, the Banū Yashkur approached their poet, Suwayd, asking him to reply to Ziyād, but he refused.

The acknowledged imperfections of his spoken Arabic did not prevent the recognition of his poetry, from the time of al-Aṣmaʿī onward (*Fuhūlat al-shuʿarā'*, ed. Khafādjī and al-Zaynī, Cairo 1953, 31), as a *hudjdja* and as linguistically irreproach-able, to such an extent that his verses are cited as grammatical or lexical *loci probantes* by, among others, Sībawayh; al-Mubarrad, *Kāmil*, ed. Wright, 178, 324, 365-6, 632, although al-Mubarrad gives elsewhere a corrected version of the verse most cited as a grammatical *shāhid*; Ibn Khallikān, biography of Khālid al-Tamīmī, no. 215; Abū ʿUbayda, *Madjāz al-Kur'ān*, see *Khizāna*, x, 208-9, and Sezgin, *GAS*, ii, 373-4; and al-Wahhābī, *Marādjiʿ tarādjim al-udabā' al-ʿarab*, *s.v.* He is also quoted several times in the *LA*. Some of the verses attributed to him have also been attributed to al-Akhṭal or to al-Farazdak (Ibn Khallikān, biography of Yazīd b. al-Muhallab, no. 816; the biographer adds here that he has seen the *dīwān* of Ziyād, as is also claimed by al-ʿAynī, *al-Makāṣid al-naḥwiyya fī sharḥ shurūḥ al-alfiyya*, Būlāk 1299, iv, 597, see Ibn Ḥadjar, *Iṣāba*, iv, 199-200).

Ziyād's best known poem, and the best preserved (in particular by al-Yazīdī, *K. al-Amālī*, and by al-Bakrī in his *dhayl* to al-Kālī's *Amālī*, the *Simṭ al-la'ālī*, is his *ḥā'iyya* on the death of al-Muhallab's son Abū Firās al-Mughīra, who predeceased his father in 82/701. This elegy has been translated and published, with discussion of the sources, by F. Krenkow, *The elegy upon al-Mughīra Ibn al-Muhallab*, in *Islamica*, ii [1926-7], 344-54; the remainder of Ziyād's production survives only in fragments, recently collected by Y. Bakkār, *Shiʿr Ziyād al-Aʿdjam*, Damascus 1983. By means of a detailed analysis of the sources and the fragments, Bakkār aims at defining more clearly the biography and the personality of this poet and does not exclude the hypothesis, formed on the basis of a passage in the *LA* (s.v. *ʿudjm*), that Ziyād was in fact, despite his linguistic failings, an Arab by birth. On the subject of the *ḥā'iyya*, al-Bakrī (*Simṭ al-la'ālī*, 7-8) recounts numerous traditions, taken up by Krenkow and Bakkār, according to which this poem would be attributable not to Ziyād but to his fellow-tribesman al-Salaṭān al-ʿAbdī (on whom see Nallino, *La letteratura araba*, 920)—further evidence of the extent to which this *mawlā* was integrated into his adoptive tribe.

It is perhaps all this that Blachère refers to when he writes (*HLA*, 512) that, while the work of Ziyād remains inaccessible to us, his biographical data "make this individual one of the most interesting figures from the point of view of our knowledge of relations between the Arab world and Iran, in poetry, at this time".

ZIYĀDAT ALLĀH [see aghlabids].

al-**ZIYĀDĪ**, Abū Ḥassān al-Ḥasan b. ʿUthmān al-Shīrāzī (this *nisba* from some apparent connection with the Persian city; see Yākūt, *Buldān*, ed. Beirut, iii, 381), judge, traditionist and historian of the early ʿAbbāsid period, b. 156/773 in Baghdād and died there Radjab 242/Nov.-Dec. 856 (al-Ṭabarī, iii, 1434, and al-Khaṭīb al-Baghdādī) or the following year.

A traditionalist in his views and associate of al-Shāfiʿī, he was questioned under the *Miḥna* [*q.v.*] at the end of al-Ma'mūn's reign (al-Ṭabarī, iii, 1121-5, 1128, 1132). But he came into his own under the more orthodox al-Mutawakkil and was in 240/854-5 appointed *kāḍī* of the Sharkiyya quarter of Baghdād; whilst in office there, he had a certain ʿĪsā b. Djaʿfar (presumably a Shīʿī) flogged to death for insulting the Shaykhayn, i.e. Abū Bakr and ʿUmar, and ʿĀ'isha and Ḥafṣa (*ibid.*, iii, 124-6). He was regarded as trustworthy in relating traditions. He was close to the historian al-Wāḳidī [*q.v.*] and was himself the author of a history, now lost, which was an important source for Ibn Abī Ṭāhir Ṭayfūr, whence for al-Ṭabarī, on contemporary and near-contemporary history.

ZIYĀDIDS, a dynasty of southwestern Arabia centred on Tihāma [*q.v.*] between the years 203-409(?)/818-1018, but having control also in the northern highlands of the Yemen [see al-yaman] and along the Indian Ocean coast. Unfortunately, our sources are late and little informed, there are discrepancies in the dates given and even the names of the later members of the family are unknown.

The dynasty is named after Muḥammad b. Ziyād, who traced his pedigree back to the Umayyad dynasty and who, during the caliphate of the ʿAbbāsid al-Ma'mūn [*q.v.*], became the protégé of his minister, al-Faḍl b. Sahl [*q.v.*]. In 202/817 a letter arrived at the ʿAbbāsid court with news of a rebellion of tribes in Tihāma. Al-Faḍl b. Sahl advised al-Ma'mūn to despatch Muḥammad b. Ziyād there in order to crush it. Ibn Ziyād was duly sent with the additional order to build a new capital in Tihāma. After performing the Pilgrimage in 203/818, he pressed on south into Yemen. There he fought many hard battles against recalcitrant tribes and succeeded in winning control over the whole of Tihāma. In 204/819, he built the new capital, as he had been instructed, and it was named Zabīd [*q.v.*]. Before his death in 245/859, he extended the territory of the dynasty far beyond Tihāma: to Ḥaḍramawt [*q.v.*], along the southern coast to al-Shiḥr [*q.v.*] and Mirbāṭ in modern ʿUmān, to Aden [see ʿadan] and Abyan [*q.v.*] and north along the Red Sea coast to Ḥaly Ibn Yaʿkūb.

Ibn Ziyād was followed in power by his son, Ibrāhīm (d. 283/896), he by his own son, Ziyād (d. 289/902), he by his own son, (Ibn) Ziyād (d. 299/911), who was succeeded by one Abu 'l-Djaysh. The latter died in 371/981 and this is the last name and last firm date in the history of the family; 409/1018 is, however, mentioned specifically as the date of the demise of the dynasty.

ZIYĀNIYYA, a Maghribī branch of the Ṣūfī order of the Shādhiliyya [*q.v.*].

The eponymous founder was Muḥammad b. ʿAbd al-Raḥmān Ibn Abī Ziyān (d. 1145/1733), a descendant of the Prophet (*sharīf*) originally from the Moroccan southwest (Wadi Draʿa, near Figuig). At an early age he went to Sidjilmāsa and was initiated into Ṣūfism by a *muḳaddam* of the Nāṣiriyya [*q.v.*], Sīdī Muḥammad b. ʿAzza. On the latter's death, he left for Fās in order to complete his education in the Islamic sciences, notably under Muḥammad b. ʿAbd al-Ḳādir al-Fāsī (d. 1116/1704). According to Rinn, he was allegedly expelled from Fās by Sultan Mawlāy Ismāʿīl (*Marabouts et Khouan*, Algiers 1884, 412); but the hagiographical work devoted to Ibn Abī Ziyān, the *Ṭahārat al-anfus wa 'l-arwāḥ al-djismāniyya fi 'l-ṭarīḳa al-ziyāniyya al-shādhiliyya*, mentions that it was his care for a "decent obscurity" which impelled him to return to his ancestral land (tr. of this work by A. Cour, in *RMM*, xii [1910], see 365). There at Kanādhā (or Kenadsa) he founded a *zāwiya* [*q.v.*] which became a beacon in the region. The brigands of the Sahara feared the saint, famed for his miracle-working and from now on known as "Mawlāy Būziyān"; this last extended his protection over all the caravans crossing his region (documents with the *shaykh*'s seal made these caravans inviolable, according to Depont and Coppolani, who reproduce this seal in *Les confréries religieuses musulmanes*, Algiers 1897, 497). Devotees from the *zāwiya* often escorted the caravans, and soon Ibn Abī Ziyān had his own, involving him in extensive commercial activity. In the same realm of ideas, it was said that the *shaykh* had the supernatural power of facilitating the Meccan Pilgrimage when obstacles intervened (Cour, *op. cit.*, 378-9, 571-9).

The office of *shaykh* was always transmitted hereditarily among the Ziyāniyya, usually from father to son. The order's influence spread particularly in Algeria, notably at Algiers and Oran (see the table in Depont and Coppolani, *op. cit.*, 500). The Ziyāniyya remained faithful to the Shādhilī spirit, in both their *dhikr* [*q.v.*] formulae and their stress on knowledge of the esoteric sciences, and furthermore, in the sobriety of their behaviour (see Cour, 582-3). When the fame of Shaykh Ibn Abī Ziyān had spread throughout Morocco, he enjoyed the favour of Mawlāy Ismāʿīl (*ibid.*, 579), and this positive attitude of the holders of political power towards the Ziyāniyya became generalised. Under the Protectorate, the French authorities appreciated the benevolent and pacific role of the leaders at the Kanādhā *zāwiya*, and Depont and Coppolani note that these last "gave appreciable services" to the French forces.

Bibliography: See also J.Cl. Garcin, *Assises matérielles et rôle économique des ordres soufis*, in G. Veinstein and A. Popovic (eds.), *Les Voies d'Allâh. Les ordres mystiques dans le monde musulman des origines à aujourd'hui*, Paris 1996, 221-2. J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, 88, has only a brief mention of the Ziyāniyya as a branch of the Nāṣiriyya. (E. Geoffroy)

ZIYĀRA (a., pl. *ziyārāt*), pious visitation, pilgrimage to a holy place, tomb or shrine.

1. In the central and eastern Arab lands during the pre-modern period
2. In the central Arab lands from 1800 to the present day
3. Amongst the Copts in Egypt
4. In the Maghrib
5. In Persia and other Shīʿī lands
6. The Turkish lands, including the Balkans and Central Asia
7. In Muslim India
8. In Indonesia
9. In Central and West Africa
10. In the Horn of Africa

1. In the central and eastern Arab lands during the pre-modern period.

Unlike the *ḥadjdj* [*q.v.*], the canonical pilgrimage to Mecca, and the lesser pilgrimage, the *ʿumra* [*q.v.*], the *ziyāra* lacked the authority of Scripture. Mediaeval Arabic and Hebrew sources frequently refer to Jews and Christians making a *ziyāra* to tombs and shrines of holy persons (cf. J.W. Meri, *Sacred journeys to sacred precincts. The cult of saints among Muslims and Jews in medieval Syria*, D. Phil. thesis, Oxford Univ. 1998), and Near Eastern Jews routinely undertook pilgrimages to holy places in the Holy Land, Bilād al-Shām, ʿIrāḳ and Persia.

The first and most fundamental sense of this word applies to visiting the graves of the dead (*ziyārat al-ḳubūr*), as is reflected in the various *Sunan* collections (see Wensinck, *Handbook*, s.v. graves), but never specifically in the context of saints and prophets. Other related expressions which appear in mediaeval sources include *safar* "journeying" and *safar ilā ziyārat al-ḳubūr* "journeying to visit graves". *Ḥadīth* traditions generally refer to the Prophet's stricture against visiting Christian places of worship, and his concern that Muslims would follow idolatrous and polytheistic practices and raise tombs above the ground [see masdjid. I. C. 4.]. The Prophet urged visiting the tombs of the deceased to pray and supplicate on their behalf. *Ziyāra* also appears in other contexts. Devotees made a *ziyāra* to mosques and other holy places, many of them associated with holy persons and their legends, e.g. springs, wells, caves, mountains, etc. *Ziyāra* was also made to dead saints (*awliyāʾ*), prophets, mystics and other holy persons [see walī]. Another type of *ziyāra* was made to such venerable objects as the Prophet's sandal (cf. al-Yūnīnī, *Dhayl mirʾāt al-zamān*, Ḥaydarābād 1954-61, ii, 45-6; Meri, *op. cit.*, 123-4). Devotees also visited living holy men (saints, Ṣūfīs) or other such individuals revered for their piety, learning, spiritual insight and *baraka* [*q.v.*]. (cf. M.M. Chamberlain, *Knowledge and social practice in medieval Damascus 1190-1350*, Cambridge 1994, 132-3; Meri, *op. cit.*, ch. 2).

One of the earliest records of Muslim theologians discussing the proper etiquette (*adab*) of visiting tombs dates from the 2nd/8th century. Al-Ḥasan al-Baṣrī (d. 110/728 [*q.v.*]) expressed concern with the manner and custom of properly conducting oneself when visiting tombs; he rebuked people for forgetting its solemn purpose and for engaging there in unacceptable behaviour, such as eating (al-Turkumānī, *K. al-Lumaʿ fi 'l-ḥawādith wa 'l-bidaʿ*, ed. S. Labīb, Cairo 1986, i, 214).

(a) *Shīʿī* ziyāra *in Arab lands*

All Shīʿīs, wherever they resided, recognised the importance of making the *ziyāra* to the tomb of the Prophet's grandson al-Ḥusayn and the other Shīʿī Imāms. Although the *ziyāra* was not in fact obligatory as the *ḥadjdj* was, a similar obligatory status, merits and recompense were nevertheless ascribed to it. The major Shīʿī *ʿatabāt* [*q.v.* in Suppl.] or pilgrimage cities were almost a "secondary *ḳibla*". The threat of divine punishment for not performing the *ziyāra* figures promi-

nently in *ziyāra* traditions. Shīʿīs upheld the intercession of the Imāms for their followers, in contrast to the Sunnīs, among whom the orthodox scholars like al-Ghazālī and Ibn Ḳayyim al-Djawziyya denied the intercession of saints but only attributed it to the Prophet.

Ziyāra traditions arose in the context of Sunnī-Shīʿī antagonism precipitated by the massacre of al-Ḥusayn and his party at Karbalāʾ [*q.v.*]. Performing canonical prayer (*ṣalāt al-farīḍa*) was equivalent to the obligatory status of performing the *ḥadjdj* and supererogatory prayer to that of the recommended *ʿumra*. Other Shīʿī traditions mention that performing the pilgrimage to Karbalāʾ on the day of ʿArafa equals "one thousand Pilgrimages, one thousand lesser pilgrimages and one thousand military expeditions with the Prophet..." (al-Shaykh al-Mufīd, *K. al-Mazār*, Ḳum 1988, 20). Since the *ziyāra* did not represent a legal substitute or alternative to the *ḥadjdj*, the award of merits surpassing those of the *ḥadjdj* was explicit. Al-Ḥusayn's son Abū ʿAbd Allāh likened the requirements of setting out on a *ziyāra* to al-Ḥusayn to those of the *ḥadjdj*. "What is incumbent upon us (*mā yalzamunā*) is what is incumbent in the *ḥadjdj*" (Ibn Ḳūlūya, *Kāmil al-ziyārāt*, Beirut 1997, 250-1). A number of traditions further address the commendable status of *ziyāra* (cf. *ibid.*, Nadjaf 1356/1437-8, 141).

Shīʿīs placed greater emphasis on *ziyāra* ritual than did Sunnīs. In fact, no Shīʿī theologian opposed making a *ziyāra*. The institutionalisation of ritual contributed to the formation of pilgrimage centres in the towns and cities of ʿIrāḳ. Similarly, the devotional role ascribed to the Shīʿī Imāms and the Family of the Prophet in Fāṭimid Egypt continued with the successor Sunnī dynasties (C.S. Taylor, *Reevaluating the Shiʿi role in the development of monumental Islamic funerary architecture: the case of Egypt*, in *Muqarnas*, ix [1992], 3-10; C. Williams, *The cult of ʿAlid saints in the Fatimid monuments of Cairo*, in *ibid.*, i [1983], 37-52, iii [1985], 39-60).

(b) *Opposition to* ziyāra

Opposition to *ziyāra* crystallised after the founding of the Ḥanbalī school of jurisprudence in ʿIrāḳ. It was not its founder Ibn Ḥanbal (d. 241/855 [*q.v.*]), but rather subsequent generations of disciples who were concerned with Muslims engaging in *ziyāra* practices which violated the Ḳurʾān and the Sunna. However, Ibn Ḥanbal at first forbade reciting the Ḳurʾān at funerals, but immediately changed his mind afterward (cf. al-Ghazālī, *Iḥyāʾ ʿulūm al-dīn*, iv, 492). Ḥanbalīs affirmed that so long as no precedent existed in the Ḳurʾān or Sunna for the veneration of saints and for making a *ziyāra* to tombs (with the exception of reading the opening chapter of the Ḳurʾān, supplicating on behalf of the dead and contemplating death and the Hereafter, etc.), *ziyāra* was to be considered an heretical innovation (*bidʿa*) and venerating saints as polytheism (*shirk*). They also rejected the *ziyāra* on the grounds that it encouraged immoral practices, such as the intermingling of the sexes, especially at festivals and on saints' days (*mawsim*).

One of the earliest Ḥanbalī condemnations of *ziyāra* came from the Baghdādī jurisconsult and resident of Damascus Ibn ʿAḳīl (d. 513/1119 [*q.v.*]), who castigates the ignorant and wretched (i.e. the common people) for practices "which they created for themselves", namely, glorifying tombs and physically coming in contact with them. Ibn ʿAḳīl argues that proponents of the cult of saints justified pilgrimage to tombs and shrines by invoking a tradition on the authority of the Companion Djābir b. ʿAbd Allāh (d. 78/697) in which the Prophet visited the Mosque of the Aḥzāb on Monday, Tuesday and Wednesday (G. Makdisi, *Ibn ʿAqīl, religion and culture in classical Islam*, Edinburgh 1997, 209). On the basis of this tradition, he and later generations of Ḥanbalīs deliberated whether it was legal to perform *ziyāra* to saints' tombs, shrines (*mashāhid* [see MASHHAD]) and mosques with tombs in them. Devotees would engage in nights of religious devotion called *iḥyāʾ* during which they would recite the Ḳurʾān and pray. Such occasions, it was implausibly alleged, engendered immoral behaviour. Ibn ʿAḳīl refers to men and women committing immoral acts and to the expenditure of great sums of money. He further elaborates on objectionable rituals which include kindling lights, kissing tombs and covering them with perfume, addressing the dead with petitions, writing formulae on paper, taking earth from the tomb as a blessing, hanging rags on trees, etc. Such practices, he argues, were tantamount to *djāhilī* practices (Makdisi, *op. cit.*, 210).

Ibn Taymiyya (d. 728/1328 [*q.v.*]) was one of the foremost critics of the cult of saints and the author of several highly controversial legal opnions (*fatāwā*) and treatises concerning *ziyāra*, which provide insight into the rituals of saint devotion among Muslims and Christians throughout the Near East, particularly in Damascus, where he lived most of his life.

Ibn Taymiyya distinguishes between the heretical *ziyāra* (*al-ziyāra al-bidʿiyya*), which he associates with pagans, Jews and Christians, and the legal *ziyāra* (*al-ziyāra al-sharʿiyya*), which is enjoined by the Prophet. The former, tantamount to polytheism, is when "the visitor intends that his supplication be fulfilled at the tomb or that he supplicate the deceased, supplicate for rain through him and make a request of him or take an oath by God, requesting a need" (*Madjmūʿ fatāwā*, al-Riyāḍ 1991, xxvii, 31-2). However, Ibn Taymiyya does not deny the possibility that supplication can be fulfilled, going so far as to say that "if anything is granted, it should be attributed to the personal merit of the tomb's patron" (*Iḳtiḍāʾ al-ṣirāṭ al-mustaḳīm mukhālafat ahl al-djaḥīm*, Cairo 1950, 374). While some theologians acknowledged the symbiotic nature of the relationship between the living and the dead, Ibn Taymiyya argues that "in the legally permissible *ziyāra*, the living does not have need for the dead by making a request of him (*masʾala*) or seeking his intercession (*tawassul*). But rather, the dead derive benefit from the living, and God the Exalted has mercy upon the living who supplicate for the dead" (*Madjmūʿ fatāwā*, xxvii, 71).

Ibn Taymiyya's disciple Ibn Ḳayyim al-Djawziyya (d. 1275/1350 [*q.v.*]) continued his master's crusade against *ziyāra* practices which threatened orthodoxy and in a scathing polemic against them argued that mediaeval Syrians in performing *ziyāra* were observing rites (*manāsik*) similar to those of the Pilgrimage to Mecca (Ibn Ḳayyim al-Djawziyya, *Ighāthat al-lahfān min maṣāyid al-shayṭān*, Beirut 1986, i, 220-21, 304). Concerning such parallels, see Meri, *The etiquette of devotion in the Islamic cult of saints*, in *The cult of saints in Late Antiquity and the Middle Ages. Essays on the contribution of Peter Brown*, ed. J. Howard-Johnston and P.A. Hayward, Oxford 1999, 263-86; idem, *Sacred journeys*.

During the early 20th century, the puritanical Wahhābiyya [*q.v.*], adherents of the doctrines of Ibn Taymiyya, destroyed the monuments that stood over the tombs of the Companions throughout the Ḥidjāz.

(c) *Affirming the* ziyāra

Writing in defence of the *ziyāra* in his *Iḥyāʾ ʿulūm al-dīn*, Abū Ḥāmid al-Ghazālī (d. 505/1111 [*q.v.*])

took the opponents of *ziyāra* to task by affirming the existence of saints and the permissibility of making a *ziyāra* to all tombs. But he, too, qualified the true meaning of *ziyāra*, which he did not merely associate with saints. The presence of holiness made a pilgrimage site efficacious. Muslims possessed a universal sense of the holiness of the dead which manifested itself in the devotee's physical and spiritual contact with the site. Al-Ghazālī stresses the universality of the interpersonal experience of self-surrender and embracing the dead with all one's senses, a recurring theme in the pilgrimage guides (*op. cit.*, iv, 492).

Ziyāra should be conducted in accordance with the Sunna of the Prophet. For al-Ghazālī, the goals of *ziyāra* were contemplation, remembering death and obtaining blessings, a view with which even the Ḥanbalīs would agree. However, the devotee may obtain blessings only through his own contemplation and supplication and not through the dead saint. The exception is the Prophet. Al-Ghazālī cites two traditions, one of which commends *ziyāra*: "Visiting tombs is altogether recommended for remembrance (*dhikr*) and contemplation (*iʿtibār*). Visiting the tombs of the righteous is recommended for the purpose of seeking blessings [and] contemplation. The Messenger of God... forbade visiting tombs and then permitted that afterwards" (iv, 490). Al-Ghazālī then quotes a canonical Tradition related by ʿAlī in which the Prophet changed his mind about permitting Muslims to visit the dead.

Unlike the Ḥanbalīs, al-Ghazālī did not distinguish between *ziyāra* to the tombs of loved ones and those of saints. The goals were one and the same—supplicating to God on behalf of the dead. Since the Prophet visited his mother's grave, it is permissible for Muslims to visit all graves and remember the dead. However, the Prophet never kissed, lay upon or rubbed against tombs.

(d) *Pilgrimage literature*

Pilgrimage guides are collectively referred to as *kutub al-ziyārāt*. The guide was a companion for learned pilgrims to remember and invoke blessings upon the dead saint and to make a pilgrimage to his tomb or shrine. Although they reflect a variety of influences and traditions from the early Islamic period, pilgrimage guides provide a real sense of the variety of *ziyāra* ritual and thus constitute an important source for understanding the veneration of holy persons. Guides occasionally mention Jewish, Christian and common holy sites.

A number of factors contributed to the emergence of pilgrimage guides as a devotional genre. The Islamic territorial expansion from the 1st/7th to the 3rd/9th centuries led to Muslim scholars recording and commenting on the burial sites of the Prophet's Companions who had settled in the garrison towns and of those martyred in battle. Similar traditions, of varying degrees of authenticity, concerning the prophets and other scriptural figures are also frequently mentioned.

Ziyāra traditions evolved from *faḍāʾil* traditions which emphasise the Islamic nature and sanctity of a location by identifying the burial place of a prophet, martyr or hero. Such traditions extol the merits of particular cities, holy sites and saints. The systematic compilation of traditions contributed to the emergence of regional histories and pilgrimage guides for such cities as Cairo, Damascus, Aleppo, Kūfa and Nadjaf, and of other literary genres which often mention pilgrimage sites.

The only known specimen of pilgrimage literature for the entire Islamic world and parts of the Christian Mediterranean and Byzantium during the late 6th/12th and early 7th/13th centuries is the Syrian savant and ascetic ʿAlī b. Abī Bakr al-Harawī's (d. 611/1215 [see AL-HARAWĪ AL-MAWṢILĪ]) *K. al-Ishārāt ilā maʿrifat al-ziyārāt* (ed. J. Sourdel-Thomine, Damascus 1953). Almost all of our knowledge of pilgrimages to shrines in the Arabian peninsula derives from this source. The author records sites and popular traditions concerning them, based on first-hand knowledge and second-hand accounts. Al-Harawī regularly includes popular traditions, which he indicates in a number of ways: "It is said" (*ḳīla/yuḳāl*), "according to local custom" (*kamā dhakarū/yadhkurūn*), or "according to what the people of the site mentioned" (*kamā dhakara ahl al-mawḍiʿ*). He often questions these traditions by stating that "the truth is..." (*wa 'l-ṣaḥīḥ anna...*).

The *Ishārāt* provided a basis for late mediaeval pilgrimage guides and regional histories, particularly in al-Shām. Unlike other pilgrimage guides, however, there is no evidence to suggest that it was employed during a *ziyāra*. In fact, the author dedicated the work to the ʿAbbāsid caliph (Y. Rāghib, *Essai d'inventaire chronologique des guides à l'usage des pèlerins du Caire*, in *REI*, xli [1973], 272-3). Morever, it is not as explicit as Egyptian pilgrimage guides in providing directions and distances. The *Ishārāt* is akin to a travel itinerary, but it does not provide distances between places or mention the time spent in a given location. In fact, the guide is a compilation from memory, trustworthy sources, and notes which may have survived being appropriated by the Franks in 588/1192. All pilgrimage guides employ a common language to refer to pilgrimage sites, a language not merely descriptive in nature but one indicative of the rituals that devotees performed and the sacred nature of sites.

In the absence of a universal tradition of pilgrimage guides, many traditions emerged which reflected a variety of local and regional practices as attested in the diversity of guides. Pilgrimage guides throughout the Islamic world tend to be derivative in nature, often relying upon previous traditions. The earliest known pilgrimage guide is of Shīʿī provenance, the *K. al-Ziyārāt* of the Kūfan jurist al-Ḥasan b. ʿAlī b. Faḍḍāl al-Taymī al-Kūfī (d. 224/838-9). No correlation exists between the growth of Shīʿī pilgrimage guides in ʿIrāḳ and the development of pilgrimage guides in Egypt. Neither the Egyptian or later Syrian guides betray a Shīʿī origin. Authors of Sunnī and Shīʿī guides rely upon the *faḍāʾil* literature for the purpose of glorifying a location. However, the Shīʿī guides also draw upon traditions attributed to a number of the Imāms, most notably the sixth Imām Djaʿfar al-Ṣādiḳ [*q.v.*], which largely concern al-Ḥusayn, ʿAlī and other members of the Prophet's Family.

(e) *Shīʿī pilgrimage guides*

These are concerned with rites (*manāsik*) of *ziyāra* and not only with *adab* or etiquette as in the Sunnī case. *Manāsik* ordinarily and in Sunnī usage refers to the ceremonies and rites of the *ḥadjdj*. Shīʿī guides stress the importance of ritual behaviour to a greater degree than Sunnī ones. The earliest known Shīʿī guides include that of al-Kūfī (see above), Ibn Ḳūlūya's (d. 368/978-9) *Kāmil al-ziyārat*, his disciple Muḥammad b. Muḥammad al-Nuʿmān al-Ḥārithī (al-Shaykh al-Mufīd)'s (d. 413/1022) *K. al-Mazār* and Ibn Dāwūd al-Ḳummī's (d. 368/978 or 379/989) *K. al-Mazārāt al-kabīr*. Such guides describe ritual behaviour and supplications pronounced before undertaking a pilgrimage, such as the types of rituals and rites which al-Shaykh al-Mufīd refers to as *manāsik*. He and Ibn Ḳūlūya cite traditions indicating that Shīʿīs placed

great emphasis on the *ziyāra* to ʿAlī's tomb in Nadjaf and that of al-Ḥusayn in Karbalāʾ. One such tradition of Abū ʿAbd Allāh b. al-Ḥusayn states that "making a *ziyāra* to al-Ḥusayn . . . is equal to and more meritorious than twenty pilgrimages to Mecca" (Ibn Ḳūlūya, ed. Nadjaf, 161). A similar tradition concerns visiting al-Ḥusayn on the day of ʿArafa.

Since prescribed ritual acts constituted a central part of Shīʿī *ziyāra* devotion, Shīʿī scholars and Imāms exercised control over its rites and urged devotees to make the *ziyāra* according to the traditions of the Imāms to the extent that not doing so was considered un-Islamic and would result in a shorter lifespan (*ibid.*, 43).

This is in contrast to the Sunnī *ziyāra*, in which little control existed. For the Shīʿī, performing the *ziyāra* had many benefits in addition to receiving the temporal benefits of performing the *ḥadjdj* and *ʿumra*, as well as dispelling sadness and expurgating sins. Wherever they resided, Shīʿīs observed the same rites and rituals. The formalisation and consolidation of ritual was a necessary corollary to the development of central pilgrimage centres, which did not exist for the Sunnīs.

Nor were local cults insignificant. However, local ritual practices were not preserved in pilgrimage guides, but have only survived in local histories. The Shīʿī Ḥamdānid ruler of Aleppo Sayf al-Dawla (*r.* 333-56/944-67 [*q.v.*]) was a devotee of saints who patronised and constructed shrines in Aleppo and its outlying villages.

It was incumbent upon the Shīʿī pilgrim to abstain from worldly pleasures. *Ziyāra* to the shrine of al-Ḥusayn in Karbalāʾ was a special experience which demanded the full participation of the devotee in the martyrdom of al-Ḥusayn and the expression of great sorrow, not merely the sadness one expresses over the death of relations but rather its ultimate manifestation requiring the pilgrim to experience physical and emotional debilitation.

Unlike the majority of Sunnī guides, Shīʿī ones were written by prominent theologians, such as the aforementioned Ibn Ḳūlūya and his disciple al-Shaykh al-Mufīd. The latter's *K. al-Mazār* is divided into two parts, the first of which concerns the merits (*faḍāʾil*) of Kūfa, its [congregational] mosque and the Euphrates, etc. This is followed by a description of the *ziyāra* to ʿAlī's tomb and a discussion of the necessity of visiting that of al-Ḥusayn and the merits of performing the *ziyāra* to it, especially on various holy days. So highly developed were the *ziyāra* rites that Shīʿīs pronounced formulaic expressions at every stage. Shīʿī guides could perhaps be regarded as manuals for theologians who would instruct illiterate and common pilgrims in the ways of the group activity of *ziyāra*. The second part of the guide deals primarily with *ziyāra* to the Prophet Muḥammad and his Household, who were buried in Medina, and to the Shīʿī Imāms. Al-Shaykh al-Mufīd devotes a section to abridged supplications, which suggests that they were meant primarily for instantaneous memorisation before the performance of the *ziyāra* rather than for reading or study.

Shīʿīs also prayed special *ziyāra* prayers as at the tomb of the first Imām ʿAlī, which consisted of a series of supplications and recitations of particular chapters of the Ḳurʾān, placing the right and left cheek on the ground and pronouncing imprecations against the enemies of ʿAlī and those who wronged him.

These guides do not mention places in Syria to which ʿIrāḳī Shīʿī pilgrims undertook pilgrimage, as no Imāms were buried there. However, the Shīʿīs of Syria and Lebanon performed many of the same rites and rituals mentioned in these guides at local shrines as those done at the shrines of the Imāms in ʿIrāḳ and Persia. In spite of the absence of evidence concerning Shīʿī *ziyāra* rituals in Syria, Aleppan and Damascene Shīʿī theologians would have travelled to the holy cities of ʿIrāḳ, and theologians who hailed from the east and settled in al-Shām would have disseminated the proper teachings of the Imāms and taught proper *ziyāra* rites.

The earliest surviving Egyptian pilgrimage guide, which served as a basis for later works, is the *Murshid al-zuwwār ilā ḳubūr al-abrār* of the Shāfiʿī jurisconsult and *ḥadīth* scholar ʿAbd al-Raḥmān b. ʿUthmān (d. 615/1218) (publ. Cairo 1995). Like other guides, it begins with the sacred topography of the pilgrimage centre, in this case Djabal al-Muḳaṭṭam and the Ḳarāfa cemeteries. This is followed by descriptions of mosques and their endowers, historical accounts concerning the *ziyāra* and traditions concerning the dead hearing the living, discussion of the propriety of walking in the cemetery with sandals, formulas pronounced upon entering the cemetery, pilgrimage etiquette, and various ritual acts (making sacrifice, prayer, etc.). Finally, the author lists tombs, their efficacious qualities, associated rituals and exact pilgrimage routes. The guide was not merely descriptive but also prescriptive. In fact, it is replete with instructions and directions to the pilgrim as he walked from station to station. A contemporary of Ibn ʿUthmān, Madjd al-Dīn b. Muḥammad b. ʿAbd Allāh al-Nāsikh (d. *ca.* 696/1296-97), a minor Egyptian official in the service of the vizier Ibn Ḥanna, wrote a second guide, *Miṣbāḥ al-dayādjī wa-ghawth al-rādjī wa-kahf al-lādjī*. During the 9th/15th century, the Ṣūfī mystic Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Muḥammad b. al-Zayyāt (d. 815/1412) composed *al-Kawākib al-sayyāra fī tartīb al-ziyāra fi 'l-ḳarāfatayn al-kubrā wa 'l-ṣughrā* (Cairo 1907). Another guide was composed by Nūr al-Dīn Abu 'l-Ḥasan ʿAlī b. Aḥmad b. ʿUmar b. Khalaf b. Maḥmūd al-Sakhāwī al-Ḥanafī (d. 1482/3?), entitled *Tuḥfat al-aḥbāb wa-bughyat al-ṭullāb fi 'l-khiṭaṭ wa 'l-mazārāt wa 'l-tarādjim wa 'l-biḳāʿ al-mubārakāt*. The Cairene *ziyāra* developed into an elaborate institution with learned guides known as *mashāyikh al-ziyāra* who conducted visitors (*zuwwār*) through the Ḳarāfa cemeteries on Djabal al-Muḳaṭṭam [*q.v.*].

Pilgrimage guides developed much later in al-Shām than they did in Egypt. However, most of our knowledge of mediaeval Syrian *ziyārat* derives from historical sources. In contrast to Egypt, where *ziyāra* literature was known in Fāṭimid and Mamlūk times, the earliest extant pilgrimage guide for Syria dates to the early 10th/16th century. The absence of institutionalised Sunnī control over the *ziyāra* as with the later *mashāyikh al-ziyāra*, and of an early tradition of scholarship centered around pilgrimage traditions, prompted the later appearance of guides. However, poems such as the one recited to the Damascene historian Ibn ʿAsākir (d. 572/1176 [*q.v.*]) on Mt. Ḳāsiyūn, praise the performing of the *ziyāra* to its pilgrimage sites. Muslims were accustomed to writing poetry about their holy places. Brief descriptions of pilgrimage sites are also found in geographical works like al-Dimashḳī's *Nukhbat al-dahr* and fuller accounts in travel itineraries like the *Riḥlas* of Ibn Djubayr and Ibn Baṭṭūṭa, who routinely mention the pilgrimage sites in a given locality. Khalīl b. Shāhīn al-Ẓāhirī (d. 873/1468) in his *Zubdat kashf al-mamālik*, ed. and tr. E.F.C. Rosenmüller, Leipzig

1828, consistently enumerates the congregational mosques, *madrasas*, shrines (*mashhads*), pilgrimage sites (*mazārāt*) and blessed sites (*amākin mubāraka*). The centrality of these designations in al-Ẓāhirī's work and the emphasis that he places on "blessed places" indicate the contemporary importance attached to places of pilgrimage. The 6th-7th/12th-13th centuries are characterised by increased activity in the compilation of pilgrimage traditions and descriptions of pilgrimage places and the rituals and legends associated with them. These works represent a transition from an oral to a written *ziyāra* "tradition" among scholars and historians in al-Shām. Historians such as Ibn ʿAsākir, Muḥammad b. ʿAlī al-ʿAẓīmī (d. *ca.* 556/1161 [*q.v.*]), Yaḥyā b. Abī Ṭayyiʾ (d. *ca.* 625-30/1228/33 [see IBN ABĪ ṬAYYIʾ]), Ibn al-ʿAdīm (d. 660/1262), Ibn Shaddād (d. 684/1285) and Ibn al-Shiḥna (d. 890/1485) [*q.vv.*] include in their histories detailed inventories of tombs, shrines and other monuments for the Mirdāsid, Ḥamdānid, Ayyūbid and Mamlūk periods. Their works provide significant details concerning the founding of monuments, their efficaciousness, legends associated with them, and the practices and beliefs of the common people and their encounters with the holy. Some of these traditions are based on the personal experiences of the writers or their contemporaries. Notable is the prominence accorded to *ziyāra* traditions concerning the tombs of the Family of the Prophet, his Companions and the Followers throughout these works.

Ibn ʿAsākir dedicates a number of chapters of his *Taʾrīkh* to places of prayer, tombs and shrines in and around Damascus to which the *ziyāra* is made. One section includes nineteen traditions concerning the burial places of prophets and Companions narrated by a number of Companions and several reports by the Damascene historian Abū Zurʿa (d. 270/894), who is critical of the authenticity of a number of tombs, stating e.g. "Regarding Mudrik b. Ziyād, I did not find any mention of him, except on the tablet on his tomb from an unverifiable source. . . ."

Like al-Harawī's *Ishārāt*, the works of Ibn al-ʿAdīm and Ibn Shaddād reflect a popular level of discourse and also mention the activities of the people. Ibn al-ʿAdīm, who was a contemporary of al-Harawī, from whom he personally heard a number of accounts, devotes a chapter of his *Bughyat al-ṭalab fī taʾrīkh Ḥalab* to "the pilgrimage sites (*mazārāt*), tombs of prophets and saints and the noble localities (*mawāṭin*) in Aleppo and its districts, which are known for the fulfilment of supplication" (ed. S. Zakkār, Beirut 1988-9, i, 459). The account includes 57 pilgrimage places for Aleppo and its districts, including accounts taken from al-Harawī and the author's father.

Ibn Shaddād dedicates three chapters of *al-Aʿlāḳ al-khaṭīra* to pilgrimage sites in Aleppo, Damascus, Jordan, Palestine and Lebanon. He relies extensively on al-Harawī for Palestinian and Damascene *ziyārāt* and on Ibn al-ʿAdīm and Ibn Abī Ṭayyiʾ for Aleppan sites. The Ḥanbalī jurisprudent Muḥammad b. ʿAbd al-Hādī (d. 744/1343), who was a member of the Maḳdisī family, also composed a number of no longer extant works, including a pamphlet concerning the *ziyāra* and another on the *ḥadīth* concerning the lives of the prophets and their graves. He also includes unique details concerning Ayyūbid pilgrimage sites.

Ibn Ṭūlūn (d. 953/1546 [*q.v.*]), a prolific historian and commentator on the political and social climate of Mamlūk and early Ottoman Damascus, was one of the many devout believers who made the *ziyāra* on a regular basis to tombs and shrines in his native Damascus, judging by his numerous works which mention or are devoted to Damascus' pilgrimage sites and saints, including *Mufākahat al-khillān fī ḥawādith al-zamān* and *al-Ḳalāʾid al-djawhariyya fī taʾrīkh al-Ṣāliḥiyya*. Thirteen other compositions dealing with various aspects of the cult of saints are now lost but widely quoted in the aforementioned works and in his autobiography, *al-Fulk al-mashḥūn fī aḥwāl Muḥammad Ibn Ṭūlūn*. Two other works survive, the first of which, *Tuḥfat al-ḥabīb fīmā warada fi 'l-kathīb* (cf. J. Sadan, *Le tombeau de Moïse à Jéricho et à Damas*, in *REI*, xlix [1981], 59-99), concerns the tombs of Moses in Damascus and Jericho, while *Ghāyat al-bayān fī tardjamat al-Shaykh Arsalān* is a brief biography of a 6th/12th-century Damascene saint and a description of his burial place. Women visiting shrines prompted Ibn Ṭūlūn to write the no longer extant *al-Tawadjdjuhāt al-sitt ilā kaff al-nisāʾ ʿan ḳabr al-Sitt*, against their visiting the reputed shrine of the Prophet's granddaughter Sayyida Zaynab in a village south of Damascus.

In *al-Ḳalāʾid al-djawhariyya*, which he composed about the history of al-Ṣāliḥiyya [*q.v.*] outside Damascus, Ibn Ṭūlūn dedicates a chapter to its famous pilgrimage sites and mausoleums. He begins by listing a number of grottoes, caves and *miḥrāb*s, mosques and *madrasas* followed by the most important tombs for which he provides detailed biographical accounts based on those of the Maḳdisī family and others. The Maḳdisīs also composed a number of important biographical works, parts of which survive.

The first known Damascene pilgrimage guide is Ibn al-Ḥawrānī's (d. 1000/1592) *K. al-Ishārāt ilā amākin al-ziyārāt* (Damascus 1981), which relies upon the works of Ibn Ṭūlūn, al-Rabaʿī's *Faḍāʾil al-Shām* and Ibn ʿAsākir's *Taʾrīkh madīnat Dimashk*. Ibn al-Ḥawrānī wrote the *Ishārāt* in response to a request, intending "to guide [others] to righteousness so that it will serve as an aid to the one who sets out on pilgrimage (*ṭālib al-ziyāra*), obeying the words of God the Exalted, 'Let there become of you a community that shall call for righteousness'" (Ḳurʾān, III, 104). The guide, which includes over one hundred pilgrimage sites for Damascus and outlying villages and a number of other Syrian localities like Aleppo and its surrounding villages, tombs, shrines, mosques, minarets and sacred grottoes, opens with the praise of Damascus and its congregational mosque, the traditions concerning the head of Yaḥyā b. Zakariyyāʾ [*q.v.*], the minaret where ʿĪsā will descend at the end of time and a number of individual shrines, such as the tombs of Hūd, al-Sayyida Ruḳayya and Nūr al-Dīn [*q.vv.*]. For each entry, the author provides a biography of the saint. The rest of the guide is ordered by location, beginning with the western part of the city, then proceeding to the southern, eastern and northern parts. The sixth chapter includes pilgrimage sites in the outlying villages. This is followed by a number of northern Syrian localities. Ibn al-Ḥawrānī includes pilgrimage sites on the basis of established *ziyāra* traditions, such as those found in the works of al-Rabaʿī, Ibn ʿAsākir and Ibn Ṭūlūn. The concluding chapter is devoted to *ziyāra* etiquette. According to Ibn al-Ḥawrānī, the *ziyāra* begins with the remembrance of God and the intent to perform pilgrimage. The author then indicates that the devotee reflects upon himself and his sins which prevent him from nearing God. He experiences a cathartic state in which he rebukes and scolds himself and then weeps. Then he supplicates God and reads from the Ḳurʾān, while being sincere in reaching his goal, and refrains from speaking foul words. *Ziyāra* was not only a means for fulfilment of personal supplications; the devotee was to

remember God and the Afterlife, pray and read the Ḳurʾān. This is the ultimate purpose of *ziyāra*.

Ḳāḍī Maḥmūd al-ʿAdawī's (d. 1032/1623) *K. al-Ziyārāt bi-Dimashḳ* (Damascus 1956), which is an acknowledged imitation of Ibn al-Ḥawrānī's *Ishārāt*, relies upon many of the same sources and a number of literary, devotional and historical works, and mentions 98 saints' tombs and other pilgrimage sites. An emphasis on biographical details renders this a biographical work rather than a pilgrimage guide to be employed during the *ziyāra*. Al-ʿAdawī is not explicit about the purpose for which the guide is to be used. However, it may be assumed that it served a similar commemorative function to Ibn al-Ḥawrānī's *Ishārāt*, but does not stress pilgrimage etiquette.

Yāsīn al-Faraḍī b. Muṣṭafā al-Djuʿfī al-Biḳāʿī al-Ḥanafī al-Māturīdī (d. 1095/1684), the author of the guide *al-Nubdha al-laṭīfa fi 'l-mazārāt al-sharīfa* is explicit about the purpose for which devotees should use it. Al-Biḳāʿī intended that the guide be employed during pilgrimage as an aid to remembering the saints who were buried in a particular location, perhaps even suggesting that the pilgrim should visit as many pilgrimage sites as he possibly can.

During the eighteenth century, the Damascene Ṣūfī ʿAbd al-Ghanī al-Nābulusī (d. 1143?/1731 [*q.v.*]) undertook several journeys through Bilād al-Shām, Egypt and the Ḥidjāz in which he meticulously recorded details of the pilgrimage sites he visited, and in one of his several travel works, *al-Ḥaḍra al-unsiyya fi 'l-riḥla al-ḳudsiyya*, he undertook a 44-day journey from Damascus to Jerusalem in which he visited numerous shrines.

2. In the central Arab lands from 1800 to the present day.

In the 19th and 20th centuries, the visitation of the tombs of saints and other holy sites has continued to be a common feature of popular religious life in Egypt, Greater Syria, ʿIrāḳ and Arabia (for Shīʿī *ziyārāt*, see 5. below). As a result of enhanced security and comfort of travel provided by modern means of transport, there has even been a remarkable increase in the number of pilgrims visiting important shrines such as that of Aḥmad al-Badawī in Ṭanṭā [*q.vv.*]. The same holds true for the *ziyāra* to the Prophet's tomb and to the old cemetery of Medina (see AL-MADĪNA and BAḲĪʿ AL-GHARḲAD)—a visitation that is, of course, in most cases performed before or after the *ḥadjdj* [*q.v.*]. In this connection, it is to be noted that the destruction of tombs and shrines in Mecca, Medina and elsewhere in Arabia, at the hands of Wahhābīs [see WAHHĀBIYYA], has not in the long term resulted in a dramatic decrease of visitations to these places, at least not to the most important ones. (For a survey of the sites in Medina demolished since 1926, see e.g. Yūsuf Raghdā al-ʿĀmilī, *Maʿālim Makka wa 'l-Madīna bayn al-māḍī wa 'l-ḥāḍir*, Beirut 1997, esp. 401 ff.) However, any *ziyāra* there is to be performed, at least in principle, according to the strict rules of the Wahhābiyya and under the control of its representatives.

In other countries of the Arab East, the situation varies. For a number of reasons, including urban development measures and the confiscation of *waḳf* [*q.v.*] property by the state, many shrines (in particular the smaller ones) have become neglected or have even been demolished. Others, however, still flourish, and in fact a number of new ones have sprung up recently. Moreover, there are old shrines which, for one reason or another, have lately acquired a popularity they never had before. An interesting example of this phenomenon is the shrine of Sayyida Zaynab (*Ḳabr al-Sitt*) near Damascus, which is visited mainly, but not exclusively, by Shīʿīs (see Mervin, in *Bibl.*, and no. 25 [1996] of the journal *al-Mawsim*). In the case of Sayyida Zaynab, as well as with regard to Muslim sanctuaries in Jerusalem [see AL-ḲUDS], Hebron [see AL-KHALĪL] and other *mazārāt* in Palestine (see, in particular, Canaan, in *Bibl.*), it is obvious that political circumstances, as in the past, have a considerable (positive or negative) influence on the actual performance of the *ziyārāt* and on the number of pilgrims participating.

In general, the *ziyāra* is popular especially with lower and middle-class women. Many educated Muslim men shun or even vehemently denounce all traditional forms of saint veneration, and in particular most of the *ziyāra* practices. At best, they demand that the rites be reformed according to the teachings of the Salafiyya [*q.v.*], i.e. be stripped of all words and deeds that, in their opinion, are *bidʿa* [*q.v.*].

More or less sharp criticism of what goes on at popular festivals [see MAWSIM and MAWLID], such as prostitution and various forms of exploitation of the credulous, is to be found in modern Arabic literature. This criticism is voiced in works written by religiously conservative authors as well as by modernists and (even more so) by secularists. There are, however, many such writers who also point to the spiritual dimensions and social values which find expression in the *ziyārāt* and related practices (for Egypt, see Wielandt, in *Bibl.*).

3. Amongst the Copts in Egypt.

Coptic Orthodox sites for *ziyāra* can be found throughout Egypt, shaping an entirely Christian topography. The origins of sites range from the 1st to the 20th centuries. The itinerary of the Holy Family during their flight to Egypt is marked by numerous holy places. Nowadays, Copts include holy rocks and trees in their *ziyāra*, while St. Mary and Jesus became venerated in churches and monasteries built on the legendary sites. The itinerary stretches from Sakha in the north to Asyūṭ in Middle Egypt. Some noteworthy places are Musturud (where now the Church of the Virgin Mary stands), Wādī 'l-Naṭrūn (currently with four large monasteries), and Old Cairo (the churches of Abū Sardja and Muʿallaḳa and two convents for nuns). At several convents and churches, such as at Dayr Dronka and Dayr al-Muḥarraḳ near Asyūṭ, large *mawlids* developed besides the regular *ziyāra* (Catherine Mayeur-Jaouen, *The Coptic Mouleds. Evolution of the traditional pilgrimages*, in N. van Doorn and K. Vogt, *Between desert and city. The Coptic Orthodox Church today*, Oslo 1997, 212-29).

Martyrs, saints (such as Mārī Girgīs, Abū Sayfayn, Sitt Dimyāna) and the Virgin Mary account for the majority of *ziyāra* sites, yet there are numerous local saints, some dating back to the 4th century A.D. Concurrent with the Coptic Church reform that started in the 1950s, many pilgrimage centres have been restored and re-shaped into new shrines which draw each week thousands of pilgrims who are in a process of rediscovering their Coptic heritage and history. An example of this development is the shrine of St. Menas at Maryūṭ, which was a large pilgrimage centre from the Late Roman Empire until the 9th century. In 1959 the Coptic Church built a new monastery, Dayr Abū Minā, near the site, and the relics of St. Menas were transferred from Cairo to Maryūṭ. The site gained in reputation after the remains of the popular Patriarch Kyrillos VI, who died in 1971, were laid there as well.

Concomitant with Islamic Egypt reinforcing its religious roots, Copts are purifying their *ziyāra* practices from non-Christian practices, beliefs and elements. Since the 1970s, *ziyāra* has evolved from an outing to a holy place characterised by indigenous practices, shared by Muslims and Christians alike, to a liturgical event orchestrated by the Coptic Church. Prayers are not extempore but made according to certain texts, requests made to saints go via priests and monks, *tamdjīd* (songs of praise about the saint) are sung from printed bulletins, while the *ziyāra* is supervised by church volunteers who ensure that the pilgrims obey the Church's teachings. Often a mass will be celebrated. As a result of this, the number of Muslim visitors whom these sites used to draw has drastically diminished.

An important aspect of *ziyāra* is to take home a sign of *baraka* [*q.v.*] in the shape of holy oil, a trinket with the saint's picture, or a small container with *ḥānūt* (fragrant balm that was put on the grave on the saint's day).

The goals of *ziyāra* are manifold: to pray for healing, to pronounce vows, or to deliver what was promised in an earlier vow. *Ziyāra* during *mawlids* is considered the prime time for baptising children and for exorcising evil spirits. Honouring the saint is an important aspect of *ziyāra*, thus reinforcing bonds between the living and the dead, and between the Church on earth and the Church Victorious. Churches organise bus tours to a series of sites, enabling Copts from all over Egypt to connect with each other, confirming their identity and faith.

4. In the Maghrib.

In 760/1359, the former vizier and scholar of Granada, Ibn al-Khaṭīb [*q.v.*], was in Marrākush where he paid a reverential visit to the sanctuary of the patron saint of the Moroccan city, Abu 'l-ʿAbbās al-Sabtī (d. 606/1205 [*q.v.*]). The Andalusī was impressed by the opulence of the sanctuary, financed by vast revenues. Daily, they normally revolved around the sum of "800 *mithḳāls*" but some days could "attain or even exceed 1,000 dīnārs". Such sums of money could not fail but arouse the greed of the staff of the sanctuary and to pose problems in regard to distribution. A witness to these disputes, Ibn al-Khaṭīb saw the issues being presented before judges; the degree of opulence of the religious institution was at stake. With their gifts, the masses of pilgrims who came periodically to test the miraculous powers of the dead saint generated covetable riches. Visitors accompanied their vows with coins "deposited in chests reserved for this purpose" (al-Maḳḳarī, *Nafḥ al-ṭīb*, vii, 273). In return, it was expected that the saint would intercede with God for the fulfilment of their desires. Underlying these transactions were the God-given prerogatives apparently exercised by al-Sabtī while still alive. Dead, the saint continued to dispense his *baraka*, by virtue of the theory according to which "the miracles of saints do not disappear on their death" (Ibn Ḳunfudh, *Uns*, 6-7). This was the view commonly held in the Maghrib of the 8th/14th century: the *post mortem* miracles of Abu 'l-ʿAbbas al-Sabtī were more numerous than those that he performed in his lifetime. Having paid him a visit in 1200, Ibn al-ʿArabī (d. 638/1240 [*q.v.*]) reported on the double nature, benign and malignant, of the powers of the saint: "He made ill and he cured, he made live and made perish, gave power to certain men or deprived them of it," he asserted (*Futūḥāt*, ch. 485). Furthermore, in his lifetime, the saint had been the object of a cult associated with both "the élite" and "the masses", and his entire mystical doctrine was based on the principle

of alms. After his death, his prestige increased—the city was symbolically placed under his protection—as did the number of pilgrims whose offerings made the fortune of those who managed his cult. How had these powers been acquired? Why did this human saint, first in his lifetime and subsequently after his death, become the object of a particular cult? Ibn Khaldūn gives the answer in a chapter of his *Muḳaddima*, of which a considerable part of the current historical anthropology of religious practices in the Maghrib is nothing more than a glossed version. Such saints would be included in what he says of the *fuḳahā'* and *ahl al-dīn wa 'l-ʿibāda*, who earn a great reputation, so that they are showered with presents by the pious, and become wealthy without any personal effort; they sit back, and people wonder how they have acquired such wealth and fortune (*Muḳaddima*, Eng. tr. Rosenthal, ii, 327-8, Fr. tr. Monteil, ii, 209).

Ibn Khaldūn was pointing to a phenomenon which, while quite ancient in the Maghrib, in the 6th/12th and 7th/13th centuries took on an extraordinary growth, to such an extent that it revolutionised Maghribī religiosity and gave it a new configuration. Despite the opposition of the more rigorous *ʿulamā'*, in towns as well as in the countryside, the sacred became progressively structured around a new and burgeoning social force, the saints, to whom, since the 8th/14th century, our sources have applied the term marabouts (< *murābiṭ* [see RIBĀṬ]). Whence came the power of these individuals? The answer must lie in their capacity to represent themselves as "recipients of the divine" (J. Berque), a capacity from which derives their power to dispense good fortune as well as to inflict misfortune. It also comes from their functions of patronage, of arbitration and mediation in the city. As early as the time of Ibn Khaldūn, far from merely monopolising the devotion of the common people alone, the saints who imposed themselves on rulers and on other religious scholars as redoubtable protagonists also strongly affected the modes of belief of the whole of society. Men and women, "great" and "small", sought their goodwill. How is devotion to be manifested to a patron whose benevolence is sought, other than by periodically rendering him homage? It is thus that there developed one of the most outstanding expressions of Maghribī religious life, the *ziyāra*. This would come to rival the other forms of devotional travel (*ḥādjdj*, *murābaṭa*, etc.), becoming one of the principal institutions of Maghribī devotion virtually until the mid-20th century, and persisting in certain areas even today (F. Reysoo, *Pèlerinages au Maroc*, Neuchâtel-Paris 1991).

In its nature, *ziyāra* presents a double characteristic: it can be individual or collective. It engages individuals in a personal movement as it involves groups concerned for their collective destiny. Ultimately, it evokes urban as well as rural social structures. In other words, it is unitary in its status of "distance covered", whilst it is plural or multiform in terms of its content and its usages. Men as well as women, city-dwellers as well as rustics, artisans as well as peasants, scholars as well as the illiterate, governors and governed—all contribute to making of it a ritual gesture deriving its particularity from a precise arrangement combining energy, movement, space and time and setting out the specific requirements which are to be met in each instance.

In its capacity as an individual journey, *ziyāra* was not a feature of mediaeval Maghribī religiosity. Born in the central lands of Islam around the mid-8th century, it is seen, in the Maghrib, to belong in a continuity which makes of it an eminently spiritual journey. Leaving aside this form of *ziyāra*, one may concentrate on the form that engages and sets in motion crowds and numbers. In its capacity as a collective enterprise, *ziyāra*, which is easily transformed into local pilgrimage, is definitely one of the essential elements of the cult dedicated to Maghribī saints [see WALĪ. 2.]. Although in the majority of cases this collective *ziyāra* to a saint develops on the latter's death, there are cases where it comes into being in his lifetime. The *Tashawwuf* of Ibn al-Zayyāt al-Tādilī [see TĀDLĀ] offers examples of both instances. Tracing the life of a saint of Tādlā, who died in 536/1141, this hagiographic treatise relates that "his tomb was revered, and people come even now (early 7th/13th century) in search of healing by contact with the earth that covers him" (*Tashawwuf*, 106). With regard to the famous Abū Yaʿazza Yalannūr al-Hazmīrī or al-Haskurī (d. 573/1177), we read that "people came [to him] from all countries, he nourished them [at his own expense], he gave fodder to their mounts". Such generosity was expensive. To cover it, the saint would accept alms from his "brothers in God", sc. his disciples. There were also "the residents of neighbouring villages [who] gave hospitality to those who came to visit him" when their number was too large for them to be accommodated in his *zāwiya* (*Tashawwuf*, 164).

In order to understand how a local pilgrimage came into being, it is necessary to recognise that a *mazāra* is a social invention. It is a place which, because it is endowed with a symbolic efficaciousness, crystallises the expectations and the hopes of individuals and of groups, and the greater its size, the greater the prestige radiating from the "place of pilgrimage". For this to happen, a subtle equilibrium must be established between the expectations of individuals and of groups and their fulfilment in such a manner as to replenish the source. The expectations of individuals and of groups thus have the power of life and death over places of pilgrimage. Saints can experience success in their lifetime and sink into oblivion at their death. However, one such as Abū Yaʿazza (to take an example from a rural setting), or Abu 'l-ʿAbbās al-Sabtī (to take an example from an urban setting), were revered in their lifetime, and both of these saints have continued to be the object of ritual reverence to this very day. For a *mazāra* of importance to survive, it is often necessary that the populace, the religious élite and the governing class participate in its institutionalisation. The greater the extent to which the activity of these three protagonists converges, the better the prospects of the *mazāra* to endure and to radiate across an extensive geographical area. Thus Maghribī Sharīfism, in the 9th/15th century, was broadly a phenomenon simultaneously religious and political. Also, when the body of Idrīs II, the founder of the city of Fās, was "discovered" in 1437, it is obvious that the "discoverers" had a substantial interest in restoring the prestige of the Idrīsids and their religious claims (H.L. Beck, *L'image d'Idrīs II*, Leiden 1989). Conditioned by more than a century of belief in the ancestral prestige of the *shurafā'* [*q.v.*], society readily accepted the discovery. Moving to al-Ḳayrawān, the same considerations are seen presiding over the cult of Abū Zamʿa al-Balawī, a Companion buried in Tunisian soil. The veneration offered to him seems to have been linked to the belief that he was buried with some hair of the Prophet, whose barber he was. Although it is not known when this veneration began, it is clear that it is a late phenomenon, the reason being that the exact site where the pious individual

is buried is not known. The presumed site became the object of ritual interest in the 5th/11th century when a cemetery was created nearby. In the 8th/14th century, local Ṣūfism included it among pilgrimages to the most renowned sanctuaries of the town. Consecrated as an "official" *mazāra*, the presumed tomb of the saintly man was surmounted by an octagonal cupola which later was enlarged to become an architectural complex of the *zāwiya* type (S. Bergaoui, *La zâwiya Sahâbiyya de Kairouan a l'époque moderne*, in *SI*, lxxvi [1997], 103-32). Returning to Marrāku<u>sh</u>, and moving on to the 10th/16th century, the town is seen "inventing" a pilgrimage to the tomb of the *ḳāḍī* ʿIyāḍ (d. 544/1149 [see ʿIYĀḌ B. MŪSĀ]). As to the reasons why the Moroccan city acquired a tomb four centuries after the death of its occupant, no doubt the need was felt for a man of impeccable orthodoxy to validate the ritual process which was being established under the name of *ziyāra* to the *sabʿatu ri<u>dj</u>āl* (H. de Castries, *Les sept patrons de Marrakech*, in *Hesperis*, iv [1924], 245 ff.). Neither in his lifetime nor on his death did the theologian enjoy any particular charisma: "his tomb was little known for the place [where it was sited], was not much frequented until God revived the place though the good offices of al-Fallāḥ [a Ṣūfī saint, died in 1570]", writes the author of a biographical dictionary of the celebrities of Marrāku<u>sh</u> (al-Marrāku<u>sh</u>ī, *Iʿlām*, ix, 341, quoted in K. Fekhari, *Le culte des saints à Marrakech*, Rabat 1996, 91). Examples of the "invention" of pilgrimages could be further multiplied, such as that established at the tomb of Ibn ʿAbbād al-Rundī (d. 792/1390) at Fās (P. Nwyia, *Ibn Abbâd de Ronda*, Beirut 1961, 77-80); such items constitute one of the most thoroughly documented chapters of Ma<u>gh</u>ribī hagiography.

Before the 9th/15th century, little information is available concerning these collective pilgrimages. Only one is genuinely known of: that which was witnessed by Ibn Ḳunfu<u>dh</u> (d. 810/1407 [*q.v.*]) in 769/1367, when he was a judge in the land of Dukkāla, not far from the town of Aṣfī, on the Atlantic coast of Morocco. He describes it as an assemblage bringing together "an incalculable number of persons". From the information supplied it is possible to gain an impression of the sociological composition of the pilgrims; those present included *ʿulamāʾ*, Ṣūfīs, and members of the general public. Ibn Ḳunfu<u>dh</u> saw taking place, in the course of these proceedings, trance sessions in which sick people were encouraged to participate; they emerged, he claims, miraculously cured. This pilgrimage took place regularly, but unfortunately it is not known how and under what circumstances it came into being and who precisely was revered there. Other details, such as the question e.g. as to whether women participated in the event, are not available. It is not until the 10th/16th century that the sources begin to describe such assemblages.

Numerous *ʿulamāʾ* lent their authority to these pilgrimages. There were also many who, without denouncing the principle, deprecated the aberrations and the excesses which accompanied them. Because jurists were often called upon to make rulings on the rites involved in these pious visits, judicial material concerning the phenomenon is abundant from this period onward. The 11th/17th century, in particular, yields a rich harvest of judicial and hagiographical material. A Salafī scholar of Constantine, ʿAbd al-Karīm Lafgūn, devotes an entire work to denouncing "blameworthy innovations" (sing. *bidʿa* [*q.v.*]) in evidence in the cult of saints in his land. At the same time, he supplies a vivid portrayal of religious life in the region of Constantine. Among numerous examples, there is the following. A man acquires the reputation of a saint. He founds a *zāwiya* which resounds all day long with noisy, ecstatic seances inspired by *faḳīrs* who come, in large numbers, to congregate around the master. It is they who are responsible for the stewardship of the enterprise and they who visit tribes and villages in the locality to collect the "piety tax" (*<u>dj</u>ibāya*) and legal alms. The reputation of the saint is extended to cover almost the whole of the Constantine region. Each year, an immense procession (*rakb*)—the term is also used to denote the caravan of pilgrims to the Holy Places—consisting of city-dwellers, peasants and nomads traverses the land in the direction of the *zāwiya*. The pilgrims bring all kinds of offerings: "camels, horses, cattle, sheep" on the part of country people, "*ra<u>gh</u>īfs*, pieces of cloth, money" on the part of the city-dwellers. To stimulate their pious generosity, the saint reminds them that "he who brings nothing, leaves with nothing". As a result, rather than make the pilgrimage empty-handed, the less affluent prefer to beg. But it is not only the common people who make the journey; the upper classes also come flocking to obtain the favours of the saint. They offer "horses, clothes and money" (*Man<u>sh</u>ūr al-hidāya*, 133-4).

At the same time, another scholar, Abu 'l-Ḥasan al-Yūsī, denounced further practices that were taking place at the eastern extremity of the Ma<u>gh</u>rib. Analysing a venerated place in the "*ribāṭ* of Salé", he states that "it is a place of pilgrimage (*mazāra*) where people seek the *baraka* of saints who used to be there". But he adds immediately that "of the latter, in our times, it appears that only one, Yaḥyā b. Yūnus, is very well known to the public, and even he is neglected in the records. Marīnid kings are also there: they are known." And in conclusion: "All that could be mentioned as sanctifying this place besides these two elements, and which is found in certain pseudo-historic writings, is without foundation or authority" (quoted in Berque, *Al-Yousi*, Paris 1958, 60).

To give a durable framework to these local pilgrimages, the marabouts often made contractual agreements (sing. *<u>sh</u>arṭ*) with their flocks. Investigating, during the 1970s, what the author calls "the pilgrimage centre" of the Moroccan town of Boujad, Dale Eickelman heard it said that accords had linked the client tribes of the region to the *zāwiya* brotherhood of the <u>Sh</u>arḳāwa since the time of the founder, Sīdī Muḥammad al-<u>Sh</u>arḳī (d. 1010/1601) (*Moroccan Islam*, Austin, Texas 1976, 169). Credit is due to Jacques Berque for having been the first to draw attention to stipulations of this kind. From the late 1940s, he discovered among the Saksāwa of the High Atlas *<u>sh</u>arṭs* between tribes and local saints; an example was published in his *Structures sociales du Haut Atlas*, Paris 1955, ^{2}1978, 278. These contractual agreements were not confined to Morocco; for some which used to be current in the central Ma<u>gh</u>rib, i.e. in Algeria, see Houari Touati, *Entre Dieu et les hommes*, Paris 1994, 259.

Currently, some of these local pilgrimages continue to function with virtually the same degree of fervour as in former times. Such is the case of the Sbūʿ of Timimoun, which annually attracts thousands of pilgrims. But a *ṭaʿām* such as that of the Flitta—organised by the tribe in honour of its saint, Sidi M'ḥammad b. ʿŪda, who lived in the 11th/17th century—has not been held since the "Armed Islamist Groups" (GIA), fanatical adversaries of the cult of saints, destroyed this Algerian sanctuary in 1993. In the mid-1950s, it still featured among the most spectacular gatherings

of the plain (E. Dermenghem describes it as "one of the finest moussems of this type" in his *Le culte des saints dans l'islam maghrébin*, Paris 1954). The same applies to that held in the High Atlas in honour of Lalla ʿAzīza, a saint of the 8th/14th century. Revisiting the site in the footsteps of Berque, twenty years later, the sociologist P. Pascon observes *en passant* that "a returning emigrant declared openly that he would not sacrifice in accordance with outdated customs... In May 1976, to widen the road, the great *karkūr* [*q.v.*] of Lallā ʿAzīza was pushed into a ravine by a bulldozer... That year, in July, there was not enough attendance to justify the slaughter of a single bull at the sanctuary of the saint" (*Structures sociales du Haut Atlas*[2]).

These examples show that all kinds of factors have combined to hasten the decline of the great ritual assemblages of the Maghrib. Some result from socio-economic transformations, others from the assimilation of the majority of the population, and yet others from new modalities of religious socialisation of which the major promoter was initially the nation state, a role adopted today by political parties in Algeria and by groups which are tolerated in Morocco but prohibited in Tunisia, all of which regard themselves as Islamist.

5. In Persia and other Shīʿī lands.

(a) *Shīʿī* ziyāra *connected with the* mashhad *tradition*

Shrine culture connected with a *mashhad* [*q.v.*] "place where a martyr died", is a well-established tradition in Shīʿī Islam. The concept of *shahāda* or martyrdom suffered in the "path of God" [see SHAHĪD] played an important role in the development of belief in the sanctity of the Imāms' shrines. In Shīʿī piety, all Imāms are revered as martyrs, and their tombs are sites for annual visitation by Shīʿīs, who believe that their devotion (*wilāya* [*q.v.*]) to the martyred Imāms, expressed through these pilgrimages, will win forgiveness for their sins and a share in the final victory of the messianic Imām al-Mahdī [*q.v.*]. Pious Shīʿīs also look upon the shrines as places where they can share in the Imām's sanctity.

The Shīʿī shrines are richly endowed, and lavish gifts were bestowed by various Muslim rulers, especially by Shīʿī ones. Towns grew up around them, and the sacred areas (*ḥaram*) were adorned with magnificent and costly ornamentation. All the shrines have some architectural features in common. The tomb lies in a courtyard surrounded by arched halls and cells. Its walls are resplendently decorated with coloured tiles. The entrance to the main rectangular building is through a golden outer hall. In the middle of the central golden-domed chamber lies the shrine, surrounded by a silver enclosure (*dharīḥ*). Two golden minarets usually flank the entrance to the shrine.

The shrines are important centres of Shīʿī learning, and important seminaries (*madrasa* [*q.v.*]) grew up around them. Every Shīʿī longs to find a last resting place in the holy precincts of the beloved Imāms, and this has resulted in the development of extensive cemeteries at all the shrines, especially at Karbalāʾ, Nadjaf, and Mashhad [*q.vv.*], and in areas near these shrines.

Of all the Imāms, it is al-Ḥusayn b. ʿAlī [*q.v.*] who enjoys the status of the "Chief of Martyrs", having suffered the torments of thirst and hunger in the desert and having been slaughtered by his enemies at Karbalāʾ. His tomb was probably the first *mashhad* in Shīʿī piety, and was regarded as holy immediately after his martyrdom in 61/680 (al-Madjlisī, *Biḥār al-anwār*, ci, *K. al-Mazār*, is a volume devoted to the merits of *ziyāra* to Karbalāʾ). The *mashhad* of ʿAlī at Nadjaf, near Kūfa, became a public shrine in the early ʿAbbāsid period (al-Shaykh al-Mufīd, *K. al-Irshād*, Tehran 1351 *sh.*/1972, i, 14). The *mashhad* at al-Kāẓimayn, near Baghdād, enshrines the tombs of al-Kāẓim and al-Djawād, the seventh and ninth Imāms. In Sāmarrāʾ, [*q.v.*] are buried al-Hādī and al-ʿAskarī, the tenth and eleventh Imāms. The eighth Imām ʿAlī al-Riḍā is buried in Sanābad, in the district of Ṭūs, around which grew up the city of Mashhad. The tombs of Fāṭima, the Prophet's daughter, and other Imāms buried in the graveyard of al-Baḳīʿ in Medina [see BAḲĪʿ AL-GHARḲAD] were levelled to the ground by the Wahhābīs in 1925. These Sunnī puritans regard the Shīʿī practice of venerating *mashhads* as polytheism (*shirk*) (Goldziher, *Muh. St.*, Eng. tr. ii, 333).

Besides the Imāms, there are numerous shrines dedicated to the ancient prophets like Adam, Noah, Jonah, and others in and around Nadjaf, and around other towns in ʿIrāḳ, Palestine, Syria, and southern Turkey. The Imāms' sons and daughters (*imāmzāda* [*q.v.*] and *sayyida* or *bībī*) also receive special reverence in the *ziyāra* tradition. Among the *imāmzādas*, the most famous are the shrines of Sayyid Muḥammad, the son of ʿAlī al-Hādī, in Balad, some 56 km/35 miles south of Sāmarrāʾ, Shāh ʿAbd al-Aẓīm al-Ḥusaynī [*q.v.*] in Rayy, and Shāh Čirāgh in Shīrāz. The very unusual *mashhad al-siḳṭ* for al-Ḥusayn's miscarried fetus is located west of Aleppo opposite Mount Djawshan, where women pray for fertility (Yāḳūt, *Buldān*, ii, 156, 308). Miraculous healing powers are attributed to all these places. Among the shrines dedicated to holy women among the *ahl-bayt* [*q.v.*] are those of Sayyida Zaynab bt. ʿAlī and Sayyida Ruḳayya bt. al-Ḥusayn in Damascus; Sayyida Zaynab and Nafīsa in Cairo; Bībī Fāṭima, daughter of Mūsā al-Kāẓim, the seventh Imām, in Ḳumm; Nardjis Khātūn, the twelfth Imām's mother, and Ḥakīma, the daughter of ʿAlī al-Hādī, the tenth Imām, in Sāmarrāʾ. In addition, the tombs of famous Shīʿī scholars are also visited in reverence for their contribution in keeping the Imāms' teachings alive. Thus in Nadjaf the tombs of Shaykh al-Ṭūsī and ʿAllāma al-Ḥillī are visited; in al-Kāẓimayn, al-Shaykh al-Mufīd and the Sharīfs al-Murtaḍā and al-Raḍī; and more recently, on the road to Ḳumm, the shrine of Āyatullāh Khumaynī [*q.v.* in Suppl.].

Besides the mausoleums there are numerous historical places connected with the events of ʿĀshūrāʾ [*q.v.*] at Karbalāʾ which are described in the manuals (*miṣbāḥ al-zāʾir* and similar titles), forming a special genre of pious literature, listing the holy places and the recommended rituals of visitation composed by prominent Shīʿī scholars (see al-Madjlisī, *op. cit.*). Kūfa boasts of several historical mosques connected with the Imāms and their prominent disciples, which draw huge crowds.

(b) *Rituals connected with* ziyāra

Ziyara to the tombs of the Shīʿī Imāms and their descendants is a religious recommendation for the Shīʿīs (Ibn Ḳawlawayh al-Ḳummī, *Kāmil al-ziyārāt*, Nadjaf 1356/1937, 294). From early days, it was common for both the Shīʿīs and Sunnīs to undertake pilgrimages to these and other shrines. Unlike the *ḥadjdj*, *ziyāra* to these shrines may be undertaken at any time, although certain days are specially recommended, and in regard to some shrines, pilgrimage is associated with a special lunar month or season of the year. Thus the *ziyāra* of Sayyida Zaynab in Cairo is performed in Radjab; whereas that of Imām al-Riḍā in Mashhad is recommended in Dhu 'l-Ḳaʿda. That of

imāmzāda Sulṭān ʿAlī near Ḳās̲h̲ān is held on the seventh day of autumn. It is only the *ziyāra* of al-Ḥusayn at Karbalāʾ that, besides on major occasions like ʿĀs̲h̲ūrāʾ, is recommended every Thursday evening. On these evenings, the *mas̲h̲had* is thronged with crowds of pilgrims from many lands.

The performance of *ziyāra* is regarded by the pilgrims as an act of covenant renewal between the holy person and his devotees. This is a covenant of love, sincere obedience and devotion on the part of the believers. Through *ziyāra*, one participates in the suffering and sorrows of the Prophet's *ahl al-bayt*. People who cannot undertake the arduous and expensive journey to the shrines of the Imāms can go to the wilderness, or up onto a high roof in one's house, and then turn towards the *ḳibla* and pronounce the special salutations (*ziyāra-nāma*) meant for various specific occasions. Although distinction is made between the *ziyārāt* of the Imāms and of other holy persons, S̲h̲īʿī scholars have regarded it as permissible to show all of them honour and respect by addressing them in a prescribed way, some of these salutations being narrated directly from the Imāms. However, the *ziyāra* of the Imāms is followed by two units (*rakʿa* [*q.v.*]) of worship as a gift to the Imām whose *ziyāra* is being performed. It concludes with a petition for the Prophet and his family's intercession and praise to God.

6. The Turkish lands, including the Balkans and Central Asia.

In the Turkish world, the word, in its form *ziyāret*, denotes pilgrimage to and act of devotion at a saint's tomb, and is one of the words derived from this root (also *mazār, mezār, ziyāretgāh*) applied to the holy place itself. However, the names given to these holy places vary considerably according to the different regions; *tekke, türbe* in the Balkans and Turkey; *pīr, očāg̲h̲, imāmzāda* in Ād̲h̲arbāyd̲j̲ān; *gunbez, langar, muḳaddas d̲j̲āy* in Central Asia, etc. In Chinese Turkistān, the characteristic feature of a saint's tomb, sc. a banner (*ʿalam*)—a long pole surmounted by an animal's tail (*turra, tug̲h̲-i mazār*), systematically to be found close by Central Asian mausolea, but more rarely in Turkey and the Balkans—has often given its name to the *ziyāra*, sc. as *tug̲h̲-ʿalam*.

In Turkey, each Ṣūfī brotherhood used to encourage its members to make a pilgrimage to the tomb of the eponymous saint of the order or of the great *k̲h̲alīfa*s. But there also existed here a pilgrimage circuit which was traditionally accomplished by the pilgrim who then desired to go to Mecca: first of all he would visit the tomb of the Prophet's Companion, Abū Ayyūb al-Anṣārī in Istanbul, and then that of the Ṣūfī Ḥād̲j̲d̲j̲ī Bayrām Walī at Ankara (Hikmet Tanyu, *Ankara ve çevresinde adak ve adak yerleri*, Ankara 1967, 67). In Central Asia, given the distance from Mecca, certain *ziyāra*s functioned as substitutes for the sanctuary at the Kaʿba, and popular belief held that several pilgrimages to certain places could replace the Pilgrimage to Mecca. The most famous shrines here were the tomb of Bahāʾ al-Dīn Naḳs̲h̲band at Buk̲h̲ārā; the Tak̲h̲t-i Sulaymān at Os̲h̲ in Kirg̲h̲izistān, called "the Second Mecca"; and the tomb of Abū Yūsuf Hamadānī at Marw/Mari in Turkmenistān, called "the Kaʿba of K̲h̲urāsān". Also, a reproduction of the Kaʿba, which was built some years ago near the little mausoleum of K̲h̲urāsān Bābā in the Kizil Orda *oblast* of Kazak̲h̲stān, is set forth by the family of its custodians as "the Second Mecca" of the Kazak̲h̲s. In eastern Turkistān, pilgrims would in the first place make a circuit of the tombs of Satuḳ Bug̲h̲ra K̲h̲ān at Artūs̲h̲, of Āfāḳ K̲h̲ʷād̲j̲a Hidāyat Allāh at Kās̲h̲g̲h̲ar and Isḥāḳ Walī at Yarkand. But at the present time, the great pilgrimages of Sinkiang/Xinjiang are made to the tombs of Ordām Pādis̲h̲āh at Yangi Hisār and Tūyūk K̲h̲ʷād̲j̲ām at Turfān (see Abdürahim Häbibulla, *Uyghur etnografisi*, Shinjang K̲h̲älk Näs̲h̲riyati, Ürümči, i, [1993], 349).

The curators of these holy places are either simple keepers (*türbedār*) or descendants of the saint, usually Ṣūfīs. Their main function is to act as intercessors (*s̲h̲afāʿa*) for the pilgrims but they also instruct the visitors about the appropriate acts of devotion at the sites they control. Finally, they administer the alms and the offerings (money, cereals, animals, etc.), which are called, in Turkey and the Balkans, *adak, ned̲h̲ir* and sometimes *niyāz* or vow. In Central Asia, one finds also the terms *sadaka* and the Arabic-Persian-Turkish compound *nad̲h̲r-niyāzmanlik*. Women, kept away from places of devotion in orthodox Islam, form the greater part of visitors to a *ziyāra*; most saints are reputed to be able to solve problems strictly affecting women (sterility, marriage, etc.) and to cure all sorts of ailments (see Liliana Masulovic-Marsol, *Tombes de saints musulmans et guérison; une approche anthropologique*, in *Cimetières et traditions funéraires dans le monde islamique*, Ankara 1996). But the reasons for pilgrimage are various, and concern men also: simple devotion, mystical interest, cures, social success, etc. The actual acts of devotion are, as a general rule, the same as those practised in the rest of the Islamic world but with some local peculiarities. Circumambulation (*ṭawāf*) is made round the tomb, habitually in an upright position but occasionally on all fours as at Ḥād̲j̲d̲j̲ī Bektās̲h̲ in Anatolia, and at certain tombs is accompanied by fumigations (odoriferous and medicinal plants). *Ṭawāf* may also be made round a holy object situated near the tomb, such as a hundred-year old tree at that of Bahāʾ al-Dīn Naḳs̲h̲band. Veneration may also be focused on an object other than the actual tombstone: a black stone and ram's horns at the previously-mentioned shrine; a cauldron at that of Aḥmad Yasawī at Turkistān [*q.v.*] in Kazak̲h̲stān and at Ḥād̲j̲d̲j̲ī Bektās̲h̲; and suchlike. As well as circumambulation, the pilgrim sometimes kisses the tomb or the doorstep or the sides of the door leading into the funeral chamber, or any other object connected with the saint. Another usage, especially common in the Turkish world, is to hang pieces of cloth on nearby trees or the windows of the mausoleum. One sometimes even comes across inflated sheep's skins (e.g. tomb of Mūsā Kāẓim at K̲h̲otan in eastern Turkistān). The practice of settling down in a tomb, for some hours or a whole night, is attested at several tombs. The texts read by the person filling the role of intercessor are restricted to some Ḳurʾānic sūras (generally the *Fātiḥa*

and XXXVI, *Yāsīn*) and other formulae consecrated by centuries of practice, but also Persian poetry (e.g. 'Umar Khayyām in Tādjīkistān) or Turkish chants called *gülbenk* or *terdjümān* (Ḥādjdjī Bektāsh). Certain great centres of pilgrimage (e.g. the last-named and Takht-i Sulaymān) offer, as well as the *ṭawāf*, a circuit punctuated by devotions done in grottoes, by rocks, near springs, sacred trees, etc. (e.g. at Takht-i Sulaymān; see Zaïm Khenchelaoui, *Le mythe et le culte de Salomon dans l'espace musulman*, doctoral thesis, EHESS, Toulouse 1998). Although condemned by Islamic orthodoxy, the *ziyāra* has maintained itself in the Turkish world because of its important role in popular religion. The rites of pilgrimage have admittedly undergone changes and have often disappeared round certain tombs under Marxist régimes in the Balkans, Central Asia and Sinkiang, as also in Kemalist Turkey. Also, the effects of desacralisation have deeply modified the functioning of the *ziyāra* in certain high places (e.g. at Ḥādjdjī Bayrām Walī, Takht-i Sulaymān and Āfāḳ Khwādja). Within Turkey, with the relaxation of Kemalist doctrines since the 1950s, and since the end of Communism in the former USSR, the *ziyāra* has been reconstituted on new foundations but still connected with the old traditions. In Sinkiang, although *ziyāra* is sometimes forbidden and sometimes tolerated but still regarded with disapproval, it remains a much-followed practice in popular circles (see Th. Zarcone, *Quand le saint légitime la politique. Le mausolée de Afāq Khwādja à Kashghar*, in *Central Asian Survey* (1999).

7. In Muslim India.

Except in the north-east of Pakistan, where it can denote the place (generally a tomb) to which pilgrimages are made, elsewhere in the Indian subcontinent the term *ziyāra* (in the form *ziyārat*) signified an actual pilgrimage. A tomb which is visited is called a *mazār*, or, if it belongs to a famous saint, a *dargāh*, i.e. a palace, since the saint is treated as the true master of the territory, like a sultan [see WALĪ. 6.). The greatest places of pilgrimage in India are the tombs of the five great saints of the Čishtiyya brotherhood. It is said that a visit to these five tombs is worth a pilgrimage to Mecca. There are other saints, more localised but also very famous, such as Ghāzī Miyān [*q.v.*] at Bakraikh in northern India.

These visits may be made by individuals on any day, especially in the evening; individual and collective visits take place once a week, generally on a Thursday evening, or once a month. Big festivities are always organised once a year on the anniversary of the death of the saint. They are known as *'urs*, i.e. "(mystical) nuptials", and not *mawlid* "birth", as they are in the Arab world; they give rise to large pilgrimages where the faithful are present in great numbers. Here special attention will be paid to the great feasts in order to analyse the different elements of the pilgrimage.

Firstly, there is the journey itself, travelling from the place of residence of the pilgrim to the sanctuary and then back again. This is done, as it is for marriages, in a procession, with standard-bearers, musicians and even dancers, who are considered to be a good omen, at the front. The most famous procession in Indian history was the one to the sanctuary of Ghāzī Miyān in northern India, which was the one that the Mughal emperor Akbar (963-1014/1556-1605 [*q.v.*]) liked to watch.

Then comes the veneration of the tomb itself, when the faithful all approach one by one to honour the saint who resides there. They touch the tomb, leave perfumes and flowers there, and often make a circumambulation. This is the *ṭawāf*, which in India is often performed clockwise, considered to be a good omen for Hindus, in contrast to a counter-clockwise motion in the Arab world. This is a sign of acculturation which seems to have been only little noticed.

Then there is the transaction which takes place between the believer, the saint and God. This is the most important moment for the pilgrimage and gives rise to conflicting interpretations. The strictly orthodox view, which is expressed in the wording of the invocation, the *du'ā'*, demands that the offerings and prayers be addressed directly to God, beseeching Him to grant merit to the saints and the faithful. The spontaneous interpretation by the faithful is quite different; in exchange for their prayers and their offerings they invoke the intercession (*shafā'a*) of the saints to obtain favours for themselves, which are more often of a material rather than of a spiritual nature. The Muslim conquerors used to pray for victory; today, politicians continue to come and beg for success. These transactions may take the form of vows, a sort of commercial bargaining, where the believer undertakes to perform this or that offering in return for this or that favour.

A fourth element which is not always present is communal. Animals are sacrificed in the name of the saint, or the first fruits of the harvest are offered to him, and these are then consumed in a banquet.

A fifth element, which could be termed the ecstatic, uses music and dance as a medium. Ideally, it concerns mystical chants which are performed by specially trained musicians or *ḳawwāls*, and they may well induce ecstatic dances. The most beautiful climax, which is repeatedly found in Indian Ṣūfism, in particular at the tomb of Mu'īn al-Dīn Čishtī at Adjmer,

arises by dying from exhaustion in an ecstatic dance. These dances, however, may also change into a profane celebration with the dancers and prostitutes.

Finally, particular sanctuaries often have special features: for example, near the tomb of Bābā Farīd al-Dīn Čis̲h̲tī in Pakistan there is a "doorway to heaven", and this is open only at the annual feast. Those who pass through it are certain to enter Paradise; G̲h̲āzī Miyān cured those who were afflicted with leprosy.

Such pilgrimages allow the faithful to leave their everyday environment, to establish contact with the divine world by the intermediary of saints, and even to have a foretaste of the Hereafter through ecstasy. They return home with the hope of favours in this world and assurance for the Hereafter. Even though these great pilgrimages have borrowed Indian elements (they are often called *melā*, a fair, like the great Hindu gatherings), they still remain Islamic in their greatest features; they are focussed on the tombs of the saints and not on deities, and they appeal to the rites and mystical techniques characteristic of Muslims.

Bibliography: For a more detailed Bibl. see WALĪ. 6. For a general survey of the subject and the sources, see J.A. Subhan, *Sufism, its saints and shrines: an introduction to the study of Sufism with special reference to India*, [2]New York 1970 ([1]1938); C.W. Troll (ed.), *Muslim shrines in India. Their character, history and significance*, Dihlī 1989. Traditional Muslim views and those of the early Orientalists on pilgrimages and their timing are analysed in Garcin de Tassy, *Mémoires sur les particularités de la religion musulmane en Inde*, in *JA* (1831) ([2]Paris 1969, annotated English tr., *Muslim festivals in India*, Dihlī 1995); also in C.W. Ernst, *An Indo-Persian guide to Sufi shrine pilgrimage*, in G.M. Smith and Ernst (eds.), *Manifestations of sainthood in Islam*, Istanbul 1993, 43-67.

An ethnological analysis of pilgrimages can be found in I. Ahmad, *Ritual and religion among Muslims in India*, Dihlī 1981. For an analysis of the rituals, see M. Gaborieau, *The cult of saints among the Muslims of Nepal and Northern India*, in S. Wilson (ed.), *Saints and their cults. Studies in religious sociology, folklore and history*, Cambridge 1983, 291-308; idem, *Le culte des saints en tant que rituel: controverses juridiques*, in *Archives de sciences sociales des religions*, no. 85 (1994), 85-98.

The different places of pilgrimage in the different regions of the Indian subcontinent are treated together in D. Matringe, *Pakistan*, Gaborieau and C. Champion, *Inde* and Lyndell-Jones, *Bangladesh*, in H. Chambert-Loir and C. Guillot (eds.), *Le culte des saints dans le monde musulman*, Paris 1995, 167-234.

For detailed studies of some of the greatest pilgrimages see e.g. P.M. Currie, *The shrine and cult of Muin al-din Chishti of Ajmer*, Dihlī 1989; R.M. Eaton, *Court of man, court of god. Local perceptions of the shrine of Bâbâ Farîd, Pakpattan, Punjab*, in R.C. Martin (ed.), *Islam in local contexts*, Leiden 1982, 44-61; Gaborieau, *Légende et culte du saint musulman Ghâzî Miyân au Népal occidental et en Inde du Nord*, in *Objets et Mondes*, xv/3-4 (1975), 289-318; idem, *Les saints, les eaux et les récoltes*, dans M.A. Amir-Moezzi (ed.), *Lieux d'Islam. Cultes et cultures de l'Afrique à Java*, Paris 1996, 239-54.

8. In Indonesia.

Undertaking pilgrimages to spiritually or magically potent sites is a well-established practice in most parts of Indonesia. Spread throughout the archipelago, there are numerous sacred sites. Most of them are of local importance only but some attract visitors nationwide. Sites for *ziarah* (thus the Bahasa Indonesian form) can be divided in two main categories: graves of religious and worldly Muslim leaders such as saints, kings and high nobles; and sites that are considered laden with power due to their natural environment. The most popular Muslim saints are the *wali sanga*, the founders of Islam in Indonesia [see WALĪ. 7]. The graves of originators of *pesantren* [*q.v.*] (*kyai*) can have local fame and are visited weekly, especially by alumni and students of the *pesantren* (Z. Dhofier, *Tradisi pesantren, studi tentang pandangan hidup kiyai*, Jakarta 1985, Eng. tr. *The role of the Kiai in the maintenance of traditional Islam in Java*, Tempe, Arizona 1999). Most graves are part of a mausoleum, with the main saint in the middle and his students and family members buried around him. The reasons for undertaking a *ziarah* vary from making a request to the saint, praying to God and fulfilling a vow, to seeking blessing, power and esoteric knowledge (*ngelmu*).

Especially on Java, numerous pre-Islamic sites for *ziarah* still testify of the gradual process of Islamisation that accommodated syncretistic Javanese Hindu-Buddhist beliefs and practices (*agama jawi*). These influences on what later became orthodox Islam (*Islam santri*) shaped the customs practiced at many sites of *ziarah* (for a description of Javanese beliefs, see Koentjaraningrat, *Javanese culture*, Singapore 1985). Furthermore, pre-Islamic beliefs in the potency of certain natural areas, such as spiritually significant cosmic mountains, resulted in holy graves being placed on top of mountains. Pre-Islamic influences are especially noticeable in various architectural elements, such as the entrance gates to the graves of the *wali sanga* like Sunan Ampel and Sunan Giri in east Java and Sunan Bayat in Tembayat in central Java.

Certain locations are considered to be cosmic centres that possess the same degree of spiritual power as can be encountered in Mecca. Hence *ziarah* in the Malay world can be a substitute for those Muslims who cannot afford the *ḥadjdj* to Mecca. An example of such a centre is Mount Ciremai in Kuningan. Indonesian Muslims believe that climbing up and down this mountain three times can be considered equal to performing the Meccan Pilgrimage. Also, there are certain sites (such as Kubur Panjang at Leran near Gresik) where pilgrims go in preparation for the *ḥadjdj*.

The timing for performing a *ziarah* is determined by a complex system of the coinciding of weekly cycles based on the Muslim and the Javanese calendars. The nights prior to Fridays, when the first day of the five-day Javanese week coincides with the Muslim week of seven days (*Jumaat Kliwon, Jumaat Paing*, or *Jumaat Legi*), are believed to be times when the power of tombs is especially potent. On those nights, the main tombs are open, while during other days visitors can only derive blessing from the general atmosphere at mausolea. These specific times for *ziarah* are also considered the most beneficial in bringing requests for intercession to the saint. The students of a *kyai* traditionally gather at the grave of their master once a week, preferably on Thursday night. For the more Islamic Javanese pilgrims, the Eve of the first of *Sura*, the first month of the Javanese year, is the pre-eminent time to make a pilgrimage.

Customs practiced during *ziarah* also depend on the purely Islamic or purely Hindu-Javanese character of the tomb. In Imogiri (south of Yogyakarta), at the enormous mausoleum of the first Javanese Muslim kings of the Mataram empire, there are pilgrims who practice a wide range of purely Javanese practices, while others limit themselves to Islamic observances. The Javanese practices include ascetic feats and forms

of Javanese meditation (*semedi* and *tapa*) in order to obtain magical power with the help of the once-powerful king, and the bringing of offerings (*sesajen*) in the form of a blessed ceremonial meal (*slamatan*). At the same time, the Muslim character of the kings might be honoured by reciting the Ḳur'ān near their graves or by performing *tahlilan*, a type of *dhikr* (for *ziarah* to Javanese-Islamic sites, see Woodward, *Islam in Java*, ch. 5; J. Pemberton, *On the subject of "Java,"* Ithaca and London 1994, ch. 7).

At the tombs of Muslim saints, it is mostly Islamic customs which prevail, such as reciting the Ḳur'ān and performing *dhikr* or *tahlilan*. Once a year, a *khaul* is held to honour the day the saint passed away or was born. This celebration may take from one day to a week and is similar to the celebration of the *mawlid* [*q.v.*] in the Middle East. Common events of the *khaul* are speeches by Islamic leaders, recitation of the Ḳur'ān, fairs and selling or distributing food. On the saint's feast day, the fabric that has covered the tomb during the past year is replaced by new cloth. Pre-Islamic customs such as drinking holy water, sprinkling flowers on the tomb and sharing a meal of blessing (*slamatan*), are tolerated at nearly all shrines. One can only approach tombs through their custodians, the *juru kunci* ("key bearers"), who guard the proper rituals to be performed during the pilgrimage. Also, they are the bearers of the saint's hagiography and of the texts of prayers and formulae in Javanese and Arabic to be presented to the saint. Local *kyai* or other Muslim officials are always in charge of the Islamic rituals, such as the perfomance of *tahlilan*.

The popularity of *ziarah* in Indonesia may also be influenced by the prevalent custom of visiting the graves (*nyekar*) of deceased relatives, which is done mostly in the week prior to the beginning of Ramaḍān. The purposes of these visits range from cleaning the graves and the recitation of religious texts for the benefit of the deceased to seeking blessings from the deceased ancestors.

Ziarah is a widespread phenomenon throughout the Malay world. Snouck Hurgronje mentioned the visiting of the tombs of kings or Muslim saints in Aceh, exclusively for the fulfillment of vows (*The Achehnese*, Leiden 1906, ii, 293). Yet many Muslim groups have considered it incompatible with orthodox Islam. In Indonesia, Muslims affiliated with the more traditional Javanese-minded organisation of *kyai*, the Nàhdatul Ulama, are in favour of performing *ziarah*, while the Reformist grouping of the Muhammadiyah reject it. The relatively small amount of literature, contemporary and historical, about the practice of *ziarah* that is available has mostly been written by Western scholars; while for Malaysia, only one major article can be mentioned, that of R.O. Winstedt, *Karamat, sacred places and persons in Malaya*, in *Jnal. of the Malayan Branch of the RAS* (1924), 264-79.

9. In Central and West Africa.

Ziyāra, originally a technical term for the visitation of tombs of saintly persons, has assumed a wider meaning in Central and West Africa. Whereas the term is often used in the sense of "holy place" in parts of Muslim Asia, in the African context *ziyāra* denotes a pious visit to a *shaykh* living or dead, as well as the visit to the celebrations of a saint's life. However, there are only scanty references to *ziyāra* in the literature.

The practice of *ziyāra* has spread with the expansion of the Ṣūfī orders, particularly the Ḳādiriyya and the Tidjāniyya [*q.vv.*]. Although historical evidence is meagre, it seems that tombs became the destination of pious visits in Aïr and in the area of Timbuktu [*q.v.*, and see KUNTA] in the course of the 16th century. The habit of such visits also started at the tomb of ʿUthmān b. Fūdī [*q.v.*] in Sokoto shortly after his death in 1232/1817. Probably as early as the first half of the 19th century, annual festivals were celebrated by members of both the Ḳādiriyya and the Tidjāniyya on the occasion of the *mawlid* [*q.v.*] of ʿAbd al-Ḳādir al-Djīlānī (d. 561/1166) during the month of Rabīʿ I or the *ḥawliyya* of Aḥmad al-Tidjānī (d. 1230/1815) during the month of Ṣafar. There is also evidence that performing the *ziyāra* to the Prophet's tomb at Medina was the rule for most, if not all, Africans who undertook the *ḥadjdj*.

In the 20th century, the visitation to the tombs of saints has become a common practice for many ordinary Muslims in West and Central Africa. As an example, one might point to Senegal and its Holy Cities Touba and Tivaouane, which house the tombs of Aḥmadu Bamba, founder of the Murīdiyya [*q.v.*] Ṣūfī order and al-Ḥādjdj Mālik Sy, founder of the biggest branch of the Tidjāniyya in the country [see SENEGAL]. However, it seems that *ziyāra*, in the sense of visiting the tomb of a holy man, is not as widespread a practice in sub-Saharan Africa as it is in the Maghrib or in Egypt, a fact strongly (and perhaps over-) emphasised by Trimingham. There are few shrines to be found in the area, and even lower is the number of tombs surmounted by a *ḳubba*. Instead of visiting the dead, intercession is sought rather from the living.

In Senegal, *ziyāra* (Wolof, *siyare*) refers to the visit to annual festivals held on the occasion of a saint's birthday, death or other significant event in his life. The locus of these visits is not necessarily the saint's tomb. Touba is the destination of the *magal*, a pilgrimage held in the month of Ṣafar to commemorate the departure of Aḥmadu Bamba to his exile in Gabon in 1895. This festival has not been without political significance in the past and has in recent years attracted more than one million people annually. Apart from the great *magal*, members of the Murīdiyya order nowadays celebrate *magal* festivities for a growing number of more or less important religious leaders. Similarly, the leaders of the Tidjāniyya order mobilise their membership to attend regular meetings known as *gamou*, a term originally applied to the *mawlid* festivities held on the Prophet's birthday. The *gamou* during the month of Rabīʿ I remains the most important event in the *ziyāra* calendar of the Senegalese Tidjāniyya, but there are now similar festivals to commemorate Tidjānī leaders throughout the year.

Owing to the lack of research, it is difficult to say anything definite on the practice of *ziyāra* in other parts of West and Central Africa. We know of guidebooks for pilgrims and travel accounts written by Nigerian scholars on visiting the Prophet's tomb at

Medina or the tomb of Aḥmad al-Tidjānī at Fās. But apart from the case of ʿUthmān b. Fūdī, there is no evidence in the literature of festivals dedicated to the memory of Nigerian holy men, although we can assume that they exist, e.g. among the Ḳādiriyya of Kano. The Hausa and speakers of other African languages use the Arabic word *ziyāra* to refer to these pious visits. In the town of Nioro du Sahel (Mali), members of religious lineages organise annual events visited by followers from far away.

Apart from the pilgrimage performed to a saint's festival, the term *ziyāra* refers also to formal visits in various social contexts. In the broadest sense, *ziyāra* is an occasion at which people pay their respects to a holy man. The motives for such pious visits might range from *tabarruk*, i.e. the wish to participate in the saint's blessing, to more concrete concerns, such as asking the saintly person for supplicatory prayers (*duʿāʾ* [*q.v.*]) or for assistance in a specific worldly matter. Women and men may seek the *shaykh*'s help to find a remedy against infertility or may just visit the *shaykh* on account of his healing power; peasants may ask the *shaykh* to drive away locusts or to pray for rain.

Another peculiarity of *ziyāra* in West Africa is the practice of offering gifts to the *shaykh*. This custom has come to be so closely associated with pious visits that in some areas the term *ziyāra* not only means "visits", but also the donations that a *shaykh* receives from his disciples in kind or in money. A religious leader might undertake a journey to "collect *ziyāra*", particularly in cases where the followers are not able to make the trip to see their *shaykh*.

Ziyāra can be described as the direct link between a living *shaykh* of a Ṣūfī order and his followers. Members of the Tidjāniyya order affiliated with the Senegalese *shaykh* Ibrāhīm Niasse (d. 1395/1975) perform the *ziyāra* on the Prophet's birthday, when huge crowds gather for celebrations at Kaolack, the home town of Niasse, and in the city of Kano. In addition, Niasse used to call upon his followers to visit him at least once a year in order to submit a donation, receiving the master's *baraka* [*q.v.*] in return. For this purpose, a date is fixed annually after the harvest, the time when the disciples from rural areas are most likely to donate large amounts of money or contributions in kind. The followers were told that *ziyāra* is the key to the gates of right guidance and well-being. The same practice is continued by leaders of the Tidjāniyya affiliated to Niasse elsewhere in sub-Saharan Africa, who use the occasion to talk and preach to their followers. More recently, the disciples of Niasse in such countries as Senegal, Gambia, Ghana, Nigeria, Cameroon and Chad have introduced a festival on 15 Radjab to commemorate Niasse's birthday.

Coulon, *The Grand Magal in Touba*, in *African Affairs*, xcviii (1999), 195-210 (on the greatest *ziyāra* of the Murīdiyya). (R. Seesemann)

10. In the Horn of Africa.

As in the rest of the Islamic world, *ziyārāt* are a common feature of Islam in the Horn of Africa. Primary and secondary source materials detailing such pilgrimages are limited; enough information exists, however, for us to draw a rough outline of these popular practices. The objects of veneration fall into roughly two categories. First are the grave sites of lineage ancestors esteemed for their position as eponymous clan founders and of traditional saints believed instrumental in the introduction of Islam to the region. The second category comprises more recent holy men associated primarily with the introduction of Ṣūfī *ṭuruḳ* [see ṬARĪḲA] in the late 19th century and venerated for their piety and direct connections with the divine. Whether seeking material assistance in this world or spiritual connection with the next, pilgrimages to the burial places of these blessed individuals play a central role in the lives of Muslims in the Horn and eastern Africa.

Among the most notable tombs belonging to the first category are those of Shaykhs Isaaq and Daarood, the eponymous founders of the Somali Isaaq and Daarood clan families, respectively. Believed to have been immigrants from southern Arabia, Somali tradition has provided both ancestors with Sharīfian credentials and sanctified their burial places as sites of annual pilgrimage. The *ziyāra* to Shaykh Isaaq's purported resting place, for instance, takes place soon after the grain harvest in the Isaaq heartland of the north. Thousands of pilgrims, primarily from the Isaaq clan as well as their client lineages, gather at the Shaykh's tomb in Mait on the northern Somali coast as well as at other shrines dedicated to him throughout the north. While taking the shape of a religious pilgrimage, as I.M. Lewis points out, the primary object of such celebrations is the reification of clan unity and social identity rather than supplication to the spirit.

The traditional burial places of holy men associated with the arrival of Islam in the Horn are also popular objects of pilgrimage. The most important sites include the tombs of Shaykh Mumin Abdullah in Bay and Shaykh Aw Barkadle near Hargeisa [*q.v.*], both located in Somalia, and the shrine of Shaykh Nūr Ḥusayn of Bale in Ethiopia. Venerated as the propagators of the true faith, they are also revered as patrons and protectors. The Somali clansmen in Bay visit Shaykh Mumin's tomb, largely in order to seek protection for their crops from predatory birds. Aw Barkhadle, renowned for destroying the evil magician Bu'ur Ba'ir, is viewed as a guarantor of fertility and guard against miscarriage. Shaykh Nūr Ḥusayn is venerated by the Oromo in Ethiopia as a general patron responsible for their overall well-being and serves as a central icon of their Muslim identity.

In addition to these sites of traditional figures, the tombs of more recent religious figures, especially those associated with the Ṣūfī movement of the late 19th and early 20th centuries, are also the objects of veneration. Tombs belonging to the primary initiators of the *ṭuruḳ* constitute the main sites of visitation, although lesser figures of each order are also fre-

quently visited by the pious. Among the most popular sites are the graves of Shaykh ʿAbd al-Raḥmān Zaylaʿī in Kolonkool, Shaykh Uways Muḥammad al-Barāwī in Biyoole and Shaykh ʿAbd al-Raḥmān Ṣūfī in Maḳdishū, all of whom were important figures in the powerful Ḳādiriyya [*q.v.*] movement of the late 19th and early 20th centuries. Although individuals may visit the tombs of these saints for their own special intentions, the majority of pilgrims come seeking enlightenment and a spiritual closeness to the saint that in turn will place them in greater proximity to God. As one learned pilgrim to the tomb of Shaykh Uways noted, "there exists no barrier between the tomb of the Prophet and that of Uways" (ʿAbd al-Raḥmān b. ʿUmar, 155 ff.), the former being the place of closest human proximity to God. Such visits also serve as an opportunity to further an individual's own mystical knowledge by obtaining *idjāzāt* from the caretakers of each tomb, frequently the descendants of the deceased saint, for the right to recite and transmit various prayers and formulae believed to assist one on the path towards union with the divine.

The timing of pilgrimages as well as the ceremonies conducted at each varies from site to site. *Ziyārāt* to so-called "traditional" sites are frequently tied to important points in the local calendar. The pilgrimage to Shaykh Isaaq's tomb, for instance, occurs shortly after the annual grain harvest. In contrast, the annual visit to the tomb of Shaykh Mumin occurs in the spring, soon after the planting. In other cases, pilgrimages are tied to the lunar Islamic calendar. The *ziyāra* of Aw Barkhadle is held, for example, on the first Friday during the "dark period" of Djumādā I. Similarly, pilgrimages to the tombs of saints connected with the *ṭuruḳ* occur on the anniversary of each saint's death as marked on the lunar calendar. However, pilgrims, especially members of the *ʿulamāʾ*, continue to visit these sites throughout the year seeking blessings and spiritual enlightenment. An interesting combination of these two patterns occurs with the *ziyāra* connected with the tomb of Shaykh Nūr Ḥusayn of Bale. The main feast day for the saint is set on the traditional date of his birth, which is fixed on a Tuesday at the beginning of August according to the traditional Oromo calendar. The month is known in Oromifa as *jia* Shaykh Ḥusayn, or the Moon of Shaykh Ḥusayn. However, another feast day is held during the *ʿīd al-aḍḥā* during the month of Dhu 'l-Ḥidjdja coinciding with the end of the *ḥadjdj*.

Likewise, ceremonies surrounding each pilgrimage vary widely. The centerpiece of most visits is the viewing of the tomb in order to make supplications for oneself or on behalf of others. This is generally accompanied by numerous animal sacrifices and the recitation of *ḳaṣīdas* [*q.v.*] dedicated to the saint.

Visits to saints connected with the *ṭuruḳ* are largely limited to these activities, along with a heavy emphasis on sermons, religious lessons and frequent prayer. Visits to the tombs of "traditional" saints frequently include additional rituals required to complete the ceremony. At the *ziyāra* of Aw Barkhadle, for instance, a great deal of emphasis is placed on the veneration of various relics (including a gold embossed Ḳur'ān and a bed post purported to belong to the saint). A formal procession to a nearby hilltop believed to be the site of the saint's victory over the magician Bu'ur Ba'ir is the highlight of the pilgrimage, which is then completed with the performance of the *djumʿa* prayer. The pilgrimage to Shaykh Nūr Ḥusayn's tomb is even more tightly choreographed and includes numerous ceremonies that replicate elements of the pilgrimage to Mecca. Pilgrims enter the sanctuary via a gate called Bāb al-Salām, as do those who enter Mecca. They then proceed to kiss and touch a black stone known as the *darara bashu* that Nūr Ḥusayn is popularly believed to have brought from Mecca. Finally, pilgrims perform a ritual stoning of the devil in the nearby valley, Kachamsare, in imitation of the same *ḥadjdj* ritual.

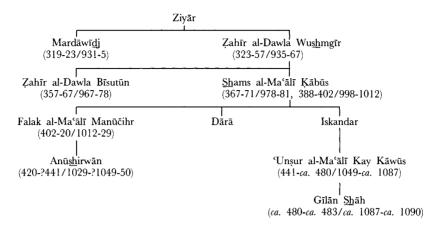
ZIYĀRIDS, a petty dynasty of Djīlī/Daylamī stock which ruled in the provinces at the south-eastern corner of the Caspian Sea, Ṭabaristān and Gurgān, from 319/931 to *ca.* 483/*ca.* 1090; their rise to power forms part of the general upsurge of the Daylamī peoples during the 4th/10th and early 5th/11th centuries [see DAYLAM]. In the earlier, more vital half of the dynasty's existence, members of the family were at times able to pursue independent policies, but at others, they had to acknowledge the Sāmānids [*q.v.*], and sometimes the Būyids [see BUWAYHIDS], as their suzerains; and after *ca.* 400/1011-12 they became vassals of the Ghaznawids for some 25 years and then of the Saldjūḳs. Unlike some others of the Daylamī princes of northern Persia who had inclinations towards Shīʿism, the Ziyārids were Sunnīs.

The founder of the line, Mardāwīdj b. Ziyār, claimed descent from the royal house of Gīlān. He rose to power as a mercenary commander within the vacuum of authority in northwestern Persia after the decline of direct caliphal control there, and by 322/934, shortly before his assassination, was master of Djībāl and even of Ahwāz. For details of his career, see MARDĀWĪDJ.

His brother and lieutenant, Wushmgīr, succeeded him in 323/935, and at the outset was able to hold on to Mardāwīdj's conquests in northern Persia. But after *ca.* 328/940 Ziyārid authority there was challenged by the rival Daylamī power of the Būyids, and Wushmgīr could only save his position by allying with the Sāmānids, who had ambitions of extending their control over Rayy and northern Persia; even so, he lost Ṭabaristān and Gurgān to the Būyid Rukn al-Dawla on two or three occasions. For details, see WUSHMGĪR.

When Wushmgīr died in 357/967, his eldest son Bīsutūn claimed the Ziyārid succession, but this was disputed by his younger brother Ḳābūs, who secured

Genealogy of the Ẓiyārid dynasty


the support of the Sāmānids. After a struggle, Bīsutūn gained control of Ṭabaristān and Gurgān through an alliance with the Būyids, marrying a daughter of ʿAḍud al-Dawla b. Rukn al-Dawla [*q.v.*]. On Bīsutūn's death in 367/978, Ḳābūs managed, with Būyid help, to set aside Bīsutūn's minor son and succeeded in the Ziyārid capital Gurgān. But after 369/970 Ḳābūs's relations with his protectors soured. He was ejected by a Būyid army from his principality, which was then placed under direct Būyid rule for seventeen years, whilst Ḳābūs remained an exile in Sāmānid Khurāsān. Only in 388/998 was he able to return, establishing good relations with the successor to the Sāmānids in Khurāsān, Maḥmūd of Ghazna, but ruling as an independent sovereign. For details, see ḲĀBŪS B. WUSHMAGĪR.

Ḳābūs's tyranny led to his downfall and replacement by his son Manūčihr in 402/1012, with his death in the following year. For the remaining eighty years or so of the Ziyārid dynasty's existence, the historical sources become much more sparse and then almost non-existent, and Ziyārid coins disappear after Manūčihr, so that much less is known about the later than the earlier Ziyārids. None of the later rulers reached the calibre of earlier ones like, say, Wushmgīr or Ḳābūs. Hence the dynasty lost much of its power and influence, even within the Caspian region, and never again played any role outside it. Manūčihr ruled as a tributary of Maḥmūd of Ghazna and married a Ghaznawid princess, but this did not preserve his lands from threatened ravaging by the Ghaznawid army in 419/1028 and he had to buy the troops off.

Manūčihr's young son Anūshirwān was in 420/1029 confirmed by Maḥmūd as his dead father's successor, with the requirement of continued tribute, but from 423/1032 till 431/1040 authority within the Ziyārid lands was usurped by a maternal relative of Anūshirwān's, Abū Kālīdjār b. Wayhān. Non-payment of tribute provoked a fresh Ghaznawid invasion of Gurgān and Ṭabaristān in 426/1035 until Abū Kālīdjār agreed to resume tribute to Sultan Masʿūd. Subsequently, Anūshirwān seems to have regained control in the state, but in 433/1041-2—Ghaznawid power having by now receded from Khurāsān—the Ziyārid territories were invaded by the forces of the Saldjūḳ Ṭoghril Beg, and the Ziyārids became tributaries of the Great Saldjūḳs.

The Ziyārids now enter their obscurest period. Anūshirwān possibly died in 441/1049-50. Yāḳūt alone mentions a certain Ḥassān as succeeding him, but this man's existence is otherwise unconfirmed. The last Ziyārids for whom we have firm information are Kay Kāwūs b. Iskandar b. Ḳābūs, the famed author of the *Ḳābūs-nāma*, named after his grandfather, who died *ca.* 480/*ca.* 1087 [see KAY KĀʾŪS], and his shadowy son Gīlān Shāh. The latter's end is wholly unknown, but he may have been overthrown by the Nizārī Ismāʿīlīs of the Elburz region, with a consequent end to the dynasty *ca.* 483/*ca.* 1090.

Bibliography: 1. Sources. For the earlier Ziyārids, these are the general chronicles for the history of northern Persia, including Masʿūdī, *Murūdj*, Miskawayh and Ibn al-Athīr, and local Caspian historians like Ibn Isfandiyār and Ẓahīr al-Dīn Marʿashī, whilst for the 5th/11th century, such early Ghaznawid sources as Gardīzī and Bayhaḳī become important.

(C.E. BOSWORTH)

ZMĀLA denotes in origin a tribe of western Algeria; secondly, a mode of semi-nomadic social organisation, illustrated notably by the celebrated community gathered round the *amīr* ʿAbd al-Ḳādir [see ʿABD AL-ḲĀDIR B. MUḤYĪ ʾL-DĪN AL-ḤASANĪ] in the middle years of the 19th century; and thirdly, inspired by ʿAbd al-Ḳādir's system and by others, under the Gallicised form *Smala*, an institutionalised strategic system adopted during the time of the French presence in Algeria.

1. The tribe of the Zmāla in history.

The Zmāla inhabited the lower northern slopes of the Tessāla, as well as the plain of Mlēta, traversed

by the Wād Ghāsūl which separated their territory from that of the Dwāyer (Dawā'ir [*q.v.*]). It was on this plain that Dwāyer and Zmāla gathered together after the sowing season (November), before migrating with their herds to the Tessāla in March, then returning to the plain for the harvest. Their economy was of a semi-nomadic type. A tradition refers the origin of the Zmāla back to the arrival of the army of the Sultan of Morocco, Mawlāy Ismā'īl, in 1118/1707, but al-Mashrafī (12th/18th century) reckoned that Zmāla was in fact the name given to the Wnāzera, a segment of the Ulād 'Abd Allāh, of the confederation of Banū 'Āmir (Benī 'Āmer), an origin compatible with the subsequent absorption of various elements. After the capture of Oran [see WAHRĀN] in 1206/1792, Muḥammad b. 'Uthmān al-Akhal al-Kabīr rewarded the Zmāla for their military assistance in the siege by distributing land to them and permitting their leading families to settle in the town.

In 1830, the Bey of Oran had four *aghas*. The *Agha* of the Zmāla was obliged to levy taxes on the *r'āya* (= *ra'āyā*) tribes in the territory called Ya'ḳūbiyyat al-Sharḳ, to the south-east of Mascara. In exchange for public order services, the Bey granted them the use of inalienable land (*arḍ sābga*) which could be withdrawn from them in case of disloyalty to the government.

After the fall of Algiers, Dwāyer and Zmāla, led by al-Māzarī, nephew of Muṣṭafā b. Ismā'īl, attempted reconciliation with the Sultan of Morocco. Another group, commanded by Muṣṭafā b. Ismā'īl, remained loyal to the Bey of Oran. At this time, French troops took possession of the city in a surprise attack. The locality was to remain completely isolated until the conclusion of the Desmichels Treaty on 26 February 1834. During this period, intervention by the Moroccans in Tlemcen culminated in the pillage of the city.

Rallying for the most part to 'Abd al-Ḳādir in 1833, the Zmāla participated until 1835 in his *makhzen*. Twice in 1833 a French column raided the encampments of the Zmāla at the foot of Djebel Ṭafrāwī in the mountains of the Tessāla. The Zmāla were obliged to promise to abandon 'Abd al-Ḳādir, to settle on the plain of Messergin, supply hostages and pay taxes to the French.

After the signing of the Desmichels Treaty, discord erupted between the Benī 'Āmer and the Dwāyer, who were joined by some of the Zmāla. After several battles, a segment of the latter took refuge near Mers el-Kebir. It was not until June 1251/1835 that a majority of the Dwāyer and of the Zmāla submitted definitively to French authority, signing the so-called "Fig-tree" Convention on 16 June 1835. Dwāyer and Zmāla recognised French sovereignty, accepted Muslim chieftains appointed by the Governor-General, paid an annual tribute and supplied armed contingents, guides and spies, in return for protection against attacks by neighbouring tribes, pay and provisions during campaigns, and the replacement of horses killed in action. The Zmāla returned to Oran in July 1835 with some of the Dwāyer, some of the Ghrāba and a number of black Africans, leading to the creation by the French in 1845 of an enclave known as the "Black Village".

At the time of the Mascara expedition (25 November-12 December 1251/1835) [see AL-MU'ASKAR] the Algerian camp was weakened by the defection of Muḥammad al-Māzarī, who joined the French forces at the head of a group of Dwāyer and of Zmāla. He was named *khalīfa* of the Bey of Mostaganem and *Agha* of the plain of Oran.

In March 1837 a fixed camp was established at Messergin to protect the tents of the Dwāyer and of the Zmāla. Furthermore, after the signing of the treaty of Tāfna (30 May 1837), the French element remained a minority, while more than a third of the Dwāyer and three-quarters of the Zmāla were still with 'Abd al-Ḳādir. In 1837, pay was allocated to these irregular *spahis*, generally superior to that offered by 'Abd al-Ḳādir, who sought to attract them to his side, along with the Ḳurghlān [see ḲUL-OGHLU], offering them employment, cattle and land. Their role was generally limited to the functions of couriers, transport, surveillance and public order, escorting and relaying of posts. Thus they provided reconnaissance for the flanks and the vanguard of the two divisions sent 18 May 1841 from Mostaganem against Tāgdemt. In September of the same year, their number rose to about a thousand.

The dispersion of the *zmāla* of 'Abd al-Ḳādir (see below, 2 (a)) took place on 16 May 1843, but the intensification of the anti-French struggle was marked in 1845 by the abandonment of Oran in one night by those of the Dwāyer and the Zmāla who had remained loyal, camping in the shelter of the French artillery.

Subsequently, the Zmāla saw their territories considerably reduced. Thus from 1846 onward, the lands of the Zmāla were included in the zone destined for colonisation, to the north of the Oran-Mascara road. Marshal Bugeaud opposed their "constriction", preferring to see them fragmented around Oran. The Zmāla were then progressively resettled in inhospitable and mountainous zones, while their population grew from 5,250 to 6,230 between 1845 and 1866. In 1867, they were divided into two principal groups: one on the southern slopes of Djebel Murdjādjo, of some 600 persons, the other on the border of the Sebkha.

Like the rest of the Algerian population, they were decimated by famines and epidemics. Their watercourses were diverted, which not only had the effect of ruining the Zmāla but also permitted seizure of the salt-pans of Arzew, vital for the economy of Oran.

2. The mode of social organisation.

Popularised during the French invasion of Algeria under the form *smala*, the term denotes that which a person or tribe carries when in motion, i.e. all one's goods, with nothing left behind (*lā yukhalif min mālihi shayʾ*, *LA*, *s.v. azmala*). The form given by Ibn Manẓūr, although it attests to an ancient use of the root in this sense, does not take into account a possible Berber origin. There is no reason not to envisage a hybrid. The extension of the term illustrates the fusion in operation between Berber and Arab tribes in the central Maghrib. Tribes of Arab origin moving through the Tell and the Sahara are sometimes called *zmēluya* Arabs and there exists an adjective of relation, *zmēlī*, formed on this root (e.g. among the Dwāyer).

A tribe, or a group of horsemen organised into a tribe, comes together and organises itself into a *zmāla* at a time of movement in an unsafe region or in a period of conflict. They are associated with a hostel or staging post (*kunāk, knāk*) and placed under the authority of a holy person (*mrābeṭ = murābiṭ*) who lives in the encampment (*gaṭna*) and arbitrates cases in litigation. Responsible for the bivouac, especially from the point of view of security, he is exempt from tax. *Zmūl* horsemen patrol the roads and participate in the maintenance of order. They accompany the annual round of tax collection. Strategic roads, in particular, were dotted with these *zmāla* encampments. The horsemen were commanded by a *kayed ez-zmāla* endowed with a special bodyguard.

Such a type of "mobile capital" was necessary as a compromise method of gathering together the dispersed forces of Algeria to resist the French enemy. It also played a considerable role in the internal politics of the *amīr* ʿAbd al-Ḳādir.

(a) *The* zmāla *of ʿAbd al-Ḳādir*

The story of the *amīr*'s resistance to the French is told in the article ʿABD AL-ḲĀDIR B. MUḤYĪ 'L-DĪN, and only the aspects relating to his *zmāla* will be addressed in the present article.

From 1839 onwards, the *amīr* had instructed his *khalīfa*s and all the dignitaries of Mascara and of Tlemcen to leave the town and live in tents in the *zmāla*. Combatants originating from all the regions of the former Regency and influential persons from the whole of Orania, including Algerians, joined the *zmāla* on an individual basis, as did Tunisians and especially Moroccans. The *amīr* used his troops and his horses in the traditional harassment tactic of *karr wa-farr* (charge and retreat). As the French struggled to cope with an elusive enemy, warfare became total from 1841 onward.

Numerous descriptions make it possible to envisage the structure and organisation of the *zmāla* at the zenith of ʿAbd al-Ḳādir's powers. His personal tent was at the centre of his own *dawwār*, backing on one side against that of Lālla Zohra, his mother (d. 1279/1861), one of the few women venerated for her piety (*mrābṭa = murābiṭa*), and on the other that of his wife Khayra, his sister Khadīdja and his children. Adjacent to that of the *amīr* was the tent of the guests. On account of its size, the *zmāla* was a mobile city, with composition varying according to the regions traversed. This assemblage of soldiers and artisans principally comprised trades associated with the profession of arms: armourer (*shākmakdjī*), maker of rifle butts (*kondākdjī*), cutler (*būčākdjī*), blacksmith (*ḥaddād*), tailor (*khayyāṭ, ṭārzī*), saddler (*sarrādj*, particularly important), harness-maker (*brādʿī*), doctor and surgeon (*ṭabīb, djarrāḥ*), veterinarian (*ṭabīb al-ʿawd*), barbers (*berber*) and café proprietors (*ʿaskarī kahwādjī*).

At the time of its dispersal on 16 May 1843, near the source of the Wād Ṭāgīn, the population of the *zmāla* was estimated at between 25,000 and 60,000 persons, comprising more than 350 douars defended by 5,000 combatants (including 500 regular infantrymen and 2,000 horsemen). The nucleus extended over more than two kilometres.

A smaller structure, called *dāyra* (= *dāʾira*), was established in Morocco at the end of 1843 and served as a base for the *amīr*, despite attacks by Moroccan tribesmen and troops encouraged by France, especially after the Treaty of Tangier, completed by the Lālla Maghniyya Convention (10 September 1844 and 18 March 1845). The *dāyra* succeeded in resisting attacks until its surrender on 23 December 1847.

There exists a place called Zmāla (formerly Saint-Paul farm) in Kashrū, some 20 km to the south-east of Mascara, where ʿAbd al-Ḳādir would often spend time. Similarly, in 1840-1 there was a *zmāla* near Tāgdemt, an encampment consisting only, in the absence of the *amīr*, of a few tents pitched among the thorn bushes, this being the permanent residence of his mother, his wife and his servants.

3. In the military and administrative history of French Algeria.

The concept is inseparable from French colonial strategy in Algeria, and its use involved essentially smalas of spahis and smalas of notables. From the outset of the war of conquest in Algeria of 1830, France adopted a policy of using Muslim troops raised from the country, notably the spahis, which it had employed in India during the previous century (Ar. form *ṣbāyḥī*, in Fr. *cipaye*, in Eng. *sepoy*; see SIPĀHĪ. 2 and 3). In face of the failure of the formation of regular units of zouaves and spahis recruited from the Muslims, often arising out of the infantry and cavalry contingents of the Regency, in practice not very active, inclined to rebelliousness and desertion, and expensive, the French Army took into its service the tribes of the old *makhzan* [*q.v.*] who lived in *zmālas*, encampments with their families and herds which they left behind when called to service (see above, 2). These goums of irregular spahis (*mkhāzniyya*) were formed because of the insufficiency in numbers of the regular cavalry (chasseurs, hussars, chasseurs d'Afrique and regular spahis) and because of the unsuitability of this last group for reconnaissance and espionage missions and for rapid action amidst Muslim populations. This model was then applied to the regular spahis in 1834.

In the early stages of the French conquest, the function of the *agha* (who headed a *zmāla*) was maintained in order to retain the appearance of a Muslim administration over the subject people. The *agha* was specifically responsible for police functions and the collection of taxes for the occupying power, and had no role at all in the defence of the Muslim subjects. These Muslim officials were easily dismissed in case of "softness". Their jobs were progressively suppressed with the progress of colonisation, though some were kept in a purely honorific role. This was the case with the *agha* Sī Ḥamza b. Abū Bakr (b. 1859), the religious head of the Ulād Sīdī Shaykh who at the beginning of the 20th century exercised his authority over thirteen tribes and had at his disposal a *makhzan* and a smala; he was responsible for the docility of the Muslims of the district of Aflu, which made up, with Tiaret, the indigenous commune of Tiaret-Aflou formed in 1874, as well as for the payment of levies and taxes as representative of the captain, who was head of the Arab bureau. He received a substantial salary in addition to a share of the "Arab levy" deducted from that granted to the caïds under his orders.

Three periods can be distinguished: (1) creation of the institution for serving local needs; (2) its organisation at the level of the whole country; and (3) the failure and abandonment of the system. The installation of smalas arose in the first place as a result of local initiatives, notably by the Arab bureaux, services that were essentially charged with the transmission of orders to the Muslims and their implementation, a watch over markets and the compiling of reports of all kinds about the situation of the Muslim population (Decree of 1 February 1844, *Le Moniteur Algérien*, 593, of 10 February 1844, 1-2), and which participated in expeditions against these last. In this way was disguised an information service in the heart of the tribes in direct relation with the military command of subdivisions and divisions, thereby facilitating police and repressive duties, of which the spahis were to become the chief instrument. This took place parallel to the formation of three regiments of spahis in 1841 (one per province), into which were incorporated the effective manpower of the "gendarmes maures" when these last were dissolved.

Towards the end of 1844, a smala was created at 2.5 km/1.5 miles south of Orléansville or al-Aṣnām, meant in the first place for the spahis of the Arab bureau (*mkhāzniyya*), and situated close to the "penitentiary for the local population" of Lālla ʿŪda, for which it furnished Muslim prisoners. At the same time, a smala of spahis was formed a little to the west, on a site of 500 ha (1844). Finally, to strengthen the work of pacification of the Muslim population and to consolidate the north-south axis from Ténès to Orléansville, Lapasset created at the end of 1844 or beginning of 1845 a smala for the goum of the *mkhāzniyya* of Ténès, made up of 20 paid cavalrymen, whose chief was, however, killed in 1845. This smala was destroyed by the insurgents of Bū Maʿza in November 1845 at the time when old Ténès was attacked, and replaced in early 1846 by a centre called Smala on the plateau of the Ulād Hennī, which dominates the town of Ténès.

The spahis were formed into three regiments (of Algiers, Oran and Constantine, respectively) on 21 July 1845. This led to the creation of fixed camps where the cavalrymen making up the smala could live with their families and herds in a dual traditional way of life and a military one. Each regiment had the same structure: a regimental depôt with the general staff, and six squadrons spread over the province. Only a few places were reserved for officers, with a local rank only, from the Muslims recruited to form the troops. The red and blue uniform was inspired by local traditions, with a clear Turkish influence: a short tunic, *djābādōlī*, worn over a waistcoat; breeches ending below the knee, *serwāl*; a white *ḥāyk* worn over the shoulders and kept in place by a thick rope of camel's hair, *brīma*; and above this, a white *barnūs* covered with a red one. The definitive administrative order setting up these smalas (3 August 1850) was followed by a report on the smalas of the three regiments of spahis corresponding each one to a province.

If the formation of a *burdj* allowed the families of the spahis a place of shelter in the event of a rebellion, these last were also hostages for the continued faithful allegiance of the cavalrymen when they went out on an expedition. Since it also made up an agricultural colony, a model farm for the surrounding populations, the smala eventually facilitated the introduction of new agricultural methods for the Muslim population and increased the rentable value of their cultivated land, whose industrial and commercial outlets were all in the hands of Europeans. It was above all a means to facilitate the progress of colonisation by the Muslims themselves by means of these provisional establishments, thus veiling European colonisation. The defence of the frontiers, often connected with the problems of emigration by tribes driven away by misery and various effects of the state of war against the French presence (insecurity, brigandage, etc.), also allowed a transfer of the cost of public security to the indigenous population. But the main and true aim was to recruit troops from the best Muslim cavalrymen and to tempt them with the best horses of the land, notably those of Orania, the most esteemed under the Regency, and the cheaper ones.

The use of spahis within a smala replaced the former functions of the *makhzan* of the Regency, and was to attract the sons of leading "tents" and great families (*ulād khayma kbīra* or *bayt kbīra*) which military defeat would have left unemployed, and it was also

a means of utilising and remodelling the remnants of the Algerian aristocracy.

A check to this plan arose from the fact that the smalas of spahis were only recruited from the poorer rural population, who rarely had even a poor horse (*kaydār* "nag"). These men had to be equipped from top to toe, but often sold their equipment after being recruited; they were nothing but a "motley band of the lowest classes, soldiers of fortune who were dying of hunger" (Lt.-Gen. Le Pays de Bourjolly), despised by the Muslim population but nevertheless useful because of their roles as scouts and spies (*s̲h̲awwāf*).

Nor did the smalas ever fulfil their agricultural role, since they only received the lands left over from colonisation and little suitable for agriculture. The precariousness of occupation of the sites allotted to the smalas is seen in the frequent displacements which took them away from urban agglomerations in a southwards direction into the tribal heartlands. These latter tribes reacted strongly, seeing these Muslim colonists as intruders on lands taken from them by force, who helped to levy taxes and impose intolerable financial demands and were the instruments of fierce repression in times of rebellion. Moreover, ruined by the occupiers, they cared little about increasing yields from ungrateful lands, often suffered misery and want and were thus forced into emigration. Hence far from being an instrument of improvement for surrounding populations, the smala was often a witness to, and at times an active agent of, the pauperisation or disappearance of those populations (a rallying-point for beggars succeeded the smala of Wād Slī). The spahis were recruited from a population often little interested in the agricultural way of life, who preferred to retain their own family plots and who rarely occupied the lands entrusted to them. In these last cases, the spahi would leave the land to be cultivated by *k̲h̲māmsa* (agricultural workers remunerated by receiving a fifth of the crop), who, having only an annual contract, were little interested in improving the traditional methods of cultivation.

In January 1871, mutinies by the smalas of Mad̲j̲bar, Bū Ḥd̲j̲ar, al-Ṭarf, and above all, ʿAyn Gaṭṭar, linked with the rebellion of the Ḥnēns̲h̲a, when it was announced that they were to be sent to France after the defeat of 1870, provoked a fresh repression of the Muslim population. The flight of spahis of the smala of ʿAyn Gaṭṭar with their families and herds to Tunisia sounded the knell of French projects to develop docile troops on the model of the smalas. An opinion which became more and more widespread opposed this return of lands to Muslims and advocated their opening to colonisation in order to increase their rentability, which would also allow the full imposition of taxes from which the lands had hitherto been exempt. By 1914, despite their role as foci for recruitment, the sixteen smalas which the Second Empire had bequeathed to the Third Republic had all been suppressed, except for that of Sīdī Md̲j̲āhed in the Tāfna region, near the Moroccan frontier, to which should be added that of al-Uṭayya near Biskra, set up in 1875. This last was disbanded in 1919, and the former soon after 1930, signifying the final defeat, in face of a civilian colonisation now all-powerful, of an adaptation of Bugeaud's model of the soldier-worker, a Muslim soldier-colonist and worker in the service of France.

(H. Bencheneb, shortened by the Editors)

ZONGULDAK, a port on the Black Sea coast of Turkey (lat. 41° 26' N., long. 31° 47' E.), and the chef-lieu of an *il* or province of the same name.

The town only emerged in the second half of the 19th century when coal was found in the Zonguldak-Kozlu-Ereğli area, at a convenient distance from the Black Sea (see the art. s.v. in *Yurt Ansiklopedisi, Türkiye il-il, dünü, bugünü, yarını*, x, Istanbul 1982-4). When the Ottoman navy was about to change over to steamships, a local man named Uzun Meḥmed reportedly presented Sultan Maḥmūd II with the first sacks of Zonguldak coal, and actual exploitation began in 1848 (Erol Kahveci, *The miners of Zonguldak*, in idem *et alii* (eds.), *Work and occupation in modern Turkey*, London 1996, 173-200). The mining area was linked to a pious foundation, providing revenues for the Holy Cities of Mecca and Medina (Ahmet Naim, *Zonguldak kömür havzası*, Istanbul 1934). However, between 1848 and 1865, the Ottoman authority officially in charge of the enterprise was the K̲h̲azīne-i K̲h̲āṣṣa, which transferred the actual running of the mines to English contractors. Until 1882, the sale of Ereğli-Zonguldak coal in the open market was not permitted. As a town, Zonguldak developed late; V. Cuinet records that, while *ca.* 1890 coal mining was already rather important, the only "habitation passable du lieu" was the structure housing the offices of local government (*La Turquie d'Asie*, iv, Paris 1894, 498). The population of the town in 1997 was 107,176, and that of the *il*, 612,722.

A high accident rate, low levels of production and the obligations of the Ottoman State to the Dette Ottomane after the 1875 state bankruptcy, from 1891 onwards obliged the government to resort to French investors and foreign skilled labour, and in 1896 a newly-formed company received a fifty-year concession for the exploitation of the mines and the construction of railways. Major shareholders were French,

including the Banque Ottomane, but there were also Ottoman investors. Increasing involvement by Ottoman subjects, including high-level officials, prompted the late Ḥamīdian government to attempt in vain to improve the mines. In the Ottoman parliament convened after the reinstatement of the constitution, there were protests against the high transportation fees charged by the company, which apparently aimed at the ruin of its Ottoman competitors (1909) (see D. Quataert, *Social disintegration and popular resistance in the Ottoman empire, 1881-1908. Reactions to European economic penetration*, New York 1983, 41-70). It was however only in 1937 that the government of the Republic bought back the mines, with a view toward securing a national energy supply in case of war, and in 1940 the entire mining area was nationalised.

Mine labourers. Throughout the 19th century, as in earlier periods, mining was not a full-time activity but was practiced by peasants recruited for labour in the mines on a part-time basis (Suraiya Faroqhi, *Towns and townsmen of Ottoman Anatolia. Trade, crafts, and food production in an urban setting 1520-1650*, Cambridge 1984, 176-7). A law of 1867 specified that all mineworkers, except for the engineers and foremen, had to be Ottoman subjects. This same law also introduced the obligation of villagers to work in the mines; this forced labour continued until 1921. Even today, miners are largely local men, and rotational labour by part-time peasants continues, especially among hewers. However, foreign labourers, including Montenegrins, Croatians and Hungarians, as well as other qualified workers and technicians, were also imported.

Considerable labour unrest first occurred in 1908, when wage demands, fear of mechanisation and a reaction against "outside" miners brought in from Sivas, triggered a wave of strikes; Ottoman local authorities tended to support the strikers against the foreign company. In 1940 obligatory service in the mines was reintroduced, and only abolished in 1948. From 1937 and into the 1940s, prison labour was employed on a considerable scale (Kahveci, *The miners*, 183-200). Private records and memoirs document the unsanitary conditions of life in the mines, and the high incidence of diseases such as tuberculosis, typhus and intestinal ailments. Only from the 1960s onwards did the mines become a focus of organised trade union activity, with a major strike in 1965. Large-scale demonstrations sparked by a long-term decline in real wages, occurred in the early 1990s as well (see on these topics, Mübeccel Kiray, *Ereğli, ağir sanayiden önce bir sahil kasabası*, Ankara 1964; D.A. Roy, *The Zonguldak strike. A case study of industrial conflict in a developing society*, in *MES*, xii [1974], 147-85; Sina Çıladır, *Zonguldak havzasında işçi hareketlerini tarihi, 1848-1940*, Ankara 1977; T. Nichols and Erol Kahveci, *The condition of mine labour in Turkey. Injuries to miners in Zonguldak, 1942-1990*, in *MES*, xxxi [1995], 198-227; Quataert and Nadir Özbek, *The Ereğli-Zonguldak coal mines. A catalog of archival documents*, in *The Turkish Studies Assoc. Bull.*, xxiii [1999], 55-67; Quataert, *Zonguldak maden işçilerinin hayatı, 1870-1920 başlangıç niteliğinde bazı gözlemler*, in *Toplum ve Bilim*, lxxxiii [1999-2000], 80-90). After employing up to 10,000 people in 1914, and 50,000 at the peak of mining activity, the coal mines are today in crisis and scheduled for privatisation.

Fixed capital and output. Zonguldak until late into the republican period had few links to the Anatolian interior, and handled all its trade by sea. The port was constructed after 1896 by the French mining company. Railways linking the different mines to the port also were constructed, but by the beginning of the First World War, the tunnels necessary for connecting the more remote mines to the port had not as yet been dug. Coal production in the early 20th century reached 500,000 tons per year, the foreign company's share amounting to over 75%. By the terms of their contracts, all mining entrepreneurs had to offer 60% of the coal extracted to the government at prices determined by the latter. Apart from the needs of the Navy, Izmir enterprises and households also came to depend on Zonguldak coal, and there were some exports to Greece and Rumania. Yet until 1913 the foreign company was not very profitable, in part because coal seams had been poorly chosen, and management problems were rife. But impediments placed in the company's way by a government hostile to foreign control of a crucial energy source equally limited profitability.

A study published in 1995 emphasised that low investment in the mines has remained typical of the republican period as well, resulting in the widespread use of out-of-date equipment. Much of the capital invested has been derived from international sources, down to 1965, particularly funds made available under Marshall Plan auspices, more recently from the World Bank. Today, Zonguldak coal has increasingly to compete in the Turkish market against the imported item.

Other industrial towns. It is one of the peculiarities of Zonguldak province that, apart from the central city, we find two major rival towns. Karabük is of even more recent origin than Zonguldak itself, having been founded in 1939. Partly for military reasons, the steelworks established in this locality, whose construction formed a major item in the Five-Year-Plan of 1932, were built at a considerable distance from the coast, with coal brought in from Zonguldak and raw iron from distant Divriği. The other important town in the province of Zonguldak is Ereğli (Bendereğli, Karadeniz Ereğlisi), which by contrast was a small but active port as early as the 10th/16th century (Faroqhi, *op. cit.*, 110-13). Up to the 1950s, Ereğli's harbour was only suitable for small craft, and the transportation of Zonguldak coal to steamships constituted an important activity, but since 1960, Ereğli has also become the site of a large steelworks, and a modern harbour has been built.

Bibliography: Given in the article.

(Suraiya Faroqhi)

ZSITVATOROK, the name of a peace-treaty signed by the Ottomans and the Habsburgs in 1606, and so-called ever since the negotiations leading to it started on boats at the confluence of the rivers Zsitva and Danube (the literal meaning of the word being "Zsitva mouth").

The peace treaty put an end to the so-called "Long" or "Fifteen Years' War", which was begun in 1593 and renewed each year, bringing smaller or bigger successes to both sides without a final victory. The revolt led by István Bocskai against the Habsburgs helped the Ottomans to a certain extent to strengthen their sometimes rather weak positions.

First, Bocskai and the Habsburgs came to an agreement in Vienna on 9 February 1606. Three-party talks started on 29 October, when the Emperor Rudolph II was represented by Ernst Molart, the Sultan Aḥmed I by ʿAlī, the *beglerbegi* of Buda, and Bocskai by Baron István Illésházy. The treaty, to be valid for 20 years, was signed on 11 November, amended in March 1608 at (Érsek-) Újvár (Nové Zámky), and ratified by the sultan—after long consideration—on 11 October 1608.

The peace treaty stipulated, among other things,

the following: (a) it was forbidden to attack castles and take prisoners; (b) earlier captives were to be freed; (c) the Habsburg Emperor was to hand over 200,000 florins as a once-and-for-all payment; (d) castles taken in the county of Nógrád were not to be returned to the Ottomans, but Esztergom with its vicinity remained in their hands, while the future of Kanizsa and its surroundings was to be decided later; and (e) taxes were to be collected locally and handed over by village mayors.

ZUʿʿĀR (a., sing. *zāʿir*), lit. "rowdy, ill-behaved lads", a term used notably in the Egyptian and Syrian urban milieux during the Mamlūk and Ottoman periods, and also with the sense of "gypsies", but, rather, in an extra-urban milieu. At the present time, we have in Lebanon and Palestine *azʿar* (pl. *zuʿrān*) "vagabond, brigand". Other forms that are found include *zuʿrūr* and *zaʿir*. The Arabic dictionaries place the term under the verb *zaʿara* "to copulate, have sexual intercourse". In fact, it should be connected instead with *dhāʿir* (pl. *dhuʿʿār*) "rascal, scoundrel", itself connected with the verb *dhaʿara* "to frighten, instil fear", apparently a variant or by-form of *dāʿir* (pl. *duʿʿār*) "dirty, debauched, rotten, evil, licentious", verb *daʿara* "to smoke a great deal like green or rotten wood which refuses to burn", cf. *bayt al-diʿāra* "brothel", *daʿira* "to be immoral".

The *zuʿʿār* are often connected with the mystical *ṭuruḳ* (see E. Geoffroy, *Le soufisme en Égypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans*, Damascus 1995, index s.v. *zurʿān*; A. Raymond, *Égyptiens et Français au Caire 1798-1901*, Cairo 1998, 52-9).

Words for "rascals, scoundrels" are very numerous in both the spoken and written forms of Arabic, mediaeval and modern: *al-ʿāmma* "the plebs"; *awbāsh al-nās* "the scum of the people"; *al-ʿayyārūn* [see ʿayyār] "brave, swaggering youths"; *ahl al-sharr* "evildoers"; *al-djuʿaydī* "frightful, evil ones"; *djuʿaydiyya* "the populace"; *al-ghammāzūn* "those who screw up their eyes, intriguers"; *al-ghawghā'* "those who swarm like tiny beasts"; *ḥamalat al-silāḥ* "civilians bearing arms"; *al-ḥarāmiyya* "bastards", currently "highway bandits"; *al-ḥarāfish* [see ḥarfūsh] "troubled, agitated populace" (this is sometimes written *al-kharāfish*, cf. a similar verb *kharbasha* "to botch something, do untidy work"); *iḥranshafa* "to prepare to fight (of a cock), to begin to pay a forfeit (of a man)"; *al-kudya* "begging", *ahl al-kudya* "vagabonds"; *man lā yamliku ḳūt laylatihi* "a person who does not possess enough to eat for a single night of his existence"; *man lā yūdjadu wa-lā yuʿrafu idhā ṭuliba* "someone who cannot be found and cannot be recognised when one looks for him"; *al-mufsadūn wa 'l-mufsidūn* "those who are corrupted and those who corrupt"; *al-murdjifūn* "agitators"; *al-mushākilūn* "footpads, highwaymen"; *al-nuhabā'* "those who pillage"; *al-raʿāʿ* "the mob, thieves"; *al-ramadiyya* "tramps, vagabonds"; *al-ṣaʿālīk* [see ṣuʿlūk] "brigands, robbers"; *al-shuṭṭār* "lively, active ones"; *al-suʿāt* "the dregs of the people"; *al-sūḳa*, lit. "those led to pasture", "the flock under the ruling power", and pejoratively, "canaille"; *al-sukkāt* "rascals"; *al-ṭummāʿ* "those who are avid, covetous"; *ya'khudhūn al-khifāra* "those who run a protection racket"; *yaṭlubūn al-bāṭil wa 'l-fasād* "those who cultivate fraud and corruption (see the references to texts in Th. Bianquis, *Damas et la Syrie sous la domination fāṭimide*, i, Damascus 1989, 671 n. 1).

In effect, marginal persons were numerous in mediaeval Arab society. They involved persons who had broken with traditional family solidarity, such as villagers who had to leave their holdings which were too small to support all the young adults of the kin group and went to the towns to seek a living; former Bedouin who had been obliged to throw off tribal links after the murder of a kinsman; Kurdish bandits (*al-akrād*) driven from their mountains by hunger; and soldiers abandoned by their masters, as was often the case with black slaves purchased cheaply to act as a largely non-specialised infantry corps and then left without food or upkeep when no longer needed on the battlefield. Others fell outside such solidarity groups from birth, such as the male children of child mothers or prostitutes, often recognisable by their short *nasabs*, with *ibn* "son of" followed by the name or sobriquet of a woman. They could even come from ethnic groups who refused integration into a controlled environment, such as the Zuṭṭ [*q.v.*], buffalo herders of Indian origin installed by the Sāsānids in the 5th century in the marshlands of Lower ʿIrāḳ and then displaced by the ʿAbbāsid caliphs at the beginning of the 3rd/9th century to the plains of Antioch and Cilicia; or the Nūrīs/Nawar [see nūrī], limited-ranging groups of gypsies who were blacksmiths and tinsmiths, who, still up to the 20th century, would pitch their patched and tattered tents in the Syrian steppes in the vicinity of towns, in order to hire out the charms of their wives and daughters, and who would organise entertainments in the streets with small girls and trained animals like bears, goats and monkeys. All these marginal groups might themselves create a new collective solidarity around a fictitious *nasab*, like the Banū Sāsān [*q.v.*]; see C.E. Bosworth, *The mediaeval Islamic underworld. The Banū Sāsān in Arabic society and literature*, 2 vols. Leiden 1976; K. Zakhariya, *Abū Zayd al-Sarūdjī, imposteur et mystique; relire les maqāmāt d'al-Ḥarīrī*, Damascus 2000, 121-8.

Their organised bands, *aḥzāb*, *ʿasharāt*, *ʿuṣab*, often residing near the gates either inside or outside a town, would march behind their banners to the sound of their drums and fifes (*al-ṭubūl wa 'l-zumūr*) and might be called by more glorious descriptive collective terms, such as the Muslim youths of Tinnīs, *shabāb shudjʿān* "brave youths", who in the opening years of the Fāṭimid presence regularly preyed on the rich Christian merchants, *al-aghniyā' al-naṣārā*, emptying their warehouses and debauching their womenfolk and daughters (see Sawīrus Ibn al-Muḳaffaʿ, *History of the Patriarchs of the Egyptian Church*, ed. and tr. A.S. Atiya *et alii*, ii/2, Cairo 1948, Ar. text 88, Eng. tr. 131-3). When they were not exterminated by the regular troops, these bands might be gradually institutionalised into urban militias, called *aḥdāth* [*q.v.*] or into confraternities, bands of *futuwwa* [*q.v.*]. See Cl. Cahen, *Mouvements populaires et autonomisme urbain dans l'Asie musulmane*, in *Arabica*, v (1958), 225-50, vi (1959), 25-56, 223-65; Bianquis, *op. cit.*, ii, 673-80; idem, *Le chevalier de la steppe, l'ânier de village, le cavalier de la citadelle: trois personnages de la transition en Syrie au XI[e] siècle*, in M.A. Bakhit and M.Y. Abbadi (eds.), *Bilād al-Shām during the Abbasid period*, ʿAmmān 1992, i (Ar. section), 429-44, ii (foreign languages section), 91-104; A. Havemann, *The Saljuq vizier and ra'īs in Syria. The struggle for urban self-representation*, in *IJMES*, xxi (1989), 233-42; J.M. Mouton, *Damas et son principauté sous les Saldjoukides et les Bourides, 468-549/1076-1154*, Cairo 1995; M. (TH. BIANQUIS)

AL-**ZUBĀRA**, a location on the north-west coast of Ḳaṭar [*q.v.*]. It was the main town on the peninsula until 1878, when it was largely destroyed. It now contains only the 1938 fort, built as a police station, and, 2 km further north, the ruins of a fortified settlement dating back to the 18th century. The surrounding land is flat, saline and barren.

In their late 17th-century migration from central Arabia, the ʿUtūb [*q.v.*] clans may have settled briefly around al-Zubāra before continuing towards present-day al-Kuwayt [*q.v.*] in the early 18th century. They included what became the early leading families in al-Kuwayt: the Āl Ṣabāḥ, the Āl Djalāhima and the Āl Khalīfa. In 1766, the Āl Khalīfa left al-Kuwayt again for al-Zubāra, shortly followed by the Āl Djalāhima. The town soon developed into a significant pearling centre and trading port, particularly after Baṣra [*q.v.*] fell to Persia in 1776. Countering a challenge to this new pre-eminence by the *shaykh* of Būshahr, the newcomers captured Baḥrayn [*q.v.*] (until then a Persian dependency) in 1783. Henceforth, the Āl Khalīfa settled on Baḥrayn, while retaining control over al-Zubāra (now increasingly eclipsed). Āl Khalīfa rule was challenged by Raḥma b. Djābir Āl Djalāhima until his death in 1826. Thereafter, the Āl Thānī family, based in the east of the peninsula, gradually increased its power, challenging the Āl Khalīfa's hold over al-Zubāra and north-western Ḳaṭar. Al-Zubāra at this time was described as a town of 400 houses.

The first treaty between the Āl Thānī and Great Britain in 1868 implied Britain's right to intervene in disputes with the Āl Khalīfa. In 1873, the British Political Agent awarded the latter customary rights and access but not sovereignty over al-Zubāra. In 1878, the Āl Thānī attacked and destroyed the town. Ḳaṭar's recognition in 1916 as a separate British protectorate failed to settle the matter. In 1937, Baḥrayn protested against a survey of the area's port potential; a section of the local Āl Naʿīm tribe sided with their traditional overlords, the Āl Khalīfa, and were attacked and defeated by the Āl Thānī. The Āl Khalīfa imposed an embargo, which became one of the causes for the sharp decline of northern Ḳaṭar, and indeed of the whole peninsula.

In 1944 the political agent negotiated an agreement granting Baḥrayn customary and grazing rights, although tension persisted. Only in 1950 was the Baḥraynī embargo lifted when the Āl Khalīfa's right to visit was again confirmed. The following year, many of the Āl Naʿīm who had left for Baḥrayn returned. Yet in 1953 Baḥraynī maps were published claiming sovereignty over al-Zubāra, and the following year, the claim was officially revived. Shaykh ʿAlī Āl Thānī in response reoccupied the fort and in 1956 added further police. In 1957, the British political agent ruled that Baḥrayn could no longer expect extraterritorial privileges in the area, thus finally establishing full effective Ḳaṭarī (Āl Thānī) control.

During the 1980s and 1990s, the issue of al-Zubāra was raised again by Baḥrayn in the context of the other territorial disputes between the two states. When Ḳaṭar unilaterally referred the Hawar islands dispute to the International Court of Justice in 1991, Baḥrayn protested. Its 1992 offer to make a new joint submission which would include all outstanding issues—also implying al-Zubāra—was refused by Ḳaṭar.

Bibliography: Extensive mention of al-Zubāra can be found in the following: Sir Charles Belgrave, *The Pirate Coast*, Beirut 1960; A. Abu Hakima, *History of Eastern Arabia 1750-1800*, Beirut 1965; J.B. Kelly, *Britain and the Persian Gulf, 1795-1880*, Oxford 1968; R. Said Zahlan, *The creation of Qatar*, London 1979; J. Schofield (ed.), *Territorial foundations of the Gulf states*, London 1994.

(G. NONNEMAN)

ZUBAYDA BT. **DJAʿFAR** b. Abī Djaʿfar al-Manṣūr [*q.v.*], Umm Djaʿfar (d. 216/831-2), wife of the caliph Hārūn al-Rashīd [*q.v.*], mother of his successor Muḥammad al-Amīn [*q.v.*]. Her name was Amat al-ʿAzīz ("handmaid of the Almighty"), but she is known by her pet name Zubayda ("little butter ball"), given to her by her grandfather al-Manṣūr on account of her plumpness and radiant looks. Her beauty, intelligence, extravagance and generosity made her one of the most admired women in her time. She set the fashion at the caliphal court and added to its splendour by patronising scholars, poets and musicians, but she also spent fabulous sums on public works, especially in Mecca. Like her husband Hārūn al-Rashīd, she became a literary figure, appearing in *adab* anecdotes, as also in *Alf laylā wa-laylā*.

According to Ibn al-Athīr (ed. Beirut, v, 572) Zubayda was born in 145/763, whereas earlier sources only state that she was about one year younger than Hārūn, her cousin on the paternal and maternal side, her mother Salsal being Khayzurān's [*q.v.*] sister. Their marriage took place in 165/781-2, a happy union by all accounts, although not untroubled by rivalries and intrigues of the harem (*Aghānī*[3], vi, 309, ix, 88, xviii, 65, 307). In 170/787 her only child Muḥammad (al-Amīn) was born. Six months earlier, a Persian concubine had given birth to ʿAbd Allāh (al-Maʾmūn), whom Zubayda raised from infancy after his mother's death. She must have soon realised, however, that the highly intelligent, gifted ʿAbd Allāh threatened her son's succession to the caliphate. Although Muḥammad was designated caliph as early as 175/792, Hārūn's evident preference for ʿAbd Allāh and the growing rivalry between the brothers affected her increasingly in the years to come (cf. N. Abbott, *Two queens of Baghdad*, Chicago 1946, 170 ff.).

The part Zubayda played in the downfall of the Barmakids [*q.v.*] is difficult to assess (cf. Abbott, *op. cit.*, 191-200); her chief political concern remained the issue of succession. She used her Hāshimite alliances and her wealth in support of her son, who succeeded Hārūn in 193/809, but when in 195/811 an army was sent to Khurāsān against al-Maʾmūn, she urged the general ʿAlī b. ʿĪsā to treat her stepson with respect should he fall prisoner (Ṭabarī, iii, 817). During the turbulent events of the civil war, Zubayda suffered personal humiliation, first on the part of Baghdādī rebels in 196/812, later by al-Ṭāhir's [*q.v.*] Khurāsānian troops, who were also responsible for the murder of al-Amīn in 198/813 (Ṭabarī, iii, 846, 934). Her spirit seems to have been unbroken, however. She sent placating messages to al-Maʾmūn, avowing that he was ample compensation for all her losses, and eventually effected a reconciliation (*Taʾrīkh Baghdād*, xiv, 433-4, no. 7802). Her quiet later years bear witness of the cordial relationship between them (cf. Abbott, *op. cit.*, 229-35).

Zubayda is commemorated for her philanthropic works, in particular the water supplies of Mecca and the pilgrim road (cf. Ibn Djubayr, *Travels*, ed. W. Wright, Leiden 1907, 208). In 193/808 she initiated an extensive system of waterworks centred around the 'Ayn Zubayda on the plane of 'Arafāt, including a subterranean aqueduct cut through the rocks at enormous costs [see MAKKA. 2]. The sources report her personal engagement in the planning and her persistence against the objections of the engineers (Wüstenfeld, *Chroniken der Stadt Mekka*, Leipzig 1858, i, 444-5; Ibn Khallikān, no. 228, tr. de Slane, i, 532). Zubayda died on 26 Djumādā I 210/10 July 831 in Baghdād. The place of her tomb is a matter of dispute (Abbott, *op. cit.*, 247-50).

(RENATE JACOBI)

AL-**ZUBAYDĪ**, ABŪ BAKR MUḤAMMAD B. AL-ḤASAN (Ḥumaydī, 180) b. 'Abd Allāh b. Madhḥidj, a well-known Arabic philologist, *faḳīh* and poet, whose great-great-great-grandfather Bishr al-Dākhil (Ibn Ḥazm, 412) had come from Ḥimṣ [*q.v.*] with the Umayyad army to al-Andalus (his genealogy goes back to the *Djāhiliyya* in Yemen). Al-Zubaydī was born in Seville *ca.* 316/928 into a scholarly family. The *ṭalab al-'ilm* brought him to Cordova, the residence of the Umayyad caliphs, where he associated with his teachers, above all with Abū 'Alī al-Ḳālī [*q.v.*]. The young scholar attracted the attention of the caliph al-Ḥakam II (350-66/961-76) who, when still a prince, was a great promoter of art and science. He entrusted al-Zubaydī with the education of his son Hishām, the heir to the throne. He urged him to make his knowledge available for everybody in books, similar to the way he had already shown himself as an expert in a complementary work to Sībawayhi's [*q.v.*] famous grammar, namely, his:

(1) *K. al-Istidrāk 'alā Sībawayh fī K. al-Abniya wa 'l-ziyāda 'alā mā awradahu fīhi muhadhdhab*ᵃⁿ, additions and corrections on the structure of nouns, etc. (ed. I. Guidi, Rome 1890, repr. Baghdād *ca.* 1970; cf. *al-Mawrid*, iv/1 (1395/1975), 251-3; new ed. by Ḥannā Djamīl Ḥaddād, al-Riyāḍ 1407/1987; an excerpt is *Amthilat al-abniya fī Kitāb Sībawayhi, Tafsīr* Abī Bakr al-Zubaydī, *Sharḥ* Muḥammad Khalīfa al-Dannā', Beirut 1996).

Al-Zubaydī then wrote three works, among which his biographies of grammarians and lexicographers from early times to his own days, in which he quotes his *K. al-Istidrāk* on p. 239:

(2) *K. Ṭabaḳāt al-naḥwiyyīn wa 'l-lughawiyyīn*, ed. M. Abu 'l-Faḍl Ibrāhīm, Cairo 1373/1954, ²1973, composed between the years 363/973-4 and 365/975-6. As he points out in the preface, the caliph put his personal material at his disposal, both orally and in writing (see R. Sellheim, in *Oriens*, viii [1955], 345-8). Al-Zubaydī's *Ṭabaḳāt* was used as a source by later biographers, and excerpts were made, one of which has been printed (F. Krenkow, Rome 1919).

To this period also belongs al-Zubaydī's work on "errors in language" (*laḥn* [*q.v.*]; cf. AL-ANDALUS. x) made by common people (cf. G. Krotkoff, in *Bull. of the College of Arts and Sciences, Baghdād*, ii [1957], 3-16; Sezgin, *GAS*, viii, 254-5):

(3) *K. Laḥn al-'awāmm*, ed. R. 'Abd al-Tawwāb, Cairo 1964. Again, he thanks the caliph emphatically for his encouragement and assistance. Two hundred years later, Ibn Hishām al-Lakhmī [*q.v.* in Suppl.] from Seville wrote an answer to this innovative treatise (cf. D. Reig, in *SI*, lxxvii [1993], 183-9). For an excerpt from al-Zubaydī's *Laḥn*, see the introduction of the editor, his general study, called *Laḥn al-'āmma wa 'l-taṭawwur al-lughawī*, Cairo 1967, and his collected works *Buḥūth wa-maḳālāt fī 'l-lugha*, Cairo 1403/1982. Without examining the first edition, 'Abd al-'Azīz Maṭar republished the work under the title *Laḥn al-'āmma*, Cairo 1981.

The third work published by al-Zubaydī at the instigation of the caliph was the highly-praised revised excerpt which he made from the first Arabic dictionary. Al-Zubaydī, too, is of the opinion that the work is only to be ascribed (*mansūb*) in its entirety to al-Khalīl b. Aḥmad [*q.v.*]. He must have finished it before the death of the caliph on 3 Ṣafar 366/1 October 976, for at the end he wishes him a long life (see further, Ḥumaydī, 47-9!):

(4) *Mukhtaṣar al-'Ayn*, ed. Nūr Ḥāmid al-Shādhilī, 2 vols. Beirut 1417/1996 (cf. J. Kraemer, in *Oriens*, vi [1953], 207-8; Sezgin, *GAS*, viii, 52-6, 254; 'Abd al-'Azīz Ibrāhīm, in *al-Mawrid*, xvii/2 [1408/1988], 196-224, xvii/3, 189-214).

Al-Zubaydī rose to become *ṣāḥib al-shurṭa* [*q.v.*], but he probably succeeded in returning to his native town Seville in the function of *ḳāḍī* only after the caliph's death and under the latter's successor, his own pupil Hishām. He died there on 1 Djumādā II/6 September 989. His son Abu 'l-Walīd Muḥammad, also one of his many pupils, died soon after 440/1048 as *ḳāḍī* in Almeria (Ḥumaydī, 36).

(5) *K. al-Wāḍiḥ fī 'ilm al-'arabiyya*, a highly-praised, clearly-arranged grammar, composed after the example of Sībawayhi's *Kitāb*, but shorter than others (ed. Amīn 'Alī al-Sayyid, Cairo 1975; ed. 'A. Khalīfa, 'Ammān 1976; cf. Sezgin, *GAS*, ix, 250). The work seems to have circulated in various versions (*riwāyāt*), perhaps as written notes taken during lectures (*madjlis*). Partial versions may have existed before al-Zubaydī came in contact with the court.

Shorter treatises about questions concerning the *K. al-'Ayn* may also be considered as written notes taken during lectures, also indirectly through al-Ḳālī's *K. al-Bāri'* [see MATHAL. iii; AL-YAZĪDĪ], and not as independent works (cf. Ḳifṭī, *Muḥammadūn*, 209; Sezgin, *GAS*, viii, 255, ix, 319), namely:

(6) *Istidrāk (?) al-ghalaṭ al-wāḳi' fī K. al-'Ayn* [see LAḤN AL-'ĀMMA];

(7) *Risālat al-intiṣār li 'l-Khalīl* (cf. Ḳifṭī, *Inbāh*, iii, 109);

(8) *al-Mustadrak min al-ziyāda fī Kitāb al-Bāri' 'alā K. al-'Ayn*;

(9) *K. Basṭ al-Bāri'* (cf. S.A. Bonebakker, in *Oriens*, xiii-xiv [1961], 174);

(10) *al-Radd 'alā Ibn Masarra*, or *Hatk sutūr al-mulḥidīn* (cf. Ibn Khallikān, *s.v.*) is a treatise against the doctrines of Ibn Masarra.

Al-Zubaydī is said to have composed biographies of later jurists in Cordova:

(11) *Akhbār al-fuḳahā' al-muta'akhkhirīn min ahl Ḳurṭuba* (cf. Ḥādjdjī Khalīfa, *s.v.*).

In addition are mentioned a work on metrics:

(12) *al-Ghāya fī 'l-'arūḍ* (cf. Ḥādjdjī Khalīfa, *s.v.*);

(13) *al-Taḳrīẓ* (cf. Ibn Khayr, 351); and an excerpt,

(14) *Ikhtiṣār*, from al-Bukhārī's *Ṣaḥīḥ* (ms. in Tunis, see Pons Boigues, 92-3 no. 50).

Bibliography (in addition to works mentioned in the text): 1. Sources. Ibn al-Faraḍī, *T. 'Ulamā' al-Andalus*, Cairo 1373/1954, ii, 92 (cf. M.L. Ávila

(R. SELLHEIM)

AL-ZUBAYR B. AL-ʿ**AWWĀM** B. KHUWAYLID, Abū ʿAbd Allāh al-Ḳurashī al-Asadī, one of the most eminent Companions of Muḥammad, known by the surname *Ḥawārī* (a Geʿez loanword) *Rasūl Allāh* ("the Disciple or Apostle of the Messenger of God"). He is one of the ten Companions to whom Paradise was promised by the Prophet (*al-ʿashara al-mubashshara* [*q.v.*] or *al-mubashsharūn al-djanna*) and a member of the *shūrā* [*q.v.*] appointed by the dying caliph ʿUmar b. al-Khaṭṭāb to elect his successor. The name al-Zubayr is derived from *al-zabr, ṭayy al-biʾr bi ʾl-ḥidjāra*, casing of a well with stones (Ibn Durayd, *al-Ishtiḳāḳ*, 47-8) or a strong man (*LA*, s.v. *z-b-r*).

His mother, Ṣafiyya bt. ʿAbd al-Muṭṭalib b. Hāshim, was the Prophet's aunt, so that he was a cousin of Muḥammad and a nephew of his wife Khadīdja bt. Khuwaylid. A report asserts that al-Zubayr, Ṭalḥa b. ʿUbayd Allāh, ʿAlī b. Abī Ṭālib and Saʿd b. Abī Waḳḳāṣ were all born in the same year (al-Dhahabī, *Taʾrīkh*, 499). Al-ʿAwwām died when al-Zubayr was very young and he was taken into the care of his uncle Nawfal b. Khuwaylid.

Al-Zubayr was one of the earliest converts to Islam: some claim that he was the fourth or fifth male who adopted the new religion. Reports disagree concerning his age when he followed Muḥammad. The best known states that he was 16 years old at the time. Ibn Isḥāḳ attests that Abū Bakr persuaded him, together with four other future members of the *shūrā*, to embrace Islam; the version of the Zubayrīs has it that he was eight years old when he followed Muḥammad and that, when he was 12, he drew his sword to protect him and became the first person who drew a sword in the way of God; to give more credibility to this version, a report claims that he converted to Islam with ʿAlī (Ibn ʿAsākir, xviii, 344-5; al-Dhahabī, *Siyar*, i, 41, 45). The contradictions between these versions are the result of debates within Muslim society concerning the precedence claimed in adopting the new religion (*sābiḳa*), according superiority to the first converts (cf. I. Hasson, *La conversion de Muʿāwiya ibn Abī Sufyān*, in *JSAI*, xxii [1998], 214-42).

Al-Zubayr took part in the first *hidjra* and returned with the first group to Mecca when rumours spread that the Meccans had become reconciled to Muḥammad since he was ready to recognise the three goddesses, al-Lāt, al-ʿUzzā and Manāt [*q.vv.*]. Later, al-Zubayr, accompanied by his mother, migrated (*hādjara*) from Mecca to Medina.

Within the range of the institution called *al-muʾākhāt* ("brothering" [*q.v.*]), al-Zubayr was paired probably with the Awsī Salama b. Salāma b. Waḳsh or with the Khazradjī poet Kaʿb b. Mālik [*q.v.*]; earlier, in Mecca, he was paired with ʿAbd Allāh b. Masʿūd [see IBN MASʿŪD].

Al-Zubayr took part in most of the early battles. At Badr (2/624 [*q.v.*]), there were only two horsemen in the ranks of the Muslims; al-Zubayr was one of them. The Zubayrīs relate that the archangel Djibrīl and the angels who took part in this battle (Ibn Hishām, *Sīra*, ii, 285-6) wore yellow turbans like that of al-Zubayr (Ibn ʿAsākir, xviii, 353-5). At Uḥud (3/625 [*q.v.*]), the Prophet expressed his admiration for Zubayr's valour. During the Battle of the Trench (al-Khandaḳ [*q.v.*]) in 5/627, al-Zubayr was sent by the Prophet to spy on the Banū Ḳurayẓa. Muḥammad said on this occasion: "Each prophet has his true disciple, and al-Zubayr is mine" (*li-kulli nabiyy*ⁱⁿ *ḥawāriyy*ᵘⁿ *wa-ḥawāriyya al-Zubayru*; al-Wāḳidī, *al-Maghāzī*, ii, 457). Just after the Battle of al-Khandaḳ, al-Zubayr and ʿAlī organised the massacre of Banū Ḳurayẓa, carrying out the sentence pronounced by Saʿd b. Muʿādh [*q.v.*] and approved by Muḥammad (al-Wāḳidī, *al-Maghāzī*, ii, 513; al-Ṭabarī, *Taʾrīkh*, i, 1499). During the Khaybar campaign (7/628), al-Zubayr distinguished himself more than any other warrior except ʿAlī. Throughout the course of the conquest of Mecca, al-Zubayr commanded the left wing of the Muslim army. At Tabūk (9/630 [*q.v.*]), al-Zubayr held the Prophet's "greatest banner", *al-rāya al-ʿuẓmā* (al-Wāḳidī, *al-Maghāzī*, iii, 996). After Muḥammad's death, al-Zubayr took part in the battle of al-Yarmūk (15/636 [*q.v.*]) and later ʿUmar sent him with 4,000 reinforcements to support ʿAmr b. al-ʿĀṣ in the conquest of Egypt.

With such a record, it is not surprising that al-Zubayr was described as "the bravest man of Ḳuraysh" (*ashdjaʿ Ḳuraysh*, al-Ṭabarī, ii, 805) or simply "the bravest man" (*ashdjaʿ al-nās, Aghānī*, xi, 125). But in a *munāfara* (disputation over claims to nobility), Ibn ʿAbbās is said to have charged him with cowardice at the Battle of the Camel: he fled and did not attack, he fought but did not persevere (Ibn Abi 'l-Ḥadīd, ix, 327). In order to correct this impression, a pro-ʿAlid tradition claims that "he fled as a repentant and not out of cowardice".

A late report affirms that al-Zubayr served for a time as Muḥammad's secretary in the registration of the income from legal alms (*amwāl al-ṣadaḳāt*, al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, 91, citing al-Ḳudāʿī, *ʿUyūn al-maʿārif*).

Al-Zubayr, like many other eminent Companions who opposed ʿAlī b. Abī Ṭālib before, and particularly after his proclamation as caliph, was attacked in Shīʿī literature (E. Kohlberg, *The attitude of the Imāmī-Shīʿīs to the Companions of the Prophet*, see *Bibl.*; idem, *Some Imāmī Shīʿī views on the Ṣaḥāba*, in *JSAI*, v [1984], 143-75). The eighth volume (in the lithographic edition) of al-Madjlisī's *Biḥār al-anwār* records many such attacks; these form the main subject-matter of the Shīʿī literature known as *sabb al-ṣaḥāba* (cursing of the Companions). Al-Zubayr and the other leaders of the camp opposing ʿAlī in the Battle of the Camel (36/656) are designated in the Shīʿī tradition by the epithet *al-nākithūn*, i.e. rogues, rascals, "those who broke their compact". Abū Mikhnaf reports that al-Zubayr was the first leader who killed Muslim captives in cold blood, *ḳatalahum ṣabr^an* (Ibn Abi 'l-Ḥadīd, ix, 321). Nevertheless Shīʿī attacks on al-Zubayr are moderate in comparison with those on Ṭalḥa, ʿĀʾisha, Abū Bakr, ʿUmar and others, and favourable points are mentioned. Thus it is said that, in the events which led to the election of Abū Bakr as the first caliph, al-Zubayr supported ʿAlī, together with the Banū Hāshim and the bulk of al-Anṣār. In addition, the descriptions of the Battle of the Camel assert that al-Zubayr, despite the provocations of his son ʿAbd Allāh, did not take part in the fighting after his meeting with ʿAlī. It seems that the real reason for al-Zubayr's conduct in this battle derives from his disappointment in dropping behind Ṭalḥa in claims for the caliphate when ʿĀʾisha inclined to appoint Ṭalḥa and al-Zubayr estimated that he did not have any chance to be elected caliph, even if his side won. It was thus best to leave.

The Sunnī reaction in support of al-Zubayr and other *ṣaḥāba* takes many forms. The most prevailing includes the enumeration of their virtues, *manāḳib*, and the harmonisation between Muḥammad's promise of Paradise to *al-ʿashara al-mubashshara* and the *ḥadīth* assuring Muslims who fought Muslims with Hell (Ibn ʿAsākir, xviii, 382-404; Ibn Ḥadjar al-Haytamī, *al-Ṣawāʿiḳ al-muḥriḳa*, 151-74). Al-Zubayr and his partners are considered as *mudjtahidūn* (those who strove to interpret what God wanted and what was better for Islam and the Muslims). The leaders of both camps fought *bona fide* and not for worldly gain, therefore, God will reward them in Paradise according to the Prophet's utterance "Whoever does *idjtihād* but errs will be rewarded; whoever does *idjtihād* and hits the mark, will be rewarded twice" (Abū Nuʿaym al-Iṣfahānī, *K. al-Imāma wa 'l-radd ʿalā 'l-rāfiḍa*, ed. ʿAlī al-Faḳīhī, Medina 1994, 362-81; Ibn Ḥadjar al-Haytamī, *Taṭhīr al-djanān*, Cairo 1965, 6). In order to point out al-Zubayr's abstemiousness and piety, it is reported that he had 1,000 slaves who had to pay to him a certain tribute, *ḍarība* or *kharādj*; he always gave this tribute to the poor for the sake of God; and he ceased to draw his allowance from the *dīwān* after ʿUmar's murder (Ibn ʿAsākir, xviii, 339, 343, 396-7, 399, 403).

Al-Zubayr, Ṭalḥa and ʿAlī are said to have secretly encouraged the agitation against ʿUthmān, each for his own reasons, but when they felt they had lost control over events, they tried to prevent the caliph's murder, and sent their children to protect him. After ʿUthmān's murder and the proclamation of ʿAlī as caliph, al-Zubayr and Ṭalḥa collaborated with ʿĀʾisha against ʿAlī and declared that ʿUthmān had been killed unjustly and that the new caliph was responsible for his death. They arrived in al-Baṣra, recruited an army and forced ʿAlī to fight them. The decisive Battle of the Camel took place near al-Baṣra in Djumādā I 36/November 656. Al-Zubayr was killed and was probably buried in Wādī al-Sibāʿ, known now as Baldat al-Zubayr, in the vicinity of al-Baṣra. He is variously reported to have died aged 64, 57 or 54.

After the *hidjra*, al-Zubayr had become one of the wealthiest Companions. He owned a large number of properties, including some large estates, such as al-Ghāba in the vicinity of Medina, al-Salīla in al-Rabadha; *dār al-Zubayr* and *masdjid al-Zubayr* in *sūḳ wardān* of al-Fusṭāṭ; and estates in Alexandria and Kūfa. Some were grants of land in Arabia from the Prophet, others were granted by ʿUthmān b. ʿAffān, especially in ʿIrāḳ. His estate (*dār*) in the quarter of Banū Sulaym in al-Baṣra was vast and included markets and stores (al-Yaʿḳūbī, *Mushākalat al-nās li-zamānihim*, ed. W. Millward, Beirut 1962, 13-4). In order to give an example of his fortune, it was reported that he sold one of his *dūr* for 600,000 dirhams (al-Dhahabī, *Siyar*, i, 57).

One of his wives was Asmāʾ [*q.v.*], the daughter of Abū Bakr and elder half-sister of ʿĀʾisha, who was known by her nickname *Dhāt al-niṭāḳayn* ("she of the two girdles").

In the chapters on the virtues (*faḍāʾil*) of the Companions, most *ḥadīth* collections dedicate a section to the merits (*manāḳib* and even *faḍāʾil*) of al-Zubayr (al-Bukhārī and al-Tirmidhī, *bāb manāḳib al-Zubayr*; Muslim and Ibn Mādja, *bāb faḍāʾil al-Zubayr*). It is said that al-Zubayr and ʿAbd al-Raḥmān b. ʿAwf obtained special permission to wear silk since they suffered from lice or scabies (*Musnad Aḥmad*, iii, 122, 127, 180, 192, 255; al-Bukhārī, *Ṣaḥīḥ, k. al-djihād*, vi, 100-1; Muslim, *Ṣaḥīḥ, k. al-libās, bāb lubs al-ḥarīr li 'l-radjul*).

The *ḥadīth* corpus includes a very small number of traditions attributed to Muḥammad and cited by al-Zubayr. In addition to the "six canonical collections" (*al-kutub al-sitta al-ṣiḥāḥ*), traditions of al-Zubayr appear in many other collections, such as the *Musnad* of Aḥmad b. Ḥanbal; Aḥmad b. ʿAmr al-Bazzār, *al-Baḥr al-zakhkhār*; Abū Yaʿlā al-Mawṣilī, *al-Musnad*; ʿAbd al-Razzāḳ al-Ṣanʿānī, *al-Muṣannaf*; ʿAlī b. Abī Bakr al-Haythamī, *Madjmaʿ al-zawāʾid*; and al-Ṭabarānī, *al-Muʿdjam al-kabīr*. The Zubayrī traditionists have an explanation attributed to al-Zubayr himself, who declared that he was afraid to relate something wrong, to ascribe it to the Prophet, and then to be punished in Hell, according to the *ḥadīth*: *man ḳāla ʿalayya mā lam aḳul yatabawwaʾ maḳʿadahu min al-nār* (Ibn ʿAsākir, xviii, 332-5).

Al-Muṣʿab al-Zubayrī (d. 236/851), a descendant of al-Zubayr, gives the names of ten of his sons in addition to several daughters. The best known are ʿAbd Allāh [*q.v.*], the first child born in the Muslim

community in Medina, ʿUrwa [*q.v.*], Ḥamza, and Muṣʿab [*q.v.*]. Another descendant, al-Zubayr b. Bakkār (d. 256/870), dedicates the extant part of his *Djamharat nasab Ḳuraysh wa-akhbāriha* to al-Zubayr's offspring. Al-Zubayr is said to have given his sons the names of martyrs, *shuhadāʾ*, hoping that they would die in the service of Islam.

(I. HASSON)

AL-**ZUBAYR** B. **BAKKĀR** B. ʿABD ALLĀH B. MUṢʿAB, Abū ʿAbd Allāh, author of *akhbār* works which combine belles-lettres and history and belong to the oldest preserved books in this field.

He was born in 172/788-9 at Medina. As a descendant of al-Zubayr b. al-ʿAwwām [*q.v.*] he was a prominent member of the illustrious Zubayrī family. When he died at Mecca in Dhu 'l-Ḳaʿda 256/October 870, he had been *ḳāḍī* of the Holy City for the previous one and a half decades. His grandfather was a close associate of the caliph al-Mahdī and was appointed governor of Medina by Hārūn al-Rashīd, and his father also was for some time governor of Medina; but al-Zubayr chose the life of a scholar. According to an account transmitted only by Ibn al-Athīr, vi, 526, he left his home town because of a quarrel with the ʿAlids. In any case, he sojourned several times at Baghdād and Sāmarrāʾ. When he came to Baghdād for the first time, probably before the death of Isḥāḳ b. Ibrāhīm al-Mawṣilī [*q.v.*] in 235/849-50, he had already produced a version of his *Djamharat nasab Ḳuraysh wa-akhbārihā* (cf. the preface of Maḥmūd M. Shākir). His appointment to the office of *ḳāḍī* of Mecca by al-Mutawakkil seems have taken place at Sāmarrāʾ in 242/856-7, and if an anecdotal report is trustworthy (*Taʾrīkh Baghdād*, vi, 469), he had become some time before that date tutor to al-Mutawakkil's son al-Muwaffaḳ [*q.v.*]. The introductory *isnād* of al-Zubayr's *Azwādj al-nabī* indicates further that he lectured in the year 246/865 at Sāmarrāʾ, and Ibn al-Nadīm, *Fihrist*, ed. Tajaddud, 123, mentions that he came to Baghdād for the last time in 253/867.

Unlike the more technically-oriented genealogical works (see, for instance, the *K. Nasab Ḳuraysh* of his uncle Muṣʿab al-Zubayrī [see MUṢʿAB]), al-Zubayr's *Djamhara* is rather a collection of *akhbār* structured in a genealogical order, and it thus develops the old narrative tradition of genealogical writing, as already reflected in the *Djamharat al-nasab* of Ibn al-Kalbī (ed. Maḥmūd Firdaws al-ʿAẓm, 3 vols. Damascus n.d. [*ca.* 1982-6] and ed. Nādjī Ḥasan, 2 vols. Beirut 1986), into a model which may be regarded a predecessor of al-Balādhurī's *Ansāb al-ashrāf*. Al-Zubayr's *Djamhara* treats the Banū Asad b. ʿAbd al-ʿUzzā b. Ḳuṣayy and centres upon the Zubayrids. In contrast to this, his *al-Akhbār al-Muwaffaḳiyyāt*, of which only a minor part is known, offers an unstructured collection including a wide range of materials current in his time. Most of the *akhbār* deal with caliphs, governors and celebrities, who are depicted in situations of social and political significance or in the context of eloquence and rhetoric art. Many of these accounts are elaborated narratives emphasising the exemplary character of the person's behaviour. Poetry plays an important role in both works. These and other works (cf. Ibn Khayr al-Ishbīlī, *Fahrasa*, 467, 499, 534), were transmitted by firmly established *riwāyāt*, the most important among them being those of al-Ḥaramī b. Abi 'l-ʿAlāʾ (*Taʾrīkh Baghdād*, iv, 390), Aḥmad b. Sulaymān al-Ṭūsī (*ibid.*, iv, 177) and Aḥmad b. Saʿīd al-Dimashḳī (*ibid.*, iv, 171). According to the anecdotally-transmitted complaints of his wife, al-Zubayr also possessed a library. Many of the titles of al-Zubayr's works listed by Ibn al-Nadīm (123) deal with the work and life of poets; none of them, however, has survived in independent transmission, although more than 600 quotations from al-Zubayr in Abu 'l-Faradj's *Aghānī* have preserved many of these materials. He is also an often-quoted authority in other works of *adab* and history, such as al-Zadjdjādjī's *al-Amālī* or al-Balādhurī's *Ansāb*, and is to be considered among the finest representatives of Classical Arabic *akhbār* literature.

Bibliography: Edited works. *Al-Akhbār al-Muwaffaḳiyyāt*, ed. Sāmī Makkī al-ʿĀnī, Baghdād 1972; *Djamharat nasab Ḳuraysh wa-akhbārihā*, ed. M.M. Shākir, i, Cairo 1381; *al-Muntakhab min Kitāb Azwādj*

al-nabī, ed. Sukayna al-Shihābī, Beirut 1403/1983, and, together with Ibn Zabāla, *Azwādj al-nabī*, ed. Akram Ḍiyā' al-'Umarī, Medina 1401/1981.

ZUBDA (A.), derived from the root *z-b-d* with the basic meaning "foam(ing)", refers primarily to "cream (of milk), (fresh) butter", secondarily to "best part(s), essence, selection". In this transferred meaning it became a popular leading word of book titles, indicating that the work in question either encompasses the most important facts of its subject-matter (as e.g. in *Zubdat al-bayān fī tadbīr amrāḍ al-insān* "The essential information about the treatment of the diseases of man"; cf. Brockelmann, S II, 1031) or that it is an abridged version of some lengthier treatise (as e.g. with *Zubdat al-asfār sharḥ Mukhtaṣar al-Manār* "The essence of the books, Commentary upon M.M."; cf. Brockelmann, S II, 90). Occasionally the primary meaning of *zubda* is played upon, as e.g. in *Zubdat al-ḥalab fī ta'rīkh Ḥalab* "The cream of the fresh milk; about the history of Aleppo" (Brockelmann, I, 332). Less often than *zubda*, its plural form *zubad* is used in the same way. The popularity of *zubda* and *zubad* in book titles is documented by 71 titles starting with *zubda* (63) or *zubad* (8) listed in the register of Brockelmann, S III, 1165. (A.A. AMBROS)

ZUDJĀDJ, ZADJĀDJ and ZIDJĀDJ (A., sing. *zudjādja*), glass, syn. *kawārīr* "glass vessels, pieces of glass"; Pers. *ābgīna* or *shīsha*. It is mentioned in the Ḳur'ān (XXIV, 35) with the meaning of "glass container functioning as a lamp".

Glassmaking is often included in scientific works on mineralogy as a particular type of stone (see e.g. al-Bīrūnī, *K. al-Djamāhir fī ma'rifat al-djawāhir*, Islamabad 1989, 191-3). In literary accounts, glass vessels and centres of glass production throughout the Islamic world are sometimes referred to, although they are invariably of generic nature. For example, Fusṭāṭ, Ṣūr, Antākiya, al-Khalīl, Ḥalab, Dimashḳ, Baghdād, Ḳādisiyya, al-Baṣra, Iṣfahān, Shīrāz and Istanbul are all mentioned as glassmaking centres at various times (a survey is in Lamm 1929-30, 484-508).

Glass had been manufactured in the areas conquered by the Muslim armies for centuries, especially in Egypt and along the eastern Mediterranean coast. The "invention" of glass blowing in the 1st century B.C. had transformed this medium from an expensive, time-consuming product into an affordable, multipurpose one. The chemistry, technology, and manipulation of glass remained unchanged in the transitional period from late Antiquity to early Islam—glassmaking being a rather traditional craft that evolved with small but steady steps in the mediaeval period.

Glassmakers in the Islamic world continued to exploit artistically the wide range of available techniques of glass working, improving upon many, partially neglecting some, and reviving others. Most utilitarian objects were inflated on the blowpipe, shaped with different tools on the pontil (a solid iron rod attached to the base of the vessel after the blowpipe was cut off) and left undecorated. A large number of vessels were further manipulated with decorative effects in the so-called hot-worked technique. Designs were created applying glass trails, roundels, and splotches on the walls; patterns were impressed blowing the object directly in a decorated mould or making use of a tong-like tool that pressed both sides of an open-shaped vessel. The most sophisticated hot-worked objects present white trails applied in a spiral motion around the walls of a dark-coloured vessel, which are then incorporated in the surface with a rolling action against a smooth stone slab or marver, and patterned in festooned motifs with a pointed tool. This type of glass is often described as "marvered" or, better, "with marvered trails".

Cold-cut glass (glass that was abraded, incised, or cut away with hard-stone tools, rotating wheels, or drills in the lapidary technique after the vessel was shaped and left to harden and cool) was inspired by Roman and especially Sāsānid models, reaching new heights in the 4th-5th/10th-11th centuries.

The glass surface was often painted with a brush or a stylus and fired again to fix the pigments onto the surface. Early on, in the 2nd-3rd/8th-9th centuries, stained glass (usually known as "lustre-painted"), probably of pre-Islamic Egyptian origin, became popular in both Egypt and Syria. A lustrous film stained the glass surface permanently in various tones of yellow, brown, orange and red (sometimes combined) through a chemical reaction during the second firing. Difficult skills were required to control the temperature in the kiln to achieve the desired results without spoiling the shape of the re-heated vessel, skills that were perfected in the period of manufacture of enameled and gilded glass in the same areas in the 7th-8th/13th-14th centuries. Enamelled glass made under the Ayyūbids and the Mamlūks is the best known type of Islamic glass, thanks to its extraordinary polychrome appearance, the good condition of many objects, which were prized and collected through the centuries, and its technical accomplishment. Enamels, which are made of lead-rich glass pulverised and applied to the glass surface with a brush and an oily medium, and heavy gilding allowed the creation of painterly surfaces, including figural and vegetal motifs as well as calligraphic inscriptions. The texts, which often include the name of a sultan or an *amīr*, are extremely useful to establish the chronology of this extraordinary type of Islamic glass.

A clear art-historical development of shapes and decoration of Islamic glass is far from being entirely understood, notwithstanding the large number of extant objects and fragments. Even when it is obviously accomplished and expensive—and therefore made for wealthy clients—does glass only in rare instances include useful inscriptions, either moulded, incised or painted, that reveal the name of a patron or an artist, let alone a date. Glass was a commercial and artistic commodity across the entire Eurasian continent, shipped via land along the Silk Route and via sea on the Indian Ocean and the Mediterranean; consequently, excavated objects or vessels with a hearsay provenance were not necessarily created in the immediate vicinity. In addition, glass was traded also in the form of cullet, either as broken vessels or raw lumps, for re-melting. This simplified technology allowed fuel to be saved, but it inevitably makes the interpretation of chemical and elemental analyses a difficult task. Such lack of direct and indirect information, combined with scant and elusive original literary sources, has prevented scholars of Islamic art and of the history of glassmaking from grasping this subject thoroughly.

Carl Johan Lamm's seminal work (Lamm 1929-30, followed by the more focused Lamm 1935 and 1941) represents the only attempt to present a general study

of Islamic glass thus far. The field has progressed slowly but steadily, and interest in Islamic glass has become particularly strong in the past twenty-five years. Earlier works that stimulated the recent interest in the field and are still looked upon as significant contributions—either as art-historical essays or archaeological reports—are Schmoranz 1898; Wiet 1912; Lamm 1928; Riis-Poulsen 1957; and Smith 1957, in addition to several articles that appeared in the *Journal of Glass Studies* since its first issue in 1959 (for example, Oliver 1961; Pinder-Wilson-Scanlon 1973; Bass 1984; Whitehouse 1993) and those in the *Annales* of the congresses of the *Association Internationale pour l'Histoire du Verre* since 1958.

Although time is not yet mature for a manual of Islamic glass, its general development is clear within the context of Islamic art and of mediaeval glassmaking. During the first two centuries after the advent of Islam, shapes, colours and decoration changed little from the long-established traditions of blown and hot-worked glass in the former Roman-Byzantine provinces. Bottles and perfume containers with whimsical trailed and applied decoration—among them the so-called cage flasks in the shape of quadrupeds carrying a small bottle—and moulded ribbed bowls are the most representative objects from this period. In the formerly Sāsānid area, the tradition of cold glass cutting, especially overall facets to create honeycomb patterns, probably continued during this early period, although the chronology is unclear because the majority of the extant objects show later, 3rd-4th/9th-10th-century, shapes. Relief-cut glass represents one of the best artistic achievements of the early Islamic period, the undisputed extant masterpiece being the so-called Corning Ewer in cameo glass (the decoration was achieved by partially cutting away the layer of green glass that covered the clear glass vessel; see Whitehouse 1993). Ultimately belonging to the Iranian tradition of glass cutting, this ewer is also symbolic of the transfer of techniques across the Islamic world, its shape being clearly related to Fāṭimid rock-crystal objects [see BILLAWR]. As a general statement, it can be said that a taste for colourful, textured and complex surfaces is predominant in the former Roman regions (stained- or lustre-painted glass provides a good example). Colourful *millefiori* ("thousand flowers") tiles and small vessels revived this Roman tradition in the heart of the ʿAbbāsid caliphate in the 3rd/9th century. "Scratched" or finely incised coloured objects with a wealth of geometric and vegetal motifs, probably created in the same ʿAbbāsid area, were so prized that they found their way to tombs in China (An 1991). Clear, colourless glass presenting restrained, stylised motifs belongs instead to the eastern Islamic world, with the Mesopotamian area functioning as a sort of meeting point of the two traditions. This statement, with its many exceptions, holds true also throughout the history of mediaeval Islamic glass.

That tradition played an important part in Islamic glass production is confirmed by the continuous use of many techniques throughout the mediaeval period, although shapes and details in the decoration are helpful to better understand their chronology. Functional undecorated objects (among them inkwells, alembics and scientific tools), and vessels presenting applied trails, moulded patterns, impressed motifs, marvered threads and combinations thereof, ranging from the 3rd/9th up to the 7th/13th centuries, form the bulk of glass from the Islamic lands in museums and collections worldwide, although it is not possible to select outstanding examples in the brief space assigned to this entry. About sixty circular medallions with figural motifs and, sometimes, inscriptions originally set into windows of 6th/12th-century G͟haznawid and G͟hūrid palaces in what is now Afg͟hānistān, however, deserve to be mentioned as a group that has recently come to scholarly attention, which also highlights the role of glass in architectural decoration (Field-Prostov 1942; Carboni 2001, cat. no. 73).

Enamelled and gilded glass probably originated in the Syrian region in the 6th/12th century. It was sought after by affluent merchants and rich members of the community, and also became a popular article of trade in all directions. Under the Mamlūks, not only large mosque lamps but also a profusion of secular objects include the names of sultans and *amīrs*. This is the only extant group of Islamic glass objects that provides evidence of a fervent royal and courtly sponsorship for this medium. Economic and political decline and the challenge of European trade and industry in the 9th/15th century weakened also the manufacture of enamelled glass in the Mamlūk lands. This decline in glass production, which was preceded by a similar situation in the eastern Islamic area, marks a two-century gap in our knowledge of Islamic glass, corresponding to the Tīmūrid and early Ṣafawid periods in Persia and the early Ottoman era in the former Mamlūk regions. The industry must have almost died out, although we know, for example, that glass was made in Istanbul in the 10th/16th century (Rogers 1983), until Venetian, then Bohemian, English and Dutch glass invaded the market and indirectly encouraged local production. Virtually nothing is known of Ottoman glass, but a little more about functional vessels made in Iṣfahān and S͟hīrāz under the late Ṣafawid, Zand, and Ḳād͟jār dynasties (Charleston 1974; Diba 1983; Charleston 1989). Glass manufactured in the Mug͟hal territories, instead, can be regarded as the only attempt to create artistically-motivated products (Dikshit 1969; Markel 1991; Carboni 2001, cat. nos. 104-6). Today, active but small glass factories creating vividly coloured bubbly glass, principally made with recycled cullet, can be visited throughout the Islamic world, in particular in Cairo and Damascus (see Henein 1974).

(S. Carboni)

ZUHĀK, a historicised mythological tyrant of demonic nature who belonged to the Pīshdādiyān dynasty of Persian legendary history. (The form Zuhāk, if it exists at all, must be a mispronunciation of Perso-Arabic Ḍaḥḥāk, itself a re-interpretation of Middle Persian Dahāk, Avestan Azhī dahāka-, probably "snake-man"; cf. Vedic *azi-* "snake".)

According to Iranian tradition, recorded in Middle Persian, Persian and Arabic sources, Ḍaḥḥāk, also called Bīwarasp "possessor of a thousand horses", and a descendant of early Iranian world-kings, was the son of a king of the Arabs. Seduced by Satan (Ahrīman) he murdered his father, usurped his kingdom and attacked Djamshīd, the Iranian legendary king who had haughtily claimed divinity and therefore had lost the glory (*farrah*) bestowed by God on legitimate kings, seized him, had him sawed in half, captured his domain and reigned for a thousand years. His rule was characterised by severe oppression and bloodshed. Under him, drought caused famine and extreme hardship. Through Satan's machinations, two snakes grew on his shoulders. Following Satan's advice, he fed them daily with the brains of two youths to quell the torment they caused. A smith by the name of Kāwa (Kābī, in most Arabic sources) who had lost all but one of his sons to Ḍaḥḥāk's royal kitchen, made a banner of his leather apron and called upon people to rise against the tyrant. Farīdūn, a young man of royal lineage, who had been brought up in secret for fear of Ḍaḥḥāk, was sought out to head the rebellious force. He invaded the tyrant's palace, subdued him with his bull-headed mace, freed the two beauties from Djamshīd's harem whom Ḍaḥḥāk had abducted, put him in chains and sequestered him in Mount Damāwand where he will remain fettered until the restoration of the world by Soshyant, the saviour.

Azhī dahāka- (Pers. Azhdahā arabicised as Azdahāḳ; see e.g. al-Ṭabarī, i, 201), the avatar of Ḍaḥḥāk, appears in the Avesta as a three-headed monster with three mouths and one thousand eyes. In Rigvedic traditions, *azi-* "snake" refers to monsters which block the passage of heavenly waters. In Middle Persian, *azhdahāg* assumes the meaning of monstrous dragons, of which the prime example is the one which is defeated and chained by Farīdūn. Rustam, the greatest warrior of Iranian legends, is said to be on his mother's side a descendant of Ḍaḥḥāk. This is supported by a tradition found in the *Mudjmal al-tawārīkh*, ed. Bahār, 25, which places the origin of Ḍaḥḥāk in the east. It seems that later on, his birth place was transferred to the deserts in the west, and in some sources, in Yaman. According to Ibn al-Balkhī (*Fārs-nāma*, ed. R. Nicholson, 11), his mother was the daughter of Djamshīd. He is one of the chief figures in the *Kūsh-nāma*, an 11th-century Persian epic in verse. Some Arabs claimed him as theirs; Abū Nuwās boasts in a line quoted by al-Ṭabarī, i, 201, of Ḍaḥḥāk's belonging to the Arab race. In a line of Abū Tammām cited by al-Thaʿālibī (*Ghurar*, 35), he is mentioned as the foremost embodiment of violence and cruelty.

(E. YARSHATER)

ZUḤAL, the planet Saturn. The name *Zuḥal* (diptote) is said to be connected with the Arabic root *z-ḥ-l* meaning "to withdraw or become distant"; according to various lexicons (e.g. *LA*, *TA*), the planet takes its name from the fact that it is "far removed, in the seventh heaven". This etymology clearly postdates the knowledge among Arabic writers of Greek cosmology, for whom Saturn is the farthermost planet in the cosmos; it would have made little sense within the context of the limited astronomy of the pre-Islamic Arabs. According to the *Muḥīṭ al-muḥīṭ*, *zuḥal* was used as a metaphor for exaltedness (*'uluww*) as well as for being far removed; e.g., the poet al-Mutanabbī compared his patron Sayf al-Dawla's exalted state with that of *zuḥal*. Another name for Saturn found in texts from Spain and the Maghrib is *al-Muḳātil* "the warlike", just as we have there *al-Kātib* "the writer" alongside of the usual name *'Uṭārid* [*q.v.*] for the planet Mercury (see AL-NUDJŪM and al-Battānī, *Opus astronomicum*, i, 291). *Z-ḥ-l* does not seem to have cognates referring to Saturn in other ancient languages. (In contrast, the Akkadian name for Saturn *kajamānu* ("the steady one") evidently is the source for the Hebrew *kiyūn* (Amos v. 26) and Persian *kaywān*.)

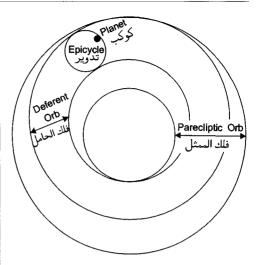
According to ancient and mediaeval astronomy, the planets (from Greek πλανώμενοι "wanderers") are those celestial bodies that move with respect to the fixed stars as seen from the stationary Earth at the centre of the Universe. Thus in addition to our five planets observable with the naked eye (Mercury, Venus, Mars, Jupiter and Saturn), the sun and moon were considered planets as well. In Arabic, the first five, which exhibit retrograde motion in the ecliptic, were called *al-kawākib al-mutaḥayyira* ("the straying [or perplexed] stars") to distinguish them from the planets in general, which were usually referred to as *al-kawākib al-sayyāra* ("the wandering stars") [see AL-NUDJŪM]. Following Ptolemaic cosmology, Islamic astronomers placed Saturn in the seventh and outermost planetary system of orbs (*aflāk*, sing. *falak* [*q.v.*]) between the orb of the fixed stars and Jupiter's orbs. To bring about Saturn's observed motions, three solid rotating orbs were postulated (see Fig. 1): (1) a pareclíptic (*mumaththal*) orb (centred on the Earth and in the plane of the ecliptic) whose convex (outer) surface (*muḥaddab*) was contiguous with the eighth orb of the fixed stars while its parallel concave (inner) surface (*muka''ar*) was contiguous with the convex surface of Jupiter's parecliptic (motion equal to precessional rate of fixed stars, 1°/100 yrs.); (2) an eccentric deferent (*ḥāmil*) for the epicycle nested within the parecliptic (mean motion in longitude of approx. 0;02°/day; eccentricity = 3 $^{5}/_{12}$ parts based on the deferent radius being 60); and (3) an epicyle (*tadwīr*), embedded within the deferent, that contained the actual planet (mean motion in anomaly of approx. 0;57°/day; radius = 6 $^{1}/_{2}$ parts). These mean motions lead to quite accurate values of 29.4 years for the mean tropical period


Fig. 1. Ptolemaic configuration (*hay'a*) for Venus, Mars, Jupiter and Saturn

and 1.035 years for the synodic ("anomalistic") period. Saturn's tropical period, the longest of the planets, led a number of Islamic astronomers to call for a thirty-year observational programme (see MARṢAD and A. Sayılı, *The observatory in Islam*, Ankara 1960, 163-6, 204, 288-9).

Ptolemy's exact values for motion in longitude and anomaly, given to six sexagesimal places, were slightly modified in various Islamic *zīdjs* [*q.v.*]. More drastic changes may be found in the precessional rate, which was given a more correct value of 1°/66 yrs. at the time of the caliph al-Ma'mūn [*q.v.*] and an even more accurate rate of 1°/70 years by the 4th/10th century. As with the other planets, Islamic astronomers proposed a number of modifications to Saturn's system of orbs to correct several non-uniform motions introduced by Ptolemy; these were considered violations of the accepted physics of the time, which required uniform circular motions in the heavens [see 'ILM AL-HAY'A]. As for latitudinal motions, either above or below the ecliptic, these were brought about by inclinations of the deferent and complex motions of the epicycle (for which see Ragep, *Naṣīr al-Dīn*, i, 188-94).

Saturn's parecliptic outer surface marked the boundary between the planets and the fixed stars, and as such delimited the minimum possible size for the universe (it being unknown whether the fixed stars were all on a single orb just beyond Saturn or on multiple orbs at greater distances). Its distance from the Earth was generally given as approximately 20,000 earth radii (about 80,000,000 miles), which is of course considerably smaller than the current figure. Saturn's boundary with Jupiter was about 14,200 earth radii from the Earth, so the "thickness" (*thikhan*) of Saturn's parecliptic (equivalent to the distance occupied by its system of orbs) was 5,800 earth radii. Saturn itself, based on rather dubious observational data, was taken to be about 77 times the volume of the Earth.

Zuḥal in astrology [see MINṬAḲAT AL-BURŪDJ and NUDJŪM (AḤKĀM AL-)].

According to a Sāsānid astrological theory, adopted by several early Islamic astrologers, Saturn-Jupiter conjunctions indicated important religious and political

changes and thus provided the basis for an astrological world history [see ḲIRĀN]. Saturn is the lord of Saturday. Its two domiciles (*baytān*) are Capricorn (day-house) and Aquarius (night-house); it is also the day-ruler of the third triplicity (*muthallatha*), consisting of Gemini, Libra and Aquarius, the night-ruler of which is Mercury. It is also the companion (*sharīk*) of the ruler of the first *muthallatha* (Aries, Leo and Sagittarius). Its exaltation (*sharaf*) is in the 21st degree of Libra (20th, according to some Indian and Roman sources), and its fall (*hubūṭ*) is in the 21st degree of Aries. Saturn's nature is cold, dry and male, and it is characterised as black, malefic and generally of bad omen. It is called "the greater star of misfortune" (*al-naḥs al-akbar*), Mars being the lesser. They are contrasted with the two planets of good fortune, namely Jupiter and Venus [see SAʿD WA-NAḤS; AL-SAʿDĀN].

In alchemy, *zuḥal* means lead.

(W. HARTNER-[F.J. RAGEP])

ZUHARA, the planet Venus. The Arabic name is derived from the root *z-h-r* meaning "to shine, be radiant", appropriate for the brightest planet whose magnitude can reach -4.4; perhaps in consequence of this, it was sometimes referred to as the white planet (*LA*). *Z-h-r* does not seem to have cognates referring to Venus in other ancient languages. Its Persian name is *(A)nāhīd*.

From Antiquity it was well known that the "morning" and "evening" stars were in fact the same planet, and that this planet, Venus, stayed fairly close (within 48°) to the sun. According to ancient and mediaeval astronomy, the planets are those celestial bodies that move with respect to the fixed stars as seen from the stationary Earth at the centre of the Universe [see on these planetary conceptions, ZUḤAL].

Following Ptolemaic cosmology, Islamic astronomers placed Venus in the third planetary system of orbs (*aflāk*, sing. *falak* [*q.v.*]) between those of Mercury and the sun. To bring about Venus's observed motions, three solid rotating orbs were postulated (see Fig. 1): (1) a parecliptic (*mumaththal*) orb (centred on the Earth and in the plane of the ecliptic) whose convex (outer) surface (*muḥaddab*) was contiguous with the concave surface of the sun's parecliptic while its parallel concave (inner) surface (*mukaʿʿar*) was contiguous with the convex surface of Mercury's parecliptic (motion equal to precessional rate of fixed stars, 1°/100 yrs.); (2) an eccentric deferent (*ḥāmil*) for the epicycle nested within the parecliptic (mean motion in longitude equal to the sun's mean motion of centre, i.e. approx. 0;59°/day; eccentricity = 1 ¹/₄ parts based on the deferent radius being 60); and (3) an epicycle (*tadwīr*), embedded within the deferent, that contained the actual planet (mean motion in anomaly of approx. 0;37°/day; radius = 43 ¹/₆ parts). These mean motions lead to quite accurate values of one tropical year for the mean tropical period and 584 days for the synodic ("anomalistic") period.

Ptolemy's exact values for motion in longitude and anomaly, given to six sexagesimal places, were slightly modified in various Islamic *zīdjs* [*q.v.*]. As with the other planets, Islamic astronomers proposed a number of modifications to Venus's system of orbs to correct several non-uniform motions introduced by Ptolemy; these were considered violations of the accepted physics of the time, which required uniform circular motions in the heavens [see ʿILM AL-HAYʾA]. For precession and latitude, see ZUḤAL.

According to Ptolemy, the nearest distance to Venus, which is the same as Mercury's farthest distance, was 166 earth radii (approx. 664,000 miles); this is the distance from the Earth to the concave surface of Venus's parecliptic. Its farthest distance was 1160 earth radii (approx. 4,640,000 miles), which was the same as the Earth's nearest distance to the sun. Thus the "thickness" (*thikhan*) of Venus's parecliptic (equivalent to the distance occupied by its system of orbs) was 994 earth radii. These numbers, of course, depend on being able to fit the two inner planets (Venus and Mercury) between the moon and sun; as such, there were attempts to observe Venus transiting the sun, where it would thereby appear as a spot. Such observations, which were reported by a number of astronomers, would help establish that Venus was below the sun, though not definitively since it might go around the sun in its epicycle. At least one astronomer, Muʾayyad al-Dīn al-ʿUrḍī (d. 666/1266), entertained the notion that Venus might be above the sun (see B.R. Goldstein, *Some medieval reports of Venus and Mercury transits*, in *Centaurus*, xiv [1969], 49-59; idem and N.M. Swerdlow, *Planetary distances and sizes in an anonymous Arabic treatise preserved in Bodleian Ms. Marsh 621*, in *Centaurus*, xv [1970], 135-70; cf. Ragep, *Naṣīr al-Dīn*, 391, 517-24). The usual volume for Venus in Islamic astronomical texts was ¹/₃₆ of the Earth's volume (Ptolemy has ¹/₄₄; see Ragep, *op. cit.*, 523).

Zuhara in astrology [see MINṬAḲAT AL-BURŪDJ; NUDJŪM (AḤKĀM AL-)].

Venus is the lord of Friday. Its two domiciles (*baytān*) are Libra (day-house) and Taurus (night-house). It is the day-ruler of the second triplicity (*muthallatha*), consisting of Taurus, Virgo and Capricorn, the night-ruler of which is the moon, as well as day-ruler of the fourth triplicity, consisting of Cancer, Scorpio and Pisces, whose night-ruler is Mars. Its exaltation (*sharaf*) is in the 27th degree of Pisces and its fall (*hubūṭ*) in the 27th degree of Virgo. Venus's nature is cold and moist (phlegmatic) and female, and it is characterised as white, benefic and generally of good omen. It is called "the lesser star of good fortune" (*al-saʿd al-aṣghar*), Jupiter being the greater, contrasted with the two planets of misfortune, namely Saturn and Mars [see SAʿD WA-NAḤS; AL-SAʿDĀN].

In alchemy, *zuhara* means copper.

(W. HARTNER-[F.J. RAGEP])

ZUHAYR B. ABĪ SULMĀ RABĪʿA b. Riyāḥ al-Muzanī, renowned poet of the pre-Islamic era, who, in the judgement of ancient critics, competed for first place with Imruʾ al-Ḳays and al-Nābigha al-Dhubyānī [*q.vv.*] (Ibn Sallām, *Ṭabaḳāt fuḥūl al-shuʿarāʾ*, ed. Shākir, 52, 64-5; *Aghānī*, ix, 146-7, 158; al-Ḥuṣrī, *Zahr al-ādāb*, ed. Mubārak, 1, 90).

His father Rabī'a belonged to the tribe of the Muzayna [*q.v.*], a minor tribe residing to the south of Medina as neighbours of the B. 'Abd Allāh b. Ghaṭafān [*q.v.*] and of the B. Murra (an offshoot of the Ghaṭafān), his maternal uncles. Rabī'a stayed for some time among the Banū Murra with his mother, but after a dispute over the distribution of booty following a raid, he returned with her to the Muzayna (*Aghānī*, ix, 148). However, he did not remain among them long, since in the course of a raid against the Dhubyān, the Muzayna left him behind. He returned to the Murra, settled among them and married the sister of the poet Bashāma b. al-Ghadīr, who was thus the maternal uncle of Zuhayr (*Aghānī*, ix, 157). Zuhayr was born and grew up among the Ghaṭafān, and, according to Ibn Ḳutayba (*al-Shi'r wa 'l-shu'arā'*, ed. Shakir, 137), in none of his poems does he refer to his Muzayna ancestry.

Zuhayr is classed among the *mu'ammarūn*, those having a remarkably long life, and a well-known verse of the *Mu'allaḳa* (v. 47) refers to his already advanced years; in another poem, which incidentally al-Aṣma'ī does not consider authentic (rhyme, *liyā*, al-Shantamarī, ed. Ḳabāwa no. 17, Tha'lab, ed. Dār al-Kutub, 283-92; cf. al-'Aynī, *al-Maḳāṣid al-naḥwiyya fī sharḥ shawāhid shurūḥ al-alfiyya*, Būlāḳ 1299, ii, 267-69) and which tells of *dahr* and the decay of human things, Zuhayr mentions the fall of al-Nu'mān b. al-Mundhir of al-Ḥīra [see LAKHMIDS] which took place in 602. He would thus have been living at the beginning of the 7th century (R. Jacobi, *Studien zur Poetik der altarabischen Qaṣide*, Wiesbaden 1971, 8) and, according to the *Aghānī*, ix, 148, at 100 years old he is said to have encountered the Prophet. The *Mu'allaḳa* was composed to celebrate the end of the War of Dāḥis [*q.v.* in Suppl.] and Ghabrā', between the 'Abs and Dhubyān. This war is said to have lasted 40 years and to have continued some years after the *yawm* of Shi'b Djabala [*q.v.*], which apparently took place around the year 550 or, according to a more widespread tradition, in the year 570. Thus the poem celebrates the end of this long war and the two chieftains of the B. Murra who concluded the peace, Harim b. Sinān and al-Ḥārith b. 'Awf.

The *Mu'allaḳa* of Zuhayr, unlike other *mu'allaḳāt*, is linked to a specific historical episode, which it evokes: the personal exploits of an individual of Murra, al-Ḥuṣayn b. Ḍamḍam, who, having not accepted the peace accords between the two clans, killed a member of the 'Abs. The two chieftains of Murra took responsibility for payment of the blood-price, and peace was finally concluded (*Aghānī*, ix, 148-50). This justly famous poem opens with a long *nasīb* which colourfully describes the departure of the tribe of Umm Awfā; it then passes abruptly to a paean praising the generosity of the chieftains, which is intermingled with a description of the horrors of war and the men who wage it, identified directly, without the intermediary of any comparison, with animals that need to slake their thirst with water mixed with blood and to pasture on muddy ground. The poem ends with a section composed of verses having the form of a proverb, some of which have probably been added (see M.C. Bateson, *Structural continuity in poetry*, Paris-The Hague 1970, 50; G.J.H. van Gelder, *Beyond the line*, Leiden 1982, 59).

The *dīwān* of Zuhayr has been conserved with two principal commentaries (besides the commentaries on the *Mu'allaḳa* alone; cf. in this context M. Abū Ṣūfa, *al-Ḳaṣā'id al-'ashr wa-maṣādir sharḥihā*, 'Ammān 1986): the commentary of the Andalusian philologist al-A'lam al-Shantamarī (d. 476/1083) and the commentary of the Kūfan Tha'lab (d. 291/904). The former, which forms part of the commentary that al-Shantamarī composed on the *dīwān* of six pre-Islamic poets, presents Zuhayr's *dīwān* according to the Baṣran *riwāya* of al-Aṣma'ī, which has been preserved in its entirety, while citing for certain poems the likewise Baṣran *riwāya* of Abū 'Ubayda, which has been preserved in part only. This recension contains 20 poems and has been edited numerous times: by W. Ahlwardt, without commentary, London 1870, by C. Landberg, with al-Shantamarī's commentary (*Primeurs arabes*, ii, Leiden 1889) and recently by F. Ḳabāwa, Aleppo 1970. This last edition adds a *Dhayl*, which contains the poems and fragments which feature in the collections of Tha'lab and of the Kūfan Ṣa'ūdā' (tutor of the children of Muḥammad b. Yazdād, vizier of al-Ma'mūn, see al-Suyūṭī, *Bughya*, i, 256, no. 476; al-Baghdādī, *Khizānat al-adab*, ed. Hārūn, v, 452, considers him "weak in grammar", but nevertheless frequently quotes his commentary). The commentary of Tha'lab chiefly presents Zuhayr's *dīwān* according to the Kūfan *riwāya* of Abū 'Amr al-Shaybānī, but he also collates the other Kūfan recensions (Ḥammād al-Rāwiya and al-Mufaḍḍal al-Ḍabbī) and the Baṣran recensions, cf. K. Dyroff, *Die Geschichte der Überlieferung des Zuhairdiwans*, Munich 1892, 20, and Nāṣir al-Dīn al-Asad, *Maṣādir al-shi'r al-djāhilī*, Cairo 1956, 530-5. This collection contains 53 poems and fragments and was edited in 1944 by the Dār al-Kutub al-Miṣriyya, and in 1982 by F. Ḳabāwa. Nāṣir al-Dīn al-Asad, *op. cit.*, 526-42, and Shawḳī Ḍayf, *Ta'rīkh al-adab al-'arabī, al-'aṣr al-djāhilī*, Cairo 1960, 305-6, are of the opinion that only al-Aṣma'ī's recension should be taken as an authentic basis for an analysis of the poetry of Zuhayr.

Early Arabic criticism attributes to Zuhayr two particular qualities: that of being born into a family of great poetical talent (Ibn al-A'rābī [*q.v.*], *Aghānī*, ix, 158; al-'Abbāsī, *Ma'āhid al-tanṣīṣ*, i, 110; Ibn Rashīḳ, *al-'Umda*, ii, 306; he was *rāwī* of Aws b. Ḥadjar, who had married Zuhayr's mother after the death of his father, Ibn Rashīḳ, i, 88, 99, Ḍayf, *Ta'rīkh*, 300; his maternal uncle was the poet Bashāma b. al-Ghadīr, *Aghānī*, ix, 157); and that of having worked very assiduously on the composition of his poems, something which could have required a great deal of time. Certain of the poems of Zuhayr are in fact called *ḥawliyyāt*, "poems which have been pondered over for a year" (Ibn Ḳutayba, *Shi'r*, 78, 144). Furthermore, Zuhayr belonged to a line of poets who were in their turn transmitters (*rāwī*) of a preceding poet (Ibn Rashiḳ, i, 198, 201). Without going so far as to suppose, as Ṭāhā Ḥusayn and others after him have supposed, that "poetical schools" are involved here (M. Zwettler, *The oral tradition of classical Arabic poetry*, Columbus, Ohio 1978, 86-7; cf. also Ḍayf, *Ta'rīkh*, 306-7), it may be asserted that the poetry of Zuhayr does appear to be the fruit of a meticulous apprenticeship. According to the *khabar* of a poetical tenson or contest between Zuhayr and his son Ka'b, transmitted only by Tha'lab and Sa'ūdā' (*Dīwān*, ed. Dār al-Kutub, 256-9; *Aghānī*, xv, 147-9), Zuhayr is said to have rebuked and even struck his son for composing poems before completing his education (cf. Blachère, *HLA*, 336 n. 1).

These affirmations, all of them pointing in the same direction, are reflected in the judgements of ancient critics and in their manner of citing the poetry of Zuhayr. Al-Aṣma'ī, like his master Abū 'Amr b. al-'Alā', did not have a high opinion of the "slaves of poetry" (*'abīd al-shi'r*), those poets whose verses are polished and refined precisely because they have been

composed without recourse to natural talent (Ibn Ḳutayba, *Shiʿr*, 144, al-Djāḥiẓ, *al-Bayān wa 'l-tabyīn*, i, 206, ii, 13, in reference to al-Ḥuṭay'a, *rāwī* and disciple of Zuhayr), and for this reason he did not consider Zuhayr as a *faḥl*, preferring to him al-Nābigha al-Dhubyānī (*Fuḥūlat al-shuʿarā'*, ed. Torrey, in *ZDMG*, lvi [1911], 492; *Aghānī*, iii, 25).

On the other hand, critics of the classical epoch not only judged that this toiling over verse was a positive aspect of this poetry, but they were also often aware that this concern with form went beyond the mark of the verse taken in isolation. The expression *lā yuʿāẓilu fī/bayn al-kalām/bayn al-ḳawāfī/al-kalimatayn*, whereby ʿUmar b. al-Khaṭṭāb defined the poetry of Zuhayr (Ibn Ḳutayba, *Shiʿr*, 137-8; *Aghānī*, ix, 148; Ibn Sallām, *Ṭabaḳāt*, 63), is thus explained in the *Risāla al-Mūḍiḥa* of al-Ḥātimī (d. 388/998), ed. Nadjm, 91, as avoiding pairing words that are not of the same genus. Al-ʿAskarī (*K. al-Ṣināʿatayn*, 169) in the chapter dealing with *sū' al-naẓm*, gives a similar explanation, and adds that this defect, from which the greatest of the ancient poets were not exempt, is not to be found in the poetry of Zuhayr. At 107-8, this same critic cites an example of *madīḥ*, drawn from the *Muʿallaḳa*, in which the theme is developed over several verses, according to logical transitions which al-ʿAskarī does not fail to point out. It often happens that images or a *waṣf* are deployed over several verses which, while retaining their formal autonomy, are dependent one upon the other; Zuhayr is above all a skilled engraver, who represents both his poetical themes and his ideas by means of images which have, in every detail, a visual force.

Al-ʿAskarī also mentions other verses which are well constructed and well balanced (*Ṣināʿatayn*, 367, 401; Ibn Rashīḳ, *al-ʿUmda*, i, 333) and he underlines, several times, the formal means whereby Zuhayr surmounts the difficulties of the end of the verse and of rhyme (*Ṣināʿatayn*, 466, 468-69; Ibn Rashīḳ, *al-ʿUmda*, ii, 3) and all the critics acknowledge in him the qualities of "weightiness" and of "solidity" (Ibn Sallām, *Ṭabaḳāt*, 64; Ibn Ḳutayba, *Shiʿr*, 144). Al-Marzūḳī (*Sharḥ Dīwān al-Ḥamāsa*, 9) interprets the ancient judgement of the poetry of Zuhayr attributed to ʿUmar b. al-Khaṭṭāb ("he praised people only for the qualities that they have", Ibn Sallām, *Ṭabaḳāt*, 63) not in the moral sense but in the poetical sense of a successful description (*iṣābat al-waṣf*).

Among poetic genres, *madīḥ* is the most frequently represented (11 poems out of the 20 most positively authentic), honouring in particular the chieftains of Ghaṭafān, and this corresponds to the expressions used by tradition in defining Zuhayr as *amdaḥ al-ḳawm* (Ibn Ḳutayba, *Shiʿr*, 144) or indeed in saying that Zuhayr was *ashʿar al-nās . . . idhā raghiba* (judgment attributed to the grammarian Yūnus b. Ḥabīb, d. 182/798, in *Aghānī*, viii, 77; al-ʿAskarī, *Ṣināʿatayn*, 29; Ibn Rashīḳ, *al-ʿUmda*, i, 95), while recognising that he was not in thrall to the lure of gain (*ibid.*, i, 81). Numerous traditions refer to the praises addressed by Zuhayr to Harim b. Sinān as a monument *aere perennius*, while the gifts that Zuhayr received from him had been eroded by time (*Aghānī*, ix, 146); Ḳudāma b. Djaʿfar, *Naḳd al-shiʿr*, ed. Bonebakker, 33-4, cites long passages from the *madā'iḥ* of Zuhayr, to serve as an "example".

Less numerous are the *hidjā'* poems. Ibn Rashīḳ, *al-ʿUmda*, ii, 66, 171, considered that in this poetical genre Zuhayr had proved himself a stylist both caustic and pure; cf. van Gelder, *The bad and the ugly*, Leiden 1988, 16. Other poems relate to personal affairs, such as his repudiation of his first wife, Umm Awfā (*Dīwān*, al-Shantamarī, no. 16; Thaʿlab, ed. Dār al-Kutub, 342; according to al-Yazīdī, *Amālī*, 133, Muḥammad b. Ḥabīb considered these verses apocryphal), who was jealous of his second wife, the mother of Zuhayr's sons Kaʿb, Budjayr and Sālim. The last-named died young, and Zuhayr composed a *rithā'* for him (not transmitted by al-Shantamarī; *Aghānī*, ix, 157; *Dīwān*, Thaʿlab, ed. Dār al-Kutub, 340-1). Four poems deal with the theft of camels belonging to Zuhayr, and the abduction of their herdsman by a member of the Banū Asad who, as a result of some menacing verses on the part of the poet, decided to send the slave back to him (*Dīwān*, Thaʿlab, ed. Dār al-Kutub, 164-83, 300-12; al-Shantamarī, nos. 5-8; cf. al-Baghdādī, *Khizāna*, v, 453-58; according to al-Aṣmaʿī, the first of these poems was the finest *kāfiyya* in the Arabic language).

Bibliography: There hardly exists a poetical study that does not mention the poetry of Zuhayr. (LIDIA BETTINI)

ZUHAYR B. DJANĀB, a semi-legendary tribal leader and poet, and the eponym of a tribal group belonging to the Kalb b. Wabara [*q.v.*] who flourished in the 6th century A.D. According to some, he was in command of the whole of the Ḳuḍāʿa [*q.v.*].

Around the middle of the 6th century, Abraha [*q.v.*] put Zuhayr in charge of the two brother tribes, Taghlib b. Wā'il and Bakr b. Wā'il [*q.vv.*]. Zuhayr raided them after they had rebelled against him, taking captive Kulayb b. Rabīʿa [*q.v.*] and his brother Muhalhil. At a later stage, Zuhayr and his tribe made up for their alliance with Mecca's enemy, Abraha, by joining the *Ḥums* [*q.v.*]. Moreover, Zuhayr subdued an attempt by the Ghaṭafān [*q.v.*; see also MURRA, at Vol. VII, 629a] to establish a rival sanctuary northeast of Mecca. His action is said to have been praised by the Prophet Muḥammad.

Zuhayr is supposed to have committed suicide, when he was disobeyed, by drinking unmixed wine. Among his offspring we find Maysūn [*q.v.*] who bore for Muʿāwiya I his son Yazīd [*q.vv.*]. The prominence of Ibn al-Kalbī in the reports about Zuhayr demonstrates the latter's importance in the tribal tradition of the Kalb, and that of the Ḳuḍāʿa as a whole, for at least two centuries into the Islamic era.

ZUHAYR B. ḤARB, ABŪ KHAYTHAMA al-Shaybānī al-Nasā'ī, traditionist of the early 'Abbāsid period. He was born at Nasā in Khurāsān in 160/776-7 but lived mostly in Baghdād, dying there in Sha'bān 234/March 849. He was amongst the seven scholars forwarded by Isḥāḳ b. Ibrāhīm to the caliph al-Ma'mūn for questioning over the createdness or otherwise of the Ḳur'ān (al-Ṭabarī, iii, 1116; see also MIḤNA). Regarded as a trustworthy, *thiḳa*, narrator of traditions, he was the author of a *Kitāb al-'Ilm* (publ. Damascus 1966).

Bibliography: al-Khaṭīb al-Baghdādī, viii, 482-4 no. 4597; Ibn Abī Ḥātim, *al-Djarḥ wa 'l-ta'dīl*, Ḥaydarābād 1952-3, i/2, 591; Ibn al-'Imād, *Shadharāt*, ii, 80; Sezgin, *GAS*, i, 1077.

(C.E. BOSWORTH)

ZUHAYR B. ḲAYS AL-BALAWĪ (b. ?, d. 76/695), Arab commander, stemming from Balī, one of the Ḳuḍā'a [*q.v.*] tribes, of reputed Yemeni descent. Ibn Ḥadjar, *Iṣāba* i, 555-6, includes him among the Prophet's Companions and mentions his role in the conquest of Egypt, whilst al-Suyūṭī, *Ḥusn al-muḥāḍara*, i, 200, lists him as a *Ṣaḥābī* but in i, 258 as a *Tābi'* or Successor, showing that he belonged to the two groups.

He took part in the campaigns against the Maghrib in the time of 'Uḳba b. Nāfi' [*q.v.*], one of them against Surt/Syrte where, after its conquest, Zuhayr was left, together with 'Umar b. 'Alī al-Ḳurashī, at the head of the army; in another account, he is said to have been 'Uḳba's deputy, at the head of al-Ḳayrawān, fighting against the Berber chief Kusayla [*q.v.*] and defeating him.

Zuhayr also participated in the campaign against Ayla [*q.v.*] at the side of the governor of Egypt 'Abd al-Raḥmān b. Djaḥdam, a partisan of the Zubayrids, against 'Abd al-'Azīz b. Marwān, but ended up by coming to an agreement with the latter when Ibn al-Zubayr's influence in Egypt declined and 'Abd al-'Azīz was established as *amīr* there. The latter appointed Zuhayr *amīr* of Barḳa [*q.v.*] and instructed him to attack the Byzantines. It is related that he defended himself against 'Abd al-'Azīz, who retained a grudge against him from his anti-Umayyad past in Egypt and who spoke slightingly of him; Zuhayr vigorously responded that a man like himself, who had taken part in the collection of the Ḳur'ān, should not be treated humiliatingly. When a Byzantine force from Constantinople attacked Barḳa, he died valiantly with his 70 companions before the rest of the troops could come to his aid, in 76/695.

(R.G. KHOURY)

ZUHAYR, 'AMĪD AL-DAWLA al-Ṣaḳlabī [see AL-ṢAḲĀLIBA], ruler of Almería middle 419-late 429/middle 1028-late 1038, originally a client (*mawlā*) of al-Manṣūr Muḥammad b. Abī 'Āmir, the famous *ḥādjib* of al-Andalus at the end of the late 4th/10th century.

During the period of turmoil which followed the fall of the 'Āmirids in 399/1009, a number of Ṣaḳlabī leaders left Cordova and managed to set up independent states on the eastern seaboard of Spain. Prominent among them was Khayrān, who ruled Almería (405-19/1014-28) and appointed his brother/companion (*ṣāḥib*) Zuhayr as his lieutenant in Murcia. Nominated by Khayrān as his successor in Almería, Zuhayr ruled an extensive territory extending from Almería to Játiva, Baeza and the approaches of Toledo. He even controlled Cordova itself for some fifteen months (425/1034).

Zuhayr is credited with building and later extending the great mosque of Almería and with improving the city's water supplies and fortifications. He is said to have sought, and complied with, the advice of the *fuḳahā'*. The description of Zuhayr by the author of the *Tibyān* as a stupid ignoramus does not accord with the accounts of Andalusian chroniclers, who speak highly of Zuhayr's piety, courage, astuteness and prudence.

Shortly after the accession of the Zīrid *amīr* of Granada Bādīs b. Ḥabūs (Ramaḍān 429/June 1038), the alliance which had existed between Zuhayr and Ḥabūs came to an end as a result of Zuhayr's alliance with Muḥammad b. 'Abd Allāh al-Birzālī, lord of Carmona and leader of the Zanāta [*q.v.*] Berbers, traditional foes of the Ṣanhādja [*q.v.*] to which the Zīrids belonged. Zuhayr's alliance with the lord of Carmona was probably motivated by the expansionist policy of the *ḳāḍī* Muḥammad b. 'Abbād, ruler of Seville, who in 426/1035 had installed the pseudo-Umayyad Hishām in Seville as caliph of al-Andalus. This Zuhayr and al-Birzālī adamantly refused to accept. According to the last Zīrid *amīr* of Granada, Zuhayr "on hearing of the death of Ḥabūs cast covetous eyes on Granada. He therefore marched on the city and duly encamped at a place known as Alpuente (*al-Fūnt*)" (*Tibyān*, 70, tr. 58). Having decided to open hostilities, Bādīs laid ambushes in ravines on Zuhayr's route and pulled down a bridge which the Ṣaḳlabī had to cross. On approaching the bridge, Zuhayr was set upon by Bādīs's men. At the very outset, Zuhayr's Negro detachment, some 500 strong, defected. Zuhayr himself, however, stood fast and ordered his fellow Ṣaḳāliba to engage the Granadans who, though outnumbered, routed the Ṣaḳāliba. "In the space of a single hour, it [Zuhayr's army] was routed with the loss of all its eunuchs (*khiṣyān*). Zuhayr, however, completely vanished and was not to be found either living or dead" (*Tibyān*, 70, tr. 59).

Almería was annexed, a month later, by 'Abd al-'Azīz b. Abī 'Āmir of Valencia, who acquired a huge fortune from the possessions left by "his grandfather's *mawālī*" (*Dhakhīra*, i/2, 730).

ZUHAYR, AL-BAHĀ' [see BAHĀ' AL-DĪN ZUHAYR].

ZUHD (A.), the material and spiritual asceticism facilitating closer association with the divine.

Zuhd constitutes one of the "spiritual virtues" considered not only by the mystics, but also by a large

number of believers, as essential to religious life in Islam. As such, it occupies a dominant place in the biographies of saints of the first centuries of the Hidjra. The term embraces numerous nuances, divided between two principal meanings: on the one hand, "renunciation" in the sense of detachment, of indifference to things of this inferior world; on the other, "asceticism" in the sense of privation, mortification, tests imposed on the carnal soul (*nafs*). The two terms of Ḳur'ānic origin, *ʿābid* and *nāsik*, have often been employed as equivalents of *zāhid*, although the former (in the plural *ʿubbād*) serves to denote the devotees of God, and the latter, more specifically, the one who performs sacrifices and performs rites. *Zāhidīn* (Ḳur'ān, XII, 20), the sole occurrence of the root, describes the merchants who sold Joseph after finding him in the pit in which his brothers had thrown him, "attaching no value to him" and therefore not considering him worth keeping. Their detachment here takes on a profane sense. To denote a certain form of spiritual renunciation, the Ḳur'ān uses paraphrases, as in the verse (LVII, 23): "Do not despair in that which escapes you and do not exult in that which has been given to you." Reference could also be made to III, 14; XV, 8; XVI, 96; XVIII, 7; XX, 131; XXIII, 55, 56; XXVIII, 60, 83; XXXI, 33; XLIII, 33-5.

Literature specifically devoted to renunciation comprises, out of 63 titles listed for the period between the 2nd/8th and the 10th/16th centuries (27 of which have survived to this day), 37 works dating from the 2nd/8th and 3rd/9th centuries. Their titles include, in addition to the word *zuhd*, which appears 45 times, one instance of *taṣawwuf* (taken as a synonym of *zuhd*); two of *bukā'* (weeping) and *dhamm al-dunyā* (contempt for this inferior world); four of *waraʿ* (abstinence through religious scruple); and, finally, eight occurrences of *raḳā'iḳ* (actions that elevate man), which would thus seem to be the closest equivalent, and the singular of which (*raḳīḳa*) can, as Roger Deladrière has pointed out, denote the precariousness of the life of ascetics. On the other hand, the anthology of al-Bayhaḳī (d. 458/1065 [*q.v.*]) throws light on the various nuances attributed to *zuhd* in the 4th-5th/9th-10th centuries: contentment with little (*ḳanāʿa*); isolation (*ʿuzla*); the effacement of self (*khumūl*); opposition to the lower soul and to passion (*mukhālafat al-nafs wa 'l-hawā'*); the limitation of hopes (*ḳaṣr al-amal*); the pressure to finish works before the end of life (*al-mubādara li 'l-ʿamal ḳabla bulūgh al-adjal*); zeal in obedience (*al-idjtihād fi 'l-ṭāʿa*); safeguarding the status of a servant (*mulāzamat al-ʿubūdiyya*); scrupulous piety (*waraʿ*); and vigilant piety (*taḳwā*). Some added poverty (*faḳr*), which denotes external deprivation as much as the absence of desire for riches; the latter includes, in a spiritual sense, the absence of desire for the blessings of the other world. On the other hand, Sahl al-Tustarī (d. 283/896 [*q.v.*]) draws a clear distinction, on the basis of a prophetic tradition, between *zuhd* and *taḳashshuf* (mortification of the flesh).

Expressing an opinion on the subject of renunciation has never been the exclusive preserve of the Ṣūfīs. Declaring that in the *Kitāb al-Zuhd al-kabīr* of al-Bayhaḳī, it is a traditionist, Abū ʿAbd Allāh al-Ḥāfiẓ (d. 412/1021), and not a Ṣūfī who supplies most information concerning the renunciation of ascetics, mystics and gnostics, Deladrière has thrown light upon the essential role of the *ḥuffāẓ* in the elaboration of this literature. This affinity is confirmed by the fact that, in Twelver Shīʿī circles, *zuhd* was reckoned among the qualities required for the transmitter (*rāwī*) of Imāmī traditions.

The earliest works, such as those of Ibn al-Mubārak (d. 181/797 [*q.v.*]), are primarily concerned with the actions and gestures of the Prophet Muḥammad—who appears to an increasing extent, in the course of the development of mystical literature, to be the most consummate model of the "renouncer"—and of his Companions, as well as certain epigoni, the one most often cited being al-Ḥasan al-Baṣrī (d. 110/728 [*q.v.*]). The work of Ibn Ḥanbal (d. 241/855 [*q.v.*]) adds to this the renunciation practised by eleven sanctified individuals, from Adam to Jesus, and by the Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz. It is principally from the 4th/10th century onward that the leading protagonists of this literature become the mystics of the two preceding centuries: Dhu 'l-Nūn al-Miṣrī, Ibn Adham, Fuḍayl b. ʿIyāḍ, Bishr al-Ḥāfī, Sarī al-Saḳaṭī, Yaḥyā b. Muʿādh, Sahl al-Tustarī, al-Djunayd and al-Shiblī.

Goldziher advanced the hypothesis according to which the earliest prophetic traditions, those possessing the strongest guarantee of authenticity, tended towards a rejection of *zuhd*, whereas only late forgeries endorsed or extolled it. It is in any event certain that a large number of *ḥadīth*, corroborated by Ḳur'ān, XXV, 67, stressed the necessity of limiting the practice of asceticism and of observing a high degree of moderation.

In regard to the first four centuries of the Hidjra, it is difficult to establish a decisive distinction between the corpus of work emanating from the Ḥanbalīs or other traditionists and that of the mystics proper. The distinction was accentuated during the Mamlūk period, at which time the Ṣūfī or the *walī* only received the epithet of *zāhid* when he had distinguished himself through extreme corporeal asceticism. E. Geoffroy has declared that at the end of this period, Ḥanbalī authors, making abundant use of the terms *zāhid* and *ʿābid*, effected a very fine demarcation between adherence to Ḥanbalism and attribution of the term Ṣūfī, especially in Syria, while in the Ottoman period there was a general rapprochement between Ḥanbalism and Ṣūfism. In practice, being an ascetic has never implied adherence to Ṣūfism, although the consensus among mystics has always stressed the importance of this quality.

For the Persian Djāmī (d. 898/1492 [*q.v.*]), who clearly differentiates *zuhd* from true Ṣūfism, "ascetics consider the beauty of the other life in the light of faith and of certitude and do not despise this inferior world, but they are still veiled by the pleasure that is afforded them by the contemplation of Paradise; on the other hand, the true Ṣūfī is separated as by a veil from these two worlds, by the vision of primordial Beauty and of eternal love" (*Nafaḥāt al-uns*, ed. Tawḥīdpūr, Tehran 1957, i, 10).

It is especially in the determination of the sphere of application of *zuhd* that the greatest differences arise. In the 2nd/8th and 3rd/9th centuries, two interpretations of the term were established: for some, it meant above all renunciation, not only of agreeable clothes, accommodation and foodstuffs, but also of comfort, sleep and all human relationships, sometimes including marriage; for others, it was a more internal and subjective asceticism, the renunciation of intentions and desires, which led to the concept of *tawakkul* [*q.v.*]. However, for many mystics, the two aspects were seen as going hand-in-hand.

Ibrāhīm b. Adham (d. 165/782 [*q.v.*]) is generally credited with a sub-division of *zuhd* into three stages, which is also found in the works of al-Sarrādj and could emanate from a later source: (1) renunciation of the world; (2) renunciation of the joy of having

devoted oneself to renunciation; and (3) the stage at which the world becomes so insignificant in the eyes of the ascetic that he is no longer interested in it. His disciple, Shaḳīḳ al-Balkhī, reckoned to be the first to have spoken of mystical states (*ʿulūm al-aḥwāl*), declares that *zuhd* constitutes the most elementary stage of those who practise sincerity (*ahl al-ṣidḳ*). It is followed by the stages of fear, of desire for Paradise, and of love of God. The beginning of *zuhd* consists in the training of the body to experience the hunger which will give release from the other preoccupations of this inferior world.

The Malāmatiyya [*q.v.*], just like the Khurāsānī spiritual leader al-Tirmidhī (d. 318/930) proposed a conception of *zuhd* which was to serve as a model for numerous mystical systems from the 3rd/9th century onward: genuine *zuhd*, that of the Prophet and of his Companions, is presented as a particular type of renunciation, which does not imply in any way a visible and material practice of asceticism, but a profound detachment, an attitude of the heart; ascetic practices may be admitted, if considered necessary, as a preparatory stage, as is affirmed, in a different context, by al-Djunayd. Such a form of renunciation presents an aspect that is entirely spontaneous, linked to a divine grace.

Abū Saʿīd al-Kharrāz (d. 286/899 [*q.v.*]) adopted the same classification as did al-Balkhī: renunciation is followed by fear, and it consists in "the progressive detachment of the heart from every desire concerning this inferior world". The "renouncers" are subdivided according to three categories: "Some act thus in order to liberate their heart from all preoccupation other than obedience to God, the mention of His name and His service; others desire, through this influence, to become light and to pass quickly over the bridge which traverses Hell, knowing that those who are weighed down will be delayed and subjected to interrogation. Finally, others act thus through the desire for Paradise. They deprive themselves of the life of this inferior world and dedicate themselves to awaiting the reward of God. But the most elevated degree of renunciation consists in consenting totally to the love of God and accepting without reserve the state of servitude by the understanding of His will" (*K. al-Ṣidḳ*, ed. ʿAbd al-Ḥalīm Maḥmūd, Cairo, 43).

For Ibn ʿAṭāʾ Allāh al-Iskandarī (d. 709/1309 [*q.v.*]), renunciation consists in liberating the heart from the love of this inferior world and from the jealousy it may feel in regard to other people and the benefits they enjoy: "O ignorant one, cease to envy the creatures of this inferior world for what they have received. Your heart is preoccupied with what they possess and you become even more ignorant than they. In fact, they are preoccupied with what they have received and you, you are preoccupied with what you have not received" (*Tādj al-ʿarūs, ʿalā hāmish al-Tanwīr*, 11).

Zuhd has gradually acquired a place in the succession of mystical stations, but differences exist between one thinker and another, although all consider it as associated with the beginning of the way.

In Twelver Shīʿī traditions, it appears to be the least of the virtues of the believer, its highest level corresponding to the lowest level of "contentment with little" (*ḳanāʿa*), while Dhu ʾl-Nūn al-Miṣrī (d. 245/859 [*q.v.*]) states that the "ladder of *waraʿ* gives access to *zuhd*". For al-Dārānī (d. 205/820), spiritual heir of al-Ḥasan al-Baṣrī, the pinnacle of *zuhd* is abandonment to trust in God (*tawakkul*); it would be the same for al-Ghazālī (d. 505/1111), giving it precedence over *faḳr*. Al-Ḥakīm al-Tirmidhī considers *zuhd* as the outcome of repentance (*tawba*) and the stage preceding combat against the carnal soul (*ʿadāwat al-nafs*). We have here a stage of the heart. "The world appears worthless in the eyes of renouncers, since an invisible part has been revealed to them. They therefore do not concern themselves in the least with the subsistence that could fall to their lot, and on this matter they trust in their Lord with an utterly tranquil heart. He who does not direct his regard towards the other life and magnifies in his own eyes the life of this world, even if he is completely withdrawn from the life of here below, wears nothing but rags and eats only grass, is not a true renouncer but only a man who compels himself to renounce" (*Nawādir al-uṣūl, aṣl* 106, *fī ḥaḳīkat al-zuhd*, Beirut, 144).

Ibn al-ʿArabī (d. 638/1240 [*q.v.*]) likewise envisages *zuhd* as one of the first stages of the way. It is situated in the wake of isolation (*ʿuzla*), of retreat (*khalwa*) and the practice of scruple (*waraʿ*). According to him, it also precedes *tawakkul*.

Thus for Muslim as well as for Christian spiritual seekers (desert anchorites and mystics), interior renunciation is held to be much more important than spectacular practices of asceticism. The latter have, however, persisted into the present day in response to precise functions, for the ascetic himself as for his entourage.

Examples of extreme mortification are not lacking among the accounts of the lives of the early Ṣūfīs; it used to be said, for example, that Shāh al-Kirmānī (d. between 270/883 and 300/912) spent forty years without sleeping; Rūzbihān Baḳlī (d. 606/1209 [*q.v.*]), told the story of a saint who had fasted totally for seventy days; Abū Saʿīd b. Abi ʾl-Khayr (d. 441/1049 [*q.v.*]), a Khurāsānī Ṣūfī and disciple of al-Sulamī, practised ascetic exercises over a period of seven years, in particular the *ṣalāt maḳlūba* which consists of reciting the Ḳurʾān and praying while suspended by the feet in a dark place.

Numerous Egyptians mystics, among others, are renowned for their impressive feats of asceticism. Shaykh Murshid declared to al-Shaʿrānī that he had not eaten more than one raisin per day over a period of forty years, to the point where the skin of his stomach adhered to that of his back. Al-Sayyid al-Badawī (d. 675/1276), the famous saint of Ṭanṭā who had adopted voluntary celibacy, possessed nothing of his own and burned out his eyes by staring at the sun from his terrace, spent forty days without drinking, eating or sleeping. He never took off his clothes or his turban, waiting for them to fall to pieces by themselves. His disciples, including Abū Ṭarṭūr, were renowned for their asceticism. In this context, some mystics took it as a point of honour to surpass Jesus, regarded by the majority of Ṣūfīs as a model of poverty, of mortification and of detachment from the concerns of this world. These manifestations of the Badawiyya, as those of numerous other mystical orders, have been subjected at all times to the censure of the *ʿulamāʾ*, whose efforts have been pursued, to little effect, into the present day.

(Geneviève Gobillot)

ZUHDIYYA (a., pl. *zuhdiyyāt*), a pious, homiletic or ascetic poem, of the kind that flowered as a genre of Arabic poetry in the 2nd-3rd/8th-9th centuries. The noun *zuhd* [*q.v.*] denotes principally "asceticism", "renunciation (of the material world)", but the themes of the *zuhdiyya* are broader than this allows one to understand; collectively, the *zuhdiyyāt* articulate a general, God-fearing Islamic piety, exhorting mankind to be mindful of mortality and to a comportment of utter sobriety.

Though the *zuhdiyya* emerged as a distinctive genre in the early ʿAbbāsid period with the poetry of Abu 'l-ʿAtāhiya (d. 211/826 [*q.v.*]), it had its roots in an important register of pre-Islamic verse, and then, more particularly, in the pious/didactic poetry of two relatively minor Islamic poets, Sābiḳ al-Barbarī (d. 110/728) and Ṣāliḥ b. ʿAbd al-Ḳuddūs (d. 167/783-4 [*q.v.*]).

That the *zuhdiyya* was recognised in the mediaeval period as a genre in its own right can be gleaned from the divisions of poetry in *dīwāns* of individual poets (cf. Schoeler, *Einteilung*, 34 ff.). The first *dīwān* to be arranged according to theme/genre is al-Ṣūlī's (d. 335/946) recension of the *dīwān* of Abū Nuwās (d. *ca.* 198/813) which lists *zuhd* as the tenth (and final) category of poems. Ḥamza al-Iṣfahānī (d. after 350/961), for the same poet, places the *zuhdiyyāt* as the sixth of eleven categories. Subsequent *dīwāns* containing ascetic poetry are: ʿAlī b. Ḥamza al-Iṣfahānī's *dīwān* of Abū Tammām (d. *ca.* 232/845), where *zuhd* is one of eight themes; Ibn al-Muʿtazz (d. 296/908), whose *dīwān*, also arranged by al-Ṣūlī, contains a short, 10th, section on *zuhd wa-ādāb wa-shayb wa-ḥikma*; and Ṣafī al-Dīn al-Ḥillī (d. 750/1349) containing a final, 12th, section labelled *fi 'l-ādāb wa 'l-zuhdiyyāt wa-nawādir mukhtalifa* (a collection which contains few truly ascetic fragments.)

(a) *Antecedents*. The dominant thematic strain of the *zuhdiyya* is rooted in pre-Islamic poetry, particularly the elegiac tendency of much of the early corpus: the evocations of Man's mortality in a finite existence and of the despoiling effect of Time/Fate (*al-zamān/al-dahr*). In *Djāhilī* poetry, where such contemplation crystallises in aphorism, it is generally labeled *ḥikma* (lit. "wisdom") in later anthologies and manuals of poetry. *Ḥikma* penetrates and overlaps with the thematic and homiletic register of the *zuhdiyya*, which is a wisdom literature of sorts, drawing also on the *naṣāʾiḥ* of earlier poetry (cf. Muḥammad ʿAwīs, *al-Ḥikma fi 'l-shiʿr al-ʿarabī*, which symptomatically contains a section on the *zuhdiyya*).

However, pre-Islamic poetry's elegiac strain is distinct from the pessimism of *zuhd* in two fundamental respects. For it either suffuses elegies (*marāthī*), whose mood is pessimistic but whose function is nevertheless distinct from *zuhd*, or, in the poetry of *fakhr*, pessimism is transcended by the poet's enunciation of his own worth within the ethical and moral panoply of *muruwwa* (cf. Sperl, *Mannerism*, 71 ff.). Seldom, if at all, does pre-Islamic poetry give expression to the morose quietism of *zuhd*.

Insofar as his poetry contains an admixture of elegiac and religious themes, acknowledging life after death and buttressing didacticism with frequent references to the biblical prophets, the Christian poet of al-Ḥīra, ʿAdī b. Zayd (d. *ca.* 600), is viewed as the father of this genre. (Ironically, he is also described as the father of the *khamriyya* [*q.v.*] or wine poem in the genealogical histories of Arabic genres.) It is in this poet that we find the earliest significant treatment of the *ubi sunt* topos, which may have been inherited from the muse of earlier Christians of the region, but which was later Islamised in the *zuhdiyya* as a standard rhetorical feature, often stressed by passages of anaphora (the question *ayna* "where is . . .?" beginning a whole series of lines).

In early Islamic times, *zuhd* is understood to have been influenced largely by the ascetic teachings of al-Ḥasan of Baṣra, for whom the Prophet Muḥammad was a paragon of ascetic virtue (Hamori, 267). As an Islamic genre, the texture of the *zuhdiyya* is one rich in Ḳurʾānic allusion and quotation (*iḳtibās*); it also contains many elements of *ḥadīth*. But does Scripture support its ascetic tenor? To some extent this is certainly the case, and much can be made of verses in the Ḳurʾān which rail against human material greed (cf. e.g. XX, 131). This must be balanced, however, by an understanding of the Ḳurʾān's concomitant view of the fruits and blessing of the Earth (cf. e.g. XXXVI, 34-6). The *zuhdiyya* is an unstintingly lugubrious literature of admonishment that tends to ignore the spirit of such Ḳurʾānic verses.

(b) *Early development*. Much insight into the genre's development can be gleaned from the surviving poetry of Sābiḳ al-Barbarī (who was *imām* and *ḳāḍī* under the caliph ʿUmar II in the Syrian town of al-Raḳḳa). In his *Bayān*, al-Djāḥiẓ described (and decried) his poetry as *kulluhu amthāl*—a string of pious maxims. This is not entirely fair; indeed, some of his lengthier pieces are patterned in a way that may have influenced his successors. There is an emerging structure

in his work, and some of his poetry needs to be carefully examined in the light of a variety of retrospective allusions to it in the *dīwān* of Abu 'l-ʿAtāhiya. There is a thematic consistency in his verse: addiction to this world is chided, remembrance of God is urged. A counseling temperament lends weight to such material, particularly in a poem addressed to ʿUmar b. ʿAbd al-ʿAzīz.

Whilst striking parallels between Sābiḳ and ʿAdī b. Zayd exist, Sābiḳ himself foreshadows traits of Abu 'l-ʿAtāhiya in being inventive with old motifs and transforming the semantics of the traditional lexicon of poetry. For example, *dār*, lit. "abode" (in ancient poetry, typically, the "abode of the beloved"), is made to refer to "this mortal world", and *araḳ* "insomnia", is caused not by the pains of love but by existential angst.

Abu 'l-ʿAtāhiya's *zuhdiyya* rhyming in *lām* and beginning *li-man ṭalal*[un] *usāʾiluhu* (cf. Sperl's analysis, *Mannerism*, 82-96) bears comparison with Sābiḳ's identically rhymed *taʾawwabanī hamm*[un] *kathīr*[un] *balābiluhu* (Kannūn, 20-2). Even more yielding is a comparison of Abu 'l-ʿAtāhiya's *lā yaʾmanu 'l-dahra illā 'l-khāʾinu 'l-baṭiru* (*Diwan*, 153-4) with Sabiḳ's *bi-smi 'lladhī unzilat min ʿindihi 'l-suwaru* (Kannūn, 6-9). The metre of the two poems is identical and they clearly display an affinity with each other that is more than simply due to generic features. The first and last lines of Abu 'l-ʿAtāhiya's poem are virtual citations from Sābiḳ's, and seem to highlight the literary evocation of the earlier piece. Abu 'l-ʿAtāhiya's poem is shorter; it is also stylistically tighter, more economically structured, and more thematically homogeneous. The full literary implications of such observations require further study. The very least we can say with confidence is that Sābiḳ's poetry was in circulation during Abu 'l-ʿAtāhiya's day.

Ṣāliḥ b. ʿAbd al-Ḳuddūs was a preacher in Baṣra who edified the crowd with gnomic verse, sermons and *ḥadīths*. His poetry of *sententiae*, proverbs and *naṣīḥa* (advice) enjoyed some success, judging from the diffuse spread of his poetry in the various sources—al-Buḥturī quotes 75 verses from 35 poems (i.e. in fragmentary form in his *Ḥamāsa*). Three of his poems in particular were celebrated, his *sīniyya*, his *kāfiyya*, and also a *zaynabiyya*, which has also been attributed to ʿAlī. He counsels sobriety, self-control, and ascetic virtue as a guarantee for peace of mind in this world and salvation in the next. Among the qualities he extols are: faithfulness to friends, holding one's tongue, reflection before speech, avoidance of unnecessary mirth, and awareness of the fact that, even when alone, one is observed by God. One's conduct should be an exteriorisation of inner virtue. Wealth is denigrated; were it to be distributed according to intelligence, most people would be beggars. One should trust unstintingly in God (cf. Chokr, 222-4).

There is little theology in these, or in any, *zuhdiyyāt*. However, there are some attitudes that are redolent of al-Ḥasan al-Baṣrī, e.g. that of fatalistic resignation to the will of God, whilst espousing Ḳadarī views in assigning responsibility for sin (cf. Wagner, 123).

The close thematic and functional links between the *zuhdiyya* and sermon material (*waʿẓ/mawāʿiẓ*) emerge from a *ḳiṣṣat ʿAbd al-Ḳuddūs maʿa rāhib al-Ṣīn* attributed to him (Khaṭīb, 93-104): it treats of the futility of existence and chides the *abnāʾ al-dunyā* for trusting too much in their lot; there are elements here of *dhamm al-zamān* or complaints about the corruption of the age. And finally, we find a call to repent (*tawba*). Though accused of *zandaḳa*, and eventually executed on this charge in the reign of al-Mahdī, there is no evidence of heterodoxy in his verse. The polemical/Muʿtazilī view that he was a *dahrī* dualist ignores totally his genuinely homiletic poetry which appears to be authentic (Chokr, 226-31).

(c) *Abu 'l-ʿAtāhiya.* The audience of this poet, once he came to write *zuhdiyyāt* to the exclusion of other poetry in the reign of Hārūn al-Rashīd, was probably in part similar to that of Ṣāliḥ. His own views are recorded in the *Aghānī*: "[*Zuhd*] does not appeal to kings, nor to transmitters of poetry, nor to students of lexical rarities; the people who really delight in it are ascetics, students of *ḥadīth*, scholars of religious law, people who make a show of piety, and the common people, who most admire what they can understand" (Schoeler, *ʿAbbāsid belles-lettres*, 287-8). But if this reduces the status of his poetry on a purely linguistic level, we should be reminded of the complex literary relationships of his verse. He was a professional poet who gave himself exclusively to the *zuhdiyya* only after a conversion; in his early career he had composed in the other major genres, and he was certainly aware of the evolution of the poetic canon among his contemporaries. And it is said that he came to guard his genre jealously, warning fellow-poets from trespassing on his literary terrain (Abū Nuwās composed relatively few *zuhdiyyāt*: only 24 in the recension of al-Ṣūlī). Awareness of others—as a literary/poetic posture—is detectable in the details of his verse and in the way he constructed some of his more felicitous poems.

(d) *Structure.* Sperl has shown convincingly how individual *zuhdiyyāt* can be made up of carefully arranged and contrastive semantic, morphological and syntactical patterns. The apparent cohesion of themes in the *zuhdiyya* is achieved by more than the simple use of *anaphora* (and other types of repetition, themselves redolent of sermon material). The most visible technique is the occasional adaptation (or evocation) of the *ḳaṣīda* model.

In general, we should stress the following relatively enhanced qualities of his verse: the sometimes sustained semantic and metaphorical transformation of traditional imagery within single compositions; the tension that is sometimes felt between a purely ascetic tendency and the influence of dalliance (in its poetic manifestations)—this is more to do with (lapses of) temperament than structure; and the *zuhdiyya*'s existence virtually contiguous with the more secular, and even reprobate, genres of the Baghdād circle of poets in the early ʿAbbāsid period. S.M. Stern expressed a facet of this cogently: "The worldly and other-worldly sentiments were not felt as being mutually exclusive, but as two aspects of the same conception of the world, opposing, yet at the same time counterbalancing and complementing each other. The same poet could at the same time contemplate and express both facets of his experience with equanimity. His primary and most frequently expressed attitude will be that of the enjoyment of the world; to this subject he will devote the overwhelming majority of his poetical productions. The contrary tendency will be satisfied with an occasional *zuhdiyya*, which will ultimately be inserted in his *dīwān* among other verses" (*Hispano-Arabic strophic poetry*, 81). This astute psychological evaluation further asserts the relatively subordinate status of the homiletic genre.

(e) *Later developments.* After Abu 'l-ʿAtāhiya, the *zuhdiyya* was never again so closely associated with an individual author (though mention must be made of Maḥmūd al-Warrāḳ, d. *ca.* 230/845). Yet ascetic poetry remained popular and found its way into many

subsequent anthologies; fragments of ascetic poetry are quoted in Ibn Ḳutayba (d. 276/889), Ibn ʿAbd Rabbihi (d. 328/940) and al-Ibs̲h̲īhī (d. *ca.* 850/1446), to name but a few authors. In these collections, it is the affinity of this poetry with sermon material that emerges most noticeably; the literary quality of poems as a whole is almost totally ignored, and any sense of structural artifice is destroyed by their fragmentary arrangement (cf. esp. al-Buḥturī, who breaks poems down into *maʿānī*, e.g. *fī-mā ḳīla fī tawakkuʿ al-mawt wa 'l-ḥid̲h̲r minhu wa 'l-iʿdād li 'l-maʿād*, and *fī-mā ḳīla fī 'l-tuḳā wa 'l-birr*).

The survival—and certain developments—of the genre in later times are conveniently attested by Ibn Sanāʾ al-Mulk (d. 608/1211): "The *muwas̲h̲s̲h̲aḥ* treats of the same subject as the various kinds of *s̲h̲iʿr*, i.e. love, praise, mourning (*mart̲h̲iya*), invective (*hid̲j̲āʾ*) frivolity (*mud̲j̲ūn*), and asceticism (*zuhd*)" (Stern, 42). None of these ascetic *muwas̲h̲s̲h̲aḥāt* appear to survive—another marker of their minor status. However, there is some interesting evidence of the relationship between this ascetic mode and the dominant secular strain: "The special feature in these lost 'ascetic' *muwas̲h̲s̲h̲aḥs* is that according to Ibn Sanāʾ al-Mulk they used to correspond to a given secular *muwas̲h̲s̲h̲aḥ*, i.e. that *muʿāraḍa* used to be a rule in them, applied to a special purpose; the 'ascetic' *muwas̲h̲s̲h̲aḥ* was considered as 'expiating' the sin committed through the poem which served as model" (*ibid.*, 82). This is reminiscent of the relationship one has detected between Abu 'l-ʿAtāhiya and the poetry of his libertine contemporaries (though it is not quite the same as the scorn which could be directed against the *zuhdiyya* in the form of literary lampoon: Salm al-K̲h̲āsir (d. 186/802) mocked Abu 'l-ʿAtāhiya for hypocrisy: *mā aḳbaḥa 'l-tazhīda min wāʿiẓ^in^/yuzahhidu 'l-nāsa wa-lā yazhadu*).

Some remarks should address the survival of *zuhdiyya* once it was eclipsed by Ṣūfī poetry from the 6th/12th century onwards (a subject on which there appears to be no sustained study). The final chapter of Ibn Ḥazm's (d. 456/1054) *Ṭawḳ al-ḥamāma* contains two long poems on "the virtues of continence" (*faḍl al-taʿaffuf*). The second poem is a virtual manifesto of the *zuhdiyya* in the period of its decline, apostrophising the soul to live in *ḳunūʿ* and *tawakkul*, themes which by this time are associated more with the mystical register. In a central passage, some of the principal images of *Sūrat al-takwīr* and other sūras are woven into the text in a sustained and particularly felicitous way. We are reminded that, after Abu 'l-ʿAtāhiya, mastery of the register did not die, though no-one was ever again as prodigious, fluent and varied as he.

Finally, a fascinating permutation of the *zuhdiyya* in Arabic literary history is its role in the tale of the City of Brass in the *Arabian Nights*. This tale illustrates the survival intact of the poetry of *zuhd* right up to the pre-modern period, and evinces how Ḳurʾānic themes common to the classic *zuhdiyya* could be woven meaningfully into a narrative, delivering a richly textured message against the spiritual void of material wealth: *tazawwadū fa-inna k̲h̲ayra 'l-zādi 'l-taḳwā* (II, 197). In this story, ascetic poetry dovetails strikingly with a mystical undercurrent of the kind that had essentially displaced the *zuhdiyya* in the sphere of popular religious poetry (cf. Pinault).

With the City of Brass in mind, Allen has suggested intriguingly how this register survives in the modern period, lending a profound resonance to Ṣalāḥ ʿAbd al-Ṣabūr's celebrated poem, *al-Nās fī bilādī*.

ZUHRA, a clan of Ḳuray s̲h̲ [*q.v.*] in Mecca, with the genealogy Zuhra b. Kilāb b. Murra b. Kaʿb b. Luʾayy b. G̲h̲ālib b. Fihr.

In pre-Islamic Mecca, the clan seems to have been prosperous, and members of it had trading connections with ʿAbd S̲h̲ams. In the factional disputes within Mecca, Zuhra were in the group led by ʿAbd Manāf, the *Muṭayyabūn* or "Perfumed Ones" [see LAʿAḲAT AL-DAM] and then in the *Ḥilf al-Fuḍūl* [*q.v.*] along with Hās̲h̲im and al-Muṭṭalib. The clan acquired Islamic kudos from the fact that the Prophet's mother Āmina bt. Wahb [*q.v.*] was from Zuhra. Early converts from the clan included ʿAbd al-Raḥmān b. ʿAwf and Saʿd b. Abī Waḳḳāṣ [*q.vv.*], but there were also opponents of Muḥammad within Zuhra (including the grandfather of the famous traditionist of Umayyad times, Ibn S̲h̲ihāb al-Zuhrī [*q.v.*], who fought on the side of Ḳuray s̲h̲ against the Muslims at Badr and Uḥud), and in 8/630, after the battle of Ḥunayn, Muḥammad judged it politic to conciliate three of the leaders

of Zuhra with presents of captured camels [see AL-MU'ALLAFA ḲULŪBUHUM].

AL-**ZUHRĪ**, HĀRŪN B. 'ABD ALLĀH, judge in Egypt, considered the greatest Mālikī scholar there, d. 232/846.

A native of Mecca, he came to Bag̲h̲dād, but nothing is known of his activities there until al-Ma'mūn nominated him *ḳāḍī* of Egypt on 14 Ramaḍān 217/13 October 832 (al-Kindī) or a few days later (Ibn 'Abd al-Ḥakam), where he remained in post till 13 Ṣafar 226/12 December 840. As a judge, his career was marked by innovations. He moved his seat as judge, and sat in front of the mosque in winter and in the middle of it in summer, whilst keeping a distance between himself and the faithful at prayer, as also from his own scribes and his enemies. Regarding the judicial system, on his arrival in Egypt he took personal charge of all contentious cases, visiting the scenes in question with the parties involved, e.g. in the case of *ḥubus* or pious endowments, keeping track of the income from them, and paid close attention to other things, such as the financial situation and care of orphans, etc.

Al-Zuhrī, with his strong personality, seems to have enjoyed the favour and confidence of the caliph; he would allow no-one to sit next to him, but left a place there for the caliph only. His relations with al-Ma'mūn are documented concerning the episode of the *miḥna* [*q.v.*], in 218/833, the instructions regarding which were brought by Abū Isḥāḳ b. Hārūn to the governor of Egypt at the time, Kaydur Naṣr b. 'Abd Allāh. The latter summoned al-Zuhrī, who bowed to the caliph's orders, apparently without hesitation, followed by the majority of the *fuḳahā'*. From that time onwards, al-Zuhrī would accept attestations by witnesses only if they recognised the createdness of the Ḳur'ān, and this remained the practice in Egypt until al-Mutawakkil's accession in 232/847. He does not seem to have been ferocious against non-compliant *fuḳahā'*, since al-Mu'taṣim is said to have sent him a letter demanding that he act more rigorously, and when he refused to act thus, the Chief Judge Aḥmad b. Abī Duwād [*q.v.*] had the caliph remove him from office in 226/840.

Al-Zuhrī left behind in Egypt an impression of honesty, acquiring only a house for himself which he sold at the end of his period of office. Al-Marzubānī attributes some poetry to him.

AL-**ZUHRĪ**, IBN S̲H̲IHĀB, i.e. Abū Bakr Muḥammad b. Muslim b. 'Ubayd Allāh b. 'Abd Allāh b. S̲h̲ihāb, d. 124/742, one of the founders of Islamic tradition in the widest sense of the word. The source material about him includes both biographical data and instructive anecdotes; the latter reflect both admiration for his achievement and criticism of his links with the Umayyads and of some laxity on his part regarding the transmission of *ḥadīt̲h̲*.

Al-Zuhrī's first tutor (*mu'addib*) was probably the *mawlā* [*q.v.*] Ṣāliḥ b. Kaysān al-Madanī. From 'Abd Allāh b. T̲h̲a'laba b. Ṣu'ayr al-'Ud̲h̲rī [see 'UD̲H̲RA] (d. 87/706 or 89/708) al-Zuhrī learned the genealogy of his own clan, the Banū Zuhra. But when al-Zuhrī wanted to study *fiḳh* [*q.v.*], 'Abd Allāh had to refer him to Sa'īd b. al-Musayyab. Later, al-Zuhrī was a student of 'Urwa b. al-Zubayr and many others. A contemporary of his remarked that the assertive young al-Zuhrī did not outstrip his peers in knowledge; but at an assembly he would step forward from among them and present his questions, while they were held back by their youth.

Al-Zuhrī boasted of his excellent memory, but he doubtless kept records of the *ḥadīt̲h̲*s transmitted to him. His colleague, Abu 'l-Zinād, a *mawlā* of the Umayyads and their official, reported that al-Zuhrī used to carry with him writing tablets and written pieces of skins (*al-alwāḥ wa 'l-ṣuḥuf*). "We used to mock him," Abu 'l-Zinād added, as if regretting the fact that he himself had not followed the same practice. This colleague was believed to have said: "We used to write down only legal matters (*al-ḥalāl wa 'l-ḥarām*), while Ibn S̲h̲ihāb wrote down everything he heard." Al-Zuhrī is supposed to have widened the concept of *sunna* common to his time. One colleague of his reported that, in their quest for *sunan*, both he and al-Zuhrī recorded everything traced back to the Prophet. But al-Zuhrī went on to write down *ḥadīt̲h̲* transmitted on the authority of the Prophet's Companions, while his colleague argued that such *ḥadīt̲h̲* did not form *sunna*. "He succeeded," the colleague concluded, "and I failed." According to al-Zuhrī, the caliph 'Umar II ordered him, among others, to collect the *sunan*, which were later written down in booklets [see DAFTAR] sent each to another province.

For several decades, from the days of 'Abd al-Malik b. Marwān [*q.v.*] to those of His̲h̲ām, al-Zuhrī maintained a close relationship with the ruling house. He officiated at different periods as *ḳāḍī*, tax collector and *s̲h̲urṭa* [*q.v.*] chief. Al-D̲h̲ahabī [*q.v.*] reported that al-Zuhrī had the rank of *amīr*; elsewhere al-D̲h̲ahabī said that "he had many dependants and servants, was a man of eminence, was dressed in the outfit of the *adjnād* and enjoyed high rank in the state of the Banū Umayya."

Encouraged by the ruling family, al-Zuhrī started "*ḥadīt̲h̲* dictation sessions" attended by state officials. According to his own apologetic statement, he gave in to pressure from the rulers and immediately decided to hold similar sessions for scholars not affiliated with the state apparatus. One of the stimuli for the recording of *ḥadīt̲h̲* is supposed to have been anti-Umayyad propaganda. Al-Zuhrī reportedly complained about 'Irāḳī tampering with his *ḥadīt̲h̲*: "We issue the *ḥadīt̲h̲* [short as] a span and it returns (i.e. from 'Irāḳ) [long as] a cubit." Al-Zuhrī is also believed to have said, "Had it not been for *ḥadīt̲h̲*s which we do not know pouring upon us from the East (*al-mas̲h̲riḳ*), I would not have written down, nor allowed the writing, of one single *ḥadīt̲h̲*."

The dictation sessions were attended, among others, by S̲h̲u'ayb b. Dīnār or b. Abī Ḥamza al-Ḥimṣī (d. 162/778-9), a *mawlā* of the Umayyads and a scribe of His̲h̲ām [*q.v.*] who was in charge of the caliph's *nafaḳāt* [cf. DĪWĀN, at Vol. II, 323b-324a]; no wonder

that Shuʿayb's "books" were said to resemble the records of the state register (*tushbihu kutuba 'l-dīwān*). Shuʿayb reportedly held about 1,700 of al-Zuhrī's *ḥadīth*s, and the figure gives one an idea of the amount of material processed in al-Zuhrī's sessions over the years.

In addition to *ḥadīth* and *fiḳh*, al-Zuhrī was also well versed in other fields of knowledge. An admiring student said about him that when he talked about eschatology (*fi 'l-targhīb* "arousing desire for Paradise"), he gave one the impression that he was only proficient in this topic, but the same happened when he talked about the prophets and the "People of the Book", or the Ḳur'ān and the *sunna*, or the Bedouin and their genealogies.

(M. LECKER)

AL-ZUHRĪ, MUḤAMMAD B. ABĪ BAKR (thus according to Ḥusayn Mu'nis; according to the author of *al-Ḥulal al-mawshiyya*, Abū ʿAbd Allāh Muḥammad b. Yaḥyā), the author of a geographical work, the *K. al-Djughrāfiya*.

This work has in the past been used by scholars who, knowing nothing about the author, have called him the "Anonymous of Almería". Al-Zuhrī appears in no biographical work, but the few personal details that can be gleaned from his book show him to have been an Andalusī of the 6th/12th century, a contemporary of al-Idrīsī, alive in 545/1150-1 and very knowledgeable about al-Andalus. His work is known under several other titles, including *K. al-Ṣafwa*, *K. al-Ṣafra* and also *K. al-Sufra*, this last seeming most appropriate ("Book of food for the traveller"). It has been edited by M. Hadj-Sadok in *BEO*, xxi (1968), 1-346, as *Kitāb al-Djaʿrāfiyya. Mappemonde du calife al-Ma'mūn reproduite par Fazārī (III^e/IX^e s.), rééditée et commentée par Zuhrī (VI^e/XII^e s.)*; Hadj-Sadok used numerous mss., which have important divergences, and other copies exist, including six in Rabat libraries. The book thus seems to have enjoyed a wide diffusion, leading Mu'nis to view it as a popular guide for merchants and travellers, put together by someone without wide culture and in a fairly relaxed style. Al-Zuhrī used the word *djughrāfiya* in the sense of *mappa mundi*, and the extant text is merely the commentary on maps ignored by the copyists at the expense of the anecdotal and miraculous element [see ʿADJĀ'IB]. The *K. al-Djughrāfiya* was used by several Arabic authors; thus the anonymous *al-Ḥulal al-mawshiyya* cites a passage on the Almoravids absent from the edited text.

(HALIMA FERHAT)

ZÜHRĪ AḤMED EFENDI [see NEWROKOP].

ẒUHŪRĪ TURSHĪZĪ, Nūr al-Dīn Muḥammad, Persian poet, d. 1025/1616. He was born *ca.* 944/1537 and raised in Khurāsān; although most sources identify his birthplace as a village in the district of Turshīz [*q.v.*], the poet himself states that he was born in Ḳā'in. He began his career in Yazd at the court of Ghiyāth al-Dīn Mīr-i Mīrān, where he was acquainted with the poet Waḥshī [*q.v.*]. After spending several years in Shīrāz, he migrated to India in 988/1580. Settling in the Deccan, he entered the service of the Niẓām Shāhīs [*q.v.*] in Aḥmadnagar. After a brief period in the retinue of Mīrzā ʿAbd al-Raḥīm Khān-i Khānān [*q.v.*], Ẓuhūrī moved to Bidjapur *ca.* 1004/1596. He lived in this city until his death, working under the patronage of the ʿĀdil Shāh [*q.v.*] Ibrāhīm II and his minister Shāh Nawāz Khān. Ẓuhūrī was in contact with many of the major poets of the period, including Naẓīrī and Fayḍī. He was especially close to Malik-i Ḳummī [*q.v.*], marrying his daughter and co-writing several works with him.

During his lifetime, Ẓuhūrī was perhaps best known for his panegyric *ḳaṣīda*s, which were sometimes compared to the work of the ancient masters of the form. Though these poems were written for a wide range of patrons, including Shāh ʿAbbās and the Khān-i Khānān, the majority were dedicated to Burhān Niẓām Shāh II and Ibrāhīm ʿĀdil Shāh II. Modern critics, however, tend to prefer Ẓuhūrī's *ghazal*s, which constitute the largest section of his *dīwān*. His *dīwān* also includes stanzaic poems and a substantial body of *rubāʿī*s. Dedicated to Burhān II, Ẓuhūrī's *sāḳī-nāma* in rhymed couplets is the longest and perhaps greatest representative of this quintessentially Ṣafawid-Mughal genre. However, it was Ẓuhūrī's prose, in particular the collection known as *Si nathr*, that exercised the greatest influence on later writers. This work consists of three introductions dedicated to Ibrāhīm II: *Dībāča-i Nawras* prefaced a collection of song lyrics written by Ibrāhīm himself in a Deccani vernacular; *Dībāča-i Gulzār-i Ibrāhīm* and *Dībāča-i Khwān-i Khalīl* both preceded collections of panegyric verse that were the joint efforts of Ẓuhūrī and Malik-i Ḳummī. These introductions were long regarded as models of rhymed, ornate prose. Several formal letters, including one addressed to Fayḍī, are also found in Ẓuhūrī's collected works. Two other prose works often attributed to Ẓuhūrī—*Pandj ruḳʿa* (a collection of love letters) and *Mīnā bāzār* (a description of the Bidjapur market)—are likely the work of Irādat Khān Wāḍiḥ, who died in 1128/1716 (see Ahmad, 337-52).

Bibliography: For brief biographies and a list of *tadhkira* sources, see Storey, iii, 280-1, and Dh. Ṣafā, *Tārīkh-i adabiyyāt dar Īrān*, Tehran 1364 *sh.*/1985, v/2, 977-88. The most important of these sources are collected and quoted at length in A. Gulčīn-i Maʿānī, *Kārwān-i Hind*, Mashhad 1369 *sh.*/1990, ii, 823-38. See also Fakhr al-Zamānī Ḳazwīnī, *Tadhkira-i maykhāna*, ed. Gulčīn-i Maʿānī, Tehran 1340 *sh.*/1961, 363-412. Among the secondary sources, see M. ʿAbdu'l Ghani, *A history of Persian language and literature at the Mughal court*, Allahabad 1929-30, iii, 181-219; and Nazir Ahmad, *Zuhuri. Life and works*, Allahabad 1953, by far the most detailed and scholarly study of the poet currently available. Nazir Ahmad has also edited Ibrāhīm ʿĀdil Shāh's *Kitāb-i Nawras*, Lucknow 1955. For a listing of the manuscripts of Ẓuhūrī's poetic works, see A. Munzawī, *Fihrist-i nuskhahā-yi khaṭṭī-yi fārsī*, iii, 1880 (*kulliyyāt*), 2419-21 (*dīwān*); and iv, 2875-77 (*sāḳī-nāma*). His *dīwān* and *sāḳī-nāma* have been lithographed in India; see *Fihrist-i kitābhā-yi čāpī-yi fārsī*, i, cols. 1554, 1571, and ii, col. 1900. For a listing of the many manuscripts and litho-

graphs of Ẓuhūrī's authentic and putative prose works, see Storey-de Blois, iii, 281-5. In addition to the translation listed in this source, a full Persian text and English translation of Ẓuhūrī's *Si nat̲h̲r* can also be found in ʿAbdu'l Ghani, *History*, iii, 305-467. (P.E. Losensky)

ZULĀLĪ-yi K̲H̲ᵂĀNSĀRĪ, Persian poet from the reign of S̲h̲āh ʿAbbās I [*q.v.*]. Reports on his date of death range from 1016/1607 to 1037/1627-8, but the most probable seems to be 1024-5/1615-16. Little is known about his life. He was born in K̲h̲ᵂānsār to the northwest of Iṣfahān and divided his life between these two towns. Although reputedly quiet and retiring by nature, Zulālī had close contacts with the Ṣafawid court, particularly with Mīr Bāḳir al-Dāmād Astarābādī [*q.v.*], his principal patron.

Although Zulālī composed *g̲h̲azals* and *ḳaṣīdas*, his enduring claim to fame is the collection of seven *mat̲h̲nawīs*, entitled *Sabʿa-yi sayyāra* ("The seven planets"). *Ḥusn-i gulzār*, written in the metre of Niẓāmī's [*q.v.*] *Mak̲h̲zan al-asrār*, consists of short anecdotes in a Ṣūfī-didactic framework. Of a similar structure is *S̲h̲uʿla-yi dīdār*, in the metre of Rūmī's *Mat̲h̲nawī-yi maʿnawī*. The remaining five poems present continuous narratives. *Mayk̲h̲āna* tells the story of the legendary king D̲j̲ams̲h̲īd and the discovery of wine. Zulālī's *D̲h̲arra wa K̲h̲urs̲h̲īd* is the tale of a dust mote's love for the sun, and another allegory of mystical love appears in *Ād̲h̲ar wa Samandar*, written in the metre associated with the *Laylā wa Mad̲j̲nūn* romance. The *Sulaymān-nāma* narrates Solomon's love for Bilḳīs in the heroic *mutaḳārib* metre. These six *mat̲h̲nawīs* are all relatively short, containing 500-1,000 verses. Composed over the course of twenty years, *Maḥmūd wa Ayāz* concerns the legendary love of Sultan Maḥmūd G̲h̲aznawī for his slave boy. It is by far Zulālī's longest work and his most sustained effort to emulate Niẓāmī's *K̲h̲usraw wa S̲h̲īrīn*.

Zulālī's style is highly complex and innovative in its use of neologistic compounds and unprecedented similes and metaphors. In the opinion of most critics, his work is very uneven, with impenetrably opaque verses side-by-side with conceits of startling originality and beauty. This was apparently the result of the poet's intuitive, almost haphazard method of composition; according to Awḥadī Balyānī, he worked on all seven of his *mat̲h̲nawīs* simultaneously. His works were left in a state of disarray on his death, and *Maḥmūd wa Ayāz* was redacted in its final form in India. He had a great influence on the later romance tradition throughout the Persian-speaking world. Ṭug̲h̲rā-yi Mas̲h̲hadī, a poet at the court of S̲h̲āh D̲j̲ahān, composed a set of prose introductions to Zulālī's works entitled *Ās̲h̲ūb-nāma* to accompany the short introductions written by the poet himself.

Bibliography: For a list of *tad̲h̲kira* sources, see D̲h̲. Ṣafā, *Tārīk̲h̲-i adabiyyāt dar Īrān*, Tehran 1364 *s̲h̲*./1985, v/2, 965-6. The most important of these are Amīn b. Aḥmad Rāzī, *Haft iḳlīm*, ed. D̲j̲. Fāḍil, Tehran n.d. [1950s], ii, 484-5, and Muḥammad Ṭāhir Naṣrābādī, *Tad̲h̲kira-i Naṣrābādī*, ed. W. Dastgirdī, Tehran 1352 *s̲h̲*./1973, 230-4. Zulālī receives only passing treatment in most literary histories: see Browne, *LHP*, iv, 252, and Rypka, *Hist. of Iranian literature*, 301. Manuscripts of Zulālī's *mat̲h̲nawīs* are abundant, both individually and collectively; for full listings, see A. Munzawī, *Fihrist-i nusk̲h̲ahā-yi k̲h̲aṭṭī-yi fārsī*, under title of each work. Lithograph editions include: *Maḥmūd wa Ayāz*, Tehran 1302/1885 and 1321/1903, and *Mat̲h̲nawī-yi Zulālī*, Lucknow 1290/1874. A recent edition of Zulālī's six shorter *mat̲h̲nawīs*, prepared as a doctoral dissertation at the University of Isfahan 1374 *s̲h̲*./1995 by Amān Allāh ʿAlī ʿAskarī, provides the first critical edition of the poet's works. (P.E. Losensky)

ẒULM (a., verbal noun of form I), basically meaning, according to the authoritative lexicologists, "putting a thing in a place not its own" (Lane, *LA*, *TA*), i.e. displacement. In the moral sphere, it denotes acting in such a way as to transgress the proper limit and encroach upon the right of some other person. In common usage, *ẓulm* has come to signify wrongdoing, evil, injustice, oppression and tyranny, particularly by persons who have power and authority. Frequently it is therefore used as the antonym to *ʿadl* [*q.v.*], *inṣāf* [*q.v.*] and *ḳisṭ* and (sometimes by expressing a slightly different shade of meaning) as a synonym to *bag̲h̲y* (encroachment, abuse), *d̲j̲awr* (oppression), *fisḳ* (moral deficiency [see fāsiḳ]), *inḥirāf* (deviation), *mayl* (inclination) and *ṭug̲h̲yān* (tyranny). Because of its general and comprehensive meaning the root *ẓ-l-m* is current in the vocabulary of religion, theology, philosophy, ethics, law and political theory.

1. In religion and ethics during the pre-modern period.

The word *ẓulm* and its derivatives are found in more than 280 places in the Ḳurʾān; it can be seen as one of the most important negative value-words in the sacred book. The warnings against oppression, the admonitions against injustice and the frequent emphasis on the principles of uprightness, equity and temperance in the Ḳurʾān and the prophetic dicta must be seen mainly as a reaction against the pre-Islamic tribal society which paid little or no attention to justice. That *ẓulm* is used as a generic term becomes obvious by the semantic equivalence or close relationship between *ẓulm* and terms such as *kufr* (e.g. II, 254; IV, 168-9) [see kāfir], *s̲h̲irk* [*q.v.*] (e.g. II, 165; XXXI, 13), *fisḳ* (e.g. VII, 162) or *iʿtidāʾ* (transgression; e.g. V, 107); in addition, *ẓulm* is used in the sense of *d̲h̲anb* (offence; cf. LXV, 1; II, 35), *naḳṣ* (detriment; cf. XVIII, 33; XIX, 60) or *ḍarar* (harm; cf. II, 57). *Ẓulm* can be done to God (by man's transgressing the limits imposed by God; e.g. II, 229), to others (by going beyond the bounds of proper conduct in social life; by hurting someone seriously without any conceivable reason; e.g. XII, 75; XXI, 58-9), or even to oneself, each one of the preceding being in fact wrongdoing to oneself (*ẓulm al-nafs*): "Whoever does an injustice has wronged himself" (e.g. II, 231; III, 117; IX, 70; X, 44). The particular parameters decreed by God remain an insoluble mystery to men; sometimes, however, they are understandable in terms of the social good, e.g. when God designates usury as *ẓulm* (II, 279), or the devouring of entrusted orphan's property (IV, 2, 10), or the violation of rules concerning inheritance (IV, 11-14) and divorce (LXV, 1) prescribed by God.

The Traditions take up the warnings against the punishment of *ẓulm* in the Hereafter. Not only is the *ẓālim* himself damned but also the one who does not support the *maẓlūm* [*q.v.*] or curb the *ẓālim*. Prayers against an injust ruler will be granted in the other world; the triumph over the *ẓālim* is certain. Beside this predominant idea of compensation for *ẓulm* (an evident reflection of the historical circumstances), concrete examples of social injustice are mentioned, such as the usurpation of landed property; the delay in repaymeht of debts by someone who is rich enough to repay them (*maṭl al-g̲h̲anī*); the unjustifiable maltreatment of slaves or subjects; and the *ḳāḍī*'s unjust sentence. Only one kind of *ẓulm* is unpardonable,

shirk, but the others either cannot be neglected or are excusable.

Although the Ḳur'ān affirms repeatedly that God does not do wrong (e.g. IV, 40; XVI, 33; XXIX, 40) and that He disapproves of injustice (e.g. III, 57, 140; XLII, 40), theological ethics could not be entirely divorced from the problem of theodicy or the conception of God's role in the world, and in particular, His relation to man. Therefore, two of the central theological and ethical questions were, can God do an injustice, and is there an individual responsibility for unjust acts? The Muʿtazila [*q.v.*] agreed on the premise that all God's acts are just acts, for everything done by God, including punishment for wrongdoing, is for the welfare of mankind and not for His own advantage. Following their insistence on divine justice and reason, they held that God by nature can do no injustice. Nor is it conceivable that He will ever do an injustice, because to will evil is evil. God can neither will the evil done by others nor initiate it. Whether God could be described as capable (*ḳādir*) of doing wrong and refraining from right, was, on the other hand, a highly debatable question in theological circles, including the Muʿtazila. Furthermore, divine justice meant according to the Muʿtazila that God was in some way obliged to provide "the optimum" (*al-aṣlaḥ*) for His creatures. The extreme emphasis on divine *ʿadl* and free will provoked a sharp reaction. The Ashʿariyya [*q.v.*] embraced the earlier tendency of Islam that declared God, in His unlimited omnipotence, the author of good as well as evil. All things, from human acts to natural events in the world, are the direct result of divine decree. God alone creates acts; man, however, "acquires" [see KASB] these acts and so can be deemed legally responsible for his deeds. What God does or decrees is by definition just; what He refrains from doing is unjust. Accordingly, injustice denotes actions improperly done, or done in violation of God's command.

Philosophical ethical treatises like those of Miskawayh or Naṣīr al-Dīn al-Ṭūsī [*q.vv.*] are based essentially on Greek theory, and on Plato and Aristotle in particular. As Aristotle said, justice is not a part of virtue but all virtue in its entirety; injustice as its opposite is not a portion of vice but the whole of vice. Since justice is essentially a notion of equivalence, whoever is in favour of disproportion and unequivalence is an unjust person. Injustice is the product of harm done by one man to another, either with or without intention, or it might be the result of imbalance and excess by irrational acts. Following Plato, four cardinal virtues and eight generic vices constituting either an excess or a defect in relation to the original virtues, are distinguished. Whereas justice is the most perfect virtue and the true mid-point (centre), injustice (oppression) and servility (suffering of wrong) are the extremes (peripheries). The mean is defined but not the peripheries. Analogous to the three criteria to determine justice and to ensure its application (divine law, just ruler and money), injustice is also of three types: violation of the *Sharīʿa*, repudiating the ruler's authority and violating the norms of equitable transactions involving money.

The *adab* [*q.v.*] literature scarcely deals with the conceptual aspect of justice and injustice; it essentially consists of quotations from the Ḳur'ān and *Ḥadīth*, of guidelines, general rules, anecdotes, aphorisms and poems.

Since the first *fitna*, several opposition groups (Khāridjites and [Proto-] Shīʿa [*q.vv.*]) insisted on the duty to rise against illegitimate rulers representing *djawr* and *ẓulm*, or held that if believers found themselves in the *dār al-ẓulm*, i.e. a region where a true imāmate did not prevail, it was incumbent upon them to emigrate. (For *ẓulm* and its derivatives *ẓālim* and *maẓlūm* as technical terms of Shīʿī, especially Twelver, Islam, see MAẒLŪM.) Later jurists, defining justice as protection of the *Sharīʿa*, first limited the duty of resistance to unjust rulers by possibility. Sunnī jurists since al-Ghazālī (d. 505/1111 [*q.v.*]) and Imāmī jurists, for rather different reasons and even before this, refused to permit rebellion against unjust government (in the case of the Imāmiyya, so long as the Imām was absent).

In political theory and in the Mirrors for Princes particularly, great emphasis is laid on justice: as a standard, though moral, quality demanded of the ruler and his officials, and as a guarantee for prosperity and social harmony. Nevertheless, the fear of civil war (*fitna*) and disturbance (*fasād*) leading to disorder and the need for stability finally resulted in the acknowledgement of existing power, whatever it might be. This was partly a reaction to the repeated politico-religious unrest and disorders; partly it was the result of the disagreement over who was the most excellent Imām or Sulṭān and of the absence of legal means and fixed procedures by which a tyrant could be made responsible and be deposed. (For the different functions of the *maẓālim*, see art. s.v.) Various traditions enshrining the duty of obedience to a ruler, even if unjust, and extolling the security provided by the exercise of coercive power, even if by an illegitimate ruler, as against the weakness of a just ruler which leads to anarchy, were put into circulation: "The tyranny of a sultan for forty years is preferable to the flock being left without a master for a single hour," and the like. The doctrine was evolved that, whether the ruler was good or bad, obedience to him was incumbent upon the Muslim because it was God's will that he held office. In practice, this attitude resulted in prevailing tyranny, the spread of political quietism and of the tendency to regard all authority as evil. Ibn Khaldūn (d. 808/1406 [*q.v.*]) or his follower Ibn al-Azraḳ (d. 896/1491) then contended that man is by nature oppressive and unjust.

In jurisprudence, there are two aspects of injustice, the substantive or internal aspect of law, and the procedural or external aspect. Whereas the first is measured by the adherence to the sacred law, the second or formal aspect of injustice is manifested in such corrupt practices as bribery, irregularity, inaccuracy and partiality in the application of the law, commonly named *fisḳ*.

That justice brings about prosperity, and tyranny the ruin of the country, respectively, is acknowledged by several authors. Ibn Khaldūn dedicates a whole chapter in his *Muḳaddima* to this aphorism. Attacks on property, he says, means a general destruction of the incentive to do business. Consequently, everything decays. Generally, social injustice is identified with taking property by force or unfair means, with the unjustified imposition of illegal taxes or tasks and with the use of subjects for forced labour.

Bibliography: No comprehensive and critical study or bibliography seems to have been yet undertaken. Esposito, Oxford and New York 1995, 4 vols., arts. (concept of) *justice*, *ẓulm*. (ROSWITHA BADRY)

2. In contemporary political usage.

In the modern period, new experiences, perceptions and ideas, both at home and abroad, reshaped the theory and practice of politics in the Islamic lands. First, reports from Western lands, then the massive Western presence in the Islamic world changed Muslim perceptions of good and therefore also of bad government. The ideas and methods of the French Revolution, the German ideal of the Rechtsstaat, the example of English parliamentary government all had their impact. They were followed by such European ideas as nationalism, socialism, and the combination of the two in national socialism, each with its own definition of the functions and duties of the state, and of the circumstances when resistance to it is justified or even required.

The first external influences came from Western Europe, and the new ideal of government that they brought was that of constitutional, representative government, through elected assemblies. As good government was redefined, bad government was redefined as a departure from it. The old Islamic notions of *mashwara* and *shūrā* [*q.vv.*] were reinterpreted to provide a traditional Islamic justification for parliamentary democracy; the term *istibdād* was revived to connote autocratic personal government. As used in classical texts, it had a connotation of arbitrary and capricious rather than of illegitimate or tyrannical rule. It was used, for example, of a ruler who took decisions and actions on his own, without consulting his religious or bureaucratic advisors. In Arabic chronicles of the Mamlūk period it sometimes appears in a neutral or even in a positive sense, to indicate that one or another of contenders for power had got rid of his rivals and taken sole charge. In the 19th and 20th centuries, it came to be the term commonly used by advocates of liberal reforms to denounce the autocratic monarchs whom they wished either to restrain or to remove.

The rise of neo-Islamic movements brought a revival of the term *ẓulm*, and with it *ẓālim* and *maẓlūm*, to describe misgovernment, its practitioners and its victims. It was used in particular of rule by imperialists (understood to mean non-Muslims ruling over Muslims) and of apostates (used to condemn nominally Muslim rulers who adopt non-Muslim patterns of government and law). These terms figure prominently in the political statements of the Āyatullāh Khumaynī and more generally of the Islamic Republic of Iran, as well as of parallel movements in other Muslim countries. In the traditional Islamic world view, the converse of *ẓulm* is justice; in the democratic view, it is freedom. Modern Muslim thought and discourse reflect the meeting, and sometimes the contradictions, of the two.

ZUMURRUD (A.), also ZUMURRUDH, the emerald, according to Islamic works on gemology, the second-best of the precious gems, after the *yāḳūt* [*q.v.*] "corundum" and before the *luʾluʾ* [*q.v.*] "pearl". The most valuable gem of the beryl group, it was often confused with *zabardjad*, the peridot, a confusion which may have started rather early. Max Bauer goes even

so far as to say that in ancient times the name "emerald" was applied loosely to green gemstones in general, such as tourmaline, jasper, malachite, and others (Bauer, *Precious stones*, ii, 317).

Etymology

The *Lisān al-ʿArab* lists *zumurrudh* as a synonym under *zabardjad* (with the variant *zabardadj*), and this is easily recognisable as a loan from Greek *smaragdos*, "emerald", probably via Aramaic (Syriac *(e)smaragda (e)zmarragda/smaragdos*). In the West, the Greek word *smaragdos* was received into Latin as *smaragdus*, which apparently developed into a Vulgar Latin form *(e)smaraldum* from which the Romance and, ultimately, the English forms derived.

Definition

Emerald (Be_3 $(Al,Cr)_2$ Si_6 O_{18}) is the green variety and most valuable gem of the beryl family; it owes its verdant green colour to a trace of the chromium ion (Cr_2O_3) in its crystal structure (Webster, *Gems*, 84).

The emerald green colour ranges from dark to light. The most valuable variety is of a saturated or very deep green (*mushbaʿ al-khudra*), without any other shade of colour, with good transparency (*djayyid al-māʾiyya*).

The next in value is known as *rayḥānī*, i.e. of basil leaf colour followed by the *silḳī*, of chard green colour. The least valuable is of light green colour (*anḳaṣ khudrat^an*), dull or opaque (*aḳtar māʾiyyat^an*) and with less brilliancy (*aḳall shuʿāʿ^an*).

Physical properties

The only colour of emerald (*zumurrud*) is green. It is characterised by softness (*rakhāwa*) and brittleness (*takhalkhul*), extreme smoothness (*malāsa*), lustre (*ṣaḳāla*) and softness (*nuʿūma*) (al-Tīfāshī, *Azhār*, 85).

The various defects that decrease the value of the stone are: freckles (*namash*), inclusions (or patches) looking like African rye (*ḥarmaliyyāt*) and white veins (*ʿurūḳ*) (al-Bīrūnī, *K. al-Djamāhir*, 161). An exclusive characteristic of the *dhubābī* variety of emerald is its influence on the snake's eyes, which was tested by al-Tīfāshī and found to be true (*Azhār*, 84). When an emerald of this kind is drawn near the snake's eyes, they bulge out of their sockets and burst. Other Arab gemologists made the same experiment with the *rayḥānī* and *silḳī* varieties, but the snake's eyes did not change.

Provenance

The earliest known mines of emeralds lie by the Red Sea in Egypt (Webster, *Gems*, 84). Emeralds have been found with Egyptian mummies. The appliances and tools used in the working of emerald mining have been found in the shafts of ancient mines dating back to the time of Sesostris *ca.* 1650 B.C. The ancient mines, known as those of Cleopatra, were rediscovered in 1818 by Cailliaud, a member of the expedition organised by Muḥammad ʿAlī Pasha [*q.v.*] (Webster, *Gems*, 84; Bauer, *Precious stones*, 110, 311).

Arab gemologists agree on the location of emerald mines as being in upper Egypt. Al-Ḳalḳashandī [*q.v.*] mentions that emeralds were still extracted from the mines near Ḳūṣ [*q.v.*] in Upper Egypt until the time of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*], but the mines were then neglected until the 9th/15th century because of high extraction costs (*Ṣubḥ*, iii, 455). Emeralds are found, according to al-Tīfāshī, embedded in a soft red earth inside the friable talc schist. They never occur in gem-gravels like rubies and diamonds, and their occurrence in Egypt is the same as that in the Ural mountains (Bauer, *Precious stones*, 310, 315). The best emeralds, which take the usual hexagonal elongated form of crystal, are extracted from the vein as one piece and called *ḳaṣaba* ("cane, filet, reed"), whilst the small ones extracted from the earth by sieving are called *faṣṣ* ("cabochon") (al-Tīfāshī, *Azhār*, 81-2). The beads cut from the small pieces are called "lentil-like" (*ʿadasiyyāt*) (*Djawāhir*, 163).

Medical and magical (talismanic) uses

While al-Bīrūnī is silent as regards the practical benefits of the emerald, al-Tīfāshī (*Azhār*, 85-6), Ibn al-Akfānī (*Nukhab*, 52), Ibn al-Wardī (*Kharīda*, 168) and al-Bayhaḳī (*Maʿdin al-nawādir*, 81-2) enumerate a number of what were in their time common beliefs about them, applicable to the best quality of emeralds. They say that the emerald strengthens the eyesight if one gazes at it for a long time; it guards against epilepsy if worn in a necklace or ring before the disease occurs; it saves from death if dissolved in water and drunk before the poison's effect starts; if drunk or hung externally over the liver and stomach, it stops acute dysentery, bleeding and leprosy; it repels venomous animals from the wearer; and it strengthens the teeth and the stomach if held in the mouth. Although al-Tīfāshī affirms that these benefits are exclusive to the best variety of emerald (*al-dhubābī*), all varieties can be hung on the upper arm and neck for talismanic purposes, and on the thigh of a woman in labour for speeding up child delivery (*Azhār*, 86, tr. Abul Huda, 195).

Value and prices

Al-Bīrūnī discusses the prices of emeralds, relating the value in dirhams to carat weight, starting with 2,000 dirhams for 4 carats and ending with 32,000 dirhams for 21 carats (*Djamāhir*, 164). The caliph al-Manṣūr bought the emerald ring known as *al-Baḥr* ("the Sea"), which weighed three *mithḳāls*, for 30,000 dīnārs (al-Djāḥiẓ, *al-Tabaṣṣur bi 'l-tidjāra*, 20), and al-Maʾmūn bought a piece of a *dhubābī zumurrud* that weighed two *mithḳāls* for 30,000 dīnārs (al-Bayhaḳī, *Maʿdin*, 81).

Historical records

The first emeralds and other precious stones to enter the Muslim treasuries or private possessions were obtained from booty during the battles with the Sāsānids such as al-Ḳādisiyya and Djalūlāʾ (15-16/635-7) and subsequent conquests.

Such emeralds were in the form of unset stones, encrustations on objects such as figurines, tables and other utensils, or carved in the shape of a spoon, a handle of a knife, a long rod, or set in jewelry as rings and strings. Encrusted and studded with emeralds and other precious stones were artifacts such as a gold figurine representing a horse, a ewer, a gold and silver table and a gold palm-tree (Ḳāḍī Ibn al-Zubayr, *Hadāyā*, §§ 180, 189, 196, 201, 209, 215).

Caskets containing large amounts of emerald stones were to be found in the treasuries of the ʿAbbāsids and in those of the Fāṭimids (*Hadāyā*, §§ 150, 346, 357, 377, 412). Al-Rashīd had an emerald rod more than one cubit long (*Djamāhir*, 165; *Hadāyā*, § 28), and a similar rod was held by the Fāṭimid caliph al-Ẓāhir when he rode in processions (*Djamāhir*, 165-6; *Hadāyā*, § 28). Al-Rāḍī had, like al-Rashīd, a passion for precious beautiful items made of, or studded with, precious stones, and possessed [knife] handles, one of which was of emerald (*Hadāyā*, § 244). High-ranking courtiers and officials possessed valuable emerald items also, and a concubine of Yaḥyā b. Khālid al-Barmakī is said to have given her personal physician an emerald spoon as a gift (*Djamāhir*, 165).

ZUMURRUD <u>KH</u>ĀTŪN, a Turkish slave, mother of the 'Abbāsid caliph al-Nāṣir li-Dīn Allāh [*q.v.*] (575-622/1180-1225). She was politically active and continued the religious policy of her husband al-Mustaḍī' [*q.v.*] (566-75/1170-80) by favouring Ḥanbalīs, e.g. Ibn al-<u>Dj</u>awzī [*q.v.*], and interceding for them with her son. The sources praise her piety and generosity. She endowed *madrasas*, *ribāṭs* and mosques, and had a *turba* erected at the grave of the mystic Ma'rūf al-Kar<u>kh</u>ī [*q.v.*], together with a *madrasa*. On the occasion of her pilgrimage she allegedly spent 300,000 dīnārs for alms and on repairs of Meccan cisterns and water-supplies. In the year 580/1184-5 she accompanied al-Nāṣir on a politically important journey to Sāmarrā'.

When she died in <u>Dj</u>umādā I 599/Jan.-Feb. 1203, her son grieved deeply. At the funeral he preceded her bier on foot. She was transported by ship on the Tigris, all the boat people standing up in her honour (al-Ṣafadī, *Wāfī*, xiv, 213), and was buried in a *turba* built for her in her lifetime. Mourning continued for a year. Numerous elegies were composed, and her possessions, including jewels and clothes, were distributed on the caliph's order.

(Renate Jacobi)

ZŪN, <u>Zh</u>ūn, the name of a deity of the district of Zamīndāwar [*q.v.*] in eastern Af<u>gh</u>ānistān, whose shrine there figures in historical accounts of the Arabs' and Ṣaffārids' penetration of the region.

In 33/654-5 'Abd al-Raḥmān b. Samura, governor of Sīstān for 'Abd Allāh b. 'Āmir [*q.v.*], raided into Zamīndāwar and attacked the "hill of Zūn" (*<u>dj</u>abal al-Zūn*), entered the shrine and partially despoiled the idol there, telling the local *marzbān* that his sole object was to demonstrate the idol's impotence (al-Balā<u>dh</u>urī, *Futūḥ*, 394). Over two centuries later, in the accounts of the Ṣaffārid Ya'ḳūb b. al-Lay<u>th</u>'s campaigns in eastern Af<u>gh</u>ānistān, the shrine of Zūn is described as being set on a sacred mountain; the ruler there, the Zunbīl, was divine and was carried on a golden throne by twelve men (Ibn al-A<u>th</u>īr, ed. Beirut, vii, 326). Marquart located this to the northwest of the Helmand river near Bi<u>sh</u>lang. See on these events, Bosworth, *Sīstān under the Arabs, from the Islamic conquest to the rise of the Ṣaffārids (30-250/651-864)*, Rome 1968, 19, 34-6; idem, *The history of the Saffarids of Sistan and the Maliks of Nimruz (247/861 to 949/1542-3)*, Costa Mesa and New York 1994, 99 ff.

The origins and affiliations of this cult are unclear; it was clearly not Zoroastrian or Buddhist. Marquart surmised that it might have been connected with the celebrated shrine of the Sun God Āditya at Multān. Bussagli has suggested the possibility of influences from the pre-Buddhist divine monarchy of Tibet. The title of the local ruler, Zunbīl, earlier forms perhaps **Zūn-dātbar* or **Zūn-dā<u>dh</u>* [see zamīndāwar], may appear in Chinese sources as *Shun-ta*, and Christian ecclesiastical historians mention τζουνδαδέερ and *Zundaber*. See J. Marquart and J.J.M. de Groot, *Das Reich Zābul und der Gott Zūn vom 6.-9. Jahrhundert*, in G. Weil (ed.), *Festschrift Eduard Sachau*, Berlin 1915, 248-92, and the works of M. Bussagli and G. Scarcia discussed in the two books of Bosworth mentioned above. An origin in the religions of ancient Mesopotamia seems unlikely, *pace* T. Fahd, *Le panthéon de l'Arabie centrale*, Paris 1965, 199-201, nor an etymology from Greek, *pace* Wahib Atallah, *Sur un vers de Ğarīr. Etymologie de* zūn *et de* hirbiḏ, in *Arabica*, xviii (1971), 49-54.

The end of the Zunbīls and the cult of Zūn was brought about by Ya'ḳūb b. al-Lay<u>th</u>'s operations in the region from 253/867 onwards, with his killing of the Zunbīl in 237/871. Thereafter, all mention of Zūn and its devotees disappear, and we must assume that Zamīndāwar became gradually Islamised by the early 4th/10th century.

Bibliography: Given in the article.

(C.E. Bosworth)

ZUNBĪL, the putative title borne by a line of rulers in eastern Af<u>gh</u>ānistān in pre- and early Islamic times, who opposed the extension of Muslim arms into their region for some two centuries.

In the Arabic historical texts, there is uncertainty about the vocalisation of the name, with forms like *Rutbīl and *Ratbīl, etc. given. The origin of the title is quite obscure. Marquart was probably correct in seeing in it a theophoric name which included the element Zūn [*q.v.*] or <u>Zh</u>ūn, the name of the god mentioned in the Arabic sources as worshipped in the region of Zamīndāwar [*q.v.*]; but other, less plausible etymologies have been suggested such as **zanda-pīl* "furious elephant" as an epithet (Persian!) given to the ruler by the Arabs when they encountered the Zunbīl in war. The most thorough recent discussions are by M. Bussagli and G. Scarcia, especially the latter's *Ancora su «ZNBYL»*, in *AIUON*, N.S. xvi (1966), 201-5, and *Zunbīl or Zanbīl?*, in *Yádnáme-ye Jan Rypka*, Prague 1967, 41-3.

The line of Zunbīls probably arose from the time when the Southern Hephthalites [see hayāṭila] dominated Af<u>gh</u>ānistān south of the Hindu Kush and northwestern India (5th and 6th centuries). They were implacable foes of the Muslims from the time of the first Arab raids through Sīstān and Bust [*q.vv.*] in the later 7th century till the 3rd/9th century, when the campaigns of the Ṣaffārid Ya'ḳūb b. al-Lay<u>th</u> [*q.v.*] to Kābul and beyond seem to have brought the line of Zunbīls to an end, then permitting the Islamisation of eastern Af<u>gh</u>ānistān.

Bibliography: See also the references given in zūn, and especially the discussion of the title in Bosworth, *The history of the Saffarids of Sistan*, 85-6, 91-5. The course of the relations between the Zunbīls and the Muslims can be traced in the works of Marquart and de Groot and of Bosworth given in the *Bibl.* to zūn. (C.E. Bosworth)

ZUNNĀR (a.), the girdle worn by the "Protected Peoples", *ahl al-<u>dh</u>imma* (in effect, by Jews, Christians and Zoroastrians), usually linked with the *<u>sh</u>i'ār* or *<u>gh</u>iyār* [*q.v.*], patches of varying colour

worn on the *dhimmīs*' clothing to distinguish them from the Muslims. The *zunnār* was usually wider than the *minṭaka*, the general word for "girdle". The requirement of its usage is traditionally regarded in the sources as being part of the so-called "Covenant of ʿUmar [I]", now considered to have been a body of practices which grew up piecemeal and which did not reach full legal embodiment till the 3rd/9th century. See further DHIMMA and GHIYĀR. The term itself obviously stems from *zōnarion*, diminutive of Grk. *zōnē*, probably via Aramaic *zunnārā*; in Syriac, it denotes the girdle worn by monks. In Persian Ṣūfī poetry, it is often used for the locks of the beloved.

Bibliography: See the arts. mentioned in the text, and the references given in the *EI*[1] art. s.v.

(A.S. TRITTON*)

ZURAYʿIDS, a South Arabian dynasty of Fāṭimid allegiance (473-569/1080-1173), of Yām [*q.v.*], centred on the southern port of Yemen [see AL-YAMAN], Aden [see ʿADAN].

When the Maʿnids (Banū Maʿn), the then rulers of Aden, suspended their tribute to their masters, the Ṣulayḥids [*q.v.*] in 473/1080, al-Mukarram Aḥmad marched on Aden for the Ṣulayḥids, drove out the Maʿnids and installed as joint rulers al-ʿAbbās and al-Masʿūd, sons of one al-Mukarram b. al-Dhiʾb, in return for their previous services to the Ṣulayḥid Fāṭimid cause. Al-ʿAbbās died in 477/1084 and his son, Zurayʿ, who gave his name to the dynasty (Banū Zurayʿ), took over as joint ruler with his uncle, al-Masʿūd. The situation remained thus until 504/1101. Seeing that the Ṣulayḥids were preoccupied elsewhere, the Zurayʿids repudiated their arrangement with them, and declared themselves independent rulers of Aden.

Our sources fail us badly, for there is little information on the independent dynasty. Its early history was one of struggles between the two branches of the family and all the problems of joint rule came to the surface (see Smith, *Ayyūbids*, ii, 63, for the complete family tree). In 533/1138 ʿAlī b. Sabaʾ b. Abi ʾl-Suʿūd b. Zurayʿ assumed full power. After his death shortly afterwards, his brother, Muḥammad b. Sabaʾ took over and reinforced control over much of southern Arabia, apart from Aden. Muḥammad was appointed an official Fāṭimid *dāʿī* by the Fāṭimid caliph in Cairo. Muḥammad was able to bring much stability to the southern area of Yemen, and in 547/1152 purchased a number of fortresses to bolster his dynasty's position. He died in 548/1153 and was succeeded by his son, ʿImrān.

We know nothing of ʿImrān's reign. He died in 561/1166, and thereafter the effective control fell into the hands of Zurayʿid slave ministers. Upon the arrival in Aden in 571/1175 of the conquering Ayyūbid force coming to Yemen from Egypt [see AYYŪBIDS] in 569/1173, the ruling minister Yāsir b. Bilāl was put to death. It can be said, therefore, that the Zurayʿid dynasty was brought to an end by the Ayyūbid conquest of the country.

(G.R. SMITH)

AL-**ZURKĀNĪ**, MUḤAMMAD B. ʿABD AL-BĀKĪ b. Yūsuf b. Aḥmad b. Muḥammad al-Miṣrī al-Mālikī (b. 1055/1645 in Cairo, d. here 1122/1710), renowned Mālikī jurist. His forefathers came from the village of Zurkān in the province of al-Manūfiyya in Lower Egypt. Already his father ʿAbd al-Bākī (d. 1099/1688; see Brockelmann, II, 414) had made a name for himself at the al-Azhar University as a jurisprudent of the Mālikī school of law; he composed a commentary on the *Mukhtaṣar* of Khalīl b. Isḥāk (d. 767/1365 [*q.v.*]).

Al-Zurkānī himself was also a member of al-Azhar, where he taught *fikh* and *ḥadīth* until his death. Alongside commentaries on works of his predecessors among the traditionists, he became above all known far beyond the borders of Egypt as the author of a copious commentary on the *Muwaṭṭaʾ* of Mālik b. Anas [*q.v.*] with the title *Abhadj al-masālik bi-sharḥ Muwaṭṭaʾ al-Imām Mālik*, soon to be known as *Sharḥ al-Zurkānī* (printed several times in Cairo in 4 vols.; see Sezgin, *GAS*, i, 462).

Manuscripts of his works are to be found in the Dār al-Kutub, Cairo, the library of al-Azhar, and in the Ẓāhiriyya Library, Damascus (see Kaḥḥāla, x, 124).

His *Muwaṭṭaʾ* commentary was written, according to his own indications in the preface and at the end of the work, between 1109 and 1112. He was guided by Ibn Ḥadjar al-ʿAskalānī's [*q.v.*] commentary on the *Ṣaḥīḥ* of al-Bukhārī. A source-analytical study of al-Zurkānī's *Muwaṭṭaʾ* commentary has not yet been written. One may, however, consider as certain that he had direct access to the pertinent commentaries on Mālik's work, i.e. *al-Tamhīd li-mā fī ʾl-Muwaṭṭaʾ min al-maʿānī wa ʾl-asānīd* and *al-Istidhkār al-djāmiʿ li-madhāhib fukahāʾ al-amṣār* by the Cordovan scholar Ibn ʿAbd al-Barr [*q.v.*]. Al-Zurkānī would have used the manuscripts of these works that are extant in the al-Azhar library. In addition to the canonical *ḥadīth* collections and *muṣannaf works*, he quotes, whether directly or not, the *K. al-Masālik fī sharḥ, Muwaṭṭaʾ Mālik* of Abū Bakr Ibn al-ʿArabī (d. 543/1148 [*q.v.*]), and the already classical biographical work on the Mālikīs by al-Kāḍī ʿIyāḍ b. Mūsā [*q.v.*].

The structure and the style of the work permit us to infer that we are dealing here with a handbook for teaching purposes treating the basic tenets of Mālikī law as laid out in Mālik's *Muwaṭṭaʾ* in the *riwāya* of Yaḥyā b. Yaḥyā al-Laythī [*q.v.*]; as such it was beholden to the tradition of legal and traditionist scholarship as handed down in the *madhhab*. Independent or groundbreaking comments on the legal material presented by Mālik are not to be expected in al-Zurkānī's work.

Bibliography (in addition to references given in the article): Ziriklī, *Aʿlām*, vi, 184.

(M. MURANYI)

ZŪRKHĀNA (P), lit. "house of strength", the traditional gymnasium of Iran.

The traditional *zūrkhāna* consists of a building whose architecture recalls a public bath (*ḥammām* [*q.v.*]). Its main room is often sunken slightly below street level to provide for constant temperatures and prevent

draughts that might harm the perspiring athletes, and access to it is possible only through a low door, forcing everyone to bow in respect while entering. Traditionally, admittance to the *zūrkhāna* was forbidden to women, non-Muslims, and prepubescent boys. At the centre of the room lies the *gawd*, a usually octagonal pit about a metre deep in which the exercises take place. The *gawd* is surrounded by spectator stands, behind which the walls are adorned with pictures of athletes and saints. Of particular importance is an elevated and decorated seat, the *sardam*, which is reserved for the *murshid* "guide" or "director". The *murshid*'s function is to accompany the exercises with rhythmic drumming and the chanting of verse from classical Persian poetry such as (but not limited to) Firdawsī's *Shāh-nāma* [*q.v.*] as well as poetry specific to the house of strength, most notably Mīr Nadjāt Iṣfahānī's *Gul-i kushtī* ("The Flower of Wrestling").

The standard attire for athletes is the *lung*, a cloth wrapped around the loins and passed between the legs; when wrestling, however, leather breeches (*tunbān*) are worn. The exercises take place in a standard order. After some warming up calisthenics, in the course of which one of the athletes may lift heavy wooden boards (*sang*) as he lies on his back outside the *gawd*, athletes do push-ups (*shinā*) and then swing Indian clubs (*mīl*), both exercises being accompanied by the *murshid*'s drumming and chanting. Individuals will then take turns to whirl at speed about the *gawd* (*čarkh*), and step forth to swing above their heads a heavy iron bow (*kabbāda*), on the cord of which are strung heavy rings. Until the 1940s the crowning event of a *zūrkhāna* session was wrestling (*kushtī*). With the introduction of international freestyle and graeco-roman wrestling, however, wrestling disappeared from the *gawd*. Traditional wrestling, which resembles the freestyle variety except that athletes are permitted to grab each other's breeches at the belt and at the reinforced hems, survived in a modernised form under the name of *kushtī-yi pahlawānī* ("*pahlawānī* wrestling"), but lost its organic link with the *zūrkhāna*. The loss of the institution's agonistic component lessened its attraction to young men, thus contributing to the decline of its popularity.

Traditionally, athletes were divided into a number of grades. These were, in ascending of seniority: *nawča* "novice", *nawkhwāsta* "beginner", *pahlawān* "athlete", and, finally, each establishment's most accomplished member, the *mīyāndār*, who conducts the proceedings. Beginning in the 1940s, however, these grades gradually fell into disuse and were replaced by the standard international categories "cadet", "junior", and "senior", and, for *pahlawānī* wrestling, weight classes.

The vocabulary, rituals, ethos and grades of the *zūrkhāna* recall those of *futuwwa* [*q.v.*] and Ṣūfism [see TAṢAWWUF], but a direct filiation cannot be established. Popular religion, especially veneration of the first Shīʿī Imām, ʿAlī b. Abī Ṭālib, plays a major role in the institution, and proceedings are frequently interrupted by salvos of benediction (*ṣalawāt*). However, in the mid-20th century there were also a few Jewish and Zoroastrian *zūrkhānas* in Tehran, Yazd and Shīrāz; their rituals were adapted accordingly.

The origins of the *zūrkhāna* are shrouded in mystery. Wrestling has an old tradition in Iran, as evinced by many episodes recounted in the *Shāh-nāma*, most famously Rustam's bout with his son Suhrāb. According to Muslim traditions, the prophets Adam, Jacob and Muḥammad, as well as ʿAlī b. Abī Ṭālib and his two sons al-Ḥasan and al-Ḥusayn excelled at it. The patron saint of *zūrkhāna* athletes (as well as Turkish wrestlers) is the 8th/14th-century Ṣūfī Pahlawān Maḥmūd of Khwārazm, better known as Pūryā-yi Walī.

Wrestling was patronised by the Saldjūḳs, Il-Khānids, Tīmūrids and Ṣafawids, and under the latter, wrestlers were organised in a guild headed by a *pahlawān-bāshī*. But the earliest known mention of *zūrkhāna* exercises occurs in a fragment dating from the Ṣafawid era, *Ṭūmār-i Pūryā-yi Walī*. The first Western traveller to describe a *zūrkhāna* was Reinhold Niebuhr, to whom we also owe the first graphic representation of one. Beginning in the early 19th century, the Ḳādjār rulers of Iran became enthusiastic patrons of wrestling, and consequently, *zūrkhānas* thrived. They were embedded in a town quarter's social structure and constituted an important part of community life. Some were frequented by craftsmen and tradesmen associated with the bazaar (*sūḳ* [*q.v.*]), some had a Ṣūfī membership, and still others were used by men of questionable mores on the fringes of legality, the *lūṭīs* [*q.v.*]. Later in the century, royal patronage led men of higher birth to participate in the exercises, a development that reached its peak under Nāṣir al-Dīn Shāh (*r.* 1848-96 [*q.v.*]). With the advent of the Constitutional Revolution in 1905-6, royal patronage ceased, dealing a severe blow to the houses of strength, which became once again a feature of urban lower middle-class culture. In subsequent years, the introduction of modern Western sports and physical education diminished their appeal among athletically-inclined men, while cinemas drew spectators away. *Zūrkhānas* might have disappeared altogether, had it not been for the official millennial celebration of the poet Firdawsī's birth in 1934, on which occasion exhibitions of *zūrkhāna* exercises were held in public. They soon came to be termed *warzish-i bāstānī* "ancient sports", which implied that their origin lay in pre-Islamic times. This rendered it compatible with the official ideology of the two Pahlawī shāhs, which emphasised Iran's ancient Persian heritage at the expense of Islam. It became conventional wisdom that the *zūrkhānas* originated in the underground resistance activities of Iranian patriots against the Arab and, later, Mongol invaders, although there is no historical evidence for this.

From 1953 to 1978 *zūrkhāna* sports were mostly under the control of Shaʿbān Djaʿfarī, who benefited from royal patronage, having been one of the ringleaders of the August 1953 riots that accompanied the military *coup d'état* that ousted the Prime Minister Muḥammad Muṣaddiḳ [*q.v.*]. The Shāh rewarded Djaʿfarī with a modern clubhouse whose *zūrkhāna* was lavish by the humble standards of traditional houses of strength. The carefully choreographed exercises performed by the members of this club became an exotic tourist attraction for visiting foreign dignitaries and celebrities, including women. Led by Djaʿfarī, *zūrkhāna* athletes performed by the hundreds in Tehran's main stadium on such occasions as the Shāh's birthday.

After the Islamic Revolution, the authorities of the Islamic Republic emphasised the Islamic character of the institution and tried to popularise it again. To attract young people, boys were permitted into the *gawd*, and a plethora of competitions are held with the aim of turning the exercises into modern sport replete with point systems, records and champions. Whether these innovations can assure the survival in the long run of the *zūrkhāna* remains to be seen.

Zūrkhānas can be found in most Iranian cities. Outside Iran, they were introduced to ʿIrāḳ in the 1830s, where they existed until the 1960s. There are also

zūrkhānas in Ādharbāydjān and Afghānistān, although their rituals differ somewhat from those found in Iran.

ZURNA, a woodwind musical instrument, the shawm, with a powerful sound, played in the open. *Zurna* (*zūrnā*) is the later Ottoman and modern Turkish spelling of the Persian and early Ottoman term *surnā* (*surnāy*), *ṣūrnā* or *ṣurnā* (*ṣurnāy*). The name spread throughout the countries of the former Ottoman empire, where it is still used in many places. In Egypt the instrument retained its traditional Arabic name *mizmār* [*q.v.*]; in Libya and Morocco it is called *ghayṭa* [*q.v.*].

The *zurna* is played with a double reed. Since the reed vibrates freely in the mouth cavity of the player, the instrument has a penetrating sound which the player cannot modify. It became the characteristic woodwind instrument of the Islamic world, played at ceremonial, military and festive occasions. In Ottoman times it served two different purposes. First, it was the prominent melody instrument of the *mehter* [*q.v.*] ensemble. Second, it was, and still is, the melody instrument of the popular pair of shawm and drum (*davul-zurna*), played mainly to accompany folk dances at festive occasions in the countryside. The folk *zurna* is characterised by a fork-shaped "spool" (*nezik*) in the head of the instrument. It was recently shown that this "ingenious invention" allows the instrument maker to fit the body of the *zurna*, in the region of the seven fingerholes and the thumbhole, with an easily made cylindrical bore instead of the traditional conical bore. It can be assumed that the fork was invented in the creative atmosphere of the Ottoman capital, from where it spread through the empire. A vivid impression of the guild of *zurna* makers and players, and of the varieties of the instrument known in 17th-century Istanbul is given by Ewliyā Čelebi.

(E. Neubauer)

AL-**ZUṬṬ**, the form in early Arabic usage for the name of a northwestern Indian people, the Jhāṭs [see DJĀṬ], members of whom were brought into the Persian Gulf region in the first Islamic centuries and possibly earlier.

According to al-Balādhurī, the Sāsānid emperor Bahrām V Gūr (*r.* 420-38) transported Zuṭṭ from India to Khūzistān and the Persian Gulf shores; these subsequently became Muslim and were settled by Abū Mūsā al-Ash'arī [*q.v.*] at Baṣra, being attached to the tribe of Ḥanẓala of Tamīm. At least some of them were caught up in the rebellion of Ibn al-Ash'ath [*q.v.*], and after its suppression, the governor of the East al-Ḥadjdjādj demolished their houses, deprived them of their stipends and deported a certain number. Already in Mu'āwiya's reign, the caliph had moved some of the Zuṭṭ of Baṣra and some of the Sayābidja [*q.v.*], of Malaysian origin, from Lower 'Irāḳ to the 'Amḳ near Antioch and the Cilician plain around al-Maṣṣīṣa (in 49/669 or 50/670) (al-Balādhurī, *Futūḥ*, 162, 373-4, 376-7). At the time of the Arab conquest of Sind (93/711), some of the Zuṭṭ of the Indus valley (probably including indigenous Sindīs as well as Jhāṭs) were transplanted by al-Ḥadjdjādj to the similar riverine environment of Lower 'Irāḳ, the Baṭā'iḥ or marshlands [see AL-BAṬĪḤA]. Both al-Walīd I and Yazīd I further moved groups of Zuṭṭ to northwestern Syria, together with water buffaloes for the hot coastal plains there (*ibid.*, 168, 376), but many Zuṭṭ clearly remained in 'Irāḳ. Whether the grandfather of the Imām Abū Ḥanīfa (d. 150/767 [*q.v.*]) named as Zūṭī in al-Khaṭīb, *Ta'rīkh Baghdād*, xiii, 324-5, came from one of the Zuṭṭ groups of Lower 'Irāḳ (Zūṭī is said to have come "from the people of Kābul" and to have been a *mawlā* of Taym Allāh b. Tha'laba of the Bakr b. Wā'il) is uncertain.

There may have been further migrations of Zuṭṭ from India to the southern provinces of Persia and to Lower 'Irāḳ during early 'Abbāsid times (al-Mas'ūdī, *Tanbīh*, 355, tr. 455). They seem to have become a turbulent element of the population in the latter region, and al-Djāḥiẓ names the *Zuṭṭ al-ādjām* "Zuṭṭ of the thickets [of the lower 'Irāḳ marshlands]" as amongst the outlaws and predatory groups with whom his beggar chief Khālid b. Yazīd had kept company (K. *al-Bukhalā'*, ed. Ḥādjirī, Cairo 1958, 49, tr. Pellat, 70). In 205/820 the caliph al-Ma'mūn had to appoint commanders for the war against the Zuṭṭ of Lower 'Irāḳ. But the troubles continued, and his successor al-Mu'taṣim had to send the veteran commander 'Udjayf b. 'Anbasa against them in 219/834; this required a campaign involving amphibious operations, and after the Zuṭṭ were subdued, 27,000 of them, including 12,000 fighting men, were reportedly in 220/835 deported to Baghdād and thence to Khāniḳīn [*q.v.*] on the road to Djibāl and to 'Ayn Zarba [*q.v.*] on the Byzantine frontier in Cilicia. Zuṭṭ unrest does not seem to have had the same social aspect as the rebellion of the Zandj [*q.v.*] half a century later, but may have expressed general discontent with the centralising policies of the Baghdād government; however, its exact causes and motivations are unclear (al-Ṭabarī, iii, 1044-5, 1069, 1166-70; al-Mas'ūdī, *Tanbīh*, 355-6, tr. 455-6; Ibn al-Athīr, ed. Beirut, vi, 362, 379, 389, 443-4, 446, vii, 80). The Zuṭṭ are mentioned in the late 4th/10th century, when a Būyid prince, Abū Naṣr Shāh-Fīrūz, in 390/1000 disputed control of Fārs with Bahā' al-Dawla, and gathered into his forces local groups there of Daylamīs, Zuṭṭ and Turks (Hilāl al-Ṣābi', in *Eclipse of the 'Abbasid caliphate*, iii, 349; Ibn al-Athīr, ix, 160), but thereafter, mention of the Zuṭṭ

as a special group seems to fade from historical record.

De Goeje in his monograph (see *Bibl.*) endeavoured to show that those Zuṭṭ who originally settled at Baṣra, but then scattered, including by a Byzantine deportation of them from ʿAyn Zarba when this last was attacked by the Greeks, were the ancestors of a part at least of the Gypsies [for whom see ČINGĀNE; LŪLĪ; NŪRĪ]. The modern Gypsy language, of obviously northwestern Indian origin, in fact contains few words of Arabic provenance, and de Goeje's thesis remains unproven.
